THE

TO

His GRACE the DUKE

OF

MARLBOROUGH.

THE Nature and Deſign of this Work may, in ſome Degree, atone for the Liberty we take in prefixing to it the immortal Name of MARLBOROUGH. For whoſe Protection ſhould we court in publiſhing an *Univerſal Hiſtory*, wherein are diſplayed the Atchievements of all the Heroes of former Ages, if not your GRACE's, who are Grandſon to the greateſt Hero of our Age? Whoever impartially peruſes the following Hiſtory, and compares the ſo much exalted Heroes of Antiquity with the late Duke of *Marlborough*, will find, that their mighty Acts now ſerve but as Foils to ſet off his more glorious Enterpriſes and Succeſſes. Moſt of

thoſe great Conquerors were, we may ſay, but licenſed Thieves, Subverters of States and Empires, Plunderers of the Subſtance, and Enemies to the Rights, of Mankind; whereas the generous Duke of *Marlborough* drew his Sword in the noble Cauſe of Liberty, againſt the ambitious Attempts of a powerful and inſulting Nation, defeated its beſt-concerted Meaſures, and delivered not *Britain* only, but all *Europe*, from impending Slavery.

NOR have Arms alone reflected an extraordinary Luſtre on Your GRACE's Family; Letters too have greatly contributed to its Splendor. The Earl of *Sunderland* Your Father, altho' engaged in the moſt arduous Scenes of publick Life, hath enriched this Nation with a Monument of Love and Value for the liberal Arts, which other Nations may well envy, but few can equal. No Wonder then, that Your GRACE, in whom the eminent Prerogatives of two ſuch illuſtrious Families have centered, ſhould be ſo much the Darling of this happy Nation. But it is not the Luſtre alone, which is derived on You from Your noble Progenitors, that entitles You to the Love and Eſteem of Mankind. The Excellency of Your own Virtues heightens the Glory which You received by Inheritance: Among the many good Qualities, which we might here take occaſion to celebrate, without riſquing the uſual Cenſure incurred by Dedicators, we ſhall only ſingle out that truly noble and generous Spirit, which is ſo becoming Perſons of Your eminent

eminent Station. Providence ſeems to have put Wealth in Your Hands merely that You might deſpiſe it, and ſhew by Your Example in theſe Times of Corruption, that the Value of Gold is to be meaſured only by the Opportunities it gives of exerting Good Nature. That Greatneſs of Mind, which You happily join to Greatneſs of Fortune, will make the Duke of *Marlborough* live, when mean Men, of the ſame Rank, are, in ſpite of their Treaſures ſo carefully hoarded up, buried in Oblivion. The Humanity of Your Temper, Your obliging Affability and Condeſcenſion, might be a noble and juſt Subject of Panegyric: But it is not our Intent here to enter into a Detail of Your GRACE's Virtues and Perfections. We are too conſcious of our own Inabilities to attempt it. We ſhall therefore only add, that if Your GRACE's Patronage can recommend this our Performance, to all who love and honour the Duke of *Marlborough*, its Reception will be Univerſal. What we lay before You has been hitherto kindly received by the Public, both at Home and Abroad; which, we hope, will in ſome meaſure excuſe the Liberty we take in ſuing for Your GRACE's Protection. To have intirely depended on Your Good Nature, without any kind of Merit in the Work itſelf, would have been unpardonable.

BUT we have already treſpaſſed too much upon Your GRACE's Patience; wherefore we ſhall only beg leave to aſſure You, that our greateſt Ambition is, that this Addreſs, and the following Hiſtory, be acceptable to Your GRACE, and that we may be allowed the Honour of Subſcribing ourſelves,

MY LORD,

Your Grace's

Moſt Obedient,

Moſt Devoted,

Humble Servants,

The Authors.

THE

PREFACE.

HISTORY is, without all doubt, the moſt inſtructive and uſeful, as well as entertaining, part of literature; more eſpecially, when it is not confined within the narrow bounds of any particular time or place, but extends to the tranſactions of all times and nations. Works of this nature carry our knowledge, as Tully obſerves, beyond the vaſt and devouring ſpace of numberleſs years, triumph over time, and make us, though living at an immenſe diſtance, in a manner eye-witneſſes to all the events and revolutions, which have occaſioned aſtoniſhing changes in the world. By theſe records it is that we live, as it were, in the very time when the world was created; we behold how it was governed in its infancy, how over-flowed and deſtroyed in a deluge of water, and again re-peopled; how kings and kingdoms have riſen, flouriſhed, and declined, and by what ſteps they brought upon themſelves their final ruin and deſtruction. From theſe and other like events occurring in hiſtory, every judicious reader may form prudent and unerring rules for the conduct of his life, both in a private and publick capacity. But, as the eminent advantages accruing to us from this valuable branch of learning have been ſufficiently diſplayed by many others, we ſhall not trouble our readers with a minute detail of them, but haſten to what is peculiar to the Work, which we now offer to the Publick.

WE promiſed in our firſt Number to prefix to this Volume, when it was compleated, a Preface, wherein, after ſome account of the method we have obſerved, and the authors we have chiefly followed in the work, we ſhould examine the different computations of time, the coins, weights, and meaſures uſed by the ſeveral nations whoſe

hiſtories ſhould be therein delivered, with ſuch other particulars as we ſhould judge uſeful and neceſſary. This promiſe is what we now intend to diſcharge, and to begin with a ſuccinct account of the method we have purſued.

OUR intent was to write a general hiſtory of mankind, from the earlieſt account of time to the preſent. Purſuant to this deſign, before we enter upon the hiſtory itſelf, we have thought it neceſſary to premiſe, by way of introduction, an account of the Coſmogony, or production of the earth, as being the theatre on which the ſcenes of the enſuing hiſtory were to be acted. In this preludious diſcourſe, after having related, without omitting any thing that was really curious or entertaining, the various opinions both of the antient and modern philoſophers, concerning the formation of the animate and inanimate World, we proceed to the only authentick and genuine hiſtory of the creation, that which has been left us by Moſes. The opinions of the philoſophers are, for the moſt part, abſurd, incoherent, and contradictory; whereas the Moſaick account, if rightly underſtood, carries with it all the marks of truth and probability, even though it be regarded only as a human compoſition, abſtracted from divine authority. Having attended the earth through its ſeveral degrees of formation, ſeen it perfected, cloathed with trees and plants, repleniſhed with animals, and at laſt man, for whom the whole was deſigned, and to whom the dominion of it was expreſly given by its maker, introduced and placed in it; we take ſome notice of the opinion of thoſe who think mankind were in being before Adam, whom they ſuppoſe to have been the progenitor of the Jews only; we touch upon ſeveral enquiries that have been made concerning the time and ſeaſon of the creation, the place where Adam was created, *&c.* and cloſe the introduction with ſome account of the creation of the angels, of the nature, power, employments, *&c.* of thoſe ſpiritual beings, that ſo eminently concerned themſelves in the affairs of mankind, at leaſt in the firſt ages of the world. The introduction, we hope, will not be thought of a diſproportionable length; ſo copious a ſubject, as the origin of the world and mankind, could not be well reduced into a narrower compaſs. If there ſhould be ſome little obſcurities or inconſiſtencies, where we have delivered or explained the opinions of the old philoſophers, we need not ſay much to excuſe ourſelves to thoſe who know in what uncertainty and confuſion the hiſtory of thoſe philoſophers and their opinions have been left by the antients.

FROM

FROM the coſmogony, or formation of the earth and things that were made for the uſe of man, we proceed to the general hiſtory of the world till the flood, but premiſe ſeveral curious enquiries touching the ſituation of the garden of Eden, the ſtate of innocence and its continuance, the two trees, the prohibition laid on the firſt pair, the tempter and his puniſhment, the fall of man, and the effects it had on human nature, and on the earth, with the different opinions touching the manner in which the change in the conſtitution of man and of the earth was effected. The chronology from the creation to the deluge is what we likewiſe thought neceſſary to ſettle, before we entered upon the hiſtory of the antediluvian world. As Moſes hath not ſet down the particular time of any tranſaction before the flood, except only the years of the patriarchs, all we can do in this period is to determine that point, which might have eaſily been done, were there no varieties in the ſeveral copies we now have of Moſes's writings. But as the Hebrew, the Samaritan, and Greek verſion of the Septuagint, vary very much from one another, and ſome writers prefer one copy and ſome another, we have exhibited theſe varieties in ſeveral chronological tables of the years of the patriarchs, adding to the computation of the Hebrew, of the Septuagint, and of the Samaritan pentateuch, the numbers of the years of the patriarchs, as delivered by Joſephus, and corrected by Dr. Wills and Mr. Whiſton, the numbers in the preſent copies of that hiſtorian being greatly corrupted. Having thus ſtated the chronology before the flood, we deliver the hiſtory of the antediluvian patriarchs, as tranſmitted to us in the writings of Moſes, which are the only to be depended upon in thoſe early times. However, we have thought it not amiſs to collect the moſt material pieces of hiſtory to be found in profane authors, relating to the times preceding the flood; among which though there be ſome which bear apparent marks of truth, yet we believe the greater part will be judged to deſerve little credit: However, as every thing, which has the leaſt pretence to ſo great antiquity, cannot but be entertaining and curious, we hope our labour in collecting them will not be condemned as uſeleſs.

FROM the hiſtory of the antediluvian world, we paſs to that of the flood, where we produce profane teſtimonies of that wonderful cataſtrophe, relate various conjectures of antient and modern writers, as to the manner in which that dreadful devaſtation was brought on the earth, give ſome account

account of the ark, whereby Noah and his family, with ſuch kinds of living creatures as he took in with him, were delivered from this deſtruction; and laſtly, before we diſmiſs the hiſtory of the old world, take a tranſient view of the antediluvian ſtate of mankind, of their religion, policy, arts, and ſciences, of the alterations which have been wrought in nature by the flood, of the longevity of the antediluvians, and the cauſes of it, as well as of the prodigious fertility of the firſt earth. To theſe we add an enquiry touching the ſituation of mount Ararat, and the various opinions about it.

HAVING thus collected, in the beſt manner we could, what we have found worth notice, from writers of various times, religions, and countries, relating to the antediluvian world, we proceed to the general hiſtory from the deluge to the birth of Abraham; but firſt ſettle the chronology from the deluge to the departure of Abraham from Haran. This is one of the moſt difficult periods to ſettle in all chronology, not only becauſe we have no aſſiſtance therein from profane hiſtory, but alſo on account of the great diverſity between the ſeveral Moſaick writings. However, it is no ſmall ſatisfaction, that the great differences between the ſeveral copies end here, and that, being once got below the birth of Abraham, we enter upon a more certain ſeries of time, about which chronologers do more generally agree; the variety of the copies making a difference of but a few years, not of ſeveral ages, as we find before this period: For the better exhibiting of which we have inſerted chronological tables of the years of the poſtdiluvian patriarchs to the call of Abraham, according to the computation of the Hebrew, of the Septuagint, and of the Samaritan Pentateuch. Having ſtated the chronology, we come to the hiſtory of Noah after the flood, and of his deſcendants to Abraham, preſenting the reader with whatever we find curious or entertaining, not only in ſacred, but profane writers, namely, in the ſmall remains which are left us of the Phœnician antiquities collected by Sanchoniatho, and which are ſuppoſed to relate to the earlieſt times. As the planting of nations in the two firſt general migrations, the forming of ſocieties and governments, the riſe of arts and ſciences, the beginning of ſtates and monarchies, fall within this period, we give the reader as diſtinct an account of theſe important facts, as the records which have reached us will allow of.

FROM

FROM the general hiſtory of the Migrations of the children of Noah, of the peopling of the earth by them, and the ſettling of the firſt governments, we deſcend to the particular hiſtories of each kingdom; beginning with that of Egypt, which is without doubt one of the moſt antient nations of the world, having been peopled either by Ham, or his ſon Mizraim, with his own iſſue, which inhabited ſeveral parts of it, under the names of Mizraim, Pathruſim, Caſluhim, and Capthorim. This hiſtory we purſue from the firſt original of the Egyptian nation to its conqueſt by the Perſians, when the ſevere prediction of the prophet [a] was fulfilled, *There ſhall be no more a prince in the land of Egypt*. And here to acquaint the reader, in a few words, with the method we have followed in delivering the particular hiſtories of each nation; we begin with accounting, in the beſt manner we can, for the name or names which each nation bears; then we proceed to a deſcription of the country, containing an account of its ſituation, extent, climate, diviſions, fertility; of its animal and vegetable productions, of the natural and artificial curioſities it contains; of its cities, rivers, mountains, lakes, and whatever elſe worthy of notice is to be found in each Province. Next we inquire into the original and antiquity of the inhabitants, conſider their laws, government, religion, cuſtoms, inſtitutions, language, commerce, learning, trade, navigation, and alſo endeavour, as far as ſo intricate a ſubject will allow, to ſettle the chronology of each nation. Laſtly, we deliver the ſeries and hiſtory of their kings, which comprizes the wars, treaties, revolutions, and all the moſt remarkable events of each country. Thus we may ſay, without vanity or oſtentation, that no hiſtory has hitherto appeared in any language, which can with more juſtice challenge the title of an univerſal hiſtory than the preſent, ſince it comprizes not only the hiſtory of all nations and countries, but of all religions and religious ceremonies, of all arts and ſciences, of the laws that have been any where obſerved, of trade, and navigation, and, in ſhort, of whatever has been invented for the uſe and convenience of human race. But to return to the ſequel of our hiſtory:

AFTER delivering the ſucceſſion of the kings of Egypt, according to the Greek and Latin authors, we thought it might be deemed an omiſſion, if we ſhould take no notice of

[a] Ezek. xxx. 13.

of the ſeries of the Egyptian kings given us by the oriental writers. Wherefore we have ſet down their names, and briefly mention their principal actions, as related by the eaſtern hiſtorians, leaving the reader to judge what credit ought to be given them.

NEXT to the hiſtory of the Egyptians we give that of thoſe nations, with whom the children of Iſrael waged war before, or upon, their ſettling in the land of Canaan, namely, the Moabites, Ammonites, Midianites, Edomites, Amalekites, Canaanites, and Philiſtines. From theſe we proceed to the hiſtory of the antient Syrians, Phœnicians, and that of the Jews, from Abraham, founder of the Jewiſh nation, to the Babyloniſh captivity. We have enlarged ſomewhat on the latter, giving a diſtinct account of their patriarchs from Abraham to Moſes, of their Egyptian bondage, deliverance, and 40 years wandering in the wilderneſs; of their wars with the inhabitants of Canaan and the neighbouring nations; of their religion, government, laws, cuſtoms, learning, arts, commerce, with an accurate deſcription of the land of promiſe, &c. We have alſo ſettled the Jewiſh chronology, from the call of Abraham to the Babyloniſh captivity, and then proceeded, firſt to the hiſtory of the judges that governed Iſrael, from the death of Joſhua to Saul their firſt king, and thence to the reign of Zedekiah, when the city of Jeruſalem was burnt, and the whole nation carried into captivity by Nebuchadnezzar. Having thus delivered the hiſtories of the moſt antient kingdoms, till they were ſeverally ſubdued by the great empires, and became parts or provinces of them, we enter upon the hiſtory of the ſaid empires, and cloſe this volume with the hiſtories of the Aſſyrian empire to its conqueſt by the Medes and Babylonians, and of the Babylonian empire to its deſtruction by Cyrus.

NOW to ſay ſomething of the authors we have chiefly followed in the work, for we have advanced nothing without quoting our authors, that the reader may, for his fuller ſatisfaction, recur, if he pleaſes, to the originals; Moſes is the only authentick writer of what happened before, and for ſeveral ages after, the flood. He is by univerſal conſent allowed to be the moſt antient hiſtorian now extant; for, whether he was contemporary with Inachus, as Juſtin Martyr, Tertullian, Julius Africanus, Joſephus, Tatian, Clemens of Alexandria, Porphyrius, and others ſuppoſe, or lived in the time of Cecrops, the firſt king of Athens, as

Euſebius

Euſebius affirms, it is certain, that his hiſtory was compoſed, not only before all the hiſtories, but even before the fables, of the Greeks; ſince, according to the calculation of the former, he wrote 675 years before the Trojan war, and according to that of the latter 275 years before that æra. His hiſtory as well as the Jewiſh laws, whereof he was author, are comprized in five books, known under the title of the Pentateuch, which is univerſally received both by the Jews and Chriſtians as penned by him, if we except Abenezra and Spinoſa among the former, and ſome modern criticks among the latter, if their avowed principles can permit us to call them chriſtians, who denied him to be author of it, and who have been learnedly confuted by a late writer [b]. Beſides the Pentateuch, there have been ſome other works aſcribed to Moſes, though without any certainty, ſuch as the book of Job, which ſome ſuppoſe to have been compoſed by him, during his 40 years abode in Midian, and have this argument on their ſide, that it appears to have been written before the deliverance of the Iſraelites from the Egyptian bondage; otherwiſe it were abſurd to ſuppoſe, that either Job or his friends, conſidering what kindred and country they were of, could be ſo ignorant of the wonders which God had wrought in favour of that oppreſſed people, or ſo forgetful of them, as not to have urged them in the ſtrongeſt terms, during their long and intricate controverſy about the various diſpenſations of providence. Moſes is alſo ſuppoſed to have wrote eleven pſalms, viz. the 90th, 91ſt, and ſo on to the 100th. Origen [c], believes him to have tranſlated the book of Job out of the Syriack into Hebrew. Some few fragments of other books are likewiſe quoted by ſeveral of the antients as wrote by him; ſuch as, 1. his Apocalypſe, out of which St. Paul is by them ſuppoſed to have taken thoſe words, *For in Chriſt Jeſus neither circumciſion availeth any thing* [d], *&c.* 2. his Leſſer Geneſis; 3. his Aſcenſion; 4. Aſſumption; 5. his Teſtament, and myſterious books. St. Jerom, who quotes a paſſage or two out of his Leſſer Geneſis, tells us, that they had it in Hebrew in his time [e]. The Sethites, an antient ſect of hereticks, quoted his teſtament and his myſterious books or diſcourſes; but all theſe were ſo far from bearing any authority in the church, that they fell into contempt and oblivion, in proportion as chriſtianity prevailed.

THOUGH

[b] Abbadie. Verit. de la Relig. Chriſtien. [c] Origen, in Job.
[d] Gal. vi. 15. [e] Epiſt. 127. ad Fabiol.

THOUGH the writings of Moſes be the only records to be depended upon in the early times, yet we have not omitted to give ſome further accounts, relating to the ſame period, tranſmitted to us by profane writers, namely, by Sanchoniatho, Manetho, and Beroſus. Sanchoniatho, a Tyrian according to Athenæus and Suidas, according to others of Berytus, is ſaid by Porphyry the philoſopher [f], Euſebius [g], and Theodoretus [h], to have lived about the time of the Trojan war: whence Bochart, Huetius, and others ſuppoſe him to have been contemporary with Gideon. But theſe writers are certainly miſtaken in their chronology, and Sanchoniatho muſt be of a much later date, ſince he ſpeaks of Tyre, which was built but 91 years before the deſtruction of Troy, as a very antient city. He muſt therefore have lived, as Suidas thinks, ſome conſiderable time after that war, but the number of years we cannot percifely determine. If what is ſaid of Sanchoniatho be true, viz. that he dedicated his book to Abibal king of Tyre, who was Hiram's father, and Solomon's ally, he muſt have been contemporary with David, who did not begin his reign till ſeveral years after the Trojan war. He compiled the Phœnician hiſtory, according to Porphyry, from the antient monuments and memoirs which were imparted to him by one Hierombalus a Prieſt, whom Bochart, Huetius, and ſome others take to be Gideon, he being in the book of Judges ſometimes named Jerobaal. But this conjecture is reſuted by others [i]. He is ſaid to have likewiſe made uſe of the regiſters of the cities of Phœnice, which he found lodged in the temples, and to have carefully ſought out, as Philo Biblius informs us, the writings of Taaut, knowing him to have been the firſt inventor of letters, and the ſame whom the Egyptians call Thoth, the Greeks Hermes, and the Latins Mercury. He wrote alſo the hiſtory of Egypt, and another book of the Coſmogony and Theogony of the Phœnicians. Theſe works were tranſlated out of the Phœnician into the Greek tongue by Philo Biblius, a famous grammarian, who lived in the reigns of Veſpaſian, Titus, Domitian, Trajan, and Adrian. Philo digeſted them into nine books, though Porphyry mentions but eight, perhaps not counting, as Bochart conjectures, his Coſmogony and Theogony. He begins his hiſtory with the origin

[f] Lib. 4. adverſus Chriſtian. [g] Lib. 1. Præparat. Evangel. [h] Lib. 2. de curat. Græcar. affect p. 28. [i] Vandalen. Differ. de Sanchoniath.

by the prieſts attributed to Thoth, muſt have been extant in the days of Manetho, or he could never have appealed to them in ſo public a manner, eſpecially in writing to his prince. The ſtronger prejudice againſt the credit of this writer, ariſes from his chronology. The Egyptians, it is true, pretended to an exceſſive antiquity, and to have certain records for a prodigious length of time paſt. This appears not only from the old Egyptian chronicle, but from the extravagant number of years their prieſts impoſed upon Herodotus, Plato, and Diodorus; but Manetho ſeems to have been much more modeſt, though the ſum of his 32 dynaſties, from Menes to fifteen years before Alexander, (without taking the reigns of the gods and demi-gods into the account) if caſt up, will amount to above 5300 years, which will reach higher than the creation of the world; and Joſeph Scaliger has accordingly ſettled their chronology in ſuch manner, that, by his own way of reckoning, it exceeds the epoch of the creation 1336 years. After Cambyſes had carried away the Egyptian records, the prieſts, in all probability, to ſupply their loſs, and keep up their pretences to antiquity, began to write new records, wherein they not only neceſſarily made great miſtakes, but added a good deal of their own invention, eſpecially as to diſtant times. From theſe materials, for want of better, Manetho collecting his hiſtory, muſt have intermixed a good deal of fable, as there is indeed in the antiquities of all nations; ſince it cannot be expected, that people could have begun to keep records till ſome ages after their ſettlement. It is unjuſt therefore to lay the whole blame of the confuſion and uncertainty, we find in the Egyptian hiſtory, at the door of Manetho: He collected, for ought we know, faithfully from the records he had, and we have ſo little genuine remains of him, and what we have has been ſo mangled by tranſcribers and pretenders to correct him, that they ſcarcely bear any reſemblance of that antient and venerable hiſtorian. Several antient writers of good judgment, as Plutarch, Porphyry, Euſebius, and Joſephus, looked upon him as a writer, whoſe authority was to be depended on; and the curious fragment tranſcribed from him by Joſephus, before his copies had been corrupted, ſeems to confirm this good opinion, being the moſt valuable and authentic piece of Egyptian hiſtory, of ſo great antiquity, that is extant, and the ſeries of kings, which we have thence exhibited, in B. I. ch. 3. ſect 3. is a pretty exact one, connecting the Egyptian and Gre-

clan hiſtories, by acquainting us, that Sethoſis was Ægyptus, and his brother Armais Danaus.

BEROSUS, by birth a Chaldean, flouriſhed under Antiochus Soter, or his ſon Antiochus Theos, and not in the time of Moſes, as ſome, groſsly miſtaken, have imagined. For he dedicated his work to Antiochus, the third king after Alexander, as Tatian informs us, that is, to Antiochus Theos; Alexander was ſucceeded by Seleucus Nicanor; Seleucus Nicanor by Antiochus Soter; and he by his ſon Antiochus Theos. He tells us himſelf in his firſt book of the hiſtory of Babylon, that he was born during the minority of Alexander the Great. He wrote in three books the Chaldean and Babyloniſh hiſtory, which took in that alſo of the Medes. Pliny tells us [a], that his hiſtory contains the events of 480 years. But of that work we have now remaining only ſome few fragments, quoted by Joſephus in his books againſt Apion, and by Alexander Polyhiſtor; for the Beroſus, publiſhed by Annius of Viterbo, is, without all doubt, a ſpurious piece. Joſephus ſays, that he agreed with Moſes in his accounts of the deluge, the fall of man, the ark, in which the reſtorer of mankind was ſaved; and adds, that he mentions the deſcendants of Noah, and their reſpective ages, to Nabulaſſar, king of Babylon; and that, relating the actions of that prince, he ſpeaks of the taking and burning of Jeruſalem by his ſon Nebuchadonoſor; on which occaſion, ſays he, the Jews were carried captives to Babylon; whence enſued the deſolation of that city for 70 years, till the reign of Cyrus. He is quoted by Pliny, Tatian, Clement of Alexandria, Tertullian, Vitruvius, and Euſebius, which ſhews him to have been a writer of good authority. In the ſeries he gives us of the ten kings, whom he ſuppoſes to have reigned at Babylon before the flood, there are ſome ſmall variations in the authors, who have tranſcribed that hiſtorian, which has induced us to exhibit them to the reader's view, in B. I. ch. 1. ſect. 5. of the preſent hiſtory. As theſe ten ſucceſſions exactly anſwer the ten generations from the creation to the flood, the firſt king, by name Alorus, has been ſuppoſed to be the ſame with Adam, as Xiſuthrus, the laſt in the ſeries, plainly appears to be Noah. The reader will find his account of the Chaldean and Babylonian coſmogony, *p.* 29, and the ſubſtance of the few fragments that are ſtill remaining, and relate to the earlieſt times, in B. I. ch. 1. ſect. 5.

To

[a] Hiſt. Natur. l. 6. c. 55.

To Beroſus we may add Abydenus, who flouriſhed ſome time after him, and, in many things, follows him. Abydenus wrote the hiſtory of the Chaldean empire, whereof there are but a few fragments remaining in Euſebius, Cyrillus, and Syncellus. In one of theſe fragments he gives the names and reigns of the ten firſt kings of Chaldea, copied with ſome ſmall variation from Beroſus, as the reader may ſee, in B. I. ch. 1. ſect. 6. In another he ſpeaks of the tower of Babel, and the confuſion of languages, agreeable to the account we have in holy writ. Theſe fragments Scaliger has illuſtrated with learned notes in his book, *De emendatione temporum.* Some confound this Abydenus with Palæphatus, called alſo Abydenus, from the city of Abydus, the place of his birth. Palæphatus was contemporary with Alexander, a favourite diciple of Ariſtotle's, and wrote the hiſtories of Cyprus, Delos, and Arabia.

ERATOSTHENES the Cyrenæan was a man of eminent learning, keeper of the famous library of Alexandria, and greatly in favour with Ptolemy Euergetes, by whoſe order he wrote the hiſtory of the Theban kings of Egypt, the catalogue of which has met with a very favourable reception among the learned, not only as a ſupplement to Manetho, who has entirely omitted that ſucceſſion, but as a certain foundation for fixing the Egyptian chronology. His authority has been by ſeveral writers preferred to that of Manetho, in regard he was not an Egyptian, and took his liſt from the ſacred records of Thebes, or had it from the ſacred ſcribes there. He has given, together with the Egyptian names of the kings, their interpretation in Greek, which the ſkilled in the Coptic tongue allow to be juſt in ſome inſtances; but ſeveral of them are corrupted and unintelligible. This author wrote a great number of books, whereof the catalogue may be ſeen in Fabricius, Galens, Voſſius, &c. but the only piece, now remaining entire, is his deſcription and fabulous account of the ſtars. He ſtarved himſelf thro' grief for the dimneſs of his ſight in the 10th or 12th year of Ptolemy Epiphanes, 196 years before Chriſt.

In the hiſtory of Egypt, beſides Manetho, we have chiefly followed Herodotus and Diodorus Siculus. Herodotus, or, as others call him, Erodotus, is the moſt antient writer among the Greeks, whoſe works have reached us. There is no room left to doubt of the place of his birth, he himſelf having inſerted, at the beginning of his hiſtory, both his name and country; *This is*, ſays he, *the book of* Herodo-

tus *of* Halicarnaſſus. He was alſo ſur-named the Thurian, having accompanied a colony, which was ſent from Athens, to ſettle at Thurium, a city of Magna Græcia on the Tarentin gulf. This happened the third year of the 83d Olympiad, during the archonſhip of Callimachus. Here, if we believe Pliny [1], he wrote his hiſtory, being then forty years old, in the firſt year of the 84th Olympiad, 310 years after the foundation of Rome, and 444 before Chriſt. Before he began his hiſtory, he travelled all over Greece, Italy, and Egypt, to enquire into the origin, traditions, and records of the nations he was to write of. His main deſign was to write the wars of the Perſians againſt the Greeks, from the reign of Cyrus to that of Xerxes; but he extended it to the hiſtory of other nations, namely of the Lydians, Egyptians, and Scythians. This hiſtory he divided into nine books, giving to each of them the name of one of the nine muſes; wherein he has ſince been followed by Cephalion, Bion the rhetorician, and P. Aurelius Opilius; tho' ſome are of opinion, that his books were not by himſelf diſtinguiſhed with thoſe titles, but by the admirers of his performance. He recited his hiſtory, as Lucian informs us, on the publick theatre at Olympia to a crowded auditory of the chief men of all Greece, met to celebrate the olympic games, and was more admired even than thoſe who carried the prizes. Euſebius ſays, that this happened, not at Olympia, but at Athens, on the feſtival of the Panathenæa. On this occaſion it was that Thucydides, tho' then eighty years old, was ſo touched with emulation, that he reſolved to undertake the writing of an hiſtory, and ſtrive to equal or excel Herodotus. The hiſtory of Herodotus has been propoſed by Tully, Hortenſius, Quintilian, and all the beſt judges of antiquity, as a pattern to all hiſtorians. As for the truth of his accounts, we muſt own, that it has been called in queſtion by men of no mean character. Cteſias doubts the truth of what he writes concerning the Medes and Aſſyrians; but we ſhall prove hereafter this hiſtorian leſs worthy of credit than Herodotus. Manetho cenſures him, for advancing many falſities, with regard to the Egyptian hiſtory; which charge is not quite groundleſs, ſince he himſelf owns, that what he relates to have happened before the reign of Pſammitichus, and on the credit of others, is far from certain. But none ever attacked with more virulency, if we may be allowed the expreſſion,

[1] Lib. 12. c. 4.

expreſſion, the credit of Herodotus, than Plutarch, whoſe judgment would be of great weight, had he not himſelf declared, that the reputation of his country had engaged him in the diſpute. Herodotus relates, that, in the expedition of Xerxes, the Thebans, to conſult their own ſafety, abandoned the common cauſe, and joined the Perſians. Tho' this was matter of fact, and Demoſthenes afterwards reproached the Thebans with it, yet Plutarch, who was a native of Chæronæa, a Theban city, could not bear the baſe behaviour of his countrymen to be tranſmitted to poſterity, but vented his reſentment againſt the publiſher of their cowardice in a book wrote for that purpoſe, and entituled, *Of the malignity of* Herodotus. But his exceptions are either trifling, or turn upon facts, which Herodotus himſelf delivers as doubtful. Beſides, he betrays throughout the whole work a great deal of paſſion, prejudice, and ill-nature. On the other ſide, all Greece, by their ſolemn approbation, gave an ample teſtimony of his veracity, at a time when moſt of the tranſactions, which he deſcribes, were very well known. In his whole work there appears an air of ſincerity, which even his enemies have been forced to acknowledge: He examines the truth of the facts which he relates, and for the moſt part acquaints his readers with what others have ſaid on the ſame ſubject. When he relates extraordinary events, he tells us, that he copied them from others, and declares which he believes, and which he ſuſpects, adding, *as it is ſaid*; *as I have been told*; *this does not at all ſeem probable*; *thoſe, who feign ſuch ſtories, relate*, &c. He often repeats, that what he relates ought not be depended on, any further than it appears probable; that the character of an hiſtorian obliges him to relate what he had heard, but that the readers are not bound to believe whatever he has been told. As to the Lydian hiſtory, which ſome look upon as fabulous, it cannot be denied, but that he was acquainted with the tranſactions of that nation, which bordered on the Aſiatic Greek cities, in one of which Herodotus was born, and not above 60 years after the deſtruction of the Lydian empire. He ſeems very ſincere in his Egyptian hiſtory: for he ingenuouſly owns, that all he relates before the reign of Pſammitichus is uncertain, and that he reports the early tranſactions of that nation on the credit of the Egyptian prieſts, on which he did not much depend. His hiſtory of the Aſſyrians and Medes does not at all agree with that which the modern chronologiſts have followed; but moſt of the antients have prefer-

red Herodotus to all others. In his hiſtory of Perſia he differs in many particulars from Xenophon's Cyropædia; but we muſt obſerve with Tully, that the Cyropædia is rather an inſtructive piece, than an hiſtory. The chronology of Herodotus is far from being exact, eſpecially with relation to the Egyptian affairs, extravagant numbers of years having been impoſed upon him, as well as upon Diodorus and Plato, by the Egyptian prieſts, who piqued themſelves mightily on the antiquity of their nation. Herodotus wrote other books beſides the hiſtory now extant; for Ariſtotle [m] finds fault with him, for ſaying that an eagle drank during the ſiege of Nineveh, whereas no bird with hooked talons, as that philoſopher affirms, ever drinks. This paſſage is not to be found in his works now extant, which has made ſome authors imagine, that Ariſtotle quoted it from the hiſtory of Aſſyria, which, in two places of his firſt book, he promiſed to write. But, if he had ever publiſhed it, we can ſcarcely believe, that none of the antients would have ſo much as mentioned it. It is more likely, that his preſent hiſtory was more complete in Ariſtotle's time, than it is now; or even that Ariſtotle thro' miſtake quoted Herodotus inſtead of ſome other author, whereof we have inſtances in other antient writers. Some aſcribe to Herodotus the life of Homer, which in moſt editions is annexed to his hiſtory; but the diverſity of ſtile, and the diſagreement between Herodotus and the author of that piece, plainly evince theſe two works to have been penned by different hands. We refer the reader for further particulars concerning Herodotus, to Henry Stephens, Joachimus Camerarius, and Montfaucon in his book on Judith.

DIODORUS SICULUS was born at Argyrium, or Agyrium, a town of Sicily, and thence called Siculus, or the Sicilian. He flouriſhed under Julius Cæſar and Auguſtus, and began his hiſtory after the death of the former, as he himſelf informs us [n]. He travelled with no ſmall danger over great part of Europe, Aſia, and all Egypt, to acquaint himſelf with the geography of the places, as well as the cuſtoms and manners of the inhabitants. He wrote a general hiſtory from the earlieſt times to the 180th olympiad, that is, to Cæſar's war with the Gauls. This hiſtory he intituled the Bibliotheque or Library, having copied his accounts from the writers of different nations, who flouriſhed before.

[m] Lib. 8. de Anima. c. 18. [n] Lib. 5. p. 208.

before. In his hiſtory of the Egyptians, Aſſyrians, Medes, Perſians, Greeks, Carthaginians, Sicilians, and Rhodians, he follows Herodotus, Cteſias, Beroſus, Thucydides, Xenophon, Philiſtus, Calliſthenes, Theopompus Chius, &c. in what relates to the Macedonians, he depends on Cardianus and Marſias; in his hiſtory of Crete he quotes Epimenides Dorſiadas, Soſicrates, and Loaſthenidas: Of the forty books of his hiſtory, fifteen only are now remaining, viz. the five firſt, the eleventh, and the following to the twentieth. The four firſt books comprehend the theology and hiſtories, preceding the Trojan war, of the Egyptians, Babylonians, Chaldeans, Indians, Scythians, Arabians, Ethiopians, Africans, and Greeks. This part is interwoven with many Fables, which, however, were believed by thoſe nations, whoſe hiſtories he writes. In the 5th book he gives an account of the origin and antiquities of the greater iſlands. The five following books contained the antiquities of all the eaſtern nations, the origins of the Greeks and Romans, and the moſt remarkable tranſactions that happened in any part of the world, from the taking of Troy to the expedition of Xerxes into Greece. The 11th book begins with the expedition of Xerxes into Greece, and ends in the year which preceded the expedition of the Athenians into Cyprus under the conduct of Cimon. The five following books continue the hiſtory of all nations to the time of Philip king of Macedon, whoſe exploits are related in the 16th, as thoſe of his ſon Alexander in the 17th, and of his ſucceſſors to the death of Antigonus in the three next. In the other twenty books our author purſued the hiſtory of all nations, from the death of Antigonus, which happened in the 119th olympiad, to Cæſar's war with the Gauls, that is, to the 180th olympiad. The 11th book and the following were written in the nature of annals, with the names of the Athenian Archons and Roman conſuls to each year. But Diodorus is not ſo exact in his computations, with regard to the Roman affairs, as could be wiſhed; for he places the beginning of Xerxes's war in the firſt year of the 75th olympiad, which, according to him, concurred with the conſulſhip of Spurius Caſſius and Proclus Virginius Tricoſtus; but theſe had been conſuls ſix years before, and thoſe of that year were Cæſo Fabius, the ſecond time, and Spurius Fuſus; a miſtake which is continued thro' the whole ſequel of his annals. In the affairs of Egypt he was likewiſe greatly impoſed upon, as to the numbers of years, by the Egyptian prieſts.

In the hiſtory of the Moabites, Ammonites, Midianites, &c. we chiefly follow the ſcripture and Joſephus, from whom, however, we diſſent, when he takes the liberty, as he frequently does, to diſſent from holy writ. Joſephus wrote his hiſtory of the Jewiſh war and deſtruction of Jeruſalem firſt in Hebrew, or, as ſome ſay [o], in Syro-Chaldaic, for the uſe of his own nation, and afterwards tranſlated it into Greek about the ſeventh year of the reign of the emperor Veſpaſian, to whom he dedicated it. This work was, by the emperor's order, placed in the public library at Rome, and the author, as Euſebius and St. Jerom inform us [p], diſtinguiſhed with a ſtatue, an honour conferred upon very few. Beſides his hiſtory, he wrote twenty books of the Jewiſh antiquities, which he dedicated to Epaphroditus his great patron. In theſe books he gives us the hiſtory of the Jews from their firſt origin to the 12th year of Nero, when they began to ſhake off the Roman yoke. This work, as Joſephus himſelf informs us, was completed in the 13th year of Domitian, that is, in the 93d of Chriſt. In his chronology he often diſagrees both with the Septuagint, and the writers of other nations; nay, he is frequently inconſiſtent with himſelf, which we may impute to the careleſneſs and ignorance of his tranſcribers, ſeeing there appears ſuch a diſagreement between the antient manuſcripts of the ten laſt books of his antiquities and the printed copies, that ſome have imagined [q] him to have left two different ones. The veracity of this writer, eſpecially in the books of his antiquities, has been often call'd in queſtion; and truly, his accounts ſometimes not only vary from holy writ, but are diametrically oppoſite to what we read in the hiſtory of Moſes and the prophets, and this after having ſolemnly proteſted, that his deſign was to add nothing of his own, but faithfully to tranſcribe, without the leaſt alteration, what he founded in the ſacred records of his nation. He wrote alſo two books againſt Apion, who, in the third and fourth books of his Egyptian hiſtory, had defamed and traduced the Jews. In this work he ſhews himſelf converſant not only in the hiſtory of his own, but of all other nations, and to have peruſed, as St. Jerom expreſſes it [r], all the libraries of the Greeks. This book likewiſe Joſephus dedicated to Epaphroditus, whence

[o] Sam. Baſnagius, Exercit. in Baronium. [p] Euſeb. l. 3. Hiſt. Eccleſiaſt. & Hieron. c. 13. catalog. [q] Emericus Bigot. epiſtolæ Reineſii ad Boſium, p. 381. [r] Epiſt. 84. ad Mag. Orator.

whence it is manifeſt, that it was publiſhed before the 95th year of Chriſt, for in that year Epaphroditus was, by order of Domitian, put to death. Beſides his hiſtory and antiquities, he wrote the hiſtory of his own life; and, according to ſome, a diſcourſe on the empire of reaſon, in commendation of the ſeven Maccabees; a book alſo againſt the Greeks, namely againſt Plato, is aſcribed to him; but it is uncertain, whether he was the author of the two latter, ſome affirming, ſome denying, him to have wrote them.

In our hiſtory of the antient Syrians, we have had always before our eyes the books of the kings, the chronicles, and the prophets, and have left Joſephus and the profane hiſtorians, where they ſeem to contradict holy Writ, but at the ſame time acquainting the reader in our notes with their various opinions, and the reaſons that are alledged to ſupport them. The hiſtory of the Phœnicians we have taken chiefly from Diodorus Siculus, Juſtin, Curtius, Pauſanias, Appian, Oroſius, Plutarch, and from Dius, Menander, and Philoſtrates, as quoted by Joſephus. Dius and Menander wrote the hiſtory of Phœnice, and are both commended by Joſephus as very exact in their accounts, having compiled their hiſtories from the antient records that were lodged in the temples. Dius was by birth a Phœnician, and Menander an Epheſian; the accounts of both perfectly agreed, as Joſephus often repeats, with ſcripture. Beſides the hiſtory of Phœnice, Menander wrote the life of Ithobal king of Tyre, wherein he mentioned the drought that happened in Ahab's reign. Philoſtrates likewiſe wrote the hiſtory of Phœnice, and, as Joſephus informs us, gave an exact account of the ſiege of Tyre.

The account we give of the Phœnician kings, from the antient fabulous hiſtory of the Greeks, is chiefly extracted from Apollodorus. This writer was by birth an Athenian, by profeſſion a grammarian, diſciple of Ariſtarchus the grammarian, and Panætius a Rhodian philoſopher, who lived in the reign of Ptolemy Euergetes. He wrote his hiſtory, which he intituled The Bibliotheque of the Gods, in the reign of Attalus Philadelphus, king of Pergamus, who died in the third year of the 160th Olympiad, that is 138 years before Chriſt. Of this work there are now but three books remaining, tho' there is no doubt but it contained ſeveral others; for Macrobius quotes the 14th, Hermolaus the 16th; and Photius tells us, that Sopater the Sophiſt, handling the ſame ſubject, copied ſeveral paſſages out of this work, from the firſt to the 24th book. This piece, in

Scaliger's

Scaliger's opinion, is a very judicious performance, and tho' moſtly fabulous, yet ſuch as may give us ſome inſight into antient hiſtory, the fables being founded on hiſtorical truth, and the perſons ſuch as have exiſted, tho' their actions be exaggerated or diſguiſed. The ſame author adds, that we may extract from Appollodorus a more certain and better grounded chronology, than from the rhapſodies of Beroaldus; and Voſſius is of opinion, that, by ſeparating the fabulous ſtories from real events, we may form from his writings a true hiſtory. He begins with Inachus, who is believed to have founded the kingdom of the Argivi, in Abraham's time, and brings his hiſtory down to the time of Theſeus prince of Athens. The books that are loſt reached to 1040th year after the Trojan war, or to the 258th Olympiad.

In the hiſtory of the Jews we have followed the ſcripture and Joſephus, where he agrees with the ſacred hiſtory, not neglecting to acquaint the reader in our notes with the traditions of the rabbies.

The hiſtory of the Aſſyrians, Chaldeans, and Babylonians we have likewiſe delivered agreeable to what we have found in ſcripture relating thereto. We have rejected as an arrant fable the Aſſyrian hiſtory of Cteſias; but as it has been, we may ſay, from all antiquity admitted into the body of hiſtory, we ſhall here give ſome account of that writer. Cteſias was a native of Cnidos, and accompanied Cyrus in his expedition againſt his brother Artaxerxes, on which occaſion he was taken priſoner; but, having cured Artaxerxes of a wound he received in the battle, he became a great favourite at the court of Perſia, where he continued practiſing phyſic for the ſpace of 17 years. Thus far Diodorus Siculus. Photius likewiſe informs us, that he flouriſhed in the time of Cyrus, the ſon of Darius and brother of Artaxerxes, who poſſeſſed himſelf of the kingdom of Perſia. Strabo, ſpeaking of the great men of Cnidos, mentions Cteſias, who, ſays he, cured Artaxerxes; and Xenophon, who was his contemporary, tells us, that Cteſias of Cnidos was a phyſician, and, being taken priſoner, dreſſed the wound, which Artaxerxes received in the engagement. He was employed, as he himſelf witneſſes, by Artaxerxes in negotiations with the king of Salamis, with Conon, and the Lacedemonian embaſſadors; which ſhews what credit he was in at the court of that prince. Cteſias wrote the hiſtory of Perſia in 23 books, whereof the firſt ſix contain the hiſtory of the Aſſyrians and Medes, the other ſeventeen

the

the whole hiſtory of Perſia, from Cyrus to the author's death. He alſo wrote the hiſtory of the Indies. But theſe works are loſt, and all we have remaining of them is an Abridgment compiled by Photius, which is alſo imperfect, he having omitted the hiſtory of the Aſſyrians and Medes. However, we have that hiſtory too abridged in Diodorus, and the names of the kings, which Diodorus left out, carefully ſet down by Euſebius and Syncellus. Cteſias has always been looked upon, by the moſt judicious among the antients, as a fabulous writer. Ariſtotle, who was almoſt his contemporary, declares him a writer unworthy of credit. Antigonus Cariſtius, who lived in the time of Ptolemy Philadelphus, ſays, that he frequently lyes, and relates what is altogether incredible. Plutarch, in his life of Artaxerxes, calls him a vain man, and a notorious lyar. Lucian charges him with relating in his Indica what he had never ſeen or heard; and truly, whoever peruſes that work, muſt immediately conclude him to have been a man of no ſort of ſincerity. His hiſtory of Aſſyria is moſt evidently calculated to aſtoniſh, amaze, and to ſtrain credulity beyond all poſſible bounds. His liſt of the Aſſyrian kings ſeems to be a groſs forgery, it being a medley of Greek, Perſian, Egyptian, and other names. Again, in all long liſts of kings the ſame names, or ſome bearing a near reſemblance to them, are obſerved often to recur. But the names in Cteſias are not alone what may prompt us to pronounce him guilty of forgery; the length of the reigns may be urged as another argument againſt him; except it be anſwered, that in thoſe very early days, ſo nearly bordering on the times of the deluge, ſuch length is not to be wondered at. But this would be no anſwer at all; for at leaſt three fourths of them muſt have lived, when the life of man was reduced to its preſent ſtandard. But yet, ſeveral of the antient hiſtorians, and, what is more ſurprizing, of the modern Chriſtian writers, have blindly followed him, in oppoſition to ſcripture, Herodotus, and other more undoubted authorities. Diodorus Siculus tranſcribed him; Cephaleon, Caſtor, Trogus, and Velleius Paterculus have copied ſeveral accounts from him. Julius Africanus, Euſebius, and Syncellus have adopted, in part, his chronology of the Aſſyrian kings, wherein they have been followed by moſt of the modern chronologers.

We ſhall now give a ſuccinct account of ſeveral authors quoted by us in this volume, with whom perhaps every reader may not be acquainted. Theſe are,

ZOROASTER

ZOROASTER, a Bactrian, whom ſome ſuppoſe to have been contemporary with Nimrod, and king of the Bactrians. Cluverius takes him for Adam; Procopius, Gazeus, and Epiphanius, for Abraham; Huetius for Moſes, Gregory of Tours for Shem, &c. We are in no leſs uncertainty as to the time wherein he flouriſhed; Epiphanius making him contemporary with Nimrod, Euſebius with Semiramis, and Apuleius with Cyrus and Cambyſes. Plato calls him the moſt antient of all the Perſian ſages: Eudoxus, Pliny, and Hermippus tell us, that he lived five thouſand years before the Trojan war: Xanthus of Lydia, according to the teſtimony of Laertius, reckons but 600 years from Zoroaſter to Xerxes. As to his works, Hermippus ſays, that he wrote two millions of verſes. Suidas gives us the titles of ſome of his works, viz. four books of nature, one of precious ſtones, and five of aſtronomical predictions. Euſebius quotes a paſſage from his ſacred hiſtory of Perſia, containing an excellent deſcription of the divine attributes. Theodorus of Mopſueſtia, treating of the magic of the Perſians, produces Zoroaſter's hypotheſis, admitting two principles. Proclus collected the pretended oracles of Zoroaſter in 280 hexameter verſes. He is ſaid to have been the inventor of magic among the Eaſtern nations; but by magic nothing was meant in thoſe days beſides phyſic and theology, as Naudæus proves with very convincing arguments.

MOCHUS, or Moſchus, a Sidonian, lived before the Trojan war, as Strabo informs us, and wrote the hiſtory of Phœnice. He is quoted by Joſephus in the firſt book of his antiquities, by Athenæus, and Tatian, who names two other Phœnician writers, viz. Theodotus and Heſicrates. His hiſtory was tranſlated into Greek by Chætus, or Lœtus; but we have now only a few fragments of it remaining in the above-mentioned writers.

ALEXANDER POLYHISTOR, a celebrated writer in the reign of Ptolemy Lathyrus, and by Sylla carried captive to Rome, wrote a great many hiſtories, as his name witneſſes, and among others thoſe of India and Egypt. Clement of Alexandria quotes a book of his concerning the Jews, wherein were inſerted Solomon's letters to the Egyptian and Phœnician kings, with their reſpective anſwers. Euſebius alſo recites a fragment of the ſame author, relating to the Jews. [s]

ORPHEUS,

[s] Euſeb. Præpar. Evang. l. 9.

ORPHEUS, ſurnamed the Librethian, was a Thracian, and is famous among the antients, not only for poetry and muſic, but alſo for theology. He is ſaid to have been the firſt that taught the Greeks the Egyptian myſteries. Clement of Alexandria ſays, that Homer borrowed ſeveral paſſages from his poems. The antients mention many pieces that were under his name, ſome of which are ſtill extant, viz. an epic poem, entitled, *The Argonautics*; 86 hymns; a poem on precious ſtones and their virtues, and ſeveral fragments of other works, aſcribed to him by Proclus, Tzetzes, and other writers. Plato mentions the hymns of this author in his eighth book of laws: Stobæus and Suidas aſcribe the hymns to Onomacritus, and others, with Clement of Alexandria, to Pythagoras. We alſo find ſeveral verſes cited by Juſtin Martyr, Clement of Alexandria, Euſebius, and Theodoret, out of the teſtament of Orpheus; but the bare reading of them will convince us, that they are the performance of a more modern writer.

NEITHER have Euſebius, biſhop of Cæſarea in Paleſtine, Africanus, and Syncellus, been excluded from our hiſtory. In their time the libraries of Greece were furniſhed with excellent manuſcripts, which have been ſince loſt. From them they made their collections; and we may judge of their ſincerity by the authors which remain, and which they have faithfully quoted; ſo that where other writers were at a loſs, they have often put us in the way in our purſuit of truth.

IN the deſcriptions of countries we have chiefly followed, among the antients, Strabo, Ptolemy, and Dionyſius Periegetes. Strabo flouriſhed under Auguſtus and Tiberius, and viſited moſt of the Places which he deſcribes; whence his deſcriptions are very exact, if we except thoſe of Germany, wherein he depended on the relations of others. He publiſhed ſeveral works; but his XVII books of geography are the only that have reached us. In theſe he not only deſcribes the ſituation of the places, but often the manners, cuſtoms, laws, and religions of the inhabitants.

PTOLEMY was of Peluſium in Egypt, and flouriſhed in the reign of M. Aurelius Antoninus. In his geography he followed Marinus Tyrius who was almoſt his contemporary. He is often miſtaken as to the degrees of longitude and latitude, and ſometimes ſpeaks of cities, which had been deſtroyed many years, not to ſay ages, before his time, as ſtill extant. Moſt of his miſtakes have been carefully corrected by Ortelius, and Gherardus Mercator, Cluverius, Velſerius,

Velſerius, and others. His Canon is ſo exactly agreeable to ſcripture hiſtory, that if this latter could poſſibly ſtand in need of confirmation, ſo far as it relates to the hiſtory of the great empires of the Aſſyrians and Babylonians, nothing could be ſo effectual towards it as this Canon, which has given birth to one of the moſt famous profane æras, that of Nabonaſſar, the firſt king in it, and without which there would be the greateſt obſcurity in the affairs of theſe people. Nothing is more ſurprizing, than that this moſt noble monument ſhould have been ſo little examined by the light naturally reflected on it from the ſacred pen-men, as not to have extricated the whole body of chronologers and hiſtorians from out of the labyrinth, they have almoſt all bewildered themſelves in, miſled by the extravagances of Cteſias, a fabulous writer, who has been blindly followed by the antients, and moſt of the moderns. This Canon takes date from about the 23d year of Pul's firſt appearance on this ſide of the Euphrates, about the year 2252 after the flood, according to our computation, and 747 years before Chriſt; which ſhews the kingdom of Babylon to have been immediately of Aſſyrian origin, according to the prophet [t]: *Behold the land of the Chaldeans; this people was not till the Aſſyrian found it for them that dwell in the wilderneſs; they ſet up the towers thereof, they raiſed up the palaces thereof.*

Dionysius Periegetes, born at Charax, a town ſituated on the gulph of Arabia, flouriſhed in the reign of Auguſtus, by whom he was ſent, as Pliny informs us [u], to ſurvey the eaſtern countries namely Armenia, Parthia, and Arabia. His geographical deſcription of the world was originally wrote in Greek verſe, and tranſlated into Latin verſe by Rufus Feſtus, Avienus, and Priſcian. Euſtathius, archbiſhop of Theſſalonica, wrote in Greek a learned commentary on this work.

Thus we have taken the materials to compoſe this volume from the pureſt ſources of antiquity. However, we muſt own, that as to the hiſtory of antient times, and the original of particular nations, we have not been able to give ſuch ſatisfactory accounts as we could wiſh, not one of the hiſtories of thoſe antient nations, whom the Grecians called Barbarians, written by the natives, or extracted immediately from their records, having reached us. What fragments of them have been preſerved here and there in other

[t] Iſai. 23. 13. [u] Lib. 5. c. 27.

other writers, we have connected together, filling up the chaſms of one writer with the teſtimony of another, and melting down together the moſt precious metals of antiquity, in order to form a new one leſs precious indeed, but, perhaps, more ſerviceable.

BUT as the authors, that we have had occaſion to follow, or even to tranſcribe, in this volume, are ſuch as have tranſmitted to us accounts of the earlieſt times, we muſt here, in a few Words, remove the Prejudices which ſome criticks have raiſed againſt the profane writers in general, who have treated of the original and early antiquities of nations. In moſt nations, ſay they, poets were the firſt hiſtorians, who of courſe interſperſed their accounts with a thouſand fables. From ſuch infected ſources the hiſtorians in after-ages, for want of better materials, copied, and conſequently deſerve no more credit than thoſe they tranſcribed.

To anſwer this objection, we muſt with Varro divide the whole ſeries of time into three periods; the firſt, from the beginning of the world to the deluge; the ſecond, from the deluge to the firſt olympiad; and the third, from the firſt olympiad to the preſent. The firſt period he calls an age intirely unknown; and truly we find nothing in profane Hiſtorians, relating to that time, which has any appearance of truth, if we except two or three, quoted by Joſephus, whoſe accounts of the deluge, and the times preceding it, agree, as he informs us, in many particulars with that of Moſes. The ſecond period Varro ſtiles the fabulous time, by reaſon of the many fables with which the accounts of it, that have been tranſmitted to poſterity, are interwoven: The laſt he calls the hiſtorical time. Diodorus Siculus extends the fabulous age no farther than the Trojan war; and indeed from that time the impenetrable miſt, which had overcaſt the preceding ages, begins to clear up, and ſome rays of truth to break out. Now to anſwer the objection, we do not pretend to give any tolerable account of the firſt ages from profane authors. In after ages when the uſe of letters was introduced, poets, it is true, are ſaid to have been the firſt hiſtorians; but we muſt not ſuppoſe whatever they wrote to be a mere fable; their ground-work was often truth, tho' embelliſhed with various fictions. Thus for inſtance, Homer's poems ought not to be regarded only as an excellent poetical performance, but as the moſt antient hiſtory of Greece; inſomuch, that if we had no other remains of antiquity, than Homer's works, to convince us

of

of the Trojan war and the taking of that city, we could not call in queſtion the truth of that event. Homer, tho' a poet, diſcovers to us the ſtate of Greece at that time; he gives us an account of their kings and generals; deſcribes their ſtates, cities, and government; ſhews us, that Greece was divided into ſeveral ſmall dynaſties, each of which had their reſpective ſovereigns, of which Agamemnon, king of Mycenæ, Sicyon, and Corinth, was the moſt powerful, &c. Theſe, and a great many other events are purely hiſtorical, and confirmed by creditable hiſtorians; ſo that Homer's work is both a poem and a hiſtory. And what we have inſtanced in one poet, may in the ſame manner be applied to others: For tho' their works were interſperſed with many fabulous ſtrokes, yet they might have furniſhed a judicious hiſtorian, that could diſtinguiſh between truth and fiction, with good materials for a hiſtory: Beſides, it is not to be doubted, but that, ever ſince the uſe of characters was firſt introduced, men have left behind them monuments of ſuch things as might concern poſterity; fathers, what regarded their domeſtic affairs; princes and magiſtrates, what related to the public. Theſe were the firſt hiſtories of mankind, and the moſt antient hiſtorians have done nothing elſe but digeſt them into a better form. Thus Manetho compiled this hiſtory from the memoirs of Jerombalus, an Egyptian prieſt; Beroſus from the regiſters of the Babylonians; Sanchoniatho from thoſe of the Phœnicians, &c. And indeed there is reaſon to ſuppoſe, that moſt cities and ſtates had regiſters, in which from year to year they wrote down the moſt remarkable occurrences, and archives, wherein they lodged letters, treaties, and other pieces, which might ſerve as evidences to poſterity. They alſo tranſmitted the memory of things by the inſtitution of feſtivals, the building of cities, erecting of ſtones, pillars, altars, tombs, and the like monuments. The cuſtom of engraving on ſtone is, without doubt, very antient, and the number of theſe moſt faithful monuments of antiquity was almoſt infinite, as is plain from all the antient hiſtorians, who often appeal to them. From theſe, as well as from the poets, it is reaſonable to ſuppoſe, that the firſt hiſtorians extracted their hiſtories, and therefore they deſerve the ſame credit; nay, the poets themſelves often worked upon materials already prepared, and only put into verſe what they found regiſtered in the annals of their country. But who can warrant that the prieſts, who, in moſt nations, were the firſt annaliſts, did not through ſuperſtition inſert many fictions? Prieſts,

zealous

zealous for the worſhip of their gods, and whoſe intereſt it was by falſe prodigies to deceive people, may have ſcattered ſuch up and down in their accounts, and made their gods interpoſe in the principal actions. And in this point the beſt hiſtorians have ſuffered themſelves to be impoſed on. But as to the ſubſtance of the narrations in matters of war, politicks, new ſettlements, treaties, deaths of princes, &c. what motive could the prieſts have to be guilty of forgeries? The relating of prodigies is an abuſe, which ſuperſtition has brought into all the hiſtories of the world. Has not credulity inſerted even into the modern hiſtories a thouſand prodigies? and are theſe hiſtories leſs true with reſpect to the great events?

'Tis true, that moſt of the monuments of antiquity are now loſt; but they were in great part extant, when thoſe hiſtorians wrote, whoſe works have reached us. Beſides, tho' many of the public monuments have been deſtroyed by wars, time, miſguided zeal, and other caſualties, yet they are not all loſt. What few facts we have ſtill remaining in the moſt antient writers, furniſh a ſtock of materials, which, with the help of criticiſm, whoſe province it is to diſtinguiſh between truth and fiction, may be made uſe of, without danger of our being impoſed upon. The fragments of thoſe venerable hiſtorians, preſerved here and there in other writers, are like ſo many rays, which, in the midſt of the darkneſs thrown over the early times, ſerve to diſcover a way through the ruins.

NEITHER is the diſagreement of authors among themſelves any certain proof that they deſerve no credit. Oftentimes, with reſpect to things that have happened in our days, and almoſt in our ſight, we find a difference in the accounts given by thoſe who were eye-witneſſes to what they relate. The particulars of a battle are not always told the ſame way by thoſe who diſtinguiſhed themſelves in it. The neareſt objects appear differently, according to the different views of the ſpectators. Imagination, prejudice, and partiality often ſet a bias on mens underſtandings, and hence ariſe all thoſe variations we find in the writings, which have ſerved as memoirs to the firſt hiſtorians of particular nations. This diſagreement among authors has very much encreaſed the labour of collecting them into one body: We have often been in ſuſpence about the choice and preference, and always taken care to relate, at leaſt in the notes, the variations we found among different authors, it not being reaſonable to confine the reader to our own ſentiments.

An exact diſtribution of time is, as it were, the light of hiſtory: Without this it would be only a chaos of facts heaped together. An exact chronology is like Ariadne's clue, which conducts our ſteps through all the windings of the labyrinth. By the means of certain fixed epochas we perceive the progreſs of ſtates, the variations of their fortunes, and the changes made in their government. For this reaſon we have thought it neceſſary to ſettle the chronology, and refer the facts we have collected to their proper dates. Our general æras are, the creation, the flood, and the years before, or after, Chriſt. The mind being thus conducted, the ideas we retain from reading are more diſtinct, and more eaſily fixed in the memory.

Geography is another eſſential part of hiſtory. Every hiſtorian that neglects it muſt of neceſſity be confuſed in his relations. We have therefore endeavoured to be exact in the ſituation of the towns, rivers, foreſts, lakes, and mountains, whither the courſe of events has led us. Our guides in this were not only the hiſtorians, who are not always very exact, but alſo the moſt eminent geographers of antiquity, whom we have mentioned above; and in doubtful caſes we have had recourſe to the moderns, particularly to Cluverius, Ortelius, Cellarius, and ſuch of the modern travellers as have ſurveyed the places, and are generally looked upon as exact and faithful in their accounts. From all theſe together we have got maps drawn by a ſkilful hand, where we thought them neceſſary. Thus the reader will be able with one caſt of an eye to run over the ſeveral countries which he reads of. There are many nations, which have not the ſame limits at this day, that they had formerly; neither are all towns, which have antient names, unqueſtionably ſituated in the very places, where the towns of the ſame name ſtood heretofore. We have therefore choſe rather to deſcribe moſt of the places, mentioned in our hiſtory, by their antient names; but at the ſame time we have conſtantly taken care to reconcile the antient geography with the modern in our notes, and to mark the different limits of the new nations and the old.

It is not uſual to publiſh hiſtories with notes, or at leaſt to crowd them with ſo great a number: But tho' no other hiſtory, perhaps, has need of them, yet they are neceſſary to this which we have undertaken. The manners, cuſtoms, religions, arms, dreſs, governments, &c. of the various nations we deſcribe, are not only ſo different among themſelves,

ſelves, but from any thing we now ſee, or are acquainted with, that it would have been hardly poſſible to give juſt ideas of them without explications, which could not have well been brought into the text. The thread of the moſt beautiful ſtory would have been often broke, and no point of hiſtory would have been brought to its concluſion, but in a languid manner. It was neceſſary therefore to throw into notes the great number of inſtructive obſervations, without which the hiſtory would have been imperfect. Beſides, abundance of diſputes have been raiſed by learned men upon ſeveral events, which we are obliged to inform the public of, in order to make our work more complete. But this could not have been, if we had not taken notice of the variations of the ſeveral authors, who have tranſmitted to us the ſame facts. Hiſtorians often diſagree as to the circumſtances, and, on the other hand, the thread of the hiſtory will not admit but of one way of relating the event. We have therefore placed in the body of the hiſtory what ſeemed to us moſt probable, and the reſt in the notes, leſt thoſe readers who peruſe but one author, ſhould charge us with falſhood, if we differed from his hiſtorian. The length of ſome of our notes ought not to frighten the reader: Every judicious perſon will perceive, that we have taken pains to be as conciſe as the ſubject would allow us, having often brought, within the compaſs of a few lines, diſſertations, with which learned men have filled large volumes.

THE knowledge of the coins, weights, and meaſures of the antients, is neceſſary for the right underſtanding of their writings, as well as of the preſent hiſtory, where we could not avoid uſing now and then their terms and phraſeology. But as it cannot be expected, that we ſhould enter here into a minute diſcuſſion of a ſubject which has ſupplied matter to whole volumes, we ſhall only exhibit ſome tables, wherein the value of the antient coins, weights, and meaſures is, with great care and exactneſs, reduced, by Dr. Arbuthnot, to the Engliſh ſtandard. Several writers of great abilities, namely Biſhop Cumberland, Mr. Greaves, and Dr. Hooper, have, with great learning and accuracy, handled the ſame ſubject: But we have given the preference to Dr. Arbuthnot's calculations, by reaſon they are more adapted to the capacity of every reader; and, on the other hand, do not differ in any conſiderable matter from thoſe of the learned writers we have mentioned. In theſe tables the reader will find, 1. The Greek, Roman, and Jewiſh meaſures of

length. 2. Their meaſures of capacity for things both liquid and dry; and laſtly, their money reduced to the Engliſh ſtandard.

The Roman Ounce is the Engliſh Avoirdupois Ounce, which they divided into ſeven Denariis as well as eight Drachms; and ſince they reckoned their Danarius equal to the Attick Drachm, this will make the Attick Weights $\frac{1}{8}$ heavier, than the correſpondent Roman Weights.

Note. The Grecians divided their Obolus into Chalci and Lepra. Some, as Diodorus and Suidas, divided the Obolus into ſix Chalci, and every Chalcus into ſeven Lepta: Others divided the Obolus into eight Chalci, and every Chalcus into eight Lepta or Minuta.

The GREATER WEIGHTS reduced to Engliſh TROY WEIGHT.

Now

Now to ſay ſomething of the different computations of time; Beroſus wrote his chronology by the computation of Sari, Neri, and Soſi; which being ancient meaſures of time, and well known when the original records were written, could not then have wanted explanation. But Beroſus, or ſome later writer, has, either out of ignorance or deſign, magnified theſe meaſures beyond all imagination, and tells us, that the Sarus contained the interval of three thouſand ſix hundred years; the Nerus of ſix hundred, and the Soſus of ſixty. But other authors have taken thoſe years for days only [u]; and indeed with a great deal of reaſon; for not to inſiſt on the incredible length of the reigns of the Chaldean princes in the firſt hypotheſis, which no writer of common ſenſe could offer to impoſe on the world, it plainly appears, that they were no more than days, from the reign of the ſixth king of Chaldea, which is expreſſed in the firſt table of thoſe kings exhibited in B. I. ch. 1. ſect. 5. to be nine-ty nine years, but in the others by the round number of ten Sari, or 100 years. The word Sarus, throwing away the ter-mination, is no other than the Chaldee, or Syriac Sar, ten. The Sarus therefore contained three thouſand ſix hundred days, or juſt ten old Chaldean years, of three hundred and ſixty days each; and that before the deluge, not only the civil, but alſo the tropical, ſolar, and lunar year conſiſted of twelve months, of thirty days a piece, or three hundred and ſixty days in the whole, has been fully proved by a modern writer [w].

THE Egyptians, who addicted themſelves to the ſtudy of aſtronomy in the earlieſt ages, and were well acquainted with the motions, periods, and ſtations of the planets, were the firſt that adjuſted the length of the year to the annual re-volution of the ſun, by adding to their twelve months of 30 days a piece five additional days and ſix hours, while the Greeks and Romans uſed the more rude and inconvenient form of lunar years, intercalating a month every third year. However, the five additional days, as Syncellus [x] informs us, were not introduced till a thouſand years after the deluge, and never were looked upon as proper parts either of the year, or of any of its months, but as days belonging to the nativity of five ſeveral Egyptian deities, who, as it is obſerved in a fa-mous tradition related by Plutarch [y], were to be born neither in any year, nor in any Month,

[u] Syncellus, p. 17.

[w] Allin's Diſc. on the antient Year, in Mr. Whiſton's Theory, Book II. p. 144.

[x] Syncell. p. 123.

[y] Plut. de Iſid. & Oſirid.

THE Jewiſh year, as is plain from the calculations which Moſes gives us of the days of the flood and elſewhere, conſiſted of 365 days, and conſequently of 12 ſolar months, the laſt of which had 35 days. As Moſes had been brought up in Egypt, it is very likely he learned that way of reckoning there; and beſides, it muſt have been the moſt known and eaſy method to the Jews, who had been accuſtomed to it during their long abode in Egypt. Scaliger [z], and others after him, have indeed ſuppoſed, that they had an intercalar month, once every 120 years; but it is plain, that the ſcripture hints nothing like ſuch an intercalation, or year of 13 months; tho' it is not eaſy to gueſs how they diſpoſed of the ſix additional hours of the Egyptians, without ſome ſuch ſuppoſition. However, Moſes, by expreſs command of God, did afterwards compute the years by moons.

THE antient year of Greece, Lydia, and the Grecian colonies in Aſia, as well as the firſt Roman year, before the correction of Numa Pompilius, conſiſted likewiſe of 360 days, as the learned writer, we have quoted above, fully proves [a].

BESIDES the computation of months and years, the Greeks reckoned their time by Olympiads, each olympiad containing the ſpace of four years. This method of computation had its riſe from the Olympic games, which were celebrated every 4th year, and became ſo conſiderable, that the Greeks made them their epoch. They commenced, according to ſome, the year of the world 3208, 776 years before Chriſt, and 22 before the founding of Rome; according to others, in the year of the world 3251.

THE Romans computed by Luſtrums, or purifying ſacrifices, which were inſtituted by Servius Tullus, about the year 180 of Rome, and were to be renewed every five years, immediately after the Cenſus; whence the Luſtrum contained the ſpace of five years. But they muſt have been for ſome time diſuſed, as appears from the Faſti Capitolini, where the 50th Luſtrum is ſaid to have been made in the 574th year of Rome.

As

[z] Scaliger, de emend. tempt. l. 2.

[a] Mr. Allin, ubi ſupra.

As to the chronology of the antients, there is no depending upon it. That of the eaſtern nations has been ſtrangely depraved, by contentions ariſing among them about their antiquity, each claiming the preference in that point. Thus Herodotus tells us [b], that the prieſts of Egypt reckoned from the reign of Menes to that of Sethon, who put Sennacherib to flight, 341 generations, as many prieſts of Vulcan, and an equal number of kings of Egypt. He adds, that three Generations make an hundred years; ſo that, according to this computation, the whole time from the reign of Menes to that of Sethon was eleven thouſand three hundred and forty years. The Chaldeans alſo piqued themſelves on their antiquity, and pretended to have obſerved the ſtars 473,000 years; and Calliſthenes, the diſciple of Ariſtotle, ſent aſtronomical obſervations from Babylon to Greece, ſaid to be of 1903 years ſtanding. The chronology of the antient Greek authors is no leſs uncertain. Thoſe who wrote of antiquities, as Pherecydes, Epimenides, Hellanicus, Hippias the Elean, Ephorus, &c. digeſted their works by genealogies, or the ages, and ſucceſſions of the prieſteſſes of Juno Argiva, of the Ephors, of the kings of Sparta, and the Archons of Athens, &c. nor did they begin to ſet down the generations, reigns, and ſucceſſions in numbers of years, till ſome time after the death of Alexander, which makes their chronology very uncertain. And ſuch it was reputed by the Greeks themſelves, as is manifeſt from ſeveral paſſages in Plutarch [c]. The chronology of the Latins is ſtill more uncertain. Plutarch, and Servius repreſent great uncertainties in the original of Rome. The old records of the Latins were burnt by the Gauls about 64 years before the death of Alexander; and Quintus Fabius Pictor, the moſt antient Latin hiſtorian, lived 200 years after that king, and copied the greateſt part of his hiſtory from Diocles Peparethius a Greek. Not one of the European nations had any chronology at all before the time of the Perſian empire, and whatever chronology they now have of antient times has been formed ſince by reaſoning and conjecture: So that, on a ſtrict view and due examination of the antiquities of nations, and the records which have been left us, thoſe of the Jews, excluſive of their divine authority, will evidently appear to be the moſt certain and authentic, and conſequently the ſureſt foundation to build our chronology upon.

HOWEVER

[b] Herod l. 2. [c] Plut. in Vit. Lycurg. & Solon.

HOWEVER, it muſt be confeſſed, that there is no certain uniformity in the Jewiſh computation, and that the ſeveral copies of their records, viz. the Hebrew, Samaritan, Pentateuch, and Septuagint, differ very much from one another. Which diſagreement hath ariſen from two things; 1. Corruption, or errors of frequent tranſcribing; 2. The want of computing from ſome fixed æra, and digeſting the hiſtory as it was written, into a chronological method: For beſides the great diſagreement among the various copies, with regard particularly to the ages of the patriarchs, there is a ſeeming difference at leaſt betwixt the whole numbers of ſeveral intervals. Thus, for inſtance, the interval from the Exodus to the founding of Solomon's temple, is expreſly mentioned [d] to be four hundred and eighty years; whereas the ſum of all the patriarchs given in the book of Judges, &c. amount to about five hundred and ninety two years. Which particulars not being adjuſted by the years of ſome certain æra, we are at a loſs for the true diſtance of time, not knowing by what ſtandard the meaſure of the intervals is to be taken.

THIS variety of computations hath left room for chronologers to enlarge, or contract the ſpace of time, betwixt the flood and the birth of Chriſt, by adhering to one copy rather than another; or by rejecting, or retaining the whole numbers, or the particulars, juſt as it ſuited their humour of making the ſacred hiſtory agree with the prophane; or otherwiſe of reducing the prophane to the ſacred. And as the diſagreement among the heathen writers is great alſo, and every author hath followed the hiſtorian he liked beſt, hence a wide difference hath ariſen amongſt modern chronologers, as appears by the various computations, ſeveral of them have made of the years of the world to the birth of Chriſt, which we here give, as collected by Strauchius [e], Chevreau [f], and others.

The

THE Reader may perceive at one view of the preceding tables, what room the ſeveral copies of the ſcriptures we now have, give for varying the chronology of the whole, and how many different ſyſtems may be grounded on them. By the calculation made uſe of in the firſt table, which conſiſts of the intervals, inſerted in the fourth, or right-hand column of each diviſion, from the creation to the birth of CHRIST, according to the whole numbers mentioned in the text of the reſpective copies, the Samaritan account exceeds the Hebrew by three hundred and ſixty one years, while the Septuagint exceeds the Samaritan by nine hundred and ſixty five years. Which difference ſtill becomes greater in the ſecond table, made out of the particular numbers, which compoſe the intervals, by an addition of one hundred and nineteen years to the Samaritan, and two hundred and thirty eight to the Septuagint, computation; which therefore exceeds the Hebrew computation in the firſt table, by no leſs than one thouſand five hundred and ſixty-four years.

THE third table exhibits three other forms, the firſt of which, being that of the great primate Uſher, is grounded on the Hebrew whole numbers, and differs from that in the firſt table but ſixty years, which are added to the interval from the deluge to the call of Abraham. The ſecond is compoſed from the chronology of Joſephus as cleared up by Dr. Wills [g], and Mr. Whiſton [h]; who, reckoning according to the particulars, obſerves ſomewhat of a mean between the Samaritan and the Septuagint, and is thought, in moſt reſpects, to have given us the true Hebrew numbers, which, it is to be feared, the Jews, ſince his time, have corrupted. And the third is that of P. Pezron, being an enlargement of the Septuagint and Greek computation, in order to accommodate the ſacred to the prophane hiſtory.

OF theſe three different copies of ſcripture, the Samaritan computation ſeems not only beſt to ſuit the nature, and circumſtances of the hiſtory of antient times recorded in the old teſtament, as well as to be confirmed by the concurrence of genuine prophane hiſtory, which by no means ought to be thrown out of the queſtion; but alſo appears to be the old and authentic Hebrew computation, preſerved by the Samaritans in their character, while the Hebrew copy has evidently been

[g] Pref. to L'Eſtrange's Edition of Joſephus. [h] Chronol. of the Old and New Teſt. and his Eſſay for reſtoring the true Text, &c.

been corrupted, in all probability, to obviate the prophecies concerning the Meſſiah, and on other accounts; as Pezron [i], Dr. Wills [k], Mr. Whiſton [l], and others have ſufficiently proved.

For theſe reaſons therefore, and many others, which will frequently occur in the courſe of this work, we have found ourſelves obliged to depart from the example of the generality of our modern chronologers, who follow the Hebrew chronology, and to adhere to that of the Samaritan, which preſerves a mean between the defect of the Hebrew on the the one hand, and the exceſs of the Septuagint on the other. In adjuſting our periods, we have ſtrained nothing to favour any hypotheſis of our own, or to force the ſacred hiſtory to agree with any part of the prophane, as too many unreaſonably have done; of which our conſtant confining ourſelves to the whole numbers, which are always the ſhorteſt, is a demonſtration.

The reader may obſerve, that the whole difference betwixt the Hebrew and the Samaritan computation (for we have no more than the Pentateuch in that character) lies in the interval between the creation and the calling of Abraham, and ariſes from the different ages aſſigned the patriarchs, at the birth of their ſons, mentioned in Geneſis. The Septuagint copy carries this difference down to the founding of the temple, which, according to that text [m], happened in the four hundred and fortieth year of the Exodus, forty years ſhort of the Hebrew; but we have choſen to follow the whole number, as it ſtands in the Hebrew [n], (for we have no Samaritan copy here to guide us) thinking the text too expreſs to admit of any alteration. The length of the interval from the founding to the burning of the temple, is limited within the four hundred and thirty years [o] of God's patience towards the Jews; and is collected out of the years of the reigns of the kings of Iſrael and Judah, as they have been collated and adjuſted by judicious chronologers [p]: So that there is no room for allowing more than forty years to the reign of Solomon,

[i] Vid. l'Antiquité des tems retablié & defendué. [k] In his Preface to L'Eſtrange's Engliſh Joſephus. [l] Eſſay for reſtoring the true Text, &c. Prop. 12. p. 220. [m] Vid. Septuag. 1 Kings vi. 1. [n] 1 Kings vi. 1. [o] Ezek. iv. 4, 5, 6. [p] See Uſher's Chronologia Sacra, Pars poſterior; and Whiſton's Short View of the Chronol. of the Old Teſt. p. 83, and in the Tables at the End.

Solomon, as assigned him in all the copies extant, the Scripture affording means for reconciling the seeming inconsistencies, with regard to the ages of him and his son Rehoboam, at their respective accessions to the throne. But here we should be at a great loss (the Babylonish captivity interrupting the course of the Jewish history) if it was not for the opportunity we have of connecting this period with the Nabonnassarian or Babylonian æra, by means of the famous astronomical canon of Ptolemy; whereby we are enabled with certainty to carry the account of time down to the birth of CHRIST, which, according to our supputation, falls in the year of the world four thousand three hundred and five, and of the flood two thousand nine hundred and ninety eight, according to the Samaritan computation in the first table.

WE have also taken the liberty to depart from the general method, observed hitherto by chronologers in another point, and instead of carrying down our computation from the creation, through the several ages, to the birth of CHRIST, to discontinue it at the flood, and begin a new reckoning from thence; and this we have been induced to do for several reasons.

1. BECAUSE the period between the creation and the flood contains little memorable, besides the age and death of each patriarch. 2. Because it is a particular period, cut off, as it were, from the rest of time, and hath little or no connection with the ages succeeding the deluge. 3. Because at the deluge the old world was destroyed, and from thence a new origination of mankind began, whose affairs have little or no dependence on those of the antediluvians. 4. Because it will help to give the reader a more distinct notion of the distance of time, as derived from a period with which we are more immediately concerned, and beyond which no genuine history of any nation reaches. 5. Because it will bring the several scriptural computations nearer to an agreement among themselves, the great disproportion among them arising chiefly from the difference this period creates. Thus in the whole space of time, from the creation to the birth of CHRIST, the Septuagint, according to the first table, differs from the Hebrew, one thousand three hundred and twenty six years, and but seven hundred and forty, reckoning from the flood. The difference also between the Septuagint and the Samaritan, reckoning from the creation, is no less than nine hundred and sixty five years; and no more than thirty,

if you compute from the flood. The Septuagint chronology exceeds that of Josephus six hundred and twelve years, taking in the times preceding the deluge; but in the space betwixt the deluge and CHRIST, it is exceeded by that of Josephus by seventy four years, as will appear more clearly by the following table.

According to the First TABLE.			According to the Second TABLE.		
	Years from the Creation to Christ.	Years from the Flood to Christ.		Years from the Creation to Christ.	Years from the Flood to Christ.

INDEED

INDEED, if we compare the Hebrew and Samaritan, the caſe is otherwiſe; for the difference betwixt thoſe two Computations is greater in the interval from the flood to Chriſt than from the creation, the Samaritan falling ſhort of the Hebrew in the interval between the creation and the flood, at the ſame time that it exceeds it in that betwixt the flood and the vocation of Abraham.

UPON theſe conſiderations, we have thought fit, throughout the courſe of our hiſtory, to make uſe of the year of the flood, inſtead of that of the world, in our marginal ſynchroniſms, and hope the reader will conſider it rather as an improvement, than an innovation in chronology. However, in our tables at the end of each volume, we ſhall add the year of the world, to ſerve inſtead of a Julian period; a contrivance, which how uſeful ſoever it may be in the technical chronology, is, as we conceive, of no manner of uſe at all in the hiſtorical.

To the year of the flood we have always added that before Chriſt, which, conſidering the variety of ſyſtems that are abroad, (every author almoſt having one of his own) is the more neceſſary, as it always carries the chronology of the author along with it; for the two ſums, being added together, ſhew the year before the Chriſtian Æra, according to that Computation, whether Hebrew, Samaritan, or Septuagint, which the author follows. For inſtance, according to the Samaritan account in the firſt table, which we follow, Solomon began to build the temple in the year of the flood 1987, and before Chriſt 1011; theſe two ſums added make two thouſand nine hundred ninety eight; which is the year before the Chriſtian Æra by that reckoning; and two thouſand nine hundred ninety eight being added to one thouſand three hundred and ſeven, the number of years betwixt the creation and the flood, the ſum, four thouſand three hundred and five, gives the year of the world in which the birth of Chriſt happened, according to the vulgar computation. Indeed, was our chronology upon as fixed a footing as it is among the Greeks, the Ruſſians, and ſome other nations, who begin their computation from the creation, and never change their opinions; to diſcover the diſtance of any tranſaction backwards from the preſent time, there would be no need of knowing more than the year of the world in which it fell out. For inſtance, the temple was begun, according to the Ruſſians, who follow the Greek and Septuagint computation in the ſecond table, in the year of the world 4495.

Now the preſent year of our Lord, 1730, being the ſeven thouſand two hundred and thirty eighth according to their account, it is only deducting four thouſand four hundred ninety five, from ſeven thouſand two hundred thirty eight, and you have two thouſand ſeven hundred forty three, which is the number of years ſince the founding of Solomon's temple to this time, differing but two years in exceſs from our reckoning: Whereas, before we could be able to diſcover it by that ſingle character, we ſhould be obliged, perhaps, to ſearch a good while to find out the ſyſtem which the author goes upon; and when we had met with it, ſhould be at the trouble of uſing ſubſtraction, as well as addition. So that the joining the year before Chriſt to that of the world, or of the flood, is one of the greateſt improvements in chronology; and as neceſſary for aſcertaining the true time of every event, as the longitude and latitude are in geography, to determine the exact ſituation of a place. In a word, theſe two ſorts of reckonings ought to be made inſeparable; and whoever gives only one of them without the other, can afford his reader no ſatisfactory idea of things; and indeed muſt write in confuſion himſelf.

HAVING given the reader this general account of our chronology, and ſtated the ſeveral periods of it from the creation, and the flood, to the birth of Chriſt; we ſhall hereafter give the analyſis of each period, as we proceed, to ſhew the authority upon which our ſyſtem is grounded.

IN the hiſtory itſelf we have endeavoured to execute our propoſals in the beſt manner we could; and hope, we have made no ſlips therein, but ſuch as are excuſable. Some, no doubt, there are; for we have not the vanity to think ourſelves able to write a perfectly complete hiſtory, which, as a modern author [P] expreſſes it, is not to appear, but in that year which diſcovers the perpetual motion, and the philoſopher's ſtone.

IN compoſing the following work, we have all along taken the liberty (to uſe the words of an ingenious gentleman, whom we have followed in this reſpect) "To tranſlate, to "imitate, or even literally to introduce any parts of the au"thors, from whom we have made our collections, if we "found them really conducing to the uſe or ornament of the "deſign, not being able to diſcover any merit, or cunning, "in

[P] Le Moyne.

" in varying the ſtile and ſenſe of an author, for no ~~other~~
" other purpoſe, than to conceal the ignorance of the
" tranſcriber, or to deſtroy an obligation of gratitude,
" which ought to be confeſſed to all mankind"[q].

We have added to this, as we ſhall do to each volume, a complete and copious Index, giving the reader a view of the whole work in epitome, and referring him to all the parts of it with great exactneſs.

[q] Mr. Lewis in his preface to his origines Hebræ.

AN

UNIVERSAL HISTORY,

FROM THE

Earlieſt Account of Time to the Preſent.

THE

INTRODUCTION,

CONTAINING

The Coſmogony, or Creation of the World.

OUR deſign is to write a general hiſtory of mankind, from their original to our own time. An undertaking of vaſt extent, and which would, perhaps, be ſcarce practicable, were the hiſtories of all nations now extant, and their ſeries complete. But as many nations entirely neglected their hiſtory, at leaſt for ſeveral ages; ſo the hiſtories of many others, who kept ſome records of paſt actions, have been either totally, or in part, deſtroyed by wars, time, miſguided zeal, and other caſualties. Beſides, few nations have been able to give a tolerable account of their original, or early antiquities; the firſt memory of perſons, and facts,

The deſign of the work, and the difficulties which attend it.

having

having been preſerved by the inſtitution of feſtivals, the building of cities, erecting of ſtones, pillars, altars, tombs, and the like monuments, from whence a true ſeries of hiſtory could not be accurately deduced and collected, any more than from the oral tradition which accompanied them.

BUT if the want of records has, on the one hand, reduced hiſtory into a cloſer compaſs, it has, on the other, occaſioned great confuſion and uncertainty. For the frequent interruptions and defects, which occur in the antiquities of nations, drive the hiſtorian ſo often to precarious conjectures, and oblige him to have recourſe to ſo many ſhifts, to connect and ſupply them, that his labour ſeems to be encreaſed by the ſcarcity of materials; and he is unable, after all, to give his reader ſatisfaction.

MANY other difficulties there are, which attend the execution of this undertaking, eſpecially as to the hiſtory of antient times: ſuch as the numbers of forged and ſpurious books; the fictions of poets, who were the firſt hiſtorians; the contradictions and partiality of authors; the different computations of time in uſe among the ſame, as well as different, nations; the want of æras to compute from in ſome nations, and the multiplicity of them in others; the variety of proper names of the ſame perſon and place, and the corruption of them through ignorance, negligence, or deſign. What adds to the misfortune is, that, if we except the Jews, not one of the hiſtories of thoſe antient nations, whom the Grecians called Barbarians, written by the natives, or extracted immediately from their records, have come to our hands; nothing remaining of them, beſides ſome few fragments, preſerved here and there in other writers, which ſerve only to make us lament their loſs, and to ſhew the inaccuracy of the Greek hiſtorians, with regard to foreign nations.

WE have thought proper briefly to premiſe thus much, with regard to the ſtate of antient hiſtory, in order to entitle ourſelves to the reader's candour, in paſſing his judgment upon a performance, wherein there are ſo many difficulties to ſtruggle with. But before we enter upon the hiſtory itſelf, we ſhall give ſome account of the coſmogony, or the production and formation of this earth; which ſeems to demand our firſt attention, as being the place from whence mankind derive their original, and the theatre whereon the ſcenes of the enſuing hiſtory are to be acted.

THAT

THAT the univerſe was created or produced out of nothing, by an infinitely powerful, wiſe, and good GOD, who being ſelf-exiſtent is the original cauſe of all things, is not only certain from revelation, but deducible, and has been clearly proved, from reaſon [a]. And tho' all atheiſts, both antient and modern, have conſtantly denied, that even infinite power can create matter, and the affirmative has been thought to be embaraſſed with ſeveral conſiderable difficulties, as our having no idea how a nothing from all eternity can be made to exiſt, and the ſeeming contradiction in ſuppoſing the world to be created in time, becauſe then it would be ſeparated from eternity only by an indiviſible point, which cannot ſufficiently diſtinguiſh an eternal Being from a temporary production [b]; yet theſe are rather difficulties ariſing from our own imperfect, and finite reaſon and conception, whereby we are not able to form a diſtinct idea of creation, or eternity, than any real impoſſibility in the thing itſelf: for it is no contradiction to affirm, that ſomething, which once was not, may ſince have begun to exiſt; the true notion of creation being not a forming of ſomething out of nothing, as out of a material cauſe, but only a bringing of ſomething into being, which before had no being at all, and which, without ſome cauſe, would not have exiſted; and this no man can reduce to a contradiction, any more than the formation of any thing, into a ſhape which it had not before, can be reduced to a contradiction [c]. And they who deny God's power to create matter, muſt fly to one of theſe ſuppoſitions, either that matter exiſted from eternity, as a paſſive ſubject of all the operations of God, and as a collateral principle, or elſe that matter is the only ſelf-exiſtent being; either of which involves us in the moſt impious abſurdities. The firſt ſuppoſition neceſſarily implies two ſelf-exiſtent principles, which is a direct contradiction; and the other, that it is impoſſible to conceive matter not to be, or to be in any reſpect otherwiſe than it now is, without a contradiction; than which nothing is more eaſy. For whether we conſider the form of the world, with the diſpoſition and motion of its parts, or whether we conſider the matter

God the author of the world, both as to matter and form.

[a] Dr. Clarke, in his Demonſtration of the Being and Attributes of God. [b] Mr. Bayle, dans les Nouvelles de la Rep. des Letters, Tom. IV. p. 1301. [c] Dr. Clarke, ubi ſup. p. 83, 84. See alſo Dr. Nicholls's Conference with a Theiſt, Vol. I. Part 1, p. 26.

matter of it, as ſuch, without reſpect to its preſent form; every thing in it, both the whole, and every one of its parts, their ſituation and motion, the form, and alſo the matter, are the moſt arbitrary and dependent things, and the fartheſt removed from neceſſity, that can poſſibly be imagined [d].

The arguments uſed to prove the non-exiſtence of matter of ſmall force.

As for thoſe who deny the actual exiſtence of matter and motion, (if there be any who do ſo in earneſt) it might be ſufficient to ſay, that there is in effect no difference in reſpect to us, whether they be actually exiſtent, or no more than appearances; for if GOD immediately communicate all ſenſible perceptions to our mind, as he muſt do if there be no ſuch thing as ſenſible ſubſtance, he is ſtill the author of thoſe appearances, which have the ſame conſequences and effects, to our conception, as if they were real: not to urge the indecency of ſuſpecting GOD to have made the world a mere ſcene of deluſion. The impoſſibility of extenſion is attempted to be proved from the inextricable difficulties which follow, if matter be infinitely diviſible, as it neceſſarily muſt, and is eaſily demonſtrated [e]. And if there be no extenſion, the unavoidable conſequence is, that there can be no motion; which is alſo urged from the perplexing objections raiſed on the ſuppoſition of a vacuum; and yet a vacuum muſt be admitted, or elſe no motion can be conceived [f]. But theſe difficulties, though unanſwerable, as great maſters of reaſon have confeſſed, evince no more, than that human underſtanding is finite and imperfect; and being only raiſed from our want of having an adequate idea either of extenſion or ſpace [g], ought not therefore to be eſteemed real difficulties [h].

The ſeveral opinions concerning the origin of the world.

THE ſeveral opinions, which have been held by the antients, or moderns, as to the origin of the univerſe, may be comprehended under one, or other, of the following three; viz.

I. THAT the world is eternal, both as to matter and form, and had neither any origin, nor will be ſubject to any corruption [i].

II. THAT

[d] Dr. Clarke, ubi ſup. p. 23, &c.
[e] Vide Bayle, Dict. Hiſt. Art. Zenon, Remarq. G.
[f] Vid. ibid. Rem. F. I.
[g] Vid. ibid. Rem. I. and Locke on Human Underſtanding, B. 2. c. 13.
[h] Vid. Clarke's Demonſtration of the Being and Attributes of God, p. 11, 12.
[i] Diodor. Sic. l. 1. p. 6.

II. THAT the matter of the world is eternal, but not the form. Or,

III. THAT the world had a beginning, and will ſuffer a diſſolution, being of its own nature periſhable.

AND to begin with the firſt of theſe opinions: None of the antients openly maintained it, excepted ſome Pſeudo-Pythagoreans, and Ariſtotle [k]; to whom we may add ſeveral of Plato's followers. But few, if any, of them intended thereby to aſſert, as ſome moderns have done, that the material world was GOD, or the original, ſelf-exiſting, and independent Being, in oppoſition to the belief of a ſupreme all-governing Mind; but either barely that ſomething muſt needs be eternal, which is all Ocellus Lucanus proves; or elſe that the world is an eternal, and neceſſary effect, flowing from the immutable energy of the divine nature, which ſeems to have been Ariſtotle's opinion; or elſe that the world is an eternal voluntary emanation from the all-wiſe and ſupreme Cauſe, which was the opinion of many Platoniſts [l]. The opinion of thoſe who held it eternal, both in matter and form.

OCELLUS LUCANUS, whoſe antiquity and authority have been oppoſed to thoſe of Moſes [m], though he lived not long before Plato, was one of the moſt antient aſſerters of the world's eternity; wherein he deviated from the true doctrine of his maſter Pythagoras. We have a ſhort treatiſe under his name, concerning the nature of the univerſe, wherein he affirms it to be utterly incapable either of generation or corruption, of beginning or end [n]; that it is of itſelf eternal, and perfect, and permanent for ever [o]; and that the frame and parts of the world muſt needs be eternal, as well as the ſubſtance and matter of the whole [p], and mankind alſo [q]. But his arguments for this opinion are either very abſurd and ridiculous; as when he attempts to prove that the world muſt needs be eternal, without beginning, or end, becauſe both its figure and motion are circular, and therefore without beginning, or ending [r]; or elſe they are ſuch arguments as tend to prove that ſomething muſt needs be eternal, becauſe it is impoſſible for every thing to ariſe out of nothing, or to fall into nothing; as when he The opinion of Ocellus Lucanus.

[k] Burnet's Archæol. l. 2. cap. 1. [l] Dr. Clarke, ubi ſup. p. 32. [m] Vid. Oracles of Reaſon, p. 215. [n] Ocell. Lucan. de Univ. p. 506. Inter opuſc. Mythol. edit. per T. Gale, 1688. [o] Ib. 510. [p] Ib. 528. [q] Ib. 530. [r] Ib. 514. Vid. alſo Oracles of Reaſon, ubi ſup.

he ſays, that the world muſt have been eternal, becauſe it is a contradiction for the univerſe to have had a beginning; ſince, if it had a beginning, it muſt have been cauſed by ſome other thing, and then it is not the univerſe [s]: to which one argument all he ſays in his whole book is plainly reducible. And to ſay the truth, he himſelf ſeems perſuaded, that however eternal and neceſſary every thing in the world be imagined to be, yet even that neceſſity muſt flow from an eternal and intelligent Mind, the neceſſary perfections of whoſe nature are the cauſe of that harmony which keeps the univerſe together, and prevent its falling into diſorder [t]. He allows God to have given men faculties, organs of ſenſe, and appetites, not for the ſake of pleaſure, but fitted for final cauſes [u]; and expreſly aſſerts, that the ever active Being governs, and the ever paſſive is governed; that the one is firſt in power, the other poſterior; that the one is divine, rational, and intelligent, and the other generated, irrational, and liable to change [x].

Of Ariſtotle. ARISTOTLE alſo held this opinion, as is ſufficiently known; and, if he be to be believed, was the firſt, at leaſt of the Greeks, who aſſerted it; for he ſays, that before his time the temporary production of the world was univerſally entertained, though it was a queſtion whether it ſhould ever periſh or not [y]. His doctrine was, that not only the matter of the heavens and earth were ingenerate and eternal; but that even mankind, and all the ſpecies of animals, male and female, have ſubſiſted from everlaſting by a perpetual courſe of generation, without any original beginning or production; and that the earth hath for ever been adorned with trees, plants, flowers, minerals, and other productions, as we now ſee it to be [z]. But how this is reconcileable with what he elſewhere delivers of the natural gravity and levity of different elements, ſeems hard to ſhew: for if thoſe elements were in their natural places and diſpoſitions, according to their reſpective gravity, which nothing but ſome external violence could have hindered; it follows neceſſarily, that the earth once was in a very different form from

[s] Ocell. ibid. 506, 508. [t] Ocell. de Legibus Fragm. ibid. p. 537. [u] Idem de Univ. 531. Vid. Dr. Clarke's Demonſtration, &c. p. 33, &c. [x] Ocell. de Legibus Fragm. ubi ſup. p. 538. [y] Ariſtot. de Cœlo. lib. 1. cap. 10. [z] Ibid. cap. 12. Vid. Philon. Jud. de Incorruptibilitate Mundi, p. 940. Burnet's Archæol. l. 1. p. 180. Cudworth's Intellectual Syſtem, p. 250.

from what it now is, and could not poſſibly be inhabited from eternity [a]. The great reaſon, which induced Ariſtotle to aſſert the world to be eternal [b], was, becauſe he thought ſuch an effect muſt needs eternally proceed from ſuch an eternal cauſe as the divine Mind, which, being all act and energy, could not reſt in a ſtate of inactivity. He acknowledges, that the firſt principle is neither fire, earth, nor water, nor any thing which is the object of ſenſe; but that a ſpiritual ſubſtance is the cauſe of the univerſe, and the ſource of all the order and beauty, as well as of the motions and forms, which we ſo much admire in it [c]. And he expreſly deſcribes God to be an intelligent Being [d], incorporeal, the firſt mover of all things, himſelf immoveable [e], eternal, indiviſible, and void of all quantity [f]; and affirms, that if there were nothing but matter in the world, there would be no original cauſe, but an infinite progreſſion of cauſes [g]; which is abſurd [h]. So that the true notion of this great philoſopher was, that though the world had no temporary generation, yet it was produced from one ſupreme Deity, after ſome other manner [i].

THESE ſentiments of Ariſtotle, as to the eternity of the world, have been embraced by many of his followers, and among the reſt by ſeveral learned Mohammedans, who were thence named Dahrians, or Eternaliſts. Of this opinion al Farâbi, al Kendi, Ebn Roſhd, and Ebn Sina (which two laſt we uſually call Averroes and Avicenna) were ſuſpected; and therefore their philoſophy was publicly, and even in the pulpit, inveighed againſt by the more orthodox, and themſelves branded with the invidious appellations of atheiſts and infidels [k].

THOUGH Plato, as we ſhall ſee hereafter, did himſelf plainly acknowledge the world to be made by God, yet having uſed ſome expreſſions, as if he thought the time of its formation

Of Plato's followers.

[a] Vid. Burnet's Archæol. l. 1. p. 181, and his Theory of the Earth, V. I. p. 51. [b] Several other Reaſons were given by his Followers, nearly agreeing with thoſe of Ocellus, which may be read in Philo Jud. ubi ſup. p. 943, &c. [c] Ariſtot. Metaph. l. 1. cap. 2, 3. [d] Νοῦς. [e] Diogenes Laert. in vita Ariſtot. p. 286. Ed. Amſt. 1692. [f] In Phyſ. l. 7. c. 1. &c. [g] In Metaph. [h] Vid. Clarke's Demonſtration, &c. p. 35, and alſo Cudworth, p. 253. [i] Simplic. in Ariſtot. Phyſ. l. 8. & l. 1. c. 1. [k] Vid. D'Herbelot. Biblioth. Orientale, p. 303. & Elench, Scriptorum præfix. Epiſt. Hai Ebn Yokdhan.

formation to be indefinite; as when he says, that the world *must* needs be an eternal resemblance of the eternal idea [l], his followers, or the greatest part of them, who adhered to Aristotle's opinion in this matter, took advantage of these expressions, and explained them so, as if by the creation of the world was not to be understood a creation in time, but only in order of nature, casuality, and dependance [m]: that is, that the will of God, and his power of acting, being necessarily as eternal as his essence, the effects of that will and power must be supposed coeval to the will and power themselves; in the same manner as light would eternally proceed from the sun [n], or a shadow from the interposed body, or an impression from an imposed seal, if the respective causes of these effects were supposed eternal [o]. Existence from eternity, and being caused or produced by another, were not therefore by these philosophers apprehended to be contradictory or inconsistent. And as they were led into this opinion, no otherwise than from the sole consideration of the deity; viz. its benevolent will, and generative power [p]; so they allowed, that the world, notwithstanding its being from eternity, *might in some sense* be said to be made, as being produced from another cause, and not self-originated. And the generation of the inferior gods and the world, in this sense, Proclus himself, that grand champion for the world's eternity, plainly acknowledges, when he says, that they called it the generation of the gods; meaning thereby, not any temporary production, but their ineffable procession from a superior first cause [q].

THE latter Platonists were so fond of this notion of the world's eternity, that being on the one hand unwilling to abandon it, and on the other desirous to save appearances, they endeavoured, by forced constructions, to wrest their master's words, especially his Timæus, to their purpose; and, as has been long since observed, turned themselves every way, using all manner of violence to the text, as conceiving they ought, by all possible means, to conceal and deny the generation of the world, and of its soul, as if it were some horrid

[l] Plato in Timæo, & apud Cicer. de Univ. [m] Plotinus En. 3. l. 2. c. 1. & En. 2. l. 9. c. 3. [n] Idem, En. 5. l. 8. c. 12. Sallust. de. Diis & Mundo, cap. 7. Proclus in Timæum. l. 2. p. 111. [o] Dr. Clarke's Demonstration, &c. p. 37. See also the authors there cited, & Philo Jud. de Incorruptibilitate Mundi. [p] Procl. in Tim. p. 116. [q] Procl. in Tim. p. 85. Vid. etiam Sallust. c. 13. Cudworth, p. 253.

horrid thing, and not to be ſpoken of [r]. It is well known, that Platoniſm was very early introduced into the church; and even this dogm favourably received by ſome, and Origen in particular [s], and as zealouſly oppoſed by others. It may, however, be worth obſerving, that this doctrine of the world's co-eternity with GOD was, in the ſixth century, ſuffered to be publicly taught in Alexandria by Ammonius, the ſcholar of Proclus [t]; and not without ſucceſs.

An anſwer to the Platonic argument for the world's eternity conſidered.

To the argument made uſe of by the Platoniſts for the eternity of the world, drawn from the nature and attributes of GOD, it has been anſwered; that though GOD be eſſentially and neceſſarily good, yet the communications of his goodneſs are the effects of his will, and not merely of his nature. For GOD, being a free agent, could have refrained from making the world, or could have made it otherwiſe; and therefore thoſe who make the expreſſions of the divine bounty neceſſary, in order to ſettle the world's eternity, and that he might always have an object whereon to exerciſe his goodneſs, take as much from his ſelf-ſufficiency, as they would ſeem to flatter his goodneſs. For GOD cannot be himſelf without his goodneſs; and therefore, if his goodneſs cannot be without ſome creature to ſhew and diſplay itſelf upon, GOD cannot be perfect, or happy without his creatures; becauſe theſe are the neceſſary iſſues of his goodneſs, and conſequently the being of the creature becomes neceſſary to the being of GOD, which is the higheſt derogation imaginable from the abſolute perfection of the divine nature [u]. All which is very true, and we do not ſee what reply a Platoniſt could make, if it were the real doctrine of the ſect, that the world was an involuntary effect of his mere nature. But they plainly taught otherwiſe, and expreſly declared, that one of the reaſons, why they maintained the world not to be a temporary production was, the conſideration of his beneficent will [x], as well as his productive power; both which being ſuppoſed, the effect may neceſſarily follow, without any derogation from GOD's abſolute perfections. It is not therefore without due conſidera-

[r] Plutarch de Pſychog. Plat. p. 1013. [s] Vid. Methodium de creatis, apud Photium, p. 932. [t] Zacharias Mitylenenſis, in Biblioth. patrum, Vol. II. p. 331. Ed. Paris, 1644. [u] Vid. biſhop Stillingfleet's Origines Sacræ, p. 275, &c. [x] Ἀγαθοεὶ δὴς Βούλησις. Procl. in Timæum, p. 116. which words Dr. Cudworth has tranſlated, ſomewhat freely, Eſſential Goodneſs. Intell. Syſtem. p. 253.

tion, that very able diſputants have acknowledged, that the time when the world was created, or whether its creation was, properly ſpeaking, in time, is not ſo eaſy to demonſtrate ſtrictly by bare reaſon, but the proof of it can be taken only from revelation; and therefore they, who, wanting that light, have denied the world to have had a beginning, are ſomewhat excuſable [y].

This controverſy ſet in a clearer light.

But, on a nicer diſcuſſion, this controverſy about the eternity of the world will appear to be, in a great meaſure, a diſpute about words only. All chriſtians in general (except thoſe who believe the eternity of matter, and therefore deſerve not that name) agree, that God alone hath always exiſted; but ſeveral maintain, that he might have actually created the world, as ſoon as he formed the decree of producing it; whence they conclude, that the world might have exiſted eternally, ſince there is no doubt, but that the decree to produce it is eternal. On the other hand, ſeveral maintain, that it is impoſſible for a creature to be eternal [z]. But when they come to argue, the ſtrength of each party lies rather in making objections, than ſolving them. This diſpute, which is rendered ſo tedious and perplexing, would end preſently, if they would but explain themſelves clearly on each ſide, and forego the equivocal acceptation of *eternity*; and then the queſtion ſhould be thus ſtated: *Is it poſſible, that* God *and his creatures may have always exiſted together?* The negative would not ſo readily be taken; for the expreſſion of the eternity of the world, that expreſſion, I ſay, which ſhocks ſo many people, would not ſtrike the mind. To remove this ſtumbling-block ſtill more effectually, it ſhould be declared, that a creature which ſhould have always co-exiſted with God would not be eternal, for this reaſon; becauſe the duration of creatures is ſucceſſive, and that eternity is a ſimple duration, which eſſentially excludes both paſt and future. By this eſſential diſtinction between the duration of God and that of creatures, the whole conteſt almoſt would ceaſe, and each ſide find their account. It would be granted to thoſe who deny the poſſibility of the creature's being eternal, that they are in the right; and it would not be denied to be poſſible, that God and his creature might have always have exiſted together;

[y] Dr. Clarke's Demonſtr. &c. p. 39. & Poiret. Cogitationes rationales de Deo anima & mundo. lib. 3. c. 16. num. 9 p. 439. Ed. 1685. [z] Vid. Joh. Philopon. contra Proclum, p. 4. & Cudworth, p. 887.

together; ſince it is certain, that the cauſe includes not in its idea a priority of time, with reſpect to its effect, and that this is more nicely true as to an almighty cauſe, which needs only will to produce actually whatever it pleaſes. Again, they who ſay, that the creatures have not always co-exiſted with GOD, muſt grant, that GOD exiſted before they did. There was then a before when GOD exiſted alone; therefore it is not true, that GOD's duration is an indiviſible point; whence it follows, that time preceded the exiſtence of creatures: which conſequences drive thoſe who argue in this manner to contradict themſelves; for if the duration of GOD be indiviſible, without paſt, or future, time and creatures muſt have began together; and if ſo, how it be ſaid, that GOD exiſted before the exiſtence of his creatures [a]?

THE two ſeemingly inſuperable arguments then for the eternity of the world are drawn from eternity of GOD's decree for its creation, and the indiviſibility of the real duration of GOD: which yet have been anſwered in this manner; It is ſuppoſed, that among the poſſible beings which GOD knew before he made the decrees of creation, one was a ſucceſſive duration, which hath neither beginning nor end, and whoſe parts are as diſtinct from one another, as thoſe of poſſible extenſion, which GOD likewiſe knew before his decrees, as infinite according to the three dimenſions. He has left in the ſtate of poſſible things one part of this infinite duration, and has decreed the exiſtence of the other. He choſe ſuch moment as he pleaſed, in this ideal duration, for the firſt which ſhould exiſt, and annexed thereto the act by which he decreed the creation of the world: ſo that the eternity of that act does not prove the eternity of the world; nor does the inviſibility of GOD's real duration prove the world had no beginning [b].

BUT after all, the diſtinction of the ſchoolmen between the manner of the duration of GOD, and that of his creatures, whereon the preceding argumentation is built, though it has been generally received by the beſt pagan, as well as chriſtian, philoſophers, and is at leaſt as old as Parmenides [c], has yet been rejected, and oppoſed by many men of great

[a] Bayle, Dict. Hiſt. Art. Zabarella, Jaques, Rem. H. See alſo Epiſt. Abi. Jaafar Ebn Tofail de Hai Ebn Yokdhân Edit. à Pocock. p. 105, 106. and Mr. Ockley's Engliſh Tranſlation, p. 83. [b] Bayle, ubi ſupra. [c] See Cudworth, Intell. Syſtem. p. 388.

learning and judgment, as inconſiſtent and unintelligible; it being very hard to conceive eternity to be an inſtant, or how that can be together, or at once, which muſt neceſſarily be imagined to be co-exiſtent to ſucceſſions [d]. And whatever force the above-mentioned arguments may be ſuppoſed to carry for the eternity of the world, underſtanding thereby the univerſe, with its ſeveral changes and viciſſitudes; they are far from proving, that the diſpoſition of the ſolar ſyſtem, much leſs the form of the earth, has been for ever the ſame as we now ſee it: the imagining of which ſeems to have been the great error of the old Eternaliſts, and has been ſtrongly oppoſed by ſeveral arguments, as well from reaſon, as human teſtimony, ſeparate from the evidence of divine revelation, as will be ſeen hereafter.

The opinion of thoſe who held the univerſe to be God.

SOME modern aſſerters of the world's eternity have gone on very different principles from theſe antients, and ventured to affirm the material univerſe to be ſelf-exiſtent, and the ſupream deity itſelf. This is the doctrine of Spinoza, the firſt, as is ſuppoſed, who reduced atheiſm into a ſyſtem, by regular deductions, after the method of the mathematicians. But, as the fundamental opinion, whereon he erected that ſyſtem, was not new, it may be proper, before we ſpeak of him, to ſay ſomething of thoſe who led him the the way, though he has departed from them in ſome reſpects.

The opinion of Xenophanes, and his followers;

THAT the univerſe is but one ſubſtance, and that GOD and the world are but one and the ſame thing, hath been an opinion of ſome ſtanding, and is ſuppoſed to have been firſt taught by Xenophanes, the founder of the ſect afterwards called the Eleatic. He is ſaid to have held not only the eternity and immutability of the world [e], but alſo, that whatever exiſted was one being; that there was neither any generation nor corruption; that this one being was immoveable, and remained always the ſame [f], and was the true GOD [g]; which doctrine was not only defended by his ſucceſſors, Parmenides, Meliſſus, and Zeno of Elea, but by Stilpo, and

[d] Gaſſend. Phyſic. l. 1. Archbiſhop Tillotſon, Vol. 7. Serm. 13. See alſo Dr. Clarke's Demonſtr. &c. p. 45. and Cudworth's intell. Syſtem, p. 644. [e] Plutarch. apud Euſeb. de Præparat. Evang. l. 1. cap. 8. &. l. 15. cap. 35. [f] Ariſtocles de Philoſoph. apud Eund. l. 14. cap. 17. Vid. etiam Ariſtot. de Xenophane, Zenone, & Gorgia, in initio, & Cicer. in Lucullo. [g] Cicer. Quæſt. Acad. lib. 2. Vid. etiam Sextum Empiric. in Pyrrhon. Hypotyp. l. 1.

and the Megaric philoſophers alſo. And to obviate the objection, which might be brought againſt the unchangeable nature of the univerſe, from the continual alterations made therein, by new generations and corruptions, they maintained, that whatever changes it ſeemed to ſuffer, were no more than illuſions of our ſenſes, and mere appearances. Which laſt retreat they are eaſily beaten from: for ſince they cannot deny, but there are changes in the world in appearance at leaſt, it even thence follows, that nature is not immutable, but muſt neceſſarily be changed in the ſubject which produces, or receives, our ſenſations; and thoſe ſenſations, being paſſions, imply both an efficient cauſe, and a paſſive principle, which overthrows at once their pretended unity of all things [h].

NEVERTHELESS this opinion of Zenophanes and his followers that all things are one, which ſeems ſo impious and abſurd, has been ſo explained by ſeveral learned men [i], and themſelves defended, as if by the univerſe, or all, they meant not the material principle of which all things are compoſed, but that one ſimple principle, from whence all things had their original, that is, the true GOD, whom they expreſly affirm to be incorporeal [k], and therefore could not poſſibly be in their opinion the material world. But the writings of theſe philoſophers being not without obſcurity, ſome of the antients, who were leſs acquainted with metaphyſical ſpeculations, underſtood them phyſically; as if they had aſſerted the whole corporeal world to be all but one thing, and that immoveable; thereby deſtroying, together with the diverſity of things, all motion, mutation, and action; which was plainly to make them not to have been philoſophers, but madmen. Simplicius [l], a man well acquainted with the opinions of antient philoſophers, aſſures us, that Xenophanes and Parmenides herein wrote not as naturaliſts, but as metaphyſicians, not concerning a phyſical element, or principle, but concerning the true being, or the divine tranſcendency; adding, that though ſome of thoſe antient philoſophers did not diſtinguiſh natural things from ſupernatural, yet the Pythagoreans, and Xenophanes, and Parmenides, and Empedocles, and Anaxagoras, did all handle theſe two diſtinctly,

[h] Vid. Ariſtoclem. ubi ſupra. [i] Leſcalopier, in Cicer. de Nat Deor. l. 1. p. 44. Art. de penſer, part III. cap. 18. & Cudworth, Intell. Syſt. p. 377. & 383, &c. [k] Cudworth, p. 377, 383, &c. [l] Simplic. in Phyſ. Ariſtot. p. 5, 6, &c.

ſtinctly, however, by reaſon of their obſcurity, it were not perceived by many; for which cauſe they have been moſt of them miſrepreſented not only by pagans, but alſo by chriſtians [m]. And in fact, when theſe Eleatics come to treat of natural things, they plainly acknowledge them to be compounded of different principles. Xenophanes ſuppoſed, that the earth conſiſted of air and fire [n], and that all things were produced out of the earth, and the ſun and ſtars out of clouds [o]: he alſo held, that there were four elements [p]. Parmenides made a profeſſed diſtinction between the doctrine concerning theological and metaphyſical things, called by him Truth, and that concerning phyſical and corporeal things, which he called Opinion. In the former of which doctrines he aſſerted one immoveable principle, but in the latter two moveable ones, fire and earth, or heat and cold, the firſt being the workman, and the other the matter [q]; he taught, that the earth was formed of a denſer air, which ſubſided [r], and that mankind was firſt produced out of mud [s]. Which notions concerning the origin of things he ſeems to have received from Archelaus the Ionic, whoſe auditor he is ſaid to have been. And with them Zeno alſo agreed, holding, that the nature of all things aroſe from a mixture of heat and cold, dryneſs and moiſture; and that man was generated of the earth, being equally compounded of the aforeſaid principles, ſo that neither predominated [t].

Of Strato Lampſacenus.

WHETHER Strato of Lampſacus held the unity of all things or no, is a doubt; for though he made nature inanimate, and acknowledged no GOD but nature [u], yet it is not certain, that he taught the univerſe, or nature, to be one ſimple being. From his ridiculing the atoms of Democritus [x], it has been thought reaſonable to imagine, that he admitted no difference between the parts of the univerſe; but this is allowed to be no neceſſary conſequence. It may be only concluded, that his opinion approaches infinitely nearer to Spinoziſm,

[m] Cudworth, p. 383. See Bayle, Dict. Hiſt. Art. Xenophanes, Remarq. L. [n] Plutarch. apud Euſeb. de Præp. Ev. l. 15. cap. 55. [o] Idem, in Strom. apud Eund. l. 1. cap. 8. [p] Diog. Laert. in Vita Xenoph. p. 558. [q] Simplic. ubi ſupra, & Diog. Laert. in Vita Parmenidis, p. 560. [r] Plutarch. apud Euſeb. ubi ſup. l. 1. cap. 8. [s] Diog. Laert. loco citato. Cicero, in Lucullo. Simplic. & Themiſt. in lib. 1. Phyſic. Ariſt. [t] Diog. Laert. in vita Zenon. p. 566. [u] Cicero, de Nat. Deor. l. 1. & Quæſt. Acad. l. 2. Lactantius, de Ira Dei, cap. 10. [x] Cicero, Quæſt. Acad. ubi ſupra.

Spinoziſm, than the corpuſcular ſyſtem. There is likewiſe ſome room to believe, that he did not teach, as the atomiſts did, that the world was a new work, and produced by chance; but, as the Spinoziſts do, that nature produced it neceſſarily, and from all eternity [y]. Plutarch indeed tells us [z], that he held that which was natural to follow that which was fortuitous, as if he allowed ſomething to chance, at firſt motion, or impreſſion at leaſt, which was afterwards perfected by nature, or the plaſtic life, ſuppoſed by him to be in every part of matter; making the mundane ſyſtem to depend upon a certain mixture of chance, and plaſtic or orderly nature both together [a]. But as his opinion is repreſented by Lactantius [b], he rejected all chance, which was the great difference between him and the Epicureans, and affirmed, that nature had in itſelf a generative and vital power, but had neither ſenſe nor figure; ſo that all things were, as he imagined, generated of their own accord, without the aſſiſtance of any former, or author.

Of Alexander the Epicurean, and ſome heretical chriſtians.

But whatever was the real notion of this greateſt of the peripatetic philoſophers [c], it is certain, that Alexander the Epicurean, who is ſuppoſed to have been contemporary with Plutarch [d], maintained that God is matter, or not diſtinct from it; that all things are eſſentially God, and that forms are imaginary accidents, which have no real exiſtence; and therefore he held all things to be ſubſtantially the ſame [e]. Some heretical chriſtians have alſo embraced this extravagant opinion; as one Amalric in particular, whoſe dead body was taken up, and burnt in the beginning of the thirteenth century [f], for having in his life-time taught that all things were God, and God was all things, and the eſſence of all creatures; ſo that the creator and the creature were the ſame; and that God was therefore called the end of all things, becauſe all returned into him [g]. Which ſentiments of his were followed by his ſcholar David of Dinant, and ſeveral

others [h]; the learned Peter Abelard having alſo been accuſed of holding the ſame opinion [i].

Of certain ſects among the Japaneſe, and Mohammedans.

NOR has this notion been confined to Europe only, it having alſo made no ſmall progreſs in the eaſt. A conſiderable ſect among the Japaneſe teach, that there is but one principle of all things; that this principle is ſimple, clear, luminous, incapable of encreaſe or diminution, without figure, perfect in the higheſt degree, wiſe, but void of reaſon or underſtanding, leading a life of perfect inaction, eaſe, and tranquillity, like a man whoſe attention is ſtrongly fixed on one thing, regardleſs of all other. They hold, that this principle is in all particular beings, and communicates his eſſence to them, in ſuch a manner, that they are the ſame thing with him, and are reſolved into him when they are deſtroyed [k]. The ſect called by the Mohammedans al Zenâdika (the ſingular of which is Zendîk) do alſo maintain, that whatſoever we ſee, or is in the world, is God [l]. And the famous Abu Moſlem, by whoſe conduct and ſucceſs the Khalifat was tranſlated, from the family of Omeya to that of Abbâs, is ſaid to have held the ſame opinion, and that all things returned at laſt into one common principle, or God; which opinion, ſome have ſuppoſed to be what the Arabian authors call the metempſycoſis of reſolution [m], and differs a little, if any thing, from that of a later ſect, who ſprang up among the Mohammedans about 300 years ago, and call themſelves Ahl al tahkîk, or people of certainty: they believe, that there is no other God than the four elements, which, together with the world, and all its changes and viciſſitudes, they aſſert to be eternal; and that mankind, as well as other beings, are a compound of thoſe elements, of which they are formed, and into which they return, and are diſſipated. Of this ſect there are great numbers in the province of Lar in Perſia [n].

The dogm of the ſoul of the world.

THE dogm of the ſoul of the world, which is not only common at this time in the eaſt, but was ſo among the antients,

[h] See the authors juſt cited, and Bayle, Dict. Hiſt. Art. Spinoza, Rem A. [i] Bayle, ibid. [k] Poſſevin. Biblioth. Select. Tom. I. lib. x. cap. 11. p. 411, &c. See alſo Bayle, Dict. Hiſt. Art. Japan, Rem. D. [l] Viaggi di Pietro della Valle, Tom III. p. 324. [m] لابن السماع الحلوني Ebn al Amid, in vita Khalifæ al Mansûr. See a more preciſe account of this opinion in Mr. Sale's preliminary diſcourſe to his tranſlation of the Korân, p. 176, and 182. [n] Della Valle, Tom. III. p. 892.

tients, and made the chief part of the Stoic ſyſtem, is at the bottom the ſame with that of Spinoza [o]: but as he differed from the Stoics, not only in contracting God's knowledge, which they allowed to be univerſal, and in denying his providence; but alſo in aſſerting the preſent diſpoſition of the world to have been neceſſary and eternal, and conſequently ſubject to no decay, contrary to their expreſs doctrine, it will be more proper to conſider that opinion under the next head. We ſhall only obſerve here, that ſome heterodox Stoics, as Boëthus in particular, did not only deny the world to be an animal, or intelligent being [p], ſubſtituting in the room of its mind or ſoul a plaſtic nature; but alſo aſſerted the world's eternity and incorruptibility, or one conſtant and invariable courſe or tenor of things [q]. The elder Pliny ſeems alſo to have been of this opinion; for he declares, that the world, and that which by another name is called heaven, by whoſe circular motion all things are governed, ought to be believed to be an eternal and immenſe deity, ſuch as was neither made, nor ſhall ever be deſtroyed [r].

SPINOZA taught, that there is no difference of ſubſtances, but that the whole, and every part of the material world, is a neceſſarily exiſtent being, and conſequently infinite [s]; that there is no other God but the univerſe [t], and that extenſion is one of his attributes [u]: that ſince it is abſolutely impoſſible for any thing to be created or produced by another, and alſo abſolutely impoſſible for God to have cauſed any thing to be, in any reſpect, different from what it now is [x]; every thing that exiſts muſt needs be ſo a part of the divine ſubſtance, not as a modification cauſed in it by any will, or good pleaſure, or wiſdom in the whole (for he expreſly denies God to act by any freedom of will [y], or for the ſake of final cauſes [z]) but as of abſolute neceſſity in itſelf, with reſpect to the matter of the exiſtence of each part, no leſs than with reſpect to the ſelf-exiſtence of the whole. So that the opinion of Spinoza evidently comes to this; The opinion of Spinoza.

[o] V. Bayle, Dict. Hiſt. Art. Spinoza, Rem. A. [p] Diog. Laert. in Vita Zenonis Cit. p. 455. [q] Philo Jud. de Incorruptibilitate Mundi, p. 947. Poſidonius and Panætius alſo maintained the world to be eternal. ibid. [r] Plin. Nat. Hiſt. lib. 2. c. 1. [s] Spinoza, in Ethic. Part I. Prop. 6, 7, and 8. [t] Ibid. Prop. 14. [u] Ibid. in Schol. ad Prop. 15, & Part II. Prop. 2. [x] Ibid. Part. I. Prop. 6, & 33. [y] Ibid. Prop. 32. Coroll. 1. [z] Ibid. in Append. ad Prop. 36.

this; that the univerſe, or material world is God, or the ſelf-exiſtent being; and that all particular beings, corporeal extenſion, the ſun, moon, plants, animals, men, their motions, ideas, imaginations, and appetites, are all neceſſary modifications of him [a].

Confuted. THIS monſtrous ſyſtem, tho' it has met with ſome patrons, has yet been ſufficiently expoſed, and confuted by even the weakeſt of its adverſaries [b], and indeed carries its antidote along with it. For Spinoza, to avoid the abovementioned inſuperable objection made to the Eleatics, who held the univerſe to be immutable, falls into a worſe extremity, and attributes a continual change, and corruption to the divine nature, in reſpect of its various modifications: which doctrine ſhocks common ſenſe, it being horrible to ſuppoſe the Deity both the cauſe, and ſubject of all the moral, and phyſical evils, which are ſo frequent in the world; and what can be more abſurd, than to imagine matter, the vileſt of all things, the theatre of all changes, and the field of battle of contrary cauſes, to be that ſupreme, perfect being, with whom is no variableneſs, neither ſhadow of turning [c]? The very foundations of this hypotheſis are in a moment overturned, if we admit either a vacuum, or the diviſibility of matter, the one deſtroying the infinity, and the other the unity of God [d]; and therefore the Spinoziſts conſtantly deny both, ridiculouſly pretending, that there can be no diviſion of matter, unleſs one part be ſeparated from the other by empty ſpace. It ſeems alſo impoſſible, according to this ſyſtem, that the Deity can be an intelligent being: for perception and intelligence being really a diſtinct quality, or perfection, and not a mere effect, or compoſition of unintelligent figure and motion, as has been well proved [e]; it follows, that God could not poſſibly be poſſeſſed even of that imperfect underſtanding, allowed him by Spinoza, which, however, being wholly ſeparate from any power of will or choice, is, in any reſpect of any excellency, or indeed to any common ſenſe, the very ſame thing as no underſtanding at all [f]. Mr. Hobbes, who alſo held, that there was no ſubſtance

[d] Tho' Spinoza allows God to be one, yet he aſſerts, that God cannot be ſaid to be one, or a ſimple Being, in propriety of Speech. Opera Poſthuma, Ep. 50. p. 557. [e] Dr. Clarke's Demonſtr. &c. p. 61, &c. [f] Ibid. 55.

ſubſtance diſtinct from matter, being preſſed in his own mind with the difficulty ariſing from the impoſſibility of ſenſe, or conſciouſneſs being merely the effect of figure and motion, is forced to recur to that prodigiouſly abſurd ſuppoſition of the antient Hylozoics, that all matter, as matter, is indued not only with figure, and a capacity of motion, but alſo with an actual ſenſe or perception; and wants only the organs, and memory of animals, to expreſs its ſenſation [g].

The opinion of thoſe who held the matter of the world to be external, but not the form.

THE ſecond opinion, that the ſubſtance of the univerſe is eternal, tho' the form be not, was generally embraced by the antients, who from that eſtabliſhed axiom, That nothing can be produced from nothing [h], concluded the creation of matter to be an abſolute impoſſibility; but at the ſame time thought, they had good reaſon to believe, the world had not always been in its preſent ſtate and diſpoſition. They who held this opinion may be divided into two claſſes. The firſt endeavoured to account for the generation of the world, or its reduction into the preſent form, from mechanical principles only, and the activity of matter, without having recourſe to the aſſiſtance of any divine power; the other introduced an intelligent mind, as the architect and diſpoſer of all things. But, before we produce their ſeveral ſyſtems and notions, it may be proper to examine the principles they proceed upon more nearly.

The abſurdity of ſuppoſing matter to be uncreated.

THERE is no doubt, but that the creation of matter, on due weighing the arguments for and againſt it, will appear to be ſo far from impoſſible [i], that it muſt neceſſarily be admitted [k]. For if it be abſurd to imagine matter to be the only ſubſtance, as has been ſufficiently ſhewn, it is much more ſo to ſuppoſe two, or more, eternal beings; which yet was not by the antients thought to be contradictory. But this impious poſition, that God is not the creator of matter, being once laid down for truth, thoſe philoſophers who made God the former, preſerver, and director of the world, notwithſtanding their ſeeming orthodoxy, argued much more inconſiſtently, than thoſe who denied him to have any concern with it. For if matter was an eternal uncreated being, and diſtinct from God, it owed its exiſtence to its own nature only, depending on no other cauſe, either in reſpect of

[g] Hobbes Phyſic. cap. 25. Sect. 5. See Dr. Clarke, ubi ſupra, p. 63. [h] Ex nihilo nihil. [i] See before, p. 2.
[k] Vid. BAYLE, Dict. Hiſt. Art. Anaxagoras, Rem. G. p. 212. & Art. Hierocles Philoſophe, Rem. A.

of its eſſence, or its properties. And it is contrary to all rules of reaſon, that another being ſhould exerciſe ſo great a power over matter as entirely to change it, and form a world out of that which had been ſelf-exiſtent from all eternity without being a world. If God's right to act in this manner be founded on this ſuperior power, the ſame title would authorize all uſurpations, and confound all notions of right and wrong. If it be ſaid, that God dealt thus arbitrarily with matter out of a principle of goodneſs, on a ſuppoſition of its inſenſibility, and precedent imperfection; the anſwer which has been given is, that ſuch a work would not be ſo much an inſtance of God's goodneſs, as an effect of ſuperfluous diligence, in endeavouring to put in order what he had not created, as if any order or perfection could be wanting in a being which had eternally ſubſiſted of itſelf; for all acceſſions to ſuch a being muſt be foreign to its nature, and conſequently a defect. God therefore muſt in ſuch a caſe have began his work by an ill action, in going about to deveſt of its natural ſtate a ſubſtance, uncreated as well as himſelf, and his own ſiſter [1].

On the other hand, they who attribute the formation of the univerſe to mere matter and motion, without the intervention of a Deity, tho' they avoid the abovementioned abſurdities, yet fall into other difficulties as inextricable, by ſuppoſing the eternal motion of matter; which they are obliged to do, if they will not contradict their own maxim, and admit motion at leaſt to be produced out of nothing. But if motion be eternal, it was either eternally cauſed by ſome eternal intelligent being, which would again introduce the Deity whom they had excluded: or it muſt be of itſelf neceſſary and ſelf-exiſtent; whence it would follow, that it muſt be a contradiction in terms to ſuppoſe any matter to be at reſt, or to ſuppoſe that there might poſſibly have been originally more or leſs motion in the univerſe, than there actually was; both which are conſequences too abſurd and ridiculous for any to admit: or elſe, without any neceſſity in its own nature, and without any external neceſſary cauſe, it muſt have exiſted from eternity by an endleſs ſucceſſive communication; which is alſo a plain contradiction: for an infinite ſucceſſion of merely dependent beings, without any original cauſe, is a ſeries of beings, which has neither neceſſity

[1] Hierocles, apud Photium in Biblioth. Cod. CCCLI. p. 1380. See Bayle, Dict. Hiſt. Art. Epicure, Rem. S. & Art. Hierocles, ubi ſupra.

ſity nor cauſe, nor any reaſon at all of its exiſtence, neither within itſelf, nor from without; that is, 'tis an expreſs impoſſibility. A late author [m] indeed has ventured to aſſert, and pretended to prove, that motion, that is the conatus, or endeavour to move, is eſſential to all matter: but how philoſophically, may appear from this one conſideration. The conatus to motion in any one particle of matter muſt be either a conatus to move ſome one determinate way at once, or to move every way at once: a conatus to move ſome one determinate way cannot be eſſential to any particle of matter, but muſt ariſe from ſome external cauſe; becauſe there is nothing in the pretended neceſſary nature of any particle to determine its motion, neceſſarily and eſſentially one way, rather than another: and a conatus equally to move every way at once, is either an abſolute contradiction, or at leaſt can produce nothing in matter, but an eternal reſt of all, and every one, of its parts [n].

Objections to the ſtate of matter before the formation of the world, according to this opinion.

The ſtate, wherein theſe philoſophers conceived matter to have eternally been before the formation of the world, is alſo liable to ſeveral objections. They generally ſuppoſed the original of the earth to have been from a chaos, or dark, confuſed, fluid maſs, without diſtinction of elements, and made up of all variety of parts [o], but without order, or any determinate form. To this chaos they attributed a certain motion, ariſing from the action and reaction of the firſt four qualities, and the different tending of the particles of earth and water downwards, and their air and fire upwards. This motion they abſurdly enough imagined to have been irregular and diſorderly [p], till it was ſtopped or changed into a regular and natural motion, either by chance, or divine power. But Ariſtotle has long ago obſerved, that the ſuppoſition of ſuch an irregular motion deſtroys itſelf; for it is impoſſible,

[m] M. Toland, Lett. 3. p. 66, 14, and 25.

[n] See Dr. Clarke's Demonſtr.

[o] Mr. Bayle ſuppoſes Ovid took the chaos to have been entirely homogeneous, becauſe in his fine deſcription of it, in the firſt book of his Metamorphoſis, he ſays, that there was then but one face of nature in the world: which is inconſiſtent with what he preſently adds of the diſagreeing principles of which the chaos conſiſted. But that expreſſion may rather be underſtood of the uniformity of the whole, as being equally, in every part, a promiſcuous compound of all the elements. Vid. Dict. Hiſt. Art. Ovide, Rem. G.

[p] Plato in Timæo, apud Ariſtot. de Cœlo, lib. III. cap. 2. p. 370. Ovid. Metam. l. 1.

impoſſible, that what is infinite and eternal ſhould be moved in a diſorderly manner, but muſt neceſſarily have a regular and natural motion; whence it follows, that the production of the world would rather have been an overturning, than introducing of the true natural ſtate: for which reaſon he ſays, Anaxagoras ſeemed to have been in the right, when he began his formation of the world from matter entirely at reſt [q]. So that if we admit the motion of the chaotic particles to have been natural, and according to their ſeveral qualities and properties, the very poſſibility of matter's having continued in that ſtate from eternity is deſtroyed, becauſe we then introduce a principle, which will neceſſarily ſeparate the ſeveral kinds of bodies one from the other, and that in a certain limited ſpace of time. This principle alſo renders the aſſiſtance of a deity unneceſſary; for if the chaos be acknowledged to have in itſelf all the internal power that is requiſite for the ſeparation of its parts, and the placing of every element in its proper ſituation, there can be no occaſion for the intervention of any external cauſe.

To reaſon well therefore concerning the production of the world, we muſt conſider God as the author of matter, and as the firſt and ſole principle of motion. If we cannot raiſe our minds ſo high as to conceive a creation properly ſo called, which way ever we turn, we ſhall find ourſelves driven to aſſertions and ſuppoſitions directly contrary to reaſon, and be involved in an endleſs labyrinth of abſurdities and contradictions [r].

Theſe philoſophers right in ſuppoſing the world had a beginning.

But however, they who held this opinion were miſtaken in accounting for the origin of the world, they had great reaſon to aſſert that it had a beginning, and was once formed out of a confuſed chaos. For though the preciſe time of this formation could not have been exactly known, without revelation; yet, even at this day, there are remaining many conſiderable, and very ſtrong rational proofs, which make it exceeding probable, that this preſent frame, and conſtitution of the earth, at leaſt, has been of no very antient date. The changes which muſt neceſſarily fall out naturally in the earth in a vaſt length of time, by petrification, the ſinking and waſhing down of mountains, the daily encroaching of the land upon the ſea, the conſumption of water by plants, and innumerable other accidents; the univerſal tradition of the

[q] Ariſtot. de Cœlo, loco citato.

[r] See Bayle, Dict. Hiſt. Art. Ovide, Rem. G.

the moſt antient nations, both learned and barbarous; the number of men with which the earth is at preſent inhabited; the late original and invention of all uſeful arts and ſciences; the ſhortneſs of the hiſtory of the world, which reaches up but to a very few ages; the manifeſt abſurdities and contradictions of thoſe few accounts, which pretend to a greater antiquity; the impoſſibility that univerſal deluges, or other accidents, ſhould at certain long periods have oftentimes deſtroyed far the greateſt part of mankind, with the memory of all former actions and inventions, and yet never have happened to deſtroy them all; theſe and many more arguments drawn from nature, reaſon, and obſervation, make it exceeding probable, that the formation of the earth was novel, and of no great antiquity. And it is not to be doubted, but that the doctrine of thoſe antient poets and philoſophers, who taught, that the world had a beginning, was founded on ſtill more antient traditions, which were ſo many authorities to them, as their teſtimonies are at this day to us [s].

HAVING obſerved thus much, it is time to take a view of the different hypotheſes, which may be ranged under this head; and we ſhall begin with thoſe, who, excluding all divine interpoſition, accounted for the formation of the univerſe, from the properties and action of matter only.

AND with this doctrine the moſt ancient profane accounts we have now remaining of the original of the world, viz. the Phœnician, Egyptian, and Babylonian have been charged; but whether juſtly or no, muſt be left to the judgment of the reader, after we ſhall have laid before him, firſt the accounts themſelves, and then the obſervations which have been made on them.

THE firſt of them is that of the Phœnicians, which has been tranſmitted to us by Sanchoniatho, one of their own writers, and was originally taken, as he aſſures us, from the coſmogony of Taautus, who was the ſame with the Egyptian Thoyth, or Hermes [t]. He wrote, that the firſt principle of the univerſe was a dark and ſpiritual (or windy) air, or a ſpirit of dark air, and a turbid obſcure chaos; and that theſe things were infinite, and for many ages had no bounds. The Phœnician coſmogony.

[s] See Dr. Nicholl's Conf. with a Theiſt, Vol. I. Part. I. p. 26, &c. Dr. Burnet's Theory of the Earth, Book I. c. 4. p. 49. Dr. Clarke's Diſcourſe concerning the evidences of natural and revealed Religion, p. 252. [t] Sanchoniatho, apud Euſeb. de Præp. Ev. l. 1. c. 10.

bounds. But when the ſpirit was affected with love towards its own principles, and a mixture followed, that conjunction was called Deſire. This was the beginning of the formation of all things: but the ſpirit did not know (or acknowledge) its own production. From this conjunction of the ſpirit was begotten Môt [u], which ſome call *mud*, others a corruption of a watery mixture; and of this came the ſeed of all creatures, and the generation of the univerſe. That there were certain animals which had no ſenſe, from which proceeded intelligent animals called Zophaſemin [x], that is, the contemplators of heaven, being formed alike in the ſhape of an egg: immediately Môt, with the ſun, moon, ſtars, and larger conſtellations, ſhone forth. That the air being intenſely enlightened by the violent degree of heat communicated to the ſea and earth, winds were generated, and clouds, and great deſcents and defluxions of the heavenly waters; and when they were ſeparated, and drawn from their proper place by the heat of the ſun, and then met all again in the air, and daſhed the one againſt the other, thunders and lightnings were engendered; and at the noiſe of the thunders the before-mentioned intelligent animals awoke, and were terrified with the ſound, and male and female moved in the earth and in the ſea [y].

Remarks thereon. EUSEBIUS of Cæſarea, to whom we are obliged for preſerving this fragment, obſerves, that this coſmogony of the Phœnicians directly brings in atheiſm [z], Sanchoniatho having therein delivered no divinity or theology concerning

[u] Mot, Bochart derives this word from the Arabic مادة Madah which ſignifies, as he ſays, the firſt matter of things. But as Sanchoniatho makes the Chaos, and not Môt, to be the firſt material principle, Biſhop Cumberland thinks it may better be accounted for from another Arabic word, which needs no ſuch changes, as he is forced to preſume; and that is مثة Matha, which ſignifies to ſteep or macerate in water; موث Mawth, the noun, denotes ſuch a confuſion, or ſolution, as is thereby made; a mucilage, as phyſicians ſpeak. Cumberl. remarks on the Coſmogony of Sanchon. p. 4. By what it afterwards ſaid of Mot's ſhining forth with the ſun, moon, and ſtars, it ſeems Thoyth conſidered the earth as a planet. Vid. ib p. 18. [x] Zophaſemin. צופי שמים Sophe Shamaim in Hebrew, or Phœnician, ſignifies the Spies or Obſervers of Heaven. Theſe animals were not the angels, as Bochart imagines, but the celeſtial bodies, which Sanchon. ſuppoſes to be intelligent, and therefore were adored as Gods. Vid. ib. p. 21. [y] Sanchon. apud Euſeb. ubi ſupra.
[z] Euſeb. ibid. p. 33.

*

cerning the ſupreme God, nor concerning the inhabitants of heaven [a], or angels. Which animadverſion has been approved, and purſued by a late very learned man [b], who, with great reaſon, looked on this account of the origin of things as a profeſſed apology for the idolatrous worſhip paid to dead men, and the ſeveral parts of the univerſe; Thoyth having led his tranſcriber into the fouleſt ſink of heatheniſm, which is neglect of the ſovereign and only true God, in the making, and conſequently of the governing of the world; endeavoured to eſtabliſh the vain and fooliſh religion of the Phœnicians and Egyptians, who worſhipped the creature more than the creator [c], by pretending to give a generation of the world, without any help from God, and ſuppoſing, that the heathen deities, the Zophaſemin, which were the planets and fixed ſtars, paſſed gradually from the life of planets, which have no ſenſe (and yet ſome of them were worſhipped) through the ſtate of ſenſible animals, which were more ſolemnly ſerved, till at length they came to be perfect intelligences [d], and ſo worthy to challenge the higheſt worſhip which they gave to them, in which their ſtate-religion reſted.

On the other hand it has been remarked, that it is well known, Euſebius took all advantages poſſible to repreſent the pagans to the worſt, and render their theology ridiculous and abſurd [e]; and that if the beſt interpretation be put on the words of Sanchoniatho, it is not improbable, that the Phœnicians ſuppoſed two principles, of which one was a turbid dark chaos, and the other a ſpirit [f], or an underſtanding prolifical goodneſs, forming and hatching the corporeal world into perfection [g], the eternity of which ſpirit ſeems alſo to be aſſerted by what follows, that it knew not its own generation, that is, had no original at all. But this Phœnician coſmogony being confeſſedly taken from that of Thoyth, and conſequently agreeing in ſubſtance with the Egyptian, which is therefore under the ſame imputation of atheiſm, judgment may be ſuſpended, till that be conſidered alſo.

The

The Egyptian cosmogony.

THE account of the origin of the universe, given us by Diodorus Siculus, is generally supposed to be the cosmogony of the Egyptians [h], though Diodorus himself does not say much; and is as follows: When the universe first coalesced, heaven and earth were of one form, their nature being blended together; but afterwards, as bodies separated, the world took on it the entire disposition wherein we now behold it, and the air began to have a constant motion; upon which its fiery parts flew to the upper regions, being naturally carried upwards by their own levity; and hence proceeded the rapid circular motion of the sun and other stars. The muddy and turbid matter, after it had been incorporated with the humid subsided in one place by its own weight, and being agitated with continual internal volutations, of the watry parts the sea became formed, and of the more solid the earth, which was slimy and very soft at first, but stiffning by the rays of the sun, the surface began to ferment, by reason of the heat; and some of the humid parts swelled, and rose by degrees into putrid pustules, covered with thin membranes. The humid matter, being thus fœcundated by the genial heat, by night received nutriment from the mist falling from the ambient air, and by day grew more and more solid by the sun's warmth, till at length the inclosed brood being arrived at perfect maturity, and the membranes burnt up and burst, all kinds of creatures were produced. Of which those which had obtained the greater degree of heat, became volatiles, and flew upwards; those in which the earthly concretion prevailed, were placed in the rank of reptiles, and other terrestrial animals; and the creatures which chiefly consisted of a watry nature, repaired to a congenial element, and were called fish. At length the earth, continually hardening more and more by the heat of the sun, and by the winds, could no longer produce any of the larger animals; but they began to propagate their several species by generation. And, to obviate any objection against the possibility of the earth's producing living creatures, our author instances in the

[h] Eusebius seems to be of the same opinion, tho' he entitles the Chapter, wherein he transcribes this passage from Diodorus, (being the 7th of his 1st Book de Præp. Ev.) Of the Cosmogony according to the Greeks, in regard of their agreement in general with it, the Grecian Philosophers having, as is notorious, received their physiology from the Egyptians.

the vaſt number of mice, which are ſaid to be bred in the upper Egypt out of the putrified mud, after the overflowing of the Nile [i].

THIS coſmogony, as has been obſerved [k], agrees in ſubſtance with the former, but is more large (as later commentaries uſe to be) in particulars, and nice attempts to a mechanic explication of the generation of the world, without any help from God [l]: which conſent is an argument that they took their notions from the ſame fountain, Thoyth. And Euſebius makes the ſame animadverſion on this latter, as he does on the former; that the name of God is not ſo much as mentioned therein, but a kind of fortuitous and ſpontaneous formation of the univerſe introduced [m]. To confirm which judgment, he in another place recites a paſſage of Porphyry, who, in his epiſtle to Anebo, an Egyptian prieſt, writes, that Chœremon and others thought, there was nothing prior to the viſible worlds, and began their diſcourſes with the Egyptian gods, which were no other than the planets, and ſtars which fill the zodiac, or thoſe which riſe with them; foraſmuch as they who made the ſun the demiurgus, or architect of the world, interpreted their ſtories of Iſis and Oſiris, and the reſt of their ſacred fables, altogether into the ſtars and planets, and the river Nile; and explained all things univerſally into natural or inanimate; and nothing into incorporeal and living ſubſtances. From whence Euſebius infers, that even the ſecret theology of the Egyptians deified no other than the ſtars and planets, and acknowledged no incorporeal principle of the univerſe, nor any demiurgic reaſon, God, or gods, or intelligent and inviſible powers, but the viſible ſun only, referring the production of all things to the material, ſenſeleſs, and periſhable elements [n]. Herewith agrees alſo that conciſe account of the Egyptian philoſophy given us by Diogenes Laertius [o] from Manetho and Hecatæus; that matter was the firſt principle, out of which the four elements were afterwards ſeparated, and all kinds of animals perfectly formed: and that the ſun and moon were their gods, the one being called Oſiris, and the other Iſis. Remarks thereon.

[i] Diod. Sic. lib. 1. p. 7. 8. The account of the coſmogony given in a ſpurious book, attributed to Hermes, entitled Divine Sermons, is purpoſely omitted, as of no authority or credit. [k] Vid. Grotium de veritate Rel. Chriſt. l. 1. ſect. 16. in notis. [l] Cumberl. on Sanchon. p. 9. [m] Euſeb. de Præp. Ev. l. 1. c. 7. p. 21. [n] Idem ibid. l. 3. c. 4. [o] In Procemio, p. 8.

FROM this imputation of acknowledging no deity beſides ſtupid matter, the Egyptians have been ſtrenuouſly defended by a very able man [p], who thinks what Euſebius urges againſt them to be of the leſs weight, becauſe he plainly contradicts it elſewhere, by declaring that that nation profeſſed the belief of a demiurgic reaſon, and intellectual architect of the world, whom, he tells us, from the ſame Porphyry, they called Cneph, and ſymbolically repreſented in the ſhape of a man of a dark blue complexion, holding a girdle and a ſceptre, with a royal plume on his head, and thruſting forth an egg out of his mouth, from whence proceeded another god, whom they named Phtha, and the Greeks Vulcan. The reaſon of which hieroglyphic is thus given: becauſe this intellectual being is difficult to be found out, hidden, and inviſible, and becauſe he is the giver of life, and king of all things, and becauſe he is moved in an intellectual or ſpiritual manner, which is ſignified by the feathers on his head. The egg, which proceeds from the mouth of this god, is interpreted to be the world [q]. The firſt moſt divine being was alſo ſometimes deſcribed as a ſerpent with a hawk's head, beautiful to look on; who, if he opens his eyes, fills the univerſe with light in his firſt born region: but if he winks, darkneſs is made [r]. And as for that paſſage in Porphyry's epiſtle concerning Chœremon, where he only propounds doubts to Anebo, as deſiring further information from him concerning them, Iamblichus has given an anſwer to it, under the perſon of Abammo, another Egyptian prieſt, who ſays, that Chœremon, and thoſe others who pretend to write of the firſt cauſes of the world, declare only the laſt, and loweſt principles, as likewiſe thoſe who treat of the planets, zodiac, and other aſtronomical matters: for the Egyptians did not reſolve all things into nature, but diſtinguiſhed both the life of the ſoul, and the intellectual life, from that of nature, not in the univerſe only, but in man alſo; acknowledging an intellectual mind and reaſon firſt to have exiſted of themſelves, and ſo this whole world to have been made [s]. From which teſtimony of Iamblichus, who was but little junior to Porphyry, and contemporary with Euſebius, and who had made it his buſineſs to inform himſelf thoroughly of the Egyptian theology,

[p] Dr. Cudworth, in his Intell. Syſtem, p. 317, &c. [q] Euſeb. de Præp. Ev. l. 3. c. 11. p. 115. [r] Idem, ibid. l. cap. 10. p. 41. [s] Iamblichus apud Cudworth, Intell. Syſtem. p. 318, &c.

logy, it plainly appears, that the Egyptians did not generally ſuppoſe (as Chœremon pretended concerning ſome of them) a ſenſeleſs inanimate nature to be the firſt original of all things, but that as well in the world, as in ourſelves, they acknowledged ſoul ſuperior to nature, and mind or intellect ſuperior to ſoul, this being the maker of the world [t]. And many paſſages to the ſame purpoſe might be produced from the ſame writer, and from the Hermaic books now extant, among which tho' much is forged and ſpurious, yet it ſeems very probable, that they contain ſome remains and tincture of the old Egyptian, and Hermetic doctrine. But we cannot omit obſerving, that it was thought to be ſo notorious and confeſſed a thing, that the Egyptians held the world not only to have had a beginning, but alſo to have been made by God; that Simplicius, a zealous contender for the world's eternity, affirms the Moſaic hiſtory of the creation of the world by God, to have been nothing elſe but a fabulous tradition, and wholly drawn from Egyptian fables [u].

BUT theſe different authorities may be perhaps reconciled, by diſtinguiſhing between the religion of the Lower Egypt, whoſe inhabitants were groſs idolaters, and that of Thebais, where the worſhip of Cneph, the immortal and ſupreme God, ſo much prevailed, that they were not taxed towards the charge of maintaining the ſacred animals worſhipped by the others [x].

BEFORE we diſmiſs the Egyptians, it may not be amiſs to obſerve, that their prieſts alſo taught, that the earth had certain periods or revolutions, being deſtroyed alternately by water and fire, and renewed again [y].

The Babylonian coſmogony.

As to the Chaldeans or Babylonians, Diodorus ſays, they held the nature of the world to be eternal, and that it had neither any original generation, nor is ſubject to any future corruption; yet that the order and beautiful diſpoſition of all things were cauſed by a divine providence, and that whatever are now in the heavens were not caſual, or ſpontaneous, but perfected by the determinate and eſtabliſhed decree of the gods [z]. But Beroſus, who ought to challenge the greater authority, both in reſpect to his antiquity, and

[t] Cudworth, ibid. [u] Simplic. in Ariſtot. Phyſ. l. 8. p. 268. [x] Plut. de Iſide & Oſirid. p. 359. See alſo Cumberl. on the coſmog. of Sanchon. p. 12, &c. [y] Plato, in Tim. Origen. contra. Celſum, l. 5. [z] Diod. Sic. l. 2. p. 116.

his being himſelf of that nation, has left us the following account of their coſmogony, taken from what Oannes (of whom more hereafter) wrote concerning the origin of things. There was, ſays he, a time when the univerſe was darkneſs and water, wherein frightful animals of compounded forms were generated. That ſome men were born with two wings, others with four, and two faces: ſome having but one body and two heads, one of a man, the other of a woman, and double privities, of the male and of the female. That of other men, ſome had the legs and horns of goats, ſome horſes feet, others the hinder parts of horſes, and the fore parts of men, being in the form of Hippocentaurs. That bulls were generated having the heads of men; and dogs with four bodies, having in their hinder parts the tails of fiſhes; and horſes with dogs heads: that there were alſo men, and other animals, which had the heads and bodies of horſes, but the tails of fiſhes; and other living creatures having the ſhapes of all kinds of beaſts. Beſides theſe, there were alſo generated fiſhes, and creeping things, and ſerpents, and many other animals very wonderful, and having the mixed ſhapes of one another; whoſe pictures are alſo kept in the temple of Belus. The governeſs of all theſe was a woman, named Omorôca [a], which in the Chaldee tongue is Thalatth [b], but in Greek ſignifies ſea, and with equal propriety the moon. This being the conſtitution of the univerſe, Belus came and divided the woman in the midſt, and the one half of her made the earth, and the other half the heaven, and the animals which were in her periſhed. But he ſays, that theſe things are delivered concerning the nature of the world in an allegorical manner. For the world being humid, and animals generated therein, the aforeſaid god took away the woman's head, and the other gods mixed her body, which fell down with the earth, and formed men, for which reaſon they are intelligent,

[a] In Scaliger's edition Omorca. Our author having tranſlated this name into Chaldee, it muſt be derived from ſome other language; but as he does not tell us what that language is, we ſhall not offer at an etymology of it. [b] This word is ſo near in ſound to the Greek word Thalaſſa, the ſea, that one would ſuſpect it to be forged, at leaſt much corrupted: Perhaps it may have been written for the Chaldee, or Syriac ܬܠܝܠܘܬܐ Thalilûtho, which ſignifies moiſture, or humectation, and anſwers to the explication afterwards given. The ſea and the moon were reckoned the two ſources of moiſture.

intelligent, and partake of divine wiſdom. That Belus, whom they interpret Jupiter, cutting the darkneſs in the midſt, divided the earth and the heaven from each other, and reduced the world into order; whereupon the animals, not bearing the force of the light, became extinct. But Belus ſeeing the country deſart, tho' fertile, commanded one of the gods to cut off his own head, and to mix the earth with the blood which iſſued thence, and to form men and beaſts that could endure the air: and that Belus perfected the ſtars, and the ſun, and the moon, and the five planets [c].

FROM this paſſage we learn, that the old Babylonians expreſly attributed the orderly diſpoſition of the world, the perfecting of the heavenly bodies, and the formation of men and animals to their ſupreme god, Bel; tho' they ſeem to have held the pre-exiſtence of matter. It muſt therefore be ſome theology of the later Babylonians, which could with juſtice be charged, as it has been, with paſſing over in the ſilence the one principle of the univerſe [d]; wherein they muſt have departed from the tradition of their anceſtors, the antient Chaldeans, who were celebrated for their acknowledging one ſovereign deity, or maker of the world, as appears from that oracle of Apollo, cited by Euſebius [e] from Porphyry, where the Chaldeans and Hebrews are alone declared to be poſſeſſed of true wiſdom, as worſhipping God, the ſelf-begotten king, in a holy manner. Remarks thereon.

WE have indeed another account of the coſmogony in the Chaldaic, or Magic oracles of Zoroaſtres; but they have ſo little pretence to genuineneſs, or antiquity, are ſo confuſed a medley of ill-digeſted notions, taken chiefly from the Platonics and Gnoſtics, very unſatisfactory as to the origin of the univerſe, and talk ſo much of unknown matter, the orders of inviſible things, myſtical numbers, iynges [f], and other unintelligible jargon, that we might be excuſed taking any notice of them; but as a very learned man has thought it worth his while to extract the ſubſtance of what is moſt intelligible in them [g], we ſhall injoin it in his own words: The Chaldeans, ſays he, believe, that the firſt of all things is eternal, the ſupreme God. That God, who is The account of the coſmogony in the Chaldaic oracles.

an intellectual light, or fire, did not ſhut up his fire within his intellectual power, but communicated it to all creatures; firſt, and immediately, to the firſt Mind, and to all other eternal and incorporeal beings, under which notion are comprehended a multitude of gods, angels, good dæmons, and the ſouls of men. The next emanation is the ſupramundane light, an incorporeal, infinite, luminous ſpace, in which the intellectual beings reſide. The ſupramundane light kindles the firſt corporeal world, the empyreum, or fiery heaven, which, being immediately beneath the corporeal light, is the higheſt, brighteſt, and rareſt of bodies. The empyreum diffuſes itſelf thro' the æther, which is the next body below it, and the fire leſs refined than the empyreum: but that it is fire, the more condenſed parts thereof, the ſun and ſtars, ſufficiently evince. From the æther this fire is tranſmitted to the material and ſublunary world; for tho' the matter whereof it conſiſts be not light but darkneſs, (as are alſo the material or bad dæmons) yet this vivificative fire actuates, and gives life to all its parts, inſinuating, diffuſeing itſelf, and penetrating even to the very center, paſſing from above to the oppoſite part, thro' the center of the earth.

The opinion of the ancient pagan poets.

THE old pagan poets, who greatly contributed to the depravation of theology in general, have more particularly countenanced this opinion of the world's being produced from a chaos, without the influence of God. For tho' they make love to preſide, as it were, at the ranging of the confuſed matter, by which ſome would have us underſtand the Deity, or the active principle of the univerſe diſtinct from matter [h], yet it is moſt probable, they thereby meant no more than the agreement, or harmony, which enſued on the ceſſation of that inteſtine war of the elements: their love having his original from the chaos, as well as all the reſt of their gods, which were really no other than the heavenly bodies, elements, and other parts of nature, perſonated, and deified. For which reaſon the coſmogony of the poets was the ſame with their theogony, or generation of gods [i].

And of Orpheus in particular.

ORPHEUS, who was the great introducer of the rites of the heathen worſhip among the Greeks, being charged with having invented the very names of the gods, and declaring generations, and their ſeveral actions, wherein he was for the moſt part followed by Homer [k], is yet ſaid to have been perfectly ſilent in his theology, as to any thing intellectual, as unſpeakable

[h] Vid. Cudworth, Intell. Syſtem. p. 212. [i] Vid. eund. p. 334, &c. [k] Athenagor. & Juſtin. Martyr, apud eundem, p. 298.

unſpeakable and unknown; and to have made one of his principles to be a dragon, having the heads both of a bull and a lion, and in the midſt, the face of a god, with golden wings on his ſhoulders [l]. But, notwithſtanding the extravagancy of Orpheus's fancy, the generality of the Greek pagans, looking on the man, not as a mere poet, but a holy and profound philoſopher, ſuppoſed all his fables of the gods to be deep myſteries and allegories, which had ſome hidden and ſecret ſenſe under them, and therefore had a high veneration for him, as one divinely inſpired; inſomuch, that Celſus would have had the Chriſtians rather take Orpheus for a god than Chriſt, as being a man unqueſtionably endued with a holy ſpirit, and one who alſo died a violent death [m]. And tho' he were the great propagator of polytheiſm, yet it has been thought, that he acknowledged one ſupreme unmade Deity as the original of all things, not only from the great eſteem he was in, with thoſe two moſt religious philoſophic ſects, the Pythagoreans and Platoniſts, he being commonly called by them the Theologer, but alſo becauſe they were ſuppoſed, in great meaſure, to have owed their theology and philoſophy to him, as deriving the ſame from his principles and traditions [n].

THIS favourable opinion of Orpheus will yet be better founded, if we allow the epitome of the Orphic coſmogony, made long ago by Timotheus the chronographer, to contain the true doctrine of that poet: for he writes, that Orpheus gave an account of the generation of the gods, the creation of the world, and the formation of man, profeſſing, that he delivered nothing from his own invention, but as he was informed, on enquiry, by Phæbus, Titan, or the ſun. Which account in brief is, that in the beginning the æther, or heaven, was formed by God, and that on each ſide of the æther was chaos and dark night, which covered whatſoever was under the æther, thereby ſignifying that night was prior. He declared alſo, that there was a certain incomprehenſible Being, which was the higheſt and moſt antient of all things and the maker of the univerſe, both of the æther itſelf, and of things under the æther. That the earth was inviſible, by reaſon of the darkneſs which was upon it; but the light, breaking forth thro' the æther, illuminated the whole creation;

[l] Damaſcius περὶ ἀρχῶν, MS. apud Cumberl. Review of the Coſmog. of Sanchon. p. 280, & Cudworth, ubi ſupra.
[m] Com. Cels. l. 7. p. 367. apud Cudworth, ibid. [n] Cudworth, ibid.

on; this light, which ſo brake forth, being ſaid by him to be that higheſt of all things, before mentioned, whoſe name was revealed by the oracle, was counſel, light, and the giver of life. That theſe three names manifeſt one and the ſame power and might of that inviſible, and incomprehenſible God, who is the maker of all things, and who bringeth that which is not, into a ſtate of exiſtence. By which power were produced all incorporeal principles, and the ſun, and the moon, and the ſtars, the earth, and the ſea, and all things therein, both viſible and inviſible. He likewiſe declared, that mankind was formed out of the earth by the ſame Deity, and received from him a rational ſoul, agreeably to what Moſes has recorded. Timotheus adds, that the ſame Orpheus alſo wrote, that all things were made by one godhead of three names, and that this God is all things [o].

If this teſtimony be admitted, we need not appeal to the Orphic verſes, which are very full as to the aſſertion of the ſupreme Deity. It is true, many of thoſe verſes are ſuppoſititious, and manifeſtly forged either by Chriſtians, or Jews; but all of them cannot be proved to be ſo; ſeveral being cited by pagan authors, as written, if not by Orpheus himſelf, yet by perſons of great antiquity, and well acquainted with his doctrine and traditions; and therefore, by men of good learning and judgment, thought genuine, and worthy of ſome regard [p]. However, Orpheus's theology has been preferred to that of the other heathens by the chriſtian fathers [q]; and a late ingenious writer has ſurmized, that his eſtabliſhing of polytheiſm was owing rather to the neceſſity, he was under of complying with the ſtupidity of the barbarous people, whom he firſt civilized, than his own approbation; being obliged to give them, not the religion which himſelf beſt approved, but ſuch a one as they were capable of receiving [r].

But to return to the Orphic coſmogony, Syrianus ſays, that Orpheus held two principles, æther and chaos [s]; to which Simplicius adds a third, as prior to the other two, viz. time, the meaſure of the fabulous generation of the gods; after which, according to Orpheus, the æther and chaos were produced

[o] Timoth. Chronogr. apud Euſeb. Chron. Græc. p. 4. & Cedren. p. 57. Vid. etiam Suidam, in voce, Orpheus, & Procl. in Tim. l. 2. p. 117. [p] Vid. Cudworth, ubi ſup. p. 295, & 300, &c. & Burnet. Archæol. l. 1. p. 125 [q] Burnet, ibid. p. 127. [r] Idem, ibid. p. 120, &c. [s] Syrian. in Ariſt. Metaph. c. 2.

produced [t]. By which it ſhould ſeem he thought the æther and chaos were co-eval: but it has been obſerved, that the antients, or the later authors, who have handed their opinions down to us, do frequently confound the univerſe with this ſublunary world, and apply what relates diſtinctly to one of the two, to the other, or both promiſcuouſly; and that of the æther here mentioned, the celeſtial, or firſt fabric of things was made; and of the chaos, the ſublunary world, or our earth, and others like it, at ſeveral diſtant intervals. Which things ought to have been ſeparately treated, as well with regard to the matter, as to the time; though unſkilful authors have often neglected that neceſſary diſtinction [u].

Remarks thereon.

IT is proper here to obſerve, that Orpheus, among other eaſtern learning, ſeems to have firſt introduced among the Greeks the doctrine of the mundane egg, which, in all probability, he learned from the Egyptians, who repreſented the world by that ſymbol [x], as many other antient nations did. The Phœnicians, as we have ſeen, made their Zophaſemin, which were the celeſtial bodies, oviform; and worſhipped an egg, in the Orgia of Bacchus, as an image of the world [y]. And the ſame compariſon or reſemblance was made uſe of by the Chaldeans, Perſians, Indians, and Chineſe, as will be obſerved hereafter; and this not only for its external figure, but alſo for the inward compoſition of it; the ſhell repreſenting the heaven, the white, the air, and the yolk the earth [z]; tho' others make out this reſemblance in a different manner [a]. Hence Plutarch [b] obſerves, that the queſtion, which was the elder, the egg or the hen, was not a trivial enquiry; but, according to the Orphic doctrine, comprehended the ancient generation of all things: and the author of the hymns attributed to Orpheus makes the firſt-born god, named by the Greeks Phanes, to be produced from an egg [c]. This was the firſt-begotten god, mentioned by Athenagoras to have been hatched from the egg, as the followers of Orpheus taught [d].

ANOTHER

[t] Simplic. in Ariſt. de Auſcult. Phyſic. l. 4. [u] Burnet, ubi ſup. p. 130. [x] See before, p. 100. [y] Plut. in Sympoſ. l. 2. quæſt. 3. Vid. Macrob. Stat. l. 7. c. 16. [z] Varro, apud Prob. Gram. in Ecl. 6. Virgil. [a] Vid. Achillem Tatium in Arati. Phænom. cap. 4. & Burnet. Theor. Sacr. Tellur. l. 2. c. 10. and Theory of the Earth, Book I. c. 5. p. 86. [b] In Sympoſ. l. 2. quæſt. 3. [c] Hymn. Πρωτογόνου. Vid. Lactant. de falſa Rel. l. 1. cap. 5. [d] Athenag. Legat. pro Chriſt.

ANOTHER opinion of the Orphic theologers, which muſt not be forgotten, was, that God was all things; but this is not to be underſtood in a groſs ſenſe, ſo as to take away all diſtinction between God and the creature; for they taught this doctrine chiefly on the two following accounts: Firſt, Becauſe all things coming from God, they inferred, that therefore they were all contained in him, and conſequently were, in a certain ſenſe, himſelf. The ſecond is, Becauſe the world produced by God, and really exiſting without him, is not therefore quite cut off from him, nor ſubſiſts alone by itſelf as a dead thing, but is ſtill livingly united to him, eſſentially dependent on him, always ſupported, quickened, and pervaded by him. In the latter of which ſenſes, ſome chriſtian divines alſo have made God to be All; as when they affirm the whole world to be nothing elſe but God expanded, and when they call the creatures, as St. Jerom and others often do, the rays of the Deity. But tho' the ſcripture itſelf may ſeem to give ſome countenance to theſe expreſſions, yet they ought to be uſed with great caution, being eaſily liable to miſtake and abuſe; and the miſtake and abuſe of this one thing might poſſibly have been a chief ground of the both ſeeming and real polytheiſm, not only of the Greek and European, but alſo of the Egyptian and other pagans: they concluding, that becauſe God was all things, and conſequently all things God, therefore God ought to be worſhipped in all things, that is, in the ſeveral parts of nature [e].

WHETHER the preceding opinions, as to the original of the world, be acquitted of the charge of atheiſm, or not, it is certain, that the philoſophy which derives all things from ſenſeleſs matter, in the way of forms and qualities, without the aſſiſtance of a God, was of great antiquity, and as old as any records of time among the Greeks; the antient phyſiologers generally making the ocean, or water, to have been the original of all things: for which reaſon the oath of the gods is ſaid to be by water, called by the poets Styx, which, being moſt antient, deſerved the greateſt reverence, and was conſequently moſt proper to ſwear by [f]. And hence the ocean is by Homer called the progenitor of the gods, and ſource of all things [g]: and Thales, the prince of the Ionic philoſophers, held water to

[e] Cudworth, Intell. Syſt. p. 307. [f] Vid. Ariſtot. Metaph. l. 1. c. 3. [g] Homer. apud Plutarch. de Placit. Philoſ. l. 1. c. 3.

to be the firſt principle, whereof all things conſiſted [h]; and they alſo ſuppoſed, that at laſt all things ſhould be diſſolved, and return into water again [i]. But it ſeems, that thoſe antients, when they made water to have been the firſt principle, did not thereby mean the elementary water, but the chaos, which was fluid ſubſtance, as the Greek word ſignifies. For which reaſon Zeno and Plutarch took the chaos of Heſiod to have been water [k].

The coſmogony of Heſiod.

THE theogony of this laſt mentioned poet, which, as has been obſerved, is alſo his coſmogony, is ſomewhat confuſed, beginning twice from the chaos, and relating things rather in a poetical, than philoſophical, order. The ſubſtance of what he delivers is; That in the beginning the chaos firſt exiſted, then the wide-extended earth, and next love, the faireſt of the immortal gods; that the chaos produced Erebus and night, from the conjunction of which two proceeded Æther and day. After which he proceeds to give an account of the ſeparation of the heaven and ſtars from the earth, the raiſing of mountains, and ſinking of caves; and of the production of the ſea, from the heaven and earth together [l].

and Ariſtophanes.

BUT there is a much more methodical, and complete deſcription of this antient coſmogony given by Ariſtophanes [m], whenceſoever he had it: He writes, that firſt were chaos, black Erebus, and wide Tartarus, but neither earth, nor air, nor heaven: that night, with ſable wings, laid the firſt egg of wind in the vaſt boſom of Erebus; from whence, in proceſs of time, iſſued amiable love, ſhining with wings of gold, like to impetuous whirl-winds; that love, coupling with the obſcure chaos, engendered animals and men; but that there were no gods before love mingled all things, from which mixture of things one with another, the heaven and the earth were generated, and the whole race of immortal gods.

THIS

[h] Plutarch. de placitis Philoſ. lib. 1. c. 3. Diog. Laert. in vita Thaletis, p. 17. Cicer. in Lucullo, & de Nat. Deor. l. 1. This alſo agrees with a paſſage in ſcripture, the genuine ſenſe of which (according to the judgment of the beſt interpreters) is, that the material heavens, as well as earth, were made out of water. 2 Pet. iii. 5. Vid. Cudworth, Intell. Syſt. p. 21. & Burnet, Archæol. l. 1. p. 138, and Theory of the Earth, Book I. c. 4. p. 63, &c. [i] Homer. Il. H. Plut. in Stromat. apud Euſeb. de Præp. Ev. l. 1. c. 8. [k] Zeno, apud Scholiaſt. Apollon. Argon. 4. & Plut. in Tract. Aquane an ignis ſit utilior, p. 955. [l] Heſiod. Theog. verſ. 116. [m] In avib.

This paſſage, notwithſtanding it is ludicrouſly introduced in a comedy, is conceived, not without reaſon, to have been really a piece of the old atheiſtic ſyſtem, and may be thus explained; that chaos, or matter, confuſedly moved, being the original of all, things did from thence riſe up gradually from leſſer to greater perfection; firſt inanimate things, as the elements, heaven, earth, and ſeas, then brute animals, afterwards men, and laſt of all gods. As if not only the ſubſtance of matter and thoſe inanimate bodies of the elements, fire, water, air, and earth, were firſt in order of nature before God, as being themſelves alſo gods [n], but alſo irrational animals at leaſt, if not men too. And this is the atheiſtic creation of the world, gods, and all, out of ſenſeleſs and ſtupid matter, or dark chaos, as the only original deity [o].

The opinion of Thales.

Whether Thales, who was a Phœnician by extraction, acknowledged any divine or intelligent being, as aſſiſting in the formation of the world, is a great queſtion. Cicero indeed tells us, that he was the firſt who ſearched after ſuch things, and affirmed God to be that Mind, which created all things out of water [p]. And Laertius reports, that he uſed to ſay, God was the oldeſt of all things, and that the world was the workmanſhip of God [q]. But on the other ſide, there are a cloud of witneſſes [r], among whom are Cicero and Laertius themſelves [s], who with joint conſent give Anaxagoras, one of his ſucceſſors, the honour of having firſt rejected all chance in the diſpoſition of the univerſe, and introduced a pure intelligent mind, to ſeparate, and compoſe the ſeveral parts of it. So that all the philoſophers of the Ionic ſect, who preceded Anaxagoras, being mere materialiſts, or Hylopathian atheiſts, Ariſtotle ſeems juſtly to have called Thales the prince or leader of that philoſophy [t]. The occaſion of his being thus differently repreſented

[n] Vid. Ariſt. de gener. & corrupt. l. 2. c. 6. [o] Cudworth, Intell. Syſt. p. 121. [p] Cicer de Nat. Deor. l. 1. p. 36. [q] Diog. Laert. in Thalet. p. 21. [r] Plato in Phæd. p. 72. Dei, l. 8. c. 2. Proclus in Timæum. Simplic. in Ariſt. de Phyſic. auſcult. Theodoret. de Græc. affect. Serm II. p. 489. [s] Cicer. de Natura Deor. l. 1. p. 38, 39. Laert. in Anaxagorâ, p. 82. [t] More concerning this Queſtion may be read in Bayle's Dict. Hiſt. Art. Anaxagor. Rem. D. Art. Thales, Rem. A. Dr. Cudworth's Intell. Syſtem. p. 121, 124.

represented may possibly have been, because he left no philosophic writings, or monuments of his own behind him (Anaxagoras being the first of all the philosophic writers [u]); whence probably it came to pass, that in aftertimes some interpreted his opinions one way, and some another, and that he is sometimes represented as a theist, and sometimes as an atheist [x].

BUT if Thales be acquitted, yet his next successor, Anaximander, can by no means be excused from this imputation; for he supposed a certain infinite first matter, which he did not define to be either air, or water, or earth, to be the sole principle of the universe [y]; that the celestial bodies, and infinite worlds, were made of it by secretion, and that generation and corruption proceeded from their moving circularly together from eternity. He also asserted, that the generative principles of heat and cold being separated, when this world was made, a certain sphere of the fire first arose, and encompassed the air which surrounds the earth, as the bark doth a tree; this being afterwards broken, and divided into smaller spherical bodies, formed the sun, moon, and stars [z]. He held also, that the first animals were generated in moisture, and encompassed with certain thorny barks, by which they were defended; which, after further growth, becoming more dry, and cracking, they issued forth, but lived only a short time [a]. That men were at first generated in the bellies of fishes, and being there nourished till they grew strong, and were able to support themselves, they were afterwards cast out upon dry land. And the reason of this strange opinion, as to the original of mankind, was, because other animals soon after their birth betake themselves to their food; but man alone in his infancy needs to be nursed up for a considerable time, and therefore could not be preserved at first in any other manner [b].

Of Anaximander.

FROM

[u] Diog. Laert. in Anaxagor. p. 86. Themestius (Orat. XX) says Anaximander was the first who published a Book of Natural Philosophy. But Theopompus (apud Laert. in Pherecyd. p. 74) asserts Pherecydes Syrus to have first written of Nature and the Gods to the Greeks, whose Treatise of the Beginning of Things was extant in the Time of Laertius, ib. 76. [x] Cudworth, ibid. 124. [y] Plut. de Placitis Philos. l. 1. c. 3. Diog. Laert. in Anaximandro, p. 78. Simplic. in Aristot. Phys. l. 1. c. 6. [z] Plut. in Strom. apud. Euseb. de Præp. Ev. l. 1. c. 8. [a] Idem de placitis Phil. l. 5. c. 19. [b] Idem, apud Euseb. ubi sup. & in Sympos. l. 8. Quæst. 8.

FROM Anaximander's making this univerſal principle of his infinite, ſome late writers, and even Clemens Alexandrinus [c] among the antients, have groundleſly inferred, that he thereby meant GOD, according to the true notion of him, or an infinite mind, the efficient cauſe of the univerſe, and not ſtupid matter [d]. But it is plain, that the gods he acknowledged owed their original alſo to that infinite matter, from which he ſuppoſed all things to be ſecreted, and into which they would return; for he held the gods to be generated, riſing, and vaniſhing again in long periods of time, and that theſe gods were innumerable worlds [e].

Of Anaximenes.

THE phyſiology of Anaximenes differed but little from that of his maſter Anaximander; for he held air to be the firſt principle, and infinite [f], but that the things which aroſe there-out were finite, and ſhould at laſt be reſolved into it again. He ſuppoſed, that all things were generated by a ſucceſſive condenſation and rarefaction of this air; the earth, water, and fire being firſt produced there-out, and then the other parts of the univerſe: he held alſo, that motion was from all eternity: that the ſun gained its heat from the ſwiftneſs of its courſe; and that air held the world together in the ſame manner as the ſoul, which he took to be air alſo, did the human frame [g]. He did not, it ſeems, deny there were any gods, but was ſo far from allowing them to have formed the world, that he believed them likewiſe to have their riſe from the air [h]. Plutarch, after delivering the opinions of theſe two philoſophers, obſerves, that they were both of them in the wrong, in ſuppoſing the world to have been generated from matter only, without any efficient cauſe; matter of itſelf being able to produce nothing no more than a veſſel can be made out of a maſs of ſilver, without the help of an artificer [i].

Amended by Anaxagoras, and Diogenes of Apollonia.

ANAXAGORAS and Diogenes of Appollonia, two ſcholars of Anaximenes, attempted to remedy this grand defect in the Ionic philoſophy, by amending their maſter's hypotheſis. The firſt, by admitting an intelligent being

[c] In protrept. p. 43. [d] Vid. Cudworth's Intell. Syſt. p. 124. [e] Cicer. de Nat. Deor. lib. 1. [f] Diog. Laert. in Anaximen. p. 80. Ariſtot. de Auſcult. Phyſ. Cicer. Quæſt. Acad. l. 2. [g] Plut. in Strom. apud Euſeb. de Præp. Ev. l. 1. c. 8. & de placitis Philoſoph. l. 1. c. 3. [h] Auguſt. d Civit. Dei, l. 8. cap. 2. [i] Plutarch. de placitis Philoſoph. loco. citato.

being distinct from matter, as has been, and will be more fully, observed; and the other, by supposing the air, the first principle of the universe, to be indued with a divine reason, without which he conceived nothing could be produced from it [k]. So that this opinion differed very little from Spinozism.

THE manner in which this latter philosophizes, as to the production of the world, has so near a conformity with the Cartesian hypothesis, that it would be wrong to omit it: All things, says he, being in motion, some became condensed, and others rarified; in those places where condensation prevailed, a whirling motion, or vortex, was formed, which by its revolution drew in the rest, and the lighter parts, flying upwards, formed the sun [l].

THE next atheistic system of philosophy is the atomic, which is generally supposed to have been invented by Democritus, who was elder than Aristotle and Plato; but Laertius attributes it to Leucippus [m], who was somewhat senior to Democritus, though he wrote not so much concerning it as Democritus did. Others make this physiology much more antient: Posidonius [n] avouched it for an old tradition, that the first inventor of it was Moschus, a Phœnician, who lived before the Trojan war [o], and is supposed to have been the same with Mochus, the Phœnician physiologer mentioned by Iamblichus [p], with whose successors, priests, and prophets, he affirms, that Pythagoras, while he was at Sidon, had conversed. But as Cicero, though Posidonius's scholar, scruples not to question his veracity in some things, and expressly affirms Leucippus, or Democritus, to have been the author of this philosophy [q], we think his authority of little weight; much less can we approve, as Mr. Selden does [r], of the conjecture of Arcerius, the editor of Iamblichus, that this Mochus was no other than Moses, the celebrated prophet of the Jews. However, it is probable from some other considerations, that Pythagoras was not unacquainted with the atomical physiology;

The atomic system, by whom invented.

[k] August. de Civit. Dei, l. 8. c. 2. Vid. etiam Cicer. de Nat. Deor. l. 1. & Aristot. l. 1. de anima, c. 2. [l] Plut. in Strom. apud Euseb. de Præp. Ev. l. 1. c. 8. [m] Diog. physiology; for Democritus himself was of the Italic, or Pythagoric, succession, and is reported to have taken all his philosophy from them [s]: and the famous monads of Pythagoras are by some supposed to have been nothing else but corporeal atoms [t]. That Empedocles, who was also a Pythagorean, took the world to be compounded of minute particles, is expressly asserted [u], and will appear more plainly, when we come to give an account of his physiology: and the natural principles of Ecphantus the Syracusian, another of that sect, were indivisible bodies, and vacuum. Nor were they the only antient philosophers who went that way; Xenocrates, Heraclides, Asclepiades, Diodorus, Metrodorus Chius, and the generality of the old physiologers, having also supposed indivisible particles to be the first principles of bodies. Notwithstanding which, Leucippus and Democritus are reputed the first inventors of the atomic philosophy, either because they brought it to greater perfection, or else, because they first made it a complete and entire system by itself, so as to derive the original of all things in the whole universe from senseless atoms, which had figure and motion only, and space; from whence it would follow, that there could be no God, not so much as a corporeal one: for before them, the doctrine of atoms made not an entire philosophy by itself, but was looked upon as a part, or member of the whole philosophic system, and that the meanest and lowest part too; it being only used to explain that which was purely corporeal in the world; besides which they acknowledged something else, which was not mere bulk and mechanism, but life and self-activity, that is, immaterial substance; the head whereof is a Deity distinct from the world. So that there have been two sorts of atomists; the first, holding incorporeal substance, used that physiology in a way of subordination to theology: the other, allowing no other substance but body, made senseless atoms, without any mind or understanding, that is, without any God, to be the original of all things: which latter system is that vulgarly known by the name of the atomic philosophy, which was founded by Leucippus and Democritus [x], and afterwards, with some alteration, taught by

[s] Diog. Laert. in Democr. p. 570. [t] Vid. Cudworth's Intel. System. p. 13. [u] Plut. de placitis Philos. l. 1. cap 24. [x] Cudworth, p. 16, &c.

by Epicurus, though he would not acknowledge that he had borrowed his hypotheſis from any [y].

Occaſioned a ſtricter method of philoſophizing.

BUT whoever firſt introduced it, this hypotheſis occaſioned a more ſtrict, and accurate method of philoſophizing, than had formerly been uſed. For the atomiſts, neglecting numbers, proportions, harmonies, ideas, qualities, and elementary forms, immediately proceeded to examine the bodies themſelves, and their phyſical and mechanical properties, their motion, figure, ſituation of parts, ſize, and the like; from whence they very rationally aſcertained their ſeveral powers, determined their actions, and explained their effects; though the notions they entertained of the indiviſibility of the atoms, their innate power of motion, inclinations to certain places, and the like, be not only without any foundation, but repugnant to reaſon [z].

The doctrine of Leucippus and Democritus;

THE doctrine of Leucippus and Democritus, as to the origin of the World, was, that the firſt principles were an infinite number of atoms, or indiviſible particles of different ſizes and figures, which moving fortuitouſly, or without deſign, from all eternity in infinite ſpace, and encountering one another, became variouſly implicated and entangled, and produced firſt a confuſed chaos of all kinds of particles, which afterwards by continual agitation, ſtriking and repelling each other, diſpoſed themſelves into a vortex, or vortices, where, after many convolutions and evolutions, molitions and eſſays, in which all imaginable ſhapes and combinations were tried, they chanced at length to ſettle into this preſent form and ſyſtem of things [a],

Of Epicurus.

THIS hypotheſis, as to the formation of the principal parts of the world, agrees with that of Epicurus, as it is repreſented by Lucretius [b], excepting, that no mention is made of thoſe vortices, which yet were an eſſential part of the former. To the two properties, attributed to atoms by Democritus, magnitude and figure, Epicurus added a third, weight; without which he did not conceive they could move at all [c]. And one of the inevitable conſequences of

[y] Cic. de Nat. Deor. l. 1. [z] Burnet, Archæol. l. 1. p. 167.

[b] Vid. Lucret. de Rer. Nat. l. 5. Virgil. Eclog. 6. Plut. de placitis Phil. l. 1. c. 4. and Stanley's hiſtory of philoſophy, part 13, p. 572, &c. [c] Plut. ubi. ſup. c. 3.

of the Democritic ſyſtem being abſolute fatal neceſſity, (for when they maintained, that the world was made by a fortuitous concourſe of atoms, it was not their meaning to deny the world to have been neceſſarily made, according to the eternal laws of motion of thoſe atoms, but only to exclude the direction of an intelligent cauſe) and ſuch neceſſity, in the opinion of Epicurus, overturning all morality, and reducing the human ſoul to be a mere machine; in order to account for freedom of will, beſides the twofold motion of atoms allowed by thoſe before him, perpendicular and reflexive, he introduced a third; ſuppoſing, that the atoms could of themſelves decline from the right line, and move obliquely, even in void ſpace, and without any colliſion at all [d]; from which, as he ſtrangely inferred, proceeded natural liberty. And this declination ſerved alſo another purpoſe, that is, to explain the meeting of the atoms; which, if they all moved one way, would have been impoſſible [e]. But the moſt material difference between the two hypotheſes, though not often taken notice of, was, that Epicurus admitted no principle at all but the atoms themſelves; whereas Democritus believed them to be animated [f]; a ſuppoſition not a whit more abſurd than that of their exiſtence and ſpontaneous motion, and which would yet be of great uſe in obviating ſeveral objections to the atomic ſyſtem, otherwiſe unanſwerable [g].

As to the production of animals and mankind, the Epicurean philoſophy accounted for it in this manner: It was ſuppoſed, that the new formed earth containing in it the ſeeds of all things, the ſun, acting by its heat on the moiſter parts, raiſed ſmall bladders, like little wombs, in which the embryos, at firſt imperfect, were conceived, and through which they broke their way, when arrived at maturity; and that for their nouriſhment nature provided bags, like ſmall breaſts furniſhed with a milky juice. And it is pretended, that this fœcundity cannot ſeem ſtrange, in that juvenile vigor of nature, if we conſider, what numbers of ſmaller creatures and inſects are, at this day, bred in the ſame way. But at length, the ſeeds of the earth being exhauſted, ſhe, like a woman paſt child-bearing, of courſe left.

[d] Vid. Lucret. l. 2. v. 216, &c. [e] Vid. Bayle, Dict. Hiſt. Art. Epicure, Rem. U. [f] Auguſt. Epiſt. 66. [g] Vid. Bayle, Dict. Hiſt. Art. Leucippe, Rem. E. & Art. Epicure, Rem. F. As to the other Differences between the Doctrines of Democritus and Epicurus, conſult Cicer. de Finib. l. 1.

left off this way of producing the more perfect animals; whence it is, that every ſpecies is now propagated by copulation [h].

THIS atomic ſyſtem, which had been ſuperſeded by Plato and Ariſtotle, who brought in ideas, form, and qualities, inſtead of the mechanical properties of matter, was raiſed by Epicurus to a high degree of reputation, and continued to flouriſh after his death, beyond any other philoſophy [i]; though it was juſtly decried by the other ſects, on account of the atheiſm which naturally flowed from its principles. Had Democritus only ſuppoſed God to be a mind, or intelligence, placed in a ſphere of fire, and the ſoul of the world [k], he would have been much more excuſable than in teaching, as he did, that the images of objects, which on every ſide preſent themſelves to us, and the nature which ſcatters round, or emits ſuch images, and even our own knowledge and underſtanding, were to be reckoned among the gods [l]. So that what Democritus called God, had neither the unity, nor eternity, nor immutability, nor other attributes, which are eſſential to the divine nature: and yet an opinion very like his was not long ago advanced [m], on the ſuppoſition that our ideas are in God, and that they cannot be a modification of a created mind; from which it ſeems to follow, that our ideas are God himſelf [n]. As to Epicurus, he acknowledged indeed, that there were gods, and that they deſerved to be worſhipped on account of the excellence of their nature, tho' no benefit was to be expected from them, nor any harm to be feared [o]: for he allowed them to be neither the makers, nor the governors of the world. And yet a very learned man has lately undertaken the defence of Epicurus, as to this latter point, and maintained, that he did not deny a divine providence [p]. He ſuppoſed the gods were immortal, and ſupremely happy, leading a life of perfect inaction and tranquillity; that they were of human form, yet had not real bodies and blood, but

Reflections on this ſyſtem.

[h] Vid. Lucret. ubi ſupra. [i] Lactant. Divin. Inſtit. l. III. cap. 17. [k] Plutarch. de placitis Philoſ. l. 3. cap. 7. [l] Cicer. de Nat. Deor. l. 1. [m] F. Mallebranche's Notion of ſeeing all things in God. [n] Vid. Bayle, Dict. Hiſt. Art. Democrite, Rem. P. [o] Vid. Cicer. de Nat. Deor. l. 1. Senec. de beneficiis, l. 5. c. 19. & Gaſſend. de vita & moribus Epicuri, l. 4. c. 3. [p] Monſ. du Rondel, de vita & moribus Epicuri, Amſt. 1693. in 12°.

but ſomething analogous to them [q]; and leaſt he ſhould at once deſtroy their immortality, and ſubject them to deſtruction, he taught, that they were not compoſed of atoms, like other beings [r], though ſome have, by miſtake, affirmed the contrary [s]. It is well known, that this corpuſcular philoſophy has been revived by ſome moderns, who, rejecting the eternity of the atoms, and their fortuitous motion, but following, in almoſt all other reſpects, the old hypotheſis of Leucippus, have made a very fine ſyſtem of it. This is what Gaſſendi has done, who differs from Des Cartes, as to the principles of bodies, in nothing but the retaining a vacuum. The ſcholaſtic divines among the Mohammedans, who are very orthodox as to the creation of the world by God, do alſo admit both atoms and a vacuum: but their atoms are different from thoſe of Leucippus, for they have no magnitude, and are all like one another; and they ſuppoſe, as that philoſopher ought to have done, that every atom of a living body is alive, that every atom of a ſenſitive body is endued with ſenſe, and that the underſtanding reſides in an atom; though they differ as to the ſoul, and knowledge, whether they conſiſt in a ſingle atom, or a collection of ſeveral [t].

The opinion of thoſe who, holding the eternity of matter, admit an intelligent mind as the diſpoſer thereof; and

THOSE, who, allowing the eternity of matter, introduce an intelligent mind as the diſpoſer thereof into the form the world now bears, may be again ſubdivided into two claſſes: one, who, allowing no ſubſtance but matter, ſuppoſed it to be endued with underſtanding and life, and conſequently to be God; and another, who held God and matter to be two diſtinct, and independent beings.

1. Of thoſe who ſuppoſed matter to be the only ſubſtance, and endued with underſtanding.

THE firſt opinion, which, as has been ſaid, differs but little from Spinoziſm, ſeems to have been that of Diogenes of Apollonia [u], and was certainly maintained by Hippaſus of Metapontus, Heraclitus, and the Stoics.

The opinion of Hippaſus, Heraclitus,

HIPPASUS and Heraclitus held fire to be the firſt principle, of which all things were made, and into which, after the revolution of certain periods, they will be again reſolved,

[q] Cicer. ubi ſupra. Diog. Laert. in Epicuro, p. 634, 655, 661. Plut. de placitis Philoſ. l. 1. c. 7. Sext. Empiric. contra Math. p. 312. [r] Cicer. ubi ſupra. Lactant. de ira Dei, cap. 10. ſolved, and that this fire was God [x]; whom Heraclitus deſcribed to be that moſt ſubtile and moſt ſwift ſubſtance, which permeates, or paſſes through the whole univerſe [y].

THE notions of Heraclitus ſeem to have been very confuſed, at leaſt as they are now repreſented to us, which is no wonder at all, ſince he ſo much affected obſcurity in what he wrote concerning natural philoſophy, that he was thence ſurnamed the obſcure [z]. He is ſaid to have denied the world to have been made either by gods, or men [a]; by which it is ſuppoſed he meant, that the world was not made by any whatſoever, after ſuch a manner as an artificer makes an houſe, by machines and engines, acting from without upon the matter; but by a certain inward plaſtic nature of its own [b]. He aſſerted the fatal neceſſity of all things, but taught, that they were in a perpetual flux, nothing remaining at a ſtand. His account of the formation of the world was, that the fire being extinguiſhed, the groſſeſt parts of it coaleſcing, made the earth, which, being looſened by the fire, produced water, and from the exhalation of water the air was generated [c]. As the opinions of Heraclitus concerning the origin of things were adopted by the Stoics, (of whom immediately) we ſhall not enlarge here, but only obſerve, that the great phyſician Hippocrates had the ſame notion of the deity with Heraclitus, declaring his belief to be, that heat or fire was immortal and omniſcient, and that it ſaw, heard, and knew all things, both preſent and future [d]. and Hippocrates.

THE Stoics held two firſt principles, God, and matter void of all quality, the one active, and the other paſſive, and that they were both corporeal [e]; for they did not acknowledge any ſuch thing as incorporeal ſubſtance [f]: by which means they ſtrangely confounded themſelves, and reduced their two principles, in effect, to one and the ſame. The opinion of the Stoics

They

They affirmed God to be an immortal, rational, and perfect animal, conſcious of his own happineſs, ſubject to no evil, governing the world, and all things in it, by his providence; and the architect, and, as it were, the father of the univerſe [g]. But they more uſually deſcribed him to be a fiery ſpirit, void of all figure, yet changing himſelf into all things; or an artificial fire, methodically proceeding to the generation of the world, and containing within himſelf all ſeminal reaſons or models, according to which every thing is formed purſuant to fate [h]; which is alſo their deſcription of nature [i]. This ſpirit, they ſay, quickens, ſuſtains, and pervades the whole world, and every part of it, as the ſoul does the human body, being called by ſeveral names, according to the different form of the matter which it animates. For which reaſon they hold the world itſelf to be God, and every part of it a member of him [k]. So that this ſect, in appearance, have confounded God and nature together, tho' their genuine doctrine ſeems to have been, that there was not only an intellectual conſcious ſoul preſiding over the whole world, yet lodged more immediately in the fiery matter of it; but alſo a certain plaſtic, or ſpermatic nature, contained under, or within the former, and which was properly the fate of all things [l]. And the admitting of ſuch a ſubordinate plaſtic nature or life, which acts in order to certain ends, tho' without any ſenſe or conſciouſneſs, has been thought very reaſonable by ſome, tho' exploded by others, and that for the avoiding of theſe two conſequences; either that, in the formation and organization of natural and animal bodies, every thing comes to paſs fortuitouſly, for the ſake of no final cauſes, and without the guidance and direction of any mind or underſtanding; to aſſert which ſeems irrational and atheiſtical: or elſe, that God himſelf doth immediately form every the minuteſt thing, as it were with his own hands, which is very indecent to ſuppoſe [m]. There were ſome Stoics, it is true, who, rejecting all animality or conſciouſneſs in the world,

world, made it to be governed by a vegetable or plaſtic nature only, as Boethus, whom we have already mentioned, in particular did; but their opinion ought by no means to be imputed to the whole ſect.

As to the conſtitution of the world, the peculiar dogm of the Stoics, which Zeno, their maſter, ſeems to have borrowed from Heraclitus, was, that in certain periods, or alternate viciſſitudes of time, the univerſe is diſſolved by fire, and re-produced out of it; God withdrawing, or abſorbing all things into himſelf, by a general conflagration, and afterwards producing them out of himſelf again [n]. In which ſucceſſive conflagrations, they held, that not only the world, but all the inferior gods alſo are melted down into their ſupreme Deity, the intellectual fiery ſoul, or principle of the univerſe [o]; who, during that interval, reſts in himſelf, conſidering his providence, and entertained with thoughts becoming himſelf [p], till he again emits, and brings the world into being; the manner of which renovation Zeno thus deſcribes: God, being alone, changes all ſubſtance from fire, firſt into air, and then into water; and as the ſeed is contained in the plant, ſo God, being the ſeminal reaſon of the world, left ſuch a ſeed in the moiſture, as might afford proper matter for the generation of thoſe things which were to be produced; that the groſſer parts of this watery matter ſubſiding made the earth, the finer the air, and thoſe ſtill more ſubtilized the fire. The four elements being thus generated, from the mixture of them proceeded plants, and animals, and all other ſpecies [q].

Of the Pendets in India.

WITH theſe notions of the Stoics agrees the doctrine, which is ſaid to be almoſt univerſal among the Pendets [r], (who are *Indian* gentiles) and ſecretly entertained by the Sûfis, and learned men of Perſia, being the ſame in ſubſtance with the philoſophy of Flud, which Gaſſendi has taken the pains to refute. Theſe Cabaliſts pretend, that God, or the ſupreme, immoveable, unchangeable Being, has not only produced the ſouls of creatures out of his own ſubſtance, but whatever is material, or corporeal in the univerſe alſo; and

[n] Diog. Laert. in Zenon. p. 451. Numenius, apud Euſeb. de Præp. Ev. l. 15. c. 18, 19. [o] Vid. Plut. adv. Stoicos, p. 1075. & de defectu Oracul. p. 420. [p] Idem. adv. Stoicos, p. 1077. Senec. Epiſt. 6. Arrian. in Epictet. lib. III. cap. 13. [q] Diog. Laert. ubi ſup. p. 450, 454. Vid. Stobæi Ecl. Phyſ. c. 20. [r] We take this word to be the Malayan پندیت Pandit, which ſignifies a man of letters.

and that this production is not made ſimply in the way of efficient cauſes, but by an actual extraction, or extenſion of his own ſubſtance, which is creation, as deſtruction is nothing elſe but the reſuming of that divine ſubſtance into himſelf; which they illuſtrate by the following ſymbol. They feign, that a certain immenſe ſpider was the firſt cauſe of all things; which, drawing the matter from its own bowels, wove the web of this univerſe, and diſpoſed it with wonderful art: ſhe, in the mean time, ſitting in the center of her work, feels, and directs the motion of every part; till at length, when ſhe has pleaſed herſelf ſufficiently in ordering, and contemplating this web, ſhe draws all the threads ſhe has ſpun out, again into herſelf, and having abſorbed them, the univerſal nature of all creatures vaniſhes into nothing [s]. Another compariſon made uſe of by them is, that God is like an immenſe ocean, wherein ſeveral phials full of water are ſwimming; that theſe phials, whitherſoever they go, are always in the ſame ocean, and in the ſame water, and when they break, the water contained in them will be united to their whole, that is, to the ocean, of which they are portions [t]. But this laſt is by no means a *ſtrict parallel*; for the matter of the phials is a ſecond ſubſtance, which, by its interpoſition, ſeparates the water, incloſed in thoſe phials, from the ocean: but if there was ſuch a thing as a ſoul of the world, it would be expanded through all parts of the univerſe, nothing could hinder the union of every particular ſoul with its whole, nor would death be a means of their re-union.

Of certain ſects among the Chineſe.

THERE is alſo a ſect among the Chineſe, who acknowledge nature to be the ſole deity, thereby underſtanding that natural power, or operation, which, being the efficient cauſe of motion and reſt, produces, maintains, and preſerves all things. They take her to be the ſoul which univerſally informs matter, and call her a principle, independent of all others; but as they ſeparate this principle from all corporeal and ſenſible matter, its imperfections and definitions, they do in this particular differ ſomething from the Stoics; tho' they who incline to this ſect do believe, as they did, that the world hath had a beginning, and ſhall have an end, but ſhall afterwards begin, and end again as before, and ſo perpetually be renewed, and periſh. And according

[s] Bernier, ſuite des Memoires ſur l'Empire du Grand Mogol, p. 202, &c. Burnet. in Append. ad Archæol. p. 354. Kircher, China illuſtr. p. 155. [t] Bernier, ibid.

according to this opinion, numerous worlds have already exiſted, and others, to an infinite number, will hereafter ſucceſſively make room for one another [u].

BUT the opinion more commonly embraced at this time by the Chineſe, and wherein the atheiſm, which has ſo generally infected them, conſiſts, comes rather nearer to the Stoic doctrine, tho' not without ſome conſiderable differences; and it is this: That God is the material ſoul of the whole world, or rather only of its moſt excellent part, the heaven; and that his providence and power are finite and limited, tho' much excelling the prudence and power of man. That there are diſtinct ſpirits in the four parts of the world, the ſun, ſtars, mountains, rivers, plants, cities, houſes, and in a word, in all things: ſome of which ſpirits they ſuppoſe to be evil, making them the immediate cauſe of all the miſchiefs and diſaſters, to which human life is ſubject. By this diſtribution of ſouls throughout all nature, they are not at a loſs to account for its whole œconomy, and to ſupply the want of an almighty power, and infinite providence, which they allow to no one ſpirit, not ſo much as to that of the heaven. They ſuppoſe, indeed, that the ſoul of the heaven acts on nature with a power and prudence, incomparably greater than what man is endued with; but, at the ſame time, acknowledge in the ſoul of every other thing an inward power, naturally independent on that of the heaven, and which ſometimes acts even in contradiction to the deſigns of heaven. So that, according to them, the heaven governs nature as a mighty king, the other ſouls owe him obedience, which he almoſt always forces them to pay; yet there are ſome, which now and then diſpenſe with their duty in that reſpect, and refuſe to obey [x].

THIS laſt opinion differs widely from another entertained by a ſect of the ſame nation, and eſtabliſhed by royal authority in the year of Chriſt 65. Its founder was ſon of the king In fan vang, who was firſt named She, or She Kia [y], and afterwards,

[u] Deſcript. of China, at the end of Ides's travels, p. 171, 172. [x] La Loubere, Deſcript. de Siam. Tom. I. p. 396, &c. [y] So we chuſe to expreſs what other authors, following the Portugueſe ſpelling and pronunciation, write Xe, or Xe Kia, intending throughout this work, to reduce the orthography of the Chineſe and Japoneſe words, as near as poſſible, to the Engliſh pronunciation; of which the reader will be more particularly informed in the preface.

afterwards, when he arrived at the age of thirty, Foe, that is, not a man [z]. The ſecret doctrine of this ſect, which is never diſcovered to the ſimple, or vulgar, is; that a void, or emptineſs [a], is the principle and end of all things; that our firſt parents ſprang from thence, and on their death returned into it; and that all men are likewiſe reſolved into that principle by death; that mankind, and the elements, and all creatures make a part of this void: ſo that there is but one ſubſtance in the univerſe, which is diverſified in particular beings only by figures and qualities, or interior configurations; in a manner as water, which is always eſſentially water, though it be in the ſhape of ſnow, hail, rain, or ice [b]. They deſcribe this original being, as a pure, limpid, ſubtil, infinite ſubſtance, which can neither be generated, nor corrupted, but is both perfect itſelf, and the perfection of all things, remaining in perpetual repoſe, but without heart, virtue, underſtanding, or power, the great property of its eſſence being neither to act, underſtand, nor will any thing [c]. This opinion is the fountain, from whence that, which we have mentioned to obtain among the Japoneſe [d], is derived; and differs from Spinoziſm, in allowing an emerſion of the world from a very different ſtate poſſible, if not actually, to have been; as it does both from that and the Stoic doctrine, in diveſting their firſt principle of activity and underſtanding. A follower of Confucius has refuted the extravagancies of this ſect, by that eſtabliſhed maxim, that nothing can be produced from nothing; by which he muſt have ſuppoſed, that they taught the firſt principle of all things to be nothing [e], and, conſequently, that the world had a beginning, without either an efficient cauſe, or matter. But it is more probable, that by the words void and emptineſs, they intended only to expreſs that which has not the properties of ſenſible matter, and underſtand thereby what the moderns underſtand by ſpace, which is conceived to be diſtinct from body, and whoſe indiviſible, impalpable, penetrable, immoveable, and infinite extenſion is ſomething real. It is eaſy to perceive, that ſuch a being could not be the firſt principle, if it were

[z] See the Acta Eruditor. Lipſiæ, 1688, pag. 257, in the Extract of the Philoſ. of Confucius, printed at Paris, 1687. [a] The Chineſe words are Cung hiu, the Latin tranſlation, Vacuum & inane. [b] Biblioth. Univ. Tom. VII. pag. 406. [c] Acta Eruditor Lipſiæ, 1688, pag. 258. [d] See before, p. 88. [e] Acta Erudit. Lipſiæ, ubi ſupra.

were inactive, as these Chinese philosophers pretend: Spinoza has not been so absurd; the abstract idea which he gives of the first principle is no more, properly speaking, than the idea of space; but then he endues it with motion, from whence all the varieties of matter may proceed [f].

Of the Siamese; THE Siamese have also some agreement with the Stoics, in their notion of the alternate destruction and renovation of the universe. Their Talapoins teach, that the figure or model of the world is eternal, but that the visible world is not; for whatever we see in it lives, in their opinion, and must die; and there will at the same time be re-produced other beings of the same kind, another heaven, another earth, and other stars; and in this manner, they say, nature has perished, and been renewed several times [g].

and the later Jews. NOR was this doctrine unknown to the later Jews, whose cabalists are supposed to account for the origin of things, by making them emanations from a first cause, and therefore pre-existent, though perhaps under another form. They speak also of the resuming or withdrawing of things into the first being, by a revolution and restitution of them to their first state; as if they believed their En Soph [h], or first infinite being, to contain all things, and that there is always the same quantity of being in the universe, whether in the created, or uncreated state. When it is in its uncreated or antemundane state, God is simply all things; but when it becomes the world, the degree or quantity of being or entity is not encreased, but God expands and unfolds himself by emanations and effluxes, from the superior to the lower parts, whereby the different forms and orders of created beings are constituted. For which reason they often speak of greater and smaller vessels, as it were to receive those effluxes; and of effluent rays; and of canals, through which they flow and are propagated; in a word, when God retracts those rays, the external world perishes, and all things again become God [i]: *he sendeth forth his spirit, and they are created, and he reneweth the face of the earth, he hideth his face, and they are troubled, he taketh away their breath, they die, and return to their dust* [k].

2. The opinion of those who held two distinct, co-eternal principles, God and matter.

We come now to speak of those who held two distinct, and independent principles, co-existent from eternity, God and matter; which is supposed to have been the opinion of Pythagoras and Plato; and was certainly that of Anaxagoras, Archelaus, and several others.

The opinion of Pherecydes, Pythagoras.

What was the opinion of Pythagoras's master, Pherecydes of Syros, as to the origin of the world, is somewhat uncertain; from the first words of a treatise of his, extant in the time of Diogenes Laertius, which are indeed somewhat corrupted and obscure, it seems, he believed three eternal beings, Jupiter, or God, time, and the earth [l]. But Pythagoras himself is said to have asserted two substantial self-existent principles, a Monad, or unity, and a Dyad, or duality; by the former of which God, or an active principle or mind, is generally allowed to be meant (though some imagine the Pythagoric monads were atoms [m]); but what the latter signified is uncertain, it being sometimes interpreted to be a dæmon, or evil principle in forming matter, or the visible world [n], and at other times to be a passive principle, or matter itself [o]; the number two being used as a type, to shew the variety, inequality, divisibility, and continual changes of matter, as one was to express the unity, identity, indivisibility, and unchangeableness of the divine nature [p]. Yet it may be questioned, whether Pythagoras by his Dyad meant matter or no: for Porphyry thus interprets the two Pythagoric principles. The cause, says he, of that sympathy, harmony, and agreement which is in things, and of the conversation of the whole, which is always the same, and like itself, was by Pythagoras called Unity, that unity which is in the things themselves being but a participation of the first cause; but the reason of difference, inequality, and constant irregularity in things was by him called a Dyad [q]. Thus, according to Porphyry, by the Pythagoric dyad, is not so much meant matter, as the infinite and indeterminate nature, and passive capability of things. So that the monad, and dyad of Pythagoras seem to have been the same with Plato's Finite, and Infinite

[l] Diog. Laert. in pherecyde, p. 76: [m] See before p. 114. [n] Plutarch de placitis Philos. l. 1. cap. 7. [o] Idem, ibid. cap. 3. Vid, Numen. apud Euseb. de Præp. Ev. & Cudworth, Intell. System, p. 371, &c. [p] Vid. Dacier, Vie de Pythagore, p. lv. [q] Porphyr. in Vita Pythag, p. 203.

finite [r]; the former of which two only is ſubſtantial, that firſt moſt ſimple being, the cauſe of all unity, and the meaſure of all things [s].

HOWEVER, if Pythagoras's dyad be to be underſtood of a ſubſtantial matter, there ſeems good reaſon to believe, that he did not ſuppoſe matter to be ſelf-exiſtent and independent upon the deity; ſince, according to the beſt and moſt antient writers, his dyad was no primary, but a ſecondary being only, and derived from his monad, the ſole original of all things, as matter for the monad, or active principle, which in the beginning was alone, to work upon [t]. For whatever Ocellus Lucanus, Philolaus [u], and ſome other Pythagoreans imagined of the world's eternity, Pythagoras himſelf really believed it to have a beginning, and to have been made by God [x]: which is confirmed by its being given as one reaſon of his ſuperſtitious abſtinence from beans; that at the beginning things being confounded, mingled, and putrified together in the earth, the generation and ſecretion of them afterwards proceeded by degrees, animals being produced, and plants ſhooting forth; at which time, from the ſame putrified matter, ſprang up both men and beans [y]. But his acknowledging the creation of the world by God is ſtill more expreſs, in thoſe verſes cited for his by Juſtin [z]. We ſhall content ourſelves to add here the teſtimony of St. Cyril, who aſſures us, that he held one God of the whole univerſe, the principle and cauſe of all things, illuminating and quickning the whole, and the original of motion; from whom all things were derived, and brought out of non-exiſtence into being.

BUT Pythagoras, it ſeems, did not only call the ſupreme Deity, a monad, but alſo a tetrad, or tetractys, the explication of which has tortured the wits of ſeveral ages [b]. It is, in the golden verſes, ſaid to be the fountain of the eternal

nal nature [c]; and, by Hierocles, the maker of all things, the intelligent god, the cauſe of the heavenly and ſenſible god, that is, of the animated world, or heaven [d]. The latter Pythagoreans endeavour to give reaſons why God ſhould be called Tetractys, from certain myſteries in the number four [e]; but the late conjecture of ſome learned men [f] ſeems to be much more probable, that this name was really nothing elſe but the Tetragrammaton, or that proper name of the ſupreme God amongſt the Hebrews, conſiſting of four letters [g]; nor is it ſtrange, Pythagoras ſhould be ſo well acquainted with the name JEHOVAH, ſince, beſides his travelling into other pars of the eaſt, he is affirmed by Joſephus, Porphyry, and others, to have converſed with the Hebrews alſo. The worſt of Pythagoras's theology was, that, repreſenting God as the mover of the univerſe, and the ſoul of the world, he taught, that our ſouls were portions of the divine ſubſtance [h].

THAT Pythagoras held numbers to be the principles of all things, is teſtified by all antiquity, and he thence accounted for the production of the world in this manner. He ſuppoſed, that the monad and dyad were the two ſources of numbers, from whence proceeded points; from points lines; from lines plane figures; from planes ſolids; from ſolids ſenſible bodies, the elements of which are four, fire, water, earth, and air; and theſe are in perpetual change; from them the world was formed, being animated, intelligent, and ſpherical, containing in the midſt the earth, a globoſe body, and inhabited [i]. He taught, that the world began from fire, and the fifth element; and that there being five figures of ſolid bodies, called mathematical, or regular, the earth was made of the cube; fire of the pyramid, or tetrahedron; the air of the octahedron; water of the icoſahedron; and the ſphere of the univerſe of the dodecahedron [k].

Reflections thereon.

THIS method of philoſophizing, which was alſo adopted by Plato, if underſtood in the literal acceptation, has no manner

[c] Verſ. 47, 48. [d] Hierocles, in Aur. Carm. [e] See Cudworth, p. 376. [f] Picus Mirand. Selden & Gotef. Wendelin. See alſo Philo in Vita Moſis, p. 519. [g] Vid. Cudworth, ubi ſup. & Dacier, Vie de Pythagore, p. lvii. [h] Cicer. de Nat. Deor. l. 1. Minut. Felix, p. 151. Lactant. l. 1. c. 5. [i] Suidas, in voce Pythagoras. Diog. Laert. in Pythag. p. 508. [k] Plutarch. de placitis Phil. l. 2. c. 6. But the fifth figure, according to Clavius and others, was added by ſome of Plato's followers.

manner of foundation in nature, nothing being more certain than that numbers, if ever ſo various combined, can generate nothing but numbers [l]. it is therefore more probable, that Pythagoras made uſe of them no otherwiſe than as emblems, or ſymbols: for ſuppoſing mathematical ſciences to poſſeſs a middle diſtance between corporeals and incorporeals, he began with them; thereby to wean the mind gradually from ſenſible things, and raiſe it to the contemplation of intelligible beings. And this is the reaſon why he had recourſe chiefly to numbers; for not being able ſufficiently to explain by words the firſt principles, he repreſented them by numbers [m]: which ſeems to be all Pythagoras deſigned, though his followers have ſought myſteries in his doctrine, which himſelf never dreamt of; yet it is not to be denied, that the great defect of that philoſopher, and of Plato alſo, was, that they reſolved natural things into mathematical reaſons, numbers, and proportions; as Ariſtotle afterwards did into logical reaſons.

THE monad, dyad, and tetrad we have already ſpoken of. As to the regular bodies, it is conjectured, that Pythagoras intended only to repreſent the elements under their forms, in imitation of other natural bodies. Thus he repreſented the fire by the figure of a pyramid, or tetrahedron, from its aſpiring to a point, or the acuteneſs of its flame; the air, being next in order to the fire, by an octahedron, which bears the neareſt reſemblance to the tetrahedron, being compoſed of two pyramids joined by a ſquare baſe; the water, becauſe of its fluidity, was repreſented by an icoſahedron; and the earth by a cube, to denote its ſtability; the cube being, of all the regular bodies, the leaſt adapted to motion [n]. Or if they were to be conſidered phyſically, perhaps, Pythagoras ſuppoſed the conſtituent parts of the four elements to conſiſt of ſuch figures, according to their ſeveral ſpecific gravities: that the Molæ, or primary particles of the earth, were cubes; for as earth is the moſt ponderous of all the elements, ſo is the cube the heavieſt of all the regular bodies; that the particles of fire were tetrahedra, or triangular pyramids, fire being the lighteſt and moſt volatile element, as the tetrahedron

[l] Vid. Burnet. Archæol. l. 1. p. 158. [m] Dacier, Vie de Pythagore, p. lv. [n] Macrobius, apud Caſimir. Simienowicz, lib. 4. p. 263.

dron is the lighteſt of the ſame bodies; that the particles of the air had the form of an octahedron, which is next lighteſt body of the five, as air is the next lighteſt to fire; and that the particles of water had the ſhape of an icoſahedron, which figure is a ſort of mean proportion between the cube and the octahedron, as the weight of water is between the weight of air and that of earth. As to the fifth body, the dodecahedron, which repreſents the heaven, or ſphere of the univerſe, it muſt be entirely emblematical, (if it be not rather a later addition to the pythagoric phyſiology, and no genuine part of it) the four faces of that figure being fancied to allude to the twelve ſigns of the zodiac [o], or elſe the four elements, ſeven heavens, and the firmament [p].

The opinion of Timæus Locrus, and

Timæus Locrus, who was a Pythagorean, ſeems to have held the pre-exiſtence of matter, as if it were a ſelf-exiſtent principle together with God; for he affirms it to be eternal [q]: yet, in another place, he aſſerts the eternal God, who is viſible to the underſtanding only, to be the author and parent of all things, and that the world, which is viſible to our eyes, is the generated god [r]; and he diſtinguiſhes between the eternal duration of God, which had no beginning; and time, which was made together with the world, as an imitation of eternity [s]. He taught more particularly, that there were two principles of all things; Mind, the principle of thoſe things which are made according to reaſon; and Neceſſity, of thoſe which are produced by force, according to the powers of bodies; by which ſecond principle, he plainly means matter [t]. That before the making of the world, there were, beſides God, idea, or form, and rude matter; one being the intelligible pattern, or exemplar of all things, and the other the ſubject, which, being itſelf without figure, yet capable of all figures, was reduced by God into the determinate form of the viſible world; which, being the beſt production, is not corruptible by any other cauſe than the ſame God who compoſed it, if it ſhall at any time pleaſe him to diſſolve it [u]. So that Timæus ſeems really to

have held two ſubordinate principles, matter and form; wherein Archytas the Tarentine, who was alſo a Pythagorean, agreed with him as ſuppoſing God to be the artificer and mover, matter that which is moved, and form the art introduced into the matter [x]; which was alſo the notion of Plato. We the rather take notice of the opinion of Archytas in this place, becauſe he and Pythagoras are joined by Cenſorinus with Ocellus Lucanus, as believing mankind to have been from eternity [y].

The opinion of Plato.

Plato, who, as well as his maſter Socrates, embraced the Pythagoric notions as to the origin of the univerſe, held the three principles we have juſt mentioned, God, matter, and idea [z]; which are by Laertius reduced to two, God and matter [a]; the ideas or original patterns of things conceived in the divine mind, being really no diſtinct principle from him, but the very mind of God, with whom they are often confounded, both by Timæus, and ſeveral of the Platonics [b]. It ſeems therefore certain, that Plato ſuppoſed matter to have been uncreated and eternal, as he often aſſerts it to be. But he has been defended in this reſpect by Hierocles [c], who, being himſelf convinced by the arguments on the other ſide, was willing to have it thought, for the honour of his ſect, that its founder believed God capable of producing the world by a ſimple act of volition, though there was no pre-exiſtent matter; and therefore maintained, that he really held an abſolute creation out of nothing. Wherein Hierocles is thought to have been very ſingular [d]; and yet ſome moderns have followed him in that particular, ſuppoſing, that when Plato aſſerted matter to be eternal, he did not mean, that it ſubſiſted viſibly from all eternity, but only that it ſubſiſted intellectually in the eternal idea of God [e]. And ſeveral paſſages have been cited from the works of that philoſopher [f], which would give ſome grounds to ſuſpect he really believed, that

that God created, or produced matter itſelf, as well as made and formed the world thereout, had he not ſo explicitly declared the contrary. Another opinion imputed to Plato by Plutarch, viz. the ſuppoſing of two intelligent and independent principles, a good and an evil one, will be conſidered by and by.

As to the formation of the world, Plato taught, that matter being at firſt unformed, and without any determinate figure, and being moved in an irregular and diſorderly manner, God, who prefers order to confuſion, gathered it together; and converting this ſubſtance into the four elements, of them made the world, and all things therein, faſhioning it according to the archetypal idea, or model thereof, which he had conceived in himſelf; and that he gave it a ſphænical figure, as the moſt perfect, and that which contains the reſt; and endued it with an intelligent ſoul, becauſe an animated being is more excellent than an inanimate, which ſoul of the world Plato ſuppoſed to be formed before its material body [g]. He alſo aſſerted the world to be incorruptible, not by its nature, but becauſe it is ſupported by divine providence [h]: and held not only the animated univerſe itſelf, but the ſeveral parts of nature, which he likewiſe ſuppoſed animated, to be gods, inferior indeed to the ſupreme God, but ſuperior to men, and juſtly challenging honour and worſhip from them. Theſe gods of Plato were for the moſt part fiery, being the celeſtial bodies, though he ſuppoſed the earth alſo to be a god, affirming it to be the oldeſt of all the gods within the heaven [i]: and he for this reaſon found fault with the Anaxagorean doctrine, which made the planets and ſtars nothing but inanimate ſtones and earth [k].

The opinion of Anaxrgoras.

ANAXAGORAS, who was not more conſpicuous for his wealth and nobility of birth, than the greatneſs of his mind [l], did indiſputably hold two co-eternal principles, God and matter, being the firſt (of the Ionic philoſophers at leaſt) who, as has been obſerved, introduced an intelligent being to move, ſeparate, and put in order the chaotic matter: whence he obtained the honourable ſurname of Nous, or Mind [m]. He admitted as many ſorts of principles as of compounded bodies: for he ſuppoſed, that every kind

[g] Diog. Laert. in Platon. p. 206, &c. Plato, in Timæo. See alſo Stanley's Hiſt. of Philoſ. Part V. p. 186 & Burnet. Archæol. l. 1. p. 176. [h] Plut. de placitis Philoſ. l. 1. c. 4.
[i] Diog. Laert. in Platon. p. 211. [k] Plato deLegib. l. 10.
[l] Diog. Laert. in Anaxag. p. 83. [m] Idem, ibid. Plutarch. in Pericle.

kind of body was formed of a great number of ſmall ſimilar particles; that a bone, for example, was nothing but a compoſition of many inviſible bones, and that the blood which we ſee was made up of many minute drops, every one of which was blood [n]; from the ſimilitude of which principles he called them Homœomeriæ. But this obliged him to allow, that the ſeeds, or principles of all kinds are found in every body, which throws his ſyſtem into a ſtrange confuſion; not to mention ſeveral other inconveniencies and contradictions therein [o]. As to the formation of the world, his doctrine ſeems to have been, that the mind, or intelligence who preſided thereat, and whom he allows to be the original of motion [p], finding in the infinite matter a vaſt number of particles which were like one another, but promiſcuouſly mixed with, and ſurrounded by others which were unlike, ſeparated the one from the other, and, joining together the corpuſcles of the ſame kind, formed of ſome a ſtar, of others a ſtone, &c. Notwithſtanding which, he has been ſeverely cenſured by ſeveral, as allowing too much to material neceſſity, and endeavouring to account for things, as far as poſſible, from the inherent forms and qualities of matter only, or any way, rather than bring in the Deity, to whom he never has recourſe, but when he is abſolutely at a loſs [q], and without whoſe interpoſition, or knowledge, he admitted, ſome revolutions in nature happened [r]. As to the formation of animals, he taught, that they proceeded from the earth, being firſt generated of moiſture and heat, and after by mixture of the ſexes [s].

ARCHELAUS, the ſucceſſor of Anaxagoras, moſt probably held the ſame principles with his maſter, namely, an infinite number of ſimilar particles, as St. Auſtin and Simplicius [t] teſtify; though others [u] tell us, that he ſuppoſed infinite

infinite air, its rarefaction and condenſation, the one being fire, and the other water, to be the principles of all things. He alſo thought men and animals were produced by the heat of the earth, which yielded a ſlimy ſubſtance like milk, ſerving for food [x].

Of Empedocles. EMPEDOCLES, who was an auditor both of Pythagoras and Anaxagoras, is ſaid to have followed the phyſiology of the latter. He held two cauſes of all things, contention and friendſhip, meaning thereby ſecretion and concretion, or the ſeparation and mixture of the primary matter, from which the elements were formed, and all things that have been, are, or ſhall be, plants, animals, men, and gods, derived their original [y]; yet he ſuppoſed, that contention and friendſhip did both depend on one ſupreme Deity, as their author [z]. For Empedocles, it ſeems, believed that were it not for diſcord, or contention, all things would be one; ſo that, according to him, all things whatſoever proceeded from contention, together with a mixture of friendſhip, ſave only the ſupreme God, who hath no contention at all in him, becauſe he is eſſentially unity itſelf [a]. He taught, that the elements were compoſed out of ſmaller corpuſcles, which were moſt minute, and as it were the elements [b]. Agreeably to other atomiſts, he acknowledged no generation or corruption, properly ſo called, but aſcribed all to ſecretion and concretion [c]. He imagined the elements to have been produced in this order; firſt, that the æther was ſecreted, afterwards the fire, and then the earth, which being too cloſely preſſed by violence of the circumvolution, there iſſued thence water, from the evaporation of which proceeded the air. That the heaven was made of the æther, the ſun of the fire, and the things about the earth from the other elements [d]: ſo that the phyſiology of Empedocles was, at the bottom, the ſame with that of Democritus and Epicurus; only that he differed from them in ſome particulars, as in excluding a vacuum, and denying ſuch phyſical corpuſcles as were indiviſible, but chiefly

[x] Diog. Laert. in Archelao, p. 89. [y] Diog. Laert. in Emped. p. 538. Cicer. de Amicitia. Clemens Alex. in admon. ad Gentes, Ariſt. Phyſ. l. 8. Suidas, in voce Manes, &c. [z] Ariſtot. in Metaph. l. 3. c. 4. & de Mundo, p. 26. [a] Cudworth's Intell. Syſt. p. 392. [b] Plutarch. de placitis Phil. l. 1. c. 13. Stobæus, in Eclog Phyſic. chiefly by admitting an intelligent principle, by whoſe wiſdom the world was put into this order, as the beſt and moſt convenient for the good of the whole; though he ſometimes indulged too much to fortuitous mechaniſm, eſpecially in the ſtructure of animals [e]. We ſhall only obſerve further, that he held, according to the Pythagorean doctrine, that there were two worlds, the one intellectual, and the other ſenſible; the former of them being the model, or archetype of the latter [f].

THAT Plutarch maintained the eternity of matter is paſt all queſtion; he expreſly aſſerting, that the ſubſtance or matter, out of which the world was made, was not itſelf made, but always ready at hand, and ſubject to the artificer, to be ordered and diſpoſed by him. For, in his opinion, the making of the world was not the production of it out of nothing, but out of an antecedent bad and diſorderly ſtate, like the making of a houſe, garment, or ſtatue [g]. Of Plutarch, and ſeveral others.

IT is alſo well known, that Hermogenes, and other antient pretenders to chriſtianity, did in like manner aſſert the ſelf-exiſtence and improduction of matter, for which reaſon they were commonly called Materiarians; endeavouring by this means to give an account (as the Stoics had done before them) of the original of evils, and to free God from the imputation thereof. And they argued in this manner; God made all things either out of himſelf, or out of nothing, or out of pre-exiſtent matter: he could not make all things out of himſelf, becauſe himſelf being always unmade, he ſhould then really have been the maker of nothing; and he did not make all out of nothing, becauſe, being eſſentially good, he would have made every thing in the beſt manner, and ſo there could have been no evil in the world: but ſince there are evils, and theſe could not proceed from the will of God, they muſt needs ariſe from the fault of ſomething, and therefore of the matter out of which things were made [h]. Some modern ſects of the chriſtian profeſſion do alſo, at this day, aſſert the uncreatedneſs of matter; but theſe ſuppoſe, as the Stoics did, body to be the only ſubſtance [i].

BUT

[e] Vid. Cudworth, p. 24, 25. Ariſt. Vid. Plut. ubi ſup. l. 1. c. 20. Platon. p. 1014. 1015, &c. p. 282. [f] Simplic. in Phyſic. [g] Plut. de pſychog. [h] Tertullian. adv. Hermog. [i] Cudworth, Intell. Syſt. p. 197.

But ſome went ſtill farther, and maintained, that the chaos, or original matter, was animated by an evil, or maleficent ſoul, thereby conſtituting a third ſelf-exiſtent principle. And this was the opinion of Plutarch, whom we have juſt mentioned, and of Numenius, and Atticus [k]. The firſt not only expreſly aſſerts, that a mad irrational ſoul, and an unformed diſorderly body did co-exiſt with one another from eternity, neither of them having any generation, or beginning [l]; but diſcovers no ſmall fondneſs for this notion in ſeveral parts of his works [m], and profeſſedly endeavours to eſtabliſh it by the beſt arguments he can; pretending, that otherwiſe it would be impoſſible to account, in a ſatisfactory manner, for the original of evil. For as evil could not be produced without ſome poſitive cauſe, it being ridiculous to imagine it came into the world by accident; and as neither God, who is eſſentially good, nor mere inactive matter, void of all form and quality, could be the cauſe of evil; he therefore concluded, that it muſt proceed from a certain irrational and maleficent ſoul, or dæmon, unmade, and co-exiſting with God and matter from eternity. So that whatever is good in the ſoul and body of the univerſe, and likewiſe in the ſouls of men and dæmons, is to be aſcribed to God, as its only original; and whatever is evil, irregular, and diſorderly in them, ought to be imputed to that other ſubſtantial evil principle. And to ſupport this opinion by authority, as well as reaſon, he would perſuade us, that it was the conſtant belief of all the pagan nations, and of the wiſeſt men, and philoſophers that ever were among them [n]; imputing it to the Egyptians, who, as he imagines, repreſented the evil principle under the name of Typhon; to Zoroaſtres, and the Perſian Mages, who are alſo by Laertius affirmed to have maintained two principles, a good dæmon and an evil one [o] (though it has been queſtioned, whether they really believed the evil principle to be eternal or not); to the Chaldeans, becauſe their aſtrologers ſuppoſed two of the planets to be beneficent, two maleficent, and three of a middle nature; and to the antient Greeks, becauſe they ſacrificed not only to Jupiter Olympius, but alſo to Hades, or Pluto, who was ſometimes

[k] Procl. in Tim. p. 116. [l] Plut. in quæſt. Platon. p. 1003. [m] Idem, de Pſychog. Plat. & de Iſide & Oſiride, &c. [n] Idem, de Iſide & Oſiride, p. 369, &c. [o] Diog. Laert. in proœm.

ſometimes called by them the infernal Jupiter : ſuppoſing alſo the monad and dyad of Pythagoras, the contention and friendſhip of Empedocles, the mind and infinite matter of Anaxagoras, to be no other than a good and evil God. But above all he endeavours to prove, that Plato was an undoubted champion for this opinion, and that chiefly for theſe reaſons : firſt, becauſe that philoſopher ſpeaks of a neceſſary and innate appetite, which may ſometimes turn the heavens a contrary way, and by that means cauſe diſorder and confuſion [p] ; ſecondly, becauſe he ſpeaks of two kinds of ſouls, whereof one is beneficent, but the other the contrary [q] ; and laſtly, becauſe he ſuppoſes matter to have been moved diſorderly before the world was made, which implies, there was a diſorderly and irrational ſoul exiſting with it, as the mover of it, matter being unable to move itſelf. But as to the firſt of theſe allegations, it has been obſerved, that Plato, as if it had been purpoſely to prevent ſuch an interpretation of his meaning, in the paſſage there quoted, as this of Plutarch's, adds, that it muſt not be ſuppoſed, there are two gods of contrary minds, turning the heavens ſometimes one way, and ſometimes another. Which might alſo ſerve for an anſwer to what is afterwards urged, as if Plato had affirmed, that there were two ſouls, the one beneficent, and the other the contrary, becauſe this would be all one as to introduce two gods : but in that place it is conceived, that Plato did only diſtribute ſouls in general into good and evil ; thoſe moral differences properly belonging to that rank of beings called by him ſouls, and ariſing from them, according to his premiſed doctrine, that ſoul is the cauſe of good and evil, juſt and unjuſt : but, then, afterwards making enquiry concerning the ſoul of the world, or heaven, he poſitively concludes, that it was no other than a ſoul endued with all virtue [r]. As to the laſt reaſon, that matter is ſaid by Plato to have been moved diſorderly, it is ſuppoſed, that he did therein only adhere to that vulgarly received tradition, that the world was formed from a chaos, or matter confuſedly moved, and afterwards brought into order [s]. And as to the origin of evil, Plato is conceived neither to have imputed it to God himſelf, nor derived it from unqualified matter, nor yet from any irrational

[p] Plat. in Politic. [q] Idem, de Legib. l. 10. [r] Idem, ibid. [s] Cudworth, Intell. Syſt. p. 218, &c. Vid. Bayle, Dict. Hiſt. Art, Zoroaſtre, Rem. E.

rational and maleficent ſoul, but the neceſſity of imperfect beings [t].

HOWEVER, ſome mongrel chriſtians, as the Marcionites, Manichæans, and Paulicians, did really maintain this opinion of two ſelf-exiſtent gods, a good and an evil one, which latter Manes called Hyle, or matter [u].

The opinion of thoſe who held the world to be abſolutely created, and liable to diſſolution.

HAVING now done with the ſecond of thoſe opinions, under which we comprehended the ſeveral notions, which have been entertained concerning the origin of the univerſe, we come to ſpeak of the laſt, and only true one; that the world had a beginning, being abſolutely produced by God out of a ſtate of non-exiſtence, and conſequently, that it is of its own nature liable to diſſolution.

AND beſides ſuch of the nations, and philoſophers already mentioned, who moſt probably believed this creation of the world, though ſuſpected of contrary opinions, there were ſeveral among the heathens who unqueſtionably did ſo.

The opinion of the ancient Tuſcans.

WE ſhall firſt inſtance in the antient Tuſcans, or Etrurians, whoſe tradition we have from one of their own writers. He ſays, that God, the author of the univerſe, employed twelve thouſand years in all his creations and diſtributed them into twelve houſes. That in the firſt chiliad, or thouſand years, he made the heaven and earth; in the next the firmament which appears to us, calling it heaven; in the third, the ſea and all the waters that are in the earth; in the fourth, the great lights, the ſun and moon, and alſo the ſtars; in the fifth, every volatile, reptile, and four-footed animal, in the air, earth, and water; in the ſixth, man. It ſeems therefore, according to them, that the firſt ſix thouſand years were paſſed before the formation of man, and that mankind are to continue for the other ſix thouſand years, the whole time of conſummation being twelve thouſand years [x]. For they held, that the world was ſubject to certain revolutions, wherein it became transformed, and a new age and generation began: of ſuch generations there were in all, according to them, eight, differing from one another in cuſtoms and way of life; each having a duration of a certain number of years aſſigned them by God, and determined by the period which they called, the great year. The approach of ſuch a change in the world was judged, by

[t] Cudworth, p. 220. [u] Auguſt. contr. Fauſt. l. 20. c. 3.
[x] Anonym. apud. Suid. in voce Tyrrheni.

by the Tuſcan diviners, to be portended by a prodigy which happened in the time of C. Marius, when the air being perfectly clear and ſerene, there was heard a ſhrill and mounful ſound of a trumpet, to the aſtoniſhment and terror of every body [y]. And theſe are all the remains we now have of the old Etrurian phyſiology; which may be ſuppoſed to have been well worth our knowledge, that nation being particularly curious and diligent in their enquiries into nature [z]. Beſides thoſe we have already mentioned, who entertained this opinion of the mundane revolutions, the Druids alſo taught the alternate diſſolution of the world by water and fire, and its ſucceſſive renovation [a]. and of the Druids.

THE Mages, among the ancient Perſians, did alſo acknowledge the world to have been created by God, as their ſucceſſors moſt certainly do at this day [b]; but being at a loſs otherwiſe to account for the original of evil, they held two principles, a good dæmon, or God, and an evil one [c]; the firſt the author of all good, and the other of all evil; the former they ſuppoſed to be repreſented by light, and the latter by darkneſs, as their trueſt ſymbols; and that of the compoſition of thoſe two all things in the world are made. The good principle, or God, they named Yezad, or Yezdân, and Ormozd, or Hormizda, which the Greeks wrote Oromazes; and the evil dæmon they called Ahârîman, or Ahrîman, and the Greeks Arimanius [d]. Intending in the proper place to give a more particular detail of the antient religion of the Magi, and their ſeveral tenets, true or ſuppoſed; we ſhall only obſerve here, that though one ſect of them held, as the Manichæans and ſome other hereticks did, both theſe principles to have been from all eternity, yet they are reputed heterodox; the original doctrine being, that the good principle, or God, only was eternal, and the other created: which appears not only from the unanimous teſtimony of the eaſtern writers, but from what genuine remains we have of Zoroaſtres in the Greek, particularly the following deſcription of the ſupreme Deity, taken from the very words of Zoroaſtres himſelf; God, ſays he, has the head of a hawk (which muſt be a ſymbolical expreſſion), and is The opinion of the Perſian Magi.

the

[y] Plutarch. in Sylla. p. 456. [z] Diodor Sic. l. 5. p. 316. [a] Strabo, lib. 4. [b] See Lord's account of the religion of the Perſees, p. 5. [c] Diog. Laert. in Proœm. p. 6. [d] Vid. Hyde, de Relig. veter. Perſar. cap. 9.

the firſt of all things, incorruptible, eternal, unmade, without parts, unlike any other being, the promoter of all good, impartial, the beſt of the good, the moſt prudent of the prudent; he is the father of equity and juſtice, ſelf-inſtructed, natural, perfect, and wiſe, and the ſole inventor of what is holy in nature [e]. And, indeed, that the evil dæmon was not believed to be ſelf-exiſtent, appears from what Plutarch himſelf, though he ſo confidently affirms the contrary, ſays of his future deſtruction, it being impoſſible, that what is uncreated ſhould ever be deſtroyed [f].

That writer gives the following account of the Magian traditions in relation to their gods, and the introduction of evil into the world, viz. That Oromazes conſiſted of moſt pure light, and Arimanius of darkneſs; and that they were at war with each other: that Oromazes created ſix gods; the firſt the author of benevolence, the ſecond of truth, the third of juſtice, the others of wiſdom, riches, and the pleaſure which attends good actions; and that Arimanius made as many, who were the authors of the oppoſite evils, or vices: that then Oromazes triplicating himſelf, removed as far from the ſun, as the ſun is from the earth, and adorned the heaven with ſtars, appointing the dog-ſtar for their guardian and leader: that he alſo created twenty-four other gods, and incloſed them in an egg; but Arimanius having alſo made an equal number, theſe laſt perforated the egg, by which means evil and good became mixed together. However, the fatal time will come, when Arimanius, the introducer of plagues and famine, muſt be of neceſſity utterly deſtroyed by the former, and annihilated; then the earth being made plain and even, mankind ſhall live in a happy ſtate, in the ſame manner, in the ſame political ſociety, and uſing one and the ſame language. Theopompus, writes, that, according to the Magians, the ſaid two gods, during the ſpace of three thouſand years, alternately conquer, and are conquered; that for other three thouſand years, they will wage mutual war, fight, and deſtroy the works of each other, till at laſt Hades (or the evil ſpirit) ſhall periſh, and men become perfectly happy, their bodies needing no food, nor caſting any ſhadow: that God, who contrives this

[e] Zoroaſtres, in ſacra collectione rituum Perſ. apud Euſeb. de præp. Ev. l. 1. cap. 10. pag. 42. Oſtanes the Mage alſo wrote in the ſame manner of the Deity, ibid. [f] Vid. Cudworth, Intell. Syſt. p. 222.

this ſcene of things, reſts and repoſes himſelf for a certain ſeaſon, which is not long to him, but like the intermiſſion of ſleep to men [g].

THE modern Perſians have a peculiar tradition, which they pretend to have received from Zoroaſtres, that God created the world, not in ſix natural days, but in ſix times, or ſpaces of different length, called in their tongue Gâhanbârha, and making in all three hundred and ſixty five days, or a year compleat: as to the ſeveral names of which, their order, number of days, and the ſeveral parts of the creation performed therein reſpectively, all authors agree; though they differ as to the particular part of the year from which they begin. Their names and order are as follow: A Tradition of the modern Perſians.

THE firſt time is called Mîd-yûzeram, and contains the ſpace of fifty five days; in which the heavens were created.

THE ſecond is Mîd-yûſham, or Mîd-yuſhaham, of ſixty days; in this the waters were created [h].

THE third, Pîtîſhahîm, or Pîtiſhahim-gâh, conſiſts of ſeventy-five days; wherein the earth was created.

THE fourth is Iyâſeram, or Iyâſhehram, of thirty days; in which the trees and plants were created.

THE fifth is Midiyârîm, containing eighty days; in which ſpace the animals were created.

THE ſixth, Hameſpîtamîdîm, was that wherein man was created, being ſeventy five days [i].

THE old Indian philoſophers, called by the Greeks Brachmanes, held, that the world was generated, or made, and alſo periſhable, being ſubject to ſucceſſive diſſolutions and renovations: that the principles of all things were different, but the formation of the world commenced from water [k]; and that the cauſe of God's making all things was his eſſential goodneſs [l]. And theſe are alſo the ſentiments of the modern Bramins, their ſucceſſors: but the particulars of their doctrines are related, by different authors, with a variety not eaſy to reconcile; the occaſion of which has been partly the reſervedneſs of the Bramins, who are extremely ſhy of converſing with ſtrangers, The opinion of the old Brachmanes, and modern Bramins.

[g] Plutarch. de Iſide & Oſiride, p. 369. [h] Mr. Lord, in his account of the religion of the Perſees, p. 6, and 41, makes the work of this ſecond ſpace to be the creation of hell. [i] Hyde, Hiſt. Rel. veter. Perſar. p. 164, &c. [k] Megaſthenes, apud Strab. l. 15. p. 713. [l] Vid. Philoſtr. in vita Apollonii, p. 142.

ſtrangers, or making them the leaſt diſcoveries, but more the relators want of ſkill in their language.

Their tradition, as delivered by one writer [m], is, that the great God, being alone, and intending to manifeſt his goodneſs and power, conſulted with himſelf about the creation of the univerſe, and, as the ground-work of this mighty frame, made four elements, which were at firſt confuſedly mingled together, but the Almighty ſeparated them in the following manner. Firſt, by ſome great cane, or like inſtrument, he blew upon the waters, which aroſe into a bubble, of a round form, like an egg, which ſpreading itſelf farther and farther, made the clear and tranſparent firmament, that incompaſſes the world. After this, of the remaining water and its ſediment, God made a round ball, which he called the lower world; the ſolid part whereof became the earth, and the more fluid the ſea, both making one globe, which, by a great noiſe, or humming ſound, he placed in the midſt of the firmament. Then he created the ſun and moon in the firmament, to diſtinguiſh times and ſeaſons. And thus the elements became ſeparated, and aſſigned to their proper places, and began to perform their offices, the air filling up all interſtices, the fire nouriſhing by its heat, and the earth and ſea bringing forth the living creatures proper to each. And to theſe God imparted a ſeminal virtue, that they might be fruitful; and thus was the world created.

God having thus made the world, he then created man, as a creature more worthy than the reſt; whom the earth, at God's command, produced from its bowels, his head firſt appearing, and afterwards the other parts of his body, into which God infuſed life, and afterwards made him a companion, which was a woman, reſembling him more in mind and diſpoſition, than outward ſhape. The firſt man's name was Pourous, and the woman's Parcoutee; whoſe deſcendants being, for their wickedneſs, deſtroyed by a deluge, God afterwards created three perſons of greater perfection, called Bremaw, Vyſtney, and Ruddery, to each of whom he gave a different office and power; to the firſt, that of creating, or producing men or other animals; to the ſecond, that of preſerving and feeding them; and to the laſt, that of deſtroying them; which charges they ſeverally executed, in the manner, that ſhall be related in a more proper place.

ANOTHER

[m] Lord's Diſcovery of the Banian Religion, extracted from their ſacred book called Shaſter.

ANOTHER [n] tells us, that the Bramins acknowledge one ſole and ſupreme God, but are not perfectly agreed which of their gods he is; one ſect affirming him to be Wiſtnou, another, Eſwara; and a third holding Wiſtnou and Eſwara to be one and the ſame: that they all teach, however, that his firſt and moſt antient production was a ſecondary god, named Bramma, whom the ſupreme God formed out of a flower, which floated on the great deep, before the creation of the world; and that God afterwards, on account of Bramma's virtue, gratitude, and fidelity, gave him power to create the univerſe.

BUT the proteſtant miſſionaries, lately ſent to the coaſt of Coromandel, have given accounts ſomewhat different from the preceding, and which yet may, perhaps, deſerve more regard, a written by men who were not unacquainted with the Malabarian tongue. In one of their letters it is ſaid, that the Malabarians (who are one of thoſe nations which follow the religion of the Bramins) own but one divine Being, the ſpring and original ſource of all other gods and things, called by them Iſparetta, which, in their language, imports as much as a Deity. This Iſparetta, they ſay, before any thing was created, transformed himſelf into an egg; out of which the whole ſyſtem of heaven and earth, and all things contained therein, were afterwards produced. From this divinity, as their tradition runs, did originally ſpring ſomething, which they call Kiwelinga, and which they worſhip in their temples as a god. From this Kiwelinga three other great gods took their riſe; Bramma, Wiſhtnum, and Iſpara. Bramma is ſaid to create and make all things; Wiſhtnum, to rule over things created; and Iſpara, to deſtroy them again [o].

IN another letter we are told, the ſupreme Being is called Barabara Waſtu, who, as the Indians believe, does not concern himſelf immediately about things of ſmall moment; but having created ſome other great gods, as his vicegerents, he by them moves and influences the world, and all creatures contained therein. Theſe gods have again their ſubordinate gods, who have their particular ſtations and government of things aſſigned them. The theogony, or gradual production of which gods is deſcribed in the following ſeries. 1. The Being of all beings, or the ſupreme God, created eternity. 2. Eter-

[n] Abr. Roger, of the religion of the Bramins, (ſaid to be taken from one of the ſacred Books called Vedam) Part 1. c. 3. and Part 2. c. 1.

[o] Propagation of the Goſpel in the Eaſt, Part 1. Letter 5.

2. Eternity brought forth Tiſhiwen. 3. By this Tiſhiwen the goddeſs Tſhaddy was created. 4. The goddeſs Tſhaddy produced Putadi, or the elementary and ſenſitive world. 5. By Putadi a ſound, or ringing, was generated. 6. The ſound's off-ſpring was nature. 7. Nature afterwards begot the great god Tſhatatſhiwen. 8. Which laſt again produced another god, called Mageſhurn. 9. From Mageſhurn ſprang Ruddiren, or Iſpuren. 10. From Ruddiren, the great god Wiſhtnum. 11. This laſt created Bruma. 12. Bruma was the productive principle of the ſoul. 13. The ſoul at length created the heaven, or that vaſt expanſion between heaven and earth, which makes up the fifth element, according to their philoſophy, or rather the receptacle of the other four elements. 14. The heaven begat the air. 15. The air begat the fire. 16. The fire begat the water. 17. And the water the earth. Beſides a tedious genealogy of other gods and prophets, carried to a great length. They acknowledge their inferior gods to be ſubject to various changes, as well as the creatures themſelves: and that each of them has his fixed term of life and government allotted him: after the expiration of all which determined times, every thing ſhall return to the Being of all beings, and there ſhall follow a new creation. As to the creation of man, they ſay, that ſixty thouſand men were created at firſt, but that half of them turned devils ſoon after, and the other half remained men; both of them being, in proceſs of time, multiplied to infinite numbers [p].

The opinion of ſome among the Chineſe,

THOUGH the Chineſe have, for ſome time paſt, being generally infected with the impious opinions which have been taken notice of, it is, however, certain, that before idolatry prevailed in China, they acknowledged one God, or ſupreme, eternal, omnipotent ſpirit, the lord of heaven and earth, and the governor and director of all things, whom they worſhipped under the name of Shang ti. But this opinion now obtains with very few, and thoſe of the better ſort [q]. Theſe hold, that a chaos was the beginning of things, from which God produced and formed whatſoever is material in the univerſe. But this they diſtinguiſh into two principles, which they call Yn and Yang; Yn ſignifies hidden, or imperfect; Yang revealed, or perfect; which two principles by combination produce four images, or ſigns, which ſeem to repreſent the four elements; whence proceed eight forms, or ſymbols; and theſe repreſent certain general things,

[p] Ibid. Part 2. Letter 3. See alſo Kircher. China illuſt. p. 154. &c.

[q] Martinii Hiſt. Sinic. l. 1. p. 11.

things, whereon the generation and corruption of all things depend, being the heaven, the earth, thunder, mountains, fire, clouds, waters, and wind; which again, mutually combined, produce ſixty four ſymbols, completing, as it were, the number of the univerſe; concerning which they have much myſterious learning. They ſay, the heaven was firſt perfected, then the earth, after which genii, or ſpirits, produced, and then mankind; and that the firſt man, whom they call Puoncu, was generated from the chaos, as from an egg; the ſhell of which became the heaven, the white the air, and the yolk the earth: others ſay, he came out of a certain deſart, but that his original is unknown [r].

THEY divide the period wherein the world was created, and will be deſtroyed, as they do their natural day, into twelve hours, or times, conſiſting each of ten thouſand eight hundred years. The twelfth hour, or at midnight, the heaven was made; the earth, the firſt hour after midnight; and man, the ſecond. Their emperor Ya was created the ſixth hour, or at noon; and the age wherein we now live is the ſeventh hour (though ſome count a much larger number of years from the beginning of the world). The ninth hour, they ſay, there will be a great diſorder and confuſion of all things, cruel wars, commotions in kingdoms, and public calamities, till all things return to the chaos whence they firſt proceeded [s]. and Japaneſe;

THERE are alſo ſome, even among the Japaneſe, who acknowledge this truth of the creation of the world, and entertain a much more noble idea of their god Amida, than the generality of them do. For they ſay, he is inviſible, diſtinct from the nature of the elements, and exiſting before the creation of heaven and earth, without beginning or end; that by him all things were created, his eſſence paſſing through heaven and earth, and beyond them; being limited to no place, and governing and preſerving all things; that he is immoveable, incorporeal, without any viſible accident, whereby he may be ſeen by the bodily eyes; and this god they hold in great reverence, as the perpetual fountain of all good [t].

SEVERAL nations in America alſo entertained the ſame belief of a creation; of which ſome inſtances might be given: but their opinions containing little curious, as to the original of things, we have, to avoid prolixity, choſen to omit them. and of ſeveral American nations.

[r] Ibid. p. 13, 14.
[s] Ex Libro Sinico de Natura, ibid. p. 13.
[t] Lud. Froes. apud Kircher. Chin. illuſtr. p. 142.

A general reflection.

SOME of the accounts we have given above will, no doubt, be taken, by the generality of readers, to be very abſurd and ridiculous: but before they paſs an abſolute judgment, they are deſired to conſider the imperfection of philoſophy in thoſe early times, and that the ancients, as well Greeks as Barbarians, wrapped up and concealed their true doctrines, particularly thoſe concerning the origin of things, under the veils of ſymbols, ænigmas, and myſtical allegories [u]; for which reaſon many things in the preceding accounts, which may ſeem ſtrange and fabulous, will not, perhaps, deſerve to be treated with all the contempt they muſt needs meet with, from thoſe who underſtand them in the obvious and literal ſenſe: nor, perhaps, is it poſſible for us, at this diſtance of time, to give any tolerable explications of them; and therefore, omitting ſuch diſquiſitions, we have confined ourſelves to the bare hiſtorical narration.

The Moſaic account of the creation.

AND now we come to the only authentic and genuine hiſtory of the creation; which has been left us by Moſes, and carries with it all the marks of truth and probability, even though it be regarded only as a human compoſition, and ſeparate from divine authority: And it is to this purpoſe.

IN the beginning God created the heaven and the earth [x]. The earth, after its immediate creation, was for ſome time a promiſcuous, dark, fluid, and unformed chaos, or maſs of matter [y], which God, in the ſpace of ſix days, diſpoſed and reduced into the preſent form of the world; his ſpirit moveing, or brooding over the ſurface of the water, or fluid matter, to influence and actuate the ſame.

THE firſt thing that appeared was light; the ſeparation of which from the darkneſs was the work of the firſt day [z].

THEN God made an expanſion [a] in the midſt of the waters, to divide the waters above from the waters below; which expanſion Moſes calls heaven: and this was the ſecond day's work [b].

ON the third day, God cauſed the earth to be drained, and the waters to be gathered together, chiefly into one great receptacle, or the ocean; whereupon the dry land appeared: after which the earth produced all ſorts of plants, herbs, and trees,

[b] Ibid. verſ. 6, &c.

trees, bearing their ſeveral ſeeds and fruits, according to their various kinds [c].

THE fourth day God made the ſun and moon, and placed them in the heaven to illuminate the earth; to diſtinguiſh between day and night, and divide the ſeveral ſeaſons of the year; the ſtars were alſo made this day [d].

THE fifth day God created all the fiſhes, and inhabitants of the waters; and alſo the fowls of the air, which were likewiſe produced out of the water [e].

ON the ſixth day God made all the terreſtrial animals, the cattle, creeping things, and beaſts of the field. And laſt of all, he created man, forming his body of the duſt of the earth, and animating him with a living ſoul [f]; and out of the man he made the woman, taking her out of his ſide, having firſt caſt him into a profound ſleep [g].

THIS is the ſubſtance of what Moſes has delivered concerning the creation of the world; which being ſhort, and rather ſuited to the capacities of the people he deſigned to inſtruct, than written for the ſatisfaction of a philoſophic enquirer, has left room for various explications. and the ſetting up of ſeveral very different hypotheſes.

The Carteſian hypotheſis.

IT may be expected, we ſhould ſay ſomething of the hypotheſis of Mr. Des Cartes, though he has endeavoured rather to form a fine ſyſtem of his own, than to explain the Moſaical deſcription, and reconcile it with philoſophy. He agrees with Epicurus, in making matter and motion the principles of nature; ſuppoſing, however, the being of a God, who both created the matter, and impreſſed the firſt motion upon it; but then, after this motion once begun, and the wheels ſet a going, he leaves this vaſt machine to the laws of mechaniſm, which affect all things, both celeſtial and terreſtrial, without any farther aſſiſtance from the firſt impreſſor [h], after the following manner.

HE ſuppoſes, 1. That the matter of which the world is compoſed, being at firſt of one uniform nature, and infinitely diviſible, was actually divided into many particles of a moderate ſize, which had all ſuch a motion as is now found in the world. 2. That all theſe particles were not at firſt ſpherical, becauſe many ſuch little globes, joined together, will not fill up a continued ſpace; but that, of whatever figure they were at firſt, by their continual motion, and frequent

[c] Verſ. 9, &c. [d] Verſ. 14, &c. [e] Verſ. 20, &c. [f] Verſ. 26. [g] Cap. ii. verſ. 21, &c. [h] Baker's Reflections on Learning, cap. 7.

quent occurſions againſt each other, their angles would be cut off, and they become ſpherical. 3. He aſſerts, that there is no ſpace left empty, and therefore, when theſe round particles, by being joined together, leave ſome intervals between them, he ſuppoſes, that there are other leſſer particles, ariſing from thoſe angles that were cut off, which, by the force and celerity of their motion, will be divided into innumerable ſtill leſs fragments, proper to fill up all the interſtices. 4. He ſuppoſes, that ſome of thoſe fragments, taken from the angles of the ſpherical particles, will neceſſarily have very angular figures, and, upon that account, being not ſo fit for motion, will be apt to ſtick together, and transfer a great part of their motion to ſuch particles as are leſs, and conſequently move ſwifter. Theſe things being ſuppoſed, he proceeds to the formation of the world from his three elements, which conſiſt of the three ſorts or particles above-mentioned. The firſt element, which is the ſubtle matter cut off from the angles of the greater particles, is that of the ſun and fixed ſtars, and ſuſceptible of a much quicker motion than the other two: the ſecond element conſiſts of the ſpherical particles themſelves, of which the heavens were made: the third element conſiſts of thoſe angular particles which are leſs adapted to motion, and thence proceeded the earth, planets, comets, and other appearances of nature [i].

He ſuppoſes, that the ſolar ſyſtem is a vortex continually whirling round, whoſe matter (excepting the earth and planets) is very liquid and tranſparent, conſiſting altogether of the firſt and ſecond elements, and containing a greater quantity of the firſt, than is ſufficient to fill up the ſpaces between the particles of the ſecond. And ſince all bodies which move circularly endeavour to recede from the center of their motion, and the more thick and ſolid parts, ſuch as the particles of the ſecond element, are obliged to fly off with a greater force than the reſt; the particles of the ſecond element muſt neceſſarily recede from the common center, and approach one another, as much as their figure and motion will permit. After their interſtices therefore are filled up, the remaining matter of the firſt element takes the place left by the ſecond; by which means a maſs, or heap of the matter of the firſt element, ſettles, and is formed in the midſt of the vortex,

[i] Vid. Stillingfleet, Orig. Sacræ. Ray on the Creation. Carteſii Princip. Philoſ. part 3. §. 52. Rohault. Phyſ. part 1. c. 21.

vortex, which mafs we call the fun [k]. Every one of the fixed ftars he fuppofes likewife to be a fun, and the center of a vortex; and that the earth was originally fuch a ftar, whofe vortex was adjoining to that of the fun; but by degrees it was covered over, or incrufted with fpots, arifing on its furface, like the fcum on a boiling pot, which ftill increafing, and growing thicker and thicker, the ftar lofing its light and activity, and, confequently, the motion of the celeftial vortex about it growing more weak, languid, and unable to refift the vigorous incroachments of the neighbouring vortex of the fun; it was at laft drawn in, and wholly abforbed by it, and forced to comply with its motion, and make one in the choir of the fun's fatellites [l].

Objections thereto.

BUT this hypothefis is liable to feveral objections, and fome which abfolutely ruin it. The three elements of Des Cartes, and particularly the fubtle matter of the firft, have been fhewn to be imaginary, and his vortices fictitious, and repugnant to the nature of things; his fuppofition of a plenum is alfo evidently falfe, not to mention the abfurdities which follow his making of matter and fpace, or extenfion, to be the fame [m]. However, we cannot but think the eflay of that philofopher, who endeavoured to account for the formation of the world, in a certain time from a rude matter, by the fole continuation of a motion once impreffed, and reduced to a few fimple and general laws; or of others, who have fince attempted the fame, with more applaufe, from the original properties of matter, with which it was indued at its creation, is fo far from being criminal, or injurious to God, as fome have imagined, that it is rather giving a more fublime idea of his infinite wifdom.

WE cannot therefore excufe ourfelves from repreferting the theories of two very learned men of our age and nation; one of whom has excelled in the richnefs of his ftile and fancy, and the other in the ftrength of parts and contrivance.

The Theory of Dr. Burnet.

THE former of them, Dr. Burnet, omitting to fpeak of the original of the univerfe, or even of the folar fyftem, as made long before the Mofaic creation [n], confines himfelf to the formation of the earth only, which he fuppofes to be

done from a chaos, or confuſed maſs, conſiſting of the principles of all terreſtrial bodies, in this manner. He ſuppoſes, that the firſt change that would happen would be, that the heavieſt and groſſeſt parts would ſink downwards towards the middle of the maſs, (for there he ſuppoſes the center of its gravity) and, being more and more compreſſed, would harden by degrees, and conſtitute the interior parts of the earth. That the reſt of the maſs, which ſwam above, would alſo be divided, by the ſame principle of gravity, into two orders of bodies, the one liquid, like water, the other volatile, like air: for the more fine and active parts, diſintangling themſelves by degrees from the reſt, would mount above them; and, having motion enough to keep them upon the wing, would play in thoſe open places, where they conſtitute that body we call air: that the other parts, being groſſer than theſe, and having a more languid motion, could not fly up ſeparate from one another, but ſettled in a maſs together under the air, upon the body of the earth, compoſing not only water, ſtrictly ſo called, but the whole maſs of liquid bodies belonging to the earth. That there being two chief kinds of terreſtrial liquors, thoſe that are oily and light, and thoſe that are lean and more earthy, like common water, which naturally ſeparate from one another when they come to ſettle; the more oily and light part of this maſs would conſequently get above the other, and ſwim upon it. He proceeds to ſuppoſe, that the air was, as yet, thick, groſs, and dark, there being abundance of terreſtrial particles ſwimming in it, after the groſſeſt were ſunk down; which by their weight made their way more ſpeedily: that the leſſer and lighter, which remained, would ſink too, but more ſlowly, and in a longer time; ſo as in their deſcent they would meet with that oily liquor upon the face of the deep, or upon the watery maſs, which would entangle, and ſtop them from paſſing any further; whereupon, mixing there with that unctuous ſubſtance, they compoſed a certain ſlime, or fat, ſoft, and light earth, ſpread upon the face of the waters. That this thin and tender orb of earth increaſed ſtill more and more, as the little earthy parts, that were detained in the air, could make their way to it, ſome having a long journey from the upper regions, and others, being very light, would float up and down a long while, before they could diſengage themſelves and deſcend: but at length being all got thither, and mingling more and more with that oily liquor, they ſucked it all up, and were wholly incorporate together, and ſo began to grow more ſtiff and firm, making both but one ſubſtance,

ſubſtance, which was the firſt concretion, or firm and conſiſtent ſubſtance that roſe upon the face of the chaos, and became at laſt an habitable earth, ſuch as nature deſigned it. And ſuch a body as this, he doubts not, would anſwer all the purpoſes of a riſing world; for what can be a more proper ſeminary for plants and animals, than a ſoil of this temper and compoſition? a finer and lighter ſort of earth, mixed with a benign juice, eaſy and obedient to the action of the ſun, or what other cauſes were employed by the author of nature, for the production of things in the new made earth, and perfectly anſwering the ancient deſcriptions of the primigenial ſoil, or ſlime.

THE form of this firſt earth, both external and internal, is eaſily conceived from the manner of its formation. As to the external form, it would be ſmooth, regular, and uniform, without mountains, and without a ſea. The internal form would conſiſt of ſeveral regions involving one another, like orbs about the ſame center, or the ſeveral elements caſt circularly about each other; the water being entirely contained under the upper cruſt of the earth, which formed a wonderful vault, hanging above the deep, ſuſtained by nothing, but its own meaſures and manner of conſtruction [o].

'To confirm ſo new and ſurprizing a repreſentation of the form of the firſt earth, and to prove it muſt have been different from the preſent, he endeavours to ſhew, that if the earth had been always in the form it now bears, it would not have been capable of a deluge, which could not have been effected without ſuch an infinite maſs of water, as could neither be brought upon the earth, nor afterwards any way removed from it [p]: and that the chaos, as a fluid body, would naturally and neceſſarily ſettle and caſt itſelf into a ſmooth ſurface, every where equidiſtant from its center, and not into a ſurface broken into ſo many irregularities as our earth is; nor could it poſſibly imitate the cavities, dens, and broken holes within it [q]. And theſe reaſons he backs by authority of ſcripture, which plainly intimates a difference between the form, or conſtitution of the old world and of the preſent, by reaſon of which difference, that was ſubject to periſh by a deluge, as this is ſubject to periſh by conflagration [r]; beſides ſeveral paſſages, which ſeem to deſcribe the ſtructure

[o] Burnet's Theory of the earth, l. 1. c. 5. & Archæol. l. 2. c. 3.
[p] Idem, Theory, l. 1. c. 2. [q] Ibid. c. 4. [r] 2 Pet. iii. 5, 6, 7.

of the antediluvian earth, as founded and eſtabliſhed on the waters [s], and ſet as an orb over the face of the deep [t]; conformably to which, on the renovation, or reſtitution of nature to its primæval ſtate, the new earth will appear without a ſea [u]. To which he adds the teſtimony of ancient tradition, that the world was oviform, which was true of that original earth, not only in reſpect to its outward figure, but alſo to the inward compoſition of it; the central parts being repreſented by the yoke of the egg, the exterior region of the earth by the ſhell, and the abyſs of water by the white that lies under the ſhell [x]. The manner wherein he ſuppoſes this earth was ſupplied with water, will be taken notice of, when we come to conſider more particularly the ſtate of the antediluvian earth.

Objections thereto.

SEVERAL objections have been made to the philoſophy of this gentleman's hypotheſis, as that his laws of gravitation ruin the whole contrivance; becauſe if every thing ſubſided according to its ſpecific gravity, the earth, being heavier than the water, muſt neceſſarily place itſelf nearer the center, and ſo leave the waters to cover the face of the whole orb: that his fat, or oily liquid, to catch the terrene particles as they deſcended, is but a weak expedient, becauſe it is impoſſible, that oil, or any other liquor, ſhould ſuſtain ſuch an immenſe heavy orb: that he has, without any reaſon, deprived the old world of the benefit and advantages of a ſea, mountains, and minerals [y]: but the great misfortune is, that ſo coherent and ſurprizing a ſcheme does not in ſeveral particulars accord with the letter of the ſcripture, with which he has in many places taken great liberty, ſuppoſing, that the ſacred books were not always to be ſo literally and naturally underſtood, as was generally believed hitherto. For conſidering the mean capacities of the Jews, which were not capable of ſuch points of philoſophic truths; conſidering the moſt antient ways of conveying (or rather concealing,) ſublime theorems by parables, fables, and hieroglyphics; conſidering the ſcripture ſtile in ſome other caſes, very different from the preſent plain way of diſcourſe; conſidering the main end of thoſe writings, the benefit of the moral world ſeemed not to require a ſtrict adherence to truth in every circumſtance relating to the natural; and conſidering, laſtly, that all ages had endeavoured in vain

to

[s] Pſal. xxiv. 2. & cxxxvi. 6. [t] Prov. viii. 27. [u] Revel. xxi. 1.

[y] Vid. Keill's Examinat. of Dr. Burnet's Theory.

to clear theſe points, according to the ſtrictneſs of the moſt obvious ſenſe, and that the greater improvements in philoſophy ſeemed only to render them ſtill more unaccountable; all theſe conſiderations induced him to ſuppoſe, that the holy writers only ſecured the fundamental and general verities; involving the reſt under, and explaining the whole by a way of ſpeaking, which was myſtical and mythological, rather popular than true; and fitted more to the needs of men than the reality of things [z].

THE other theoriſt, Mr. Whiſton, not only ſhews a greater regard to ſcripture, and has avoided many difficulties, that were chargeable to the former; but proceeds on more philoſophical principles: He firſt lays down this propoſition, that the Moſaic creation is not a nice and philoſophical account of the origin of all things, but an hiſtorical and true repreſentation of the formation of our ſingle earth, out of a confuſed chaos, and of the ſucceſſive and viſible changes thereof each day, till it became the habitation of mankind [a]: which he proves from the firſt words of Moſes, In the beginning God created the heaven and the earth, which plainly imply, that the creation of the univerſe out of nothing, which we uſually ſtile creation, was precedaneous to the ſix days work; the hiſtorian immediately deſcending thence to the chaos of our earth, to which he afterwards confines himſelf; mentioning, indeed, the making of the ſun and other celeſtial bodies, to accommodate his narrative to vulgar apprehenſion, and make it complete; but chiefly to ſecure the Jews from the worſhip of the hoſt of heaven [b]. He therefore ſuppoſes, that the ſun, moon, and ſtars were created before, and only made viſible and conſpicuous to the earth on the fourth day [c]: that the ancient chaos, the origin of the earth, was the atmoſphere of a comet [d], which is no other than a planet unformed, or in its primæval ſtate, placed in a very excentrical orbit; to ſupport which propoſition he endeavours to ſhew, that the atmoſphere of a comet has thoſe ſeveral properties which are recorded of the ancient chaos; that it has ſuch peculiar properties beſides, as lay a rational foundation for ſome of thoſe phænomena of our earth, which can ſcarce otherwiſe be philoſophically explained, and that no other body, or maſs of bodies, now known, or ever heard of in the world, can

Mr. Whiſton's Theory.

[z] Vid. Burnet. Archæol. l. 2. c. 8. [a] Whiſton's new Theory of the Earth. Diſc. of the Moſaic Creation, p. 3. [b] Ibid. p. 4, &c. [c] Ibid. p. 24, &c. [d] Whiſton's Theory, B. II. p. 73.

can ſtand in competition, or pretend to the ſame character. He proceeds to ſuppoſe, that the ſix days of the creation were equal to ſix years; a day and a year being one and the ſame thing [e] before the fall of man, when the diurnal rotation of the earth about its axis, as he thinks, firſt began [f]: which ſuppoſition agrees with the letter of Moſes, and the ſtile of ſcripture elſewhere, wherein a day often denotes a year: and allows a convenient ſpace for the works of creation, which appear to have been leiſurely, regular, and gradual, without any precipitancy, or acceleration, by a miraculous hand on every occaſion; not to mention other arguments, drawn from the peculiar characters of the ſtate of nature before the fall, which will be obſerved hereafter.

On theſe foundations, Mr. Whiſton proceeds to account for the formation of the earth in this manner: That ſuch formation was not a mere reſult from any neceſſary laws of mechaniſm, independently on the divine power; but the proper effect of the influence of the interpoſition, and all along under the peculiar care, of God, who not only created the matter of which the univerſe, and particularly the earth, was to conſiſt, out of a non-exiſtent ſtate, and endued it with its ſeveral properties and powers, but interpoſed more particularly in the formation of the earth, by changing the courſe and orbit of the chaos into that of a planet, by immediately forming the ſeeds of all animals and vegetables; by ordering every diſtinct day's work to be completed in its proper period, that every thing ſhould follow in its own order and place; and principally in the creation of our firſt parents [g]. That at the time immediately preceding the ſix days creation, the face of the abyſs, or ſuperior regions of the chaos, were involved in a thick darkneſs; agreeably to the nature of a thick comet, which is repreſented as containing a central, ſolid, hot body, of many hundred, or thouſand, miles in diameter, and beſides that, a vaſtly large, fluid, heterogenous maſs, or congeries of bodies, in a very rare, ſeparate, and expanded condition, whoſe diameter were ten, or eleven times as long as that of

[e] Empedocles thought, that when mankind ſprang originally from the earth, the length of the day, by reaſon of the ſlowneſs of the ſun's motion, was equal to ten of our preſent months. Plut. de Placitis Philoſ. l. 5. c. 18. a ſurprizing teſtimony to this purpoſe.
[f] Whiſton's Theory, B. II. p. 85, &c. [g] Ibid. Book IV. p. 292, &c.

of the central ſolid, which is the atmoſphere, or chaos it ſelf. But on the change of the comet's orbit, from a very excentrical, to a moderately elliptical one, the commencing of the Moſaic creation, and the influence of the divine ſpirit, all things would begin to take their own places, and each ſpecies of bodies rank themſelves according to the law of ſpecific gravity. By which method the maſs of denſe fluids, which compoſed one part of the entire chaos, being heavier than the maſſes of earth, and water, and air, would ſink downwards with the greateſt velocity, and elevate thoſe maſſes encloſed among them upwards, which muſt diſtinguiſh the chaos into two very different and diſtinct regions; the lower and larger whereof would be a collection of denſe and heavy fluids, or a vaſt abyſs, immediately encompaſſing the central ſolid; the higher and leſſer would be a collection of earthy, watery, and airy parts confuſedly mixed, and encompaſſing the ſaid abyſs. And this he takes to be the ſtate of darkneſs; for the crowding together of all thoſe opake corpuſcles, which before roved about the immenſe regions of the atmoſphere, muſt, by conſequence, exclude the rays of the ſun much more than before [h].

THINGS being in this ſtate, the viſible part of the firſt day's work was the production of light, or its ſucceſſive appearance to all the parts of the earth; with the conſequent diſtinction of darkneſs and light, night and day, upon the face of it. And this was effected by the ſeparation of the upper and elementary chaos of earthy, watery, and airy corpuſcles, into two ſomewhat different regions; the one a ſolid orb of earth, with conſiderable quantities of water in its pores; the other an atmoſphere in a peculiar ſenſe, or maſs of the lighteſt earthy, with the reſt of the watery and airy particles, ſtill ſomewhat confuſedly mixed together. So that on this firſt day, or year of the creation, the earthy, or denſer parts, would take their places loweſt on the ſurface of the great abyſs, would ſettle in part into the ſame, and compoſe an orb of earth; and in its interſtices, and little cavities, all ſuch watery particles as were already in this region, or deſcended upon it before its conſolidation, would be encloſed; and that as far above the ſurface of the abyſs, as their quantity would enable them to reach. On this firſt day alſo, the upper regions of the chaos, now,

[h] Ibid. p. 307, &c.

now, in ſome meaſure, freed from thoſe earthy and opake maſſes, which before excluded the ſame, and cauſed the above-mentioned thick darkneſs, would, in ſome degree, admit the rays of the ſun. Now therefore that glorious emanation, light, would begin to appear on the face of the earth; and, by the annual motion, ſucceſſively illuminate the ſeveral parts of it, and conſequently occaſion the viciſſitude of night and day [i].

The viſible part of the ſecond day's work was the elevation of the air, with all its contained vapours, the ſpreading of it for an expanſum above the earth; the diſtinction thence ariſing of ſuperior and inferior waters; the former conſiſting of thoſe vapours raiſed and ſuſtained by the air; the latter of ſuch as either were encloſed in the pores, interſtices, and bowels of the earth, or lay upon the ſurface thereof. The heat of the ſun, at the concluſion of the former day, beginning conſiderably to penetrate the ſuperior regions of the chaos, and the lower earthy Strata continuing to ſettle ſomewhat cloſer together, the watery parts would ſubſide, and where they could get entrance, ſaturate their inward pores and vacuities, and the atmoſphere would free itſelf more and more from the heavieſt and moſt opake corpuſcles, and thereby become much more tenuious and clear than before. Whereupon, by the time the night, or firſt part of this ſecond day, was over, and the ſun aroſe, the light and heat of that luminary would more freely and deeply penetrate the atmoſphere, and become very ſenſible in theſe upper, or airy regions; and conſequently vaſt quantities of vapours would be elevated and ſuſtained there, and ſo encreaſe the quantities which were there already; while in the mean time all the earthy corpuſcles, uncapable of rarefaction, and with them all ſuch watery particles, as were ſo near the earth that the ſun's power could not ſufficiently reach them, were ſtill ſinking downwards, and the former increaſing the craſſitude and bulk of the ſolid earth, and the latter, if the earth was too ſolid to admit them, as by this time it would probably be, flowing down apace, and covering all its ſurface with water. So that the expanſum, or firmament, which was this day ſpread out above the earth, was plainly the air; the ſuperior waters, all thoſe freſh ones, which, in the form of vapour, a nine, or ten months heat of the ſun, with the aſſiſtance of the central heat, could elevate, and the air ſuſtain, beſides thoſe vaſt

[i] Ibid. p. 311.

vaſt quantities of ſalt ones, which had never yet left thoſe regions: the inferior waters were thoſe which were not elevated, but remained below in the bowels, or on the ſurface of the earth [k].

THE viſible parts of the third day's work were two; the former, the collection of the inferior waters, of ſuch as were now under the heaven, into the ſeas, with the conſequent appearance of the dry land; the latter, the production of vegetables out of that ground ſo lately become dry. In order to apprehend which it muſt be conſidered, that the orb of the earth had been ſettling and fixing itſelf on the ſurface of the abyſs, from the very beginning of the creation; and was by the coheſion of its parts grown ſolid, ſome time before all the lighter and remoter earthy parts were deſcended upon it, ſuppoſe by the end of the firſt day: by which means, and by reaſon of the different denſity and ſpecific gravity of its columns, it was ſettled into the abyſs in different degrees, and thereby became of an unequal ſurface, diſtinguiſhed into mountains, plains, and vallies; which things being ſuppoſed, at the concluſion of the preceding day, the air being crowded with vapours to a prodigious degree, in the night, or former part of this third day, the ſaid vapours muſt needs deſcend on the earth in vaſt quantities, leaving the air by degrees pretty free, and becoming of celeſtial, terreſtrial waters: theſe waters being deſcended by reaſon of the inequality of the earth's ſurface, and its ſolidity, muſt in ſome time have run down from the higher parts, by the declivities and hollows, into the loweſt vallies, and moſt depreſſed regions of all, and there compoſed the ſeas and lakes; ſo that in the morning, the entire face of the globe, which was before covered with the deſcending waters, muſt be diſtinguiſhed into overflowed vallies, and extant continents. The dry land being now diſtinguiſhed from the ſeas, and juſt become moiſt and juicy, like the primitive ſlime; on the ſun riſing, it was of all other the moſt fit ſeaſon for the germination of the ſeeds of vegetables, and the growth of trees, herbs, and plants; for which purpoſe, nine, or ten months continual preſence of the ſun was a time very proper and natural [l].

THE fourth day's work was the placing of the heavenly bodies, ſun, moon, and ſtars in the expanſum, or firmament; that is, the rendering of them viſible and conſpicuous on the face of the earth: together with their ſeveral aſſignations

[k] Ibid. p. 317, &c. [l] Ibid. p. 320, &c.

assignations to their respective offices there. For though the light of the sun penetrated the atmosphere in some sort the first day, and in the succeeding ones had very considerable influence upon it, yet it is by no means to be supposed, that his body was visible all that while; the air, even at this day, being not at all times so clear, as to render it discernible by us, though we are at the same time sufficiently sensible of his force and influence in the constant productions of nature. But on the coming on of this fourth day, and the sun's abode below the horizon for two or three months, those vapours, which were raised the day before, must fall downwards, and so, before the approach of the morning, leave the air in the greatest clearness and purity imaginable, and permit the moon first, and then the sun, most plainly to appear, and be conspicuous to the earth. This fourth day therefore is the time, when both these heavenly bodies, though in being before, yet so as to be wholly strangers to a spectator on earth, were rendered visible: the whole inanimate world, with its vegetable productions, being now complete, according to the tradition of the Chinese [m] inhabiting Formosa and other islands, who hold, that the world, when first created, was without form, or shape; but, by one of their deities, was brought to its full perfection in four years [n].

THE production of the fish and fowl out of waters, with the benediction bestowed on them, in order to their propagation, was the work of the fifth day, which was a very proper time for their introduction. The terraqueous globe being now become habitable, both to the swimming and volatile animals; and the air clear, and so penetrable by that complete heat of the sun, which was requisite to the generation of such creatures; those seeds, or little bodies of fish and fowl, which were contained in the water, (or moist fruitful slime of kin to it) were now exposed to the kindly warmth of the sun, and the constant supply of a most gentle and equal heat from beneath; being neither disturbed by any sudden alteration of the air from winds, nor by the agitations of tides, which in those small seas, and in the absence of the diurnal rotation were imperceptible and gradual: which seeds being invigorated with the divine benediction, became now prolific; and a numerous off-spring of the swimming and volatile kind arose, whereby

[m] Atlas Chinens. part 2. p. 46, sup. p. 325.

[n] Whiston's Theor. ubi

whereby the two fluid elements, air and water, became repleniſhed with thoſe firſt pairs, which were enabled to propagate their ſpecies [o].

THE ſixth day's work was the production of all the terreſtrial, or dry-land animals. The brute beaſts were produced out of the earth; after which the body of Adam was formed of the duſt of the ground; and by the breath of life, breathed into him in a peculiar manner, he became a living ſoul: and ſome time after, on the ſame day, he was caſt into a deep ſleep, and Eve was formed of a rib taken from his ſide. The earth being now grown more ſolid and dry, and the air fully clear and fit for reſpiration, and the other diſpoſition of external nature being ſubſervient, it was a proper ſeaſon for the generation of the land animals, and the introduction of the nobleſt of them, man [p].

THIS is the ſubſtance of the latter theory, wherein among many ingenious and probable ſolutions, there are ſome ſuppoſitions, which have been thought too bold and precarious. Objections to Mr. Whiſton's theory.

IT has been objected, that he is propably miſtaken as to the extent of the Moſaic creation; it being pretty certain, that the moon was formed at that time, or at leaſt placed in its orbit, and made to turn round the earth; for no comets have any ſecondary planets: ſo that ſomething more muſt be intended by Moſes, than the bare rendering the moon viſible; and the word made, being equally applied both to ſun and moon, it is ſuppoſed, it ought in both places to be taken in the ſame, that is, a literal ſenſe.

THE atmoſphere of a comet could not, it has been thought, have been the primitive chaos, being not an obſcure, but a bright pellucid, fluid, which is a conſequence of the intenſe heat of the central ſolid; and becauſe the greateſt part of the bodies which compoſe the upper ſtratum of the earth, would have been vitrified on the comet's near approach to the ſun, and ſo very improper for the formation of the earth.

THAT the diurnal rotation of the earth did commence till after the fall, ſo that till that time days and years were exactly the ſame, has been held a paradox; conſidering the prodigious cold, that muſt be occaſioned by the total abſence of the ſun for one half of the year, and the intenſe heat, that muſt enſue upon its continual ſhining upon it for the other; which immoderate degrees of heat and cold muſt be

[o] Ibid. p. 328. [p] Ibid. p. 329, &c.

be pernicious to the antediluvian plants and animals, unleſs their bodies were of a very different conſtitution from what they are now. Nor can there be any neceſſity to lengthen a day into a year, for the ſake of a gradual and regular formation of things, without precipitance, or acceleration, where an Almighty Agent is acknowledged to be concerned [q].

The Moſaic creation explained.

It may not therefore be amiſs, laying all hypotheſes aſide, briefly to propoſe ſuch an explication of the coſmogony, as may be moſt agreeable both to reaſon and the letter of ſcripture.

And firſt, it is conceived, that the Moſaic creation is neither to be extended to the whole univerſe, nor yet confined to the terreſtrial globe alone; the middle opinion, that it included the ſolar ſyſtem, and that only, ſeeming the moſt probable, from the near ſimilitude and relation the ſeveral planets in that ſyſtem bear to one another, and their having the ſame common center and luminary; ſo that though the hiſtorian chiefly regards the earth in his whole narration, yet there is reaſon to preſume, that the other planets were formed in the ſame manner, and in the ſame time, as the earth, of ſo many particular chaotic maſſes.

Moses, after the general aſſertion, that both heaven and earth were originally made [r] by God, and before he begins his account of their reduction into the preſent ſyſtem, informs us, that the earth, in particular, was at firſt in an unformed and deſart ſtate, when, as a thing preparatory to the work, the ſpirit of God moved upon the face of the waters; by which ſpirit ſome underſtand the third perſon in the bleſſed Trinity [s], others, that plaſtic nature [t], which was ſubſervient to him on this occaſion, or ſome other emanation of the divine power; which it is reaſonable to ſuppoſe moved the chaotic maſs, whoſe ſurface was covered with water, or other fluid matter, and impregnated it with ſeveral kinds of vital influence, preparing every part to receive the intended diſpoſition, order, and life.

Things

[q] Vid. Keill's Remarks on Mr. Whiſton's Theory. [r] The original word בָּרָא is allowed not neceſſarily to ſignify a creation, or production out of nothing: yet as the Hebrew tongue has no other word to expreſs ſuch a creation, it is moſt likely Moſes uſes it here in that ſenſe. [s] Grotius, &c. [t] Dr. Cudworth's Intell. Syſt. p. 148. Yet others by this ſpirit of God underſtand no more than a violent wind, which they ſuppoſe was ſent to dry up the waters. Chal. paraphraſe, Druſius, &c.

THINGS being in this ſtate, the confuſed ſtagnating parts of matter began to range themſelves in order; and the groſſer parts ſubſiding, the lighter and more tenuious mounted up, by which means the atmoſphere being in ſome degree cleared, the luminous rays of the ſun began to pierce it, and cauſed an imperfect and glimmering light, yet ſufficient partly to diſpel the before total darkneſs, and to diſtinguiſh day from night. And this account of the light, which appeared on the firſt day, is much more reaſonable, than to ſuppoſe the ſubſtance of the ſun, much leſs the fixed ſtars, were then extracted from the chaos [u]; becauſe more than ninety-nine parts in an hundred of the matter of the univerſe, are fiery corpuſcles, and if they were included at firſt in the chaos, it could not poſſibly have been dark or caliginous. Nor is it probable, that even the terrene matter of the planets was taken from the Moſaic chaos, not only becauſe it is expreſly called the earth, but becauſe ſuch an imagination is directly overthrown by the now undoubted property of the univerſal gravitation of matter; not to mention the falſe ſuppoſition, which muſt in that caſe be made, of the earth's being the center of the world [x]. To account for this day's light, before the ſun is ſaid to be made, there is no occaſion to recur to the ſuppoſition of its being either the divine Shechinah [y], or no more than a temporary light, occaſioned by the rapid motion communicated by God to a portion of matter [z],

THE ſecond day, the expanſe, or air, called by Moſes heaven, was perfected, being now freed from the groſs terrene particles which before crowded it, and made capable of ſupporting clouds and aqueous vapours, which were the ſuperior waters, as thoſe on the earth were the inferior [a]. By the waters above the firmament cannot be underſtood the planetary waters [b], for the reaſons given above; and the notion, the old chriſtian fathers had of ſuper-celeſtial waters, is perfectly groundleſs.

THE former part of the third day's work was to gather the waters, which before covered the face of the earth, into ſeas and lakes, that the dry land might appear. How this

[u] Which is the opinion of Dr. Nicholls, and others. See his Conference with a Theiſt, Vol. I. Part. 1. [x] Vid. Whiſton, of the Moſaic Creation, p. 35, &c. [y] The notion of Abravanel. [z] Vid. Saurin, Diſſert. p. 2. [a] Grotius, &c.
[b] This is Dr. Nicholls's interpretation, ubi ſupra.

this was effected is not eaſy to determine. That God himſelf ſhould raiſe the mountains, and hollow the chanels of the ſea for this purpoſe, appears not a little indecent; for which reaſon ſome have ſuppoſed, the mountains might have been thrown up by the force of a ſubterraneous fire, or flatus, in the ſame manner as earthquakes are now cauſed [c]: but the more philoſophical opinion is, that they were occaſioned by the different denſities of the ſeveral columns of the earth, when its ſurface was firſt formed, ſome ſinking lower into the abyſs than others; for it is more than probable, that the mountainous columns are much hollower and lighter than the other, notwithſtanding the vulgar opinion to the contrary [d]. The latter part of this day's work was the production of vegetables, which were deſigned as food for the future animals. But how great ſoever we ſuppoſe the fœcundity of the primigenial earth to be, it is ſcarce to be imagined, that trees and plants could arrive at full growth, and bear their ſeveral fruits and ſeeds in ſo ſhort a ſpace as a day, without the aſſiſtance of a ſupernatural power: and as God is on all hands allowed to have formed the ſeeds of thoſe vegetables, it may not, perhaps, be wrong to attribute their ſudden maturation alſo to his interpoſition; though, it be well known, how much vegetation may be helped and forwarded by art, even at this day, of which there have been ſome ſurprizing inſtances, and much more might be expected from nature in that vigorous ſtate.

On the fourth day the two great lights, the ſun and the moon, are ſaid to have been made and placed in the heaven. It muſt not, however, be ſuppoſed they were then firſt created, or aſſigned to their reſpective orbs; for the ſun was not only in being from the beginning of the Moſaic creation, but had all along great influence on the earth, its light and heat gradually encreaſing, and influencing the earth and its productions with greater power, as the air became from time to time more and more pure and defæcated; and the moon, as well as the other planets, kept pace with the earth in its formation; but only, that the bodies of thoſe luminaries, which had been hid from the earth till the fourth day, when the air was perfectly freed from the heterogeneous particles, and the vapours, which before obſcured it, did then firſt appear to the earth, and viſibly begin to perform their ſeveral offices. The ſtars alſo are for the ſame

[c] Ray on the Creation, and Biſhop Patrick in his Commentaries.
[d] See Whiſton's Theory, Book II. p. 82.

ſame reaſon ſaid to be made on that day; tho' the planets, as we have ſaid, were forming before; and the fixed ſtars were no part of this creation [e].

AFTER the formation of the inanimate world, Moſes proceeds to the formation of animals, and he begins with fiſhes and fowls, which were both produced, on the fifth day, out of the waters in great numbers [f]. And as the original of fiſh and volatiles was from the ſame element, ſo there is ſuppoſed to be ſome congruity in their nature, being both oviparous, and their motions of ſwimming and flying ſomething alike.

IN the former part of the ſixth and laſt day, the terreſtrial animals were produced out of the earth.

Of the formation of plants and animals.

THE manner of the original formation of plants and animals, in which the wiſdom of the creator principally appears, has never been accounted for by any philoſopher with any tolerable ſucceſs; matter, and the laws of motion having nothing at all to do in theſe things, whatever they have in the inanimate part of the world. How ridiculous and groundleſs thoſe hypotheſes are, which make them to be produced from the earth, ſuppoſed ever ſo fruitful, by the influence and heat of the ſun, appears from the late diſcovery made in philoſophy, that there is no ſuch thing as equivocal generation of any the meaneſt animal, or plant; the ſun, and earth, and water, and all the powers of nature in conjunction, being able to do nothing at all, towards the producing of any thing endued with ſo much as even a vegetative life [g]. It muſt be therefore neceſſarily allowed, that God

[e] Dr. Nicholls (ubi ſupr.) ſupports the opinion of the creation of other worlds, or Syſtems before ours, by a criticiſm on the Hebrew words ואת (in Geneſ. i. 16.) which ſignify together with; and thence concludes, that by Moſes's text the moon was to rule the night and, or together with, the ſtars, which ſhine then only; the words *he made* being interpolated in our tranſlation. By the ſtars coming in ſo abruptly in this place, ſome have been ready to think, thoſe words were added ſince Moſes's time, or crept into the text from a marginal annotation, made to obviate an objection from idolaters, that the ſtars were not made.

[f] *Let the waters bring forth abundantly the moving creature that hath life, and fowl*, &c. Geneſ. i. 21. But afterwards it is ſaid, that God *formed the fowls of the air out of the ground*, Geneſ. ii. 19. The Jews reconcile this, by ſuppoſing, they were formed out of both elements mixed, viz. out of ſoft ooze. But Calmet (in his commentary) ſays, the firſt paſſage may be rendred, *and let the fowl fly*, &c.

[g] Dr. Clarke's Demonſtration of the being and attributes of God, p. 64.

himſelf, or ſome agent impowered by him, actually formed both plants and animals, making uſe of the earth and water, as the matter only whereof he conſtituted their parts. But whether theſe firſt vegetative and ſenſitive creatures were created in their ſeeds only, (which contain the plants and animals themſelves in little) and diſperſed over the ſuperficial part of the land and water, which had power given them to hatch and bring them forth; or whether they were created in their full ſtate of perfection, ſeems not eaſy to decide. It has been thought by ſome modern philoſophers, that God at firſt created only two of each ſpecies of animals, from which all the reſt proceeded by generation: to ſupport which opinion, they obſerve, that there was but one man and one woman created, and at the deluge but two of each kind (of unclean beaſts) were preſerved in the ark. But it ſeems more conſonant to ſcripture, that a great number of every kind were formed at firſt: we are aſſured, the aquatic creatures and fowls were brought forth abundantly; and plants, having no locomotive power, muſt neceſſarily have been created diſperſedly all the world over. There has been alſo a farther queſtion moved concerning the creation of animals, viz. whether all animals, that already have been, or hereafter ſhall be, were at firſt actually created by God? or whether he hath given to each kind of animals ſuch a power of generation, as to prepare matter, and produce new individuals in their own bodies? and it ſeems to be the moſt reaſonable opinion, that God did himſelf, at firſt, actually create all the individual animals that ever were, or ever ſhall be; and that there is no ſuch thing as any production of new ones. For what were that but a creation of ſuch individuals? and what did God at the firſt creation more than, if this be true, we ſee every day done; that is, produce a new animal out of matter, which it ſelf prepares; all the difference is, that God does that in an inſtant, which the creature muſt take time to do. Beſides, the parent animal cannot be the agent, or efficient in the generation, or forming or nouriſhing of the fœtus, becauſe that is a work of art and reaſon, which brute creatures are not endued withal; nor indeed does man himſelf underſtand any thing of the proceſs of generation in himſelf. Again, it is moſt probable, if not certain, that moſt animals have in them from the beginning the ſeeds, or eggs, of all the young they ſhall afterwards bring forth; which when ſpent and exhauſted, the creature becomes barren: the females

of

of all viviparous quadrupeds being brought forth with their Teſtes, or ovaria; and all birds formed with their ovary, or egg-cluſter, containing the ſeeds of all the eggs they ſhall ever lay. Now had the creature a power of producing new ones, what need was there, that there ſhould be ſo many at firſt formed in them? Whereupon theſe philoſophers argue thus; Let us ſuppoſe, God did at firſt create two animals, a male and female: the female muſt be created with its ovaries, which (as we have ſaid) contain ſo many ſeeds, or eggs, as the creature ſhould ever bring forth young. So it is clear, that not only the firſt pair, but the firſt generation of animals were actually created. Again, this generation, from their firſt appearance, had each of them (that is the females) its Ovaria, containing in like manner, the ſeeds of its future off-ſpring; ſo that this ſecond generation was alſo created in the firſt. The ſame may be demonſtrated of the third and fourth; and ſo on of all the generations that ſhall be, as long as the world ſhall laſt [h].

The creation of man,

WHEN the creation had proceeded thus far, and every thing that could be ſubſervient to man, or advance his felicity, was completed; he, who was to be the lord of all, and for whoſe ſake the whole was framed, was brought into the world, being created in a ſolemn and immediate manner by God himſelf [i], after a conſultation, as it were, of the holy Trinity [k], every perſon wherein may juſtly be preſumed to have been peculiarly concerned in the production of that being, which was to bear the image of God, and be made capable, in ſome degree, of his immortality.

[h] Ray's Phyſico-Theological Diſcourſes, chap. 4. [i] Mr. Whiſton, conceiving it unfit and impoſſible for the divine nature of the Father to be ſo much, and in ſuch a manner, concerned with the corporeal world, and the ſinful race of mankind, is of opinion, that the ſame divine perſon, who was afterwards frequently converſant on earth, gave the law on mount Sinai, and took the title, adoration, and, to others incommunicable, name of God of Iſrael; and who at laſt was incarnate, and died, and ſtill makes interceſſion for us with the Father, and will judge the world at the laſt day; was actually and viſibly on earth in a human ſhape, and truly and really employed in this creation of the world, ſo frequently aſcribed to him in the holy ſcriptures, and particularly in this formation of man, Vide his theory, Book IV. p. 330. [k] Gen. i. 26. Moſt of the modern expoſitors take the plural number here uſed, *Let us make*, &c. to be no more than a majeſtic form

MAN then was, by a divine power, created on the ſixth day, after the terreſtrial animals had been produced; his body was formed out of the duſt of the ground [l], whence he had the name of Adam [m], and his ſoul immediately infuſed into him by his creator; in which better and immortal part more evidently conſiſted that image, or reſemblance, of God, wherein he is ſaid to have been made [n]. The woman was formed alſo on the ſame day [o], out of the ſide [p] of the man, who had been caſt into a deep ſleep for that end [q]. And this original, it is to be ſuppoſed, was choſen, to conciliate the ſtricter love and union between them; the ſide being alſo the moſt proper part to denote that equality with the man, for which the woman was deſigned; whereas if ſhe had been taken from the head [r], it might have argued ſome intended ſuperiority, or form of ſpeech, as princes now uſe. The Jewiſh doctors are of opinion, that this deliberation was real, and held with ſuch angelical beings as God might employ in the work of man's creation: and on this occaſion tell the following ſtory; That, as Moſes was writing his book by God's appointment, and theſe words came to be dictated, he made ſome difficulty to ſet them down, crying out, *O Lord wouldſt thou then lead men into error, and make them doubt of the doctrine of the unity?* whereupon God anſwered, *I command thee to write, and if any will err, let them err.* Bereſhit Rabba. Philo the Jew ſays, the true reaſon of this expreſſion is known to God only; yet he conjectures that man alone, of all creatures, being capable of the contraries of virtue and vice; the creation of ſuch a mixed being was partly proper, and partly improper for God himſelf, who therefore here beſpeaks his coadjutors, that what is irreprehenſible in the actions, or will of man may be attributed to God, and what is otherwiſe, to his ſubordinate agents. De mundi opificio, p. 15, &c.

and of woman.

[l] Geneſ. ii. 7. [m] אדמה Adamah in Hebrew ſignifies Earth, but more properly, as is ſaid, a ſort of red earth, or clay, from the root אדם to be red. Ludolphus derives it from the Æthiopic, Adama, i. e. to be pleaſant or delightful, which epithets are attributed to the earth for its amenity, and might be to the firſt man for his beauty. But this name of Adam, it muſt be obſerved, is an appellative, rather than a proper name, and includes even both the ſexes. Ibid. According to ſome of the Perſian mages (but not the more orthodox) the firſt human pair were named Miſha and Miſhâna. Hyde, hiſt. rel. vet. Perſ. c. 10. [n] Gen. i. 26. 27. Ib. v. 1 [o] Ibid. i. 27. [p] The original word, which ſtrictly ſignifies a Rib, may be alſo tranſlated Side, as it is all along by the Septuagint. [q] Geneſ. ii. 21. [r] Which ſome have imagined. Vid. St. Romuald, Abbregè du Treſor Chronolog. Tom. I. p. 35.

or if from the lower parts [s], the contrary. From what Adam ſaid on his firſt ſight of the woman, *that ſhe was bone of his bone, and fleſh of his fleſh*, it appears, he well knew whence ſhe was formed; whether he was ſenſible of the paſt operation, or had it otherwiſe revealed to him, as probably it was in a viſion as he ſlept. Beſides Eve, it is pretended by ſome Rabbins, that God made another woman out of the earth named Lilith, of whom the Jews relate many ſtories [t].

Traditions concerning their ſize,

THAT the firſt pair were created in an adult and perfect ſtate, immediately capable of the full exerciſe of their natural powers and faculties, is not to be doubted: nor is it to be imagined, but that they both came out of their maker's hands in the greateſt perfection both of body and mind [u]. But we muſt not hence entertain thoſe extravagant opinions, which ſome have held in thoſe reſpects. The Talmudiſts ſay, that Adam reached from one end of the earth to the other, when firſt created, but that, when he had ſinned, God ſqueezed his ſtature to an hundred ells [x]: though others ſuppoſe this was done at the requeſt of the angels, who were terrified at his gigantic ſize, and that God ſtill left him nine hundred cubits high [y]; and that was not a great deal too much, if he waded through the ſea into our continent after his expulſion from paradiſe, which, as ſome imagine, was ſeparated from this world by the ocean [z]. The Mohammedans alſo have a tradition from their prophet, that Adam was high as a tall palm tree [a]; but this would be too much in proportion, if that were really the print of his foot, which is pretended to be ſuch, being ſomewhat above two ſpans long, on the top of a mountain in the iſland of Ceylon, thence named Pico de Adam; and too little, if Eve were of ſo enormous a ſize, as is ſaid, that when her head lay on one hill near Mecca, her knees reſted on two others in the plain, about two muſket-ſhots aſunder [b]. The beauty, beauty of Eve is ſaid to have been ſo extraordinary, that the prince of the angels fell in love with her, which occaſioned his fall [c]: and to give as charming an idea of Adam's per-

[s] Some Rabbins ridiculouſly fancy, that God at firſt made Adam with a tail, but finding it leſſened the beauty of his workmanſhip, he reſolved to cut it off; however, he made it ſerve for the matter whereout he formed the firſt woman. Vid. Bartoloccii Biblioth. Rabbin. Tom. I. p. 68. [t] Vid. St. Romuald, ubi ſupra. Heidegger, Hiſt. patriarch. Tom. I. p. 112. [u] Vid. Philon. Jud. de mundi opificio, p. 31. [x] Talmud, in libr. Sanhedrim. [y] Vid. Bartoloccii Biblioth. Rabbinic. Vol. I. p. 65, 66. [z] Barcepha, in tract. de Paradiſo, cap. 14. [a] Yahya, Comment. in Korân. [b] Monconis, Voyages, part I. p. 372, &c. [c] Vid. Bartolocc. ubi ſup. p. 322.

ſon, ſome have imagined, that God, at his creation, cloathed himſelf with a human body ſuperlatively beautiful, and by that model formed the body of Adam; which apparition was the firſt prelude of the incarnation [d]: and what is yet more wonderful, Adam all the while looked on, and ſaw his maker, in that lovely form, faſhioning every limb [e]. Nor have the gifts of his mind been leſs magnified than his ſtature and beauty: ſome Rabbins [f] have been contented to equal him with Moſes and Solomon; others aſſert, that he was maſter of every ſcience and art; that he knew more the firſt day of his creation, than any other by the experience of a long life [g]; nay, that he ſurpaſſed the angels themſelves in knowledge [h]: allegorically interpreting what is ſaid of his ſtature's reaching from one end of the world to the other, of the extent of his underſtanding [i].

and knowledge.

Suppoſed, by ſome, to have been created double.

But it is ſtill more groundleſs and extravagant to ſuppoſe, as ſeveral Rabbins have done, that Adam's body was created double, male on one ſide, and female on the other, being joined together by the ſhoulders, the heads looking directly contrary ways: and that God, when he had made Eve, had no more to do than to ſplit this body in two [k]. Others join them by their ſides, and ſay the male body was on the right, which embraced the other round the neck with his left hand, while the other did the ſame to him with her right. Theſe dreams are ſufficiently refuted by the

[d] Eugubin. in Coſmopœia, apud Salian. Annal. Tom. I. p. 106.
[e] The Latin terms are, Cum fingeretur homo, manus illas divinas aſpexit ambroſioſque vultus illos, pulcherrima brachia corpus ſuum fingentia, finguloſque artus ducentia. Idem, ibid. [f] Apud Rivini Serpent. Seduct. p. 50. [g] Vid. Salian. ubi ſup. p. 107, 113:
[h] To prove this, they pretend to alledge the teſtimony of God himſelf. They ſay, that the angels having ſpoken of man with ſome contempt, when God conſulted them about his creation, God made anſwer, that the man was wiſer than they; and to convince them of it, he brought all kinds of animals to them, and aſked them their names; which they not being able to tell, he put the ſame queſtion to the man, who named them one after another; and being aſked his own name, and God's name, he anſwered very juſtly, and gave God the name of Jehovah. Rivin. Serpent. Seduct. p. 56. This ſtory has been adopted by Mohammed in his Korân, cap. 2. ver. 30, &c. [i] Ibid. p. 49, &c.
[k] Vid. Heidegger. Hiſt. Patriarch. Tom. I. p. 85. which author attributes this opinion to two famous Rabbins, Manaſſes Ben Iſrael (in Conciliat. in Geneſ.) & Moſes Maimonides (in More Nevoch. p. 2. cap. 30), who yet rather approve a different ſentiment.

the text of Moſes. It may not however be improper to add a word of the Hermaphrodites, or Androgynes, of which Plato has ſaid ſo much: they were bodies which had the two ſexes, with four arms, four legs, and two faces on one neck, turned one towards the other. This duplicity of numbers gave them a prodigious ſtrength, and conſequently inſpired them with great inſolence, and they thought of no leſs than making war againſt the gods: who conſulting on means to bring them to reaſon, the advice of Jupiter was approved, and that was to ſplit them in two; which being done, each part ſtill preſerved a ſtrong inclination to unite itſelf to the other, and this was, according to him, the original of love [l].

Mohammedan traditions concerning the creation of man.

THE Mohammedans have ſeveral peculiar traditions about the creation of Adam. They ſay, that the angels Gabriel, Michael, and Iſrafil were ſent by God, one after another, to fetch for that purpoſe ſeven handfuls of earth from different depths, and of different colours (whence ſome account for the various complexions of mankind [m]); but the earth being apprehenſive of the conſequence, and deſiring them to repreſent her fear to God, that the creature he deſigned to form would rebel againſt him, and draw down his curſe upon her, they returned without performing God's command; whereupon he ſent Azrail on the ſame errand, who executed his commiſſion without remorſe; for which reaſon God appointed him to ſeparate the ſouls from the bodies, being therefore called the angel of death. The earth he had taken was carried into Arabia, to a place now between Mecca and Tayef, where, being firſt kneaded by the angels, it was afterwards formed by God himſelf into a human form, and left to dry for the ſpace of forty days, or, as others ſay, as many years; the angels, in the interim, often viſiting it, and Eblis (afterwards the devil) among the reſt: but he, not contented with looking on it, kicked it with his foot till it rung, and knowing God deſigned that creature to be his ſuperior, took a ſecret reſolution never to acknowledge him as ſuch. After this, God animated the figure of clay, and endued it with an intelligent ſoul; and when he had placed him in paradiſe, formed Eve out of his left ſide [n].

THE

[l] Plat. in Sympoſ. pag. 1185. Ed. Francof. 1602. [m] Al Termedi, from a tradition of Abu Muſa al Aſhari. [n] Khond Amîr, Jallalo'ddin, Comment. in Koran, &c. Vid. D'Herbel. Biblioth. Orient. p. 55.

The Phœnician tradition.

THE two firſt human pair, according to the Phœnician tradition, were begotten, or generated by the wind Colpias, and his wife Baau, which is interpreted night [o]; that is, by a hollow wind acting on unformed matter: the meaning being no more than this, that a wind incloſed in ſeveral cavities of unſhapen matter, worked out of it the firſt man; the rude matter being the paſſive principle, or cauſe, and therefore here figuratively called the wife; and the encloſed wind being the active principle, and therefore here intimated to be as it were the huſband, in this firſt generation [p].

Of the human ſoul:

THAT the ſoul of man is a ſpiritual ſubſtance, independent on the matter it informs, is evident to any, who conſiders the power and freedom of its operations, which no accident can be ſuppoſed to have; and which matter, with all its refinements and maturations, can never be able to perform. It has, however, been queſtioned, whether the

whether infuſed, or ex traduce.

ſouls of men are infuſed into them immediately from God, or whether they are derived, ex traduce, from their parents. The latter opinion has been maintained, from all other creatures having the power of propagating their ſpecies in full perfection; by which it ſeems to follow, that mankind were endued with the ſame; from the likeneſs of temper and diſpoſition of mind, which children often take from their parents; and from the indecency of conceiving God to be inceſſantly making ſouls, when-ever the ſexes are ſtimulated to ſatisfy their natural appetite. But it is ſcarce poſſible to maintain the immateriality and immortality of the human ſoul on this ſuppoſition: for if the ſoul be propagated by generation, it muſt, to our beſt apprehenſion, be material, and liable to corruption [q]; it is therefore more reaſonable

[o] Sanchoniatho, apud Euſeb. de Præp. Ev. l. 1. c. 10. As to the words Colpias and Baau, Bochart takes the firſt of them to be the ſame with קול-פי-יה Col-pi-yah, i. e. the voice of the mouth of God; but this is improbable, becauſe it is plainly the name of a wind, derived from the Greek Κόλπος, which ſignifies a hollow place or cavity, whether thoſe little ones in our boſoms, garments, &c. or thoſe large ones which we call bays in the ſea-ſhore: nor is there ſuch a phraſe in the Hebrew tongue, as the voice of the mouth of Yah; beſides other reaſons. Baau he would correct Baut, which he affirms to ſignify the night: but it is more probably the בהו Bohu of Moſes, as Scaliger and Grotius agree. Vid. Cumberland's Remarks on the Hiſt. of Sanchoniatho, p. 207. [p] Cumberland, ibid. p. 209. [q] Vid. Cudworth, Intell. Syſt. p. 38.

reaſonable to believe, that though God has committed the formation of our bodies to the agency of ſecond cauſes, yet he has reſerved the production of our ſouls to himſelf, who is the Father, and God *of the ſpirits of all fleſh* [r].

Whether our ſouls were created at once, or ſucceſſively.

IT has alſo been doubted, whether the ſouls of mankind were all created at once, together with that of Adam, in order to be united to certain bodies, which ſhould be prepared afterwards for their reception; or whether they are ſucceſſively created, as the bodies they are to inform are made fit to receive them? Such of the old philoſophers who believed the ſoul to be a diſtinct ſubſtance from the body, as Pythagoras, Empedocles, and Plato, concluded, that all ſouls muſt pre-exiſt in the univerſe, before generation and tranſmigration into their reſpective bodies; and this doctrine was not confined to human ſouls only, but extended univerſally to all ſouls and lives whatſoever; for the antients were ſo far from denying the ſenſe and conſciouſneſs of brutes, that the generality of them allowed them the faculty of reaſoning [s], though they were not able to expreſs their thoughts as man did: for which reaſon they were ſuppoſed, by ſome, to tranſmigrate indifferently from men into other animals, and from animals into men; it being only the difference of the organs, and the modification of the matter to which they were united, wherein conſiſted the ſeeming diſparity of their powers. Several of the antient chriſtians have alſo believed the pre-exiſtence of ſouls, induced by this conſideration, that it was incongruous to bring God upon the ſtage perpetually, and make him immediately interpoſe every where in the generation of men, by the miraculous production of their ſouls out of nothing. Nay, the continual creation and decreation of the ſouls of brutes has been thought ſo improbable, that it has been fancied, they are but ſo many particular eradiations, or effluxes, from that ſource of life above, which animate ſuch matter, as is fitly prepared to receive and be actuated by them, ſo long as it continues ſuch; but when thoſe organized bodies, by reaſon of their indiſpoſition, become incapable of being further acted upon, are reſumed and retracted into that original head, or fountain; it ſeeming not at all abſurd to grant perpetuity of duration to the ſouls even of brutes, any more than to every the

[r] Numb. xvi. 22. Vid. Mr. Stackhouſe's Body of Divinity, p. 223, &c. [s] Vid. Plutarch. de placitis Philoſ. l. 5. cap. 20. See Bayle, Dict. Hiſt. Art. Pereira, Rem. E.

the leaſt particle of matter [t]. Nor is this doctrine of pre-exiſtence unknown to the Mohammedans, who imagine, that God drew out of the loins of Adam all his poſterity at once, and made a covenant with them, that they ſhould acknowledge him for their lord [u]. They ſay, that all theſe men were actually aſſembled together in a valley near Mecca, or, as others ſay, in the plain of Dahia in India, in the ſhape of piſmires, which are indued with underſtanding; and after they had in the preſence of the angels, as witneſſes, confeſſed their dependence on God, they were again cauſed to return into the loins of their great anceſtor [x]. That the Jews had likewiſe ſome notion of the ſoul's exiſting before the body, appears from their queſtion put to our Saviour, whether the man that was born blind [y], had himſelf ſinned, or his parents, to deſerve that puniſhment; and as this opinion was not then contradicted, ſome have ſuppoſed it to have been thereby tacitly approved.

NOTWITHSTANDING which, the vulgar opinion of the ſucceſſive creation of ſouls, may with good reaſon be allowed; for why ſhould we imagine, that God put forth all his creative vigor at once in a moment, ever afterwards remaining a ſpectator only of the conſequent reſult, and permitting nature alone to do all, without any farther interpoſition [z]? and how is it poſſible, that if our ſouls were ever in ſuch a ſtate of pre-exiſtence, we ſhould have ſo perfectly loſt all memory and conſciouſneſs of any thing?

Whether men before Adam.

BEFORE we have done with this ſubject, the creation of man, we muſt take ſome notice of the opinion of thoſe who think mankind were in being before Adam, who was the progenitor of the Jews only. To ſupport which, they alledge, that Moſes makes mention of two diſtinct creations, one of mankind in general [a], and the other of Adam and Eve [b]; and in the progreſs of his hiſtory gives ſtrong intimations, that there were ſeveral more men in the world when they were created; elſe it is not eaſily to be conceived, how Cain could be a tiller of the ground [c], which muſt pre-ſuppoſe all the artificers that have relation to tillage; or what reaſon he had to apprehend, that every one that found him would ſlay him [d]; nor can his going into another country, marrying

[t] Cudworth, ubi ſupra, p. 44, &c. [u] Al Korân. cap. vii. ver 173. [x] See D'Herbelot, Biblioth. orient. p. 54. Marraccius in Alcoran. p. 290. [y] John ix. 2. [z] Cudworth ubi ſupra. [a] Geneſ. i. 27. [b] Geneſ. ii. 9. Ib. v. 1. [c] Geneſ. iv. 2. [d] Geneſ. iv. 14.

ing a wife, and building a city [e], be otherwiſe accounted for. From which they would infer, that Moſes intended only to give an account of the origin of the Jews, and not of the primitive parents of the whole human race [f]. Theſe objections are eaſily anſwered; for the paſſage, wherein the creation of man is mentioned the ſecond time, is plainly no more than a recapitulation of what had been ſaid before of the creation of the world in general, with a more particular detail of that of our firſt parents. And as to the numbers of men ſuppoſed to be in the world, about the time of the murder of Abel, it is by no means improbable, that theſe ſhould be the deſcendants of Adam and Eve, whoſe poſterity, in the ſpace of near one hundred and thirty years, (for it was in that year of Adam's age that Seth, who was given in lieu of Abel, was born) might, by a fair calculation, be multiplied to many thouſand ſouls, conſidering the primitive fœcundity, and that none are ſuppoſed to have died in the interim [g].

Their difference of colour accounted for.

BUT the moſt plauſible objection of the pre-adamites is, that if Adam and Eve be allowed to be the progenitors of all mankind, there can be no tolerable cauſe aſſigned of the difference in colour between the whites and the blacks; it being very improbable, they were both the off-ſpring of the ſame parents. To this it may be anſwered, that the variety of complexions in the world may be rationally accounted for another way. We know how the hair and colour of mens bodies differ, according to the climate they inhabit, and their greater, or leſſer diſtance from the ſun: we may therefore well conclude, that the firſt colony, which ſettled in a very hot country, received a great change in their complexion, proportionable to the heat of the climate, and became very tawny, gradually inclining to blackneſs, as the ſun was more intenſe upon them. Hence, in a generation or two, that high degree of tawnineſs might become natural, and at length the pride of the natives. The men might begin to value themſelves upon this complexion, and the women to affect them the better for it; ſo that their love for their huſbands, and daily converſation with them, might have a conſiderable influence upon the fruit of their wombs, and make each child grow blacker and blacker, according to the fancy and imagination of the mother; the force of which

[e] Ib. ver. 16, 17. [f] Vid. Peyrerii Præadamit. l. 3. cap. 4. Blount's Oracles of Reaſon, 218. [g] Vid. Nicholls's conference with a Theiſt, Vol. I. part I.

which is evident from many inſtances. Upon this ſuppoſition, the children thus produced muſt every birth approach nearer to an abſolute blackneſs; and as their tender bodies came to be expoſed naked (as the manner of ſuch countries is) to the violent heat of the ſun; their ſkin muſt needs be ſcorched in an extraordinary manner; and, perhaps, its very texture altered, and by that means contract a blackneſs far ſuperior to that of their parents. By ſuch degrees it is not improbable, that people of the faireſt complexion, when removed into a very hot climate, may, in a few generations, become perfect negroes. As to what ſome have imagined, that this blackneſs was at firſt ſupernatural, and a judgment inflicted upon Ham, the ſon of Noah, for diſcovering his father's nakedneſs [h], and that all people of that complexion are the progeny of that undutiful ſon [i]; this ſeems very unlikely, and without foundation, the curſe on that occaſion being laid on Canaan, the ſon of Ham, by name, and yet his poſterity are allowed not to have been black.

THUS have we attended the earth through its ſeveral degrees of formation, ſeen it perfected, cloathed with trees and plants, and repleniſhed with animals; and at laſt man, for whom the whole was deſigned, and to whom the dominion of it was expreſly given by its maker, introduced, and placed in it.

The time and ſeaſon of the creation.

WHETHER all this was really done in the ſpace of ſix days, has been a queſtion; ſome, as has been obſerved, thinking it much too ſhort for ſuch a work, and others too long [k], ſuppoſing, that the world was created in a moment, and that Moſes extends it to ſix days, the better to help the imagination of the people, that things may ſeem to riſe in ſome order and method, and to take off any image of haſte, or precipitancy. But we cannot ſee any reaſon to depart from the letter of Moſes in this particular, the creation deſcribed by him being not the creation of the ſubſtance of all things out of nothing, which was moſt probably the effect of one individual act, but the formation of one world, or ſyſtem only, out of matter before created [l].

IT has been diſputed alſo in what ſeaſon of the year the world was made; which, it is to be preſumed, muſt be meant in reſpect of the place where Adam was created; for otherwiſe all theſe ſeaſons muſt have been in being at once

[h] Geneſ. ix. 22. [i] Ibid. ver. 25. [k] St. Auſtin. Philo. Jud. Le Grand, Hiſt. ſacra. [l] Vid. Burnet. Archæol. l. 2. p. 312.

once in different parts of the world. Some have ſuppoſed the vernal equinox to have been the time; but others the autumnal, which opinion is the more generally received [m], and ſeems to be confirmed from the years antiently beginning from that time [n]. This indeed was afterwards altered by Moſes, who ordered the eccleſiaſtical year ſhould commence from the vernal equinox, or the month Niſan [o]: but the Jews in civil affairs ſtill continued to compute from the former, or the month Tiſri.

ANOTHER ſubject of enquiry has been the place where Adam was created. There is an antient tradition, that it was in Syria, near where Damaſcus now ſtands [p]; others will have it to have been in Armenia [q]; but it was, moſt probably, in, or near the garden of Eden, the ſeat deſigned for him, where-ever that was. The place where Adam was created.

THE Mohammedans, who have very right notions as to the creation of the world in ſix days, do, however, believe, that God, previous to that creation, made the table whereon, as they ſuppoſe, his decrees are written; the pen wherewith they are written; the waters whereon his throne is eſtabliſhed; and the throne itſelf [r]: wherein they have imitated the Jews, who ſay, that God created ſeven things before the world; viz. paradiſe, the law, the ſouls of juſt men, Iſrael, the throne of God's glory, Jeruſalem, and the Meſſiah [s]. Things made prior to the creation.

BEFORE we quit this ſubject, it may be expected we ſhould ſay ſomething of the creation of angels, who ſo eminently concerned themſelves in the affairs of mankind, at leaſt in the firſt ages of the world. Of angels.

ANGELS, in the proper ſignification of the word [t], do not import the nature of any being, but only the office, to which they are appointed, eſpecially by way of meſſage, or intercourſe between God and his creatures; in

[m] Vid. Jacob. Cappelli Obſerv. in Geneſ. c. i. ver. 14. p. 583. [n] Vid. Exod. xxiii. 16. & xxxiv. 22. [o] Exod. xii. 2. [p] Vid. Heidegg. Hiſt. Patriarchar. Tom. I. p. 84. [q] Calmet's Comment. in Geneſ. [r] Vid. Ecchellens. Hiſt. Arab. c. 9. [s] Maſſechet Peſachim. [t] The word Angel is Greek, and ſignifies a Meſſenger: the Hebrew מלאך, the Arabic ملك, and Perſian پیغام, ſignify the ſame thing. The angels are in Daniel (cap. iv. ver. 13, &c.) called עירים or Watchers, from their vigilance; for which reaſon they are, in the remains we have of the prophecy attributed to Enoch, named Egregori; which word imports the ſame in Greek.

in which ſenſe they are called the miniſters of God, who do his pleaſure and miniſtering ſpirits ſent forth to miniſter for them who ſhall be heirs of ſalvation. That there are ſuch beings as we call angels, that is, certain permanent ſubſtances, inviſible, and imperceptible to our ſenſes, endued with underſtanding and power ſuperior to that of human nature, created by God, and ſubject to him, as the ſupreme Being; miniſtering to his divine providence in the government of the world by his appointment, and more eſpecially attending the affairs of mankind; is a truth ſo fully atteſted by ſcripture, that it cannot be doubted, and was ſo generally acknowledged by the Jews, that it is ſcarce to be believed, that even the Sadducees themſelves utterly denied their exiſtence, but only that they had no notion of their appearing in thoſe latter times; as many Chriſtians, though they do not abſolutely impugn the being of ſpirits, yet are far from giving credit to the frequent ſtories of apparitions. Nay, the exiſtence of ſuch inviſible beings was generally acknowledged by the antient heathens, though under different appellations; the Greeks calling them dæmons, and the Romans genii, or lares [u]: Epicurus ſeems to have been the only one among the old philoſophers who abſolutely rejected them [x]; and indeed, the belief of middle intelligences influencing the affairs of the world, and ſerving as miniſters, or interpreters, between God and man, is as extenſive as the belief of a God; having never, as we know, been called in queſtion by thoſe who had any religion at all.

And, had we no ſuch revelation or tradition, it ſeems very reaſonable to ſuppoſe, there are intermediate beings to fill up the gap which would otherwiſe be in nature; for as there is a gradation of creatures on earth, ſome haveing barely being, as earth, air, and water; ſome that beſides being have life, as vegetables; ſome that beſides life have ſenſe and perception, as brute animals; and ſome that beſides ſenſe have reaſon and cogitation, as men: and as we ſee our ſenſitive part exiſts in beings beneath us; ſo it is very probable, that our more noble and intellectual part exiſts in beings, as much ſuperior to us as we are to brutes; and that there is a like gradual aſcent from the loweſt rank of them, which borders upon man, to the higheſt, which comes

[u] Vid. Plutarch. de placitis philoſ. l. 1. c. 8. & Varron. apud Auguſt. de civit. Dei, l. 7. cap. 6.

[x] Vid. Plut. ibid.

comes as near as a finite creature can, to an infinite deity [y].

THAT the angels were in being long before the Mosaic creation, is generally allowed [z]; and indeed cannot be doubted, since they were actually present, if not employed in that creation, *when the morning stars sang together, and all the sons of* God *shouted for joy* [a]; and since it is more than probable, that the fall of the apostate angels was some time at least before it. When created.

AS to the natures of these beings, we are told, that they are spirits [b], but whether pure spirits divested of all matter, or united to some thin bodies, or corporeal vehicles, has been a controversy of long standing. Not only the antient philosophers, but some of the christian fathers [c], were of opinion, that angels were cloathed with ethereal, or fiery, bodies, of the same nature with those which we shall one day have, when we come to be equal to them. But the more current opinion, especially of latter times, has been, that they are substances entirely spiritual, though they can at any time assume bodies, and appear in human, or other, shapes [d]. Their nature, power, employment, &c.

THAT the angelical powers and abilities vastly excel those of man, cannot be denied, if we consider, that their faculties are not clogged, or impeded, as ours are, by any of those imperfections which are inseparable from corporeal beings: so that their understandings are always in perfect vigor; their inclinations regular; their motions strong and quick; their actions irresistible by material bodies, whose natural qualities they can controul, or manage to their purposes, and occasion either blessings, or calamities, public or private, here below. Instances of which are too numerous to mention.

Besides their attendance on God, and their waiting and executing of his commands, they are also presumed to be employed

[z] Vid. Stackhouse's Body of Divinity, p. 185, &c. [z] Vid. Burnet. Archæol. l. 2. p. 300, &c. [a] Job. xxxviii. 7. Yet some have imagined, they were created the first day, and designed by Moses under the name of Light: Others, that they were created the sixth day, after man, to crown and consummate the creation, which rose by degrees from the less to the more perfect parts. [b] Vid Tillotson's Serm. Vol. II. [c] S. Basil, S. Athanasius, and Methodius; and also St. Augustin. apud Sixt. Senens. l. 5. Annot. 8. Vid. Acta Concil. Nicen. 2. Act. 5. [d] Maimond More Nev. p. 2. cap. 49.

employed in taking care of mankind and their concerns: and that every man had ſuch a tutelar, or guardian, angel, even from his birth, was a firm belief and tradition among the Jews; and our Saviour himſelf ſeems to have been of the ſame ſentiment [e]. The heathens were alſo of the ſame perſuaſion [f], and thought it a crime to neglect the admonitions of ſo divine a guide [g]. Socrates publickly confeſſed himſelf to be under the direction of ſuch an angel, or dæmon, as ſeveral others have ſince done [h]. And on this tutelar genius of each perſon they believed his happineſs and fortune depended. Every genius did his beſt for the intereſt of his client; and if a man came by the worſt, it was a ſign the ſtrength of his genius was inferior to that of his opponent, that is of an inferior order; and this was governed by chance. There was ſome genii, whoſe aſcendant was ſo great over others, that their very preſence entirely diſconcerted them; which was the caſe of that of Auguſtus in reſpect to that of M. Antony [i]: and for the ſame reaſon, perhaps, ſome perſons have wit, and ſpeak well, when others are abſent, in whoſe preſence they are confounded, and out of countenance. The Romans thought the tutelar genii of thoſe who attained the empire, to be of an eminent order, on which account they had great honours ſhewn them: nations and cities alſo had their ſeveral genii [k]. The antient Perſians ſo firmly believed the miniſtry of angels, and their ſuperintendance over human affairs, that they gave their names to their months, and the days of their month, and aſſigned them diſtinct offices and provinces [l]: and it is from them the Jews confeſs to have received the names of the months and angels, which they brought with them, when they returned from

from the Babyloniſh captivity [m]. After which, we find, they alſo aſſigned charges to the angels, and in particular the patronage of empires and nations; Michael being the prince of the Jews [n], as Raphael is ſuppoſed to have been of the Perſians [o].

THE Mohammedans have ſo great a reſpect for the angels, that they account a man an infidel who either denies their exiſtence or loves them not. They believe them to be free from ſin, enjoying the preſence of God, to whom they are never diſobedient: that they have ſubtil pure bodies, being created of light; and have no diſtinction of ſexes, nor do they need the refreſhment of food or ſleep. They ſuppoſe them to have different forms and offices; that ſome adore God in ſeveral poſtures; others ſing his praiſes, and intercede for men, ſome carry and encompaſs his throne; others write the actions of men, and are aſſigned guardians to them [p].

AS the numbers of theſe celeſtial ſpirits are very great [q], it is likewiſe reaſonable to believe, that there are ſeveral orders and degrees among them, which is alſo confirmed by ſcripture: whence ſome ſpeculative men have diſtributed them into nine orders, according to the different names by which they are there called; and reduced thoſe orders into three hierarchies; as they call them; to the firſt of which belong ſeraphim, cherubim, and thrones; to the ſecond, dominions, virtues, and powers; and to the third, principalities, arch-angels, and angels. They imagine farther, that there are ſome who conſtantly reſide in heaven; others who are miniſters, and ſent forth, as there is occaſion, to execute the orders they receive from God by the former. The Jews reckon but four orders, or companies, of angels, each headed by an arch-angel; the firſt order being that of Michael, the ſecond of Gabriel, the third of Uriel, and the fourth of Raphael; but though the Jews believe them to be but four, yet it ſeems there were rather ſeven [s]. The Perſians alſo held, there were ſubordinate degrees among the angels [t].

Of the fallen angels.

ALTHOUGH the angels were originally created perfect, good, and obedient to their master's will, yet some of them sinned [u], and kept not their first estate [x], but left their habitation, and so, of the most blessed and glorious, became the most vile and miserable of all God's creatures. They were expelled the regions of light, and cast down to hell, to be reserved in everlasting chains under darkness, until the day of judgment. With heaven they lost their heavenly disposition, which delighted once in doing good, and praising God; and fell into a settled rancour against him, and malice against men: their inward peace was gone; all desire of doing good departed from them; and, instead thereof, revengeful thoughts and despair took possession of them, and created an eternal hell within them.

The time of their fall, their offence, &c.

WHEN, and for what offence these apostate spirits fell from heaven, and plunged themselves into such an abyss of wickedness and woe, are questions very hard, if not impossible, to be determined by any clear evidence of scripture. As to the time, it is most reasonable to believe, that their fall preceded the creation of the world; though some have imagined it to have been after, and that carnality, or lusting to converse with women upon earth [y], was the sin which ruined them [z]: an opinion built on a mistaken interpretation of scripture, as if angels were meant by the sons of God, who are said to have begotten the mighty men of old on the daughters of men [a]. Others have supposed, that the angels, being informed of God's intention to create man after his own image, and to dignify his nature by CHRIST's assuming of it, and thinking their glory to be eclipsed thereby, envied man's happiness, and so revolted [b]: and with this opinion that of the Mohammedans has some affinity, who are taught, that the devil, who was once one of those angels who are nearest to God's presence, and named Azazil [c], forfeited paradise for refusing to worship, or pay homage to Adam, at the command of God [d]. But on what occasion soever it first shewed itself, pride seems to have

[u] 2 Pet. ii. 4. [x] Jude, ver. 6. [y] See before p. 144. [z] Josephus, Philo Jud. Origen, Tertullian, &c. [a] Genes. vi. 2, 4. [b] Irenæus, Lactantius, Gregory Nyssen, &c. [c] Vid. Reland. de Rel. Mohammed. p. 189, &c. [d] Al Korân, cap. 2. ver. 34.

have been the leading ſin of the angels [e]: who admiring, and valuing themſelves too much on the excellence of their nature, and the height of their ſtation, came at length to entertain ſo little reſpect for their creator, as to be guilty of downright rebellion and apoſtacy [f].

IT is certain from ſcripture, that theſe fallen angels were in great numbers [g], and that there was alſo ſome order and ſubordination preſerved among them; one eſpecially being conſidered as their prince, and called by ſeveral names, Belzebub, Satan, or Sammaël by the Jews; Ahâriman by the Perſians; and Eblis by the Mohammedans. Their conſtant employment is not only doing evil themſelves, but endeavouring by all arts and means to ſeduce and pervert mankind, by tempting them to all kind of ſin, and thereby bringing them into the ſame deſperate ſtate with themſelves.

Of intermediate ſpirits, or Genii.

BESIDES the angels and devils, the Mohammedans believe there are a ſort of intermediate creatures, which they call Jin or Genii, of a groſſer fabric than angels; ſome of whom are good, and others bad, and capable of future ſalvation or damnation, as men are. The Orientals pretend, that theſe Genii inhabited the world for many thouſand years before the creation of Adam, under the reigns of ſeveral princes, who all bore the common name of Solomon: but falling at length into an almoſt general corruption, Eblis was ſent to drive them into a remote part of the earth, there to be confined: that ſome of that generation, ſtill remaining, were by Tamûrath, one of the antient kings of Perſia, who waged war againſt them, forced to retreat into the famous mountains of Kâf. Of which ſucceſſions and wars, they have many fabulous and romantic ſtories. They alſo make different ranks and degrees among this kind of beings, (if they are not rather of different ſpecies) ſome being called abſolutely Jin, and ſome Peri or fairies; ſome Div, or giants; others Tacwins, or fates [h].

[e] Vid. i. Tim. iii. 6. and the magnificent compariſon of the fall of proud Sennacherib to that of Lucifer; Iſaiah xiv. 12, &c. [f] The opinion of St. Chryſoſtome, Theodoret, Athanaſius, &c. [g] Yet ſome have endeavoured to prove there is no more than one devil. Vid. Lettres de Bayle, Tom. I. p. 360. [h] Vid. D'Herbelot, Bibl. Orient. p. 369, 820, &c.

As to the antient Greeks and Romans, we do not find, they had any notion of evil ſpirits, or devils, in the uſual ſenſe of the word, if we except only Plutarch's evil principle before-mentioned. Their infernal gods were not conceived to be of an evil nature; and though they believed the furies were the tormentors of wicked men in another life, yet they looked on them as goddeſſes, and the avengers only of evil actions.

MUCH more might be added to what we have already ſaid on theſe ſubjects; but as we may be thought already to have exceeded the bounds of an introduction, we ſhall here conclude it, and haſten to the hiſtory itſelf.

AN
UNIVERSAL
HISTORY.

BOOK I.

The ASIATIC *History to the Time of* ALEXANDER *the Great.*

CHAP. I.

The General History of the WORLD till the FLOOD.

SECT. I.

The Creation of Man, and the Situation of the Garden of EDEN.

IN the beginning God created the heaven and the earth. The earth was once in a confuſed and deſolate ſtate, but, by divine providence, and ſecond cauſes ſubſervient to that purpoſe, gradually, in the ſpace of ſix days, reduced into a habitable world; cloathed with trees, ſhrubs, plants, and flowers, and ſtocked with various kinds of animals. And when all theſe things were, by the care and beneficence of God, prepared for the reception of his principal gueſt, then, and not till then, was Man created, and introduced into the world [a].

Year of the World, 1. Year before Chriſt, 4305

The creation of the world, and of man.

[a] Geneſ. i.

Year of the World, 1. Year before Chriſt, 4305

The happy ſtate of the firſt pair.

WHATEVER opinions the ancient heathens might have of the origin of mankind, we are aſſured, by the moſt authentic records, that we are deſcended from two perſons, Adam and Eve [b], who were formed by God in the moſt abſolute perfection both of body and mind, and ſubject to none of thoſe irregular appetites, diſeaſes, wants, and ſorrows, which they afterwards, by their rebellion, brought on themſelves, and their unhappy poſterity. And leſt any thing ſhould be wanting to complete their happineſs, a moſt delightful habitation was prepared for them in Eden, by their gracious creator; a garden, or paradiſe [c], whereon all the beauties of nature were profuſely beſtowed, well watered, and planted with all ſorts of trees, that were either pleaſant to the ſight, or good for food. In the midſt of which garden were two trees of a very peculiar, and, it ſeems, contrary, nature; one called the tree of life, the fruit of which had the virtue of rendering thoſe who eat it, in ſome degree at leaſt, immortal; and the other the tree of knowledge of good and evil, the conſequence of the taſting of which was ſo pernicious to them and their off-ſpring [d].

Situation of the garden of Eden.

BUT before we proceed, it may be expected, we ſhould ſay ſomething with reference to the ſituation of this garden, concerning which there has been ſo great a variety of opinions among learned men.

Extravagant opinions concerning it.

SEVERAL of the primitive fathers believed, that there never was a local paradiſe, and that all which is ſpoken of it in ſcripture is to be underſtood in an allegorical ſenſe: others, who allowed the reality of paradiſe, have ſwerved ſo far from the letter, as to ſuppoſe it not to be ſituated on any part of this terreſtrial globe. They have placed it in the third heaven, within the orb of the moon, in the moon itſelf, in the middle region of the air, above the earth, under the earth, in a receſs hidden and removed from the knowledge of men, in the place poſſeſſed at preſent by the Caſpian ſea, under the Arctic pole, and under the equator, with many more ſuch extravagancies, which have been collected by ſeveral authors [e], ſome of whom have thought it worth while to give ſuch whimſies a ſerious anſwer.

ON

[b] Geneſ. iii. 20. [c] Geneſ. ii. 8, &c. [d] Geneſ. ii. 17.
[e] Steph. Morinus, differt. de parad. terreſt. præfix. oper. Bocharti, Edit. 1722. Moſes Bar Cepha, de paradiſ. comment. P. Dan. Huet. de ſitu paradiſi.. Burnet's Theory of the Earth. Raleigh's hiſt. of the World, &c.

Year of the World, 1. Year before Chriſt, 4305

ON the other hand, many of thoſe who have allowed a terreſtrial paradiſe, have fallen into no leſs extravagancies. There is ſcarce a corner of the earth which has not been ranſacked in ſearch of it. They have looked for it in Aſia, in Africa, in Europe, in America, in Tartary; upon the banks of the Danube, and the Ganges; in the iſle of Ceylon, in Perſia, in Armenia, in Meſopotamia, in Chaldea, in Arabia, in Paleſtine, in Syria; about the mountains of Libanus and Antilibanus; near the cities of Damaſcus and Tripoly; in Ethiopia, towards the mountains of the moon; and, which will doubtleſs be thought as much out of the way, in Sweden.

What owing to.

THIS diverſity of opinions proceeds partly, from that humour, which prevailed in the early ages of chriſtianity, of allegorizing all paſſages of ſcripture which had the leaſt appearance of difficulty in them, and partly, from the little agreement to be found betwixt the geography of Moſes and that of the heathen authors, whoſe imperfections are not yet perhaps ſufficiently ſupplied, to reſolve this difficult problem. As for the Jews, from whom we might have expected ſome light into matters which concern their own antiquities, they are perfectly ignorant of the geography of their bible, and have run as much aſtray as other nations, in their deſcriptions of paradiſe; ſuppoſing, as Joſephus [f], and all the reſt of their authors have done, the Ganges and the Nile to be two of the four rivers, in which the chriſtian fathers have almoſt unanimouſly followed them.

Several Edens.

THERE are ſeveral places which bear the name of Eden; we find two mentioned in ſcripture, beſides that in the Moſaical deſcription, if it be not one of them; viz. one near Damaſcus in Syria [g], the other in, or about, Thelaſſar in Chaldea [h]. Ptolemy places an Addan in this laſt country, and another on the Euphrates. There is alſo another Eden in Syria near Tripoly [i], in the road to Damaſcus, as the former ſeems likewiſe to be. Cartwright, in his travels [k], gives an account of an iſland in the Tigris [l], called Eden, as he informs us, by the people of the country, and about twelve

Year of the World, 1. Year before Christ, 4303

twelve miles above Mausel (A). There is a city near Tarsus in Cilicia, still called Adena, and Aden is a very noted one on the coast of Yaman, or Arabia Felix, a little without the straits of Bâb al Mondab; for Eden, or Aden, signifying pleasure, that name was given to places remarkable for the delightfulness of their situation, considered either in themselves, or comparatively with the adjacent country; and the last seems to be the case of Aden in Arabia, which has nothing more than ordinary to deserve that name, but the barrenness of the neighbouring soil.

The Mosaical paradise local, not imaginary.

It appears plainly from the Mosaical description (B), however preposterous a learned author [m] thinks it, that Moses had no imaginary paradise in view, but a portion of this habitable earth, bounded with countries and rivers, very well known by the names he gives them, in his time, and (as appears from scripture) for many ages after. Eden is as evidently a real country as Ararat, where the ark rested, and Shinaar, where the sons of Noah removed after the flood. We find it mentioned as such in scripture, as often as the other two; and there is the more reason to believe it, because the scenes of these three remarkable events are laid in the neighbourhood of one another, in the Mosaical history: but the Jews having, probably, during the distraction

[m] Burnet's Theory of the Earth, book II. chap. i. at the end.

(A) This remark, whether true or false, seems to have occasioned Raleigh's straining the expression in the Nestorian epistles, (1) translated into Latin by Masius, where that isle is not called Eden, but is said to be in the Tigris, a river of Eden.

(B) *And the Lord God planted a garden eastward in Eden* (2).—*And a river went out of Eden to water the Garden; and from thence it was parted, and became into four heads* (3). *The name of the first is Pison* [*Fishon*]: *that is it which compasseth the whole land of Havila, where there is gold* (4). *And the gold of that land is good: there is bdellium* [*Bdolah*] *aud the onyx-stone* [*Shoham*] (5), *And the name of the second river is Gihon: the same is it that compasseth the whole land of Ethiopia* [*Cush*] (6). *And the name of the third river is Hiddekel: that is it which goeth toward the east of* [*or eastward to*] *Assyria* [*Ashur*]. *Amd the fourth river is Euphrates* [*Perath or Frat*] (7).

tion of their affairs about the time of the captivity, loſt the remembrance of all the particulars relating to this account of Eden, (as indeed they have of moſt things relating to their antiquities) except that of the rivers Hiddekel and Frat; the chriſtians, who have buſied themſelves much in ſearch after it, have loſt their way for want of guides, which had been the occaſion of ſo many ſtrange notions about it, as we have already mentioned; and there muſt always be a difference among men in opinions, where the uncertainty and defectiveneſs of the proofs leave room for controverſy.

Year of the World, 1. Year before Chriſt, 4305

SOME of the lateſt moderns [n], miſled by the affinity of names, have ſuppoſed, they found the name of the Piſon preſerved in the Paſi-tigris, or rather (as they would have it, to favour their hypotheſis) the Piſo-tigris, whilſt others [o] take it for granted, that it is the Phaſis, as they conclude the Aras to be the Gihon, from the conformity of the ſignification; both thoſe terms being uſed by the Perſians to ſignify any great river in general. But at that rate, Eden may be any where, and every where, ſince a conformity of names, either in ſound or ſignification, may be found in all countries; and if that ſort of proof be admitted, unleſs under proper reſtrictions, it will be no hard matter to prove, that America was peopled immediately by the poſterity of Noah, as ſome have alledged.

This enquiry uncertain and conjectural.

THE Bdolah and Shoham, which were the produce of Havilah, being unknown names, as well as that of their native country, they are interpreted by every one ſo as to favour the ſcheme he eſpouſes. Thus the Bdolah is rendered bdellium, the carbuncle, the loadſtone, the Oleaſter. Thoſe who place paradiſe in Armenia, will have it to be cryſtal [p], becauſe they find that ſtone thereabouts; and thoſe who ſituate it in Chaldea, towards the Perſian gulph, inſiſt, that it ſignifies pearl, which is fiſhed in great quantity in Bahrein near al Katîf, on the Arabian coaſt, where the country of Havilah is to be found, according to this hypotheſis; and it muſt be owned, this conjecture ſeems to come neareſt to the truth, conſidering manna is compared [q] to the Bdolah for colour; and ſo the Talmudiſts deſcribe manna to be round as coriander-ſeed, and white as pearls. In like manner the Shoham is made by different authors to ſignify the beryl, and the

[n] Francis Junius, Hugo Grotius. [o] Will. Sanſon, in geograph. Aſiæ. Reland, diſſert. de ſitu paradiſi, p. 7. Calmet, comment. ſur la Gen. ii. 8. [p] Reland, ibid p. 27. [q] Numb. xi. 7.

Year of the World, 1. Year before Chriſt, 4305

the emerald [r]; perhaps with as little propriety, as it is rendered in our bibles the onyx-ſtone, which tranſlation is condemned by Bochart [s] and others (C).

The ſchemes which place Eden in Syria and Armenia ill-grounded.

Of the three ſchemes which at preſent obtain amongſt the learned; the firſt, which places paradiſe near Damaſcus in Syria, about the ſprings of Jordan, and has for its patrons Heidegger [t], Mr. le Clerc [u], Pere Abram [x], and Pere Hardouin [y], ſeems the worſt grounded, being deſtitute of all the marks ſpecified in the Moſaical deſcription, which ought always to be the principal teſt in this enquiry. The ſecond hypotheſis places Eden in Armenia, between the ſprings or heads of the Tigris, the Euphrates, the Araxes, and the Phaſis, and is eſpouſed by two great men, eminent for their ſkill in geography, namely, Sanſon and the late Mr. Hadrian Reland [z], beſides Calmet [a]. But this ſcheme is not much better ſupported than the firſt; for, according to the modern diſcoveries, the Phaſis does not riſe in the mountains of Armenia, near the ſprings of the Euphrates, the Araxes, and the Tigris, as Strabo [b], Ptolemy [c], Dionyſius [d], and the reſt of the antients have wrongly informed us, which led them, without doubt, into this error; but, by the map of Colchis, or Mingrelia, in Thevenot's collection, and the account of Sir John Chardin, in his travels, that river has its ſource far away in mount Caucaſus, and does not flow from ſouth

[a] Dict. de la Bible, p. 150, & Commentaire ſur la Geneſe, cap. ii. 8. [b] Lib. X. & XI. [c] Tab. III. Aſiæ. [d] Periegeſis.

(C) On this occaſion we cannot help obſerving, that our tranſlators have often ſwerved from the original Hebrew, to follow the Septuagint, if not the German verſion, eſpecially in names and terms. Thus Aram is generally rendered Syria; Khaſhdim, Chaldea; Mizraim, Egypt; Cuſh, Ethiopia; and the like, but we need not ſend the reader farther than the moſaical deſcription of Eden above cited, in which it appears, that there are no leſs than ſix variations. They have moreover introduced a corrupt pronunciation, either by following the German orthography inſtead of the Engliſh, or continuing the orthography of the vulgate, which prevailed before the reformation. Thus they have conſtantly made uſe of the J conſonant inſtead of the Y: Jacob and Joſeph ſhould be written Yacob and Yoſeph, or rather Yoſef; Benjamin Benyamîn, or rather Benyamim.

south to north, but on the contrary from north to south; a great extent of country, and the river Kor (which by its situation would much better supply the place of the Pison than the Phasis) interposing; as may be seen by the map. As one mistake generally draws on another, Reland, led again by that deceitful guide the similitude of names, supposes Cush to be the country of the Cossæans, or Cussæans; but if the Cussæans were the inhabitants of the mountains [c], which, with Parthia, bounded Media on the east; and which, in all likelihood, as he conjectures, was Kuhestân, or the mountain country, as that name signifies; how could they be settled along the Araxes, which yet it was necessary they should be, to favour his opinion? for Kuhestân is the most eastern, or north-eastern part of Irâk Ajami, a well-known province of Irân, or Persia at large, agreeable to Diodorus Siculus [f] and Arrian, [g], who makes the country of the Cossæans a part of Media; though some place them in Persia, and Ptolemy in Susiana: besides, the Phasis and Scythia (which Sanson understands by Cush, or the Cossæans) seem to have been too remote to be known to Moses. Neither does this hypothesis account for that river which watered paradise, and from whence the other four had their rise; and Reland will not allow it can be done, but by supposing a subterranean river, which may as well serve for the scheme of the Jews, followed by the Fathers, which makes the Pison and Gihon, the Nile and the Ganges.

Year of the World, 1. Year before Christ, 4305

According to the third opinion, Eden is placed upon the united stream of the Dijlat, or Hiddekel, and Frat, called by the Arabs, Shat al Arab, that is, the river of the Arabs; which [h] begins two days journey above Basrah, and, about five leagues below, divides again into two, or three channels, which empty themselves into the Persian gulph. By this hypothesis the Shat al Arab is the river passing out of Eden, which river, considered according to the disposition of its channel, and not according to the course of its stream, divides into four heads, or different branches, which make the four rivers; two below, viz. the two branches of the Shat, which serve for the Pison and Gihon; and two above, viz. the Frat and Dijlat, or the Euphrates and Hiddekel. According to this disposition, the western branch of the Shat will be Pison, and the adjoining part of Arabia, bordering on the Persian gulph, will be Havilah; and the eastern branch will be the Gihon, encompassing the country of Cush, or Khuzestân, a province of Irân, as it is still named by the Persians. This

The third scheme most probable.

[c] Strabo, lib. XIV. [f] Lib. XVII. cap. iii. [g] In histor. Ind. [h] Thev. trav. Part. II. chap. ix.

Year of the World, 1. Year before Christ, 4305

Eden to be looked for in Chaldea.

This opinion was first started by Calvin, and is, with some little variation, followed by Stephanus Morinus, Bochart, and Huet bishop of Avranches; and, indeed, all the passages of scripture, where Eden is mentioned, concur to establish it some-where hereabouts. The prophet speaking of Tyre, says, Haran, and Canneh, and Eden were thy merchants [i]. Now if Canneh be Calneb, or Calyo which is taken to be Ctesiphon, or Medain, the seat of the Parthian race of Persian kings, then Eden must have been the south of that city, according to the order of mentioning the places, which seems to be from north to south. The same order is observed in two other places of the old testament, where mention is made of Gozan, Haran, Rezeph, and the children of Eden which were in Telassar [k]. To this we may add an argument of some, that the city of Enoch, or rather Hanukh, built by Cain, and called after the name of his son, is placed to the east of Eden [l]; and Ptolemy places a city, called Anuchta, in Susiana, or the country of Cush.

With regard to the natural marks ascribed to Havilah, authors mention that part of Arabia is productive of gold; and as for the Bdolah and Shoham, they may be made the produce of any country, as we have before observed. However, the Bdolah, being considered either as pearls, or bdellium, (supposed to be a transparent, odoriferous, but bitter, gum) is allowed to be a native of Arabia.

Objections to the third scheme.

But though this hypothesis seems the best of any that hath been yet advanced, and to account tolerably well for the Mosaical description, yet is it liable to exception: for the two branches of the Shat al Arab, which by this scheme represent the Pison and the Gihon, seem not considerable enough to deserve the name of rivers, nor are of sufficient length to encompass countries of any extent; the place where the Shat al Arab divides below Basrah, being not above eighteen leagues [m] distant from the places where those two branches fall into the sea. Indeed, if we could be sure there was a third branch, which, according to some accounts and maps, parting from the Shat about Basrah, falls into the sea at al Katif, it might serve tolerably well for the Pison; and for the Gihon, we should chuse to substitute either the river Karon, or the river Karha; the first

[i] Ezek. xxvii. 23.
[k] Isaiah xxxvii. 12. 2 Kings xix. 12.
[l] Gen. iv. 17.
[m] Thevenot's travels, Part II. chap. x. Teixeira, in his journey from Basrah to Aleppo.

firſt of which falls into the Shat al Arab, the other into the Tigris, and may much more properly be ſaid to encompaſs the whole land of Cuſh, as running through Khuzeſtan; whereas the eaſtern branch of the Shat waſhes only a corner of that country, or rather one ſide of an iſland made by it and the Caron. Year of the World, 1. Year before Chriſt, 4305

OR ſuppoſe, we ſhould alter this ſcheme a little, and ſituate Eden above the confluence of Euphrates and Tigris, we ſhall find one, or two large arms, croſſing the intermediate country from one river to the other, which would much better ſupply the place of the Piſon and Gihon, than the branches of the Shat al Arab, provided, other circumſtances agreed with this alteration. If theſe branches of the Tigris had been known to Grotius and others, they would not perhaps have fallen into ſo groſs a miſtake, as to make the Nahar Malca, or Royal River, which paſſes from Euphrates to Tigris, the Gihon: it would better have ſuited with the Moſaical deſcription to have ſuppoſed it to be the river of Eden, which was divided into four heads, in which caſe the parts of thoſe rivers to the ſouth of the Nahar Malca, would ſerve for the Piſon and Gihon; and indeed, that would anſwer the Moſaical deſcription, as to the rivers, almoſt without exception. But the truth is, ſuch an hypotheſis cannot be admitted without overthrowing the credibility of the ſcripture, and allowing the moſt antient books in it were written after, or in the times of, the Babyloniſh captivity; for the Nahar Malca, or Baſilicos Potamos, as the Greeks called it, is an artificial canal ſtill in being, cut from Euphrates to Tigris, a little above Babylon, in the later times of the Babylonian empire. The oriental authors attribute this work to Nimrod [n]; perhaps it may be the ſame with the river Cutha, which, a Perſian author [o] ſays, was dug by a king of Babel of the ſame name, and ſuppoſed to be Cuſh the father of Nimrod. New ſchemes propoſed.

THOSE who patronize the Armenian paradiſe, may likewiſe improve, or amend, their ſcheme, out of the modern travellers and maps *, where they will find the Morad Shai, which falls into Euphrates, and the Kor, which joins the Araxes or Aras, either of them better fitted to ſupply the place of the Piſon than the Phaſis; or,

[n] Vid. Hyde, de Relig. vet. Perſar. p. 40. [o] Tabari, in cap. de morte Saræ apud Hyde, ibid.

* Particularly thoſe of De Liſle, which are far the beſt.

Year of the World, 1. Year before Christ, 4305

or, if they chuſe to have the Euphrates and Tigris united with the other two Moſaical rivers, they may adopt the Sert, which falls into the Tigris at Heſn Keifa, and throw out the Aras and Kor, the head of which laſt Ptolemy has made to change place with that of the Phaſis. As a wrong, or confuſed, account of the riſe and courſe of rivers, delivered by the antients, has been the occaſion of many of the miſtakes into which authors have fallen in treating of this ſubject, the inquirer ought to have recourſe to the modern obſervations of geographers and travellers, which often help where the others fail, but have been too much neglected by the learned.

The Moſaical deſcription of Eden imperfect.

After all, we ought not to be ſo earneſt about this matter; for, ſtrictly ſpeaking, the Moſaical deſcription does not agree with the ſtate of things, either as they now are, or ever were in all probability: for there is no common ſtream, of which the four rivers are properly branches, nor can one conceive, how a whole land can be encompaſſed by a river, as Havilah is ſaid to be by the Piſon, and Cuſh by the Gihon, without being an iſland. But we are to conſider paradiſe deſcribed according to Moſes's notion of things, and that imperfect knowledge of the world which they had in thoſe early times. It is abſurd in this caſe to alledge an alteration made by the deluge in the bounds of countries, or the courſe of rivers; for Moſes deſcribes things as they were ſuppoſed to be at the time he wrote; nor is it credible, that the Hiddekel and Frat were branches of a river before, and had ſprings of their own afterwards.

It is obſervable, that there is no manner of doubt in authors, with relation to theſe two rivers; nor indeed is there the leaſt room for it, they having retained their names nearly, if not exactly the ſame, to this day; for what the Hebrews called Hiddekel, the Arabs, and perhaps the Aſſyrians and Chaldeans, called Dijlat then, as they do at preſent; and the Pherath, Forat, or Frat, is ſtill called Frat by the neighbouring people; for Euphrates is one of thoſe corrupt names, which our tranſlations have borrowed from the Septuagint verſion, and which probably the Greeks, as Reland [p] judiciouſly obſerved, took from the Perſians, who often ſet the word Ab, or Au, which ſignifies water, before the names of rivers; of which word and Frat the name

[p] De ſitu paradiſi.

name Euphrates is compounded. The other opinion which forms that name from a conjunction of Frat with the preceding particle Hua, in the Hebrew text, is absurd; as supposing, the Greeks first came acquainted with that river, by reading this passage of Moses relating to the situation of Eden. Year of the World, 1, Year before Christ, 4305

THE oriental nations give the name of paradise to several places, rather for the deliciousness of their situation, than a real persuasion, that any of them was the paradise of Adam, which the Mohammedans in particular do believe not to be on earth, but in the seventh heaven [s]. And of the antient Persians, some thought it to be in the sun, as the Manichæans, and other heretics did; and others, that there is no paradise now in being, but after the resurrection the earth will be renewed, by being melted and changed into another form, and a paradisiacal state [t]; so that they seem to have believed the whole earth to have been paradise, before the curse given it at the fall [u]. However, the terrestrial paradises, mentioned by the Arabs and Persians, are; 1. The plain of Damascus, which they call al Gauta. 2. Obolla, a village in Irâk, on the western branch of the Shat al Arab, where there are most pleasant gardens. 3. Sheb Bawân, a place in Fars, or proper Persia, situate on the river Nilâb, near Nubendijân. 4. Sogd Samarkand, or the valley of Samarkand [w]. 5. Gangdîz, or the castle of the Ganges, called also Behishti Gang, or the paradise of Ganges, Arîm, or Arîn, and Kubbat al ard, or the vertex of the earth. 6. Jam gherd. But these two last places are imaginary, and supposed to be situate eastward of China, in the middle of the sea, where the zodiac and equator intersect each other, exactly at one hundred and eighty degrees of longitude from the fortunate islands (or Canaries), where they place the other intersection. So that these two places are supposed to be paradisiacal, as considered mathematically, and situate exactly under the intersection of the equator, where they think, the temperance and clemency of the air must needs render such a situation extreamly delightful. The Indians place their earthly paradise in Cashmîr, near the head of the Ganges (whence that above mentioned seems to have taken its name, though in another part of the world), and this not only Several paradises,

[s] Vid. Marrac. in Alc. p. 24. [t] See before, p. 140.
[u] Hyde de Rel. vet. Pers. c. xxxiii. p. 400. [w] Vid. D'Herbelot, p. 378, & 381.

Year of the World, 1. Year before Chriſt, 4305

only on account of the amenity of that ſmall kingdom [x], eſpecially in reſpect of the more ſouthern parts of India; but becauſe the river Ganges, which that nation eſteems ſo ſacred, is ſuppoſed to take its riſe from thence [y]. But the more general tradition of the eaſt is, that paradiſe was in Serendib, or rather Selandiv (D), that is the iſland of Selan, or, as we corruptly call it, Ceylan, or Zeilan (E) [z]. The Arab writers alſo take notice of ſeveral paradiſes, as that of Iram, or Aram, in Yaman, or Arabia Felix, built by Shaddâd, the ſon of Ad, who being deſtroyed, together with his people, by a divine judgment, his palace and gardens, wherein he exceedingly prided himſelf, were rendered inviſible (though preſerved to this day), and never ſeen but by God's particular permiſſion; which favour one Colabah pretended to have received, in the reign of the Khalif Moawiyah [a]: and another planted by the Molâhidah, or Iſmaelians, a race of princes, called by the Europeans Aſſaſſins, in a valley in Curdiſtân; which was deſigned, by its delightfulneſs, to raviſh the perſons to whom it was ſhewn, and make them believe it was in the prince's power to place them in paradiſe; and, in hopes of that felicity, to engage them in an implicit obedience to all his commands, and to commit any villainy, which he ſhould judge conducing to his deſigns.

Nor were the antient heathens themſelves without ſome obſcure tradition concerning a paradiſe, or rather ſeveral paradiſes, in the earth; but they generally placed them out of our continent; in the ocean, or beyond it, or in another hemiſphere, as the garden of the Heſperides, the Fortunate iſlands, Ogygia, and Taprobane [b], and the like; which as they were all characteriſed like ſo many paradiſes, ſo they were all ſeated out of this continent by their geography and deſcriptions of them. From which tradition, and the general inclination of the chriſtian fathers, as well as profane authors, to place paradiſe in the ſouthern

(1) Comment. in Gen. c. viii. p. 72.

southern hemisphere, or beyond the equinoctial, a late learned man [c] was induced to believe the same thing; though he supposed the whole earth, before the fall, to be, in an eminent degree, paradisiacal. Year of the World, 1. Year before Christ, 4305.

SECT II.

Of the fall of man.

GOD having placed Adam, immediately after his formation, in the garden of Eden, whose situation we have been endeavouring to discover, to dress and to keep it, gave him leave to eat freely of the fruit of every tree in the garden, except only that of the tree of knowledge of good and evil, which he strictly commanded him not to taste, under pain of death, the certain consequence of his disobedience [f]. Adam placed in paradise, and forbidden the tree of knowledge.

THE first thing which Adam did, after his introduction into paradise, and the very day of his creation, was, to give names to all the beasts and birds which presented themselves before him, not only for that purpose [g], but to perform their homage, as it were, and make Adam sensible, that there was none among them fit to be a companion for him [h]. We might on this occasion say something of the original of speech, did we not reserve that enquiry for a more proper place. He names the beasts and birds.

AFTER this God having formed Eve out of the side of Adam, as he slept, brought her to him, who knowing her to be *bone of his bone, and flesh of his flesh*, took her for his wife, and lived with her, free from any sense of shame, though they were both naked [i]. Takes Eve to wife.

HOW long they continued in this happy condition, is very uncertain; it is probable, they did immediately transgress the divine command, but it should seem, by the narration of Moses, that their fall was not long after their creation. The Jews in general, and most of the christian fathers, believe it to have been on the very day they were created [k]; but this is next to impossible; for a day would be a great deal too short for the several actions, that must on that supposition have been comprized in it. The continuance of the state of innocence.

[c] Dr. Burnet in his Theory, l. ii. c. 7. [f] Genes. ii. 15, &c. [g] Genes. ii. 19. [h] Ibid. ver. 20. [i] Ibid. ver. 21, &c. [k] Vid. Edward's survey, Vol. I.

Year of the World, 1. Year before Christ, 4305

Besides, God, himself, after the sixth day was past, declared (as at the end of the preceding days) every thing to be very good [l]; which is not reconcileable with truth, if sin, the greatest evil, had then entered into the world. Some therefore conjectured, that this calamity happened the eighth day [m], and others, the tenth of the world's age; supposing that in commemoration thereof the great day of expiation, being the tenth day of the year, was instituted in after-times [n]. If we can subscribe to the opinion of those who make a day and a year to have been the same before the fall [o], there is indeed no difficulty in supposing it even on the sixth day.

The fall as related by Moses.

The fall of man is succinctly related by Moses, in the following manner [p]; that the serpent, being more subtle than any beast of the field, asked the woman, whether it was true, that God had not granted her and her husband leave to eat of every tree in the garden? to which she answered, that God had allowed them to eat of all, except only the fruit of the tree in the midst of the garden; which he commanded they should not taste, nor so much as touch, lest they should die. The serpent replied, that they should not die; for God knew the virtue of the tree, and that so soon as they eat of it their eyes would be opened, and they become like gods, knowing good and evil. Whereupon Eve, seeing the fruit tempting to the view, and desirable to make one wise, took of the fruit of it, and eat; and gave also to her husband of it, and he did eat. Immediately the eyes of both were opened, and they, knowing they were naked, sewed fig-leaves together, and made themselves aprons. After this, Adam and Eve, hearing the voice of God, walking in the garden in the cool of the day, hid themselves among the trees; but on God's calling for Adam, he excused himself for not appearing, because he was naked. Upon this, God demanded of him, who it was that told him he was naked, and whether he had disobeyed his command, in eating the forbidden fruit? Adam did not encrease his guilt by denying it, but confessed, that the woman had offered him the fruit, and he had tasted it. She being examined likewise, acknowledged what she had done, but said, the serpent had seduced and deceived her. God then proceeded to judgment:

[l] Genes. i. 31. [m] Edwards, ubi supr. [n] Vid. Usser ad ann. mundi, 1. & Bayle, Dict. hist. Art. Abel, Rem. A. [o] Vid. Whiston's Theory, l, 2. p. 96, &c. [p] Genes. iii. 1, &c.

ment: he first cursed the serpent above all beasts, and condemned him to go on his belly, and eat the dust; adding, that he would put enmity between him and the woman, and their several off-spring; and that the seed of the woman should bruise the serpent's head, who should bruise the other's heel. The woman was punished with the pain of child-birth, and put in subjection to her husband; and as to the man, God cursed the ground for his sake, declareing, that it should bring forth thorns and thistles, and that he should earn his bread by the sweat of his brow, till he returned to the dust from whence he was taken. And at last God, having cloathed them both with skins, turned them out of the garden, lest they should take of the tree of life, and eat and live for ever; and to prevent any attempt to return to their former habitation, he placed cherubims, at the east of the garden, and a flaming sword which turned every way, to guard the passage to the tree of life.

Year of the World, 1. Year before Christ, 4305

THIS concise account being, at first view, incumbered with some improbabilities, several learned and pious men have been inclined to believe, the whole ought to be taken in an allegorical sense, and not according to the strictness of the letter; alledging for their excuse, that the antients, and particularly the eastern nations, had two different ways of delivering their divinity and philosophy, a popular and a mysterious, or hidden one: of which dubious sort of stile the scripture often makes use in explaining natural things; sometimes in accommodating itself to the capacities of the people, and at other times to the real, but more veiled, truth; and that to obviate the many difficulties which occur in the literal history of this sad catastrophe, the safest way is, to understand it as a parabolical story, under which the real circumstances are disguised and concealed, as a mystery not fit to be more explicitly declared.

Some objections to the letter of that relation.

THE first objection made to the letter of this history is in relation to the serpent, and particularly the improbability of his having the use of speech, and rational discourse; for to suppose an evil spirit, or the devil, made of the organs of this animal, has no foundation in the text of Moses, who attributes the seduction of Eve to the natural craftiness of the serpent only. Besides, the very speech of such an animal, if Eve had taken it to be dumb, must have so frighted her, that she would scarce have staid and entered into conference with it. And if the serpent had originally the gift of speech, but lost it, as a punishment of his crime in seducing the woman, Moses would surely not have

Year of the World, 1. Year before Christ, 4305

passed it over in silence, and mentioned so small a penalty, as going on his belly and licking the dust; the meaning of which words it is not easy to explain, unless we say, that the serpent did before walk upright, or on four feet; for if he crept from the beginning, it seems ridiculous to impose, as a punishment for a crime, what he was by nature subject to.

As to the trees, the nature of them both seems to have been very extraordinary: the tree of life, it is said, had the virtue to prolong life considerably, if not for ever. But if the longævity, or immortality of men had depended only on one tree, what if Adam had not sinned? How could his posterity, when they were dispersed over the face of the whole earth, have been able to come and gather fruit from this tree? Or how could one tree have sufficed all mankind? The nature of the tree of knowledge is still more difficult to conceive; it seems to have instilled into our first parents a new sense of shame and modesty, to which, before the fall, they were utter strangers. But a very different virtue is intimated to have been in the tree, that on eating of it a man became as a God, knowing good and evil.

Some further objections have been also made to this history; as the slightness of the crime for which so terrible a punishment has been laid on mankind (for which reason some have thought Moses's design in this relation was to authorize the rigor of his own laws); the improbability of Adam and Eve's sewing fig-leaves together without thread or needle, and of God's making them coats of skins, and consequently by himself, or (as is more decent to suppose) by an angel killing and fleaing the animals; and the needless precaution of placing cherubims to guard the entrance of the garden, lest the exiles should endeavour to repossess themselves of it, by fraud, or force [q].

Concluding therefore, that these things will not bear a literal construction, an allegorical, or figurative, sense has been put on this whole account; and it is pretended, that the history of the fall exhibits the defection of the soul; the serpent represents concupiscence; the man, to whom he durst not apply himself, is the picture of reason; and the woman, whom he so easily seduced and overcame, is the emblem of sense; and so on [r].

But

[q] Sic vacat exiguis rebus adesse Deo. Vid. Burnet. Archæol. l. 2. c. 7. See also Phil. Jud. de mundi opificio, p. 36. Maimon. More Nevoch. Part II. c. 30. [r] Vid. Saurin's Dissertations.

Year of the World, 1. Year before Chriſt, 4305

The literal ſenſe defended.

BUT though it cannot be denied, that ſome of the ancient philoſophers affected ſuch an allegorical way of writing, to conceal their notions from the vulgar, and keep their learning within the bounds of their own ſchool, yet it is apparent, Moſes had no ſuch deſign; and as he pretends only to relate matters of fact, juſt as they happened, without art, or diſguiſe, it cannot be ſuppoſed, but that this hiſtory of the fall is to be taken in a literal ſenſe, as well as the reſt of his writings.

The tempter was the devil, who abuſed the body of the ſerpent.

AS to the particular objections which have been mentioned, and firſt, as to the ſerpent; it is anſwered, that as Moſes contents himſelf with relating facts as they appeared, without any comment or explication; he makes the ſerpent, it is true, who was the viſible inſtrument, to have been the ſeducer of the woman, and ſays nothing of the latent efficient cauſe: for which reaſon ſome of the antient Jews were of opinion, that the whole paſſage is to be underſtood of a real ſerpent, which creature they ſuppoſe had originally the gift of reaſon and ſpeech; ſo that Eve might well have underſtood him (F). Others, thinking this too difficult of belief, have imagined, that it was not a real ſerpent, but only the devil under that name: but this opinion is no leſs liable to exception. For though the devil is frequently ſtiled in ſcripture the ſerpent, and the old ſerpent, yet why he ſhould be called the moſt ſubtile beaſt of the field, we cannot conceive; neither will the puniſhment inflicted on the ſerpent ſuffer us to doubt, but that a ſerpent's body, at leaſt, was employed in the tranſaction.

THE moſt common therefore, and indeed the only probable, opinion is, that it was the devil, ſome wicked and malicious ſpirit, (probably the chief of thoſe beings) who envied the happineſs of mankind, and was thereupon reſolved to bring them into the ſame miſerable condition with himſelf and his apoſtate companions; and that, to effect his purpoſe,

(F) Joſephus ſuppoſes, that all creatures at that time uſed the ſame language, and that the ſerpent, converſing familiarly with Adam and Eve, excited by envy of their happineſs, maliciouſly perſuaded the woman to taſte of the tree of knowledge; for which, among other puniſhments, he was deprived of the uſe of ſpeech, and of his feet, and obliged ever after to crawl upon the ground (1). Of the ſame opinion are Aben-Ezra, and others.

(1) Antiq. 1. c. 1. §. 4.

Year of the World, 1. Year before Christ, 4305

purpose, he made use of a serpent's body (G), as the properest organ by which to carry on his fraud with success. And this seems reasonable, not only from the improbability of a brute beast's over-reaching mankind in their highest pitch of understanding, but from the attestation of other parts of scripture, where the devil is called the old serpent [t]; and is by our Saviour himself said to have been a murderer from the beginning, or the first creation, alluding to his mischievous destruction of mankind at that time: the author of the book of Wisdom, who was well acquainted with the doctrines of the Jewish church, also telling us, that by the envy of the devil death came into the world [u].

Why he made choice of that creature.

Why the devil should chuse the body of a serpent, rather than that of any other creature, was probably on account of that subtlety attributed to him by Moses; which may not, perhaps, so much denote the craft and insidiousness, as the familiar and insinuating nature of this creature (H). That the serpent before the fall was mild and gentle, and more familiar with man than any other creature; and that he did not then creep on the ground, but went erect (I), and had by his engaging behaviour gained, in some measure, the good will of our parents, is not only the sentiment of both Jews [x] and Christians [y], but seems likewise to have some foundation of scripture: for when God says, that he will put enmity between the serpent and the woman, and between his seed and her seed, it must be implied, that there was some kind of friendship between them before.

It

[t] Revel. xii. 9. Ibid. xx. 2. [u] Wisd. ii. 24. [x] Joseph. Antiq. ubi supra. [y] Basil. Homil. de Paradiso. Damascen. de Orthodox. Fid. lib. 2. c. 10.

(G) The Arabs, before Mohammed, believed, that the devils were tranformed into serpents (2).

(H) The Mohammedans have a tradition, that the devil, offering to go into paradise to tempt Adam, was not admitted by the guard. Whereupon he begged of the animals, one after another, to carry him in, that he might speak to Adam and his wife; but they all refused him except the serpent, who took him between two of his teeth, and so introduced him (3).

(I) The Mohammedans also say, that the serpent was then of a beautiful form, and not in the shape he now bears (4).

(2) Reland. de Rel. Moham. l. 2. p. 271. (3) See Marracc. in Alcoran. p. 22. (4) Vid. ibid.

Year of the World, 1. Year before Chriſt, 4305

It is no way unreaſonable therefore to ſuppoſe, that this creature was beloved both by Adam and Eve: ſhe eſpecially might be delighted with it; ſhe laid it perhaps in her boſom, adorned her neck with its windings, or made it a bracelet for her arms. So that it being ſo intimate with the woman, made it the properer inſtrument for the devil's purpoſe, who ſliding into it, might wantonly play before her, until he inſenſibly brought her to the forbidden tree, and then, twiſting round its branches, might take of the fruit and eat, to ſhew her, by experience, that there was nothing of death contained in it, before he began to beſpeak her; and his ſpeech might be the leſs ſurprizing to her, becauſe ſhe might probably think, (as he might poſitively affirm) that this new acquired faculty proceeded from the virtue of the fruit.

Of what kind the ſerpent probably was.

But this conjecture is ſtill more probable, if we will but allow, that the ſerpent, whoſe body the devil poſſeſſed, was not of a common ordinary ſpecies, but ſomething like that flying fiery ſort, which, as we are told, are bred in Arabia and Egypt. They are of a ſhining yellowiſh colour like braſs, and by the motion of their wings, and vibration of their tails, reverberating the ſun-beams, make a glorious appearance. Now if the ſerpent, whoſe body the devil abuſed, was of this kind (though perhaps of a ſpecies far more glorious) it was a proper creature for his purpoſe: for theſe ſerpents are called in ſcripture Seraphs or Seraphim [z], and gave name to thoſe bright angelical beings, which we commonly underſtand by that appellation: it being very probable, from the repreſentations of them tolerated in the Jewiſh church, that the angels, when they adminiſtered to Adam and Eve, were wont to put on certain ſplendid forms; ſome of them the form of Cherubim, or beautiful flying oxen, and others the ſhape of Seraphim, winged and ſhining ſerpents. The devil therefore might uſurp the organs of one of theſe ſhining ſerpents, which, by his art and ſkill in natural cauſes, he might improve into ſuch a ſurpaſſing brightneſs, as to repreſent to Eve the angelical appearance, or Shechinah (K), to which ſhe was accuſtomed; and

[z] Numb. xxi. 6.

(K) This ſeems to be the opinion of Tertullian, when he tells us, that Eve gave attention to the ſerpent, as to the Son of God, &c. (1.)

(1) De Præſcript. Hæret. p. 220.

Year of the World, 1. Year before Chriſt, 4305

and having done this, it was no wonder, that he ſo eaſily deceived her.

HOWEVER this be, it is reaſonable to ſuppoſe, that it was ſome beautiful creature, whom Eve took to be an angel that wiſhed her well, while he diſcourſed with her. For it is impoſſible to conceive, that ſhe would be ſo ſimple and ignorant as to think that beaſts could ſpeak, much leſs that they knew more of God's mind than herſelf: nor ſeems it credible, that ſhe could be deceived but by a creature which appeared ſo glorioufly as to make her miſtake it for an heavenly miniſter, who might come to explain to her the divine command. And if we obſerve in what manner the tempter addreſſes himſelf to her (L), we ſhall find this ſuppoſition confirmed.

His accoſting Eve.

IT is not improbable [a], that the ſeducer, before he ſpoke to Eve, repreſented himſelf as one of the heavenly court, who came to congratulate the happineſs that God had beſtowed on them in paradiſe, which was ſo great, that he could not eaſily believe, he had denied them any of the fruit of the garden: he deſired therefore to be ſatisfied from her own mouth of the truth of what he pretended to have heard; and as the women acquainted him with the whole prohibition, he firſt ſuggeſts, that ſhe miſtook the meaning of it, that death could not be the puniſhment of ſo ſmall a fault; and, to flatter her ambition, deludes her with a falſe promiſe, that on eating the fruit, which he pretended had a ſovereign quality to illuminate the underſtanding, and advance the other faculties of the ſoul, ſhe and her huſband ſhould immediately become as angels, nay, as Gods, and their happineſs be inconceivably great, and independent on any but themſelves.

THIS

[a] See Biſhop Patrick's Commentary.

(L) The learned Abravanel ſuppoſes the whole to be only dumb ſhew, and that the ſerpent did not ſpeak at all, neither did Eve ſay any thing to it; but that being a very nimble and active creature, it got upon the tree of knowledge, took, and eat of the fruit; that Eve, having ſeen it ſeveral times do ſo, and not die, concluded with herſelf, that the ſaid fruit did not occaſion death, and that it might not only be grateful to the taſte, but procure them that knowledge, which God ſeemed to have grudged them (2).

(2) Stackhouſe's Body of Divinity, p. 287.

THIS ſeems to have been the purport of the ſerpent's words, by which he gained the ear of Eve; and ſhe, allured by the beauty of the fruit, and puſhed on by curioſity and vanity, could not reſiſt the temptation: and when ſhe had eat, was ſo far from being ſenſible of her condition, that fancying herſelf already in poſſeſſion of the chimerical happineſs which had been promiſed her, ſhe invited her huſband to partake with her. And he, it is probable, after ſome reluctance, was prevailed on, by her charms and endearments, to violate the command, contrary to his ſenſe of duty, and to ſhare the fate, which God's indignation for her tranſgreſſion ſhould bring upon her [b]. Year of the World, 1. Year before Chriſt, 4305

THE ſentence denounced on the ſerpent cannot ſeem ſtrange, if we conſider, how different his original form was from his preſent, and that God probably intended the debaſement of that once glorious creature, not ſo much to expreſs his indignation againſt the beaſt, as to make it a monument of man's unhappy fall, and a teſtimony of his diſpleaſure againſt ſin: nor could this be unjuſt; the meer inſtrument of an enormous crime being deteſtable, and often deſtroyed by human laws; and this great change in the ſerpent, perhaps, not felt, at leaſt, not diſtinguiſhed, or conceived by him as a misfortune [c]. The puniſhment of the ſerpent reaſonable.

IN reference to the two trees, which ſeem to be ſo very extraordinary, it is but reaſonable to imagine, there was a wide difference between the ſtate of innocence and our preſent condition; and conſequently, that there were ſome things conſonant to the firſt ſtate, which are very incongruous to our preſent. Now of thoſe Moſes has mentioned but a few, and among them the trees. As to the tree of life, nothing can be more agreeable to a ſtate of innocence, which ſeems to imply a ſtate of immortality; and ſomething was requiſite to make men immortal, when their bodies were not ſo; and what can be ſuppoſed more effectual than the fruit of ſuch a tree? When God had deſigned, that mens bodies ſhould never yield to death, it ſeems but reaſonable he ſhould direct them to the eating of ſuch a fruit, whoſe juice was of that ſpirituous nature, as to impregnate their blood with an indefatigable vigor, and to keep them up in conſtant youth, without pain, diſeaſe, or weakneſs, till ſuch time as he ſhould tranſlate them to a better The account of the two trees not incredible.

[b] See Stackhouſe's Body of Divinity, p. 284, &c. [c] Vid. Nicholl's Conf. Vol. I.

Year of the World 1. Year before Chriſt, 4305

better world (M). Whether this tree was the only one of the ſpecies is uncertain; but if it was, it is probable, that, had there been no lapſe, many of them would have been tranſplanted to other parts of the world, as the innocent off-ſpring had encreaſed; and when mankind had ſinned, it is likely, God deſtroyed this ſpecies out of the world, as now grown uſeleſs and inconſiſtent with the curſe and puniſhment of man. And of this tree the heathens ſeem to have had ſome traditional notion, when they ſpeak of the Nectar and Ambroſia which maintained the immortality of their gods, and Moly, which was the great Panacea, or univerſal medicine celebrated by the poets [d].

The tree of knowledge of good and evil is conceived to have been ſo called, either becauſe it had really a virtue to open man's underſtanding, and to make him diſtinguiſh between good and evil; or elſe becauſe the eating of it would eventually teach him the difference between the good of obedience and the evil of tranſgreſſion [e]: but others ſuppoſe it ſo called, meerly from the devil's pretending it had a virtue to confer knowledge, having received its name from the unfortunate deception; though it be in a preceding paſſage, called the tree of knowledge of good and evil, by way of anticipation: and as to God's ſaying, *Behold, the man is become one of us, to know good and evil*, that is taken to be a bitter irony, to upbraid man with his fooliſh diſobedience and diſappointment [f].

But what particular tree this tree of knowledge was, has been a matter of much conjecture; the vine, the apple,

[d] Idem, ibid. [e] Vid. Barcepham de Parad. part 1. c. 19. Edward's Survey, Vol. 1. [f] Vid. Nicholls, ubi ſupra.

(M) It is the joint opinion of the beſt antient writers, both Jewiſh and Chriſtian, that in caſe our firſt parents had continued in their obedience, they would, after ſuch a time of trial, as the divine wiſdom ſhould think convenient, have been tranſlated, or removed from earth, to heaven; and that their poſterity likewiſe would have been liable to no ſorrow or miſery of any kind, but poſſeſſed of conſtant happineſs, and, in their ſeveral courſes and ſucceſſions, taken up into a heavenly paradiſe (1).

(1) See Bull's ſtate of Man before the fall. Barcepha de parad. Part I. c. 22.

ple, the common, and Indian fig-tree [g] (N), and wheat, though no tree, have all put in their claims (O); and though the generality are for the common fig-tree, yet what

Year of the World 1. Year before Christ, 4305

[g] Vid. Barcepham, ubi sup. p. 48.

(N) Goropius Becanus is most confident, it was the Indian fig-tree; which notion, however, he did not borrow from Moses Barcephas, as Sir Walter Raleigh supposes (2). The chief reasons urged why it should be this tree, are 1. The goodness of the fruit, and fairness of the tree. 2. The breadth of its leaves, very commodious for hiding the nakedness of Adam and Eve, which, it is supposed, they would cover as soon as they perceived it; and therefore from the forbidden tree, that being the next at hand. 3. The largeness and thickness of the tree, very proper to conceal them, as they imagined, from the presence of God. But here Becanus, from the vulgate version, in medio ligni, imagined they hid themselves in the body of the tree itself, though the stem of the Indian fig-tree, notwithstanding the extravagant size given it by some authors, be not very large. As Sir Walter Raleigh, who had himself seen many of these trees in America, has given a description of them, we think it worth while to transcribe it. "They grow, says he, in moist grounds, and in this manner: "After they are first shot up, some twenty, or thirty foot in length "(some more, some less, according to the soil), they spread a "very large top, having no bough, nor twig in the trunk, "or stem; for from the utmost end of the head-branches, "there issueth out a gummy juice, which hangeth downward "like a cord, or sinew, and within a few months reaches the "ground; which it no sooner toucheth but it taketh root, and "then being filled both from the top boughs, and from his own "proper root, this cord maketh itself a tree exceeding hastily. "From the uttmost boughs of these young trees, there fall again "the like cords, which in one year, and less (in that world of "perpetual spring) become also trees of the bigness of the nether part of a lance, and as strait as nature and art can make "any thing, casting such a shade, and making such a grove, as "no other tree in the world can do. Now one of these trees, "considered with all his young ones, may, indeed, shroud four "hundred, or four thousand, horsemen, if they please; for they "cover whole vallies——But that they bear any such huge leaves, "or any such delicate fruit, I could never find (3)."

(O) The Mohammedans have the like different opinions among them relating to this tree; some affirm, it was an ear of wheat; others a fig-tree; and a third party a vine (4).

(2) Barcepha takes it, indeed, to have been the fig-tree, but does not join the word Indian to it, as we can find. (3) Hist. of the World, part I. c. 4. §. 2. (4) Vid. Marracc. in Alc. p. 22.

Year of the World 1. Year before Christ, 4305

what Moſes has ſo induſtriouſly concealed, is above the power of any to diſcover. Philo the Jew, according to his cuſtom, allegorizes what is ſaid of both theſe trees, ſuppoſeing, that no ſuch ever were, nor ever will, be in the world [m] (P).

The trial, by forbidding a fruit rational.

THAT the trial of man's obedience ſhould be ſuch a prohibition, as is mentioned by Moſes, ſeems perfectly rational, and adapted to the ſtate of innocence; no mortal precept could have been at all proper for that purpoſe, becauſe there was then ſcarce a poſſibility of their tranſgreſſing any ſuch: it muſt therefore have been ſome indifferent action, neither good nor evil in itſelf, but ſo far only, as it was commanded, or forbidden. And what ſo natural and agreeable to the ſtate of our firſt parents (conſidering they were to live all their lives in a garden) as the forbidding of them to eat of the fruit of a certain tree in that garden? a tree near at hand, and which might give them every moment an opportunity of ſhewing their obſervance of the divine command, by their abſtaining from it [n].

And the puniſhment conſequently juſt.

AND this takes off the objection againſt the puniſhment, inflicted on man for his diſobedience, as too ſevere, and no way proportionable to the offence; for we are deceived, if we ſuppoſe, that good and evil is only in the nature of the thing, and not in the commands and prohibitions of God. And, conſidering this crime to have been a downright rebellion againſt God, and committed againſt the cleareſt conviction of conſcience, with other aggravateing circumſtances, it will appear to have been a crime ſo heinous, that nothing now-a-days can be ſuppoſed to reſemble it.

No

[m] Philo Jud. de mundi opificio, p. 35. [n] See Stackhouſe's Body of Divinity, p. 281. Nicholls's Confer. ubi ſupra.

(P) Thoſe who admire allegorically interpretations, will have the forbidden fruit to have been no other than the ſenſual act of generation, for which the puniſhment inflicted on the woman was the pain of child-birth (1.). But this opinion has not the leaſt foundation in the words of Moſes; eſpecially if we conſider, that Adam knew not his wife till after their expulſion out of paradiſe.

(1) Vid. Barcepham de Parad. ubi ſup. Leon Hebreu, Philoſophie d'amour, Dial. 3. p. 620, &c.

No ſooner was the intoxicating juice of the forbidden tree gone off, and the criminals began to return to their ſenſes again, but the eyes (Q) of their underſtanding were opened, and they perceived their own nakedneſs (R), and the foul degradation of their nature; to conceal which, as far as they are able, they twiſted, or platted the flexible branches of the fig-tree round their waiſts, ſo that the broad leaves hanging down might ſerve them inſtead of aprons: for we muſt not imagine, that they ſewed the leaves together, as taylors do their cloth, which is more than the words of Moſes imply (S).

Year of the World 1. Year before Chriſt, 4305

The circumſtances of the aprons and coats explained.

JUDGMENT being paſſed on all that were concerned in this unhappy affair, it is ſaid, that God, before he drove

(Q) The expreſſion, that *the eyes of them were opened*, occaſioned a popular belief, that Adam and Eve were blind till they had tranſgreſſed; which imagination St. Auſtin has taken the pains to refute (2).

(R) By perceiving their nakedneſs, a late writer conceives no more is meant, than that they were ſenſible of their tranſgreſſion. Thus, after the golden calf was conſecrated, Moſes is ſaid to have ſeen the people naked; (Exod. xxxii. 25). And in the new teſtament γυμνὸς is ſometimes taken for a ſinner. Others indeed ſuppoſe, that the fruit of this forbidden tree provoked our firſt parents to luſt, and ſome indecent motions of the body; for, according to the modeſty of the Hebrew tongue, nakedneſs may well enough denote an irregular appetite to venereal pleaſures (and this is the opinion of St. Auſtin mentioned hereafter): But our author thinks this conjecture is without any manner of foundation, and that it is hard to conceive, how Adam and Eve ſhould not know themſelves to be naked before their fall; or why they ſhould be more aſhamed of their nakedneſs then, than they were before. When they were the only inhabitants of the world, their bed, under the canopy of heaven, was equally as chaſt as if it had been covered and encloſed; and therefore this nakedneſs of theirs muſt, in his opinion, be underſtood in a figurative ſenſe (3).

(S) The original word חָפַר, which is tranſlated Sewed ſignifies no more than to put together, to apply, or fit; in which ſenſe it is uſed Job xvi. 15. and Ezek. xiii. 18. And עָלֶה, which we render leaves, ſignifies alſo branches of trees, ſuch as were fit to make booths, or bowers; Nehem. vii. 15. (4).

(2) Auguſt. de civit. Dei. l. 14. c. 17. (3) Le Clerc's Diſſertat. (4) Dr. Nicholls's Conf. ubi ſupra.

Year of the World, 1. Year before Christ, 4305

drove Adam and Eve out of paradise, cloathed them with skins, which it is conceived is not necessarily to be understood, as if God himself, or even an angel, made the coats; it being common for the Hebrew tongue verbally to attribute things to God, which are not done by his immediate act, but by his direction, or even by the permission of his ordinary providence. So that it is probable, Adam and Eve only received instructions how to make them [o].

The cherubim and flaming sword, what?

As to the cherubims and flaming sword, placed to guard the way of the tree of life, there are several opinions concerning them. They who place paradise in the southern hemisphere, conceive the sword to have been no more than the torrid zone, which, in the parallel situation the earth is then supposed to have had, must have been a region of flame intolerably hot like a furnace, and consequently impassable; its encompassing of the whole earth sufficiently answering the Mosaic description [p], that it turned every way. Others have thought it to have been a wall, or circle of fire, encompassing paradise [q] (T); and that this flame was an accension of some inflammable matter round about the garden, which excluded all comers to it, till the beauty of it was defaced: which opinion may be more probable to them who place paradise about Babylon, where there is such an abundance of naptha and bitumen, and where there fields, which even yet, at some time of the year, seem all on fire. And if it be objected, that the cherubims had nothing to do with such a wall; it is answered, that it is usual for the scriptures to express all extraordinary works of God by angels; as to call a plague, or famine, a destroying angel; and the like [r]. Some Rabbins [s] are of opinion, that this flaming sword was an angel; which they found on that passage, where it is said,

[o] Ibid. [p] Tertullian. Apolog. cap. 47. Vid. Burnet's Theory, Book II. c. 7. Theor. Sacr. Telluris, l. 2. c. 6. [q] Pseudo-Anselm. c. 15. [r] Nicholls, ubi sup. [s] Vid. Maimonid. More Nevoch. p. 1. cap. 49.

(T) The words commonly rendred flaming sword, are in the original the flame of cutting, or division, or a dividing flame; for the same word, which signifies a sword, signifies also division; and is in the new testament translated both ways (1).

(1) See Matth. x. 34. & Luke xii. 51. Nicholls, ubi supr.

said, that God maketh his angels spirits, and his ministers a flaming fire [t]. And hence it has been imagined, that this flaming sword, which was esteemed by the Jews a second angel, was of a different kind from the cherubim, viz. a Seraph, or flaming angel, in the form of a flying fiery serpent, whose body vibrated in the air with lustre, and may be fitly described by the image of such a sword [u]. Year of the World, 1. Year before Christ, 4305

HAVING thus examined the circumstances of the fall, it may be proper to consider the effects it had upon our first parents and their posterity, and also upon the ground, which was cursed for their sake. The effects of the fall, on man, and on the ground.

THE unhappy pair did not indeed die immediately, but they became subject to death, which continually hung over their heads; the time they had to live being but as the space between a criminal's condemnation and his execution. They had lost God's favour, and forfeited paradise: the necessaries of life were now to be gotten by hard labour of the man, and child-birth was to be attended with great pain in the woman: so that the remembrance of their past happiness, and the prospect of the innumerable miseries, to which they had made themselves and their off-spring obnoxious, must needs fill them with regret and despair. For since they could not by generation transmit any thing to their posterity, but what they had themselves; their descendants were destined in like manner to undergo the troubles of life, and the pains and agonies of death, the necessary consequences of Adam's transgression: nor is there in this any injustice, we being thereby deprived only of what he had no title to. But that we are thereby become the objects of God's wrath, and deserving eternal damnation, by the imputation of the guilt of Adam's sin (which is the doctrine of St. Austin and his disciples, thence named Supralapsarians) has seemed to many a very harsh opinion, and to reflect on the goodness and justice of God.

As this is a point greatly controverted among divines [x], and foreign to our present design, we shall only say; that the general manifest depravity and corruption of human nature, so very different from what we must suppose it to have been in its original state, would induce us to believe it the effect of our first parents transgression; whereupon unruly passions and appetites got that superiority over, and influence on,

[t] Psalm civ. 4. [u] Tennison of Idolatry. [x] See Stackhouse's body of Divinity, p. 295, &c.

Year of the World, 1. Year before Christ, 4305

on, our wills, which reason alone ought to have; and this might be possibly occasioned, in some degree at least, by the infirmities which our bodies necessarily contracted, by proceeding from such a root, and by the great change brought on the earth, air, and other elements, by the curse. For whatever the antients have said of the plenty and happiness of the golden age, seems chiefly to have been some broken notions and traditions of man's first estate in paradise, and of that universal harmony wherein the world and all things would have continued, had not his fall introduced a change. The fruits of the earth were at first spontaneous, and the soil, without being torn and tormented, satisfied the wants and desires of man; but, upon his apostacy from God, as a punishment for his sin, God cursed the ground, which immediately brought forth thorns and thistles; for we must not suppose, with some, that the original fertility of the earth continued, till the destruction brought upon it by the universal deluge. The deluge was, indeed, the completion of the curse, but some considerable effects of it appeared before; otherwise how could Adam be said to eat bread in sorrow, and in the sweat of his face all the days of his life? As the earth was impoverished on man's transgression, so the air and other elements became disordered, in some measure unwholsome, and sometimes fatal. Hence proceeded famines, pestilences, earthquakes, storms, and all manner of natural calamities, which cause an innumerable variety of diseases and distempers [y].

But in order to give a more clear idea, in what degree and manner nature became impaired by the fall; it may be proper to consider the constitution of man's body, (for what concerns his soul is not properly within the compass of this design) and of the earth in that primitive state; and by what means they were reduced to their present condition.

The change in the constitution of man.

As to the constitution of man's body, it appears, that nakedness was then no inconvenience or shame, and consequently, there was no sense of any need to cover it. Those inclinations, which provide for the propagation of mankind, were, it seems, so regular, and so entirely under the command of reason, that not so much as an apron was esteemed necessary to hide those parts, which all the world have since thought proper to conceal [z]. But some have imagined, that in case man had persevered in his state of innocence, there

[y] Vid. Stackhouse, ubi sup. Book III. p. 238.

[z] Vid. Whiston's Theory,

there would have been no matrimonial commerce, but mankind would have been otherwise propagated (V); and this the antient fathers were inclined to believe, from their pre-possession in favour of the merits and excellency of celibacy [a]. This opinion St. Austin combated by very strong arguments [b], such as the benediction of God, and his command to encrease and multiply; the distinction of the sexes preceding the fall; and the absurdity of supposing sin to have been necessary for the propagation of mankind. Yet he agrees, that, in the state of innocence, the work of generation would have been carried on without any mixture of passion, or loss of virginity; and that man would then have proceeded to the propagation of his species, whenever he judged it requisite, without any incitement of lust. In the primitive state also, the temper of the human body seems to have been more soft, pliable, and alterable than now it is: some sorts of fruits and food were able to cause a mighty change therein, either to fix and adapt it to its present condition, or discompose and disorder it: thus the fruit of the tree of life had the virtue of rendering the body permanent and immortal, on the one hand; and that of the tree of knowledge, of bringing upon it diseases, corruption, and mortality, on the other; but the first effect of this latter fruit is supposed to have been the revolt of the parts subservient to generation, which, it is pretended, appears from the shame which immediately seized those who had tasted it (W). And, to say the truth, since man, in his fallen state, was unable to conform himself to the dictates of reason, love was necessarily to be introduced into the world; for otherwise it is not conceived how mankind could have subsisted: so that the passions were then raised, in order to produce men to do that to satisfy their appe-

Year of the World, 1. Year before Christ, 4305

tites, which before they did merely from prudential considerations [c].

THERE was also a considerable difference between the condition of the woman before the fall, and that which she has since been in; particularly, she was then in a state of greater equality with the man, and little more subject to sorrow in the propagation of posterity than he [d]. Nay, the very animals seem to have been, at that time, in a state of greater capacities and operations; nearer approaching to reason and discourse, and partakers of higher degrees of perfection and happiness, than they have been ever since [e].

The change in the constitution of the earth, how effected, according to Dr. Burnet.

WHEREIN the fœcundity and amenity of the primitive earth consisted, and by what means it became so much altered for the worse, is difficult to be determined. It is indeed presently accounted for, if we have recourse to the divine interposition, and suppose, that the sterility of the earth, and malignity of the air, and the general depravation of nature was effected by God, or his subordinate agents. But to assign a probable natural cause of such effects is not so easy. Dr. Burnet's notion is, that the fertility and paradisiacal state of the first earth was entirely owing to a perpetual equinox, the consequence of the situation of its axis, which he supposed to have been then parallel to the axis of the ecliptic, in which it was carried about the sun with the other planets. And that it really had such a situation, he thinks needs no other proof than its own evidence; for it is the immediate result and common effect of gravity, or libration, that a body, left freely to itself in a fluid medium, should settle in such a posture as best answers to its gravitation; and the first earth being uniform, regular, and every way equally ballanced [f], there was no reason, why it should encline at one end, more than the other, toward the sun. And this position he supposes the earth kept till the deluge, when it was so broken and divided, according to his hypothesis, that it lost its equal poise; and the center of its gravity changing, one pole became more enclined to the sun, and the other more removed from it, and so the parallel situation, which it had before, was changed to an oblique one; whence proceeded the variety of seasons, and those irregularities in the temperature of the air,

[c] Vid. Bayle, Dict. Hist. Art. Eve. Rem. F. [d] Vid. Whiston's Theory, Book III. p. 239. [e] Ibid. p. 240. [f] See the Introduction, p. 151.

air, which have ſince obtained [g]. But this does not account for the immediate effect of God's curſe on the earth, which, as has been obſerved, muſt by no means be deferred ſo late as to the flood. Year of the World, 1. Year before Chriſt, 4305

To avoid this difficulty, Mr. Whiſton has ſuppoſed, that the earth in its primitive ſtate had no diurnal motion about its own axis, but only an annual motion about the ſun; ſo that the ſun and planets then roſe in the weſt, and ſet in the eaſt, contrary to what they have ever ſince done (X).

On this ſuppoſition, as well as the former, there would alſo be a perpetual equinox through the world, which characters the fathers uſually applied to the paradiſiacal ſtate, and the antient heathens to the golden age [h]. The great change therefore which was made in nature at the fall, he takes to be the commencing of a new motion, or rotation of the earth about its preſent axis: by this means the poles of the world, which to the firſt inhabitants of the earth (dwelling near the interſection of the antient ecliptic with the preſent northern tropic) were neither conſiderably elevated nor depreſſed, ſuddenly changed their ſituation; the northern pole appeared to be elevated above, and the ſouthern depreſſed below, the horizon: and the courſe of the heavens ſeemed bent, or inclined to the ——and Mr. Whiſton.

[g] Burnet's Theory of the Earth, Book II. c. 3. [h] Vid. Burnet's Theor. l. 2. c. 1. & 10. Archæol. l. 2. c. 5. & 6.

(X) This, he thinks, may have been the foundation of that ſtory in Herodotus (1), who tells us, that the ſun, in the ſpace of eleven thouſand three hundred and forty years, four times inverted his courſe and roſe in the weſt. But what he mainly depends on is, that diſcourſe in Plato (2), where relating ſome very antient traditions (as he expreſly ſays they are, and delivered by our firſt parents to their poſterity) about the primitive ſtate of things, he ſays, that there was a great change made in the heavenly motions, the ſun and other ſtars formerly ſetting in the ſame place where they now riſe, and riſing where they now ſet; which change he attributes to God, who ſometimes directs the motion of the univerſe himſelf, and at other times, after ſo many periodical revolutions as he ſees fitting, leaves it; whereupon it is, as it were, ſpontaneouſly carried about by a motion contrary to the former. And this change Plato reckons the greateſt, and moſt entire of any, the heavenly bodies undergo.

Year of the World, 1. Year before Chriſt, 4305

ſouthern parts of the world (Y). And the probable mechanical cauſe of this commencement of the earth's diurnal motion, after its annual had continued ſome time, aſſigned by him is, the impulſe of a comet with little, or no, atmoſphere, or of a central ſolid hitting obliquely upon the earth along ſome parts of its preſent equator: from which impulſe both the annual orbit of the earth would be altered, and a vertiginous motion about a new and real axis would certainly commence. And he obſerves, that in all probability this comet was of the bigneſs of one of the ſmall ſecondary, rather than of the large primary, planets; for otherwiſe by its cauſing vaſt tides in the abyſs, after it was paſſed by, it would have occaſioned many more alterations in the earth, than we have reaſon to believe happened at that time [i] (Z).

But

[i] Whiſton's Theory, Book II. p. 98, &c.

(Y) The inclination of the earth is much inſiſted upon by the antients. Plutarch tells us, that Leucippus was of opinion the earth fell towards the ſouth, becauſe of the rareneſs of thoſe parts; the northern regions being grown rigid and compact, while the ſouthern were ſcorched, or on fire (3). Democritus and Empedocles gave nearly the ſame reaſon for it; and Diogenes and Anaxagoras ſpecify the very time when this happened; viz. after the firſt coalition of the world, and the production of animals out of the earth: and they thought this inclination was probably the effect of providence, on purpoſe, that ſome parts of the world might become habitable, and others uninhabitable, by reaſon of the frigid, torrid, and temperate climates thereof (4).

(Z) That the diurnal motion did not begin till ſome time after the annual, Mr Whiſton imagines to be evinced from the late diſcovery (as it is called) of an internal magnet freely moving within the earth, and from which all the variations of the magnetic needle are ſuppoſed to ariſe. The poles of this interior magnet being, as they ſuppoſe, diſtant from the earth's axis, ſlowly change their places in reſpect of the external earth, by a motion weſtward: whence he concludes, that the encloſed magnet, or nucleus, has not attained the ſame velocity with the exterior parts in their diurnal revolution, becauſe the impulſe by which the diurnal motion was firſt impreſſed upon the external earth, has not yet been ſo perfectly communicated to the internal magnet, as to equal the firſt motion impreſſed and ſtill preſerved by the ſuperior parts of the globe (5).

(3) Plut. de placit. philoſ. l. 3. c. 12. (4) Idem, ibid. l. 2. c. 8. (5) Vid. Dr. Halley's Theory of the variation of the magnetic needle, Philoſ. Tranſ. N° 195.

Year of the World, 1. Year before Chriſt, 4305

BUT beſides the impreſſion of this new motion, another effect of ſuch a colliſion of a comet would be the change of the earth's orbit from an ellipſis, as it was before the fall, to a perfect circle. For Mr. Whiſton ſuppoſes the reduction of the very oblong eccentrical orbit of the earth into a circular one, which he thinks it had before the deluge, was gradual, and not done all at once; the greateſt part at the commencing of the moſaic creation, and the reſt at the commencing of the diurnal motion. All this being ſuppoſed, and that providence adjuſted all circumſtances, ſo as ſhould be moſt for the advantage of the regions adjoining to paradiſe, where alone Adam and the other creatures dwelt in this ſtate; we ſhall have the earth revolving in a moderately eccentrical ellipſis, without any diurnal rotation, about the ſun in the ſpace of a year; we ſhall have ſome diameter of the earth, which paſſed near paradiſe, parallel to the longer axis of its ellipſis, and the place of paradiſe reſpecting nearly the ſame fixed ſtars with the perihelion of the ellipſis. Which being again ſuppoſed, we may obſerve, that as a circular orbit is much the beſt for a globe inhabited all round (as the earth was deſigned to be after the fall), that providing equally for the convenience of both hemiſpheres; ſo is this elliptic orbit the beſt for a globe inhabited but in one place, as the earth was in its primitive ſtate, this providing peculiarly for the happineſs of that particular ſpot, where alone the living part of the creation was to reſide. For the heat of the day-time would gradually encreaſe before, and decreaſe after noon, but yet would never be over violent; becauſe the increaſe of the heat, by the ſun's riſing higher and higher above the horizon in the forenoon, or ſpring, would be prevented, in a great meaſure, by the earth's real receding from him, and approaching nearer his Aphelion during the ſame time: and vice verſâ in the afternoon, or ſummer, which would render the ſtate of the air more equal and uniform. And thus alſo the too long duration of the night would be intirely avoided: for the whole night-time would then bear a ſmall proportion to the day, and amount perhaps to no more than two months; out of which muſt be deducted the two twilights, each of near a fortnight, which would reduce the darkneſs of the night itſelf to about a ſingle month; out of which another fortnight is to be ſtill deducted for the time of the moon's being above the horizon, and enlightning the earth:

Year of the World, 1. Year before Chriſt, 4305

ſo that at laſt, if the moon's crepuſcula be allowed for, as they ought to be, we ſhall ſcarce have a week of pure darkneſs in the whole year, to the great comfort and advantage of this truly paradiſiacal ſtate [k]; wherein there would be a conſtant warmth without the frequent interpoſition of cold; an air perfectly clear and homogeneous, and ſuſceptible of the utmoſt power of the ſolar heat, and the ſeaſons equable, or gradually diſtinguiſhed from one another, with other natural conſequences. But ſo ſoon as man had rendered himſelf unworthy of that happy ſtate, and God had pronounced a curſe on the ground, preſently the earth began a new and ſtrange motion, and revolved from weſt to eaſt upon its own axis: the ſucceſſion of day and night returned frequently, while the annual motion, performed on a different axis, diſtinguiſhed the ſeaſons, and, in conjunction with the diurnal, deſcribed the equator and the tropics; by which and the polar circles, the face of the earth was diſtinguiſhed into zones, with reſpect whereto the particular regions of the earth changed their ſituation: ſo that paradiſe, which was before near the middle or eccliptic, was now beyond the nothern tropic. The figure of the earth, which was before truly ſpherical, degenerated into an oblate ſpheroid; the torrid zone riſing about fifteen or ſixteen miles upwards, and the frigid one ſubſiding as much downwards. The compages of the upper earth, and of its ſtrata, became thereby chapped and broken, and ſo carried up the warm ſteams from beneath, ariſing from the hot central ſolid, to particular receptacles and volcanos, which before ſerved, in a more equal and uniform manner, to heat and invigorate the intire earth and its productions [l]. In theſe and other circumſtances was the ſtate of nature altered for the worſe on the fall, according to this gentleman's theory.

SECT.

SECT. III.

The Chronology from the Creation to the Deluge ſtated.

BEFORE we enter on the hiſtory of the antediluvian world, it will be neceſſary, that we ſhould ſettle the chronology of this period.

As Moſes has not ſet down the particular time of any tranſaction before the flood, except only the years of the fathers age, wherein the ſeveral deſcendants of Adam, in the line of Seth, were begotten, and the length of their ſeveral lives; all we can do in this period is, to endeavour to fix the years of the lives and deaths of thoſe patriarchs, and the diſtance of time from the creation to the deluge.

AND this might be eaſily done, if there were no varieties in the ſeveral copies we now have of Moſes's writings; which are the Hebrew, the Samaritan, and the Greek verſion of the Septuagint: but as theſe differ very conſiderably from one another, learned men are much divided in their opinions, concerning the chronology of the firſt ages of the world, ſome preferring one copy, and ſome another.

THAT the reader may the better judge of the variations in the three copies in this period, we ſhall in the following table ſubjoin the numbers of each; to which we take the liberty to add thoſe of Joſephus, as corrected by Dr. Wills and Mr. Whiſton, the numbers in the preſent copies of that hiſtorian being greatly corrupted.

A TABLE

A TABLE of the Years of the Antediluvian Patriarchs.

	Their Ages at their Sons Birth.				Years they lived after the Sons Birth.			Length of their Lives.		
	Heb.	Samar.	Sept.	Joſeph.	Heb.	Samar.	Sept.	Heb.	Samar.	Sept.
Adam,	130	130	230	130	800	800	700	930	930	930
Seth,	105	105	205	105	807	807	707	912	912	912
Enos,	90	90	190	90	815	815	715	905	905	905
Cainan,	70	70	170	70	840	840	740	910	910	910
Mahalaleel,	65	65	165	65	830	830	730	895	895	895
Jared,	162	62	162	62	800	785	800	962	847	962
Enoch,	65	65	165	65	300	300	200	365	365	365
Methuſelah,	187	67	187	187	782	653	802	969	720	696
Lamech,	182	53	188	182	595	600	565	777	653	753
Noah was aged at the Flood,	600	600	600	600						
To the Flood,	1656	1307	2262	1556						

To this Table it will be neceſſary, in order to explain the conſequences of theſe variations, to add ſeparate chronological tables, ſhewing in what year of his contemporaries the birth and death of each patriarch happened, according to the computation of each of the ſaid three copies.

A Chro-

A Chronological TABLE of the Years of the Patriarchs, according to the Computation of the Hebrew.

	Years of the world.	Years of Seth,	Years of Enos,	Years of Cainan,	Years of Mahalaleel,	Years of Jared,	Years of Enoch,	Years of Methuſelah,	Years of Lamech,	Years of Noah,
Adam created,	1									
Seth born,	130	105								
Enos born,	235	195	90							
Cainan born,	325	265	160	70

Cainan dies,	1235			910	840	775		648	581	528
Mahalaleel dies,	1290				895	830		703	636	583
Jared, Methuſelah, and Lamech die, —	1307		The Flood,			847		720	653	600

To the varieties exhibited in the two laſt tables, others might be added, by admitting the various readings of ſome numbers in the Samaritan and Septuagint: for as to the Hebrew copies, there is here a conſtant agreement among them (A).

THE manuſcript, from which the Samaritan pentateuch was publiſhed (B), agrees exactly with the Samaritan numbers

(A) It is obſervable that the Hebrew numbers were exactly the ſame when the two Talmuds were compoſed; and that the Chaldee paraphraſe of Onkelos, which is allowed to have been written about the time of our Saviour, does alſo agree with the Hebrew chronology.

(B) This MS. was written A. D. 1404. (1).

(1) Vid. John Morin. in Præf. Ed Septuag. Gr. Lat. Paris, 1628.

bers given by Euſebius [a]. But St. Jerom tells us [b], that in his time there were ſome Samaritan copies which make Methuſelah 187 years old at the birth of Lamech, and Lamech 182 at the birth of Noah, juſt as the Hebrew does. Now if theſe numbers be approved as the true original numbers, the interval from the creation to the flood will be 1556 years (C); differing from the Hebrew computation but 100 years, in the age of Jared at the birth of Enoch: and if this laſt be allowed to be a miſtake of the tranſcriber, by his dropping a number, and writing 62 inſtead of 162, as has been ſuſpected, the Samaritan will be perfectly reconciled with the Hebrew, and all difference between them vaniſh (D).

There are indeed ſome other variations in the Samaritan numbers, as given by Euſebius; but as they are plainly owing to the negligence of the copier, or the printer, we think it needleſs to trouble the reader with them.

Scaliger, on the authority of an old Samaritan chronicle, having at the end a table of the years of the patriarchs to the time of Moſes, would correct two of the Samaritan numbers in Euſebius: viz. inſtead of 65, the age of Mahalaleel when he begat Jared, he thinks it ſhould be 75; and inſtead of 67, the age of Methuſelah, when he begat Lamech, he would have it 77 [c]. By which alterations he reckons 20 years more to the flood than Euſebius and the manuſcript; that is, 1327 (E). But as he acknowledges the table, whereupon he grounds theſe corrections, contains ſome great abſurdities, it ſeems unreaſonable to oppoſe it to the joint authority of Euſebius and the Samaritan manuſcript.

As

[a] In Chronic. Græ. p, 3, 4. [b] In Quæſt. in Geneſ.
[c] Scaliger in Græc. Euſeb. p. 403.

(C) Mr. Whiſton, allowing of theſe two corrections, which are ſupported by the atteſtation of Joſephus, follows this computation in his chronological table (2).

(D) This is the hypotheſis of Father Tournemine, who in his Samaritan chronology, reckons 1656 years to the deluge.

(E) It is remarkable, that Scaliger, taking the Samaritan numbers to be brought down no lower than to the birth of Noah, computes 1947 years to the flood, according to that chronology; wherein he is again miſtaken 20 years, in the adding of the 600 years of Noah's life to the former number. And he at the ſame time quarrels with Syncellus, for not committing the ſame fault (3).

(2) See alſo his Eſſay towards reſtoring the true text of the old Teſt. &c. p. 23. (3) Scalig. in Græc. Euſeb. p. 403.

As to the Septuagint, in the common editions of that verſion, the age of Methuſelah, at the birth of Lamech, is 167, and conſequently, the ſum total of this period, according to them, is no more than 2242 [d]. But in this caſe Methuſelah will outlive the flood 14 years; and we may well wonder, with Euſebius [e], where he was preſerved. To obviate this objection, we are told, that in ſome copies Methuſelah is ſaid to have lived but 782 (not 802) years after the birth of Lamech, and no more than 949 in all [f]. But the Alexandrian manuſcript entirely takes away the difficulty, by giving the ſame number in this place with the Hebrew.

Pezron is of opinion, that the age of Lamech, at the birth of Noah, ſhould be but 182, as it is both in the Hebrew and in Joſephus, ſuppoſing with St. Auſtin, that the preſent number is the error of the ſcribe who firſt copied the original Septuagint manuſcript in Ptolemy's library [g]. So that he computes 2256 years to the flood. And if this correction be admitted, and one more mentioned alſo by St. Auſtin [h], viz. that Lamech lived 595 years after the birth of Noah, and not 565, as in the preſent copies, there will then remain no other difference betwen the Septuagint and the Hebrew than 600 years, added to the ages of ſix of the patriarchs when they begat their ſons [i], and Methuſelah will, conformably to the Hebrew and Samaritan, die in the year of the flood.

As we have choſen to follow the chronology of the preſent Samaritan copies, after the flood, for the reaſons which will be found in another place, we have done the ſame in our calculations in this period; which may, with very little trouble, be reduced to the chronology of the Hebrew, or Septuagint by thoſe who prefer the accounts of thoſe copies.

SECT.

SECT. VI.

The Hiſtory of the Antediluvian Patriarchs.

Year of the World, 1. Year before Chriſt, 4305

WHERE Adam dwelt after his expulſion from paradiſe, is uncertain; but it is likely he did not remove far off (F). He now conſummated his marriage with Eve, which, as the words of Moſes ſeem to imply, he had not done before the fall [k] (G): a ſtrong argument for the ſhort duration of the ſtate of innocence. The eldeſt ſon of Adam, named Cain, was born probably in the firſt year of

[k] Geneſ. iii. 24. iv. 1.

(F) The eaſtern tradition is, that Adam went into India (2), and did penance on the mountain thence named Pico de Adam, in the iſle of Ceylon, for ſeveral years. Some Rabbins pretend, that he was ſeparated from Eve for 130 years, and lived with another woman, named Lilith, formed out of the ground like himſelf; during which time he begat dæmons on her, as the devils did on Eve (3). Maimonides ſuppoſes, that by thoſe dæmons were meant only wicked and impious men, as the race of Adam were before Seth, whom he is therefore ſaid to have begotten in his own likeneſs, and after his own image (4). The Mohammedans ſay, that when they were caſt down from paradiſe, Adam fell on Ceylon, and Eve near Joddah in Arabia; and that, after a ſeparation of 200 years, Adam was on his repentance conducted by the angel Gabriel to a mountain near Mecca, where he found and knew his wife, the mountain being thence named Arafat; and that he afterwards retired with her to Ceylon, where they continued to propagate their ſpecies (5).

(G) Yet ſome Rabbins, as R. Solomon Yarhi and R. Moſes Haddarſhan (6), were of a contrary opinion. Others of them indeed went much farther, as father Bartolocci aſſures us, whoſe words we ſubjoin, (to ſhew what abominable imaginations ſome men are capable of) but deſire to be excuſed the tranſlating of them. De protoparente Adamo ita ſiniſtre ſentiunt, ut ipſum etiam nefariæ incontinentiæ, quod referre pudet, inſimulent; & ante Evæ formationem, omnia jumenta feraſque campi carnaliter cognoviſſe aiunt (7).

of the world; and his second, Abel (H), the year following*. When they were grown up, they betook themselves to

Year of the World, 2. Year before Christ, 4304

(H) Some Rabbins imagined, that Cain and Abel were twins (which Calvin (8) also supposed), but that Cain was the offspring of the devil, or Sammael, who first lay with Eve; and that she afterwards, by superfetation, conceived Abel by Adam (9). Some heretics fancied both Cain and Abel to have been the issue of the devil (10).

* The name Cain signifies an acquisition, or possession, being derived (though not very regularly) from the verb קָנָה Kana, to acquire. Abel, or rather Hebel, signifies vanity, and not mourning, as Josephus (1) and Eusebius (2) suppose.

The Arab authors say, that before Cabîl (for so they call Cain) Adam had a son named عبد الحارث Abd'alhâreth, on the following occasion. When Eve was big with her first child, the devil came to her and asked her, if she knew what she carried within her, and which way she should be delivered of it. She being unable to give an answer to this question, went in a fright to Adam, and acquainted him with the matter, who, not knowing what to think of it, grew sad and pensive. Whereupon the devil appeared to him, and told him, that as he knew the mysterious name of God, he would in vertue thereof, by his prayers, obtain of God, that Eve might be safely delivered of a son in his (Adam's) own likeness, provided he would promise to call his name Abd'alhâreth, or the servant of al Hareth (which was the devil's name in heaven) instead of Abd'allah, or the servant of God, as Adam had designed. This Adam and his wife agreed to, and accordingly gave the child that name, upon which it immediately died (3). The parents are taxed with this in the Koran, as an act looking towards idolatry (4). But the whole story seems to have no other foundation, than Cain's being called by Moses Obed Adamah, i. e. a tiller of the ground, which might be translated by the Arabs Abd'alhâreth.

Abu'lfaragius (5) says, Cain was born in the thirtieth year of the world, with a twin sister, whom that author calls Kilmia, Eutychius (6) Azrûm, and others Kalmanna. And that thirty years

to distinct employments; the former of them to husbandry, and the latter to the keeping of sheep [p]. And their inward dispositions were still more different, Cain being wicked and avaritious, but Abel just and virtuous [q].

Year of the World, 129. Year before Christ, 4177

Cain and Abel, their offerings. Abel murthered.

In process of time, the two brothers brought their respective offerings to God †, Cain of the fruit of the ground, and Abel of the firstlings of his flock, and of the fat thereof **; but they met with very different success: for God had respect to, or accepted the offering of Abel, but Cain's

[p] Genes. iv. 2. [q] Joseph. Ant. I. c. 2.

years after, Abel was born with a twin sister also, named Lebûdha, or Lefûra, by Eutychius (who says Lefûra was her Greek name) Owain, and by others Delborah (7).

† It has been supposed by some (but without any ground) that they brought their offerings to Adam to offer for them (8).

The oriental tradition makes these sacrifices to have been offered, and Cain's malice excited against his brother on the following occasion. When they were grown up, in the one hundred and thirtieth year of the world, according to Abu'lfaragius, Adam proposed to Eve, that Cain should marry Abel's twin sister, and Abel Cain's. But this Cain refused to agree to, insisting to have his own sister, who was the handsomest of the two. Adam hereupon was greatly displeased, because it was against the divine command that he should marry his twin sister (for it being the common opinion, that marriages ought not to be had in the nearest degrees of consanguinity, since Cain and Abel must necessarily marry their sisters, it seemed reasonable to suppose they ought to take those of the remoter degree), and ordered his sons to make their offerings before they took their wives, referring the dispute, probably, to God's determination. But while they went up the mountain for that purpose, the devil put it into Cain's head to rid himself of his brother; for which wicked intent, his sacrifice was not accepted; and they were no sooner come down from the mountain, than he fell on Abel, and killed him with a stone (9). Thus was a woman, according to this story, the occasion of the first quarrel in the world; Nam fuit ante Helenam, &c.

** The opinion of those who think Abel did not kill, or offer the animals themselves, but only their milk and wool, will be considered hereafter, when we enquire into the origin of Sacrifices.

(7) Vid. Pererium in Genes. iv. 1. Heidegg Hist. Patr. t. 1. p. 112. (8) Vid. Heidegg. ubi supr. p. 117. (9) Abu'lfarag. p. 6, 7. Eutych. p. 15, 16.

Cain's he did not accept ‡. At this preference Cain was so enraged and transported with envy against his brother, that he could not help shewing it by his countenance. God, however, condescended to expostulate the matter with him, and asked him, what reason he had to be angry, since if he did well he should be accepted; and he could blame none but himself for what was the consequence of his own ill behaviour; and, in particular, he could not justly be angry with Abel, who had no design to supplant him, and should always pay him the respect due to an elder brother. But this admonition had so little effect on Cain, that, on a convenient opportunity, when they were together in the the field, he rose up against Abel his brother, and slew him [r] *, and buried his body, in hopes of concealing the murther [s].

Year of the World, 129. Year before Christ, 4177

[r] Genes. iv. 3.—8. [s] Joseph. ubi sup.

‡ Though the difference put by God between the two offerings can be attributed to nothing, but the wickedness and ill disposition of Cain, and the righteousness and faith of Abel (10), yet it has been imagined, that Cain's ill success was owing to some defect in his offering, or his presenting the worst part of it to God, and reserving the best to himself. The reason given by Josephus (11) is very frivolous: he says, that God was more delighted with Abel's offering, as being the spontaneous production of nature; and displeased with Cain's, because it was forced by the art and industry of a covetous man (12).

In what visible manner God declared his acceptance of Abel's offering, is not expressed by Moses. The common opinion is, that fire from heaven descended on the sacrifice and consumed it, but did not touch Cain's. This is supposed by the version of Theodotion, who translated the word שעה, which we render had respect unto, ἐνεπύρισεν, he set on fire; the usual sign whereby God has been pleased to testify his approbation in other instances. The Mohammedans likewise affirm the same thing (13). And the heathens themselves boasted of the like extraordinary marks of the divine favour in some particular places (14).

* Before the commission of the fact, Moses tells us, according to the English translation, that Cain *talked with Abel his brother.*

Year of the World, 129. Year before Chriſt, 4177

After the commiſſion of this horrid fact, Cain being queſtioned by God about his brother, returned an evaſive anſwer, that he knew not what was become of him, churliſhly aſking, *if he was his brother's keeper?* But God ſoon

brother. The words ſtrictly ſignify, *Cain ſaid unto Abel his brother:* after which there is a blank ſpace left in the Hebrew copies, as if ſomething was wanting. The Samaritan pentateuch and Septuagint verſion ſupply this, by adding the words, *Let us go into the field:* but the Jeruſalem Targum, and that of Jonathan ben Uzziel have obliged us with the whole converſation. Says Cain, *There is no future judgment, nor judge, nor life after this, nor reward for the juſt, nor puniſhment for the wicked: the world was neither created, nor is governed by the mercy of God, for as much as thy oblation was accepted, and mine rejected. To which Abel anſwers, There is a future judgment, and a judge, and a life to come: there is both a reward for the juſt, and a puniſhment for the unjuſt: the world was created, and is governed by the mercy of God. And becauſe my works are better than thine, therefore was my oblation accepted, and thine rejected.* Upon which enſued the quarrel, which ended in Abel's murther. An ill beginning of religious controverſy. Mohammed has alſo, in his Korân (1), inſerted the debate between the two brothers, ſomewhat to the ſame purpoſe.

The time, place, and manner of this murther are all uncertain. It happened, very probably, not long before the birth of Seth, who was appointed inſtead of Abel: but St. Auſtin (2) will not allow Seth to be the next ſon which Eve had after Abel's death; ſuppoſing that expreſſion to mean no more, than that Seth ſucceeded that righteous perſon in his virtue and piety. Some are of opinion, that Adam aſſigned his ſons their ſeveral employments in the fiftieth year of the world (as Euſebius ſays he did), that Cain and Abel made their offerings A. M 100, and that thirty years after Abel was killed. But neither reaſon, nor ſcripture lead us to believe, that Cain concealed his reſentment ſo many years (3). The place where Abel was ſlain, according to an antient tradition, is ſaid to be ſtill ſhewn at the foot of a hill near Damaſcus (4). As to the manner wherein Cain committed this murther, there is a great variety of opinions. Eutychius and the Arabs ſay, he ſtruck him on the head with a ſtone; ſome Jews tell us, that he tore him in pieces with his teeth; others, that

(1) Chap. 5. ver. 33, &c. (2) De civit Dei, l. 15. c. 15. (3) See Bayle Dict. Hiſt. Art. Abel, Rem. C. (4) Vid. Heidegg. Hiſt. Patr. t. 1. p. 126.

ſoon convinced him, that what he had done was not hid from him; and, as a puniſhment, condemned him to be a fugitive and a vagabond on the earth, and to till an ungrateful ſoil, which ſhould not reward his labour, with the plenty and encreaſe he had before experienced. This ſentence, though it fell ſhort of the heinouſneſs of his guilt, was yet thought too ſevere by Cain, who complained, that *his puniſhment was greater than he could bear*; ſince he was to be baniſhed from the preſence of God, and from his near relations, and, being a vagabond and friendleſs, would be in danger of being killed by the next that ſhould meet him †, But God told him that whoever

Year of the World, 129. Year before Chriſt, 4177

Cain's puniſhment.

ſlew

that he killed him with the jaw-bone of an aſs, which is the weapon the painters generally put into Cain's hand: ſome arm him with a fork; St. Chryſoſtome with a ſword; St. Irenæus with a ſcythe, and Prudentius with a pruning hook (5).

Whether Abel was a married man or not, has been diſputed. Some of the antient fathers have maintained the affirmative (6), as did alſo ſome heretics called Abelians (7). But it is improbable, he ſhould continue ſingle if he lived to be near one hundred and thirty: the world wanted peopling too much to allow any room for ſuch continency. Nor do St. Jerom and St. Auſtin (8) ſeem to doubt of his being married, though Moſes makes no mention of his offspring.

The Rabbins and ſome Chriſtians (9) ſay, that Adam and Eve mourned for Abel one hundred years, during which time they lived ſeparate; Adam particularly in a valley near Hebron, thence named the valley of tears (10). The inhabitans of Ceylon pretend, that the ſalt lake on the mount of Colombo was formed by the tears, which Eve ſhed on this occaſion (11).

† Theſe words of Cain are variouſly interpreted. The firſt ſentence which our verſion renders, *My puniſhment is greater than I can bear*, ſome tranſlate, *My ſin is greater than can be forgiven* for עון ſignifies iniquity rather than puniſhment, and נשא to forgive, as well as to bear); and others interrogatively, *Is my ſin too great to be forgiven?* which laſt is the ſenſe followed by the

ſlew Cain, vengeance ſhould be taken on him ſeven fold; and the more effectually to ſecure him from that apprehenſion, was pleaſed to give him a ſign * (probably by ſome ſenſible miracle), that none that met him ſhould take away his life [t].

He goes into baniſhment, and builds a city.

Cain, ſoon after this unfortunate affair, having wandered about ſome time, at length ſettled with his wife and family in

[t] Geneſ. iv. 9.—15.

the Hebrew expoſitors, and ſeems to be the beſt (12). The latter words, in the Engliſh tranſlation, *And it ſhall come to paſs that every one that findeth me ſhall ſlay me*, have alſo been rendered, *I wiſh that any perſon that finds me may kill me* (13).

That there were ſuch numbers of men in the world, at the time of Abel's murther, that Cain might juſtly apprehend ſome danger from them, will appear from the calculations hereafter made of the increaſe of mankind before the flood. Mr. Bayle (14) thinks, that Cain was not ſo much afraid of his kindred, the deſcendants of Adam, (though he might juſtly fear the reſentment of Abel's children, if he left any) but of ſome ſtrangers whom he apprehended he ſhould meet in his baniſhment, where he ſhould be friendleſs, and have none to ſupport him; and therefore ſuppoſes, that, in his fright, he either did not conſider, there were no men in the world but what were the offspring of his father, or elſe feigned an apprehenſion, to move God's compaſſion. But we conceive, there will be no occaſion for either of thoſe ſuppoſitions, if we conſider in how few deſcents the degrees of kindred, at leaſt of affection, decreaſe, and at length vaniſh; and that Cain might juſtly be looked on, even among his relations, as a common enemy. Not to mention the vaſt numbers of men, which he could not but think, would in a few years to come overſpread the earth, and have probably little knowledge of, or reſpect for, him.

* This is the true ſenſe of this paſſage, and not that God ſet a mark upon Cain (1), according to the common expoſition; in purſuance of which, many ridiculous conjectures have been made as to this imaginary mark. Some ſay, that God ſtigmatized Cain on the forehead with a letter, which was to ſerve him as a paſsport, being taken either from the name of Abel (2), or the ineffable name of God (3), or from the word repentance; that every one might perceive Cain had repented. Others ſay this mark conſiſted of three letters, which compoſed the

(12) See Shuckford's Connection, vol. 1. p. 6. (13) Lightfoot, vol. 1. p. 3. (14) Dict. Hiſt. Art. Cain, Rem. A. (1) Vid. Shuckford, p. 8. (2) Veteres Hebræi apud Genebrard. (3) R. Solom. Yarhi. Vid. Salden. Otia Theol. p. 345.

in the land of Nod, where he built a city, and called it, after the name of his ſon, Enoch [u]. Year of the World, 129. Year before Chriſt, 4177

WHERE the land of Nod (which word ſignifies wandering) was ſituate, is uncertain. Moſes places it, according to our tranſlation, *on the eaſt of Eden*; and it has been obſerved, that Ptolemy mentions a city called Anuchtha in Suſiana, or Khuzeſtân, a country lying eaſtward from Chaldea: which ſituation, and the near reſemblance of the name Anuchtha to the original Hanokh (for Tha is ſuppoſed to be only the Chaldee termination) induced the learned Huet to believe it to be the ſame with that built by Cain. But it ſeems very improbable, that the city of Enoch, built before the flood, ſhould either withſtand the deluge, or retain its antient name after ſo great an alteration of the face of things. Beſides, Suſiana being a very fertile and pleaſant country, it is not likely, Cain ſhould be baniſhed thither, but rather to ſome barren and deſolate land, remote from

[u] Ibid. ver. 16, 17.

the name of the Sabbath (4), or elſe that it was the ſign of the croſs (5). Others ſuppoſe, that Abel's dog was given him as a conſtant companion, either to warn people not to attack him (6), or to prevent his taking any dangerous road (7). Others ſay, that his face was covered with leproſy (8). Others, that the mark was nothing but a wild aſpect, with bloody eyes, which rolled in a horrid manner (9). Moſt of the fathers imagined, that his body continually trembled to that degree, that he could not get his victuals to his mouth (10). The Septuagint verſion favours this opinion; for, inſtead of a fugitive and a vagabond, they have tranſlated στένων καὶ τρέμων, lamenting and trembling; and the Hebrew words do indeed import a reſtleſsneſs and uneaſineſs of mind, with which Cain is ſuppoſed to have been afflicted all his life (11). Some ſay, that where-ever he ſtopped, the earth ſhook and trembled around him (12). Others pretend, that God inſpired him with extraordinary courage, and rendered him void of all fear. And another notion, as well founded as any of the former, is, that Cain had a horn grew on his forehead, to warn folks to avoid him (13).

(4) In Tanchuma, fol. 4. (5) Salden. ubi ſup. (6) Ibid. (7) Corn. à Lapide in Geneſ. iv. (8) Salden. ubi ſup. (9) Vid. Salian. annal. tom. 1. p. 192. (10) Procopius in Geneſ. iv. Patr. tom. 1. p. 129.

Year of the World, 129. Year before Chriſt, 4177

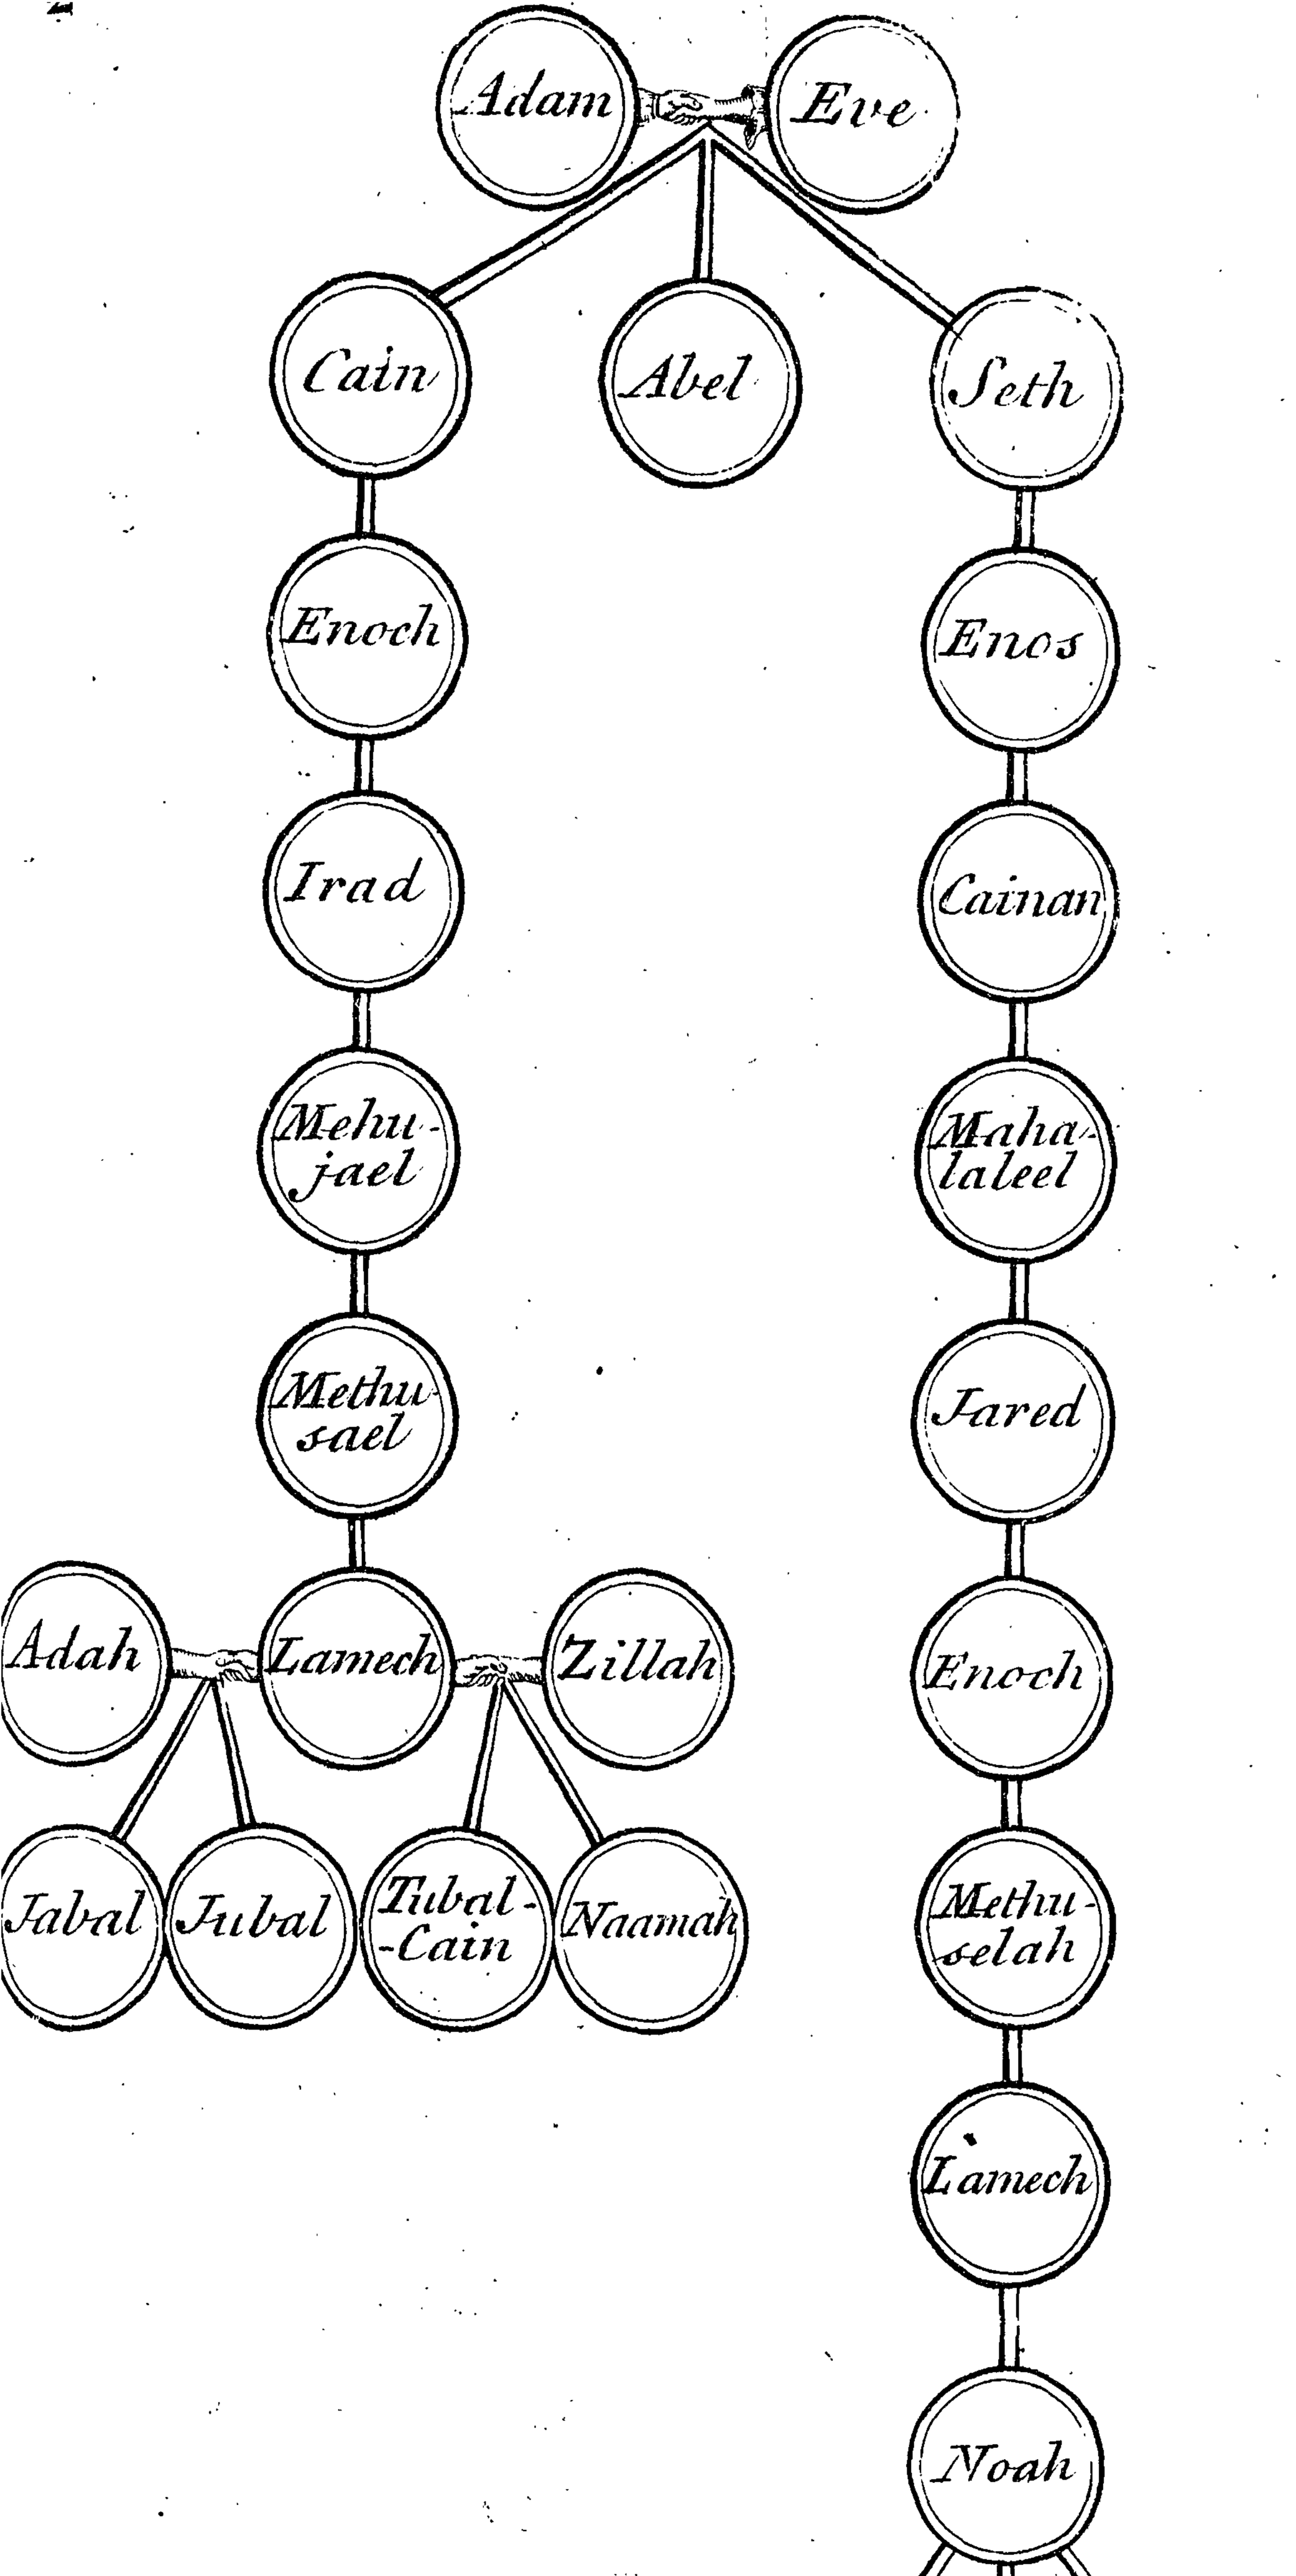
the place of his nativity, and ſeparated by mountains, or other natural obſtructions, from the commerce of his relations. For which reaſon Grotius and Junius are of opinion, that the country into which Cain retired was the deſart Arabia; but that lying on the weſt, and not on the eaſt, of Eden, to remove ſo formidable an objection, it is ſaid, that the words which we tranſlate *on the eaſt of Eden*, ſignify no more than, before, or over-againſt, Eden, as the Septuagint have rendered it [w].

When Cain built this city cannot be conjectured by any circumſtance recorded by Moſes; but it is probable, he did not till many years after his baniſhment, and when his poſterity was greatly encreaſed. Philo ſuppoſes, he alſo built ſix other cities, named Maich, Jared, Tehe, Jeſca, Selet, and Gebat, but what foundation he had for it we cannot conceive [x].

Grows more wicked.

Josephus ſays, that the puniſhment inflicted on Cain was ſo far from effecting any amendment in him, that he grew worſe, and became a reprobate to all ſenſe of goodneſs, indulging himſelf in all manner of pleaſures, though he wronged his neighbours to procure them; that he got together abundance of wealth by rapine and violence, encouraging his followers in luxury and robbery, and becoming their inſtructor in evil courſes. That he firſt corrupted that ſimplicity wherein men till then lived, by the invention of meaſures and weights, changing their innocence of life, which was happily ignorant of ſuch things, and their greatneſs of mind, into fraud and cunning: and that he alſo firſt ſet bounds to fields and poſſeſſions, and walled the city which he had built, obliging his dependants to live in community [y], the better, it is probable, to ſecure their ill-gotten wealth.

Year of the World, 130. Year before Chriſt, 4176



Seth born.

Soon after the murther of Abel, and probably the next year, his loſs was made up to his parents in another ſon they had, whom Eve named Seth, that is, appointed, becauſe he was appointed inſtead of Abel, whom Cain ſlew [z].

As the whole progeny of Adam, of whom we have any mention in ſcripture, were the deſcendants of Cain and Seth, it may be proper to give the following genealogical table of the antediluvians.

The

THE ſacred hiſtorian, confining himſelf chiefly to the line of Seth, from whence Noah was deſcended, has acquainted us with very few particulars relating to that of Cain; nor can we thence form any conjectures how long he *, or any of his deſcendants, lived. All that we have recorded is, that Lamech, the fifth in deſcent from him, married two wives, Adah and Zillah [a], which is obſerved to be the firſt known inſtance of polygamy; that by the former he had two ſons, Jabal, who was the firſt that dwelt in

Year of the World, 130
Year before Chriſt, 4176
Of the line

[a] Geneſ. iv. 19.

* There is an oriental tradition, which was believed by ſeveral chriſtians in St Jerom's time (1), that Cain was accidentally killed by Lamech, one of his own poſterity: for they ſay, that Cain, being old and dim-ſighted, and in continual terror on account of the murther he had committed, uſed to wander up and down in the woods, and one day ſat down in a thicket to reſt himſelf; and that Lamech, who was alſo blind, being a hunting, attended by a youth (whom ſome will have to be his ſon Tubalcain) either himſelf heard a ruſtling, or was informed by the lad, that there was ſomething in the buſhes which he took to be a wild beaſt, and thereupon letting fly an arrow, he ſtruck Cain (for it proved to be him) to the heart; when he came to know what he had done, he in a rage fell upon his conductor and killed him alſo (2). Others relate the latter circumſtances differently, and ſay, that he killed Cain with a ſtone which he flung at him, and the youth ignorantly, as he clapped his hands in ſorrow for what he had done (3). And this, they ſay, was the occaſion of thoſe words of Lamech to his wives, mentioned in a following note. This accident ſome place in the ſeven hundred and thirtieth year of Cain's age (4), others in the year of the world ſeven hundred and one, or eight hundred ſeventy five (5). According to Toſtatus, Cain lived near eight hundred years (6). There are ſome who fix his death in the year of the world nine hundred and thirty one, and pretend, that he was knocked on the head by the fall of a houſe (7). Paul de Burgos makes him periſh in the deluge (8); and there are others who ſay he killed himſelf (9).

Carmelitam citante Prateolo, in elencho hæres. p. 63.

Year of the World, 130. Year before Chriſt, 4176

in tents, and fed cattle*; and Jubal, the inventor of muſick: and by the other, a ſon named Tubal-Cain, who found out the art of forging and working metals †; and a daughter Naamah [b], ſuppoſed by ſome [c] to have invented ſpinning and weaving ‡. And that, on ſome occaſion or other, Lamech made a ſpeech to his wives [d], the explication of which has greatly puzzled the interpreters **.

HOWEVER,

[b] Ibid. ver. 20. 21, 22. [c] R. Lipoman. in catena, & Genebrard in Chron. Vid. Voſſium de Idolol. l. 1. c. 17. [d] Geneſ. iv. 23, 24.

* This ſeems to be underſtood, as R. Solomon Yarhi explains the paſſage, of feeding cattle in the deſart, and removing with their tents and herds from place to place, as they found paſture, which is the way of life of the Arabs, thence called Scenitæ: for others, and in particular Abel, followed a paſtoral life before Jabal (8).

† Joſephus (9) commends Tubal-Cain (whom he calls Thobel) for his great ſtrength and ſkill in war; to the perfecting of which art, he probably contributed by the invention of arms.

‡ Some imagine Naamah to have been the wife of Noah (10), others of Ham (11); and that ſhe being ſaved from the deſtruction of the deluge, was therefore mentioned by Moſes. Her name ſignifies delightful or beautiful; and her perſon is ſaid to have been ſo charming, that Aza and Azael, two angels, fell in love with her, and begat on her Dæmons called Gedim (12).

Many authors, from ſome affinity in the names and inventions of theſe children of Lamech, have thought Jubal to have been the Apollo, Tubal-Cain the Vulcan, and Naamah the Venus, or Minerva, of the heathens. And not to omit Jabal, it has been imagined he was their Pales (13). But theſe are at beſt ſuppoſitions only, and very precarious ones too, as will be ſhewn in a more proper place.

Joſephus makes the whole number of Lamech's iſſue by his two wives, to be ſeventy ſeven (14).

** His words, according to our tranſlation, are; *Hear my voice ye wives of* Lamech, *hearken unto my ſpeech: for I have ſlain a man to my wounding, and a young man to my hurt. If* Cain *ſhall be avenged ſevenfold, truly* Lamech *ſeventy and ſevenfold.* Almoſt

HOWEVER, we are aſſured by other hiſtorians [e], and it is highly probable, that the poſterity of Cain were enormouſly wicked, exceeding their father, if poſſible, in all manner of villanies; every ſucceeding generation growing worſe than the former, and becoming wholly addicted to rapine and brutiſh luſts. This reprobate race is generally ſuppoſed to be meant by Moſes under the deſignation of men, and the daughters of men, as the other family of Seth is by that of the ſons of GOD [f]. Year of the World, 130. Year before Chriſt, 4176

SETH had this year a ſon named Enos; about which time it is thought that his deſcendants, who were as eminent for piety and virtue, as thoſe of Cain were for the reverſe, had the appellation we have juſt mentioned given them. For it is conceived, that thoſe words [g], which in our tranſlation are rendered, then began men to call upon the name of the LORD, properly ſignify, then men began to be called by, Year of the World 235. Year before Chriſt, 4071. Enos born.

or

[e] Joſeph. Antiq. lib. 1. c. 2. Eutych. p. 25. Ebn al Amid, &c.
[f] Vid. Heidegg. ubi ſupr. p. 136. [g] Geneſ. iv. 26.

to the ſame purpoſe are the Septuagint, Vulgate, and Syriac verſions; and they are commonly explained by the above mentioned tradition of Lamech's unfortunately killing Cain, and the youth that attended him; which being an undeſigned act, he had reaſon to think, he deſerved a much leſs puniſhment than Cain (15).

Others take theſe words to be a thraſonical menace of Lamech, (whom they ſuppoſe to be a vindicative impious perſon) ſpoken on occaſion of ſome quarrel he had with his wives; and that the ſenſe is, *I will*, or *would, kill a man if he wounded me, and a young man if he hurt me*, &c. (16)

The Targums of Onkelos and Jonathan Ben Uzziel, and the Arabic tranſlation read the paſſage interrogatively, or negatively, *Have I ſlain a man?* that is, *I have not ſlain a man, that I ſhould bear the guilt or be puniſhed for it; nor have I killed a young man, that my ſeed ſhould be deſtroyed for it.* And it is thought, Lamech ſpoke them, on occaſion of ſome terror, or apprehenſion his family were in, leſt Abel's murther ſhould be revenged on them; which fear he ſhews to be groundleſs, becauſe he had done nothing to deſerve any ill treatment (17). This interpretation ſeems the moſt reaſonable, but cannot be depended on; the ſpeech being introduced by Moſes very abruptly, and without any connection with what precedes, or follows, it.

Year of the World, 235. Year before Chriſt, 4071

or after, the name of the Lord, that is the ſons of God[h]. But ſome take the words, according to the former verſion, to mean, that then the public worſhip of God was firſt ſet up, and proper ceremonies and ſtated times appointed for that ſervice[i]: And others, particularly the Jews, ſuppoſe they intimate, that idolatry, or the deifying of men, had its riſe about this time, either adhering to the latter verſion, or tranſlating the paſſage thus; Then men profaned in calling upon the name of the Lord [k]*.

Of the three next deſcendants of Seth, Cainan, Mahalaleel, and Jared, and of Methuſelah and Lamech, the grand-father and father of Noah, Moſes has recorded no more than their ſeveral ages. The oriental authors commend them, as they do Seth and Enos, for their piety, and the ſalutary injunctions they left behind them, forbiding their children all intercourſe with the race of curſed Cain[l].

Year of the World, 887. Year before Chriſt, 3419. Enoch tranſlated.

Enoch, the ſon of Jared, and father of Methuſelah, was a perſon of moſt extraordinary piety, walking with God, as the ſcripture expreſſes it, for at leaſt the laſt three hundred years of his life: as a reward for which exemplary behaviour

[h] Vid. Heidegg. Hiſt. Patr. tom, 1. p. 148. Shuckford's Connect. Vol. I. p. 41. [i] Perer. Druſius, Mercerus, &c. Vid. Simſon Chron. col. 56. [k] Vid. Selden de diis Syris proleg. c. 3. [l] Vid. Eutych. p. 20, &c, Elmacin.

* The interpretation of Onkelos is, *Then men left off calling upon the name of the* Lord; as if the worſhip of God began then to be neglected.

Some of the Jews (particularly Maimonides) have gone ſo far as to charge Enos himſelf with being the author of idolatry, and inventing images, by whoſe mediation men might addreſs themſelves to God (1).

But the introduction of the idolatrous worſhip of the heavenly bodies and angels, is by the Sabians, the profeſſors of it, referred to Seth itſelf. They give him alſo a ſon called Sabi, from whom the ſect ſeems to have taken its name, unleſs it be rather derived from צבא Saba, or the hoſt of heaven, the objects of their worſhip: of this ſect we ſhall take occaſion to ſpeak more particularly hereafter, obſerving only in this place, that they call the book which contains the fundamentals of their religion and morality, the book of Seth, and reckon the patriarch Enoch alſo among the propagators of Sabiiſm (2).

(1) Vid. Hottinger. Smegma Orient. p. 230. Heidegg. ubi ſup. p. 148. (2) Vid. Pocock. Specim. Hiſt. Arab. p. 138.

haviour in ſo corrupt an age, he was taken up by God into heaven, without taſting death[m] †. Year of the World, 887. Year before Chriſt, 3419.

THAT Enoch was a prophet, and that ſome prophecy of his was preſerved either in writing, or (as is moſt probable) by tradition, even to our Saviour's time, appears from the paſſage

[m] Geneſ. v. 22, & 24.

† Moſes expreſſes it thus; *and* Enoch *walked with* GOD, *and he was not: for* GOD *took him.* Which paſſage the writer of the epiſtle to the Hebrews paraphraſes in this manner; *By faith* Enoch *was tranſlated, that he ſhould not ſee death; and was not found, becauſe* GOD *had tranſlated him: for before his tranſlation he had this teſtimony, that he pleaſed God* (3). By which words it ſeems plain, that Enoch did not die, but ſuffered only ſuch a change as was neceſſary to fit him for the place whither he was going (4). Yet ſeveral of the Jews believe he actually died (5).

The Jewiſh commentators ſuppoſe, Enoch was carried into the terreſtrial paradiſe (6). Of the ſame opinion were ſome of the chriſtian fathers (7). And it has been imagined, that both he and Elias will return from thence, at the coming of Antichriſt, with whom they are to wage war (8). But theſe notions are juſtly rejected by the moſt judicious interpreters. The vulgate tranſlation of an apocryphal book ſays, indeed, that Enoch was tranſlated into paradiſe, Henoch placuit Deo, & tranſlatus fuit in paradiſum, ut det gentibus pœnitentiam (9); but it has been obſerved, that the Greek ſays only, that he was tranſlated, without making any mention of paradiſe.

The Korân mentions the aſſumption of Enoch (10), who is there called ادريس Edris, which name is derived from דרש in Hebrew to enquire into, and in Arabic, to read or ſtudy with attention; and was given him for his ſuppoſed eminent learning and great knowledge. The Mohammedan commentators ſay, that Edris is now alive in one of the ſeven heavens, being carried thither after he had taſted death, but that GOD reſtored him to life (11).

The learning of Enoch, and particularly his ſkill in the mathematical ſciences, has been celebrated by Jews, Chriſtians, and Mohammedans.

passage quoted thence by St. Jude[n]. However, the piece under

[n] Jude v. 14. 15.

The Jews say, he first invented letters, and became acquainted with the signs of heaven (12). They call him Metatron (13) (though some take this to be a name of the angel Gabriel) (14), which the Targum of Jonathan seems to interpret by the following words, the great scribe: but Buxtorf (15) is rather inclined to think it signifies the Ambassador, or messenger of God, and is the same with the latin word Metator (16).

The Greek christians supposed Enoch to be the same with the first Egyptian Hermes, who dwelt at Sais, that he first discoursed of superior substances, and foretold the deluge; and that he built the pyramids, engraving thereon the figures of artificial instruments, and the elements of the sciences, fearing, lest the memory of them should perish in that general destruction (17). Eupolemus (18) also attributes the invention of astronomy to Enoch, and says, he was the same with Atlas, to whom the Greeks ascribe the same thing. Origen (19) mentions a book attributed to Enoch, different from his prophecy, containing secrets concerning the names of the parts of heaven, and of all the stars and constellations, which is said to be extant among the Ethiopians in their tongue (20). The learned Mr. du Peiresc used his utmost endeavours to get it from thence, but to no purpose (21).

The Mohammedan authors say, that Edrîs received thirty books of revelations from God, wherein the secrets of the most occult sciences were written; and that he found out the use of the pen, the needle, (for they pretend he was a taylor, and the first of the trade) arithmetic, and astronomy. They also tell us, he was the first who took up arms for religion, or the cause of God; for being sent to preach to, and reclaim the posterity of Cain, who refused to give ear to him, he thereupon made war upon them, carrying their wives and children into slavery. The same authors say, that Enoch was the innocent cause of idolatry; for one of his friends missing him after his assumption, at the suggestion of the devil, made a statue of him, to which he paid peculiar honours, which in time degenerated into a superstitious adoration (1).

Father

under the title of the ſcripture, or prophecy of Enoch, of which we have ſome fragments extant*, is allowed to be a manifeſt forgery; though ſeveral of the fathers had a better opinion of it than it deſerves [o]. Many paſſages are quoted thence in that very antient writing, the Teſtament of the twelve patriarchs, and it is alſo cited by Clemens Alexandrinus [p]. St. Auſtin makes mention of the ſcripture of Enoch, but denies it to be genuine [q]. And when Celſus objected its authority to Origen, he replied, that the books attributed to Enoch were not looked upon by the Church as divine writings [r]. That there was a book, under the name of Enoch, in the hands of the Jews, appears from its being referred to in their antient book Zohar [s]. Year of the World, 887 Year before Chriſt, 3419

ADAM, having ſeen a numerous poſterity iſſued from his own loins †, after a life of nine hundred and thirty years ‡, paid that natural debt, to which he had by his diſobedience ſubjected himſelf and them [t]. That he repented of his ſin, and made his peace with God, is very reaſonable to believe Year of the World, 930. Year before Chriſt, 3376. Adam dies.

lieve**, notwithſtanding the uncharitable opinions of ſome to the contrary†*.

Conjectures concerning the place of his burial.

Where he was buried cannot be collected from ſcripture. St. Jerom[u] ſeems to approve of the opinion of thoſe who imagine he was buried at Hebron‡*, in the cave of Machpelah, or the double cave, which Abraham, many ages after, bought for a burying-place for himſelf and family[w]. The oriental chriſtians ſay, that when Adam ſaw death

[u] Hieron. in Matth. xxvii. [w] Geneſ. xxiii. 3, &c.

** The Jews ſay, both Adam and Eve were very penitent (8), and that he in particular was ſo exceedingly afflicted for his ſin, that he had died of grief had not God ſent the angel Raziel to comfort him (9). They even acknowledged him to have been favoured with the gift of prophecy, and that he foretold the flood (10). The Mohammedans alſo do not only reckon him among the prophets, but make him one of the ſix (the others being Noah, Abraham, Moſes, Jeſus, and Mohammed) who introduced a new diſpenſation; and ſay, that God gave him ten books of revelations, containing laws, promiſes, threatnings, and prophecies (11): which notion perhaps they borrowed of the Jewiſh authors, who pretend, that Adam wrote the book intitled Sepher Jeſira, or the book of the Creation (which others attribute to Abraham), and certain treatiſes of the Deity (12). Some Rabbins make him to have been the author of the ninety ſecond Pſalm; and in ſome manuſcripts the Chaldee title of that Pſalm imports it to be the Hymn, which the firſt man ſang on the Sabbath-day (13). Euſebius Nieremberg (14) has been credulous enough to give us two hymns, faithfully copied from the revelation of Amadeus in the library of the Eſcurial, as the genuine compoſitions of Adam; one being that which he repeated on his firſt interview with Eve, and the other the penitential Pſalm ſung by them after the fall.

†* A certain heretical ſect, named Tatianites, affirmed he was damned (15).

‡* This is offered to be proved by this paſſage of ſcripture, according to the vulgate tranſlation, Nomen Hebron ante vocabatur

batur Cariath-arbe: Adam maximus ibi inter Enacim ſitus eſt (16). But the name Adam is unwarrantably inſerted in the text, the Hebrew plainly ſignifying (as the other verſions render it), that Hebron was formerly called Kirjath Arba, or the city of Arba, who had been a great man among the Anakims. There is, however, another origin of that antient name of Hebron given by ſome writers, who taking the word Arba, which alſo ſignifies four, in that ſenſe, and not for a proper name, ſay, that city was ſo called, becauſe four couple were there buried, viz. Adam and Eve, Abraham and Sarah, Iſaac and Rebecca, and Jacob and Leah (1).

* From the Arabic كنز kanaza, to lay up privately, as treaſure, &c. Some Jews ſay, that this precaution was ordered by Adam to be taken, leſt his poſterity ſhould make his relics an object of idolatry (2).

The Eaſtern chriſtians add, that he farther directed his family, that when they were obliged to leave the neighbourhood of paradiſe, they ſhould take his body with them, and place it in the midſt of the earth, becauſe thence ſhould come his ſalvation, and that of all his poſterity (3). Which order, it is ſaid, was repeated by Lamech to his ſon Noah, with this addition, that he ſhould take with the body gold, frankincenſe, and myrrh, as offerings, and appoint one of his ſons to attend the corps to, and at, the new ſepulchre, who was to be a religious perſon, and unmarried; was to ſhed no blood, nor offer any ſacrifices but bread and wine only; was to be cloathed in ſkins, and ſhould neither cut his hair, nor pare his nails, and was to be called the prieſt of GOD; meaning thereby Melchizedek (4). And this Noah and Melchizedek are ſaid to have performed.

Year of the World, 930 Year before Christ, 3376

whereon Christ was crucified †; which opinion opened a large field for rhetorical flourishes and allusions [z]. The Mohammedans will have Adam's sepulchre to have been on the mountain Abu-kabis, near Mecca; and the antient Persians in Serendib, or Ceylon, where it was for some time, as they pretend, guarded by lions [a].

The time of the death of Eve, the mother of all living ‡, is not intimated in scripture, but there are some who venture to tell us, that she out-lived her husband ten years [b].

After the death of Adam, the Eastern writers say, that Seth with his family separated themselves from the profligate race of Cain, and removed to the mountain where Adam was buried, which they chose for their habitation; Cain and

[z] See Bayle Dict. Hist. Art. Adam, Rem. L. [a] Vid D'Herbelot. Bibl. Orient. p. 56. [b] Apud Salian. t. 1. p. 231.

† This opinion may be reconciled with the preceding, if we suppose the body was removed to Golgotha after the flood, in pursuance of the abovementioned orders. Jacobus Edessenus says (5), that Noah carried the bones of Adam with him into the ark, and when he came out of it, he divided them among his sons, giving the scull to Sem, who coming into Judæa, reposited it in the sepulchre of Adam on mount Calvary.

A commentator has an odd story, which is absurdly enough fathered on some Jews; that Seth, at the command of an angel, put into Adam's mouth, when he was interred, a seed of the tree of knowledge, which afterwards grew to be a tree, and that Christ's cross was made of it (6).

To accompany this story, we shall add two more of the same stamp, though not so properly belonging to this place. One is, that Eve broke a branch from the tree of knowledge, of which she made a cudgel, and by that cogent argument prevailed on her husband to eat of the forbidden fruit (7). The other, that Seth planted a branch of the tree of life, which had been either brought to Adam by an angel, or begged by Seth at the gate of paradise; and that the same becoming a tree, Moses afterwards from that tree took his rod, with which he performed so many miracles, the bough, with which he made sweet the bitter waters of Marah, and the pole whereon he fixed the brazen serpent (8).

‡ From whence she had her name, which is properly written Hawwah, and derived from the root חיה Haya, to live (9).

(5) Apud Barcepham de Parad. part 1. c. 14. 6 Corn à Lapide in Genes. ii. 9, citing Pinedo. (7) Apud Salden. Otia Theol. p. 607. (8) Vid. eund. p. 608. & Moebium de æneo serpente (9) Genes. iii. 20.

and his family remaining below in the valley where Abel was ſlain [c]. But how this near neighbourhood is conſiſtent with ſcripture, which plainly intimates Cain's baniſhment into a country at ſome conſiderable diſtance from the reſidence of Adam and his poſterity by Seth, we cannot conceive: unleſs it ſhould be ſuppoſed, that Cain, or his deſcendants, left their own ſettlements to diſpoſſeſs Seth and his offspring; or elſe, that the poſterity of both were by this time ſo greatly encreaſed, that after gradually extending their borders on both ſides, they at length met, and ſtraitened each other. However this be, the Eaſtern tradition is, that the progeny of Seth lived in the ſaid mountain in great ſanctity and purity of manners **. Their conſtant employment was praiſing God, from which they had few or no avocations; for their only food was the fruits of the trees which grew on the mountain, ſo that they had no occaſion to undergo any ſervile labours, nor the trouble of ſowing or getting in harveſt; they were utter ſtrangers to envy, injuſtice, or deceit. Their only oath was by the blood of Abel; and they every day went up to the top of the mountain to worſhip God, and to viſit the body of Adam, as a means of procuring the divine bleſſing [d].

Year of the World 930. Year before Chriſt, 337

HOWEVER, what time they had to ſpare in theſe happy circumſtances, they ſeem to have employed in cultivating their minds, and in ſublime ſpeculations; while the children of Cain, ſeeking no farther than preſent convenience and pleaſure, were taken up with improving agriculture, and inventing mechanical arts and muſical inſtruments. For it is ſaid, that the offspring of Seth, by contemplation of the heavenly bodies, laid the foundations of the ſcience of aſtronomy, and leſt their inventions ſhould be forgotten, or loſt before they were publickly known, underſtanding from a prediction of Adam's, that there would be a general deſtruction of all things, once by the rage of fire, and once by the violence and multitude of waters, they made two pillars, one of brick, and the other of ſtone, and engraved

[c] Eutych. p. 19. [d] Eutych. p. 20. Elmacin. p. 6.

** Our authors, if we may credit them, tell us, that paradiſe was ſo little higher than the mountain, that the children of Seth could hear the voices of the angels celebrating the praiſes of God, and even join them in that ſervice (10).

(10) Elmacin. p. 6, Eutych. p. 20.

Year of the World, 930. Year before Christ, 3376

their inventions on each of them; that if the pillar of brick happened to be overthrown by the flood, that of stone might remain; which, Josephus [e] tells us, was to be seen in his time in the land of Siriad *.

The defection of the sons of Seth.

How long the descendants of Seth continued thus religious, and imitators of their father's virtue, is uncertain. Moses says, *That when men began to multiply on the face of the earth, and daughters were born unto them, the sons of God saw the daughters of men, that they were fair; and they took them wives of all which they chose* [f]. By which it appears, that the beginning of their corruption was their marrying into the wicked family of Cain, by which means their manners were soon debauched, and at length degenerated so far, that *the wickedness of man was very great in the earth, and every imagination of the thoughts of his heart was only evil continually* [g]. Josephus writes, that the family of Seth persevered in the true worship of God, and in the pursuit of virtue for seven generations; after which, in process of time, they neglected both, shewing twice as much eagerness after wickedness, as they had formerly shewn zeal for virtue; by which means they drew down on themselves the indignation of God [h].

The

[e] Joseph. Ant. l. 1. c. 2. [f] Genes. vi. 1, 2. [g] Ibid. v. 5. [h] Joseph. Ant. l. 1. c. 3.

* Where this land of Siriad was, is a great dispute. The name is variously written in the manuscripts, κατὰ γῆν τὴν Σηιάδα, & Συριάδα; by others Σίριδα (1), and by Eustathius Σηιριὰδ, which last seems the more correct. Some place it in Syria; others (2), with a little more probability, have taken it to be the same with Seirath mentioned in scripture (3), and suppose the פסילים pesilim, which the English translation renders the quarries, near Gilgal, in the tribe of Ephraim, were the ruins of Seth's stone pillar. Yet others (4) understand those pesilim, or τὰ γλυπτὰ, the sculptures, as the Septuagint translate the word, to have been certain idols, lately set up there by Eglon.

But the more certain opinion (5) is, that the Syriadic land was in Egypt; for we are told, that Manetho extracted his history from

(1) Malela, Glycas, Cedrenus, & Vetus Interpr. (2) Vossius de LXX Interpr. p. 271. & de ætat. mundi, c. 10. Marsham Canon. Chron. p. 39. (3) Judg. iii. 19, 26. (4) Chytræus, &c. (5) Vid. Dodwell. Dissert. de Sanchon. p. 26, 36. Fabric Biblioth. Gr. l. 1. c. 11. Stillingfleet Orig. Sacr. l. 1. c. 2. & alios.

THE oriental writers place the beginning of this defection somewhat sooner, in the days of Jared [i], and in his fortieth year [k]; when they say one hundred of the sons of Seth, hearing the noise of the music, and riotous mirth of the Cainites, agreed to go down to them from the holy mountain. And on their arrival among them were so captivated with the beauty of the women, who were naked, that they immediately defiled themselves with them [l]. And so these sons of Seth perished by whoring with the daughters of Cain; for whom they offered to return again to their former abode, the stones of the mountain (it is said) became like fire, and permitted them to pass no farther [m]. The lubricity of the Cainites is described in very strong terms. The men neighed after the women like horses, and the women in the same manner after the men, committing whoredom and all manner of filthiness promiscuously with one another in public; the old women being, if possible, more brutish and lewd than the young. The fathers lay with their daughters, and the young men with their mothers, so that the children could not distinguish their parents, nor the parents their children. Year of the World, 930 / Year before Christ, 3376

from certain pillars there, whereon inscriptions had been made by Thoth, or the first Mercury, in the sacred letters and dialect; but were, after the flood, translated from the sacred dialect into the Greek tongue, but written in the sacred letters, and laid up in books by the second Mercury in the sacred recesses of the Egyptian temples (6). These pillars were in subterraneous caverns near Thebes, and beyond the Nile, not far from the sounding statue of Memnon, in a place called Syringes (7), which are described to be certain winding apartments under ground, and which (as it is said) those who were skilled in antient rites, foreseeing the coming of the deluge, and fearing lest the memory of their ceremonies should be obliterated, built and contrived in vaults dug with vast labour in several places; cutting on the walls many sorts of birds, and beasts, and innumerable kinds of animals, which they called hieroglyphic letters (8). And that Seth was not a name unknown to the Egyptians, appears from Plutarch, who tells us, that they constantly called Typhon, which was a Greek name,

Year of the World, 930. Year before Christ, 3376

The opinion of those who suppose angels defiled themselves with women.

The appellation of the sons of God, given by Moses to the children of Seth, led Josephus [n], Philo Judæus [o], and several of the fathers [p] into a strange interpretation of this passage, as if the angels, who are also called in scripture the sons of God [q], were thereby asserted to have had to do with women, and to have begotten on them the insolent and impious race we shall mention immediately *. This supposition we think needs no refutation, being utterly repugnant to

[n] Jos. ubi sup. [o] Philo Jud. de gigant. p. 284. [p] Justin. M. Tertullian, Athenag. Clemens Alexandr. Euseb. Lactantius, Ambrosius, & alii apud Sixtum Senens. Bibl. S. l. 5. annot. 77. Sulp. Sever. Hist. Sacr. l. 1. p. 8. [q] Job i. 6, ii. 1. xxxviii. 7.

name, Seth (9); and hence, it is probable, Josephus was led into the mistake of ascribing these pillars to the son of Adam.

* This opinion seems to have been originally occasioned by some copies of the Septuagint, which, in the days of St. Austin, had in this place *the angels of God* (1). Lactantius supposes the angels, who were guilty of this enormity, had been sent down by God to guard and take care of mankind, and, being endued with free will, were charged by him not to forfeit the dignity of their celestial nature, by defiling themselves with the corruptions of the earth; but that the devil at length enticed them to debauch themselves with women. He adds, that being not admitted into heaven, by reason of the wickedness into which they had plunged themselves, they fell down to the earth, and became the devil's ministers. But that those who were begotten by them, being neither angels nor men, but of a middle nature, were not received into hell, no more than their parents were into heaven. Hence arose two kinds of dæmons, celestial and terrestrial. These are unclean spirits, the authors of whatever evils are committed, and whose prince is the devil (2). From hence very probably proceeded the notions of Incubi, or dæmons, who are supposed to have carnal knowledge of women (3).

But the fancy of angels defiling themselves with women, has been greatly propagated by that forgery we have mentioned above, entitled the prophecy of Enoch. The fragments we have still extant of which give a more particular history of these imaginary transactions; wherefore we shall here insert an extract of those fragments, though some particulars might perhaps be more properly reserved for another place.

When

to the notions we have of the nature of thoſe ſpiritual beings, who are neither married nor given in marriage [r]; though Year of the World 930. Year before Chriſt, 3376

Q 4

[r] Matth. xxii. 30. Luke xx. 34, 35.

When men were greatly encreaſed, they had daughters of ſuch excellent beauty, that the Egregori, or watching angels (4), fell in love with them, and propoſed to one another, that they ſhould go down, and chooſe themſelves wives of the daughters of men: to which Semiazas, their prince, replying, that he was apprehenſive they would not go through with the affair, but leave him to bear the guilt alone, they all ſwore and bound themſelves under imprecations, that they would not recede from their reſolution. The number of theſe Egregori was two hundred, who, in the days of Jared, deſcended on the top of mount Hermon, which was ſo called from the oath they had taken. Their princes were twenty, whoſe names (if the readers have any curioſity to know them) follow:

Semiazas, their chief,	Zaciel,	Samiel,
Atarcuph,	Balciel,	Sarinas,
Araciel,	Azalzel,	Eumiel,
Chobabiel,	Pharmarus,	Tyriel,
Orammame,	Amariel,	Jumiel,
Ramiel,	Anagemas,	Sariel.
Sampſich,	Thauſael,	

Theſe, and the reſt of them, in the year of the world one thouſand one hundred and ſeventy, took themſelves wives, and began to commit lewdneſs with them, which they continued to do until the flood; and the women bore to them three generations. The firſt generation were the giants, the giants begat the Nephilim, and the Nephilim thoſe named Eliud, and they were multiplied according to their ſtature, and taught themſelves and their wives magic and enchantments. The tenth of their princes, named Azalzel, taught them to make ſwords, breaſt-plates, and inſtruments of war; as alſo the working of metals, particularly gold and ſilver, and faſhioning various ornaments for the women; he alſo inſtructed them in the preparing of coſmetics, the poliſhing of precious ſtones, and the art of dying. Theſe things the ſons of men provided for themſelves and their daughters, and they tranſgreſſed; and alſo ſeduced thoſe that were virtuous among them, and wickedneſs prevailed greatly in the earth. Semiazas, the chief of theſe angels, taught the force of poiſonous roots and herbs; Pharmarus, the eleventh, charms and incantations; the ninth aſtroſcopy; the fourth aſtrology: the eighth aeroſcopy; the third the ſigns of the earth; the ſeventh thoſe of the ſun; the twentieth thoſe of the moon; and in like manner each of them revealed

(4) See p. 175. before, in the notes.

Year of the World, 390. Year before Chriſt, 3376

though it be hard to accuſe, as ſome have done [s], thoſe who have fallen into this miſtake, of hereſy and blaſphemy. Others indeed, and particularly ſeveral of the Jewiſh writers, by

[s] Philaſtrius Brixienſis adv. Hær. cap. 108. Chryſoſt. Homil. 22 in Geneſ. c. v.

revealed certain ſecrets to their wives and children. Afterwards the giants began to devour human fleſh: by which means the number of men daily decreaſing, thoſe that remained cried to heaven againſt their cruelty, and beſought God to remember them. This the four arch-angels hearing, looked down upon the earth, and beholding a great deal of blood-ſhed thereon, and that all manner of impiety and diſorder was committed, made their report thereof to God, and at his command bound the princes of thoſe tranſgreſſors, and threw them into the abyſs, there to be kept to the day of judgment (5). Uriel in particular was ſent to Noah, the ſon of Lamech, to acquaint him, that the whole earth was to be deſtroyed by a deluge, and inſtruct him by what means to eſcape it. Raphael was ordered to bind Azael [Azalzel] hand and foot, and to throw him into darkneſs, in the deſart of Dudael, and to lay him upon ſharp ſtones, and cover him with darkneſs, that he might dwell therein for ever, being deſtined to the puniſhment of fire on the day of judgment. The words which follow, directing him to heal the earth of the wounds cauſed therein, by the ſecrets revealed by the Egregori, are ſomething dark, and deſerve not the trouble of an explication. Gabriel's charge was to deſtroy the giants, the ſons of the Egregori, by exciting them to mutual and inteſtine wars, that they might fall by each others hands; and Michael was commanded to bind Semiazas, and the reſt of his companions, and to lead them, after they they had ſeen the ſlaughter of their beloved ſons, to the utmoſt parts of the earth, where they were to be confined for ſeventy generations, till the conſummation of all things, and the day of judgment, when they were to be thrown into the gulph of fire. The giants, being begotten by a mixture of ſpirit and fleſh, were condemned to become evil ſpirits, doing miſchief upon the earth, appearing as ſpectres, and taking no food; but were to riſe with mankind at the general reſurrection. Therefore from the day of the ſlaughter of the giants, the Nephilim, the mighty men of the earth, and the great men of renown, the ſpirits which went forth from their ſouls, as from fleſh, were to continue their miſchievous employments till the laſt day. It was alſo decreed, that mount Hermon, where thoſe angels mutually bound themſelves by an oath, ſhould never be without ſnow and cold till

(5) Ex primo libro Enoch apud Syncellum, p. 11, 12, 13. Vid. 2 Pet. ii. 4.

by the ſons of God, underſtand the fallen angels *, who ſeeing the daughters of Cain walking in the nakedneſs of the fleſh, and painting their eyes like whores, wandered after them, and took wives from among them [t]. Year of the World, 930. Year before Chriſt, 3376

WHILE

[t] R. Eliezer, c. 23.

till the day of judgment, when it ſhould melt like wax. Mankind are alſo threatened with a general deſtruction, and that their life ſhould be but one hundred and twenty years (6).

This is the ſubſtance of thoſe fragments, many parts of which are ſo greatly corrupted, that it is difficult to make ſenſe of them; but the beſt is, the loſs is not great.

* Two of them were Aza and Azael, mentioned before (7). Shamhozai (whoſe name comes very near that of Semiazas) was another; he was the companion of Azael, and begat on ſome woman Hiyah and Hhiyah, who begat Sihon and Og. Shamhozai is ſaid to have repented of his crime, and in penance for the ſame to have hung himſelf up between heaven and earth, in which poſture he ſtill remains; but Azael continuing impenitent, preſides over the womens toilets (8), and in the ſame with the goat Azazel mentioned by Moſes (9). A fourth of theſe debauched angels, named Mahzael, is ſaid to have lain with Ham's wife about the time of the flood, and Sihon, it is pretended, was the iſſue of that adultery (10).

Theſe ancient traditions concerning angels were not unknown to Mohammed. The Korân (11) mentions two, named Harût and Marût, who taught magic at Babel. Theſe, the commentators ſay, were ſent down to be judges on earth, which office they executed with integrity for ſome time, till Zohara, or the ſtar Venus, deſcended, and appeared before them in the ſhape of a beautiful woman, bringing a complaint againſt her huſband (though others ſay ſhe was really a woman). As ſoon as they ſaw her, they fell in love with her, and endeavoured to prevail on her to ſatisfy their deſires; but ſhe flew up again to heaven, whither the two angels alſo returned, but were not admitted. On the interceſſion of a certain man, they were allowed to chooſe, whether they would be puniſhed in this life or in the other; whereupon they choſe the former, and now ſuffer puniſhment accordingly in Babel (12). This ſtory was taken directly from the Perſians, who make mention of two rebellious angels of the ſame names, now hung up by the feet, with their heads downward, in the territory of Babel (13).

Year of the World, 930. Year before Chriſt, 3376

WHILE we are on this head, it may not be amiſs to mention another opinion, more reaſonable than the laſt, which is embraced by the Jewiſh interpreters; [u] they ſuppoſe, that by the ſons of God in this place, are meant the princes, great men, and magiſtrates of thoſe times, who, inſtead of uſing their authority to puniſh and diſcountenance vice, were themſelves the greateſt examples and promoters of lewdneſs and debauchery, taking the daughters of men, or the inferior and meaner ſort of people, and debauching them by force †.

The iſſue of the Sethites and the daughters of Cain, and their impiety.

THE example of theſe ſons of Seth, who, tempted by the allurements of the daughters of Cain, firſt left their ſeat of innocence, was afterwards followed by others, who from time to time deſcended in great numbers from the holy mountain, and took them wives in like manner of that profligate and abandoned race [w]. From theſe unhappy marriages iſſued a generation, which ſeem to have been no leſs extraordinary for their great ſtature and ſtrength, than for their monſtrous impiety and injuſtice. There were in thoſe days giants ** in the earth [x], who being moſt probably of Cain's race,

[u] Targumim Onkelos & Ben Uzziel. R. Sol. Yarhi, Aben Ezra, &c. [w] Eutych. p. 27. [x] Geneſ. vi. 4.

† To ſupport this interpretation, they tell us that the verb לקח, which is generally rendered to take, ſignifies alſo to raviſh, or take by violence.

** The Hebrew word is נפילים Nephilim, from נפל Naphal, to fall: which derivation is urged in defence of that opinion, which makes them incarnate ſpirits, or the fallen angels, under the ſhape of men (14). The targum of Ben Uzziel agrees with this interpretation, and names two of thoſe angels then converſant on earth, viz. Shamhazai and Uziel. But the root ſignifies alſo to fall upon, to ruſh with violence, &c. According to which ſenſe Symmachus tranſlates Nephilim βιαίους, & Aquila ἐπιπίπτοντας. The other tranſlations generally rendering it Giants.

Some take theſe Nephilim to have been men of ordinary ſtature, and ſo called on account only of their enormous impiety, rapaciouſneſs, and inſolence (15), which, as it ſeems, was the opinion of Joſephus (16). But others, with greater reaſon, believe they

(14) Vid. Paul. Burgens. in loc. (15) Philo Jud. de Gigant. Gorop. Becanus in Gigantomach. Temporarius.
(16) Antiq. l. 1. c. 3.

race, both by father and mother, and born before the conjunction Year of the World, 930. Year before Christ, 3376

they were also of extraordinary stature and strength (1); the word Nephilim being manifestly used elsewhere in scripture (2) to denote men above the common size. Not, but that it may also signify those that fall away, apostates (3).

That there were in these ancient times men of a gigantic size and strength, is a thing very credible, both from later instances in historians, both sacred and prophane, and modern instances in our own times (4). But we must not hence conclude, as some have done, that mankind in general were in the first ages of a much larger stature than they are at present (5); giants being manifestly spoken of as rarities, and the wonders of their time, though their number seems to have been much greater before the flood.

The opinion of J. Bolduc (6), the Capuchine, is too singular to be omitted. He supposes, that the different words by which giants seem to be intended in scripture, as Nephilim, Raphaim, Zuzim, Gibborim, Enakim, Zamzummim, Elim, &c. do not, for the most part, denote the uncommon size, but the strength and excellence of the piety and truth of the holy patriarchs, the first propagators of mankind and divine worship. The Nephilim, in particular, he imagines to be those who were distinguished from others, in that they worshipped God by falling down, or prostration; in the same manner as the fathers of the order of St. Francis of Assise are remarkable for adoring in the same posture, and kissing the earth, before the host.

Some authors have enquired into the original cause of this monstrous stature of the giants; St. Cyril thinks it a judgment of God on the lust of their parents (7). They who suppose them to be the issue of the fallen spirits, say, it was by their artful promoting and raising the leachery and pleasure of the women with whom they had to do (8); some attribute it to the vigor of the sons of Seth (9); while others make Seth's descendants in general to have been of a very large size, and those of Cain on the contrary of a less (10).

junction of the two families *, made use of their superior power to spoil and tyrannize over the weaker. And the same course of life was followed by the new mongrel offspring, who signalized themselves also by robberies and oppressions, and became mighty men, which were, of old, men of renown [y].

Year of the World, 1287 Year before Christ, 2019

The 120 years of God's forbearance.

Mankind running thus headlong into all manner of vice, and the posterity of Seth, who had for some ages retained their integrity, becoming at length, by their imprudent alliance with the race of Cain, infected with the same contagion of profaneness and immorality, so that all sorts of wickedness began to overspread the earth; and this, notwithstanding the frequent admonitions they probably received by persons from time to time sent by God; the divine vengeance might with justice have been immediately executed on so perverse a generation: but God, out of his great mercy, was pleased to grant them a convenient time for repentance, no less than one hundred and twenty years; during which space, but no longer, his spirit should strive with man [z], or endeavour to awaken and reclaim them from their wicked course of life †.

[y] Genes. vi. iv. [z] Ibid. v. 3.

* This the words of Moses seem to imply; *There were giants* (says he) *in the earth in those days; and also after that, when the sons of God came in unto the daughters of Men, and they bare children to them*, &c. So that there appear to have been two distinct races of Nephilim; one of which arose pretty early in the world, being of the posterity of Cain; and another, which began some ages after; being the issue of the sons of Seth, by the daughters of Cain (11); and both of them probably continued to the flood.

† This passage of scripture is variously interpreted; the English translation seems to give the true sense of the Hebrew; but the Septuagint, Vulgate, and Syriac versions render the word דין (which we translate strive with) continue, or dwell in; supposing the meaning to be, either that God's spirit of admonition, or forbearance, would not always wait on man; or else that the spirit or breath of life, should not always continue in him; that is, no longer than the space of one hundred and twenty years, after which, if he continued impenitent, he should be destroyed. And this is the sense of Onkelos. The Jews have much useless learning in their comments on this text (12). But they who infer from

Year before Chriſt, 3019

Noah preaches.

AMIDST this general corruption, one man, however, was found to be juſt and perfect in his generation ‡, walking with God [a]. This extraordinary perſon was Noah *, the ſon of Lamech, who, not thinking it ſufficient to be righteous himſelf, unleſs he did his utmoſt to turn others likewiſe to righteouſneſs, by admonition as well as example, became a preacher [b] to the abandoned race among which he lived, employing both his counſel and authority to bring them to a reformation of their manners, and to reſtore the true religion among them †. But all he could do was to no purpoſe, for they continued incorrigibly obſtinate;

[a] Ibid. v. 9. [b] 2 Peter. ii. 5.

from hence, that the ſtandard of man's life was now reduced and limited to one hundred and twenty years (13), are manifeſtly miſtaken; for that reduction was not made immediately after the flood; nor till the days of Moſes; and St. Peter plainly approves the other ſenſe, when he obſerves, that *the long ſuffering of God waited in the days of Noah, while the ark was preparing* (14): yet this notion ſpread even among the heathen writers (15).

‡ From this expreſſion ſome Jews would infer, that Noah was a good man comparatively ſpeaking only, in reſpect of the great wickedneſs of the reſt of the world: but that had he lived in Abraham's time, he would have had but a ſmall ſhare of reputation for virtue (16). But this unjuſt ſurmiſe, had it any foundation in the words of Moſes, is refuted by the teſtimony of Ezekiel (17), who names him as one of the three that had been moſt eminent for righteouſneſs, and ſhould ſave their lives by their own merits in the moſt univerſal calamities. It is true, they give another reaſon for their opinion, viz. becauſe Noah did not intercede for the old world, as Abraham did for Sodom.

* Lamech gave his ſon this name, which ſignifies comfort; for this ſame, ſays he, *ſhall comfort us concerning our work and toil of our hands, becauſe of the ground which the Lord hath curſed.* Which words, not expreſſing the means by which Noah was thus to comfort his friends, ſome writers have thence inferred, that he invented the tools and inſtruments of huſbandry (1).

† The eaſtern chriſtians ſay, that when God ordered Noah to build the ark, he alſo directed him to make an inſtrument of wood,

Year of the World 1287. Year before Chriſt, 3019

ſtinate; ſo that at length (as Joſephus [c] tells us) finding himſelf and family in imminent danger of ſome violence, in return for his good will, he departed from among them with his wife and children.

Mankind incorrigible.

On his departure, it is probable, they fell into greater diſorders than before, having now none to controul, or even to trouble them with unwelcome advice. Moſes aſſures us, that *the wickedneſs of man was great in the earth, and that every imagination of the thoughts of his heart was continually evil* [d], and that *the earth was corrupt and filled with violence, all fleſh* ‡ *having corrupted his way upon the earth* [e]. Which words leave no room to enquire into the particular crimes of the antediluvian world, which ſeems to have been over-run with a complication of all manner of debauchery and wickedneſs, and above all with violence and injuſtice towards one another. Whether idolatry was practiſed before the flood, is a queſtion we ſhall diſcuſs elſewhere; but the eaſtern authors are for the affirmative, and

[c] Antiq, l. 1. c. 3. [d] Geneſ. vi. 5. [e] Ib. v. 11, 12.

wood, ſuch as they make uſe of in the Eaſt, at this day, inſtead of bells, to call the people to church, and named in Arabic ناقوس Nâkûs, which he was to ſtrike three times every day, not only to call together the workmen that were building the ark, but to give him an opportunity of daily admoniſhing his people of the impending danger of the deluge (2).

The Mohammedans likewiſe agree to make Noah a prophet, and, as has been obſerved, one of the ſix principal ones (3), though he had no written revelations delivered to him (4). The Korân mentions his preaching to thoſe of his time in ſeveral places (5). Some of their writers pretend he was ſent to convert Zohâk, one of the Perſian kings of the firſt race, who refuſed to hearken to him. He then went to preach God's unity publickly, but could make no more proſelytes than eighty, who went with him into the ark (6).

‡ The oriental writers agree in making this defection ſo univerſal, that at laſt, they ſay, there was none left in the holy mountain of all Seth's race, except only Noah and his wife, and his three ſons and their wives (7).

(2) Eutych. Annal p. 37. (3) See before p. 240. in the notes. (4) Vid. Reland de rel. Moham. p. 34. (5) Cap. 11. v. 26. cap. 26. v. 105, &c. (6) Vid. D'Herbel. Bibl. Orient. p. 675. (7) Eutych. Annal. p. 35.

and ſays the children of Seth were ſeduced to it by the Cainites [f].

THINGS being in this ſtate, God, as the ſacred hiſtorian pathetically expreſſes it, *repented, that he had made man on the earth, and it grieved him at his heart* [g]. And the time of forbearance being elapſed, he paſſed the ſentence of their utter deſtruction by a flood of waters, and not only of them, but of the beaſts of the earth, and every creeping thing, and of the fowls of the air [h], which became involved in the calamity of their maſters. But *Noah found grace in the eyes of the Lord* [i], who had before, probably at the beginning of the one hundred and twenty years, acquainted him with his deſign of bringing a deluge on the earth; and as a means to preſerve him and his from that calamity, directed him to make an ark, or veſſel of a certain form and ſize, capable of containing not only himſelf and family (for he had three ſons, Shem, Ham, and Japhet, who were all married before the flood), but ſuch numbers of animals of all ſorts, which were liable to periſh in the flood, as would be ſufficient to preſerve the ſeveral ſpecies and again repleniſh the earth, together with all neceſſary proviſions for them [k]. All which Noah performed, and ſo, by God's peculiar favour and providence, he and thoſe that were with him eſcaped this tremendous and, otherwiſe, general deſtruction; which event, the moſt extraordinary that is recorded in hiſtory, and deſerving our greateſt attention, muſt be the ſubject of a future diſcourſe, after we ſhall have taken a view of what the prophane writers offer us towards the hiſtory of this period.

Year of the World, 1307
Year before Chriſt, 2999

The whole world deſtroyed by a flood, except Noah and his family.

SECT. V.

The prophane hiſtory before the flood.

BESIDES the particulars in the preceding ſection, taken from the writings of Moſes, the only records to be depended on in theſe early times, we have ſome farther accounts relating to this period, tranſmitted to us by antient writers; particularly thoſe of the Phœnician, Babylonian, and Ægyptian antiquities, which we muſt not omit;

Accounts of antediluvian affairs beſides that of Moſes.

[f] Eutych. Annal. p. 31. [g] Geneſ. vi. 6. [h] Ib. v. 7. [i] Ib. v. 8. [k] Ib. v. 14, &c.

omit; leaving, however, the reader to judge of their credibility,

Sanchoniatho's Phœnician history.

Sanchoniatho, who wrote the Phœnician antiquities *, began his history from the origin of the world and of mankind; but his work being apparently written with a design to apologize for idolatry [l], instead of deducing the history (as Moses has done) from Adam in the line of Seth, the worshippers of the true God, he has according to the most probable hypothesis †, given us that of the idolatrous line of Cain; that the religion which this author, or those he transcribed, patronized, might appear to be introduced by the elder branch, a circumstance which, they might think, gave it no small lustre and reputation.

In the following extract from the remaining fragments of this author, we might justly be surprized to find not so much as the least mention of the deluge, did we not consider, that destruction was a judgment on the idolatrous world, with which the professors of the true religion probably reproached the heathens, and which the latter were therefore desirous to conceal, to bury, if possible, the very memory of so extraordinary a monument of divine vengeance and their own shame.

Generation I.

Sanchoniatho having delivered his cosmogony, or generation of the other parts of the world [m], begins his history of mankind with the production of the first pair of mortals [n], whom Philo, his translator, calls Protogonus and Æon ‡, the latter of whom found out the food which is gathered from trees.

Their

[l] See the introd. p. 95.
[m] Vid. ibid. p. 96
[n] Vid. ibid. p. 170.

* The credit of the fragments we have remaining of this work and the age of its author, are enquired into in the preface.

† Viz. That of bishop Cumberland, the substance of whose remarks the reader will find in the following notes.

‡ That these two were Adam and Eve, appears not only from their being the first of human kind, but also from their names, Πρωτόγονος the first produced, and Αἰών life (which is the signification of that word in the feminine gender, the masculine article τον, prefixed to it in the original, being a mistake of the transcriber;) the latter of them bearing a near resemblance to Eve both in sense and sound. What our author immediately mentions

THEIR issue were called Genus and Genea *†, and dwelt in Phœnicia: but when great droughts came, they stretched forth their hands to heaven towards the sun **; for him they thought the only God and Lord of heaven, calling Generation II.

mentions of the woman's first gathering food from trees, seems to allude to Eve's first eating the forbidden fruit (1).

*† Genus, abating the termination, makes a fair approach in sound to the name of Cain; and by its signification seems very proper to denote the man who was the first-begotten in the ordinary course of nature. The Greek word γενάω, whence the Latin geno comes, being also probably derived from קָנָה Kana (K and G being letters of the same organ, and consequently easily changed into each other), the root from which the name of Cain was formed. Genea may signify only the wife of Genus, as Caia does the wife of Caius in the civil law (2).

As to what follows, that Cain and his wife dwelt in Phœnicia, this seems repugnant to the Mosaic history, where Nod is said to be on the east of Eden. But it may not be impertinent to add, what has been observed, that there was a city in Canaan called Cain, within the bounds assigned to the tribe of Judah (3). In the best maps it is situated not far from the sea, on a promontory lying within the country, which the Philistines kept long in their possession; and it is not likely, that any who owned themselves derived from Seth, should build a city, and then brand it with the odious name of Cain; but it is possible it might be either built by some of his family before the flood, and its ruins be repaired afterwards, still keeping his name; Joppa, another city in that neighbourhood, being also said to be more antient than the deluge (4). Or it might be built by the old Philistines before Joshua's time; and they, being descended from Mizraim, might, though falsely, believe, as Sanchoniatho reports that he was of Cain's line, and thence might call the city by his name (5).

** This seems to have been the first introduction of idolatry, which began with the worship of the sun; several of Cain's descendants added other methods of idolatrous worship, distinctly set down by this author; they proceeded to deify the several parts

(1) Vid Grot. de veritate Rel. Christ. in notis ad lib. 1. § 16 Cumberl. on Sanchon. p. 215, &c. (2) Cumberl. ibid. p. 219, &c. (3) Josh. xv. 57. (4) Plin. Nat. Hist. l. 5. c. 13. (5) Cumberl. ubi supr. p. 229, &c.

calling him Beelſamen which in Phœnician is Lord of heaven, and in Greek Zeus. For we, ſays our author, not vainly, have frequently diſtinguiſhed thoſe names, but with reſpect to the later ſignification of names accruing to them from later things; which the Greeks, not knowing, have conſtrued otherwiſe, being deceived with the ambiguity of their ſignifications.

Generation III. AFTERWARDS from Genus, the ſon of Protogonus and Eon, other mortal iſſue was begotten, whoſe names were Phos, Pur, and Phlox, that is, Light, Fire, and Flame *.

Generation IV. Theſe found out the way of generating fire, by the rubbing of pieces of wood againſt each other, and taught men the uſe thereof. Theſe begat ſons of vaſt bulk and height, whoſe names were given to the mountains on which they ſeized: ſo from them were named mount Caſſius, and Libanus, Antilibanus, and Brathys †.

Generation. V. OF theſe laſt were begotten Memrumus and Hypſuranius ‡, but they were ſo named by their mothers, the women

parts of nature and men after their death, and even to conſecrate plants ſhooting out of the earth, which the firſt men, or thoſe in the elder ages, judged to be gods, and worſhipped, as thoſe that ſuſtained the lives of themſelves and their poſterity, as well as of their anceſtors: to theſe they made their meat and drink, offerings; which, Sanchoniatho ſays, were the devices of worſhip agreeing with the weakneſs and want of boldneſs in their minds (6).

* Hebrew names like theſe, though unuſual among us, are mentioned in after times in ſcripture; as, Ur, Uri, Beor, and Lehabim, which ſignify Fire and Flames, and anſwer Philo's well enough. It is ſuppoſed, they were ſo called from their inventing the method of kindling and uſing fire (1).

† This generation were inhabitants and lords in the great mountains which took their names from them. So Seir, a name of Eſau, is ſuppoſed to have been given to the mountain which he poſſeſſed, though it be proleptically given to that country before his birth (2).

‡ Bochart makes theſe two but one perſon, reading Memrumus, who is alſo called Hypſuranius, the latter name ſeeming to be a tranſlation of the firſt, which Bochart thinks has loſt a Syllable, Mem being left inſtead of Samen, or שמים Shamaim, ſignifying heaven, to anſwer Ὑψιστος in Philo's tranſlation, as Rum does Ὕψος, or high. Scaliger thinks it only put inſtead of מרום Minrum, from on high. Biſhop Cumberland derives it with leſs change

(6) Sanchon. apud. Euſeb. ubi infra. (1) Cumberl. ubi ſup. p. 237. (2) Vid. eund ibid.

men of thoſe times, who without ſhame lay with any man they could light upon **. Hypſuranius inhabited Tyre, and he invented the making of huts of reeds, and ruſhes, and the papyrus. He alſo fell into enmity with his brother Uſous *†, who firſt invented a covering for his body out of the ſkins of the wild beaſts which he could catch. And when violent tempeſts of wind and rains came, the boughs in Tyre being rubbed againſt each other, took fire, and burnt the wood there. And Uſous, having taken a tree and broke off its boughs, firſt was ſo bold as to venture upon it into the ſea. He alſo conſecrated two rude ſtones, or pillars, to fire and wind, and he worſhipped them, and poured out to them the blood of ſuch wild beaſts as had been caught in hunting *†*. But when theſe were dead, thoſe

change from רוּם Rum, and מַיִם Maïm, ſignifying waters from on high, or iſſue from above (3).

** The immorality of the womens proſtituting their bodies, ſo plainly confeſſed by our author, agrees with the intimation which Moſes gives concerning the debauchery of theſe ages, and the general corruption of the world which inſued upon it.

*† Uſous is thought to be the ſame with עוּץ Ous, i. e. ſtrong, a name long after given to the ſon of Aram, whom Joſephus calls Ouſes, and we write Uz; the termination in Joſephus only differs from Philo's Ouſous (4).

† The wind and fire, to which theſe two pillars were conſecrated, ſeem to have been thoſe violent ones that had burnt the wood. This is the oldeſt inſtance of worſhipping theſe lower ſort of naturally immortal gods; which it is probable were worſhipped becauſe the fire and winds are of kindred to celeſtial or æthereal matter. The Greek does not expreſly ſay, that the blood of the wild beaſts was poured out, but it is conceived neceſſary ſo to underſtand the words σπένδειν ἐκ θηρίων, becauſe there is nothing elſe in them, beſides their blood, which can be poured out as a libation. This is therefore to be obſerved to be the firſt offering of blood to inferior deities. And becauſe this was that of hunted wild beaſts, of whoſe blood no great quantity could be gotten to be poured out of veſſels; we may infer, that Uſous offered ſome part of their fleſh, with their blood dropping out of their limbs. And ſince there is no reaſon to doubt, but he eat part of what he had taken in hunting, as he offered part; this is the firſt example of eating fleſh before the flood; and the reſtriction under which it was afterwards granted to Noah, ſeems to intimate, that the wild antediluvian ſons of Cain had fallen into the barbarity of eating raw and bloody fleſh, forbidden therefore to Noah and his poſterity, both

(3) Idem ibid. p. 231. (4) Idem ibid. p. 238.

thoſe that remained conſecrated to them ſtumps of wood and pillars, worſhipping them, and kept anniverſary feaſts unto them *_*.

Generation VI. Many years after this generation, came Agreus and Halieus †*†, the inventors of the arts of hunting and fiſhing, from whom huntſmen and fiſhermen are named.

Generation VII. Of theſe were begotten two brothers, the inventors of iron and of the forging thereof: one of theſe, called Chryſor †, the ſame with Hephæſtus, or Vulcan, exerciſed in the caſe of ſacrifice and of ordinary diet, to prevent all correſpondence with their ſavage practices (5).

_ Here is the connection of the worſhip of men after death, with that of the parts of nature. But it does not appear, any ſacrifice or prayer was as yet made to them as gods, as is expreſly ſaid hereafter of Vulcan.

†*† Theſe names are Greek, and therefore Philo's tranſlation of ſome eaſtern names of like import. All that can be underſtood of this age is, that the arts, or employments here mentioned, were then much improved, for Uſous was a huntſman before.

Though the connection of this generation with the preceding, be expreſſed more ambiguouſly than any other in the whole pedigree, by the words, after much time; which may occaſion a doubt, whether this generation was the immediate off-ſpring of the laſt or not; yet if we conſider, how far ſome of the antediluvians were advanced in years before their children were born, we muſt allow, that no argument can be built thereon for the negative. And an interpolation of other generations cannot be admitted, without owning ſo many more generations in Cain's line before the flood, which would maké his line to have more links in it than Seth's, a circumſtance we have no reaſon to believe (6).

† Bochart's origination of this name from חרש-אור Chores-ur, which he renders Πυριτεχνίτης, an Artificer by fire, is not improbable. Yet biſhop Cumberland rather derives it from a ſimple root, חרץ Charas, to beſtir one's ſelf vigorouſly, to cut, &c. from whence χρῦσος, beaten, or cut gold, is allowed to come, and why not Chryſor? ſince it differs only in termination, and compoſitions muſt not be admitted in eaſtern words without neceſſity.

This Chryſor is the firſt man our author informs us of, who was worſhipped as a god after his death, a plain confeſſion that ſuch worſhip was not from the beginning. It is remarkable, that as this ſort of idolatry began in the eighth generation, and the flood was drawing near in the next generation but one, ſo it is more than probable,

(5) Idem ibid. p. 239, 240.

(6) Idem ibid. p. 242, &c.

ciſed himſelf in words, and charms, and divinations; and he found out the hook, bait, and fiſhing line, and boats ſlightly built, and he was the firſt of all men that ſailed. Wherefore he was alſo worſhipped after his death for a god, and they called him Zeus Michius, or Jupiter the engineer ‡; and ſome ſay, his brothers invented the way of making walls of brick.

AFTERWARDS from this generation came two brothers, one of which was called Technites, or the Artiſt, the other Geïnus Autochthon **, the home-born man of the earth. Theſe found out to mingle ſtubble, or ſmall twigs, with the bricky earth, and to dry them in the ſun, and ſo made tiling. Generation VIII.

BY theſe were begotten others, of which one was called Agrus [field] and the other Agrouerus, or Agrotes *†, [huſbandman] Generation IX.

bable, that all, or moſt, of thoſe who were concerned in this firſt deifying of men, if they lived to be any thing near the age of their contemporaries of Seth's line, were drowned therein (1).

‡ The original is Diamichius. But our learned biſhop chooſes to divide the word, and derives Michius from מחי Machi, a machine (2).

** Technites ſeems to be a tranſlation of the eaſtern name Malachi, from מלאכה Malâca, workmanſhip, art. The other Geïnus, ſignifying earthy has ſome affinity with Epher, and Ephron, Canaanitiſh names, and probably uſed by Sanchoniatho (3).

*† This generation is remarkable, becauſe to the men thereof, the firſt ſtatue, or idol to be worſhipped, and the firſt temple we read of, was erected in Phœnicia; a ſmall temple, or rather tabernacle, it was, like that of Moloch and his ſtar Chiun, or Remphan (4), and drawn by oxen, in the ſame manner as the ark, or epitome of God's tabernacle, was ſent home by the Philiſtines, ſucceſſors to the old Phœnicians in their religion and abode, upon a new cart, drawn by milch kine (5).

The names of theſe men import gods of huſbandry, as Pan, Pales, and Sylvanus among the Greeks and Romans. Biſhop Cumberland gueſſes that in Sanchoniatho, the perſon whom Philo expreſſes by Agrus, might be called Siddim, or Sadid, a name whereby one of Cronus's ſons is afterwards called; either of which will anſwer the Greek (6).

The Egyptians, whoſe religion and deſcent was the ſame with that of the old Phœnicians, beſides Pan, had an antient deity, named Aroueris, mentioned by Plutarch, and by ſome taken to be

(1) Idem ibid. p. 244, &c. (2) Idem ibid. p. 232. (3) Ibid. p. 246. (4) Amos v. 26. Acts vii. 43. (5) 1 Sam. vi. (6) Cumberl. ubi ſupr. p. 247, &c.

[huſbandman] who had a ſtatue much worſhipped, and a temple carried about by one, or more yoke of oxen in Phœnicia: and among thoſe of Byblus he is eminently called the greateſt of the gods. Theſe found out how to make courts about mens houſes, and fences, and caves, or cellars. Huſbandmen, and ſuch as uſe dogs in hunting, derive frome theſe; and they are alſo called Aletæ, and Titans.

Generation X.

Of theſe were begotten Amynus and Magus *†*, who ſhewed men to conſtitute villages and flocks.

In theſe mens age there was one Eliun ***, which imports in Greek Hypſiſtus [the moſt high], and his wife was named Beruth, who dwelt about Byblus; and by him was

Apollo, by others Orus Senior, and by Scaliger (7) Anubis. But biſhop Cumberland thinks, he was the ſame that is here called Agrouerus; and if the g is allowed to melt away, as it often does, or if we take Ἀγρὸς and Ἄρουρα as Synonyma, the name is the ſame, for the termination is arbitrary (8).

† Amynus ſeems to import in this place a defender from enchantment, and Magus a ſorcerer; though both words are more capable of a more favourable interpretation. Yet in the loweſt dregs of Cain's race, we may believe the worſt the words will bear (9).

This generation being the tenth from Adam incluſive, was that generation which, excepting Noah and his Family, was entirely deſtroyed by the flood, together with their children. But thoſe idolaters, from whom Sanchoniatho took his genealogies, ſuppreſſed all mention of the flood, as he does; and pretended, that the line, in which their idolatry began, was continued on to ſucceeding ages. And this being impoſſible to be done, in inſtances of men that ever had any being in the earth, any other way than by taking men out of Noah's line, and annexing them as ſons to the laſt men of that family, which in truth was wholly extinguiſhed in the flood, they proceed to carry on the genealogy with Miſor and Sydyc, two perſons who in reality, as it will be attempted to ſhew, were deſcendants of Noah (10). Wherefore we reſerve the hiſtory of them and their poſterity until after the deluge.

*** In Hebrew עליון Elion. This perſon, as will appear when we conſider his deſcendants, muſt be Lamech, the father of Noah, of the line of Seth, which is here introduced abruptly and imperfectly, as being that of the profeſſed enemies of the falſe religion which our author patronizes (11).

(7) De emend. temp. (8) Cumberl. ubi ſup. p. 249. (9) Idem ibid p. 250. (10) Idem ibid. p. 177. (11) Idem ibid. p. 152.

was begotten one Epigeus, or Autochthon ††, whom they afterwards called Uranus * [Heaven], ſo that from him that element which is over us, by reaſon of its excellent beauty, is called heaven; and he had a ſiſter of the ſame parents called Ge † [the Earth], and by reaſon of her beauty the earth had her name given to it.

Hypsistus, the father of theſe, dying in fight with wild beaſts, was conſecrated, and his children offered ſacrifices and libations to him. But Uranus taking the kingdom of his father, married his ſiſter Ge, and had by her four ſons, Ilus, who is called Cronus [or Saturn] Betylus, Dagon, who is Siton, or the god of corn, and Atlas ‡; but by other wives Uranus had much iſſue.

†† Theſe two Greek names having ſome relation to the earth, it is likely they tranſlate the title which Moſes gives Noah, who is here meant, viz. *a man of the earth* (1), which we render an huſbandman; and that may alſo be the reaſon why his wife's name is ſaid to be Ge, the earth (2).

* This name, and that of Elium, are ſuppoſed to have been given to Noah and his father, by Thoth and other idolaters by way of ſneer, becauſe they worſhipped the only ſupreme God in heaven, in oppoſition to their earthly gods, which had been men (3). But a better reaſon is, that it was the conſtant cuſtom to give new and magnificent names to perſons deified (4), as Elium and Uranus both were; though they had no conſiderable part of the idolatrous worſhip, which was chiefly employed in ſerving Cronus, and his wives, and children (5).

† The Atlantian theology, which ſeems to agree with Sanchoniatho, in ſaying, that Uranus gave his name to the heavens, to imprint a greater idea of himſelf in the minds of the people, tells us, however, that his wife's firſt name was Titæa (perhaps from טיט Tit, mud) and that ſhe being, after her death, conſecrated into a goddeſs, was called Ge (6).

‡ The firſt of theſe four ſons was Ham, the arguments to prove which will be produced hereafter in a more proper place; who the other three ſons here named were, will alſo be conſidered elſewhere: we ſhall only obſerve here, that none of them are either Shem, or Japhet, who, according to the biſhop's hypotheſis, are found under other names, viz. thoſe of Sydyc, and Nereus.

(1) Geneſ. ix. 20. (2) Cumberl. ubi ſup. p. 151.
(3) Idem ibid. p. 182, &c. (4) Ibid. p. 231, &c.

Thus far Sanchoniatho; the thread of whoſe hiſtory we break off here, and ſhall reſume in the next period. But before we diſmiſs this author, we ſhall in the following table compare the pedigree of Cain's line given by him, with that given by Moſes; firſt obſerving, that though Moſes hath not recorded ten generations in this line, as Sanchoniatho has, yet it does not thence follow, that there were not ten generations in this line before the flood; for Moſes does not tell us that thoſe he has named were all the deſcents before the flood, nor that the laſt generation which he mentions was drowned, though probably it was ſo. However, it is very improbable, that eight generations in Cain's line ſhould live as long as the ten in Seth's, eſpecially conſidering that Cain in all likelihood had children before Seth was born: wherefore it is more reaſonable to believe, that Moſes has paſſed over two generations of Cain, as not worthy of mention; and the rather, becauſe he does not ſay, that Enoch begat Irad, but only, *unto Enoch was born Irad* **; which will be true if he was not his ſon, but his grandſon, or great grandſon; ſkipping over two generations, which added to the eight mentioned will make ten, as in Seth's line before the flood °, thus:

° Vid. Cumberl. on Sanchon. p. 303, &c.

** The like expreſſion to the ſame ſenſe is found in another paſſage (7), where it is foretold, that *Joſiah ſhould be born to the houſe of David*, or be of the poſterity of Rehoboam then reigning, though he was many generations after him.

(7) 1 Kings xiii. 2.

A Table

A TABLE of the Deſcendants of CAIN.

According to MOSES.	According to SANCHONIATHO.
1. Adam, Eve,	1. Protogonus, Æon,
2. Cain,	2. Genus, Genea,
3. Enoch,	3. Phos, Pur, Phlox,
4. ———	4. Caſſius, Libanus, &c.
5. ———	5. Memrumus, Uſoüs,
6. Irad,	6. Agreus, Halieus,
7. Mehujael,	7. Chryſor, or Hephæſtus *†,
8. Methuſael,	8. Technites, Geïnus,
9. Lamech,	9. Agrus, Agrouerus,
10. Jabal, Jubal, Tubal-Cain.	10. Amynus, Magus.

THE Babylonian antiquities were collected by Beroſus *, a Chaldean by birth, who lived in the time of Alexander the Great [P]. But of that work we have now remaining only ſome few fragments, the ſubſtance of which, ſo far as comes within the preſent period, we here ſubjoin. Beroſus's Babylonian antiquities.

AFTER

[P] Alex. Polyhiſt. apud Syncell. p. 28.

*† Sanchoniatho here places his chief artiſts in the ſeventh and eight generation, whereas Moſes, according to this table, places them in the tenth. If we ſuppoſe the two laſt generations, and not the fourth and fifth, to be thoſe omitted by Moſes, they will come much nearer. Dr. Cumberland, to obtain a fuller agreement, conjectures, that theſe two links in Sanchoniatho, have been tranſpoſed, and that Chryſor ſhould be in the eighth place, and Technites in the ſeventh; or elſe, that the father in the ſeventh generation might invent thoſe arts, and on that account be celebrated by Thoth, or his ſcribes; and the ſons might bring them to greater perfection in the eighth generation, and for that reaſon be rather taken notice of by Moſes (1).

* Of this author, the reader will find a more particular account in the preface.

(1) Cumberl. ubi ſup. p. 232, &c.

The manner of mens acquiring the knowledge of arts and ſciences.

AFTER a deſcription of Babylonia, he writes, that in the firſt year there appeared out of the red Sea, at a place near the confines of that country, a certain irrational animal †, whoſe name was Oannes. He had his whole body like that of a fiſh, but beneath his fiſh's head he had another head grew; he had alſo feet like a man, which proceeded from the fiſh's tail, and a human voice, the picture of him being preſerved to that very day. This animal converſed with men in the day-time without eating any thing; he delivered to men the knowledge of letters and ſciences, and ſkill in various arts; he taught them to dwell together in cities, to erect temples, to introduce laws, and inſtructed them in geometry; he likewiſe ſhewed them how to gather ſeeds and fruits; and, in ſhort, imparted to mankind whatever was neceſſary and convenient for a civilized life. But after this time there was nothing excellent invented. When the ſun ſet, this animal retired into the ſea again, and ſtayed there in the night-time, being of the amphibious kind. After him there appeared ſeveral other animals of the ſame form, mentioned in the enſuing hiſtory. This Oannes did not deliver his inſtructions by word of mouth only, but, as our author aſſures us, wrote of the origin of things [q], and of political œconomy [r].

OTHER authors have alſo made mention of this Oannes, Helladius calls him Oes (if it be not rather the ſcribes way of abbreviating Oannes,) and agrees in general with the foregoing account; but adds, that he had the hands, as well as the head and feet of a man; that it was reported, he was produced from the primigenial egg (as his name teſtified ‡), and

[q] See before, p. 101. [r] Alex. Polyhiſt. ex Beroſo apud Syncell. p. 28.

† The Greek is ζῶον ἄφρενον; but the ſequel plainly ſhews him to have been nothing leſs than irrational: ſome corruption may therefore very juſtly be ſuppoſed.

As to the names of Oannes and Annedotus given to this perſon, and thoſe of the ſame appearance who are mentioned below, it may ſeem a folly to offer at any explanation of them. By their coming up out of the ſea, it is moſt probable, they were ſtrangers, and arrived in Chaldea by ſhipping (2). The Syriac word ܐܘܕܐ Onûdo, ſignifies a traveller, or foreigner, and might without much violence be converted into either of the ſaid names.

‡ An egg in Greek is called Oon.

(2) Vid. Newton's Chronol. p. 210, 211.

and that he was in reality no more than a man, though he ſeemed to be a fiſh, becauſe he was compleatly dreſſed in a fiſh's ſkin [s]. Hyginus likewiſe writes, that Euhanes, a name not very diſtant from Oannes, came out of the ſea in Chaldea, and explained aſtrology [t].

BEROSUS proceeds to give us a ſeries of ten kings who reigned in Chaldea before the flood; but as there are ſome ſmall variations in the authors who have tranſcribed that hiſtorian, we ſhall here exhibit them to the readers view. The antediluvian kings of Chaldea.

[s] Hellad. apud Photium, Bibl. Cod. cclxxix. col. 1594.
[t] Hygin. fab. 274. The printed editions of Hyginus have Euhadnes.

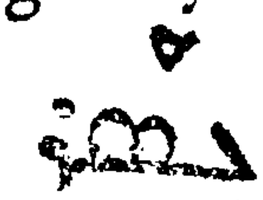
[u] Apud Syncell. p. 18. Euſeb. p. 5.

[w] Apud eund. p. 38. C.

[x] Apud eund. p. 39. B. Vid. Chron. Græc.



The length of their reigns.

THE reigns of theſe kings Beroſus computes by Sari, or decads of years **, which ſeems to be a very convenient method in thoſe times, when the lives of men were at leaſt ten times as long as they have been in later ages. According to which way of reckoning, the ſum of all their reigns amounts to twelve hundred, or more nicely eleven hundred and ninety nine years; which offers no violence to the Moſaic chronology.

Remarkable events under them.

As theſe ten ſucceſſors exactly anſwer the ten generations from the creation to the flood, the firſt king Alorus has been ſuppoſed to be the ſame with Adam [y], as Xiſuthrus plainly

[y] Perizon. Orig. Ægypt c. 2.

** Beroſus wrote his chronology by the computation of Sari, Neri, and Soſi; which being antient meaſures of time, and well known when the original records were written, could not, it is conceived, have wanted explanation in thoſe records. But Beroſus, or ſome later writers, have, either out of ignorance, or deſign, magnified theſe meaſures of time beyond all imagination, and tell us, that the Sarus contained the interval of three thouſand ſix hundred years, the Nerus of ſix hundred years, and the Soſus of ſixty (1). However, other authors have taken thoſe years for days only, and blame Euſebius for not perceiving them to be days (2); and, as it ſeems, with great reaſon: for not to inſiſt on the incredible length of the regions of thoſe princes, on the firſt hypotheſis, which no writer of common ſenſe or modeſty could offer to impoſe on the world, it plainly appears, they were no more than days, from the reign of the ſixth king, which is more exactly expreſſed in the firſt table to be ninety nine years, but in the others, by the round number of ten Sari, or 100 years; and the word Sarus, throwing away the termination is no other than the Chaldee, or Syriac  Sar, ten. The Sarus therefore contained three thouſand ſix hundred days, or juſt ten old Chaldean years of three hundred and ſixty days each: and that before the deluge, not only the civil year but alſo the tropical ſolar and lunar year conſiſted of juſt twelve months of thirty days a-piece, or three hundred and ſixty days in the whole, has been fully proved by a very learned gentleman (3).

(1) Vid. Syncell. p. 17. & Abyden. apud eundem, p. 38, C. (2) Annianus & Panodorus apud Syncell. p. 35. Vid. eund. p. 17. (3) Mr. Allin's Diſc of the antient year, in Mr. Whiſton's Theory, Book II. p. 144. Vid. etiam Scaliger. in Græc. Euſeb. p. 406.

plainly appears to be Noah. Alorus gave out, 'that God himſelf had declared him the paſtor of the people [z]; and, indeed, if any man could pretend to dominion by divine right, it muſt have been Adam.

Of Alaſparus, the ſecond king, nothing remarkable is related. His ſucceſſor Amelon, or Amillarus, was of the city of Pantibibla *†: in his reign, according to Abydenus, a ſecond Annedotus, or animal reſembling the demigod Oannes, aroſe out of the ſea, twenty ſix Sari, or two hundred and ſixty years after the beginning of this monarchy [a]; but Apollodorus writes, that he appeared under the next prince Amenon, after forty Sari, or four hundred years: which if they be computed from the creation (according to the Samaritan chronology) will end in that king's reign; but if from the firſt year of Alorus, will reach twenty years within that of Metalarus. Others, ſuppoſing this Annedotus was the hateful Oannes himſelf, blame Polyhiſtor for anticipating the time of his coming, by placeing him in the firſt year [b].

After Amenon and Metalarus, who were both of Pantibibla, ſucceeded Daonus, who was of the ſame city, and a ſhepherd. In his time four animals ††† of a double form, half man and half fiſh, came out of the ſea to land, whoſe names were Euedocus, Eneugamus, Eneubulus, and Anementus [c].

Under

[z] Abyden. ex Beroſo apud Syncell. p. 38. [a] Idem ib. & p. 39, C. [b] Vid. Syncell. p. 39, C. [c] Abyden. ib.

*† Of this city of Pantibibla, as Scaliger obſerves (4), the antients have taken no notice. It ſeems to be the ſame with Sippara; hereafter mentioned (probably the Sipphara of Ptolemy), where Xiſuthrus depoſited the records he wrote before the flood. This later name may be derived from the Chaldee ספר Sephar, or Sphar, a book, or record; and Pantibibla is the tranſlation of that name into Greek (5). Sir Iſaac Newton (6) takes it to be the Sepharvaim of the ſcripture (7).

††† Apollodorus ſays only that the fourth Annedotus appeared at this time (8); but the reading of Abydenus ſeems the more correct.

(4) Ubi ſupra, p. 407. (5) See Cumberland on Sanchon. p. 255. (6) Chronol. p. 275. (7) 2 Kings xix. 13. 8) Apud Syncell. p. 39.

UNDER the next prince, Euedoreſchus, who was likewiſe of Pantibibla, there appeared another animal, like the former, named Odacon. All theſe explained more particularly what Oannes had ſummarily and conciſely delivered [d].

THE eighth and ninth kings were both of another city, called Laranchi [e]. When the later of them Otiartes, or, as Polyhiſtor calls him, Ardates, was dead, he was ſucceeded by his ſon Xiſuthrus.

IN his reign happened the great deluge, of which our author gives the following account: Cronus, or Saturn, appeared to Xiſuthrus in a dream, and warned him, that on the fifteenth of the month Dæſius mankind would be deſtroyed by a flood; and therefore commanded him to write down the original, intermediate ſtate, and end of all things, and bury the writings under ground in Sippara, the city of the ſun; that he ſhould alſo build a ſhip, and go into it with his relations and deareſt friends, having firſt furniſhed it with proviſions, and taken into it fowls and four-footed beaſts; and that when he had provided every thing, and was aſked whither he was ſailing? he ſhould anſwer, *To the gods, to pray for happineſs to mankind.* Xiſuthrus did not diſobey, but built a veſſel, whoſe length was five furlongs, and breadth two furlongs. He put on board all that he was directed, and went into it with his wife, children, and friends. The flood being come and ſoon ceaſing, Xiſuthrus let out certain birds, which finding no food, nor place to reſt upon, returned again to the ſhip. Xiſuthrus, after ſome days, let out the birds again; but they came back again to the ſhip, having their feet daubed with mud: but when they were let go the third time, they came no more to the ſhip, whereby Xiſuthrus underſtood, that the earth appeared again; and thereupon he made an opening between the planks of the ſhip, and ſeeing that it reſted on a certain mountain, he came out with his wife, and his daughter, and his pilot; and having worſhipped the earth, and raiſed an altar, and ſacrificed to the gods, he and thoſe who went out with him diſappeared. They who were left behind in the ſhip, finding Xiſuthrus, and the perſons that accompanied him, did not return, went out themſelves to ſeek

The Chaldean account of the flood.

[d] Apollodor. ex Beroſ. ib. [e] Idem ib.

ſeek for him, calling him aloud by his name: but Xiſuthrus was no more ſeen by them; only a voice came out of the air, which enjoyned them, as their duty was, to be religious; and informed them, that, on account of his own piety, he was gone to dwell with the gods: and that his wife, and daughter, and pilot, were partakers of the ſame honour. It alſo directed them to return to Babylon, and that, as the fates had ordained, they ſhould take the writeings from Sippara, and communicate them to mankind; and told them, that the place where they were was the country of Armenia. When they had heard this, they offered ſacrifice to the gods, and unanimouſly went to Babylon; and when they came thither, they dug up the writeings at Sippara, built many cities, raiſed temples, and rebuilt Babylon again [f].

The antediluvian kings of Egypt.

The Egyptians, who would give place to no nation in point of antiquity, have alſo a ſeries of kings, who, as is pretended, reigned in Egypt before the flood; and, to be even with the Chaldeans, began their account the very ſame year that theirs does, according to Beroſus [g].

There was an antient chronicle extant among the Egyptians, not many centuries ago [h], which contained 30 dynaſties of princes who ruled in that country, by a ſeries of 113 generations, through an immenſe ſpace of 36,525 years *: during which Egypt was ſucceſſively governed

[f] Alexand. Polyhiſtor. ex Beroſo, apud Syncell. p. 30, 31. & apud Cyril. contra Julian. l. 1. Abydenus, ex eodem, apud Syncell. p. 38, 39. & apud Euſeb. de Præp. Ev. l. 9. c. 12.
[g] Syncell. p. 17. [h] Vid. eund. p. 51. & Euſeb. Chron. Græc. p. 6.

* This number appears manifeſtly to have been not a real chronological, but a fictitious aſtronomical, calculation, being produced by multiplying 1461 by 25; and is the period of the grand revolution of the zodiac, ſo famous in the Egyptian and Greek fables; at the end of which it will return to the point whence it began to move, viz. the firſt minute of the firſt degree of Aries (1).

From

(1) Vid. Syncell. p. 52.

governed by three different races; of whom the firſt were the Auritæ, the ſecond the Meſtræi, and the third the Egyptians †.

But this extravagant number of years Manetho ‡ (to whoſe remains we muſt chiefly have recourſe for the antient Egyptian hiſtory) has not adopted, however, in other reſpects he is ſuppoſed to have been led into errors in chronology by this old chronicle [i], which yet ſeems to have been a compoſition ſince Manetho's time. That writer [k] began his hiſtory with the following 16 dynaſties, or reigns of princes; the firſt of whom were called gods, and the other nine demi-gods. Theſe, he ſays, reigned one thouſand

[i] Syncell. ibid. [k] Manetho apud Syncell. p. 18. & Euſeb. Chron. Græc. p. 7.

From ſome ſuch computation, it is probable, Diodorus took the numbers he mentions of 18,000 years, the ſpace which the gods and heroes reigned, and 15,000 from Orus, the ſon of Iſis, the laſt of them, to the 180th olympiad, during which time Egypt was governed by men (2); or thoſe, which he elſewhere tells us were the number of years from Iſis and Oſiris to Alexander the Great, viz. above 10,000, or ſomewhat leſs than 23,000 (3). Other extravagant numbers were alſo by the Egyptian prieſts impoſed on Herodotus and Plato, as we may obſerve elſewhere.

† Theſe three races, if there be any ſhadow of truth in this account, ſeem moſt probably to have been the gods, demigods, and mortal men, which are by other authors ſaid to have reigned ſucceſſively in Egypt: the Auritæ (which name Goar (4) derives from Abaris, or Avaris, though that city was built long after the flood by the Paſtors, and Perizonius, more probably, from אור Our, light) being the gods, or antediluvian princes; the Meſtræi, the demigods, or poſtdiluvians of the race of Mizraim; and the Egyptians, the mortal kings, the firſt of whom was Menes (5): and this hypotheſis, as will be obſerved by and by, accounts tolerably well for the chronology.

‡ This writer was ſomewhat later than Beroſus. See the preface.

(2) Diod Sic. l. 1. p. 41. (3) Idem ib. p. 20. (4) In notis ad Syncell. Vid. Marſham. Canon. Chron. p. 107. (5) Vid. Perizon. Antiq. Ægypt. p. 23, &c.

thousand nine hundred and eighty five years *; and the first of them, Vulcan, nine thousand †.

As

* This number of years in Manetho (which the modern chronologers unjustly correct to eleven thousand nine hundred and eighty five, or eleven thousand nine hundred and eighty eight, to make them agree with the larger numbers in the old chronicle, or in some other interpolators of Manetho) plainly shews the nine thousand years, if it be not a corrupted number, [or if those years were not lunar years] allowed here to the reign of vulcan alone, did not belong to those dynasties themselves, but rather to that immense interval of time before the reigns of the antediluvian gods, or kings were reckoned, or before the present settlement of the world began. Accordingly the old chronicle, as will be seen by and by, ascribes no number of years to this Vulcan, but thirty thousand to the Sun. Diodorus also assures us, that some reckoned Vulcan as the first of those gods, and others the sun (1); which agrees well with the inscription on the Egyptian obelisk, to be produced hereafter, which calls Vulcan not an ordinary god himself, but the father of the gods (2).

† This exorbitant number of years has been taken by several of the later Greek historians not for solar, but lunar years or months;

(1) Diodor. Sic. l. 1. p. 13. (2) Whiston's Appendix to his Essay to restore the true text, &c. p. cxc.

As to this table it muſt be obſerved, that the numbers were nc part of the original record, but added by ſome moderns, who have mangled the chronology according to their own fancies [l], and therefore deſerve no regard; though we have tranſcribed them as we found them in Syncellus.

THOUGH the tranſcribers of Manetho [m] have generally taken it for granted, that this ſucceſſion of princes were ſuppoſed by Manetho himſelf to have reigned before the flood; yet we very much doubt, whether that hiſtorian really made the nine laſt, called demigods, to be antediluvians. For it appears from the ſum of the years, which theſe gods and demigods are ſaid to have reigned, that all of them could not poſſibly have reigned before the flood, even according to the Hebrew account; and if the epoch of the Egyptian kingdom began the ſame year with that of the Babylonians, as is expreſly ſaid, the total of the reigns of their antediluvian princes could not exceed twelve hundred years. Beſides,

The firſt ſeven of them only reigned before the flood.

[l] See the note †: Syncellus.

[m] Africanus, Euſebius, Panodorus, &

months; and accordingly dividing the number of days of ſo many lunar revolutions by three hundred and ſixty five, the number of days in a year, they reduce the nine thouſand to ſeven hundred twenty four years and a half and four days; which way of reckoning though Syncellus ridicules (3), yet it ſhould ſeem from the teſtimony of antient writers, to omit thoſe of Africanus and Euſebius (4), to be the original computation; excepting only a ſmall miſtake which we ſhall mention preſently. For Diodorus ſays, ſome of the moſt antient kings of the ſucceſſion of the gods reigned above twelve hundred years apiece; and that this appearing incredible, ſome ſuppoſed, that the motion of the ſun being not known in the firſt times, the year was deſcribed by the revolution of the moon (5); and with this do other authors of good credit (6) agree, who aſſure us, that the old Egyptian year was lunar. It muſt only be obſerved, that the antediluvian year containing but three hundred and ſixty days (7), the abovementioned calculation muſt be rectified in that reſpect; and then the nine thouſand years of Vulcan's reign will make juſt ſeventy five ſari, or ſeven hundred and fifty years; which ſeems indeed a little diſ-

(3) Syncell. p. 18. (4) Apud eund. p. 17, & 40. (5) Diodor. Sic. l. 1. p. 22. (6) Plutarch. in Numa. p. 72. Plin. Hiſt. nat. l. 7. c. 48. Macrob. Sat. l. 1. c. 14. Lactant. Inſtit. 2. 12. Eudoxus apud Proclum, in Tim. l. 1. p. 31. (7) See before, p. 269. in the notes.

sides, the number of sixteen kings seems too large in proportion to that of the Babylonian kings, and of the generations of Moses in the same period. It is therefore more conformable to Manetho's chronology, to suppose the first seven only, whom he calls Gods, and the old chronicle Auritæ [n], were antediluvians; and that they reigned twelve hundred years, part of the nineteen hundred and eighty five *, the remainder of which will be accounted for hereafter. And this hypothesis seems to be confirmed from the consideration of the last of these gods Typhon, who probably reigned immediately before the flood, and perished therein. For several circumstances of the deluge are mentioned in the history of Osiris and Typhon; particularly the very day when it began, or when Osiris (who is taken for Noah) was shut up in the ark [o]: the name of Typhon, according to some learned men, signifies also a deluge, or inundation

[n] See the note † in p. 273. [o] Plutarch. de Isid. & Osir. p. 356.

proportionate to the reigns of his six successors, which together can amount to no more than four hundred and fifty years. However, this way of computation will reduce this and the other extravagant numbers we meet with in the Egyptian history within some bounds of credibility.

* Mr. Whiston (1) says that this very number nineteen hundred and eighty five, for the antediluvian gods and semigods of Egypt, will not be at all too large for the present chronology, if we suppose it to extend from the beginning of the world to the death of the last of these semigods, Jupiter Hammon, or Ham; it only implying that he then outlived the deluge either three hundred and twenty nine, or four hundred and twenty nine years, [that is, according to the Hebrew chronology, or the Samaritan of Mr. Whiston] which exactly agrees with the length of mens lives at that time. But this cannot be allowed by us, who follow the chronology of the present Samaritan copy; for then Ham would live six hundred and seventy eight years after the flood, which would be above one hundred and fifty more than Shem. Besides, it is unreasonable to suppose the first of these reigns commenced at the creation, and directly contrary to the original author, who makes the Babylonian and Egyptian kingdoms coeval, and to Mr. Whiston's own way of reckoning elsewhere (2): nor is it reasonable to continue Ham's reign (if he was Jupiter) immediately from the flood.

(1) Appendix, ubi supra, p. cxci. (2) In his Chronological Table.

on †; whence the Egyptian priests called the sea Typhon [p]: and Typhon, or, as the Latin poets call him, Typhœus, is represented as a monstrous giant, warring against heaven, and at last overcome by Jupiter, and submersed in water [q]. From all which it appears probable, that he was one of those mighty men which were of old, whose wickedness was so exceeding great, that it drew down that judgment upon them [r].

The first of these gods, Vulcan, from his inventing the working of metals, and instructing mankind therein, which is on all hands attributed to him, has been thought to be the same with the Tubal-cain of Moses, and to have been contemporary with Noah [s]. But it seems a little inconsistent, that a person in the eighth generation from Adam, and the last recorded by Moses in the line of Cain, should have no less than six successors, whose reigns, together with his own, amounted to no less than twelve hundred years; when it cannot be supposed that Tubal-cain could be born at the soonest before the year of the world four hundred, according to the Samaritan, or five hundred, according to the Hebrew chronology.

By these gods Manetho, as he elsewhere explains himself, meant no more than mortal men, who for their wisdom and goodness were severally promoted to the regal dignity, and afterwards made immortal [t]. Their particular inventions, and prudent institutions, which gained them this honour from the people, we may more conveniently consider, when we enter on the history of the Egyptian nation: since, besides the interruptions which must be occasioned by attempting it in this place, there are so great disagreements throughout concerning these gods [u], that it would be in vain to endeavour to reconcile the foregoing table with the accounts of the Greek authors, which seem rather to relate to the times after the flood. For the Greeks were very liberal

[t] Manetho, apud Euseb. de præp. Ev. l. 1. c. 1. p. 45. Vid. Diod. Sic. l. 1. p. 8. [u] Diod. Sic. ibid. p. 21.

† The Arabs at this day express the general deluge by the word الطوفان al tûfân.

in bestowing the names of their gods, with, or without, foundation; and frequently gave the same name to several persons; which has introduced a confusion that might have been avoided, had they given us the true Egyptian names, instead of undertaking to interpret them. Nor is this the only instance in which those writers, especially the later Greek chronographers, have corrupted and confounded Manetho's history, as will be observed hereafter.

Having mentioned the old Egyptian chronicle, it may be proper to acquaint the reader, that, according to that record, Vulcan has no time assigned him, as appearing both night and day: the Sun, who was the son of Vulcan, reigned thirty thousand years: after him Saturn and the other twelve gods reigned three thousand nine hundred and eighty four years: then the eight demigods two hundred and seventeen years; after whom began the thirty dynasties [w].

Thus have we put together the most material pieces of history to be found in prophane authors, relating to the times preceding the flood; among which, though there be some which bear apparent marks of truth, yet we believe the greater part will be judged to deserve little credit: however, as every thing which has the least pretence to so great antiquity, cannot but be entertaining and curious, we hope our labour in collecting them will not be condemned as useless.

SECT VI.

Of the Deluge.

Year of the World, 1307
Year before Christ, 2999

A short history of the flood.

THIRTEEN hundred and odd years after the earth was made and inhabited, it was overflowed and destroyed in a deluge of water. Not a deluge that was national only, or over-run some particular region, but overspread the face of the whole earth, from pole to pole, and from east to west, and that in such excess, that the floods over-reached the tops of the highest mountains; the rains descending after an unusual manner, and the fountains of the great deep being broke open; so as a general destruction and devastation was brought upon the earth and all things in it

[w] Chron. Vetus apud Syncell. p. 51. & Eusb Chron. Gr. p. 6.

it, mankind and other living creatures; excepting only Noah and his family, who, by a special providence of God, was preserved in a certain ark, or vessel, with such kinds of living creatures as he took in to him. After these waters had raged for some time on the earth, they began to lessen and shrink, and the great waves and fluctuations of this deep, or abyss, being quieted by degrees, the waters retired into their channels and caverns within the earth; and the mountains and fields began to appear, and the whole habitable earth in that form and shape wherein we now see it. Then the world began again, and from that little remnant preserved in the ark, the present race of mankind, and of animals, in the known parts of the earth, were propagated. Thus perished the old world, and the present arose from the ruins and remains of it [a].

Year of the World, 1307
Year before Christ, 2999

THIS is a short story of the greatest event that ever yet happened in the world; the greatest revolution, and the greatest change in nature; which therefore justly deserves to be more particularly considered in all its circumstances.

THAT there was such an universal destruction by water, as is related by Moses, is confirmed by the concurrent testimonies of several of the most antient writers and nations in the world. What account the Chaldean records give of it, we have already seen [b]. The Indian and Persian traditions we may mention hereafter. That the Egyptians were no strangers to this event appears, not only from those circumstances in the story of Osiris and Typhon mentioned above [c], but from the testimony of Plato; who says, that a certain Egyptian priest recounted to Solon, out of their sacred books, the history of the universal flood, which happened long before the particular inundations known to the Græcians [d]. The inhabitants of Heliopolis in Syria shewed a chasm, or clift, in the earth in the temple of Juno, which, as they say, swallowed up the waters of the flood [e] *. Nay,

Prophane testimonies of this catastrophe.

[a] Vid Burnet's Theory, Book 1. c. 2. [b] Pag. 269, 270. [c] Pag. 276. [d] Plato, in Timæo. [e] Lucian. de Dea Syria. t. 2. p. 882.

* The author, who mentions this, says, the Greeks gave an account of the universal deluge, [which they and others (1) have confounded with that of Deucalion] too curious to be omitted. The

(1) Vid. Ovid Metam. l. 1. v. 260, &c.

Year of the World, 1307 Year before Christ, 2999

the very Americans are said to acknowledge, and speak of it in their continent[f]: and we are told, that there is a tradition among the Chinese, that Puoncu, with his family, escaped out of the general deluge[g]; though another expressly asserts, the Chinese annals make no mention at all of the flood, and that it is a mistake in those who imagine they do[h]: however, it seems their historians do speak of a flood, which some

[f] J. de Laet, de orig. gent. Americ. p. 115. Vid. etiam Acostam, Herreram, &c. [g] Vossius, Ep. ad Andr. Colvium, p. 409. [h] Couplet, Præf. ad Tab. Chronol. p. 3, 8.

The tradition goes, proceeds he, that the present race of men was not the first, for they totally perished, but is of a second generation, which, being descended from Deucalion, encreased to a great multitude. Now of these former men they relate this story: They were very insolent, and addicted to unjust actions; for they neither kept their oaths, nor were hospitable to strangers, nor gave ear to suppliants; for which reason this great calamity befel them. On a sudden the earth poured forth a vast quantity of water, great showers fell, the rivers overflowed, and the sea arose to a prodigious height; so that all things became water, and all men were destroyed: only Deucalion was left unto a second generation, on account of his prudence and piety. He was saved in this manner; he went into a large ark, or chest [λάρναλα], which he had, together with his sons and their wives; and when he was in, there entered swine, and horses, and lions, and serpents, and all other creatures which live on the earth, by pairs He received them all, and they did him no hurt, but the gods created a great friendship among them; so they sailed all in one chest while the water prevailed. These things the Greeks relate of Deucalion. But as to what happened after this, there is an antient tradition among those of Hierapolis which deserves admiration, viz. that in their country a great chasm opened, and received all the water: whereupon Deucalion erected altars, and built the temple of Juno over the chasm. This same chasm, says our author, I have seen, and it is a very small one, under the temple; whether it was formerly bigger, and since lessened, I cannot tell, but that which I have seen is little. In commemoration of this history they do thus: twice in every year water is brought from the sea to the temple, and not by the priests only, but all Syria and Arabia; many come from beyond Euphrates to the sea, and all carry water, which they first pour out in the temple, and afterwards it sinks into the chasm, which, though it be small, receives abundance of water. And when they do this, they say, Deucalion,

ſome ſuppoſe to be that of Noah [i], but they do not make it univerſal *. Moſt nations have ſome tradition of a deluge, which happened in their reſpective countries: but it muſt be owned at the ſame time, that ſeveral of them were particular inundations only, and therefore carefully to be diſtinguiſhed from that of Noah; though antient and modern writers frequently confound them together †, and relate circumſtances of the one, which belong only to the other. Year of the World, 1307. Year before Chriſt, 2999.

SOME difficulties, which ſeem to attend the Moſaic account of the deluge, ſuch as the finding out waters ſufficient to drown the world, and the improbability of all ſorts of animals being preſerved in the ark, have induced ſome, even men of learning, to ſuppoſe, that Noah's flood was not univerſal, but national only, and confined to Judæa and the regions Whether topical.

[i] Vid. Martinii Hiſt. Sinic, l. 1. p. 12, & 39.

Deucalion, inſtituted the ceremony in that temple as a memorial of the calamity, and of his deliverance from it (1).

* An Arab, who travelled into China about the beginning of the ninth century, giving an account of a converſation he had with the emperor, among other things, ſays; that mentioning the flood to that prince, on occaſion of a picture of Noah which he ſhewed him, and telling him, that the prophet, and thoſe who were ſaved with him in the ark, peopled the whole earth; the emperor laughed, and ſaid, "Thou art not deceived as to the "name of Noah; but as to the univerſal deluge we know no-"thing of it. It is true, that the deluge did drown a part of the "earth, but it did not reach ſo far as our country, nor yet to "the Indies (2). Ebn Shoknah ranks the Chineſe among thoſe who deny the flood.

† Not only Deucalion's flood in Theſſaly, but thoſe of Ogyges in Attica, and Prometheus in Egypt, have been thought the ſame with that of Noah (3). Thoſe ſpoken of by the Americans ſeem to have been national; as was that of Aſia minor, mentioned by Diodorus (4), from the Samothracian tradition; which yet they pretend was the moſt antient of all: to omit ſeveral others enumerated by Sir W. Raleigh (5), ſome of which he has taken from the ſpurious Xenophon of Annius.

regions thereabouts ‡, or perhaps to that tract of land which lies between the four seas, the Persian, Caspian, Euxine, and Mediterranean [k], or at most reached no farther than the continent of Asia [l]. And to support this presumption they alledge, that since the primary design of the flood was to destroy mankind only, who could hardly be thought in so short a time to have overspread the face of the whole earth, there was no necessity to carry the waters beyond the bounds of what was inhabited: and though in this case all the animals in the world (which were probably farther propagated than man, being created in greater numbers, and perhaps in divers parts) might not have been destroyed, yet it is conceived, that it was necessary to save some in the ark for future propagation, and that men might have them ready for their use presently after the flood, which could not otherwise have been [m]. One author indeed has gone so far as to suppose, that all mankind did not perish in the deluge, and has endeavoured to prove, from a peculiar exposition of the curses of Cain and Lamech, that the Africans and Indians are of their posterity [n]. But as he has elsewhere himself confuted this opinion by the strongest arguments [o], we shall say no more of it. And it is easy to shew, against those who hold the former opinion, that they deny a matter of fact to get over a difficulty, and that the deluge was universal in its extent as well as effect.

For, 1. The scriptures put this matter out of doubt, expresly telling us, that all the high hills under the whole heaven were covered by the waters, and that all flesh died that moved upon the earth, except only Noah, and those

[k] See Le Clerc's dissertations. [l] Stillingfleet, Orig. Sacr. Book 3. c. 4. p. 540. Vid. Vossium, de æt. mundi. p. 283. [m] Stillingfleet, ibid. [n] See Bedford's Scripture chronol. p. 39. [o] See Whiston's Theory, &c. p. 258, 388, &c.

‡ Melo, who wrote a book against the Jews, speaking of the deluge, seems to make it topical, and not to have reached Armenia. His words are these: "At the time of the deluge, a man, "who had escaped with his sons, went from Armenia, being dri- "ven out of his possessions by those of the country; and passing "over the intermediate region, came into the mountainous part "of Syria, which was then desolate (6).

(6) Melo apud Euseb. de præp. Ev. l. 9. c. 19.

thoſe that were with him in the ark *. Nor will the terms of Moſes allow the word Earth in this place to be reſtrained, as it may in ſome others, to Judæa †, or any other particular tract of land: for, unleſs the laws of nature were miraculouſly ſuſpended, before the waters in one region, much leſs a whole continent, could exceed the tops of the higheſt mountains, they would certainly diffuſe themſelves, and overflow the reſt of the earth. 2. If the deluge was topical, there was no need of the ark; Noah and his family needed only to have retired to another country, which he might do with more eaſe and in leſs time than build ſo vaſt a veſſel; the beaſts might have ſaved themſelves by flight, or their loſs, eſpecially thoſe of the unclean kinds, have been repleniſhed from other places; and the birds might, without much difficulty, have flown to another continent. 3. The number of mankind before the flood was vaſtly ſuperior

Year of the World, 1307
Year before Chriſt, 2999.

* The words of Moſes, one would think are too plain to admit any ſubterfuge. God *looked upon the earth, and behold it was corrupt; for all fleſh had corrupted his way upon the earth. And God ſaid unto Noah, the end of all fleſh is come before me——and I will deſtroy them with the earth* (1). *Behold, I, even I, do bring a flood of waters upon the earth, to deſtroy all fleſh, wherein is the breath of life, from under heaven: and every thing that is in the earth ſhall die* (2).——*Every living ſubſtance that I have made, will I deſtroy from off the face of the earth* (3).—*And the waters prevailed exceedingly upon the earth; and all the high hills, that were under the whole heaven were covered. Fifteen cubits upwards did the waters prevail; and the mountains were covered. And all fleſh died that moved upon the earth, both of fowl, and of cattle, and of beaſts and of every creeping thing that creepeth upon the earth, and every man. All in whoſe noſtrils was the breath of life, of all that was in the dry land, died. And every living ſubſtance was deſtroyed which was upon the face of the ground, both man and cattle, and the creeping things, and the fowl of the heaven; and they were deſtroyed from the earth; and Noah only remained alive, and they that were with him in the ark* (4).

† Peyrerius, one part of whoſe præ-adamite ſyſtem is, that the flood extended no farther than Judea, which he ſuppoſes to be all that Moſes meant by the earth, would alſo perſuade us, that writer by mankind, which were to be deſtroyed, intended the poſterity, of Adam; by the living creatures, the Gentiles or præ-adamites, mixed with the race of Adam; and by the great deep, the ſea of Paleſtine (5).

rior to what the present earth is, perhaps, capable of sustaining, as will appear hereafter; and the waters must therefore have overspread, in all probability, a larger part of the earth than is now known to be inhabited; and consequently the whole globe, that none might escape the divine vengeance, must have been overflowed. 4. The earth itself seems to offer us a demonstrative argument of the universality of the deluge, from the vast numbers of the shells, and teeth of fish, bones of animals, entire, or partial vegetables, and other strange things, which are to be found on the tops of the highest mountains, and in the bowels of the earth, at a great distance from the sea, and were probably left by the flood [P] ‡.

It

[P] Le Clerc's Dissert. Burnet's Theory, Book 1. c. 3. and Whiston's Theory ubi supra, & p. 275, &c.

‡ This argument is offered with some diffidence: for though the most experienced philosophers now agree, that these shells, &c. are not mock-productions of nature, or originally formed in the places where they are found by some plastic power of salts, or other minerals, (which was the conjecture of Dr. Plot (6), and other naturalists) inasmuch as they are not to be distinguished from real shells, teeth, &c. by the nicest examination of the eye, and even the microscope, and burn not immediately into a calx or lime, as all tophaceous, or stony substances do, but first into a coal, and then into a calx, which is the known quality of things of a bony, or fleshy nature; yet they do not agree, that these things were brought in by the universal deluge, for this reason, among several others, that living animals, or fish, have been found in some of those fossil shells (7), and that such marine substances are sometimes formed and generated in human bodies (8); and therefore it is supposed, they were formed by a spermatic principle, as fish spawn received into the chinks, and other meatuses of the earth, and falling down in rains, &c. (9); which may be allowed, indeed, of the several kinds of shell-fish, whose shells might preserve them in the earth, but can hardly be admitted as to others of those fossils, such as the Glossopetræ, or teeth of the shark, and the other bones of larger creatures. As to the subterraneous woods, and fossil trees, there seems to be no great reason to believe, they were thrown down by the deluge, and have lain buried in the earth ever since; it being much more probable, that they either were occasioned by inundations of the sea, or were felled by men in the places where they now lie; as is undeniable of many of them, which still shew the marks of the ax (10).

Year before Christ, 2999

IT is now time to consider, by what means this terrible devastation was brought on the earth, and in what manner those that escaped it were preserved.

Conjectures as to the manner wherein the deluge was effected.

IF the deluge were universal, the quantity of water required to effect it is so immense, that it has been generally thought extreamly difficult, if not impossible, to say, whence it came, or whither it went. The proportion of water sufficient to cause such an inundation, has been computed at eight oceans [q]; but a person well able to make the calculation, says, there must have been, at the lowest computation, twenty two oceans [r]. And where to find this is the question. There are the clouds above, and the deeps below, and in the bowels of the earth; and these are all the stores we have for water *: and Moses directs us to no other for the causes of the deluge; *The fountains of the great deep*, says he, *were broken up, and the windows of heaven were opened; and the rain was upon the earth forty days and forty nights* [s]. By the great deep some understand the ocean [t], but others, with more reason, the subterraneous abyss, or vast collection of waters in the bowels of the earth †. But it is thought, the waters, which either

[q] Burnet's Theory, book 1. c. 2. [r] Dr. Keill, in his Remarks on Whiston's Theory. Vid. Ray's Disc. p. 118. [s] Genes. vii. 11, 12. [t] Vid. Cleric. Comment. in loc.

* Moses, in his account of the creation, speaking of waters above the firmament (1), though it be generally understood of the clouds and aqueous vapours sustained in the middle region of the air (2), yet some have fancied them to be waters placed above the heavens, and have been willing to make use of them for a supply, when they could not find enough under the heavens to make up the mass of the deluge; though if these imaginary waters were there, how to get them down, or to lift them up again, is not easy to tell. But since the system of the world has been better known and the nature of the heavens, it is presumed, there are none that would assert the super-celestial waters, much less make that extravagant use of them, as to bring them down hither for a cause of the deluge (3).

† Notwithstanding the word תְּהוֹם Tehom, depth, in some passages (4) is supposed to signify the sea, yet it may be there much better interpreted of subterraneous waters, as it manifestly must in other

Year of the World, 1307 Year before Chriſt, 2999

either the abyſs or the rain could afford, will fall prodigiouſly ſhort of the proportion required. According to the obſervations made of the quantity of water that falls in rain, the rains could not afford one ocean, nor half an ocean, and would be a very inconſiderable part of what was neceſſary for a deluge [u]. If it rained forty days and forty nights throughout the whole earth at once, it might be ſufficient to lay all the lower grounds under water, but it would ſignify very little as to the overflowing of the mountains; ſo that it has been ſaid, that if the deluge had been made by rains only, there would have needed not forty days, but forty years to have brought it to paſs [w]. And if we ſuppoſe the whole atmoſphere condenſed into water, it would not all have been ſufficient for this effect; for it is certain, that it could not have riſen above thirty two foot, which is well known to be the uſual height to which water can be raiſed by the preſſure of the atmoſphere [x]; for the weight of the whole air, when condenſed into water, can be no more than equal to its weight in its natural ſtate, and muſt become no leſs than eight hundred times denſer, for that it is the difference between the weight of the heavieſt air and that of water [y]. And as to the abyſs, if by it we intend the ſea, that is not higher than the land, as ſome have formerly imagined, and therefore could contribute nothing to the deluge; it would keep its bed as it does now, and take up the ſame place: and if we underſtand the ſubterraneous waters, they would be quiet in their cells, and not aſcend otherwiſe than by force; and if force were uſed to draw them out on the ſurface of the earth, their places muſt be filled again with other waters, ſo as this turns to no account upon the whole [z].

This

[u] Vid. Merſenn. Cogit. Phyſico-mech. p. 221. [w] Auct. catenæ in Geneſ. vii. 4. [x] Voſſius in epiſt. ad And. Colvium, p. 385. [y] See Dr. Haliey's Diſſert. in the Philoſ. Tranſ. Vol. XVI. p. 104. [z] Burnet ubi ſup.

otherplaces(5). And being here joined with the epithet רבה rabbah, great, it ſeems Moſes intended, that vaſt collection of waters, which the moſt ſagacious naturaliſts place in the womb of the earth, the receptacle of the greateſt part of that deep, which covered the earth at the beginning of the creation (6).

(5) Deut. viii. 7. Ezek. xxxi. 4. (6) Geneſ. i. 2. V. Burnet, ubi ſup. c. 7.

THIS being the case, some cut the knot which they cannot loose, and shew us the naked arm of omnipotence; saying, that God created waters on purpose to make the deluge, and then annihilated them again when the deluge was to cease. But our business is not here to enquire what God could work by his almighty power, but to account for this event, in the best manner we can, from natural causes; nor are we rashly to fly to the divine omnipotence, especially for the creation of new matter. Moses plainly assigns natural causes of the deluge, forty days rain, and the disruption of the abyss; and St. Peter has assigned a cause also, the natural constitution of the world [a]; and neither of them mention a word of a new creation of waters. Others therefore, instead of a creation, suppose a transelementation, and say the air was changed into water, and that was the great instrumental cause of the deluge [b]. But this opinion agrees as little with the philosophy of Moses, or St. Peter, as the last, and renders the opening of the abyss perfectly needless [c]: besides, such a transmutation would in effect be no more than a condensation, the insufficiency of which has been already shewn. According to a third expedient, the rain and sea-waters were rarefied so as to reach the determined height: but if the waters were fifteen times rarer than they naturally are (as in that case they must have been) it is hard to say how they could either drown man or beast, keep alive the fish, or support the Ark [d]. A fourth opinion is, that the antediluvian earth, with all its stones, metals, mineral concretions, and all fossils whatsover that had obtained any solidity, was totally dissolved in the deluge, the cohæsion of its parts perfectly ceasing: that the corpuscles of these solid fossils, together with the corpuscles of those which were not before solid, such as earth, sand, and the like; as also animal bodies and parts of animals, bones, teeth, shells, vegetables, and parts of vegetables, trees, shrubs, herbs; in short, all bodies whatsoever which were either in the earth, or that constituted the mass of it, if not quite down to the abyss, yet at least to the greatest depth we ever dig, all these were promiscuously taken up into the waters, and made one common mass: that at length they subsided downwards together, generally, and as near as might

Year of the World, 1307. Year before Christ, 2999.

[a] 2 Pet. ii. 6. [b] Kircher. de Arca Noe. l. 2. [c] Vid. Burnet ubi sup. & c. 3. [d] Vid. Voss. ubi supra.

Year of the World, 1307 Year before Christ, 2999

might be expected in such a confusion, according to the laws of gravity; and thus formed the strata of stone, marble, coal, and the rest, of which the earth manifestly consists: and there being bodies of different kinds and constitutions, which are nearly of the same specific gravity, it thence happened that bodies of quite different kinds subsided at the same instant, and fell together with the same stratum; for which reason the shells of cockles, escallops, and the rest, which have a greater degree of gravity, were enclosed and lodged in the strata of stone and marble, and the heavier kinds of terrestrial matter, the lighter shells not sinking down till afterwards, and so falling among the lighter matter, as chalk and the like [d]. But this strange and bold hypothesis, to which the author was driven to solve these phænomena of the interior parts of the earth, (which yet might possibly be otherwise accounted for [e]) is so little consistent with the Mosaic history of the deluge, takes so little notice of the opening the windows of heaven, and is so contrary to the universal law of mutual attraction, and the specific gravities of bodies, accounts for so few of the phænomena of the deluge, implies such a new sort of formation, or creation of the earth at the deluge, without warrant for the same, and is so much more than his observations require, or will support, that it cannot engage the assent of any considering person [f]. A fifth opinion is, that though the rains might afford a vast quantity of water towards a deluge, yet the chief cause was the changing the center of the earth, and setting it nearer to the center, or middle of our continent; whereupon the Atlantic and Pacific oceans must needs press upon the subterraneous abyss, and so by mediation thereof force the water upwards, and compel it to run out at those wide mouths and apertures, made by the divine power breaking up the fountains of the great deep. These waters thus poured out from the orifices of the fountains upon the earth, the declivity being changed by the removal of the center, could not flow down to the sea again, but must needs stagnate upon the earth, and overflow it, and afterwards, the earth returning to its old center, return also to their former receptacles. This hypothesis gives a fair and easy solution of all the phænomena of the deluge, save only the generality of it, making it

[d] Woodward's Nat. Hist. of the earth. [e] See before, p. 283. and after § 7. [f] See Whiston's Theory, p. 276, &c. and Ray's Disc. p. 165, &c.

it topical, and confining it to our continent: for which reaſon a very ſagacious naturaliſt, who otherwiſe approves it, propoſes a ſixth way of ſolving them; and that is, by ſuppoſing, that the divine power might at that time, by the inſtrumentality of ſome natural agent, to us at preſent unknown, ſo depreſs the ſurface of the ocean, as to force the waters of the abyſs through the before-mentioned channels and apertures, and ſo make them a partial and concurrent cauſe of the deluge. And it appears from inſtances, that there are, at ſome times, in the courſe of nature, extraordinary preſſures on the ſurface of the ſea *, which force the waters outwards upon the ſhores to a great height [g]. But this we fear is too occult a cauſe to give much ſatisfaction to a philoſophic enquirer. Year of the World, 1307 Year before Chriſt, 2999

We have ſtill to conſider the hypotheſes of two perſons well known in the republic of letters, whoſe theories we have conſulted on other occaſions; Dr. Burnet and Mr. Whiſton.

To have a complete idea of that of the former, we muſt remember, that he conceives the firſt earth, from the manner of its formation, to have been externally regular and uniform, of a ſmooth and even ſurface, without mountains, and without a ſea; and that the waters belonging to it were wholly encloſed within, or under, its upper cruſt, which formed a ſtupendous vault around them [h]. This vaſt collection of waters he takes to have been the great deep, or abyſs of Moſes [i], and that the diſruption of it was the chief cauſe of the deluge. For he ſuppoſes, that the earth being for ſome hundreds of years expoſed to the continual heat of the ſun, which, by reaſon of the perpendicular poſition he imagines the earth's axis then had to the plane of the ecliptic, Dr. Burnet's Theory.

[g] Ray, ibid. p. 117, &c.
[h] See the Introduction, p. 150.
[i] Burnet's Theory, b. 1. c. 7.

* We had upon our coaſts, not many years ago, an extraordinary tide, wherein the water roſe ſo high as to overflow all the ſea-banks, drown multitudes of cattle, and fill the lower rooms of the houſes of many villages that ſtood near the ſea, ſo that the inhabitants, to ſave themſelves, were forced to get into their upper rooms and garrets. And how this could be affected, but by an unuſual preſſure on the ſuperficies of the ocean, our author cannot well conceive (1).

(1) Ray, Diſc. c. 2. p. 119.

Year of the World, 1307
Year before Christ, 2999

ecliptic, was very intenſe, and not allayed by that diverſity of ſeaſons, which now keeps our earth in an equality of temper [k], its exterior cruſt was at length very much dried; and when the heat had pierced the ſhell, and reached the waters beneath it, they began to be rarefied and raiſed into vapours, which rarefaction made them require more ſpace than they needed before, and finding themſelves pent in by the exterior earth, they preſſed with violence againſt that arch to make it yield to their dilatation. And as the repeated action of the ſun gave force to thoſe encloſed vapours more and more, and made them more ſtrong and violent, ſo on the other hand it weakened more and more the arch of the earth that was to reſiſt them, ſucking out the moiſture that was the cement of its parts, and parching and chapping it in ſundry places; and there being no winter to cloſe up its parts, it grew more and more diſpoſed to a diſſolution, and at length, when God's appointed time was come, the whole fabric broke, and the frame of the earth was torn in pieces as by an earthquake; and thoſe great portions, or fragments, into which it was divided, fell down into the abyſs, ſome in one poſture, and ſome in another [l].

This hypotheſis, the author thinks, not only agrees with the narration of Moſes, and anſwers the aſſertion of St. Peter, that the firſt earth was obnoxious to a deluge from its conſtitution [m], but ſupplies all the defects of other explications. The fall of thoſe prodigious fragments would raiſe a vaſt commotion in the abyſs, and throw its waves to a great height, which would overwhelm the mountains, now firſt formed, for ſome time: for after the firſt violent ſhock, he imagines there were ever and anon ſome ſecondary ruins which broke, and made new commotions, till at length, when all the ruins were ſettled and fixed, the waters began to ſettle too, and the dry land to appear. Thus the earth put on a new form, and became divided into ſea and land; the greateſt part of the abyſs conſtituting our preſent ocean, and the reſt filling up the lower cavities of the earth, mountains and hills appeared on the land, iſlands in the ſea, and rocks upon the ſhore. And ſo providence at one ſtroke diſſolved the old world, and made a new one out of its ruins, which we now inhabit [n].

But

[k] See before, p. 212.
[m] 2 Pet. iii. 5, 6, 7.
[l] Burnet ubi ſup. c. 6. p. 95, &c.
[n] Burnet ubi ſup. p. 101, &c.

Year of the World, 1307
Year before Christ, 2999

But though it be reasonable to believe, the first earth had its axis inclined to the plane of the ecliptic as well as the present, and had the same vicissitudes of seasons; yet allowing the theorist's supposition of its parallel position to be true, it is not conceivable, the heat of the sun would even then have had the power he imagines, or affect the earth in such a degree as to cause great cracks or fissures in it, or to raise the water under it into vapours, since we find no such effects in the hottest country or season; nor is it probable, such rarefaction, were it possible, should be so extreme as to break through an arch of some hundred miles thick. Besides, it is to be feared, that if the action of the sun was so strong, the abyss, the only store-house of waters in the first earth, would have been near exhausted * before the time of the deluge. This account also seems not very consonant to the Mosaic history, which describes a gradual rise and abatement, and long continuance of the flood, not a violent transient shock, which would not have lasted many days, if hours [o]: not to mention the little use our author makes of the rains, which he supposes indeed to have fallen throughout the earth (though he does not know how that could proceed from natural causes), and to have contributed to the disruption of the abyss, by weakening the arch of the earth, and stopping its pores, which would make the vapours struggle the more violently; and that nothing but a miracle could save the ark in so prodigious a storm and convulsion of nature [p].

The

[o] Vid. Keill's Examination of Burnet's Theory. [p] Burnet ubi sup. p. 133, 136, &c.

* Dr. Keill has made a plain calculation of this matter, and concludes, that, since none of the antediluvian rivers, according to the theorist, returned into the abyss again, it must needs follow, that in eight hundred and twelve years it would be quite empty, upon supposition that there were as many rivers in the primitive earth, as are in ours: but as there was then twice the land, if there were no seas, so there must be allowed twice as many rivers, to water it; and by such a double quantity the abyss would be emptied in half that time (1).

(1) Keill's Examination of Dr. Burnet's Theory, p. 164.

Year of the World, 1307 Year before Chriſt, 2999

THE expedient of the other learned theoriſt is the traject̃ion of a comet *, which he ſuppoſes paſſed ſo cloſe by the body of the earth, at the time of the deluge, as to involve it in its atmoſphere and tail. On which hypotheſis, he proceeds to account for the deluge in this manner:

Mr. Whiſton's Theory.

HE ſays, that when the earth had paſſed through the tail and atmoſphere of the comet, which he ſuppoſes to conſiſt of vapours rarefied and expanded in different degrees, and in which it would remain, on calculation, for about two hours, it muſt have acquired a large cylindrical column of vapours, whoſe baſis were ſomewhat larger than one of the earth's greateſt circles, and whoſe altitude were equal to the diameter of the comets atmoſphere: that theſe vapours would be impeded from deſcending towards the ſun by the earth's interpoſition and attractive power, and ſo would fall down with great violence on its ſurface; a great part of which being in a very rare and expanded condition, after their primary fall, would immediately be mounted into the air, and afterwards, on their condenſation, deſcend in violent and outragious rains on the face of the earth, and very naturally occaſion the forty days and forty nights rain mentioned by Moſes.

THAT the preſence of this comet, as it approached and came below the moon, would cauſe a double tide, as well in the ſeas above, as in the abyſs below; that in the ſeas would be leſs conſiderable, but the other would be vaſtly great, and produce mighty effects. For on the neareſt approach of the comet, the ſurface of the abyſs would put on an elliptic, or oval, inſtead of its former ſpherical figure, and the orb of earth which reſted on it would be obliged to accommodate itſelf to that larger oval ſurface; which being impoſſible for it to do while it remained ſolid, it muſt of

* That a comet actually appeared at the deluge, is atteſted by ſeveral authors (1); Pliny (2) mentions one which appeared in the reign of Typhon, that is, at the flood, or immediately before it; and ſpeaks of the direful effects of it. And our author has endeavoured to prove, that the laſt moſt remarkable comet, which was ſeen in theſe parts in the year 1680, (whoſe revolution he computes to be in about 575 years, and whoſe trajectory Sir Iſaac Newton has delineated) was that very comet which came by the earth at the beginning of Noah's deluge, and which was the cauſe of the ſame (3).

(1) Vid. Hevelii cometograph l. 12. p. 794. (2) Hiſt. nat. l. ii. 25. (3) Whiſton's Theory, p. 187.

of neceſſity enlarge itſelf, and by the violent force of the increaſing ſurface of the abyſs be ſtretched, cracked, and have innumerable fiſſures, made quite through it; or rather the tide muſt open and enlarge thoſe fiſſures, which were produced at the commencement of the diurnal rotation. Thus would the fountains of the deep be broken up, and ſufficient gaps made for a communication between the abyſs below and the ſurface of the earth above; which was no ſooner done, than the fall of the cometic waters began, and quickly covered the earth, and crouded the air with vaſt quantities thereof; which waters, being adventitious and of a prodigious weight, muſt preſs downwards with a mighty force, and endeavour to ſink the orb of earth deeper into the abyſs, according as the entire weight of each column of earth and its incumbent water together did now require, agreeably to the laws of hydroſtatics; which laws he ſuppoſes not to have been exactly complyed with at the earth's firſt ſubſiding into the abyſs, otherwiſe he could ſcarce have expected any elevation of the ſubterraneous waters. But ſince the lower ſtrata of the earth were, according to him, in a good meaſure ſettled, and conſolidated together before the upper were all formed, the whole compages would archwiſe ſuſtain itſelf much higher than the law of ſpecific gravity would otherwiſe require; and ſo, upon the diſruption of the upper earth, its ſeveral columns, as there was room, would ſettle themſelves lower than they were at firſt, and their weight, augmented by the additional waters of the comet, would ſqueeze and preſs on the ſurface of the abyſs; which being a fluid maſs, and incapable of ſuſtaining a preſſure on one part without equally communicating it to all the reſt, muſt burſt out where-ever ſuch preſſure was wanting, and throw itſelf up the fiſſures, through which it would aſcend with a mighty force, and carry up with it whatever was in its way, whether earth or water, and thereby add to the quantity of water already on the face of the earth, and become a freſh augmentation of that deluge, which began already to overwhelm and deſtroy the inhabitants thereof [q].

Year of the World, 1307
Year before Chriſt, 2999

THE abatement and decreaſe of the waters of the deluge, our author ſuppoſes, was firſt by a wind, which dried up ſome; and ſecondly, by their deſcent through thoſe breaches and fiſſures, (at which part of them had aſcended) into the bowels of the earth, which received the reſt. To which

[q] Whiſton's Theory, p. 376, &c. 380, &c.

Year of the World, 1307
Year before Christ, 2999

latter also the wind, by hurrying the waters up and down, and so promoting their lighting into the beforementioned fissures, was very subservient. The air he grants could sustain a very inconsiderable quantity in comparison of the entire mass; but as he supposes the antediluvian earth, though it was not destitute of lesser seas and lakes, yet to have had no great ocean, separating one continent from another, and covering so large a portion of it, as the present earth has[r]; he conceives, the upper region of the earth, being generally dry and porous, and of a great thickness, was capable of receiving a much greater quantity of water, than was on the earth at the time of the deluge[s].

To this theory objections have been made, as well as to the former; for, though there are some surprizing coincidents, which make it indeed probable, that a comet did really come very near, and passed by the earth when the deluge began, and might cause a prodigious tide in the sea, and in the abyss; yet it has been thought somewhat strange, that the swelling of the abyss should have such an effect as to make convenient fissures in the solid crust of earth which enclosed it, without shattering its whole frame. Nor has the theorist's account of draining off the waters from the surface of the earth been judged satisfactory; it being difficult to conceive, that those subterraneous cavities, which he supposes could contain but a small proportion of the waters requisite to make the deluge, should yet be capable of receiving the greatest part of them when it was over. These difficulties however might possibly receive a solution: but the greatest objection of all is, that it is far from being clear, whether the atmosphere of a comet be a watery substance or no; or if it were, that it should afford such a vast quantity of water as the theory has occasion for, on the earth's bare passing through it. For it is said the observations of the most curious enquirers make it not improbable, that the circle about the body of the comet is nothing but the curling and winding round of the smoak, rising at first to a determinate height from all parts of the comet, and then making off to that part of it which is opposite to the sun. And if this opinion be true, the earth, by passing through the atmosphere of the comet, ran a greater risque of a conflagration than a deluge[t].

It

[r] Whiston's theory, p. 374. See also p. 61. [s] Ibid. p. 401, &c. [t] Vid. Keill's Remarks on Whiston's Theory, and Nicholl's Conference, Vol. I.

Year of the World, 1307
Year before Christ, 2999

It seems therefore, after all, that the divine assistance must be called in on this occasion. For though the waters, which covered the earth at the creation, might be sufficient to cover it again, yet how this should be effected by meer natural means, cannot be conceived. The waters which were suspended in the clouds, might indeed descend upon the earth, and that in cataracts, or spouts of water (as the Septuagint interpret the windows of heaven) like those in the Indies, where the clouds frequently, instead of dropping, fall with a terrible violence in a kind of torrent [u]; and this alone might cause a great inundation on the lower grounds: but as the clouds could pour down no more water that they had, which would soon be exhausted at this rate, it seems from the length of the rains continuance, that the showers were rather moderate and gradual. The subterraneous stores would afford a much more plentiful supply to complete the deluge, and probably contain more water than enough to drown the world to a greater height than Moses relates *: the only difficulty is, to draw it out of the abyss on the surface of the earth. And here, since we can assign no natural cause, we apprehend, we may, not unphilosophically, resolve it into the divine power, which might on this occasion so far controul (no greater a miracle than that of continuing) the usual course of nature, as to

The most rational account of the deluge.

[u] Vid. Patrick's Comment. and Ray ubi sup. 116.

* Though Sir W. Raleigh (1) allows thirty miles for the height of the mountains, yet the highest in the world will not be found to be above five direct miles in height. Olympus, whose height is so extolled by the poets, does not exceed a mile and a half perpendicular, and about seventy paces. Mount Athos, which is said to cast its shade into the isle of Lemnos (according to Pliny eighty seven miles), is not above two miles in height; nor Caucasus much more (2); nay, the pike of Teneriff, reputed the highest mountain in the world, may be ascended in three days, (according to the proportion of eight furlongs to a days journey) which makes it about the height of a German mile perpendicular (3). And the Spaniards affirm, that the Andes, those lofty mountains of Peru, in comparison of which, they say, the Alps are but cottages, may be ascended in four days compass (4).

effect its purpose. And indeed the event was so extraordinary, and the consequences thereof so considerable, that it is very reasonable to believe, God did in an especial manner interpose therein. The Stoics, who supposed alternate destructions of the earth by fire and water, made no doubt of the possibility of a general deluge. "There are "vast lakes, says Seneca, which we do not see, great part "of the sea lies hidden and concealed, and many rivers "glide in secret; so that there may be causes of a deluge "on all sides, when some waters flow in under the earth, "others flow round about it, and being long pent up, "overwhelm it; and as our bodies sometimes dissolve into "sweat, so the earth shall melt, and, without the help of "other causes, shall find in itself what shall drown it, "there being in all places, both openly and secretly, both "from above and from beneath, an eruption of waters, "ready to overflowand destroy it [w].

Of the ark.] HAVING thus considered efficient causes of the deluge, we must next take a view of the ark, whereby Noah and his family were delivered from this destruction.

Its size and figure.

WE might presume, if Moses had not told us so, that a vessel, proportionable and adapted to the use designed, must have been of more than human contrivance, and built by the direction of God himself. The length of it 300 cubits, the breadth 50, and the height 30; but what was the exact measure of the cubit here mentioned is disputed. Some, fearing the capacity of the ark would be otherwise too small for the intended purpose, having enlarged the dimensions even to extravagance *: but the general

[w] Senec. Nat. quæst. l. 3. c. 27.

* When Celsus objected, that the ark was a monster with all things in its belly (1), Origen answered, that the ark was like a great city, whose base was 90-000 cubits long, and 25,000 broad (2); but in another place he is more moderate, and without encreasing the number of the Mosaic cubits, supposes they were geometrical cubits, each containing six ordinary cubits (3); which last opinion is approved by St. Austin (4). Some, who cannot digest these geometrical cubits, suppose, the

(1) Αλλόκοτον ἅπαντα ἔνδον ἔχουσαν. (2) Origen. cont Cels. l. 4. Vid Kircher. de arca Noe, c. 8. (3) Idem. Homil. 2. in Genes. (4) De Civit. Dei, l. 15. c. 27.

neral opinion of learned men is, that they were but common cubits [x], one of which, though formerly ſuppoſed equal to eighteen of our inches [y], is now allowed to contain almoſt 22, or more exactly 21.888 [z]. According to which meaſure the ark muſt have been 547.2 Engliſh feet long, 91.2 broad, and 54.72 high, and the ſolid contents 2,730,781.9008 feet, almoſt double to what they would be by the former computation. The form of it was an oblong ſquare, or parallelopiped, with a flat bottom, and a floped roof raiſed a cubit in the middle [a]: it had neither ſails nor rudder, nor was it made ſharp ſo as to cut the water; which form, as it was admirably contrived for lying ſteadily on the water without rolling, which might have endangered the lives of the animals within it, ſo it was very unfit for ſwimming to a great diſtance, or for riding in a boiſterous ſea. It conſiſted of three ſtories, each of which, abating the thickneſs of the floors, might be about eighteen foot high, and was partitioned into a great many rooms, or apartments [b]. This veſſel was without doubt ſo contrived as to have the benefit of the air and light on all ſides †, though the particular conſtruction of the windows be not mentioned; and the whole ſeems to have had

[x] Vid. Buteon. de Arca Noe. Pool's Synopſis, in loc. [y] Vid. Bernard. de menſuris & ponder. antiq. l. 3. [z] See the preface. [a] Geneſ. vi. 14, 15, 16. [b] Ibid. v. 14, 16.

the ark was meaſured by a large cubit of three foot (5), or by the ſacred cubit, which was larger by a hand's breadth than the common cubit (6), all without the leaſt ground or intimation to that purpoſe in the ſacred hiſtorian. Sir Walter Raleigh (7) ſuppoſes, the antediluvian cubit was larger than that which was after in uſe, becauſe, as he imagines, mankind were of a larger ſtature: but this gains no room in the ark, becauſe the bulk of its cargo muſt have been encreaſed in proportion.

† There are various tranſlations of the word צֹהַר Sohar (8), which is found but one in the whole bible in this ſenſe. Our verſion renders it window, as it ſeems very properly; for the root in the Chaldee ſignifies to ſhine, or to give light; were

had another covering beſides the roof, probably made of ſkins, like that of the tabernacle ‡.

THAT the ſpace in the ark was abundantly ſufficient to contain both Noah, and his family, and the animals, and all neceſſary proviſions for them, does evidently appear from the geometrical calculations of learned men **, who have yet generally ſuppoſed the length of the cubit to have been but eighteen inches c; whereas, if we take the dimenſions according to the larger meaſure abovementioned, the whole capacity will be nearly doubled d, as may be eaſily proved.

Bur

c Buteo, de Arca Noe. Biſhop Wilkin's Eſſay towards a real character. d Vid. Peletier Differt. ſur. l' arche de Noe.

wherefore one of the paraphraſts (9) imagines Sohar to have been a precious ſtone, or carbuncle, which Noah was to fetch from the river Phiſon, to illuminate the ark. From the following words, *and in a cubit ſhalt thou finiſh it above*, ſome have ſuppoſed the window was to have been a cubit ſquare, or but a cubit high, which would have been much too ſmall; but the relative it, being in the Hebrew of the feminine gender, and Sohar of the maſculine, thoſe two words cannot agree; and therefore the proper antecedent ſeems to be the ark which was to be covered with a roof raiſed a cubit high in the middle.

‡ Noah is ſaid, after the flood, to have removed the covering of the ark (10), which cannot well be ſuppoſed to have been the roof, but ſomething flung over it, like that of the tabernacle, which is expreſſed by the ſame Hebrew word; and the uſe of it was probably to hang over and defend the windows in bad weather.

** Biſhop Wilkins has reduced the number of ſpecies of animals, which at the firſt view may ſeem almoſt infinite, within very moderate bounds; he reckons, they do not amount to one hundred of quadrupeds, and two hundred of birds; and of theſe muſt be excepted ſuch as live in the water, ſuch as proceed from a mixture of different ſpecies, and ſuch as change their colour, ſize, and ſhape, by changing their climate; and thence, in different countries, ſeem to be of different ſpecies, when they are not. He afterwards enters into a particular detail of the animals, the quantity of food neceſſary for them, and of the capacity and proportion of the ark; and concludes, there was

(9) Jonathan. (10) Geneſ. viii. 13.

Year of the World, 1307
Year before Chriſt, 2999.

BUT another objection has been raiſed againſt the preſervation of animals in the ark, which may not be ſo eaſily anſwered; and that is, how the unknown kinds of ſerpents in Braſil, the ſlow-bellied creature of the Indies, and all thoſe ſtrange ſpecies of animals ſeen in the Weſt-Indies, ſhould either come into the ark, or be conveyed out of it into thoſe countries, which are divided from that continent where Noah was, by ſo vaſt an ocean on one ſide, and at leaſt as large a tract of land on the other (ſuppoſing a paſſage out of one continent to the other, which has not been yet diſcovered), and ſome animals cannot live out of the particular clime wherein they are [e]. But to this it may be anſwered, that it is probable, that the temperature of the air, before the deluge, was ſo equal and ſerene, that all kinds, even of the American animals, might live and be found in thoſe parts of Aſia, when Noah went into the ark, though none of them could bear the climate ſince, by reaſon of the change in nature. The great difficulty is, how to get them into America after the flood was over; and here we confeſs we cannot tell how that was done, any more than we can by what means America was peopled; and yet even thoſe who contend for a partial deluge, allow the inhabitants of that country to be the deſcendants of Noah *.

THE

[e] Stillingfleet's Orig. Sacr. l. 3. c. 4. p. 542.

was room enough and to ſpare: whereupon he obſerves, that had the moſt ſkilful mathematicians and philoſophers been ſet to conſult what proportion a veſſel deſigned for ſuch a uſe ſhould have in the ſeveral parts of it, they could not have pitched on any more ſuitable to the purpoſe than thoſe mentioned by Moſes (1). It is not to be expected, we ſhould here examine the ſeveral plans given of the ark, which may ſerve indeed to ſhew us the poſſible, but not the real, diſpoſition of it; however, for the readers ſatisfaction we have inſerted a view of the ark, according to that plan which ſeems to us moſt likely to be the true one.

* Mr. Whiſton thinks it moſt probable, that ſome were preſerved from the deluge in the American continent as well as in this, though we have no records left among them to give us notice

(1) Wilkin's Eſſay, &c. See alſo Temporarius, Chronolog. Demonſtr. lib. 1. p. 32.

Year of the World, 1307 Year before Christ, 2999

Its materials.

THE timber of which the ark was framed, Moses called Gopher wood [f]; but what tree the Gopher was †, is controverted; some will have it the cedar [g], others the pine [h], some the box [i], and others, particularly the Mohammedans, the Indian plane tree [k]; but they seem to be in the right who suppose it to be the cypress [l]; which, besides the resemblance in name, is allowed to be a very proper sort of timber for the building of ships [m], and not subject to rot [n]. To preserve it from leaking, Noah was directed to pitch it with pitch both within and without; which requiring a very large quantity, some have supposed it to be not pitch but bitumen, such as was used in the building the tower of Babel; which is probable enough, though Moses uses a different word in that place.

Where built.

NOR is there less disagreement as to the place where the ark was built, and the time spent therein. One supposes it was built in Palestine, and that Noah planted the cedars of which he made it in the plains of Sodom [o]; another takes

tice of it. The silence of the sacred historian as to that world he takes to be no objection, because he supposes the whole earth of Moses comprehends no more then the than known parts of the world (2).

† Aben Ezra and Kimhi only say it is a sort of wood so called, which is light, and swims on the water. The vulgat and Septuagint take the word Gopher not to denote the species of timber, but for an adjective, the first translating it ligna lævigata, smoothed, or planed timber, and the other ξύλα τετράγωνα square timber (3); Vossius endeavours to prove, that the expression of this last version signifies not timber squared by the workman, but such sort of trees whose branches shoot quadrangularly, or by four and four at equal distances from the earth, Of which kind are the pine, firr, cedar, and some others; but not the cypress (4).

(2) Whiston's Theory, p. 409, &c. (3) Vid, Eutych. p. 24. (4) Voss. de Sept. Interp. c. 11.

takes it to have been built near mount Caucaſus, on the confines of India [p]; and a third in China, where he imagines Noah before the flood [q]. But the place ſeems rather to have been ſomewhere near Eden; from whence, it is to be preſumed, Noah would not remove far, though not for the reaſon alledged by ſome [r], viz. becauſe he was the eldeſt ſon in a lineal deſcent from Seth, which is no way certain from ſcripture; nor can we think it was far from Ararat where the ark reſted, that being a veſſel which could not be driven to a great diſtance. It was therefore probably built in Chaldea, in the territories of Babylon [s]; where there was ſo great a quantity of cypreſs in the groves and gardens in Alexander's time, that that prince built a whole fleet out of it for want of other timber [t]. And this conjecture is confirmed by the Chaldean tradition, which makes Xiſuthrus ſail from that country [u].

Year of the World 1037. Year before Chriſt, 2999.

As to the time, a Rabbin ſays, the ark was fifty two years in building [w]: the fathers and oriental authors a hundred [x], becauſe Noah is ſaid to be an hundred years old before any mention is made of the ark [y]. Some from the words of St. Peter, *that the long-ſuffering of God waited, while the ark was preparing* [z], ſuppoſe Noah was employed therein the whole time of forbearance [a], which was one hundred and twenty years [b]: and others think the time much ſhorter, becauſe Noah's three ſons, the eldeſt of whom was born in his five hundreth year, are not only mentioned before the directions given for the ark, but they and their wives are ordered to be taken into the ark in theſe very directions [c]; which ſeems to imply, they were then married; and yet they had no children till after the flood, unleſs they periſhed in the deluge. But there is no ſuch connection, or exact order of time kept in this whole narration, as to eſtabliſh any of theſe conjectures. All we can affirm is, that ſuch a veſſel as the ark, and the neceſſary preparations of timber for it, could not be the work of a few years.

And in what time.

THE appointed time of the deluge being come, and all things in readiness, Noah, at God's command, went into the ark with his wife, his sons, and his daughters in-law *; and

Noah, &c. enter into the ark and the flood begins.

* It is certain, both from the testimony of Moses and St. Peter (1), that eight persons and no more were saved in the ark; and though there be a tradition among the Mohammedans to the same effect, which is said to have been received from their prophet himself, yet others of them report this number variously: some say they were but six; others ten; others twelve; others seventy eight; others fourscore, half men and half woman (2); and that one of them was the elder Jorham (3), the preserver, as some pretend, of the Arabian language. But it is still more extraordinary, that a christian writer should encrease the number of Noah's family, by supposing he had daughters of his own and their husbands, his sons-in-law, with him in the ark (4). The Mohammedans, on the other hand, also tells us, that the family of Noah were not all saved; but that one of his sons named Yam (5), or Canaan (6), whom some make his grandson, and the son of Ham (7), and others his wife's son by another husband (8), perished in the flood. The Korân says, Noah called to his son from the ark, saying, *Embark with us, my son, and stay not with the unbelievers: he answered, I will get on a mountain which will secure me from the waters; to which Noah replied, There is no security this day against the decree of God, unless for them on whom he shall have mercy.* And immediately a wave separating them, he was drowned (9). Some commentators (10) add, that Noah's wife likewise perished with her son.

The Eastern authors differ as to the name of Noah's wife. Some of the Jews called her Tisiah, or Arisisah (11), others say she was Naamah, the daughter of Lamech (12), of the race of Cain. The Gnostics called her Noria, for which Epiphanius (13) reprehends them, and says, her name was Barthenos. Eutychius tells us Noah's wife was Haical, the daughter of Namusa, the son of Enoch; and that Shem's wife was named Salît; Ham's, Nahlat; and Japhet's Arisisah; and that they were all three the daughters of Methuselah (14). But these deserve the same credit as the Sibyl, who pretends she was in the ark with Noah, being one of his daughters-in-law (15. The

and he took in to him, purſuant to the divine directions, of all kinds of beaſts, and of fowls, and of every thing that creepeth on the earth; of the unclean by pairs, and of the clean by ſevens, the male and his female † [d]. Noah went into the ark in the ſix hundreth year of his age, on the ſeventeenth day of the ſecond month [e], which anſwers

Year of the World, 1308
Year before Chriſt, 2998

[d] Geneſ. vii. 7, and 2, &c. [e] Geneſ. vii. 6, 11, 13.

The Eaſtern authors add, that Noah in purſuance of the directions of Adam, handed down to him for that purpoſe (16), took the body of that patriarch with him into the ark, and placed it in the midſt of the veſſel, as a barrier between the men and the women, who had no commerce during the deluge (17).

† It is a doubt, whether there went into the ark but ſeven of every clean, and two of every unclean ſpecies, or fourteen of the firſt, and four of the laſt. Some adhere to the former expoſition (18), and others to the latter (19), which ſeems to be the natural ſenſe of the Hebrew words, ſeven and ſeven; and two and two; the male and his female (20). Beſides, if there were but ſeven of the clean beaſts, one muſt have been without a mate; and if we anſwer, that the odd one was for ſacrifice (21), it is more than Moſes tells us, who, on the contrary, repeats it, that the animals all went in by pairs (22). If this be admitted, the capacity which we have allowed the ark, being double to what biſhop Wilkins computes it, will be no more than neceſſary for double the number of animals; eſpecially if we conſider, the birds all went in by ſevens; unleſs the diſtinguiſhing word clean, which is inſerted in the Samaritan text, and in the Septuagint, and Syriac verſions, ſhould be ſupplied in the Hebrew (23).

If it be aſked by what means Noah got all theſe animals together into the ark, the beſt anſwer that has been given is, that they came voluntarily, by a ſupernatural impulſe from God (1); which ſeems to be intimated by the words of ſcripture (2), though others ſuppoſe it was done by the aſſiſtance of angels (3).

answers to our second of December *, while the rest of mankind were in the height of security, and, contemning the repeated admonitions of Noah, did eat, and drink, did marry wives, and were given in marriage, until the flood came and destroyed them all [f]. For on the self-same day were all the fountains of the great deep broken up, and the windows of heaven were opened; and the rain was upon the earth forty days and forty nights. The waters of the flood continued gradually to encrease for five months, till they reached their utmost height, which was fifteen cubits, or upwards, or twenty seven foot above the tops of the highest mountains; but they seem to have been free from storms, or violent commotions, and to have raised and carrried the ark gently along, that vessel, as has been observed, being unable to abide a stormy sea.

[f] Matt. xxiv. 38. Luke xvii. 27.

* Several writers have fallen into mistakes as to the day when the flood began, by computing from the vernal equinox. But since the antediluvian year indisputably commenced from the autumnal equinox, the seventeenth day of the second month will fall about the time we have fixed it, according to the Samaritan chronology; and according to the Hebrew on the seventh of December, as archbishop Usher computes (4); on the sixth of November, as others reckon (5); or, more exactly, on the twenty eighth day of November, which is the calculation of Mr. Whiston (6).

It is remarkable, that the day assigned by Moses for the beginning of the deluge, agrees exactly with the day wherein Plutarch tells us Osiris went into the ark, viz. the seventeenth of Athyr, which month is the second after the autumnal equinox, the sun then passing through Scorpius (7). Nor does it differ above a day or two from that set down by Berosus, if we allow what probably may have been the case, that that writer, or his transcribers, fell into the mistake abovementioned, and supposed the flood began the second month from the vernal equinox, which was Dæsius (8); whereas the true month was Apellæus, the second from the autumnal equinox.

The Mohammedans say the flood began the tenth day of Rajeb (9).

(4) Annal. ad A. M. 1656. (5) Vid. Cleric. in loc.
(6) Theory, p. 218. (7) Plut. de Iside & Oziride, p. 356. D. (8) Vid. Galen. Comment. in l. 1. Epid.
(9) Ebn Shohnah.

AT the end of the five months, God caused a wind to pass over the earth, and the waters began to assuage, the two sources which fed them being stopped and restrained. On the very first day of their decrease, viz. the seventeenth of the seventh month, or the second of May, they fell so much that the ark rested on the mountains of Ararat: and by the first of the tenth month, or fifteen of July, the tops of the neighbouring mountains began to appear. Forty days after or about the twenty third of August, Noah, the better to judge of the height of the waters, opened the window, or lattice of the room where the birds were kept, and let out a raven †, which flew to and fro till the earth was dry, but gave Noah no satisfactory information; whereupon he sent out a dove ‡ three several times, staying seven days between each; the first time the dove quickly returned, finding no place dry enough for her to rest on; the second time she came back in the evening, bringing in her mouth an olive leaf plucked off, which shewed a considerable abatement of the waters; and the third time she returned no more.

Year of the World, 1308
Year before Christ, 2998

The waters assuage.

ON

† The raven is supposed to have been sent out, because Noah, thought the smell of the carcases would tempt him to fly to some distance (10); instead of which he kept hovering about the ark, having some jealousy, as the Jews pretend, of his mate (11). Though the Hebrew says the raven returned again, yet according to the Septuagint, Syriac, and vulgat versions, he did not return; wherefore it is thought he perished in the waters (12). The Rabbins have framed a dialogue on this occasion between Noah and the raven, who asking, why he was picked out to be sent on that errand, Noah told him, because the world might well be without ravens, which was neither fit for food, nor for sacrifice (13).

‡ The dove was probably sent, because of her tameness, her flying far, feeding on the ground, and returning to her nest from the greatest distance (14). Some of the Jews, pretend, she took the olive leaf from paradise, others from mount Olivet: for they imagine Judæa was not drowned in the deluge (15). From the olive leaf Noah might infer, that the lower hills, where those trees chiefly grow, were left by the waters, and that the vegetables were not totally destroyed (16). The Chaldean tradition agrees with the Mosaic history in the circumstance of the birds

Noah, &c. leave the ark.

On the first day of the first month, answering to our seventh of October, in the six hundredth and first year of Noah's life, that patriarch removed the covering of the ark, to have a more extended view, and saw the surface of the earth was cleared of the waters; however, he stayed sometime longer in the ark, till the twenty seventh of the second month, or the second of December, when by God's direction he came forth out of the ark, with his family, and all that were with him, having remained therein a year and ten days according to the antediluvian computation; and according to the present, a full year, or three hundred sixty five days [g].

The Persian, and Indian traditions of the flood.

We shall conclude this section with adding a word or two concerning the Persian, and Indian traditions relating to the deluge.

An eastern writer tells us, that some of those who embrace the Magian religion, are said to deny the flood, or at least the universality of it, pretending, it reached no further than a cliff near Hulwân [h], a city of Irâk, bordering on Curdestân. Yet the orthodox among them acknowledge this general destruction by water, wherein all mankind perished, except some few that were preserved by providence; and that it was sent by God to punish the crimes of mankind, one of whom, named Malcûs, was a monster of wickedness and impiety. One odd circumstance mentioned by them is, that the first waters of the deluge gushed out of the oven * of a certain old woman named Zala Cufa [i].

We

[g] Genes. vii. and viii. [h] Ebn Shohnah. [i] Vid. Hyde, de rel. vet. Persar, c. 10. and Lord's account of the religion of the Persees, p. 9.

birds being sent out by Xisuthrus (17). And Plutarch, says, that according to the mythologists, a dove was let out of the ark, and that her going out was to Deucalion a sign of fair weather, and her return of foul (18).

* Mohammed has borrowed this circumstance, and inserted it in his Korân (1). The commentators say, it was the sign by which Noah knew the flood was coming (2). And some pretend it was the same oven which Eve made use of to bake her bread in, being

(17) See before, 271. (18) Plutarch. de solert. animal. p. 968 (1) Al Koran. c. 11. v. 40. and c. 23. v. 28. (2) Vid. Maracc. in Alc. p. 340.

WE are told, by the same author, that the Indians acknowledge no deluge; but this must not be understood of all, for the Bramins say, that the four tribes, or casts, of which the first race of men consisted, degenerating from their primitive innocence, the priest neglecting his piety, the soldier becoming insolent and tyrannical, the merchant practising deceit in trade, and using false balances, and the artisan spending the profits of his inventions in riot and excess; their impiety and wickedness grew at length to so insufferable an height, that God's indignation was justly provoked, and he sent a flood, which destroyed all nations without exception; after which God, to repair mankind, created three persons of greater excellency than those of the former generation; to one of whom, named Bremaw, he gave the power of creating men and animals, which he executed accordingly; the first human pair proceeding one from his right side, the other from his left. The man was called Manow, and the woman Ceteroupa, and by them was the earth replenished [k]. It must be observed, however, that these people believe several alternate destructions and reparations of mankind: and some of them say, there have been already no less than three destructions by water, and that another is yet to be expected by the same element [l]. Year of the World, 1307 / Year before Christ, 2997

SECT. VII.

Of the state of the antediluvian world, and the changes made in the earth by the deluge.

WE cannot dismiss the history of the old world, without taking a transient view of the antediluvian state of mankind, and of the alterations which have been wrought in nature by the flood. Of the state of the old world.

[k] Lord's Discourse of the Banian religion, c. 6. and 7.
[l] Propag. of the gospel in the east. part. 1. lett. 3. See also the Introd. p. 143.

being of a form different from those we use, having the mouth in the upper part; and that it descended from patriarch to patriarch till it came to Noah (3).

(3) Vid. D'Herbel. Bibl. Orient. Art. Noub.

THE religion, policy, arts, and sciences of these first men would be a very entertaining subject, if the greatest part of what can be said on these heads was not reducible to a few conjectures.

The religion of the antediluvians.

THE only thing we know as to their religious rites is, that they offered sacrifices, and that very early, both of the fruits of the earth, and of animals; but whether the blood and flesh of the animals, or only their milk and wool were offered, is a dispute which we shall consider elsewhere. Some have endeavoured to prove, that all the patriarchs from Adam had stated places, and annual, and weekly times set apart for divine worship, and also a separate maintenance for the priests: all which particulars may be true, though they cannot be made out from scripture. But what is more extraordinary, they pretend to tell us the very day of the week on which the antediluvian sabbath was kept, and that it was the same with the christian sabbath, or sunday [a]; which notion we shall, in a proper place, shew to be very groundless and precarious.

Their arts and sciences.

OF the arts and sciences of these people we have not much more to say. They seem rather to have spent their time in luxury and wantonness, to which the abundant fertility of the first earth invited them, than in discoveries or improvements, which probably they stood much less in need of than their successors. The art of working metals was found out by the last generation of Cain's line; and music, which they might be supposed to practise for their pleasure, was not brought to any perfection, if invented, before the same generation. Some authors have supposed astronomy to have been cultivated by the antediluvians, though this is probably owing to a mistake of Josephus [b]: but it is to be presumed, the progress they made therein, or in any other science, was not extraordinary; it being even very doubtful, whether letters were so much as known before the flood (as will be shewn in another place), whatever is pretended by some men, who have conceived so high an opinion of Adam's knowledge, that they suppose it to have been almost universal; nor can any thing be inferred from the books attributed to that patriarch, or to Seth, and Enoch [c], which are forgeries too gross to deserve any consideration.

As

[a] Smith's Doctrine of the Church of England concerning the Lord's day. Vid. Bedford's Scripture Chronol. p. 6. [b] See before, p. 243. [c] See before, p. 236, 237.

As to their polities and civil conſtitutions, we have not ſo much as any circumſtances whereon to build conjectures. It is probable, the patriarchal form of government, which certainly was the firſt, was ſet aſide when tyranny and oppreſſion began to take place, and much ſooner among the race of Cain than that of Seth. It ſeems alſo, that their communities were but few, and conſiſted of vaſtly larger numbers of people than any formed ſince the flood; or rather it is a queſtion whether, after the union of the two great families of Seth and Cain, there were any diſtinction of civil ſocieties, or diverſity of regular governments at all; it is more likely, that all mankind then made but one great nation, though living in a kind of anarchy, divided into ſeveral diſorderly aſſociations; which, as it was almoſt the natural conſequence of their having, in all probability, but one common language, ſo it was a circumſtance which greatly contributed to that general corruption, which otherwiſe perhaps could not have ſo univerſally overſpread the antediluvian world. And for this reaſon chiefly, as it ſeems, ſo ſoon as the poſterity of Noah were ſufficiently increaſed, a plurality of tongues was miraculouſly introduced, in order to divide them into diſtinct ſocieties, and thereby prevent any ſuch total depravation for the future. Their polity.

THE ſtate of the natural world before the flood ſeems to have been exceedingly different from what it is at preſent.

THE antediluvian world was, in all probability, ſtocked with a much greater number of inhabitants than the preſent earth either actually does, or perhaps is capable of containing, or ſupplying. This ſeems naturally to follow from the great length of their lives, which exceeding the preſent ſtandard of life in the proportion, at leaſt, of ten to one, the antediluvians muſt accordingly in any long ſpace of time double themſelves, at leaſt, in about the tenth part of the time in which mankind do now double themſelves; for they began to beget children as early, and left off as late in proportion as men do now, and the ſeveral children of the ſame father ſeem to have ſucceeded as quickly one after another as they uſually do at this day; and as many generations which are but ſucceſſive with us, were contemporary before the flood, the number of people living on the earth at once would be by that means ſufficiently increaſed to anſwer any defect, which might ariſe from other circumſtances not conſidered. So that, if we make a computation on theſe prin- The old world more populous and fertile than the preſent.

ciples *, we ſhall find, that there were a conſiderable number of people in the world at the death of Abel, though their father Adam was not then 130 years old, and that the number of mankind before the deluge would eaſily amount to above one hundred thouſand millions (even according to the Samaritan chronology) that is to twenty times as many as our preſent earth has, in all probability, now upon it, or can well be ſuppoſed capable of maintaining in its preſent conſtitution [d]. From whence it follows, that to ſuſtain ſo much larger a number of inhabitants (beſides the brute animals which were very probably as numerous in proportion) the earth muſt have been much more fruitful before that deſolation than it has been ſince [e], though it was then barren in compariſon of its primitive fertility before the fall.

Of the longævity of the antediluvians.

One of the moſt extraordinary circumſtances which occurs in the antediluvian hiſtory, is the vaſt length of mens lives in thoſe firſt ages in compariſon of our own. Few now arrive to eighty, or a hundred, years, whereas before the flood they frequently lived to near a thouſand; a diſproportion almoſt incredible, were it not inconteſtably certain from the joint teſtimonies of ſacred and profane writers

[d] Whiſton's Theory, p. 246, &c. [e] Ibid. p. 256.

* It is now generally owned (1), and that from good obſervations, that mankind do double themſelves in about three hundred and ſixty, or three hundred and ſeventy years; or allowance being made for all, but very uncommon and very rare caſes of general wars, famines, plagues, and ſuch like deſolations, in about four hundred years. So that allowing the period for the doubling of mankind from the creation to the deluge to be ten times ſhorter, by reaſon of their ſo much longer lives; if we have a ſeries of forty numbers beginning at two (for ſo many God created himſelf at firſt) and doubling themſelves in forty, or for convenience in forty one years at a mean, or one age with another, till the deluge, we ſhall, in ſome degree, obtain the ſum total of mankind at the deluge, and alſo in the ſeveral ages before that time; though this period of doubling muſt ſtill have been much ſhorter in the earlieſt, and longer in the lateſt, times of the interval. Which computation Mr. Whiſton (2), (to whom we are obliged for theſe obſervations) has given us in the following table.

(1) See Sir W. Petty's Eſſay on the multiplication of mankind; and the Philoſophical Tranſactions, N° 196. p. 597, &c.
(2) Theory of the Earth, p. 249.

ters *; whose authority in this point being not to be eluded, some, to reconcile the matter with probability, have imagined, that the ages of those first men might possibly be computed not by solar years, but months [f], which reduces the length of their lives rather to a shorter period than our own. But for this there is not the least foundation; besides the many absurdities that would thence follow, such as their begetting children at about six years of age, as some of them in that case must have done, and the contraction of the whole interval between the creation and the deluge to considerably less than two hundred years, even according to the larger computation of the Septuagint.

* Josephus reckons up the testimonies of Manetho, Berosus, Mochus, Hestieus, Jerom the Egyptian, and the writers of the Phœnician antiquities. He says also that Hesiod, Hecatæus, Hellanicus, Acusilaus, Ephorus, and Nicholaus wrote, that the anti-

The causes of it.

The causes of this longevity are variously assigned: some have imputed it to the sobriety of the antediluvians, and the simplicity of their diet; that they eat no flesh †, and had none of those provocations to gluttony, which wit and vice have since invented. This, were it true, might have some effect, but not possibly to such a degree as we are speaking of, since we have had many temperate and abstemious persons in latter ages, who yet seldom have exceeded the usual period. Others have imputed it to the excellency of their fruits, and some peculiar virtue in the herbs and plants of those days; but as the earth was cursed immediately after the fall, its fruits we may suppose gradually decreased in their virtue and goodness till the flood; and yet we do not see the length of mens lives decreased considerably, if at all, during that interval. Others have thought, that the long lives of those inhabitants of the old world proceeded from the strength of their stamina, or first principles of their bodily constitutions; which might indeed be a concurrent, but not the sole and adequate, cause of their longevity: for Shem, who was born before the deluge, and had all the virtue of the antediluvian constitution, fell three hundred years short of the age of his fore-fathers, because the greatest part of his life was passed after the flood [g].

It has therefore been more rationally supposed, that the chief cause of this longevity was the salubrious constitution of the antediluvian air, which after the deluge became corrupted and unwholesome, breaking by degrees the pristine crasis of the body, and shortening mens lives, in a very few ages, to near the present standard. But how the flood should induce, or occasion such a change in the air is not easy to comprehend [h].

Dr.

[g] Burnet's Theory, Book 2. c. 2 and 4. See Stackhouse's Body of Divinity, p. 307, &c.

[h] Ray on the deluge, p. 122.

ents lived a thousand years (1). Of all which testimonies we have none now extant, except only that of Hesiod (2).

† A learned physician has advanced a very contrary opinion. Among several causes of the longevity of the first men enumerated by him, one is their eating of raw flesh; the most nourishing and best parts whereof, he supposes, are carried off in dressing by the action of the fire (3).

(1) Joseph. Ant. l. 1. c. 4. (2) In oper. & dieb. v. 130, &c. (3) Beverovicius Thes. Sanitat. l. 3.

The changes made in the world at the deluge, according to Dr. Burnet.

Dr. Burnet, as he attributes the fertility and paradiſiacal ſtate of the firſt earth to a perpetual equinox, the conſequence of the direct, or parallel poſition which he ſuppoſes the earth had then to the ſun; ſo he thinks the barrenneſs of the preſent earth, and the malignity of our air, are owing to the inequality of ſeaſons introduced at the deluge, when the earth, being broken and ſhattered, loſt its poiſe, and fell into that oblique ſituation which it now has [i]. Thence proceeded an unequal temperature of the air, violent exhalations, meteors, thunder, lightning, rain, ſnow, hail, ice, tempeſtuous winds, and the like, to which the earth was before an utter ſtranger, cauſing a ſenſible decay in nature, and a gradual contraction of human life [k].

——and Mr. Whiſton

Mr. WHISON is of the ſame opinion as to the different ſtates of the air before and ſince the deluge, and the effects thereof on human bodies, as well on the productions of the earth; but aſſigns very different cauſes for both. He thinks the purity and equality of the antediluvian air were the natural and regular properties of an original earth, ſuch as one would rationally expect in a world newly come out of the hands of its creator, and ſuch as the generality of our fellow planets (eſpecially our next neighbour the moon), as far as we can obſerve, are ſuppoſed to have had at firſt, and hitherto retained. So that all that can in reaſon be deſired, is to give a plain account of thoſe oppoſite phænomena of the earth which we are now ſo ſenſible of, and by what means the deluge could occaſion the ſame [l]. And this he endeavours to do by ſuppoſing; 1. That the comet, which, according to his hypotheſis, was the cauſe of the deluge, in paſſing by the earth by its attraction accelerated the earth's annual motion, and changed its then circular orbit into an ellipſis [m]: and, 2. That the earth at the deluge carried off vaſt quantities of the groſs, heterogeneous, and indigeſted maſſes with which the chaotic atmoſphere of the comet was crouded; part of which were received into our air, and the other part, being mixed with the waters derived from the comet, ſettled and formed a new cruſt over the ſurface of the earth, which was ſomewhat encreaſed by the dirt and ſoil thrown up by the ſubterraneous waters, and waſhed from the mountains [n].

THESE

[i] See before, 212, 213. [k] Burnet's Theory, Book 2. c. 2 and 3. [l] Whiſton's Theory, p. 363. [m] Ibid. p. 207, &c. [n] Ibid. p. 275, 417.

These two great changes in the natural world would have very conſiderable conſequences. That made in the earth's orbit, beſides altering the form of the year *, would by placing us at a greater diſtance from the ſun, occaſion a very ſenſible decreaſe in the heat of that luminary, which muſt (on calculation) have been a twenty fifth part greater before the flood than ſince [o]. The primigenial ſoil would lie buried under the ſediment, or factitious cruſt, which he computes to be about one hundred and five foot thick [p], wherein the fertile mold would be much thinner ſpread than before the deluge; conſidering which circumſtances, together with the great damp put to the influence of the central heat, as well by the waters of the deluge, as the conſolidation of the adventitious ſediment, it naturally follows, that the preſent earth could be nothing near ſo fruitful and luxuriant in her productions as the antediluvian was [q]. This ſuppoſition of a new cruſt acquired by the earth at the flood, by the way alſo accounts for the phænomena we formerly mentioned of the bones, teeth, and ſhells of fiſh, and other marine and vegetable productions ſo frequently dug up, even on mountains, and at great diſtances from the ſea [r]. The heterogeneous compoſition of our preſent groſs atmoſphere, acquired likewiſe from the comet, muſt neceſſarily occaſion great irregularities and depredations in the temperature and conſtitution of the air. For the difference of climates being not wholly owing to the ſun's heat, or the nature of the air, but partly to thoſe calorific and frigorific mixtures which are uncertainly contained therein; and our air being now in the torrid zone full of ſulphureous and ſultry, and in the frigid ones

[o] Ibid. p. 363. [p] Ibid. p. 418. [q] Ibid. p. 363, &c.
[r] Ibid. p. 423, &c.

* The antediluvian year was, according to this gentleman, in abſolute ſpace of time nearly equal to our preſent and antient lunar one, and above ten days, or, more nicely, ten days, one hour, twenty eight minutes and an half ſhorter than our preſent ſolar year; yet it contained three hundred and ſixty antediluvian days, which were equal to only three hundred and fifty five days, four hours, and about twenty minutes of our preſent days; the earth's diurnal motion having been retarded, and our days conſequently lengthened in that proportion, partly by the quantity of foreign matter derived from the comet at the deluge, and partly from another cauſe (1).

(1) Whiſton's Theory, p. 208, 209, 220.

ones of nitrous and freezing, effluvia, or exhalations, which may be removed, on the veering of the wind, from one region to another; thoſe extremities of heat and cold, and ſudden changes in the temper of the air, which we are now ſo ſenſible of, are thence eaſily accounted for; and the ſame nitro-ſulphureous and other heterogeneous mixtures and exhalations might likewiſe occaſion thoſe coruſcations, meteors, thunder, lightening, clouds, rain, winds, and ſtorms, ſo common with us; from which, and their pernicious effects, the pure homogeneous antediluvian air was perfectly free [r].

As both the theoriſts deny, there was any rain, at leaſt in the habitable parts of the primitive earth, it may be aſked, what expedients they have found out to ſupply it with water. Mr. Whiſton, who allows there were rivers, lakes, and ſeas (though no great ocean) in the firſt earth, effects this with little difficulty; ſuppoſing the vapours elevated by the ſun in the day, which the purity and thinneſs of the air hindered from condenſing and falling down in rain, deſcended, however, in regular and gentle miſts in the night [s]. But Dr. Burnet, in whoſe antediluvian earth there were neither mountains nor ſeas *, and the whole element of water was locked

[r] Ibid. p. 365, &c. [s] Ibid. p. 369.

* To this form of the primæval world, and the change made therein by the deluge, Dr. Burnet (1) has met with a ſurpriſing teſtimony from an Ethiopian tradition, delivered to the count Balthaſar Caſtiglione by a philoſopher of that nation then in Spain; which is to the following effect, viz. That the firſt earth was much more ſpacious than the preſent, and nearer to heaven; that it was perfectly round, without mountains or vallies, but all hollow, or full of cavities within, like a ſponge; that the inhabitants breathed a moſt pure air, and paſſed their lives happily; the earth ſpontaneouſly bringing forth moſt excellent fruits without plowing or ſowing: but after ſome ages, when mankind, elated with pride, had degenerated from their primitive innocence, the angry gods ſhook the earth with ſo vehement a concuſſion, that the greateſt part of it fell down into the caverns below; and the water, before incloſed in thoſe hidden receſſes, was thereby violently forced out; and to this the fountains, rivers, lakes, and ſea owe their original: that that part of the earth which had not fallen in, but ſtood above the reſt, appeared as mountains; and the iſlands and rocks in the midſt of the ſea, are nothing elſe but fragments of the hollow earth, which remained after that ſudden diſruption and fall of the whole terreſtrial frame (2).

(1) See his Theory, p. 386. (2) Fr. Patricio, della Rhetorica degli Antichi, apud Ramazzin, de fontium Mutinenſium ſcaturigine, p. 41.

locked up in the abyſs, is obliged to have recourſe to a more extraordinary explication. He ſays that the action of the ſun being very ſtrong and conſtant in raiſing vapours, and the earth at firſt moiſt and ſoft, as it grew more dry the rays of the ſun would pierce more deep into it, and reach at length the great abyſs which lay underneath, and was an inexhauſted ſtore-houſe of new vapours †. Thoſe vapours would be hindered by the heat from condenſing into clouds, or rains in the warmer parts of the earth, and there being no mountains, nor contrary winds to ſtop, or compreſs them, would bend their courſe where they found the leaſt reſiſtance, and that would be towards the poles, or colder regions, where, when they were arrived, they would be condenſed and fall down in a continual rain, or dew, upon thoſe parts of the earth; ſo that there would be a conſtant ſource of waters, which would neither fail, nor overflow, but find the earth with an equal ſupply throughout all the parts of the year. And to account for the flowing of theſe waters on the even ſurface of the earth, and of their forming themſelves into rivers, which ſeems a difficulty not eaſily to be got over, he ſuppoſes, the earth was not exactly ſpherical but oval, the polar parts being higher than the equinoctial, that is more remote from the center; by which means the waters which fell about the extreme parts would have a continual deſcent towards the middle parts of it, forming by the way lakes, and dividing into leſſer and leſſer ſtreams, till at length they were either exhaled again by the ſun, or drank up by the thirſty ſands of the torrid zone [t].

Whether any Rainbow before the flood.

If either of theſe hypotheſes be admitted, the diſpute whether there was any rainbow or not before the deluge muſt be at an end. For in an air, wherein there fell no rain in ſenſible round drops, to refract and reflect the rays of light, on which the rain-bow entirely depends, the appearance of that beautiful phænomenon could not be expected; and indeed it is ſomewhat hard to conceive, how it could be a ſign, or confirmation of the covenant which God

[t] Burnet's Theory, p. 310, &c.

† Yet, if the calculation made be true, this ſtore-houſe would be quite exhauſted long before the deluge (3).

(3) See before the note, 291.

God made with Noah, that he would drown the world no more with water, if it had been in the clouds before, and with no regard to this promiſe. For if we ſuppoſe it even an arbitrary ſign, and to have no connection with the effect, it ſeems, that, to make it ſignificant and ſatisfactory, it muſt be ſomething new, otherwiſe it could not ſignify a new thing, or be the confirmation of a new promiſe. And accordingly it has been obſerved, that the ſigns by inſtitution only, mentioned in ſcripture, have all ſomething new and ſtrange, as a mark of the hand of God: at leaſt it muſt be acknowledged, that if Noah had never ſeen a rainbow before, that ſign muſt have made a much more lively impreſſion on him, and given him much greater comfort and aſſurance in God's promiſe, than if it had been no more than what he muſt have often obſerved before the late terrible devaſtation [v].

Whether fleſh might be eaten before the flood.

WHETHER fleſh was permitted to be eaten before the deluge, is alſo a queſtion which has been much debated [u]. By the permiſſion expreſly given to Noah for that purpoſe after the flood [w], and God's aſſigning vegetables only for food to man as well as beaſt at the creation [x], one would imagine it was not lawful before; yet others have ſuppoſed, that it was included in the general grant of power and dominion given to Adam by God over the animal creation [y]; and the diſtinction of beaſts into clean and unclean, which was well known before the flood [z], is inſiſted on as a ſtrong argument on this ſide, and which it is not eaſy to anſwer. To ſay that diſtinction was uſed proleptically, is a mere ſubterfuge; and to ſuppoſe it made ſolely to diſtinguiſh what was lawful or unlawful to be ſacrificed, and not what might or might not be eaten, is little better; it being the cuſtom to offer to God ſuch fruits and animals as were fit for food and ſuſtenance, and not ſuch as were of no uſe or benefit to mankind in that reſpect.

SECT.

SECT. VIII.

An enquiry concerning the situation of mount Ararat, and the various opinions about it.

IT may be proper, before we close this chapter, to give some account of the mountains of Ararat, whereon the ark rested, the situation of which is rendered, in some measure, uncertain by the different traditions concerning it.

The Sybilline verses place mount Ararat in the borders of black Phrygia, near Celænæ, at the springs of the river Marsyas [a], which rises out of the same lake with the Mæander, and falls at length into it [b]. But it appears from good authorities, that there is really no mountain at all in that place, at least none near so high as Ararat must needs have been, but only a small hill, or eminence [c]. This fancy therefore seems to have taken its rise from Apamea, another city near Celænæ, being sur-named Cibotos, or the ark; not, as Bochart observes [d], from any tradition of Noah's ark, but from its situation, being shut up like an ark, or chest, by three rivers which encompassed it; as the port of Alexandria in Egypt was called Cibotos from the bay surrounding it: besides, Cibotos was a new name, which does not seem to have been known in those parts till given to Apamea, built by Seleucus, or Antiochus Soter; and Celænæ [e] had a prior right to it, if there had been any such tradition; so that what is farther alledged of the Apameans coining medals having on the reverse the impression of an ark, as may be seen on three severally struck in honour of Adrian [f], Septimius Severus, and Philip the Arabian [g], is of no weight.

Ben

BEN GORION ſeems to extend the name of Ararat to Caucaſus [h]: but by the mountains of Ararat have been generally underſtood, both by antient and modern authors, thoſe of Armenia. Ararat is by the Septuagint [i], and in the Vulgat [k], rendered Armenia *; and there is actually a province of that country named Ararat [l], or Airarat, from a plain therein ſo called in memory of Arai the eighth king of that nation, who was ſlain in battle there [m]; Arayi arat [n] ſignifying the ſlain of Arai. But though authors have generally agreed in placing Ararat in Armenia, yet they differ as to the particular ſituation of the mountain where the ark reſted, there being two opinions concerning it, each of which is ſupported by a tradition.

First tradition about mount Ararat.

THE firſt opinion is, that it was one of the mountains which divide Armenia on the ſouth from Meſopotamia and that part of Aſſyria inhabited by the Curds, from whom thoſe mountains took the name of Curdu, or Cardu, by the Greeks, turned into Gordyæi, and other names †. It is called by the Arabs Al Judi [o], (if it be not a miſtake for Gordi [p], or a corruption of Cordi, or Jordi §, as it ought to be written by the Arabs [q];) and alſo Thamanîn [r],

† The Greek and Latin writers name them Carduchi, Cardiei, Cordyæi, Cordueni, Gordi, Cordæi, Curdi, &c. the orientals call them alſo Cardon, Cordyn, Curud, &c. Bochart (1) ſuppoſes they are the ſame which are called by miſtake in Joſephus Cæron (2).

§ גורדי Jordi may be changed גודי Judi by an eaſy miſtake of the Ra for the Waw; but it is odd ſuch an error ſhould be univerſal.

(1) Phaleg. lib. 1. cap. 3. (2) Antiq. lib. 20. cap. 2.

nîn[r], probably from the town hereafter named, at the foot of it.

The tradition which affirms the ark to have reſted on theſe mountains muſt have been very antient, ſince it is the tradition of the Chaldeans themſelves [s]: the Chaldee paraphraſts conſent to this opinion [t], which obtained very much formerly, but when we come to enquire into the particular part of theſe mountains, whereon the ark reſted, authors ſeem to place it out of Armenia; Epiphanius in the country of the Cordyæans [u], or between the Armenians and Cordyæans on the mountain Lubar [w]: the eaſtern authors, as well Chriſtians as Mohammedans, on mount Thamanîn, or Jûdi [x], which overlooks the country of Diyar Rabiah [y] in Meſopotamia, near the cities of Mauſol, Forda ‡, and Jazîrat ebn Omar *† [z], which laſt one affirms to be but four miles from the place of the ark [a].

To

[r] Geogr. Nubiens. p. 202. [s] Beroſus apud Joſephum Antiq. lib. 1. cap. 4. [t] Onkelos & Jonathan in Gen. viii. 4. [u] Epiphan. Hæreſ. 18. [w] Idem, ibid. lib. 1. § 4. [x] Geogr. Nubiens. p. 202. Ebn Shohnah, MS. [y] Ebn Amîd, l. 1. c. 1. [z] Eutych. Annal. p. 41. Vid. etiem D'Herbelot, Bibl. Orient. p. 404. Art. Gioudi & p. 676. [a] Benjamin Tudelens. Itiner. p. 61.

‡ If this name were not uſually written Forda by the Arabian authors, we ſhould judge it ought to be Korda, from the name of the mountain. D'Herbelot mentions a town called Corda at the foot of Al Judi (3).

*† Jazîrat ebn, or bani, Omar is a city in an iſland of the Tigris, ſo named from the Khalîfah Omar ebn Abd'alazîz, of the family of Ommiyah, who, if you will believe Benjamin the Jew (4), (tho' he by miſtake calls him Omar ebn al Khettâb), removed the remains of the ark into that city, and built a Mohammedan temple therewith. The Syrians call it Gozarta, or the iſland; but we muſt not confound it, as, Aſſemani does (5), with the Gezerta of Maſius, called by ſome the iſle of Eden, which is no more than twelve miles above Mauſol; whereas Jezîrat ebn Omar is ninety miles above that city (6), in one of the roads from Aleppo to Tauris (7.)

(3) Bibl. Orient. Art. Gioudi. (4) Itiner. p. 61. (5) Bibl. Orient. Tom. II. diſſert. de Monophys. & Tom. I. p. 540. (6) Geog. Nubiens. p. 202. (7) Tavernier, Voyage de Perſe, liv. 3. chap. 4.

To confirm this tradition, we are told, that the remainders of the ark were to be ſeen upon theſe mountains: Beroſus and Abydenus both declare, there was ſuch a report in their time [b]; the firſt obſerves farther, that ſeveral of the inhabitants thereabouts ſcraped the pitch off the planks as a rarity, and carried it about them for an amulet: and the latter ſays, they uſed the wood of the veſſel againſt many diſeaſes with wonderful ſucceſs. The relics of the ark were to be ſeen alſo in the time of Epiphanius, if we may believe him [c]; and we are told the emperor Heraclius went from the town of Themanîn up the mountain Al Judi, and ſaw the place of the ark [d]. This town of Themanîn is, or was, ſituate at the foot of the mountain Al Judi [e]; the name ſignifies eighty (and not eight, as Bochart, Calmet, and others would have it) in memory of the eighty perſons, who, according to a Mohammedan tradition, were ſaved in the ark [f]; though the chriſtian writers among the Arabs, who ſay this city was built by Noah and his ſons near Forda, not approving the tradition, ſuppoſe it called ſo becauſe they were eight [g].

Remainder of the ark to be ſeen for a long time on the Cardu mountains.

THERE was formerly a famous monaſtery, called the monaſtery of the ark, upon the Cardu mountains, where the Neſtorians uſed to celebrate a feaſt day on the ſpot where they ſuppoſed the ark reſted; but in the year of Chriſt 776, that monaſtery was deſtroyed by lightening, with the church, and a numerous congregation in it [h]. Since which time probably the credit of this tradition hath declined, and given place to another which at preſent obtains.

Monaſtery of the ark formerly there.

THE ſecond opinion therefore places mount Ararat towards the middle of Armenia, near the river Araxes, or Aras, above 280 miles diſtant from Al Judi to the north-eaſt.

Second tradition about mount Ararat.

JEROM ſeems to be the firſt who hath given an account of this tradition: Ararat, ſays that father, is a champian

[b] Beroſus apud Joſephum Antiq. l. 1. c. 4. Abydenus apud Euſeb. Chron. Græc. & de præp. Evang. l. 9. c. 4. [c] Hæreſ. 18. [d] Ebn Amîd Hiſt. Arabum. l. 1. c. 1. [e] D' Herbelot, ubi ſupra. Vid. Agathiam, l. 4. p. 135. [f] D' Herbelot, p. 677. [g] Vid. Eutych. & Ebn Amîd ubi ſupr. [h] Vid. Chronic. Dionyſii Patriarch. Jacobitar apud Aſſeman. Bibl. Orient. tom. II. p. 113.

pian country, incredibly fertil, through which the Araxes flows, at the foot of mount Taurus, which extends ſo far. Wherefore by the mountains of Ararat, whereon the ark reſted, are not to be underſtood the mountains of Armenia in general, but the higheſt mountains of Taurus, which overlook the plains of Ararat [i]. Theſe probably are the plains mentioned before, which gave name to the country. An author of the middle age obſerves, that near the city of Naxuan [Nakh-chuvûn] are the mountains on which the ark reſted, having the Araxes running at the foot of them [k]; and ſince that time all the travellers into thoſe parts ſpeak of no other mountain of Ararat.

This tradition would appear of equal antiquity with the former, could we be certain this was the high mountain Baris *, in the province of Minyas † in Armenia, to which, according to a tradition reported by Nicholas of Damaſcus

[i] Hieronym in Eſai. 37. [k] Rubruquis de Tartaris, c. 48.

* Bochart (8) ſuppoſes Baris, in the Armenian tongue, to be the ſame with ἀποβατήριον, the deſcent, or going forth, as we are told that nation called the place where Noah came down from the ark (9); and has found an Arabic word of that ſignification ſomething like it; but we doubt much, whether he could find an Armenian one: բարձր bardſr, ſignifies high in that tongue, and might be given to this mountain on account of its height; but this is only conjecture. Others tell us Baris, in the Egyptian language, ſignifies a ſort of a ſhip (10), and therefore think, the name has ſome reference to the ark; and that the ſame may be alluded to in the names of the temple of Baris, and the mountains Imbar and Nibar, in that neighbourhood (11) (though their ſituation be very uncertain), as well as the Lubar of Epiphanius (12).

† Some will have Minyas to be written Milyas (13); but the firſt ſeems to be the true reading, ſince we find Minni joined with Ararat in ſcripture (14). Sir Iſaac Newton makes one name of Ararat Minni (15); and perhaps Armenia is only a contracti-
on

Damascus [l], many people in the time of a deluge fled for sanctuary; and upon the top of which a certain man stuck with his vessel. As it is no new thing to find the same relics in two different places at once, the same author also assures us, that several pieces of the timber of that vessel were to be seen on the mountain Baris, a long time after it had landed there [m]: but this circumstance may be urged as an objection against Baris being the same with the last mentioned mountain, which is said to be inaccessible. However, at the foot of it they also shew a town called Cemain, which comes pretty near to Shemonah [n], signifying eight, the number of persons who came out of the ark, and, as the Armenians say, built it [o].

Objections to it.

An objection indeed has been started by a late traveller, which tends to overthrow both traditions: he says he does not see where the dove could find an olive-branch, if the ark be supposed to have rested on any of the mountains of Armenia, for the olive is not found thereabouts [p]; nor (we are told) in any part of Asia beyond Aleppo, except one single place near Casbîn [q] in Persia. However, it seems to have been otherwise antiently, for the scripture mentions Assyria as a land of oil-olive [r]; and we are told, that the olive grew in Gogarene, a province of Armenia [s]. Another has observed, that this mountain is so pointed at the top, that he could not easily conceive how the waters of the deluge could withdraw quick enough, just when the ark was over it, so as to leave it on so narrow a space [t].

Called Masîs by the Armenians.

But the Armenians are not to be convinced by any arguments, that this is not the very mountain on which the ark rested; they called it Masîs [u], and derive the name from

[l] Apud Joseph, Antiq. l. 1. c. 4. [m] Ibid. [n] שמנה. [o] Vid. Rubruquis ubi supr. [p] Tournefort Voyages, lett. 7. [q] Tavernier Voyage de Tunquin. p. 181. [r] 2 Kings xviii. 32. on, or compound of Har and Minni, which signifies the mountain, or mountainous country of Minni; though the Armenians themselves derive the name from Aram one of their kings (16).

(16) Moses Choren, Hist. Arm. p. 49.

Amaſia ‡, the third ſucceſſor of Haikh [w], the founder of their nation. The Turks name it Agri dagh, that is, the heavy or great mountain [x], and Parmak daghi, or the mountain of the finger, in alluſions to its appearance** [y]: it ſtands about twelve leagues to the eaſt [or rather ſouth-eaſt] of Erivan [a] and of Ejmiadzin, or the three churches, (from which laſt it is two ſhort days journey) four leagues from the Aras [b], and ten to the north-weſt of Nackhchuvan [c]*†. Here

‡ This etymology overthrows Chardin's Armenian derivation from Mas, or Meſhech, the ſon of Japhet, whom he ſays that nation conſider as their founder; and his Perſian derivation from Azîz, an Arabic word ſignifying dear, or beloved (17); which laſt, however, might have been an epithet of this mountain, ſince a traveller calls it Aſſe Maſis (18), which perhaps he miſtook for Azîz Masîs. Other travellers write it Meſſis Saur (19), and Maſeſuſar, (20), and ſay, it ſignifies the mountain of the ark; but this is alſo a miſtake; for though the Armenians call a mountain Sâr, yet Masîs does not ſignify an ark. They ſhould have written Masîs Sâr, which ſignifies no more than mount Masîs: but faults of this kind in travellers are numberleſs, they being ſeldom acquainted with the language of the countries they viſit.

From Masîs doubtleſs the antients made their Mons Maſius, the ſituation of which they have delivered with as much uncertainty as the moderns (21),

** Perhaps this author miſtook this for another mountain ſo called by the Turks, which ſtands near the Caſpian ſea, between Niaſabâd and Shamakhi, and ſeems to deſerve the name better (22).

*†It is ſaid, the memorial of the ark's reſting here is preſerved in the name of this city, Nak ſignifying in Armenian a ſhip, and ſhivan, reſted (23); but this ſeems to be an etymology no better grounded than thoſe abovementioned; the Perſians ſaying it

(17) Chardin, Voyage en Perſe, tom. I. p. 157. Lucas, Voyage 1. tom. II. chap. 2. (18) Newberry in Purchas, part 2. 1417. (19) Cartwright, ubi ſup. Tavernier Voyages, liv. 1. cap. 4. (20) Gemelli Voyages, tom. 2. book 1. cap. 2. (21) Vid. Cellarii Geogr. Antiq. Vol. II. lib. 3. cap. 11. p. 232. (22) Vid. Olearius's Travels l. 1, c. 5. (23) Tavernier ubi ſupra.

Here we muſt obſerve a miſtake of the modern as well as antient geographers, who have placed this mountain ſeveral degrees more to the weſt than it ought to be. This error of theirs hath miſled many hiſtorians, and made them look for Ararat ſomewhere elſe, ſince they could not reconcile the ſituation, which the maps give it, with ſcripture. Sir Walter Raleigh ſet the example to our Engliſh hiſtorians, and reſts the ark not upon the mountains of Armenia, but ſome of thoſe between Perſia, Tartary, and India: he takes the mountains of Ararat in a more extended ſenſe, than either the antient traditions, or ſcripture will allow; and, to ſerve his turn, ſuppoſes the mountains of Caucaſus, towards Bactria and Scythia, to be part of a branch of Taurus, which, in its way through Aſia, croſſed Armenia [d], but for this there does not appear the leaſt authority from the obſervations of travellers in thoſe countries. However, his opinion hath been followed by ſome of our lateſt writers [e], not conſidering, perhaps, that Sir Walter took his notion from Goropius Becanus, one of the moſt fanciful authors that ever wrote; and that this laſt was led into it by the beforementioned miſtake of the geographers ††.

Mount Masîs is encompaſſed by ſeveral petty hills, on the tops of which are found many ruins, thought to have been the buildings of the firſt men, who feared for a time to deſcend into the plains [f]: it ſtands by itſelf in form of a ſugar loaf, in the midſt of one of the greateſt plains that is to be ſeen

Deſcription of mount Masis.

[d] Raleigh Hiſt. of the world, book 1. ch. 7. § 10. [e] Shuckford's Connect. Vol. I. p. 98, 103. [f] Cartwright, or the Preachers Travels, p. 30, 31.

it was named Nakkaſh jehân, from the great numbers of painters ſettled there; for the Perſians call one of that profeſſion (by an Arabic word) نقاش Nakkâſh: and in Armenian alſo նկարիչ Nakſherâr, is a painter; and նկարել nakſhel, to paint.

†† This author among others out of the way conceits, holds the mountain Parapaniſus, or Paropamiſus (a branch of Taurus, not of Caucaſus) to be Ararat. He imagines, that the place firſt inhabited after the flood was Margiana, a province of Perſia, from whence thoſe colonies came with Nimrod, which built Babel: his reaſon for this opinion is, becauſe they went from the Eaſt (24) to the plain of Shinaar; whereas Armenia (ſays he) bears ſomewhat weſtward from thence (25).

(24) Gen. xi. 2. (25) Goropius Becanus Indo-Scythia, p. 473.

ſeen [g], detached as it were from the other mountains of Armenia, which make a long chain [h]: it conſiſts of two hills [i]; the leſſer is the more ſharp and pointed [k]; the higher, which is that of the ark, lies north-weſt of it [l], and raiſes its head far above the neighbouring mountains [m]: it ſeems ſo high and big, that when the air is clear it does not appear to be above two leagues from Erivan [n] (whence one writer, deceived by the ſight, computes the diſtance but at one league [o]), and may be ſeen four, or five, days journey off [p]. Yet travellers agree, that the height of it is not extraordinary [q]; one thinks, he hath paſſed a part of Caucaſus which was higher [r]; and another ſays, it is not above twice as high as mount Valerian near Paris [s]: they therefore impute its being viſible ſo far off to its lonely ſituation in a vaſt plain [t], and upon the moſt elevated part of the country, without any mountains before it to obſtruct the view [u]. As for the ſnow, with which, according to all accounts, it is perpetually covered from the middle upwards [w] (as it is often with clouds during two, or three, months of the year [x]), we are told that is no rule to judge of the height by, ſince the loweſt mountains in thoſe countries, paſſed with the ſame eaſe as the plains, are covered with ſnow [y], which even in the hotteſt ſummer lies on the leaſt hills in Armenia [z], as it does on thoſe ſmall ones ſurrounding Ararat [a].

Fables of the Armenians concerning it.

The Armenian monks tell a thouſand idle ſtories concerning the ark, the whole [b], or a part of which, they pretend, is ſtill to be ſeen on the top of the mountains [c], ſomething always appearing there black, which they imagine to be the ark [d]; though at the ſame time they affirm none ever was, nor can get there [e]; thoſe who have attempted to aſcend the hill out of zeal, or otherwiſe, having

ing been puniſhed, or at leaſt brought back again by angels at night to the place they ſet out from in the day, to prevent their approaching that veſſel [f], as happened, they ſay, to a monk of Ejmiadzin, afterwards biſhop of Niſibîn, called James; though God at length ſo far complied with his deſires, as to ſend an angel to him with a piece of the ark, who bid him, at the ſame time, not fatigue himſelf in vainly endeavouring to aſcend the mountain, for that God had prohibited the acceſs to the top of it [g], and would not ſuffer men to pull in pieces a veſſel which had ſaved ſo many creatures [h]: but if they are aſked, whether they have any relics of the ark, they gravely anſwer, that it ſtill lies buried in the vaſt heaps of ſnow [i]; which indeed is the charm that hinders the aſcent [k], as one Armenian author confeſſes [l], and is ſufficient to defend the ark without the help of an angel. Yet a certain miſſionary conceits, that the earthly paradiſe ſtill remains in ſome agreeable plain of this mountain, which God preſerves from heat and cold, and where the prophets Enoch and Elias enjoy a thouſand ſorts of delights, and are to eat of the tree of life till the end of the world [m]. Indeed the plain under the mount might be allowed its claim to the terreſtrial paradiſe, was it to be decided by the beauty and delightfulneſs of the ſituation.

WITHOUT doubt the Armenian prieſts would be glad to produce better credentials in behalf of their tradition; accordingly, they ſometimes tell travellers the ſaid monk had been at the top of Ararat [n]. The Armenian patriarch informed Tournefort, that God had favoured one ſaint with the ſight of the ark itſelf [o]. And Rubruquis was aſſured by a biſhop, that the beforementioned piece of the ark [brought to James] was in their church [p]; and the Copts ſhew part of a beam of that veſſel in theirs at old Cairo in Egypt [q]. What credit ought to be given to theſe venerable teſtimonies, will beſt appear from the account Tournefort has left us of his attempt to climb this moun-

tain *, in which having ſpent a whole day with infinite fatigue,

* "We began, ſays that author (1), to aſcend mount Ararat about "two o'clock in the afternoon, but not without difficulty. We "were forced to climb up in looſe ſand, where we ſaw nothing "but ſome Juniper and Goats-thorn. This mountain is one of "the moſt ſad and diſagreeable ſights upon earth; there are nei-"ther trees, nor ſhrubs upon it, nor any convents of religious. "Struys would have done us a favour, if he had told us where "the Anchorites he mentions reſided; for the people of the "country do not remember to have heard, there ever were in this "mountain either Armenian Monks, or Carmelites; all the mo-"naſteries are in the plain. I do not believe the place is inhabi-"table in any other part, becauſe the whole ſoil of Ararat is looſe "or covered with ſnow; it ſeems too as if this mountain waſted "continually. From the top of a great abyſs, oppoſite to the "village [of Akurlu in the road from Erivan] from whence we "came, there continually fall down rocks of a blackiſh hard ſtone, "which make a terrible noiſe. There are no living animals but "at the bottom, and towards the middle of the mountain: they "who occupy the firſt region, are poor ſhepherds and ſcabby flocks, "among which one finds ſome patridges: the ſecond region is "poſſeſſed by crows and tygers, which paſſed by us not without "giving fear. All the reſt of the mountain, that is, the half of "it, has been covered with ſnow ever ſince the ark reſted there, "and theſe ſnows are covered half the year with very thick "clouds. That which is yet more inconvenient and troubleſome "in this mountain is, that the ſnow which is melted runs into the "abyſs by a vaſt number of ſources, which one cannot come at, "and which are as foul as the waters of a land-flood in the greateſt "ſtorm. All theſe ſources form the ſtream which runs by Akurlu, "and which never becomes clear. They drink mud there all the "year; but we found it more delicious than the beſt wine: it is "always cold as ice, and has no muddy taſte. Notwithſtanding "the amazement this frightful ſolitude caſt us into, we endeavour-"ed to find the pretended monaſtery, and enquired, whether there "were any religious ſhut up in caverns. The notion they have in "the country that the ark reſted here, and the veneration all the "Armenians have for this mountain (for they kiſs the earth ſo ſoon "as they ſee it, and repeat certain prayers, after having made the "ſign of the croſs) have made many imagine it muſt be filled "with religious; and Struys is not the only perſon who has told "the publick ſo. However, they aſſured us, there was only one "forſaken convent at the foot of the gulph; that there was no "fountain throughout the whole mount, only the ſtream of the abyſs,

(1) In loco ſuperius citat.

tigue, he was obliged, by the ſnow and intenſe cold, to return

" abyſs, which we could not come at to drink, but near that " convent; and that we could not go in a whole day to the " ſnow and down again to the bottom of the abyſs; that the " ſhepherds often loſt their way, and we might judge what a " miſerable place it was, from the neceſſity they were under to " dig the earth from time to time, to find a ſpring of water " for themſelves and their flocks; and that it would be to no " purpoſe to aſcend higher in ſearch of plants, becauſe we " ſhould only find rocks hanging over our heads, and heaped one " upon another.

" After this we began to travel towards the firſt range of " rocks, with one bottle of water: but notwithſtanding we had " made pitchers of our bellies, in two hours time they were quite " dried up; and water ſhook in a bottle is a very diſagreeable " ſort of drink: our only hope therefore was to come at the " ſnow, and eat ſome of it to quench our thirſt. It muſt be ac- " knowledged, that the ſight is very much deceived, when we " ſtand at the bottom and gueſs at the height of a mountain, and " eſpecially when it muſt be aſcended through ſand as trouble- " ſome as the Syrtes of Africa. It is impoſſible to take one firm " ſtep upon the ſand of mount Ararat; in many places, inſtead " of aſcending, we were obliged to go back again down to the " middle of the mountain; and, in order to continue our " courſe, to wind ſometimes to the right, and ſometimes to the " left. When we meet with any Mouſe-ear which was too ſhort " to brouze, it made our boots as ſmooth as glaſs, and ſo ſlip- " pery, we were forced to ſtand ſtill.

" To avoid the ſand, which fatigued us intolerably, we took " our way to the great rocks heaped one on another. We paſs " under them as through caverns, wherein we are ſheltered from " all the injuries of the weather, except the cold, which we felt " there very ſenſibly, and ſerved a little to allay our thirſt. We " were obliged to leave this place quickly, leſt we ſhould get a " pleuriſy, and came into a very troubleſome way, full of " ſtones, and were forced to leap from one ſtone to another. We " came about noon to a place more pleaſing, for it ſeemed as " if we were ready to take hold of the ſnow with our teeth. But " our joy laſted not long; for what we had taken for ſnow was " only a chalk rock, which hid from our ſight a tract of land a- " bout two hours journey diſtant from the ſnow, and which " ſeemed to us to have a new kind of pavement, not of little " flints, but ſmall pieces of ſtone broken off by the froſt, and " whoſe edges cut like flints. We kept in very good order; " we aſſured our guides, that we would go no farther than a " heap of ſnow, which appeared ſcarce bigger than a cake; but

turn without accomplishing his design, though it was then in the middle of summer †.

The

" but when we came to it, we found the heap was above thirty " paces in diameter. We every one of us eat more or less, as " we had a mind; and by agreement resolved to advance no far- " ther. This snow was above four foot thick; and being frozen " hard, we took a great piece to fill our bottle. It cannot be " imagined, how much the eating of snow revives and fortifies: " we descended therefore from the snow with a wonderful vigor, " which was not of long duration; for we came to sands which " lay behind the abyss, and were full as troublesome as the for- " mer. When we endeavoured to slide along, half our bodies " were buried; besides, we could not keep the direct " way, but were obliged to go to the left to come to the " edge of the abyss, of which we had a mind to take a nearer " view. And indeed it is a most frightful sight; to look on " the horrible precipices, ever so little, will make the head turn " round. The noise made by a vast number of crows, who are " continually flying from one side to the other, has something in " it very frightful. To form an idea of this place, you must " imagine one of the highest mountains in the world opening its " bosom, only to shew the most horrid spectacle that can be thought " of. All the precipices are perpendicular, and the extremities " are rough and blackish, as if a smoak came out of the sides " and smutted them. About six o'clock in the afternoon we " found ourselves quite tired out and spent. However, at length " observing a place covered with Mouse-ear, whose declivity " seemed to favour our descent, that is to say, the way Noah " took to the bottom of the mountain; we ran thither in haste, " and then sat down to rest ourselves, and found there more " plants than we had all the journey besides: and what " pleased us mighty well was, that our guides shewed from " thence, but at a great distance, the monastery whither we were " to go to quench our thirst. We laid ourselves on our backs, " and slid down for an hour together upon this green plat, and " so passed on very agreeably, and much faster than we could " have gone on our legs. The night and our thirst were a kind " of spurs to us, and caused us to make the greater speed. We " continued therefore to slide in this manner as long as the way " would suffer us, and when we met with small flint stones which " hurt our shoulders, we turned and slid on our bellies, or went " backwards on all four. Thus by degrees we gained the mona- " stery, but so disordered and fatigued by our manner of travel- " ling, that we were not able to move hand or foot. To our " great misfortune also we found there neither wine nor water, so " were forced to send to the river, the descent to which was near " a quarter of a league down-right, and the way very rugged.

† Yet,

THE ſituation of Ararat, whether it be mount Masîs, or the mountain of Cardu, is very convenient for the journey of the ſons of Noah from thence to Shinaar, the diſtance not being very great, and the deſcent eaſy, eſpecially from the latter, into the plains of Meſopotamia, of which Shinaar is a part. We diſcover plainly, through the Moſaic hiſtory, a neighbourhood between the land of Eden, where man was created, that of Ararat, where the remains of mankind were ſaved, and that of Shinaar, where they fixed the centre of their plantations. And certainly it was more natural it ſhould be ſo, than to ſeparate thoſe ſcenes at ſuch a diſtance from each other, as ſome have done.

† Yet, if you will believe a certain Dutch traveller (1), theſe difficulties may be ſurmounted; for he aſſures us, he went five days journey up mount Ararat to ſee a Romiſh hermit; that he paſſed through three regions of clouds, the firſt dark and thick, the next cold and full of ſnow, and the third colder ſtill: that he advanced five miles every day; and when he came to the place where the hermit had his cell, he breathed a very ſerene and temperate air: that the hermit told him, he had perceived neither wind nor rain all the twenty five years he had dwelt there, and that on the top of the mountain there ſtill reigned a greater tranquillity, whereby the ark was preſerved uncorrupted. He farther pretends, that the hermit gave him a croſs made out of the wood of the ark, together with a certificate, a formal copy of which the author has given in his ſham relation.

CHAP. II.

The General Hiſtory from the Deluge to the Birth of Abraham.

SECT. I.

The Chronology from the Deluge to the Departure of Abraham from Haran ſtated.

PURSUANT to our intended method, before we proceed to the poſtdiluvian hiſtory, we ſhall ſettle the chronology of this firſt period of it, which, as well as that of the preceding, can be adjuſted only from the records of Moſes.

THIS is one of the moſt difficult periods to ſettle in all chronology, not only, becauſe we have no aſſiſtance therein from profane hiſtory, but alſo on account of the great diverſity between the ſeveral copies of the Moſaical writings. It is a great misfortune, that there ſhould be any uncertainty with regard to the times next after the flood. For the planting of the world, the forming of ſocieties and governments, the riſe of arts and ſciences, and the beginning of ſtates and monarchies, falling within theſe limits, nothing could have been more ſerviceable to hiſtory than a fixed and uniform chronology of theſe early ages: whereas authors, being divided in their judgments about the authenticneſs of the ſeveral copies, have every one choſen to follow that which agreed beſt with his own notions, or hypotheſis; whereby they have ſo perplexed and confounded all tranſactions, both ſacred and profane, which fall within this period, that the hiſtory thereof can be compared to nothing but the original chaos.

HOWEVER, it is no ſmall ſatisfaction, that the great difference between the ſeveral copies end here; and that being once got below the birth of Abraham, we enter upon a more certain ſeries of time, about which chronologers are more generally agreed; the variety of the ſeveral copies making a difference of but a few years, not, ſeveral ages, as we find the difference ariſes to in this period: for the better exhibiting of which we have inſerted the following tables, adjuſted in the ſame form with thoſe we have given of the antediluvian patriarchs.

A TABLE

A TABLE of the Years of the postdiluvian Patriarchs, to the birth of Abraham.

Terah dies, and Abraham is called from Haran.	1077									205	75	

THERE is no difference in this period between the Hebrew and the Samaritan, but what ariſes from the different computation of the years of the genitures of the patriarchs; the great difficulty, in both copies, conſiſts in Terah's age at the birth of Abraham: ſome will have him born in the ſeventieth year of Terah, which cannot be, unleſs Abraham were the eldeſt ſon, as it is evident he was not (for Lot, Haran's ſon, was near as old as Abraham) or unleſs Haran was born ſome years before his father was ſeventy, which ſeems to be not agreeable to the text; and if Terah was two hundred and five years old at his death, Abraham being then but ſeventy five, he muſt be one hundred and thirty when Abraham was born *. The Samaritan copy indeed helps this matter, by making Terah's age, at his death, no more than one hundred and forty five; but then the firſt objection as to Haran's ſeniority remains: ſo that in this point the fault ſeems to be in the Samaritan †, for, it muſt be confeſſed, the Hebrew number is here moſt fit to be relied on.

* This, we think, has been ſatisfactorily proved by Mr. Whiſton, in his ſhort view of the chronology of the old Teſtament (1).

† The gentleman juſt mentioned, ſince the publiſhing of his ſaid Chronology, has thought fit to change his opinion in this matter (2), and produces ſeveral arguments to prove the Samaritan to be the true reading, and the Hebrew number a corruption. He relies on two paſſages, one of Philo, the other of Joſephus. The former ſays, *that* Abraham (*born when his father* Terah *was ſeventy*) *was ſeventy five years old when he departed from* Haran; *though* Terah *lived there till his death* (3). But Philo here only copies Moſes; ſo that his concluſion, whatever it was, does not decide any thing as to the true age of Terah at that time, which muſt have been more than ſeventy from the plain ſenſe of the text, when attended to. Joſephus's words are, *They buried* Terah *when he died at* Haran, *after he had lived two hundred and five years*; for the *life of man was already cut ſhort and did become ſhorter till the birth of* Moſes (4). Now ſince he expreſly mentions the age of Terah to have been two hundred and five, we cannot ſee any ground to ſuppoſe it a corruption for one hundred and forty five, though he elſewhere mentions Abraham to be born in the ſeventieth year of his father; for the inconſiſtency has been overlooked

(1) Pag. 31. (2) See his Eſſay towards reſtoring the true text of the old Teſtament, p. 27, &c. (3) Philo de Somniis, p. 572. (4) Joſeph. Ant. l. 1. c. 6.

The call of Abraham, where the period ends, is by some reckoned five years sooner, when he left Ur; but this will not agree with scripture, as shall be shewn when we come to settle the next period.

There are some variations between the present copies of the Septuagint; but as most of them relate to the length of some of the patriarchs lives, a circumstance not very material, and which makes no difference in the computation, we shall pass them by, and only observe, that some copies place the birth of Arphaxad twelve years after the flood, which will encrease the total of this period ten years; and that some make the age of Nahor, at the death of Terah, 179 *.

We have chosen to follow the readings of the Alexandrian manuscript, according to which the only difference between the Septuagint and the Samaritan in this period is, 130 years given to Cainan, who is added between Arphaxad and Salah, but is to be found neither in the Hebrew, nor the Samaritan, nor in the chronology of those times, given us from the Septuagint itself, by Africanus and Eusebius [a]: circumstances we look upon as sufficient authority to reject him out of the number of the patriarchs, notwithstanding his name is inserted in St. Luke [b]; which may easily have happened, by its being added from some erroneous copies of the Septuagint, and first, as is most probable, put in the margin, though it has since crept into the text.

The difference between the Hebrew reckoning and the Samaritan in this period is very considerable, being no less than 650 years, in which the Hebrew is defective, and in all

[a] Vid. Eusеb. Chron. Græc. p. 9. [b] Luke iii. 36.

overlooked by many besides Josephus; much less can we conclude it such from his reasoning about the length of mens lives being shortened; which may be just, notwithstanding Terah lived to be older than his father.

* Father Pezron, following the present copies of Josephus, places the birth of Terah in the 19th year of Nahor, which agrees with the Hebrew, and the amended number of Josephus, with the addition only of 100 years; and thus the total of this period will be 1257 (1). But afterwards taking in the 10 years, added as above, between the flood and the birth of Arphaxad, he in his second computation makes the whole 1267.

(1) See his Antiq. des temps retablie, p. 61.

all probability has been corrupted; we reserve for another place the examination of the authenticneſs of the various copies of the Pentateuch; at preſent we ſhall make uſe of ſome arguments drawn from reaſon, to ſhew that the Samaritan is to be preferred to the Hebrew.

IN the firſt place, this period ſeems much too ſhort, according to the Hebrew, for the hiſtorical facts belonging thereto. We ſhall ſhew, when we come to ſpeak of the diſperſion, how inconſiſtent it is in all reſpects with that tranſaction, and to what extreams it hath driven thoſe who follow the Hebrew chronology, to place the birth of Peleg, when that diſperſion happened, at no greater diſtance from the flood than 101 years; and how improbable it is, that in the ſpace of 427 years, the world ſhould be in ſuch an improved ſtate, as it appears to have been in the time of Abraham; when cities were built, kingdoms erected, and monarchs extended their dominion even from Perſia to Canaan: But we ſhall confine ourſelves at preſent to ſome other obſervations ariſing from the conſequences of the Hebrew numbers, which we ſhall give in the words of a learned writer [c].

1. IT is not probable, that the ſeven firſt patriarchs after the flood, who lived 300 and 400 years, ſhould beget at thirty, or thereabouts, as the preſent Hebrew is; and yet the following patriarchs, who did not live half ſo long, ſhould not beget their firſt-born till double the age: Terah at ſeventy, Abraham at eighty ſeven, Iſaac at ſixty, Jacob at eighty four, Levi, Kohath, and Amram at about ſixty each of them; for from the birth of Levi to the birth of Moſes the ſon of Amram, were about 180 years.

2. † IT is not probable, that Noah, who lived 600 years

[c] Dr. Wills, in his appendix to his learned diſcourſe of the chronology of Joſephus.

† In this paragraph we have accommodated Dr. Will's reaſoning to our own table of the Hebrew chronology, differing ſomewhat from his, which follows the ſhorter calculation, making Abraham born in the ſeventieth year of Terah, and conſequently placing his birth ſixty years earlier; that is, in the year of the flood 292, whereby there happens ſome variation between our calculations, in comparing the years of the deaths of the patriarchs together; and, as we have not brought in Joktan with his ſons, any more than Peleg, into the firſt diſperſion, we have omitted the third reaſon urged by the doctor againſt the Hebrew numbers. However, for the reader's ſatisfaction, we ſhall ſubjoin them both, by way of note, in his own words. 2dly,

before the flood, ſhould ſee nine generations ſucceed each other after the flood, and live till the 128th year of Terah, within two years of Abraham's birth; that Arphaxad ſhould outlive Peleg, Reu, Serug, Nahor, and Terah, for five generations lineally deſcended from him. And what is more ſtrange, that Shem ſhould ſurvive Arphaxad, and ſee eight generations after him ſucceſſively die; and live till the fiftieth year of Iſaac, within fifteen years of Abraham's death; that Eber, ſhould outlive Abraham himſelf, the ſeventh in deſcent from him, though Abraham dies in a good old age, an old man [d]. Thus the great anceſtors, which in courſe of nature ought to die firſt, die laſt; by reducing the ſtandard of the length of human life too faſt, for the ſhortneſs of the ſpace allowed from the flood to the birth of Abraham; and hence, among other abſurd conſequences which follow from this chronology, occaſion was given to that notion of the Jews, followed ſtill by many modern writers, that Melchizedech was Shem.

SECT.

[d] Gen. xxv. 8.

2dly, Says that author, it is not probable, that Noah, who lived 600 years before the flood, ſhould ſee ten generations ſucceed each other after the flood, and live till the fifty-eighth year of Abraham; that Shem ſhould ſee nine generations after him ſucceſſively die, and live many years after the death of Abraham, the ninth perſon lineally deſcended from him; who yet died in a good old age, an old man (2); that Sala ſhould outlive Phaleg, Ragau, Lamech (3) Nahor, Terah, and Abraham, for ſix generations lineally deſcended from him; and even the laſt of them lived to be an old man: that Heber ſhould outlive Phaleg, Ragau, Lamech (4), Nahor, Terah, Abraham, and Iſaac, ſeven ſucceſſive generations that deſcended from him, and yet Abraham and Iſaac ſhould both live to be old men (5).

3dly, It is not poſſible, that Joktan ſhould have thirteen ſons when Phaleg was born, at the diviſion of tongues, if Phaleg was born in the thirty-fourth year of Heber, as it is in the Hebrew; and to fancy Phaleg firſt called ſo at the time of his death, is ridiculous, and expreſly contrary to Joſephus. At the diviſion of tongues we are told, that Mizraim, Canaan, Sidon, Elam, Aſhur, Aram, &c. gave names to countries, and yet they died before Phaleg. Shem, Arphaxad, Salah, Heber, &c. according to the Hebrew, were alive when God inſtituted circumciſion; and yet none of them ordered to be circumciſed, which was then the ſign of being in covenant with God.

(2) Gen. xxv. 8. (3) A miſtake of the printer for Serug. (4) Serug. (5) Gen. xxxv. 29.

SECT. II.

The hiſtory of Noah after the flood, and of his deſcendants to Abraham.

THE time of Noah's going forth of the ark, is fixed in ſcripture [e] to have been on the twenty ſeventh day of the ſecond month in the ſix hundred and firſt year of his age *. The firſt thing he did upon landing was, to build an altar, and offer a burnt ſacrifice of every clean beaſt, and every clean fowl [f]. † God having accepted the ſacrifice, bleſſed Noah, and gave him power over all living creatures, with a permiſſion to eat of them as freely as of the produce of the ground; however, he forbad him to eat the blood of animals, or to ſhed that of man, ordering him to puniſh manſlaughter with death, and to people the world as faſt as he could [g]. Year of the Flood, 1. Year before Chriſt, 2997. Noah comes out of the ark. The precepts given him by God.

IT is not to be thought, that theſe three injunctions contained all that was obligatory on Noah and his poſterity, till the promulgation of the law of Sinai, there being nothing here required of his duty towards God, the whole conſiſting in moral precepts; but we are to conſider them either as explanatory of, or additional to, the laws, which Noah had received in common with the reſt of the antediluvians, and which were derived from Adam. The permiſſion to eat fleſh, now firſt explicitly given, ſeems to intimate, that it was not allowed before the flood: but to avoid repetitions, we refer the reader to what we have already ſaid on that ſubject [h].

[e] Gen. viii. 13. [f] Gen. viii. 20. [g] Chap. ix. 1—7. [h] Chap. 1. §. 7.

* The Mohammedans will have it, that Noah quitted the ark the 10th day of Moharram, which is the firſt month of their year; and that he inſtituted the faſt, obſerved by them on that day, which they call Aſhura, in commemoration of his deliverance (6).

† Some Rabbins pretend Shem offered the ſacrifice, Noah being rendered unqualified for that office, by having the misfortune to be bit by a lyon (7).

(6) D' Herb. Bibl. orient. p. 676. (7) Shalſhel, Hakkab. p. 7.

Year of the Flood, 1. Year before Christ, 2997

THE rabbins pretend, that God gave to Noah and his sons certain general precepts, which, according to them, contain the law of nature, common to all men indifferently, and for the non-observance of which the Gentiles themselves have been punished by God [i]. These precepts enjoined, 1. To abstain from idolatry. 2. From blasphemy. 3. From murder. 4. From adultery. 5. From theft. 6. To institute judges to maintain those laws; and 7. To abstain from eating the flesh of any animal, cut off while the animal was living; which last precept was supposed to be intended by the words, *the flesh with the life thereof, which is the blood thereof, shall you not eat* [k]. This barbarity some pagans are said to have practised [l]. From the time of Moses, the Jews would not suffer a stranger to live among them, unless he observed the precepts of the Noachidæ, and never give quarter in battle to any who were ignorant of them.

MAIMONIDES [m] says, the six first precepts were given to Adam, and the seventh to Noah: to those some Rabbins add others, as the prohibition to draw blood of any living creature to drink [n]; to maim animals [o]; to use magick and sorcery [p]; to couple animals, and graft trees with different kinds [q]. But what calls the antiquity of these precepts in question is, that there is no mention made of them, neither in scripture, nor in Onkelos, nor in Josephus, nor in Philo; and that neither Jerom, nor Origen, nor any of the antient fathers appear to have known any thing of them.

BISHOP Cumberland, who likewise justly suspects the veracity of the Rabbins, thinks the patriarchal laws are to be searched for in the scripture, and accordingly, in a particular treatise on that subject [r], he has shewn from thence that the patriarchs, long before the law was delivered by Moses, carefully observed the principal precepts, as well towards God, as towards man, so as to fulfil the decalogue moved thereto either by the same promises, or fear of the same judgments and punishments, which were afterwards pronounced by the Mosaical law [s].

GOD farther made a covenant with Noah [t], never to drown the world again, promiſing, as a token thereof, for the future, to ſet his bow in the clouds, when it rained. This ſeems to have been done to take away Noah's apprehenſions, who, according to Joſephus, ſacrificed to appeaſe God's wrath, fearing an anniverſary deluge; for which ſuppoſition that hiſtorian has been cenſured ſomewhat too ſeverely [u].

Year of the Flood, 1. Year before Chriſt, 2997

God aſſures Noah the world ſhould not periſh by a ſecond deluge.

NOAH, being come down from the mountain, applied himſelf to huſbandry, and planted a vineyard [x]; but the eaſtern authors [y] make this the work of his ſons. However, Noah, having drank of the wine to exceſs, lay careleſly uncovered in his tent, which his ſon Ham perceiveing, called in his brothers, Shem and Japhet, to behold the poſture their father was in; but they, out of a ſenſe of duty and modeſty, took a garment, and going backwards, covered Noah with it; for which, when he came to know of what had paſſed, he bleſſed them, and curſed Ham in his poſterity, who were to be ſervants to their brethren [z].

Noah becomes an huſbandman.

THE Armenians have a tradition, that Noah, after quitting the ark, went and ſettled at Erivan, about twelve leagues from Ararat, and that it was there he planted the vineyard, in a place where they ſtill make excellent wine [a]. According to Tavernier, Nakſhiwan, which is ten leagues diſtant from Ararat, was the place where Noah went to dwell; and he adds, that it is reported to be the oldeſt city in the world. Another tradition of the country will have the village of Cemain above-mentioned, to be the place where Noah and his ſons fixed their firſt habitation [b]. But this is to be underſtood of the places where theſe towns were afterwards built, for it is not likely, they began to build towns ſo early, much leſs, that the deluge left them ſtanding, if there had been any there before; and the ſcripture ſays, Noah was in his tent when Ham ſurprized him in wine.

Where firſt he ſettled.

HOWEVER, this tradition, ſo far as it relates to Noah's ſettling in the country near the mountain where the ark reſted, ſeems more probable than a notion lately advanced

Noah, not Fo hi.

by some men of learning [c], that Noah left his three sons, Shem, Ham, and Japhet, in some little time, and with his younger issue travelled to China, where he lived before the deluge, and that he was the first king of that country, whom the Chinese call Fo hi *; it seeming more

[c] Dr. Allix, in his Reflections upon the books of the holy scriptures, p. 112. Mr. Whiston in his Chronol. of the old Test. &c. in his new theory of the earth, and his Essay for restoring the true text, &c. Mr Shuckford in his Connection, and Mr. Bedford in his scripture chronology.

* This opinion (much more reasonable than that of Hornius, who will have Fo hi to be Adam (1), though the Chinese (2) expressly make a different person the first man, whom they call Puon ku) depends on the following observations. 1. The Chinese histories say, Fo hi had no father (3); which agrees well enough with Noah, because the memory of his father might be lost in the deluge, and so give occasion to this fable, that he had no father at all. 2. The same histories affirm, that Fo hi's mother conceived him as she was encompassed with a rainbow (4); which seems an imperfect tradition concerning the first appearance of the rainbow to Noah after the flood. 3. The character and appellation of Fo hi among the Chinese agrees with what the scriptures affirm of Noah.——Fo hi, says Le Compte, the first emperor of China, carefully bred up seven sorts of creatures, which he used to sacrifice to the supreme spirit of heaven and earth. For this reason some called him Paohi, that is oblation (5), Noah says Moses, took into the ark *of every clean beast by sevens, of fowls also of the air by sevens, the male and his female, to keep seed alive upon the face of all the earth* (6). And after the flood *Noah built an altar unto the Lord, and took of every clean beast, and every clean fowl, and offered burnt offerings on the altar* (7). 4. The Chinese histories affirm, that Fo hi settled in the province of Shensi, which is the most northwest province of China (8), and very near to mount Caucasus, upon which (according to an opinion we have taken notice of) the ark rested, and from which Noah must descend to go thence into China. In favour of

more agreeable to reaſon, as well as ſcripture, to conclude, that Noah continued with his poſterity till his death, and that, after quitting the ark, they dwelt ſomewhere near the mountain where it reſted, which is in Armenia; and that they did not remove, till ſuch time as they are mentioned in ſcripture to have begun their journey towards Shinaar .

Year of the Flood, 1. Year before Chriſt, 2997

NOAH

[c] Gen. xi. 2.

of this opinion, it is alſo further obſerved, 5. That the Moſaic hiſtory, as it is perfectly ſilent in relation to the peopling of China at the diſperſion, confining itſelf within the bounds of the then known world; ſo it ſays little or nothing of Noah after the flood; which ſeems to be an intimation, that Noah had no ſhare in the ſubſequent actions related in the ſacred hiſtory; and ſo by a fair conſequence might be in China, a region out of the compaſs of the known world. 6. That this is confirmed by the Chaldean tradition of the ſudden diſappearing of Xiſuthrus, or Noah, his wife, and daughter, and the Pilot, on their coming out of the ark. 7. That the Chineſe language and writing, are ſo entirely different from thoſe among us, introduced by the confuſion of Babel, that they cannot well be derived from thence, 8. That the diſperſion beginning from Babylon, ſo remote a country as China, could not be ſo ſoon reached and peopled, as the prodigious number of its inhabitants at preſent ſhew it to have been; and therefore they could not be of ſo late an original. 9. That the learned ſciences ſeem to have been antiently much better known in China, than in theſe parts of the world; their government and conſtitution much firmer and more laſting than ours; their moſt antient hiſtories more authentic and certain than ours (excepting thoſe of more than human original): all which things would make one ready to imagine, that as it is probable Noah might be much more wiſe and learned than any of his ſons; ſo all thoſe ſettlements, laws, and traditions, which are derived from him, are remarkable effects and teſtimonies of the ſame (9). 10. And principally, that the reign of Fo hi, according to the moſt rational and exact account hitherto given of the Chineſe chronology, coincides with the time of Noah (10); and that the length of the reigns and lives of Fo hi, and his firſt ſucceſſors, greately correſponds with the duration of the lives of men in the ſame ages recorded in ſcripture (11).

But

(9) Vid. Whiſton's Theory, Book II. p. 137, &c. (10) Vid. his Short view of the Chronol. &c. p. 61. (11) Ibid. p. 64, 65.

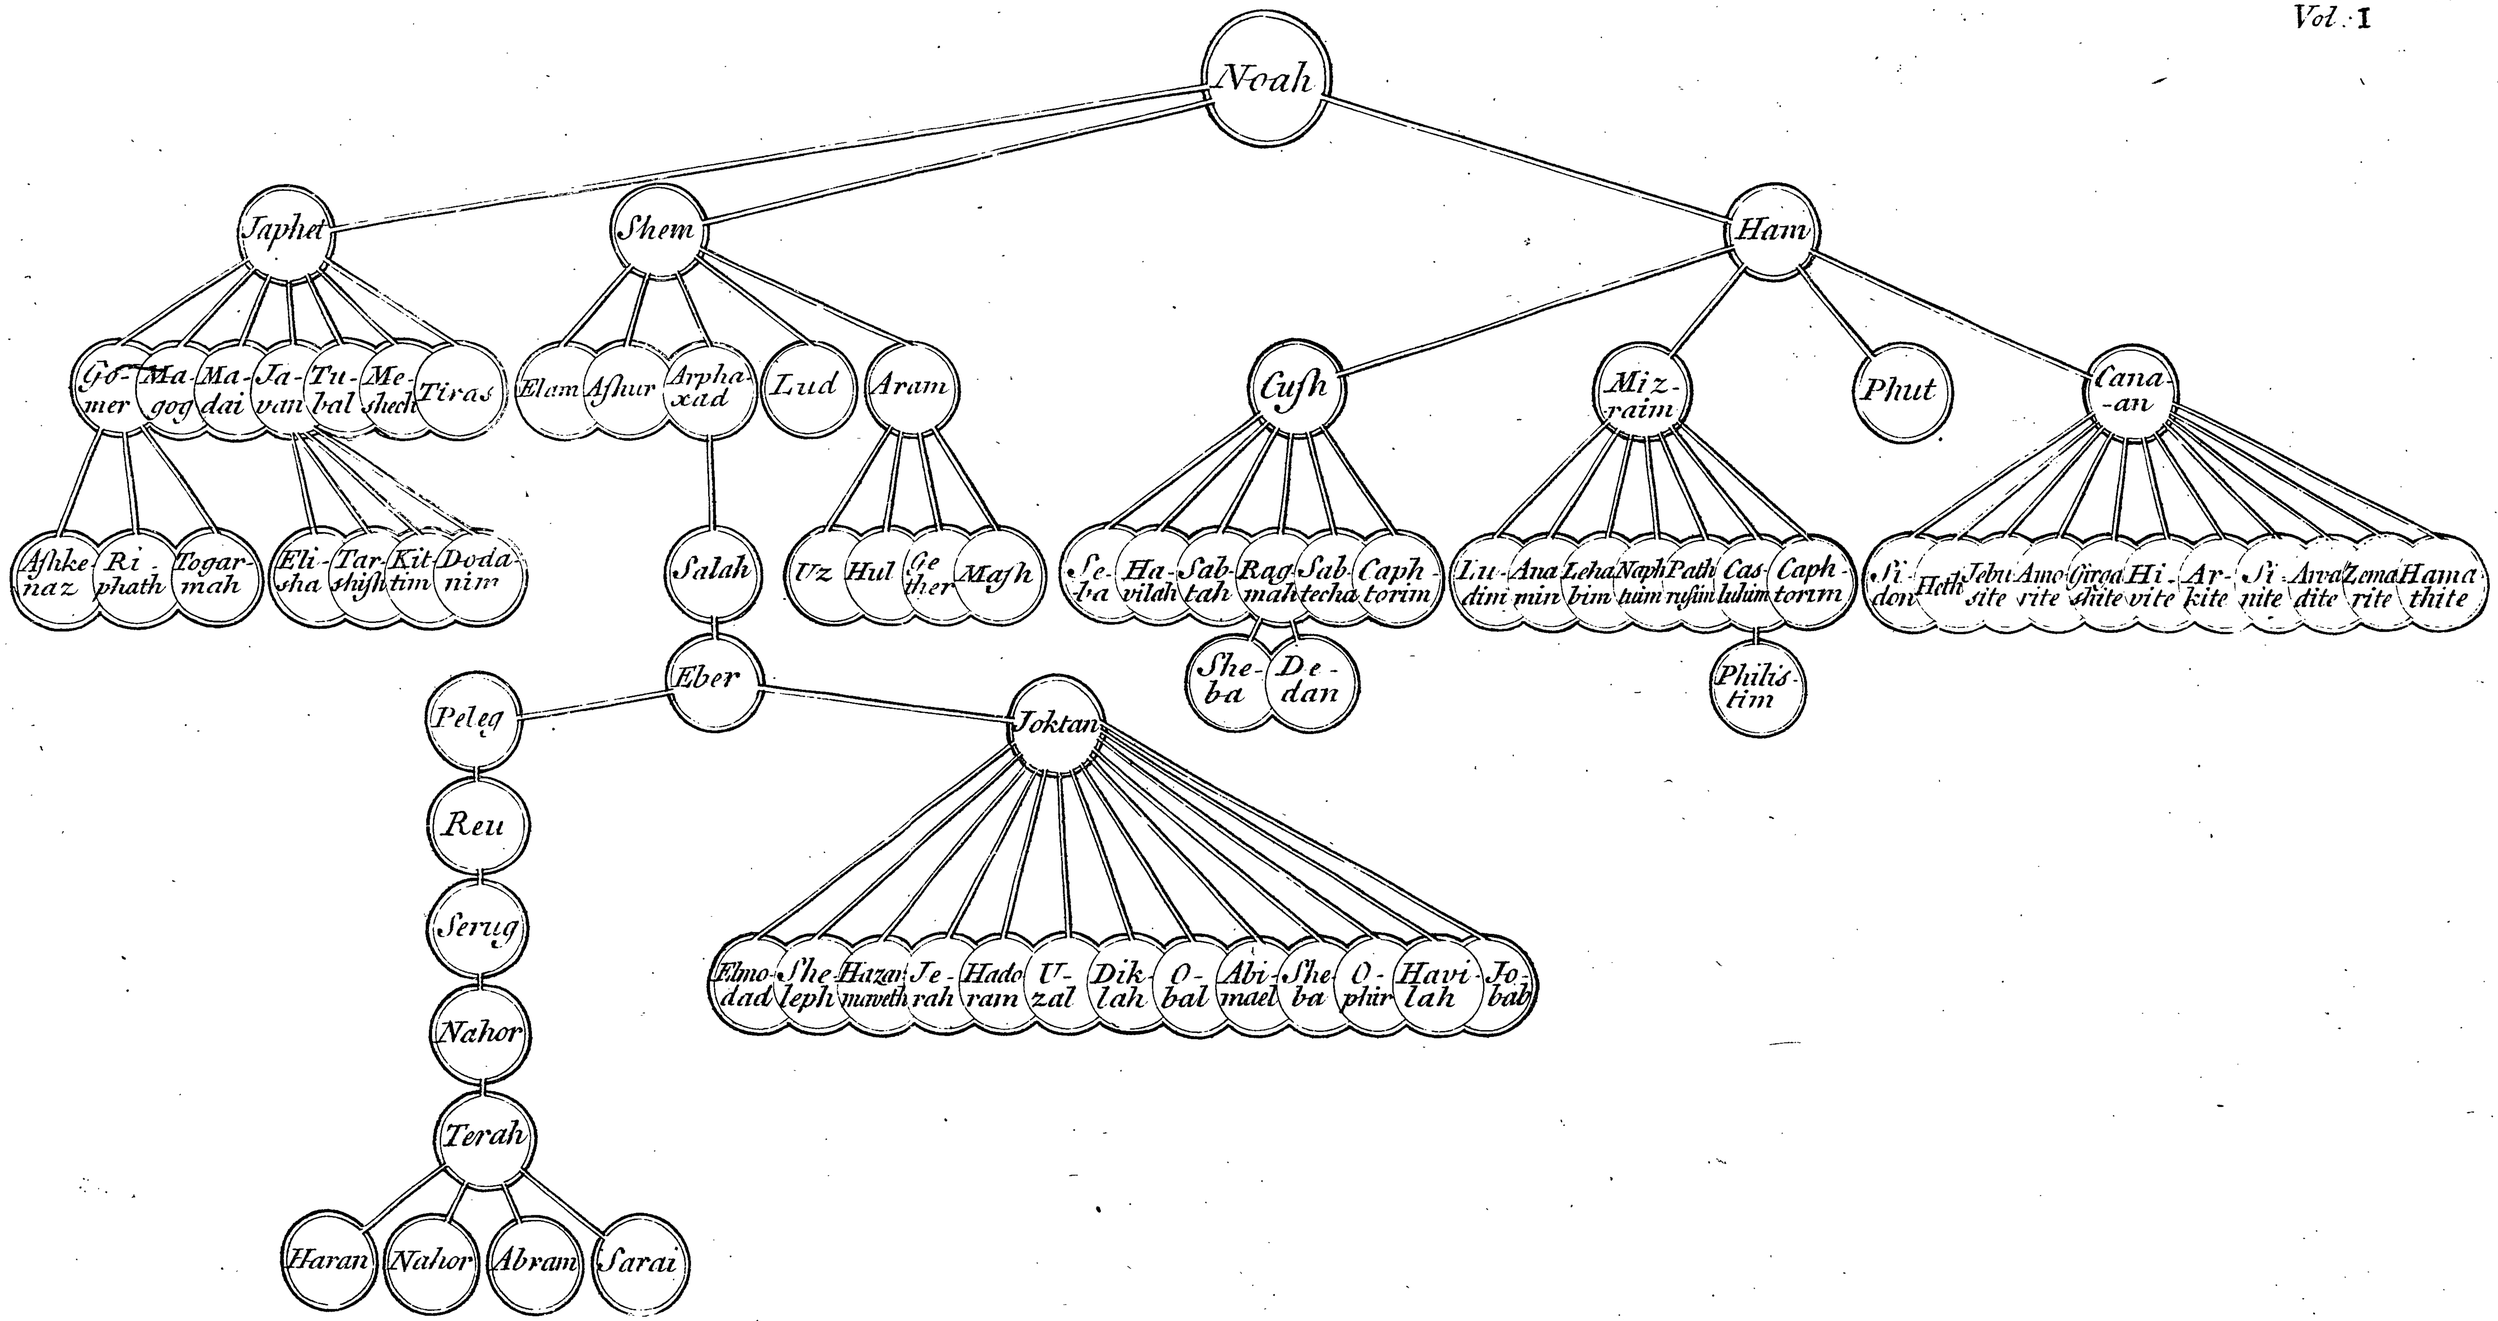
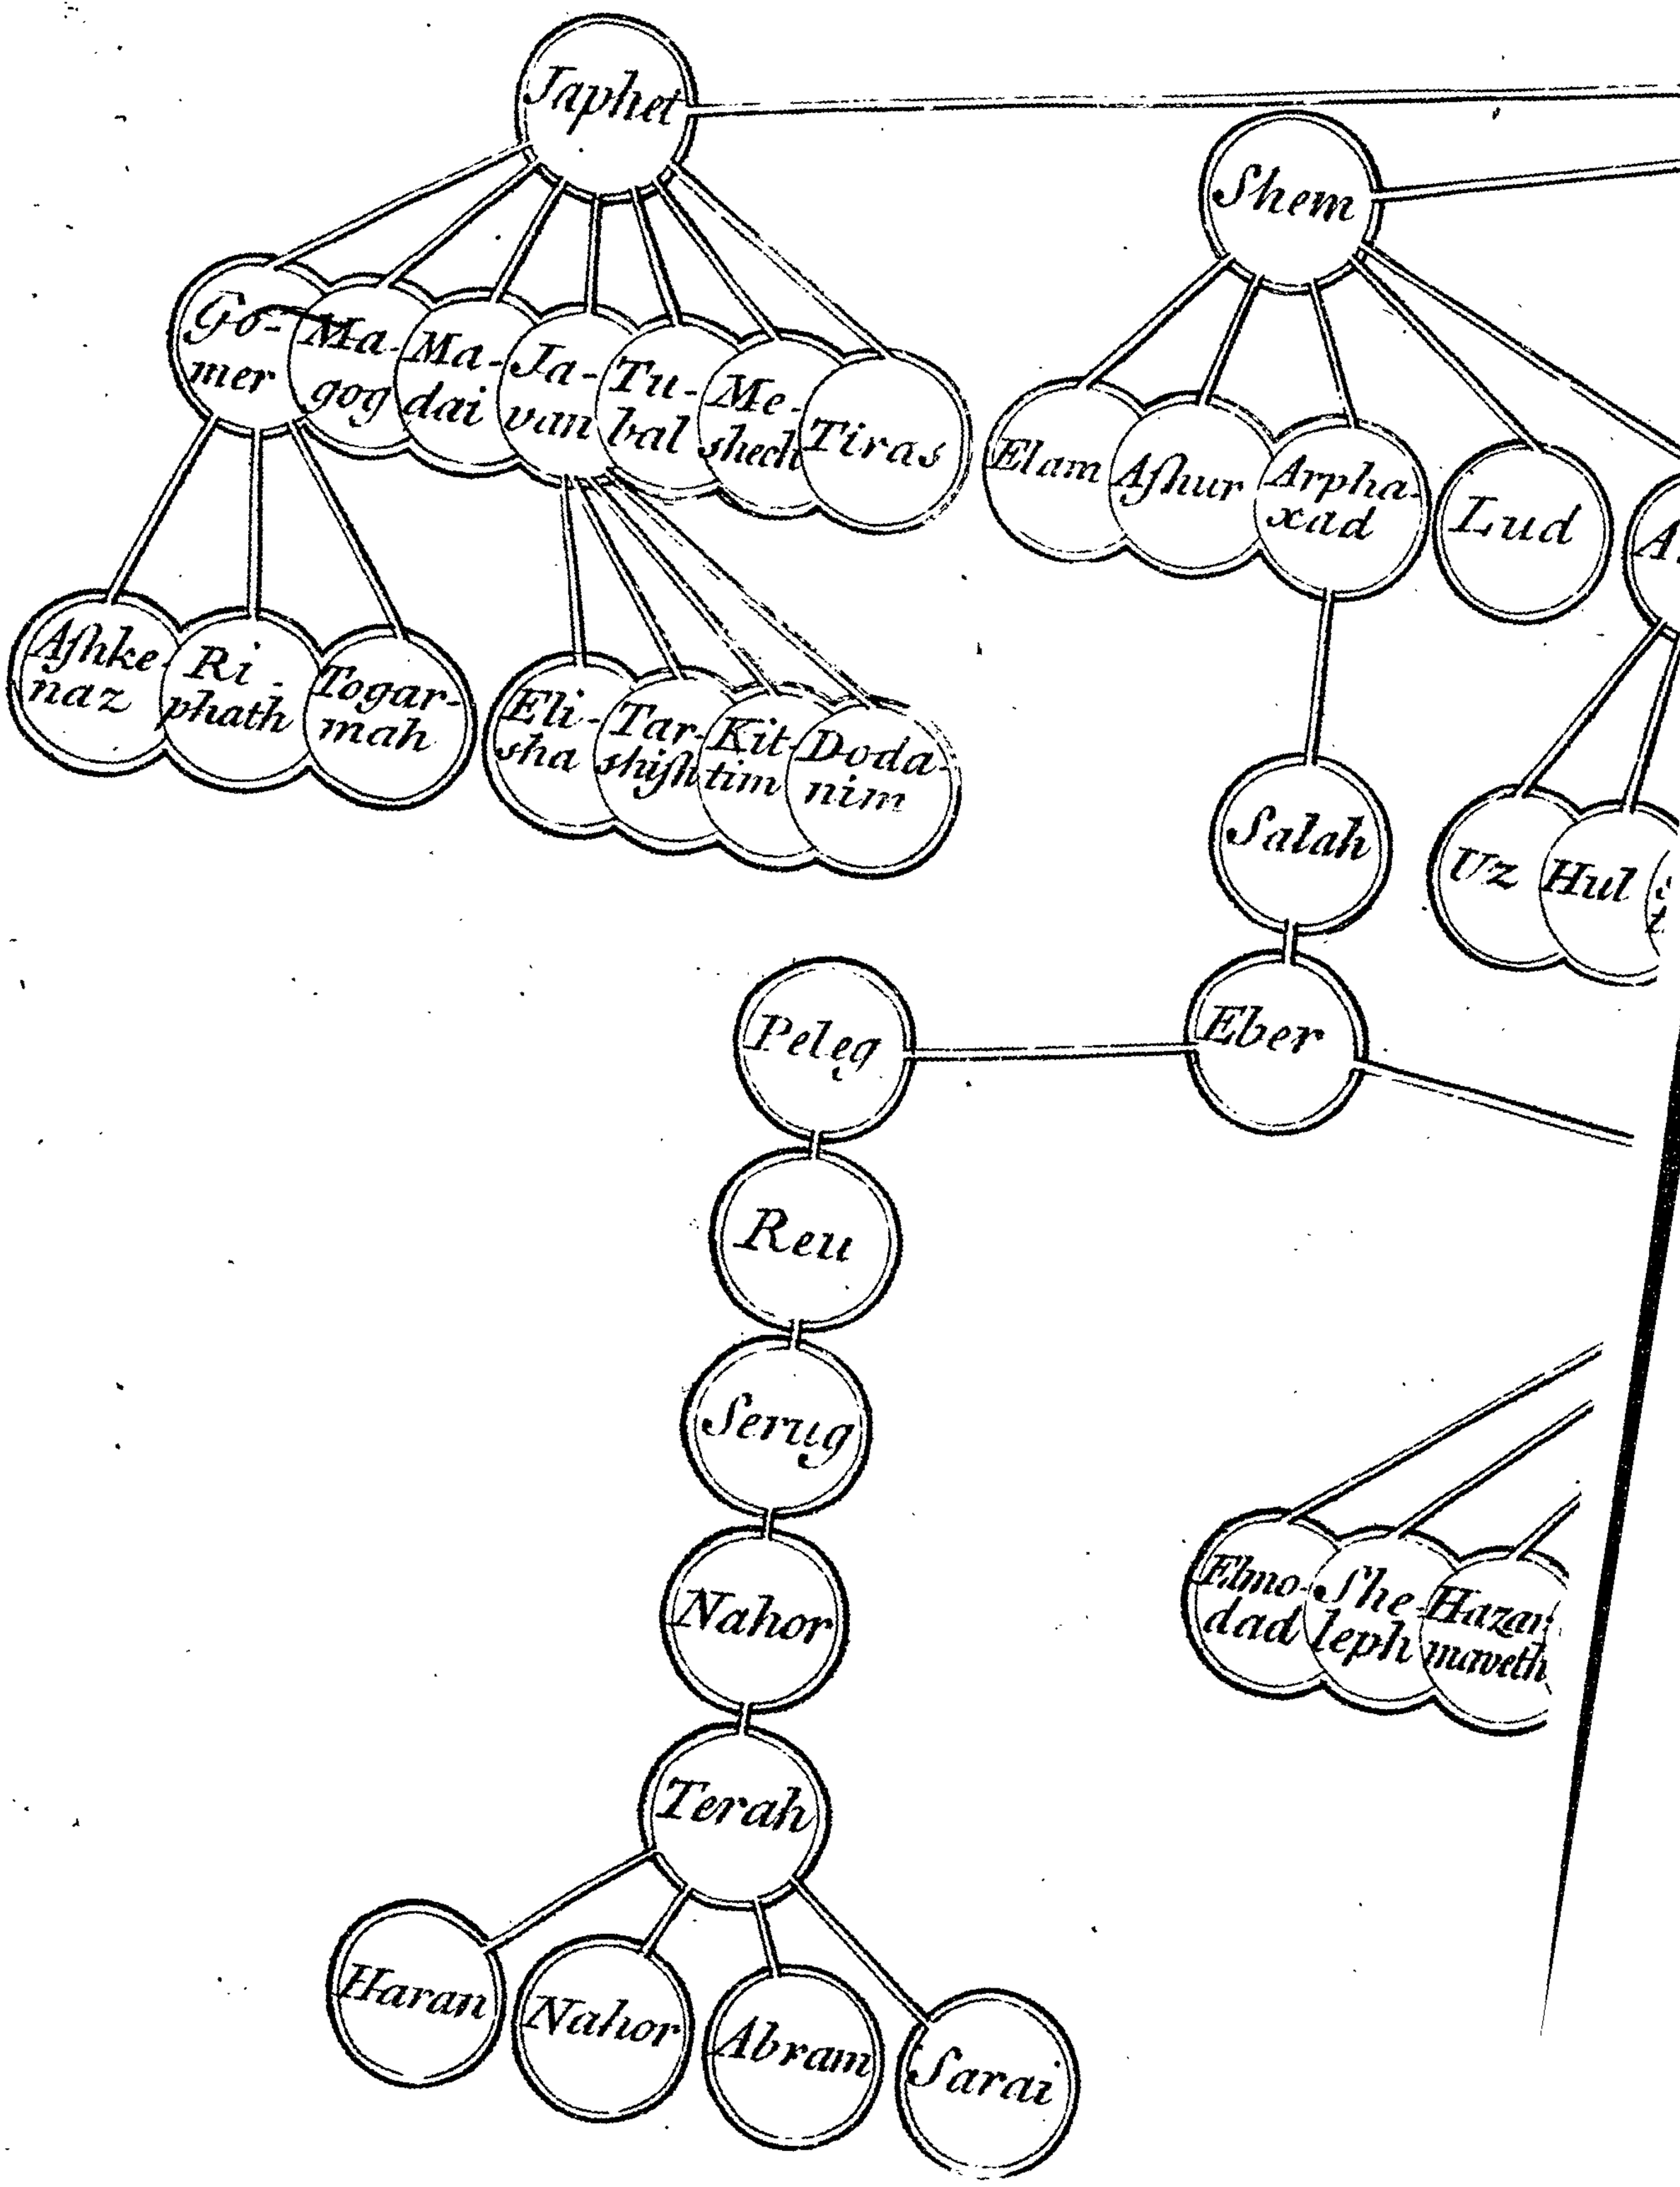
Noah dies.

NOAH died in the nine hundred and fiftieth year of his age, and, according to the tradition of the orientals, was buried in Meſopotamia, where they ſhew his ſepulchre, in a caſtle near a monaſtery called Dair abunah, that is, the monaſtery of our Father [d]. According to a common opinion, before his death, he divided the world among his three ſons, giving to Shem Aſia, to Ham Africa, and to Japhet Europe: but this has not the leaſt foundation in ſcripture.



ALL mankind, at leaſt that we have any account of in ſcripture, being the iſſue of theſe three ſons of Noah, who were



[d] D' Herbel. p. 677.

But as this opinion is conjectural only, ſo ſeveral objections might be made to it. As 1. That it is improbable, if Noah was Fo hi, that the Chineſe annals ſhould make no mention of ſo extraordianary an event as the deluge, which they are ſo far from having recorded, that Couplet (12) expreſly makes it an error in thoſe who imagine they have. 2. The uncertainty of the Chineſe writers themſelves as to the hiſtory of Fo hi and his next ſucceſſors, ſome doubting, whether there was ever ſuch a man as Fo hi; and others rejecting both him and his ſucceſſor Shin nungh, and beginning with Hoangh ti the third king; wherefore Couplet leaves them out of the ſucceſſion of Chineſe monarchs, and that not without reaſon, ſince Fo hi is ſaid to have had the body of a ſerpent, and Shin nungh the head of an ox (13). 3. Moſes's account of the diſperſion ſeems moſt evidently to relate to all mankind without exception, who, he ſuppoſes, were collected together in the plain of Shinaar; as will hereafter be more particularly evinced. And if this be admitted, Noah, having no other iſſue than his three ſons named by Moſes, conſequently could not reign in China.

This matter, however, we may be probably be able to decide, when we come to treat profeſſedly of the Chineſe affairs; wherein we expect ſome aſſiſtance from the new hiſtory of China, lately publiſhed in Italy, written by a Mandarin, who, as we are told, has made it appear, that there are no genuine records to be found in that empire, earlier than two or three centuries before Chriſt.

were saved with him in the ark *; before we proceed any farther, it will be proper to give a genealogical table of their descendants, in the same manner as we have already given one of the antediluvian patriarchs. (See the plate.) Year of the Flood, 350. Year before Christ, 2648

THE chief design of Moses being to record what particularly concerned the Israelites, he has given us the genealogy of the line of Shem only entire. As to the descendants of the other two sons of Noah, his design seems to have been to bring them down as low as the dispersion, in order to leave to posterity the names of the first founders of nations, and there to dismiss them; for it is observable, that though several particulars are mentioned in the course of the Mosaical history relating to the Canaanites, as the people with whom the Israelites were more particularly to be concerned, yet he hath deduced the genealogy of that branch of Ham no farther; on the contrary, it is shorter than those of Mizraim and Cush by one generation. The genealogy of the descendants of Noah.

NOR indeed is there much to be collected from scripture relating to the descendants of Shem, more than their names and the ages of the patriarchs in the line of Peleg, till we come to Terah the father of Abraham, with whom this period ends. But whatever there may be wanting in the sacred history, the Jews have taken care, according to their usual custom, plentifully to supply with the figments and conceits of their Rabbins, a set of men, who have surpassed all others in the art of trifling and inventing absurdities. On the other hand, the christian chronologers and historians of all ages, who have endeavoured to connect the prophane history with the sacred, within this period, would furnish us with materials enough to fill up the vacancies, could we think it worth while to collect their several opinions and conjectures; few of them agreeing in any one point, which yet every one is confident he has settled. We shall therefore take notice of but a very few of them; such contradictory sentiments serving only to shew the uncertainty of the

* Besides these three sons, some of the Jewish writers give Noah a fourth, named Yoniko, who, as they pretend, taught astronomy, and instructed Nimrod in the art of war (1). The Mohammedan traditions, generally speaking, allow Noah but three sons, yet an Arab writer mentions another, named Majestûn (2), who was probably born after the flood.

(1) Juchasin. 135. (2) Abdalrahman Ebn Abdallah apud D'Herbel. Biblioth. Orient. in voc. Nouh.

Year of the Flood, 350. Year before Christ, 2648

the whole, and consequently to confound, rather than to instruct, the reader.

We shall not in this place touch upon the migrations, or the planting of nations by the posterity of Noah, which we have reserved for the subject of a distinct section, that we might not mix the history of that remarkable transaction with other matters. We have also thought proper to change the order of the table, and give an account of the line of Ham before that of Shem, which will more naturally close this section.

Of Japhet and his posterity.

Though Japhet is generally placed last in scripture [e], yet he is expressly said to be the eldest † [f]; and that he was so is farther evident, for that Noah was five hundred years old when he begat his three sons [g], according to which manner of expression in scripture one of them was born in his five hundredth year: but it could not be Shem, for he being in the one hundredth year of his age at the birth of Arphaxad, two years after the flood [h], when Noah was six hundred and three years old, it follows, that he himself was born in the five hundred and third year of Noah: nor could it be Ham, for he is expressly said to have been the younger [i]; so that Japhet was the eldest of the three sons.

Japhet being affected, as well as Shem, with filial concern at Ham's exposing their father's nakedness, assisted to cover him, and had a blessing given him by Noah on that occasion. God, says that patriarch, *shall enlarge Japhet* ‡, *and he shall dwell in the tents of Shem*; *and Canaan shall be his servant* [k]. The first part of this prophecy has been verified in the great possessions which fell to the descendants of Japhet; as all Europe, and all the northern part

[e] Genes. v. 32. vi. 10. vii. 13. ix. 18. x. 1. [f] Ibid. x. 21. [g] Ibid. v. 32. [h] Ibid. xi. 10. [i] Ibib. ix. 24. [k] Ibid. ix. 27.

† This is the sense of the passage according to the English version and the Septuagint; but the Vulgate translates it, Shem the elder brother of Japhet. The former interpretation must be the true one, for the reason immediately given; though the original, and the oriental versions are capable of either sense.

‡ Noah here alludes to the name of Japhet, the root of which signifies to enlarge; though others translate the passage, God shall persuade Japhet, that is, bring him over in time to the true worship, figured by the tents of Shem.

part of Aſia, the leſſer Aſia, Media, Armenia, the countries between the Euxine and Caſpian ſeas, as well as thoſe lying to the north of them, Grand Tartary, with India, and China. Add to theſe the European colonies in America of late ages; for, as to the original inhabitants of that continent, it is uncertain from which of the three branches they are deſcended. The next part of the prophecy, that *he ſhould dwell in the tents of Shem*, ſeems to refer to the overthrow of the Aſſyrian empire by the Medes in conjunction with the Babylonians, as well as to the conqueſts of the Greeks and Romans in Aſia; alluded to afterwards by Balaam in his prophecy [1], *that ſhips ſhould come from the coaſts of Chittim, and ſhould afflict Aſhur, and ſhould afflict Eber*: that is, they ſhould afflict the Aſſyrians, and thoſe who dwelt beyond the river Euphrates *. And at the ſame time

Year of the Flood, 350. Year before Chriſt, 2648

[1] Num. xxiv. 24.

* The common opinion is, that by Eber in this place is to be underſtood the Hebrews, or Jews; but a learned author has offered reaſons which ſeem to prove the contrary. He obſerves, that to take it in that ſenſe is repugnant to the deſign of the paſſage, and makes Balaam bleſs, and curſe, the children of Iſrael, in the ſame breath, by propheſying of their deſtruction (1): and therefore he will have it, that Eber has not reſpect to perſons, but to place, and ſignifies beyond the river (2); in which ſenſe that word is often uſed in ſcripture (3). Upon this occaſion the ſame author propoſes to amend our tranſlation of the above text (4) by reading it thus; *and they ſhall go forth from the coaſt of Chittim, and afflict Aſhur, and ſhall afflict the other ſide of the river* (5), that is, the countries beyond Euphrates. There ſeems to be no need of ſuppoſing the laſt and to be taken conjunctively, or the words following it to be a repetition, or explanatory of the firſt, as that writer thinks; for Aſhur, ſtrictly ſpeaking, lay beyond the Tigris; neither in Balaam's time had the Aſſyrian empire extended itſelf weſtward ſo far as the Euphrates: and when that prophecy was to be fulfilled, Aſhur was reduced to its primitive bounds, and in ſubjection to Elam or the Perſians; as were alſo the Babylonians, and the inhabitants of Aram, or Meſopotamia: who we think are to be underſtood by Eber, or the other ſide of the river, that is, the Euphrates.

(1) Vid. Hyde de Rel. Vet. Perſ. p. 56. (2) Vid. eund. ibid. p. 57. (3) Idem, ibid. p. 50, &c. (4) Numb. xxiv. 24. (5) Hyde, ibid. p. 57.

Year of the Flood, 350. Year before Christ, 2648

time that they dwelt in the tents of Shem, they made the posterity of Ham their servants, by subduing the Babylonians, the Canaanites, the Egyptians, and other nations descended from that branch, wherein was the completion of the last part of Noah's prophecy.

This prophecy seems also to have regard to the state of the true religion, confining it to the race of Shem, for a certain period of time, ending perhaps at the coming of the Messiah [m]; for since Christ the knowledge of the true God hath spread considerably more among the descendants of Japhet, than it did before amongst those of Shem, having till then been confined almost wholly to the nation of the Jews, however, the Mohammedans rank Japhet himself among the prophets [n].

The septuagint version, followed by Eusebius and others, mention, an eighth son of Japhet named Elisa, who is neither in the Hebrew, nor the Chaldee †.

No particulars being mentioned in scripture with reference to the descendants of Japhet, farther than what relates to their founding of Nations, we must refer the reader, for what may be said of them under that head, to our account of the migrations.

That

[m] See below. [n] Vid. D'Herbelot Bibl. Orient. Art. Jafeth. [o] Euseb. Chronic. l. 1. p. 8. Chronic. Alexandr. Augustinus.

† The Persian historians give Japhet eleven sons, viz. 1. Jin, Chin, or Sin. 2. Seklab. 3. Manshuj. 4. Gomari. 5. Turk (from whom this patriarch is surnamed Abu'l Turk, or the father of Turk). 6. Khalaj. 7. Khozar. 8. Rûs. 9. Sussan. 10. Ghaz. And 11. Taraj. (6). The Tartarian authors name but eight sons of Japhet, in this order; 1. Turk. 2. Khars [Khozar]. 3. Saklab. 4. Rûs. 5. Maminakh. 6. Zwin [Jin]. 7. Kamari. 8. Tarikh (7). The former authors assert, that Japhet married his sons to their own sisters before they departed to people their countries, to the end they might multiply the easier; and indeed it happened, that the eastern countries, and the greater part of the north were first peopled (8).

(6) Mîr Khond & Khond Amîr. See D'Herbelot. Bibl. Orient. Art. Jafeth. (7) See Abu'lghazi Khans Genealogical Hist. of the Tartars, vol. I. p. 6. (8) D'Herbelot, ubi supra.

THAT Ham was the youngeſt ſon of Noah ‡, though generally placed the ſecond of the three, is evident by his being expreſly called the youngeſt: he may have been born within a few years after Shem, but as neither his age, nor the time of his birth are mentioned, we can determine nothing concerning that point. However, one would be apt to imagine, from Ham's indiſcretion as well as wickedneſs in diſcovering his father's nakedneſs, that when he committed that crime he was but a very young man, though he had children; he might probably be about fifty, or threeſcore, an age ſcarce equivalent in thoſe days to eighteen now. Year of the Flood. 350. Year before Chriſt, 2648

Of Ham and his poſterity.

WHEN Noah was acquainted with the irreverent action of Ham *†, he curſed him in a branch of his poſterity; *Curſed*, ſays he, *be Canaan, a ſervant of ſervants ſhall he be unto*

‡ The Hebrew word חם Ham ſignifies hot, or heat, or ſunburnt. Though he is expreſly ſaid to be the younger, yet numbers of commentators, relying more upon the order wherein he is named, maintain, that he was the ſecond ſon of Noah; and to elude the force of the text, ſeveral of them pretend, that it is not Ham himſelf, but Canaan, his ſon, who is here ſpoken of: others will have it, that Ham was called the younger, or the youngeſt, for no other reaſon, but becauſe his conduct was leſs prudent than that of his brothers (9). But ſuch interpretations, if once admitted, will ſerve only to render the moſt clear expreſſions in ſcripture obſcure.

*† If we enquire, by what means Noah came to know that it was Ham who had diſcovered his nakedneſs, ſome Rabbins anſwer, that he inferred ſo much from Ham's paſt ſhameleſs behaviour, in prophaning the ark by lying with his wife (10); others ſay, that Ham by looking on his father's ſhame, found extraordinary alterations in himſelf; his eyes became red, his hair and beard burnt, and his lips diſtorted; and he knew ſo little what he did, that he ſtripped himſelf ſtark naked, and walked about in that condition. Noah, ſeeing all this, from thence concluded, that it was Ham who had diſhonoured him. Some ſay, that he could not have known it otherwiſe than by revelation. St. Chryſoſtom's opinion is very rational; he believes, that Noah ſeeing himſelf covered with a garment which did not belong to him, aſked the occaſion of it, and learned from Shem and Japhet all that had paſſed (11).

(9) Vid. Heidegg. Hiſt. Patriarch. Exercit. 20. num. 4. (10) Vid. Heidegg. Hiſt. Patriarch. tom. I. p. 409. (11) Vid. eund. ibid.

Year of the World, 350. Year before Christ, 2648

unto his brethren [p]. This curse, if it be a curse ††, being pronounced not against Ham the immediate transgressor, but against his son, who does not appear from the words of Moses to have been any way concerned in the crime, though some imagine he had a principle share in it *‡, hath occasioned several conjectures: some [q] have believed, that Noah cursed Canaan, because he could not well have cursed Ham himself, whom God had not long before blessed [r]; others, more reasonably, think Moses's chief intent in recording this prediction was, to raise the spirits of the Israelites, then entring on a terrible war with the children of Canaan, by the assurance that, in consequence of the curse, that people were destined by God to be subdued by them [s]; for the opinion of those who imagine all Ham's race were here accursed, seems repugnant to the plain words of scripture, which confines the malediction to Canaan and his posterity, and also contrary to fact †‡.

Among

[p] Gen. ix. 25. [q] Chrysost. serm. 29. in Gen. [r] Genes. ix. 1. [s] Augustin. quæst. 17. in Genes. Theodoret in Gen. 58. Heidegg. Hist. Patr. tom. I. p. 411. Bayle cited in the notes below.

†† Mr. Bayle does not take this passage properly to contain a curse. He says, it is pretty strange, that the scripture takes no notice of any thing being done by Noah to Ham: he observes, that there is not one word of censure passed upon Ham; that the patriarch was content to curse Canaan the son of Ham; and that this curse was nothing else but a prophecy of the victories, which the descendants of Shem should obtain over the descendants of Canaan under Joshua, that is to say, seven or eight ages after the crime of Ham had been committed (12).

*‡ The Jews pretend, that Canaan was the person who first discovered the nakedness of Noah, with which he acquainted his father Ham; who made sport of the accident, and went and told it to his brothers Shem and Japhet; and that Noah awaking out of his sleep cursed Canaan, because he was the first occasion of the scandal (13).

†‡ A learned author hath affirmed, that there hath never yet been a son of Ham who hath shaken a scepter over the head of Japhet; Shem hath subdued Japhet, and Japhet hath subdued Shem, but Ham never subdued either (14). However, this must

(12) Bayle Dict. Hist. Art. Cham. § 37. Theodoret. quæst. 57. in Genes.

(13) Bereshit Rabba

(14) See Mede's works, p. 358.

AMONG thoſe who are for extending the curſe to Ham and his other race, ſome have ſuppoſed another effect of it, not mentioned by Moſes; that Ham became a black-moor, and communicated that colour to his deſcendants ‡‡; but this opinion is a meer chimæra, as has been formerly obſerved [t]. Year of the World, 350. Year before Chriſt, 2648

IN conſequence of this undutiful act of his telling his brothers that he had ſeen his father's nakedneſs, Ham has been

[t] Introd. p. 174.

muſt be a miſtake, if there be any truth in what the Egyptian hiſtories relate of the actions of Seſoſtris, and ſome others of their kings, who conquered the greateſt part of Aſia and Europe; and conſequently Ham may be ſaid to have ſubdued both. Beſide, we find the Iſraelites were long the ſlaves of Mizraim, or the Egyptians; and we ſee no reaſon why the ſhameful ſubmiſſion, which Rehoboam, the ſon and ſucceſſor of Solomon, made to Shiſhak, the Egyptian Pharaoh (15), who, after taking all the ſtrong cities of Judah, ſeems to have had Jeruſalem delivered up to him without oppoſition, to be ſpoiled with the temple, may not be deemed a ſervitude; it being expreſly ſaid, the Jews ſhould be his ſervants (16). Ham alſo appears to have encroached upon Shem very early, for he ſeems to have driven the Shemites out of their firſt ſeats in Shinaar; and every body knows the Babylonians, who were Hamites, had a conſiderable ſhare in the deſtruction of the Aſſyrian empire. But a ſtronger inſtance than any of the preceding is the Babyloniſh captivity, in which the Jews themſelves were the ſufferers. Nay, the very branch of Canaan ſeems to have had great ſucceſs againſt Japhet, not only by the exploits of the Carthaginians (originally Canaanites) in Italy, but by their conqueſt of Spain.

‡‡ This opinion has been entertained by ſeveral chriſtians, as well as Mohammedans, though ſome of the latter account otherwiſe for mens different complexions (17). The Arab writers add, that Noah, relenting at the ſudden change in his ſon, prayed to God, that his poſterity might be treated gently in their ſervitude; in conſequence whereof the black ſlaves are not only in great requeſt, but generally have great credit and power with their maſters (18).

Some of the ſame authors pretend, that Noah's curſe was inflicted on Ham for his diſobedience, becauſe he would not come to prayers one morning when his father called him (19).

(15) 1 Kings xiv. 25. 2 Chron. xii, 2. 9. (16) 2 Chron. xii. 5, 8. (17) Vid. Introd. p. 173. (18) D'Herbelot. Bibl. Orient. p. 245, & 677. (19) Ibid. p. 677.

Year of the World, 350. Year before Christ, 2648.

been looked upon as the first introducer of wickedness after the flood; and authors have imputed to him many enormities, some of them ridiculous enough, which they have grounded solely upon this single passage. They have believed, seeing Ham could be guilty of so much indiscretion towards his father, that he was a reprobate, who had committed all sorts of abominations. They take it for granted, that none but he and his posterity were concerned in the building of Babel, which they consider as a very wicked attempt [u]. They make him the first propagator of idolatry after the flood *, and the inventor of magic, and relate many passages to that effect †. They pretend, that he set a very unedifying example of incontinence, by getting his wife with child in the very ark ‡. Nay, it has been imagined, that the crime which he committed against his father was infinitely more enormous than it

[u] See after.

* Several instances of this the reader will find hereafter.

† Ham is held to have been the inventor of magic, so far only as that it was he who preserved and taught it to the descendants of Noah; for it is allowed, it was not Ham who first invented this art, but the angels, who, becoming enamoured of the women of the old world, taught it the antediluvians (1). They say that Ham, not daring to carry with him into the ark the books which treated of this subject, engraved the principal rules of the art upon plates of metal and hard stone, able to resist the waters of the deluge; which treasure he carefully hid, and after quitting the ark went and took them from the place where he had deposited them (2). It is pretended, that Mizraïm learned of his father Ham all those abominable secrets; and that the pretenders to that science consider Ham as their first founder, and to have been the same with Zoroastres, and honour him as a god. The first author of this opinion seems to have been the counterfeit Clemens (3).

‡ Though St. Ambrose and others conceive from the words of Moses, that the matrimonial duty was superseded and suspended during the time Noah and his family lived in the ark (4); nevertheless it is an opinion which has spread pretty much, that Ham did not observe continency on that occasion, but that his wife brought forth Canaan in the very ark (5).

it is repreſented in ſcripture : ſome concluding, that Ham caſtrated Noah ** ; others, that he rendred him impotent by

Year of the World, 350. Year before Chriſt, 2648

** Some Jewiſh Doctors have aſſerted this, and pretend, that what prompted Ham to ſo violent an act was, to prevent Noah's having any more ſons ; as if he feared his ſhare in the diviſion of the world would be too ſmall (6). Some grave authors have undertaken to refute this fancy very ſeriouſly, by theſe words of ſcripture : *Noah awoke from his wine and knew what his younger ſon had done unto him.* If he had performed, ſay they, upon his father ſo painful an operation as that of caſtrating muſt have been, Noah would not have ſlept till he was ſober, but the anguiſh would quickly have awakened him, and he would have ſurpriſed the criminal in the very fact ; nor would he have had any occaſion to have aſked who he was (7). From ſuch conceits as theſe ſome have drawn arguments to prove, that all the pagan gods were taken from the Jewiſh traditions. Thus they pretend, that Noah is the Saturn and the Uranus of the pagans ; and that the ſtories which are told of Jupiter's caſtrating his father Saturn, and Cronus caſtrating his father Uranus, are borrowed from this notion of Ham (8).

Upon this occaſion we are tempted to introduce a paſſage out of the count de Gabalis. He ſuppoſes, that Noah, after the deluge gave up his wife Veſta to the ſalamander Oromaſis, prince of the fiery ſubſtances, and perſuaded his three children to reſign alſo their three wives, to the princes of the three other elements (9). Ham, adds that author, rebelled againſt the counſel of Noah, and could not reſiſt the charms of his wife ; but his want of complaiſance marked all his black poſterity : the frightful complection of the inhabitants of the torrid zone, is the puniſhment of the profane ardour of their father—You believe for inſtance, continues he, that the injury which Ham did his father, was the ſame as is literally expreſſed ; but it was indeed a very different thing. Noah being come out of the ark, and ſeeing his wife Veſta's beauty rather improved by the familiarity which ſhe had with her gallant Oromaſis, his love for her returned upon him. Ham, fearing leſt his father might yet people the world with children blacker than his Ethiopians, took his opportunity one day, when the good old man had got his doſe of wine, and caſtrated him without mercy (10). We leave the reader to judge which notion is moſt agreeable to ſcripture, or becoming the gravity of a commentator, that of the Jews or this of the count de Gabalis.

Year of the World, 350. Year before Christ, 2648

by vertue of ſome magick charms *† ; others again, that he committed inceſt with his father's wife †† ; whilſt a fourth party accuſe him of all ſorts of uncleanneſs (A). This character

*† This imagination is taken from the ſpurious Beroſus: he ſays, that Noah, unable to bear the vicious courſes of Ham, who particularly addicted himſelf to magic, became odious to this ſon; and the rather becauſe he ſhewed more tenderneſs for his other ſons who were younger; and Ham finding an opportunity of revenge, did not let it ſlip: he graſped the genitals of his father, and muttered ſome words which rendered him impotent for ever after (11).

†† This is the ſentiment of Mr. Von der Hart, profeſſor of the oriental languages in the univerſity of Helmſtad. He believes, that the injury which that patriarch received from Ham, conſiſted in the infamous temerity which this brutiſh ſon had to lie either with his own mother, or at leaſt with his ſtep-mother. He proves this explanation by divers places of ſcripture, where the phraſe to *uncover the ſhame of a woman*, ſignifies to lie with her. In the ſame places of ſcripture it is ſaid, that the nakedneſs or ſhame of a woman, is the nakedneſs or ſhame of her huſband; and by conſequence, according to this way of expreſſion, to have ſeen the nakedneſs of Noah, is a modeſt phraſe, importing to have had to do with Noah's wife. This author ſuppoſes, 1. That Ham watched his time for compaſſing his deſign, when Noah was aſleep after his debauch. 2. That ſome body having diſcovered the affair, went and gave the other two ſons of Noah notice of it. 3. That they, filled with indignation at the horrid affront which had been put upon the patriarch, repaired to the place as faſt as they could, and having ſurpriſed their brother in the act, threw their garments over him and his accomplice. 4. That they gave an account to their father of all that they had ſeen. 5. That Noah, much enraged, ordered by his will, that Canaan, who was to be the iſſue of that inceſtuous commerce, ſhould be wholly deprived of the inheritance (1). Theſe hypotheſes, ſays Mr. Bayle (2), are learned and ingenious; but if once it be ſuffered to ſuppoſe, that the narrations of Moſes are ſo diſguiſed, it may be feared, that the ſame liberty will be taken with the hiſtory of the temptation, and of the fall of Adam, as ſome have dared to do.

(A) The reaſon of Noah's diſcarding Ham ſeems not to have been ſo much on account of the perſonal injuries he had received from him, as his other immoralities. That unhappy man, it

(11) Pſeudo-Beroſus, lib. 3. p. 80.

(2) Dict. Hiſt. Art. Cham. Rem. F.

character is very conformable with what we meet with in the antients concerning Cronus, with whom, among many others (B), Ham is ſuppoſed to have been the ſame. Year of the Flood, 350. Year before Chriſt, 2648

IF we may judge by the number of perſons in the three generations of Ham's line mentioned by Moſes [x], which exceeds the number of perſons deſcended from both his brothers in the ſame degree, he muſt have had the moſt numerous iſſue of the three ſons of Noah, and a greater part of the earth to his ſhare. But though much mention is made of the later poſterity of Ham in the ſucceeding part of the Jewiſh hiſtory, Moſes has recorded nothing relating to his firſt deſcendants, beſides their names and ſome general circumſtances, excepting Canaan and Nimrod.

CANAAN (C) was the fourth ſon of Ham, if we may be allowed to judge by the order in which we find his name placed in ſcripture. Neither the length of his life, nor the Of Canaan.

[x] Geneſ. x. 6.

it is pretended not only taught, that men ſhould live as they did before the flood, and commit all ſorts of inceſts, and ſomething worſe; but practiſed thoſe abominable leſſons himſelf. We chooſe to expreſs them in the words of the author. At vero cum publice corrumperet mortale genus, aſſerens, & re ipſa exequens, congrediendum eſſe ut ante inundationem, cum matribus, ſororibus, filiabus, maſculis, brutis, & quovis alio genere, ab hoc ejectus à Jano piiſſimo & caſtimonia atque pudicitia refertiſſimo (3).

(B) The hiſtory of Cronus from Sanchoniatho, whoſe account of him is the moſt full, will be given in the next ſection. Marſham thinks Ham is to be found in profane hiſtory under the names of Hammon, Thamus, Thammuz, Adonis, Oſiris, Baal, Belus, Jupiter, and Saturn the ſecond (4). The ſame author ſays, the Hebrew chronology requires, that Ham ſhould be the ſame with Menes, the firſt king of Egypt, whom almoſt all other authors make to be Mizraïm, his ſecond ſon (5)

(C) The Hebrew word is כנען, and not pronounced as we commonly do Canaan, making Ca the firſt ſyllable, but Chenaan, or rather Chnaan, the Shevah joining the Ch and N into one

(3) Pſeudo-Beroſus, lib. 3. p. 80. (4) Canon. Chron. p. 23, 30, 31, 32, 33. (5) Ibid. p. 23.

Year of the Flood, 350. Year before Christ, 2648

the time of his birth, are mentioned by Moſes: however, ſome will have it that he was born in the ark, and that, becauſe he was the fruit of an unſeaſonable incontinence, therefore he was a wicked man. It has been already obſerved, that the curſe given by Noah to Canaan was peculiar to this ſon of Ham, and does not ſeem to have extended to the reſt of his brethren. And indeed the prophecy of Noah, that Canaan *ſhould be a ſervant of ſervants to his brethren*, ſeems to have been wholly completed in him. It was completed with regard to Shem, not only in that conſiderable part of the ſeven nations of the Canaanites were made ſlaves to the Iſraelites, when they took poſſeſſion of their land, as part of the remainder of them were afterwards enſlaved by Solomon [y]; but alſo by the ſubſequent expeditions of the Aſſyrians and Perſians, who were both deſcended from Shem, and under whom the Canaanites ſuffered ſubjection, as well as the Iſraelites; not to mention the conqueſt of part of Canaan by the Elamites, or Perſians, under Chedorlaomer [z], prior to them all. With regard to Japhet we find a completion of the prophecy, in the ſucceſſive conqueſts of the Greeks and Romans in Paleſtine and Phœnicia, where the Canaanites were ſettled, but eſpecially in the total ſubverſion of the Carthaginian power by the Romans; beſides ſome invaſions of the northern nations, as the poſterity of Thogarma, and Magog, wherein many of them probably were carried away captive.

It is believed that Canaan lived and died (D) in the country called after his name; where formerly they ſhewed his tomb, which was twenty five feet long, in a cave of

[y] 2 Chron. viii. 7, 8, 9. [z] Geneſ. xiv. 4, 7, 8, &c.

one ſyllable, and ſo the Jews pronounce it; which reading brings the word nearer the Chna of Sanchoniatho and Stephanus (6): it ſignifies a merchant, or trader, as the Canaanites, or Phœnicians, were.

(D) The Mohammedans are not uniform in their opinions concerning Canaan. Some agreeing with the account given of him in ſcripture, and others affirming, that he was born before the flood, and went not into the ark, but was drowned in the deluge, as hath been already obſerved (7).

(6) De Urbib. in voce Χνὰ. (7) See chap. 1. ſect. 1.

of the mountain of the Leopards, not far from Tripoly in Syria [a]. Year of the Flood, 350. Year before Chriſt, 2648

CANAAN ſeems to have been known to the antient heathens. Sanchoniatho expreſly ſays, Chna was the firſt Phœnician, or the firſt who was called a Phœnician [b]. The ſcripture mentions nothing particular with reſpect to any of his ſons, but the tranſactions of the Iſraelites, with their deſcendants, make up a great part of the Jewiſh hiſtory, and will be treated of in their proper place.

NIMROD was the ſixth ſon of Cuſh (E), and in all appearance much younger than any of his brothers; for Moſes mentions the ſons of Raamah, his fourth brother, before he ſpeaks of him. What the ſacred hiſtorian ſays of him is ſhort, and yet he ſays more of him than of any other of the poſterity of Noah, till he comes to Abraham. He tells us, that Nimrod *began to be a mighty one in the earth*; that he was *a mighty hunter before the* LORD, even to a proverb; and that *the beginning of his kingdom was* Babel, *and* Erech, *and* Accad, *and* Calneh *in the land of* Shinaar [c]. Of Nimrod.

FROM this account a great idea hath been received of his ſtrength and valour. Some repreſent him as a giant [d] (F); all conſider him as a great warriour. It is generally thought, that by the words *a mighty hunter*, is to be underſtood that he was a great tyrant; but ſome of the Rabbins [e] interpret thoſe words favourably, ſaying, that Nimrod was qualified by a peculiar dexterity and ſtrength for the chaſe, and that he offered to GOD the game which he took; and ſeveral of the moderns are of the opinion, that this paſſage is not to be underſtood of his tyrannical

[a] See Calmet, Dict. de la Bible Art. Canaan. [b] Apud Euſeb. de præp. Evang. lib. 1. cap, 10. p. 39. [c] Gen. x, 8, 9, 10. [d] Eutych. Annal. p. 63. Abu'lfarag. p. 12. [e] Aben Ezra, Kimhi. See alſo Grot.

(E) Some Mohammedan authors confound the genealogies of the ſons of Noah at a ſtrange rate. One of them ſays, that Nimrod was the ſon of Canaan, and brother of Cuſh, whom the Perſians ſurname Fil dendan, that is, the elephants tooth (1).

(F) The Hebrew word גִּבֹּר Gibbor, which our verſion renders a mighty one, is by the Septuagint tranſlated a giant (2).

Year of the Flood, 350. Year before Christ, 2648

oppreſſions, or of hunting of men, but of beaſts [f] (G). It muſt be owned, that the phraſe, *before the Lord*, may be taken in a favourable ſenſe, and as a commendation of a perſon's good qualities; but, in this place, the generality of expoſitors underſtand it otherwiſe (H.)

HUNTING muſt have been one of the moſt uſeful employments in the times juſt after the diſperſion, when all countries were over-run with wild beaſts, of which it was neceſſary they ſhould be cleared, in order to make them habitable; and therefore nothing ſeemed more proper to procure a man eſteem and honour in thoſe ages, than his being an expert hunter, as Nimrod probably was. By that exerciſe we are told the antient Perſians fitted their kings for war and government [g]; and hunting is ſtill, in many countries, conſidered as one part of a royal education.

THERE is nothing in the ſhort hiſtory of Nimrod which carries the leaſt air of reproach, except his name, which ſignifies a rebel (I); and that is the circumſtance which ſeems to have occaſioned the injurious opinions, which have been entertained of him in all ages. Commentators, being prepoſſeſſed in general, that the curſe of Noah fell upon the poſterity of Ham, and finding this prince ſtigmatized by his name, have interpreted every paſſage relating

[f] Bochart. Phaleg. lib. 4. cap. 12. Perizon. Orig. Bab. cap. 12. p. 230. [g] Vid. Xenoph. Cyropæd. lib. 1.

(G) A writer of great authority in the Eaſt has a ſingular notion, that Nimrod by hunting provided food for the builders of Babel (3).

(H) The phraſe, *before the Lord*, ſeems to be in itſelf perfectly indifferent, and made uſe of only by way of exaggeration; however, it being often introduced in ſcripture where wicked actions are mentioned, therefore inſtead of before the Lord, St. Auſtin will have it to be rendered againſt the Lord (4), in which he is followed by ſeveral (5). The Jeruſalem Targum, and that of Ben Uzziel, both take this character of Nimrod in an ill ſenſe.

(I) This name is generally derived from מרד marad to rebel; but if a compoſition may be allowed of, a more favourable etymology,

(3) Abu'lfarag. Hiſt. Dynaſt. p. 12. (4) De civit. Dei, lib. 16. cap. 4. (5) Joh. Sariſbur. Policrat. l. 1. p. 13, & l. 8. p. 559. Nic. Abram, Pharus V. T. lib. 5. cap. 5. § 16.

lating to him to his disadvantage. They represent him as a rebel against GOD, in perswading the descendants of Noah to disobey the divine command to disperse, and in setting them to build the tower of Babel, with an impious design of scaling heaven (K). They brand him as an ambitious

Year of the Flood, 340. Year before Christ, 2641

mology, and more agreeable to Nimrod's occupation, might be offered from נמר namer a leopard, which may by a metonomy denote wild beasts in general, and רדד radad to fell or beat down, or רדה radah to subdue or take. The Arabs make Nemrûd, the plural of which is Nemâredah, the same with מארד mâred, a rebel. However, a certain Persian author, who makes Nimrod the same with Cay Caus, a king of the second dynasty of Persia, gives the name a Persian derivation, as if it was Nemûrd, that is, immortal; which appellation, he says, was given to him on account of his long reign of above 150 years (6). If the first of the three significations be the right, the name must have been given him by his enemies, not by his subjects (7). The Greeks write the name Nembrod and Nebrodes.

(K) An Arab author says, that Nimrod built this tower, that he might ascend to heaven to see Abraham's God, who had delivered him from the fiery furnace, into which that tyrant had cast him. They worked at this building three years, and when Nimrod had gotten on the top of it, he wondered to see the heaven as far from him as it was before; but his astonishment encreased, when this tower and another, which had been built for the same purpose, were successively overthrown. Still persisting in his design, he would be carried to heaven in a chest, born by four monstrous birds; but after wandering for some time through the air, he fell down on a mountain with such a force that made it shake, to which, as this writer imagines, alludes that passage in the Korân; *though the stratagems of the impious make the mountains tremble* (1).

Nimrod, by this disappointment, finding he could not make war with God in person, instead of acknowledging his power, proceeded to persecute those who adored any besides himself; but God, by dividing Nimrod's subjects, and confounding their language, deprived him of the greater part of his people, and plagued those who continued to adhere to him by a cloud of gnats, which destroyed almost all of them.

Another author adds, that one of those gnats having entered into the nostril, or ear of Nimrod, penetrated to one of the membranes

(6) The author of Mesatih. al. Olûm, apud D'Herbelot. Bibl. Orient. Art. Nemrod. (7) Vid. Hyde de rel. vet. Persar. p. 35. (1) Cap. 14. v. 46.

Year of the Flood, 350. Year before Christ, 2648

bitious usurper, and an insolent oppressor; and make him the author of the adoration of fire (L), of idolatrous worship given to men, and the first persecutor on the score of religion (M). On the other hand, some account him a virtuous prince, and so far from advising the building of Babel, that they say he left the country and went into Assyria, because he would not give his consent to it (N).

NIMROD is generally thought to have been the first king after the flood (O); though some authors, supposing a plantation, or dispersion, prior to that of Babel, have made kings

membranes of his brain, where, growing bigger every day, it gave him such intolerable pain, that he was obliged to cause his head to be beaten with a mallet, in order to procure some ease; and that he suffered this torture for the space of four hundred years, God being willing to punish by one of the smallest of his creatures him, who insolently boasted himself to be the lord of all (2).

(L) The orientals make Nimrod the author of the sect of the Magi, or worshippers of fire; they tell us, that accidentally seeing fire rise out of the earth at a great distance from him in the east, he worshipped it, and appointed one Andeshan to attend the fire there, and throw frankincense into it (3).

(M) The person persecuted by Nimrod, according to several Jewish, Christian, and Mohammedan authors, was Abraham, who by the Hebrew chronology might have been his contemporary.

(N) Jonathan ben Uzziel paraphrases the passage (4) thus; Nimrod going out of that land reigned in Assyria, because he would not come into the measures of those who were concerned in the division, therefore God gave him another country, where he built four other cities, viz. Niniveh, Platiathkartha, Parioth, and Telasar.

(O) The Eastern writers make him not only the first king of Babel, but of all the world; and say, he was the first who wore a crown, the model of which he took from the figure of one he had seen in the sky; for being pleased with the appearance, he sent immediately for an artist, and had a crown of gold cast in the same form, which he put upon his head; from whence his subjects took occasion to say, that it came down to him from heaven (5).

(2) Vid. D'Herbelot. Bibl. Orient. Art. Nemrod. (3) Vid. Eutych. Annales, p. 63, 64. Ebn Amîd, p. 29. (4) Gen. x. 11. (5) Ebn Amîd, p. 29. Eutych. Annal. p. 63.

kings in ſeveral countries before him. Mizraim is ſuppoſed by many, who contend for the antiquity of the Egyptian monarchy, to have began his reign a good while earlier than Nimrod [i]; and others, from the uniformity of the languages ſpoken in Aſſyria, Babylonia, Syria, and Canaan, affirm thoſe countries to have been peopled before the confuſion of tongues[k]. Year of the Flood, 350. Year before Chriſt, 2648

THE four cities (P) Moſes gives to Nimrod made a large kingdom in thoſe early times, when few kings had more

[i] Vid. Marſh. Chron. Can. p. 18, 23. [k] Hornius ad Sulpit. Sever. p. 21.

(P) We might be able to make ſome judgment concerning the extent of the firſt Babyloniſh kingdom, could we fix the ſituations of theſe four cities: but this is very difficult; all of them having been long ſince deſtroyed, and authors differing ſo much in opinions about them. There are even two traditions with regard to the ruins of Babel, ſome placing them at Felugia, a village on the Euphrates, about thirty ſix miles to the ſouth-weſt of Baghdâd, on the Tigris; others, about the ſame diſtance from Felugia ſouthward, on the firſt of thoſe rivers: how much more uncertain then muſt be the ſituation of the reſt, which were towns not ſo famous, and whoſe ruins, if any remain, are ſeldom enquired after.

According to the Eaſtern authors, Erech, or Arach, is Hadas, or Edeſſa (6), called by the Syrians Urhoi, by the Arabs Roha, and by the inhabitants Orfa; Accad, or Akhar as ſome write it, is Niſibîn; and Calneh, Calanne, or Calya, is Cteſiphon, or Medaïn (7); and if they are not miſtaken, the diſtances of theſe cities from each other will give Nimrod's kingdom a great extent, as do ſome traditions concerning him (8): but the Aſiatics, in many things relating to their own antiquities, are not to be relied on more than the Europeans. We are of opinion, the Babylonian kingdom, under Nimrod, was much more limited, and rather agree with thoſe who believe Erech to have been a city of Chaldea, which from thence took its preſent Arabic name of Erâc (9). This ſeems to be the Arecca of Ptolemy, and Arecha of Marcellinus, who places it in Suſiana (10). Neither can Erec be Urhoi, or Edeſſa, in the opinion of thoſe who hold Ur of the

Book 1. chap. 9, & 13. (9) Hyde in notis ad Peritſol. Itinera Mundi, p. 65. D'Herbelot Biblioth. Orient. Art. Erac. (10) Lib. 23.

Year of the Flood, 350 Year before Christ, 2648

more than one: only it must be observed, that possessions might at first have been large, and afterwards divided into several parcels; and Nimrod being the leader of a nation, we may suppose his subjects settled within those limits. Whether he became possessed of those cities by conquest, or otherwise, does not appear: it is most probable, he did not build Babel, all the posterity of Noah seeming to have been equally concerned in that affair; nor does it appear, that he built the other three, though the founding of them and many more, with other works, are attributed to him (Q). It may seem also a little strange, that Nimrod should be preferred to the regal dignity, and enjoy the most cultivated part of the earth then known, rather than any other of the elder chiefs, or heads of nations, even of the branch of Ham. Perhaps it was conferred on him for his dexterity in hunting; or, it may be, he did not assume the title of king till after his father Cush's death, who might have been settled there before him (R), and left him the sovereignty; but

the Chaldees and Urhoi to be the same; for Erec and Ur are distinguished in scripture as two different cities. Calne we admit to be Ctesiphon, or Medaïn, nearer either of the aforesaid ruins of Babel than is Baghdâd; and as for Accad, we may suppose it to have been some city in the neighbourhood of the other three, long since ruined, and the memory of it lost: and thus will this early monarchy be reduced to such dimensions, as, in all probability, the first could not exceed.

(Q) Abu'lfarag says Nimrod built three of these cities, mentioned by Moses, viz. Erech, Accad, and Calya (1), or Calne. Others ascribe to him the building of Babel, Nineveh, Resen, and several other cities, among which was Abherbijân (2), in the Persian province of the same name. An Arab author mentions a city called Takharât, or Takharân Sâr, where Nimrod coined money (3). Others write, that he dug several rivers in Erâk, derived from Euphrates, of which that of Cutha, in the way [from Babel] to Cufah, was one (4).

(R) A Persian author of great authority affirms, that Cush, or Cûtha, was king of the territory of Babel, and resided in Erak; and attributes to him the making of the river Cutha (5). Dr. Hyde places the original seat of Cush in the same country, which he calls the most antient Cûsh (6); and says, that his posterity removing into Arabia, it thence took the name of Cûsh also (7).

but we incline to think, that he ſeized Shinaar from the deſcendants of Shem, driving out Aſhur, who from thence went and founded Niniveh, and other cities in Aſſyria. Year of the Flood, 350. Year before Chriſt, 2648

THE ſcripture does not inform us when Nimrod began his reign (S). Some [l] date it before the diſperſion; but ſuch a conjecture does not ſeem to ſuit with the Moſaical hiſtory: for before the diſperſion we read of no city but Babel, nor could there well be more, while all mankind were yet in a body together; but when Nimrod aſſumed the regal title, there ſeem to have been other cities built, which ſhews it was a good while after the diſperſion. We have placed the beginning of his reign thirty years from that event, that is in the year of the flood 431, and in all likelihood it ſhould be placed rather later than earlier. Year before Chriſt, 2567

AUTHORS have taken a great deal of pains to find Nimrod in prophane hiſtory; ſome have imagined him to be the ſame with Belus [m], the founder of the Babyloniſh empire; others with Ninus [n], the founder of the Aſſyrian (T); ſome think him the ſame with Evechous, the firſt Chaldæan king after the deluge [o]; and a fourth ſort perceive a great reſemblance between him and Bacchus, both in actions and name [p]. Some of the Mohammedan writers ſuppoſe Nimrod to have been Zohak, a Perſian king of the firſt dynaſty [q]; others Cay Câus, the ſecond king of the ſecond race [r];

[l] Vid. Nic, Abram, Pharus V. T. lib. 5. § 7. [m] Petav. Doct. temp. l. 13. p. 283. [n] Hyde de rel. vet. Perſ. p. 43, 44. [o] Syncell. p. 90. [p] Vid. Calmet Dict. de la Bible Art. Nemrod. Bedford Script. Chronol. p. 265, 266. [q] Tarikh Montakhab apud D'Herbelot Art. Nemrod & Neouh.

(S) The Arabs ſay, that Nimrod reigned in al Sowâd, that is, the black country; for ſo they call Irak Arabi, from the black tents of the Scenite Arabs ſcattered over the province (8). They ſuppoſe, his father Cuſh reſided at Erac, in the province of Babel (9); though Babel is genrally thought, by chriſtian authors, to have been the regal ſeat of Nimrod.

(T) Many have confounded the Babylonian and the Aſſyrian empire together, by miſtaking the ſenſe of the text (10), as if both of them had been founded by Nimrod; but this point will be diſcuſſed hereafter, when we come to ſpeak of the foundation of the Aſſyrian empire.

(8) Abu Mohammed Muſtafa apud Hyde de rel. vet. Perſ. p. 42, 43. (9) Vid. Hyde ibid. p. 40. (10) Gen. x. 11.

Year of the Flood, 350. Year before Christ, 2648

race [r]; and some of the Jews says he is the same with Amraphel, the king of Shinaar, in Moses [s]: but there is no certainty in these conjectures, nor have we any knowledge of his immediate successors (U).

THE scripture mentions nothing as to the death of Nimrod; but authors have taken care that such an essential circumstance in his history should not be wanting. Some of the Rabbins pretend, he was slain by Esau (W), whom they make his contemporary. There is a tradition, that he was killed by the fall of the tower of Babel, which was overthrown by tempestuous winds while Nimrod was in it [t]. Others say, that, as he led an army against Abraham, God sent a squadron of gnats, which destroyed most of them; and particularly Nimrod, whose brain was pierced by one of those insects [u].

Of Shem and his posterity to Abraham.

WE now come to the history of Shem and his posterity, which for convenience we have placed last, though he was the

[r] See before, 361, in the notes. [s] Ben Uzziel. Yarhi. R. Dav. Ganz in Zemach David. [t] Abu'lfarag. Hist. Dyn. p. 12. [u] Hyde de rel. vet. Pers. p. 74. See before, p. 361. in the notes.

(U) Some christian and Mohammedan historians call the most antient kings of the Babylonians, who succeeded Nimrod, Nimâredah, that is, Nimrods (11). Some of the latter say, he reigned in al Sowâd 400 years; and that he was succeeded by a prince of the same family, called Nabat Ebn Köûd, who ruled 100 years (12): and some of the former tell us, that Bokhtanser [or rather Bakht Nasr, which is the name the orientals give to Nebuchaddnezzar king of Babylon] was of his race (13).

(W) They tell the following story, as the occasion of this accident: that the coat, which God made Adam, was with his body in the ark; and that, when Noah and his sons quitted that vessel, Ham took it, by which means it afterwards fell to Nimrod, who putting it on, all kind of beasts and birds came and fell down before him, as thinking him to excel in strength, and made him king over them, according to the text, where he is said to be *a mighty hunter before the Lord.* Esau seeing the coat upon Nimrod, conceived so strong a desire for it, that he slew him, and stripped him of it (14).

the ſecond ſon of Noah by birth, and by prerogative the eldeſt, the right of primogeniture ſeeming to have been lodged in him. Year of the Flood. 350. Year before Chriſt, 2648.

THE poſterity of Shem are twice recited by Moſes. In the firſt place [w], he only mentions the names of ſuch of his deſcendants as were concerned in the firſt diſperſions. In the other [x], he deduces the genealogy in the line of Arphaxad down to Abraham. But the ſacred writer having been more brief in the hiſtory of theſe patriarchs, than in that of the branch of Ham, relating nothing farther of any of them than their ages, and the year of their lives wherein they begot their ſons (from whence we are enabled to collect the chronology of this period, and no more), for the reſt we muſt have recourſe to the traditions and conjectures of the Jewiſh and chriſtian writers, where we ſhall not want for matter.

SHEM was born ninety eight years before the flood; for two years after it, at the birth of Arphaxad, he was one hundred years old [y]. We ſhall have given the reader all that is to be found in ſcripture concerning this patriarch after the deluge, when we have acquainted him, that he aſſiſted his brother Japhet in covering the nakedneſs of their father [z], and ſhared in his bleſſing for ſo doing: *Bleſſed be the* God of Shem, ſaid Noah, *and* Canaan *ſhall be his ſervant* [a].

IT hath already been obſerved in what manner this prophecy was accompliſhed: but there is one thing peculiar in theſe words of Noah, which ought to be taken notice of; and that is, that he bleſſeth the God of Shem, and ſays nothing of that kind with regard to Japhet; by which circumſtance is plainly intimated, that the knowledge and worſhip of the true God was to be found in the branch of Shem; and that though Japhet himſelf did at that time believe in the true God, yet his poſterity ſhould quickly fall away from the faith, and worſhip ſuch gods as did not deſerve to be bleſſed; and therefore Noah, who foreſaw what would happen, ſuppreſſed that ſhort doxology, in giving his bleſſing to Japhet: however, this prophecy ſeems to have no farther proſpect, than till the coming of the Meſſiah in the line of Shem, which was the prime prerogative of that patriarch; for ſince that time moſt of Japhet's poſterity have received the knowledge of the true God.

THE

[w] Gen. x. 21. [x] Gen. xi. 10. [y] Ibid. [z] Gen. ix. 23. [a] Gen. ix. 26.

Year of the Flood, 350. Year before Christ, 2648

THE Jews suppose the tradition of the theological truths to have passed from Noah to Shem, who communicated them to his children, by which means the true religion was preserved in the world. The Rabbins pretend, that Shem was entrusted with the will of Noah, whereby he divided the earth among his three sons; that he went to school to Methuselah for threescore and eighteen years, and kept one himself, after the deluge, upon mount Tabor, where he taught morality; that he instructed Abraham in the ceremonies relating to sacrifices, which that patriarch afterwards observed. They say farther, that God gave him the spirit of prophecy a hundred years after the flood, and that he discharged the function of a prophet for the space of four hundred years, without reaping much fruit of his labour, mankind being become greatly corrupted. They attribute also to him the invention of astronomy, together with the manner of computing by months and years [a], and of intercalating the former, having learned these secrets from Noah [b]. Those who confound Shem with Melchizedec (X), ascribe to

[a] Scip. Sgambat. Archiv. Vet. Test. lib. 1. p. 165. apud Calmet. Dict. de la Bible Art. Sem. [b] Eliezer Pirke, c. 8.

(X) The Jews, followed by many christian authors antient and modern, are of this opinion, which has nothing to countenance it in scripture: nor is it likely so eminent a patriarch would divest himself, as it were, of the sovereignty which he held over his own branch, to settle in Canaan, and become a petty prince within the dominions of another, who was to be his servant (1), namely Ham. The learned, who were of this opinion, have been led into it by adhering too strictly to the Hebrew computation (2), and perhaps looking on the tradition of the Jews as some authority (3). Yet it is since the time of Josephus, who speaks of Melchizedec only as a Canaanitish king (4), that they have made him the same with Shem; which seems to have been a notion altogether unknown to St. Paul (5). The oriental christians make Melchizedec the son of Phaleg (6); for the Septuagint chronology, which is generally received among them, will not allow him to be the same with Shem. A learned Syrian author, who holds a middle opinion between them and the Jews, will have Melchizedec to be the son of this last mentioned patriarch (7).

(1) Gen. ix. 26. (2) Cumberl. on Sanchon. p. 47. (3) Id. ibid. p. 174. (4) Antiq. lib. 1. cap. 11. (5) Heb. vii. 2. (6) Ebn Amîd p. 13. Eutych. Annal. p. 50. (7) Abu'lfarag. Hist. Dynast. p. 10.

to him the 109th Pſalm, and a treatiſe of phyſic [c] (Y). Some make him to have been the firſt king in the world, and to have founded three cities, one in each of the three parts of the earth known to the ancients (Z). Year of the Flood, 350. Year before Chriſt, 2648

THE Eaſtern writers ſay, that Shem, in purſuance of the directions of Adam and Noah [d], together with Melchizedec, the ſon of Phaleg, took Adam's body out of the ark, and, being conducted by an angel, carried it to mount Calvary, where they buried it: after which Shem conſtituteing Melchizedec the prieſt of God, left him behind to attend at the ſepulchre; and pretended on his return that he died by the way, and was buried [e]. Some ſay, Shem interred there no more than the ſkull of Adam, which had been given him by Noah [f].

THOSE who ſeek to reconcile the heathen mythology with the Moſaic hiſtory, are greatly at a loſs to find among the gods, or heroes, one who in name or character hath any reſemblance to Shem; and therefore are reduced to that ridiculous ſhift of making him the god of hell (A).

SHEM

[c] Scip. Sgambat. Archiv. V. T. lib. 1. p. 165. [d] See before, p. 241, in the notes. [e] Ebn Amîd, p. 13. Eutych. Annal. p. 50. [f] See before, p. 241, in the notes.

(Y) The Hebrew manuſcript of this book, we are told, is to be found in the Elector of Bavaria's library (1).

(Z) Theſe three cities are Sebta [or Ceuta] a maritime town in Africa [on the coaſt of Barbary], Salernum in Italy, and Salem in Judea (2). Others ſay, he only laid the foundations of [this laſt, ſuppoſing it to be] Jeruſalem (3).

(A) As thoſe authors, who fancy a reſemblance between Saturn and Noah, have on account of the ſuppoſed ſimilitude of names, made Ham Jupiter, and Japhet Neptune, Shem muſt of conſequence be Pluto (4); but ſuch an hypotheſis, we think, is not for the honour of that patriarch, any more than another, which ſuppoſes him to be Typhon; we ſhould have been glad therefore to have known what reaſons Calmet had to believe, that prophane hiſtorians intend Shem by Typhon, whom he owns to have been a famous giant, or maleficent deity (5); and, indeed, was had

Year of the Flood, 350. Year before Christ, 2648

SHEM, having lived 502 years after the flood, died at the age of 600. He left five sons, Elam, Ashur, Arphaxad, Lud, and Aram [g]. The more moderate Persian historians say, that their first king Cayumarras was a son of Shem [h], meaning probably Elam, whom Moses makes the founder of that nation.

THE scripture has recorded no one action of any of these sons of Shem, except Ashur; and the passage relating to him is a very material one, as it fixes the true time of the foundation of the Assyrian kingdom. This remarkable fact is related by Moses in these words; *out of that land* [namely *Shinaar*] *went forth* Ashur, *and builded* Niniveh *and the city* Rhehoboth, *and* Calah [i], *and* Resen *between* Niniveh *and* Calah; *the same is a great city* [k]. We are sensible this text is by many applied otherwise, and rendered according to the marginal reading of our translation, He went out into Assyria; as if Nimrod was the person spoken of; but we shall shew hereafter, that such a sense puts a manifest force upon the words. As to the epoch of this Assyrian kingdom, we suppose, it might have been founded about the same

Year before Christ, 2567

time with that of Babel, that is, 30 years after the dispersion, in the year of the flood 431.

As to the situation of the cities built by Ashur, in order to determine the extent of this first Assyrian kingdom, we find ourselves more at a loss than we were with regard to those which composed the kingdom of Babel. However, we may venture to draw this inference, that as the number of cities, of which each monarchy consisted, was equal, so it is probable their dimensions were much the same; and that the other three cities lay at no great distance from Niniveh, whose situation has been in some measure preserved by tradition (B).

ARPHAXAD,

[g] Gen x. 22. [h] Vid. D'Herbelot Bibl. Orient. Art. Sam.
[i] Gen. x. 11. [k] Ib. ver. 12.

had in great detestation by the Egyptians, as a monster of wickedness, having embroiled the nation in a rebellious war, and murdered his brother Osiris.

(B) Niniveh is supposed to have stood on the east side of the Dijlat or Tigris, opposite to Mosul; at least, the tradition of the country will have it so: but there are no ruins to be seen there, as there are at old Babel (6). Though a certain traveller pretends to

(6) See Thevenot's Travels, part 2. chap. 11. p. 52. Rauwolf's Travels, part 2. chap. 9. p. 188.

ARPHAXAD, or as the Maſoretes read the name Arpachſhad, the third ſon of Shem, had one advantage above the reſt Year of the Flood, 350 Year before Chriſt, 2643

to have diſcovered and thoroughly viewed ſome remains, by which he judged the city to have been built in form of a long ſquare, in length 150 furlongs, and in breadth 90; which at eight furlongs to an Italian mile, make threeſcore miles in compaſs (7).

The city Rehoboth, is by many ſuppoſed to be Reheboth, on the Euphrates, the ſame probably with that called Rahabat Malek, not many miles below the place where the Khabûr falls into the Euphrates (8); and Reſen to be the Reſania of the antients in Meſopotamia, ſtill in being, and called Ras alain, that is, the head of the fountain, on account of the many ſprings riſing thereabouts; and among the reſt that of the Khabûr; It is alſo called Ain Wardah. But others endeavour to find Rehoboth and Reſen nearer Niniveh, and alſo object, that they cannot be Rahabat and Ras alain, becauſe theſe laſt are not in Aſſyria, which lies to the eaſt of Tigris. They ſuppoſe, that Rehoboth is the ſame with the Birtha of Ptolemy, or Virtha of Ammianus Marcellinus (1), ſituate at the mouth of the river Lycus, from which the preſent ruins of Niniveh are not many miles diſtant to the north; and the reaſon they give is, becauſe Birtha ſignifies in the Chaldee the ſame which Rehoboth does in the Hebrew, that is, ſtreets. And as a confirmation that theſe names are the ſame, Ptolemy alſo places a Birtha on the Euphrates, about the place where we have ſuppoſed the other Rehoboth to have ſtood; nor does his placing it above the confluence of the Rhabûr and Euphrates, inſtead of below it, lay any good objection in the way, ſince Ptolemy is full of ſuch faults. It may rather be objected, that Moſes ſeems to have given all the cities he mentions the names they went by in the country where they ſtood, as near as the Hebrew orthography would allow; but in ſuch doubtful caſes, we muſt always make allowances; ſo that Birtha, or Virtha, may ſtand for Rehoboth, ſince we cannot find a more likely place.

Calah, the next city, is ſuppoſed to be the Calach, ſituate about the ſprings of the river Lycus (2), mentioned by Strabo as the capital of a province called Calachene, which ſeems to be the ſame with Ptolemy's Calacine, above Adiabene towards mount Niphates. Bochart thinks, it is the ſame with Halah, whither the Iſraelites were carried captives (3); the Heth being ſometimes changed into the Kaf, of which that author produces ſome inſtances (4).

Could

Year of the Flood, 350. Year before Christ, 2648

reſt of his brethren, namely, of having the patriarchal line continued through him. Many derive the name, as well as the nation of the Chaſdìm, or Chaldeans from Arphaxad (C), which opinion ſeems more reaſonable than that which makes

Could we be ſure of being right as to the ſituation of Calah, that of Reſen would be found of courſe; for Moſes ſays it lay between it and Niniveh, which is enough for our purpoſe, without ſuppoſing it to be the Lariſſa of Xenophon, according to whoſe deſcription it was a great city (5), as Reſen is likewiſe ſaid to have been. The difference of the names may be eaſily accounted for, from the uſage of the Greeks; who either could not, or would not, write exotic names properly. But we muſt own Lariſſa ſeems to lie too much out of the way to be Reſen, for it ſtood on the Tigris to the ſouth of Niniveh; whereas it ſhould rather have been ſituate to the northward of that city, and at a diſtance from the river, to lie in the way between Niniveh and Calah. We may, however, ſuppoſe Reſen to have been ſome city in the neighbourhood of thoſe other two, long ſince deſtroyed.

(C) Some Rabbins are of this opinion (6). And if the authority of Joſephus be of any weight, he affirms the ſame: Arphaxad, ſays he, gave name to the Arphaxadæans, at preſent called Chaldeans, whoſe prince he was (7). He certainly does not mean, as Dr. Wells obſerves (8), that the name Chaldeans is derived directly from the name Arphaxad; but perhaps he meant, that the true name Chaſdîm is derived thence, that is to ſay from כשד, the three laſt letters of Arpachſhad (9); and from Chaſdim the Greeks have made Chaldæi inſtead of Chaſdæi, by changing the ſ into l. And this opinion is more probable, becauſe the Chaldeans were not only called Khaſdîm (10) before Cheſed was born (11), but appear to have been a nation when Abraham came out of Ur of the Khaſdim (12); at which time Cheſed was neither old or conſiderable enough to have built towns and founded a nation. And this argument is ſo cogent, that Bochart and others, at the ſame time that they treat this etymology as a chimæra, are obliged to fly to the common ſubterfuge on this occaſion, and ſay, that the city of Ur is called Ur of the Chaldees by a prolepſis (13), which will hardly ſerve in this caſe for the reaſons already alledged. After all, nothing can be determined as to this point, nor will it be repugnant to ſcripture to deny the derivation of the name of Khaſdîm either from Arphaxad, or Cheſed.

Som

(5) Anabaſ. lib. 3. (6) Gedal. in Shalſhel Hakkab, p. 9. (7) Antiq. lib. 1. cap. 7. (8) Geog. of the Old Teſt. vol. I. p. 187. (9) Vid. Lightfoot Oper. vol. I. p. 1. (10) Gen. xv. 7. (11) Gen. xxii 22. (12) Gen. xi. 3. (13) Vid. Phaleg. lib. 2. c. 4. Heideg. Hiſt. Patr. tom. I. 458. § 43.

makes Chesed, the son of Nahor, Abraham's brother, to be the founder of them; though possibly the Chasdîm had another original; for nothing is mentioned in scripture concerning it. Some Mohammedan authors make Arphaxad both a prophet and an apostle, and lodge the chief sovereignty over the nations of the world in his descendants (D). Arphaxad was born in the hundredth year of his father, two years after the flood [l]; and having begat the succeeding patriarch in the 135th year of his age [m], died after he had lived in all 438 years [n]; which is the sum of what the scripture relates concerning him, though writers have added several conjectures of their own (E). Year of the Flood, 350. Year before Christ, 2648. Year before Christ, 2996.

WHO

[l] Gen. xi. 10. [m] Ibid. v. 11. [n] Ibid. v. 12.

Some compound Arphaxad's name of רפא כשד, Rasa Khashed that is, the healer or prelate of Chaldea; supposing it to have been given to Cainan as a name of dignity (14).

(D) According to a curious though fabulous Mohammedan tradition, ascribed to Ebn Abbâs, Shem being called by Noah, at day-break, to assist at morning-prayer, arose and awakened his children, of whom only Arphaxad got up and attended his father to Noah; who gave them his benediction and prayed for them: whereupon God revealed to him, that the gift of prophecy, together with the apostleship, should be granted to the children of Shem, and in an especial manner to the family of Arphaxad his eldest son; which gift should neither be taken from him, nor transferred to any other; and that the same family should also enjoy the prerogative of sovereignty and empire over the other nations, which should be divided successively between the Persians, the Greeks, the Romans, and the Arabs, to the end of the world (15).

(E) A certain author makes him one of the Rephaim, (in consequence of the etymology he has given of his name) supposing them to have been believers, and sent by Noah to recal mankind to the worship of God; wherefore they were named Rephaim, that is, healers, and restorers, to wit, of souls. He farther advances, upon no better grounds, that Cainan, or Arphaxad (whom he makes to be the same), was the founder of the empire of China; that the sect of the Bonzes was introduced into Japan by him, or his disciples; and that the Brachmans took their rise in Chaldea soon after the arrival of that patriarch in the country of Etham, (where he was sent with a colony by Noah,) about the year of the deluge

(14) Vid. Bolduc. de Ecclesia ant. legem. lib. 2. cap. 2.

Year of the Flood, 350. Year before Chriſt, 2648

WHO this ſon ſo begotten by Arphaxad was, has occaſioned no ſmall diſpute among the learned: according to the Hebrew and the Samaritan, Salah was his ſon; but in the Septuagint verſion we find Cainan put in between the two, as the ſon of the firſt, and father of the latter. This variation not only adds another link to the chain of ſucceſſion, but alters the chronology of this period, making that of the Septuagint to exceed the Samaritan by one hundred and thirty years, the age fixed for Cainan to have begotten his ſon. Thoſe who adhere to the Septuagint, draw their chief argument from St. Luke's [o] mentioning Cainan in his genealogy of Chriſt, which has been already anſwered [p] (F). However, the Septuagint verſion having been received over

[o] Luke iii. 36. [p] Pag. 338.

deluge 68, the chief of which colony was called Yarcha, which in the Hebrew is Rapha, that is a curator, or healer (16).

(F) To the arguments already produced by us on this head (17) may be added; 1. That Cainan was unknown to Onkelos, the Chaldee paraphraſt, Philo, and Joſephus, and to the Syriac, Perſian, and Arab tranſlators, as well as to the author of the Vulgat. Beroſus alſo, placing Abraham in the tenth generation after the flood (18), leaves no room for Cainan. Theophilus Antiochenus, (19) and Doſitheus (who was contemporary with the apoſtles themſelves) do alſo omit him, as do the more correct Greek writers (20). 2. He is wanting in the Roman and Paris editions of the Septuagint, in a place (21) from whence omiſſions of this kind are uſually ſupplied; which would ſcarce have happened in caſe there had been ſuch a perſon. Nor is he to be found in that edition of the Septuagint itſelf, which, having been placed in the Alexandrian library of Cleopatra, and received in Egypt, Paleſtine, and Syria, was inſerted by Origen in his Hexapla; and which, according to Jerom, was formerly reckoned the only faultleſs and uncorrupted copy, the other copy, called the vulgar, having been corrupted at the pleaſure of antient writers (22). It is true Origen mixed Theodotion's verſion with the other, but took care to mark with an aſteriſk what it had leſs, and with an an obeliſk what it had more than the Alexandrian MS. which method we ſee obſerved by Procopius Gazæus (23). 3. The various

(16) Bolduc de Eccleſ. ant. legem, lib. 2. cap. 2. See before, p. 251, in the notes. (17) Pag. 338. (18) Apud Joſeph. Antiq. lib. 1. cap. 8. (19) Lib. 3. ad Autolyc. (20) Vid. Maſſæum lib. 2. Perer. in Geneſ. cap. x. (21) Vid. Maſſæum lib. 2. Perer. in Gen. cap. x. (22) Hieronym. Epiſt. 135. (23) Vid. Procop. in Geneſ. xi.

over a great part of the chriſtian world, Cainan paſſeth for one of the patriarchs, as well as a founder of nations (G), in many countries, and there more traditions concerning him (H) than of Salah, the true ſon and ſucceſſor of Arphaxad. Year of the Flood, 350. Year before Chriſt, 2648

SALAH is the only patriarch concerning whom the chriſtian writers have obſerved an equal ſilence with Moſes. He hath been thought by ſome to have been the ſame with the prophet Saleh, ſent to preach the true religion to the tribe of Thamûd in Arabia Petræa [q]; but this perſon appears to be much later than the patriarch (I).

IT

[q] Hyde de Rel. vet. Perſar. p. 58. D'Herbelot, Bibl. Orient. Art. Salah.

rious readings in the ſeveral Greek copies, as well with regard to the years of Arphaxad after the birth of Cainan, as to thoſe of Cainan after the birth of Salah, are no ſmall evidence of corruption in this point (24).

Some of the moderns, to reconcile St. Luke with the Hebrew, make Cainan and Salah (25), others Arphaxad and Cainan, to be the ſame perſon (26).

(G) The Alexandrian chronicle (27) derives the Samaritans from Cainan; Euſtathius Antiochenus (28) the Saggodians; George Syncellus (29), the Gaſpheni; Epiphanius the Cajani (30); Salianus (31) thinks the river Caina in India takes its name from him.

(H) Beſides the particulars already mentioned, it is ſaid, Cainan was the firſt after the flood who invented aſtronomy, and that his ſons made a god of him and worſhipped his image after his death. The founding of the city of Harran in Meſopotamia is alſo attributed to him, which, it is pretended he ſo called from a ſon he had of that name (32).

(I) An Arab writer makes the prophet Saleh to be ſon of Aſaf, the ſon of Caſſakh, the ſon of Hawer, the ſon of Khaber, the ſon of Thamûd, [the ſon of Gather] the ſon of Aram, the ſon of Sem (33); ſo that he was five generations later than the patriarch Salah, who was the third in deſcent from Noah. Beſides, the deſtruction of the tribe of Thamûd was ſubſequent to that of the tribe

(33) Tarikh Montakhab. apud D'Herbelot Art. Salah p. 740.

Year of the Flood, 350. Year before Chriſt, 2648

It is the general opinion, that the Hebrews derive their name from the patriarch Eber (K), the ſon of Salah; and many of the Jews (as well as chriſtians) attribute to him the honour of being the founder of their name and nation [r] (L). But there is much more appearance, that the name

[r] Joſeph. Antiq. lib. 1. cap. 7. Shalſh. Hakk. p. 803. Eutych. Ann. p. 47.

tribe of Ad, to whom the prophet Hûd, or Eber, was ſent, as we learn, from one of the commentators (34) on the Korân; and conſequently Saleh, the prophet of the Thamûdites, muſt be poſterior to Eber.

(K) The Hebrew word עבר Eber ſignifies beyond, or ſimply, a paſſage; for what reaſon he was ſo called is uncertain; but if the Hebrews were ſo called from him, as moſt imagine, why might it not have been given him prophetically by Salah, to denote the future paſſage of his poſterity over the Euphrates into the land of Canaan, in the ſame manner as many ſuppoſe Eber gave his ſon the name of Peleg, foreſeeing the diviſion of the earth which was to happen towards the middle, or end, of his life; This patriarch's name is in ſome verſions confounded with that of חבר Heber, which both occur in one chapter (35).

(L) The maintainers of this opinion bring many arguments to ſupport it, of which two only ſeem to be of any weight: 1. That a patriarch of that name being found among the anceſtors of the Jews, it is reaſonable to believe they derived their name from him. 2. That Shem is expreſsly ſaid to be the father of all the children of Eber (36).

To the firſt of theſe it is anſwered, that, as Moſes intimates nothing that way, the bare affinity of the name is not ſufficient to determine the point in favour of that opinion. And as for what they alledge, either of the ſuperiour piety and merit of Eber above the other patriarchs, or of the Hebrew language being peculiarly ſpoken, or preſerved, by him and his poſterity, it is not only begging the queſtion, there being no foundation in ſcripture for thoſe ſuppoſitions, but may be preſumed to be falſe as to the firſt (ſince he cannot be ſuppoſed to have been more pious than Shem), as it appears to be with regard to the laſt (37), the Hebrew having been ſpoken by nations which were not of his poſterity.

To the ſecond argument it is replied, that the word Eber, in the before-mentioned text, has not reſpect to a perſon, but to place, and conſequently, that the words do not ſignify the children of the patriarch

(34) Hoſſein. Waedh, apud. D'Herbelot, ibid. p. 741.
(35) 1 Chron. viii. 12, 17, 22. (36) Geneſ. x. 21.
(37) See the next note.

name of Hebrews was given to Abraham and his deſcendants, on account of his paſſing over the rivers in his way from Irâk, or Chaldea, into Syria [s]: ſo that a Hebrew ſhould ſignify nothing elſe in the original ſenſe of the word, than a man from beyond the Euphrates. Year of the Flood, 350. Year before Chriſt, 2648

IN conſequence of the ſame opinion, it has been commonly believed by the antients, as well as moderns, that the Hebrew language alſo took its name from Eber, and that at the confuſion of tongues it remained ſolely in the family of that patriarch and his deſcendants [t] (M): but as the firſt part of this aſſertion hath no better ground than the former opinion, ſo the latter is falſe in fact, the Hebrew language having been common to people who had no affinity with the family of Eber; as the Phœnicians, or Canaanites, who in the time of Abraham ſpoke Hebrew, or a language differing very little from it.

THE

[s] Vid. Abu'lfarag. p. 11. Hyde de Rel. vet. Perſar. p. 47, &c. [t] Vid. Ebn. Amid. p. 14. Shalſh. Hakk. p. 803.

patriarchEber, but the people who dwelt on one ſide, or the other, of the river, meaning thereby either the Euphrates, or Tigris, or both, which parts were the ſeat of Shem's poſterity; to enforce which acceptation, it may be farther obſerved, that if Eber be taken here as a proper name, then under the deſignation of his children muſt be comprehended, not only the Hebrews properly ſo called, deſcended from him by Peleg, and the Arabs, who were Joktan's poſterity, and ſettled on this ſide of the river, but alſo thoſe who remained on the other ſide of the river, either in Meſopotamia, Chaldea, Elymais: but it could never be Moſes's meaning to make Shem the father of Eber's children in this ſenſe, which ſeems to have nothing in view; being too extended to illuſtrate any thing relating particularly to the Hebrews, or Jews; and too limited to reflect any honour on Shem, who was the father of many nations, and of ſome more conſiderable than thoſe deſcended from Eber. Nothing therefore ſeems to favour this opinion, unleſs it may be ſaid, that Moſes in this place had a mind to pay a compliment to all the poſterity of Eber in general, on account of the relation they bore to the Jews, as being collateral branches of the ſame anceſtor. But this point we ſhall more critically examine when we come to the hiſtory of Abraham.

(M) The confuſion of tongues having been conſidered as a puniſhment

Year of the Flood, 401. Year before Chriſt, 2597

THE building of Babel is properly referred to the time of Eber, juſt before the birth of his ſon Peleg, in the 134th year of his age and of the flood four hundred and one. Some of the rabbins and chriſtian fathers, who refer that event to a ſubſequent part of Peleg's life, ſay Eber gave him that name prophetically, to denote a diviſion of the earth, which was to happen ſome time after, and accordingly reckon Eber a prophet chiefly upon that account [u].

TILL this time all mankind lived in a body together, and ſpoke one language; but God, being offended at the building of that city and tower, confounded their ſpeech, and diſperſed them abroad, in order to people and plant the earth. But what particular language the firſt was, in what manner it was confounded, together with an account of the whole tranſaction relating to the building of Babel and the diſperſion of mankind, muſt hereafter be the ſubject of different ſections.

THE original of idolatry by image-worſhip is by many attributed to the age of Eber (N), though moſt of the fathers place it no higher than that of Serug; which ſeems to be the more probable opinion, conſidering, that for the firſt hundred

[u] Zemach Dav. part 1. p. 6. Seder Olam. cap. 1. p. 2. Yarhi ad Geneſ. x. 25. Hieron. in quæſt. Hebr. in Geneſ. Chryſoſt. Hom. 30. in Geneſ.

puniſhment for the temerity of thoſe who undertook to build Babel, many authors, poſſeſſed with high ſentiments of Eber, have preſumed, that the poſterity of that patriarch, who was deſtined by God to be the ſtock of the holy people, and the depoſitory of the true religion, had no ſhare in that enterprize, nor conſequently in the puniſhment which attended it. But if Eber's children were not concerned in it, it muſt have been becauſe none of them were grown up to an age capable of aſſiſting in that work, the diſperſion having happened at the birth of Peleg, who is by many ſuppoſed to have been Eber's eldeſt ſon: for it ſeems to be inconteſtable, that all the deſcendants of Shem, Ham, and Japhet, were concerned in that building (38). However, it is plain, Eber's poſterity ſhared in the puniſhment, for their language was divided. Witneſs the difference between the Arabic (the language of Joktan's poſterity) and the Hebrew; not to mention the Chaldee.

(N) Dr. Hyde thinks idolatry may by numerous arguments be proved

(38) See ſect. 4.

hundred and thirty four years of Eber's life, all mankind dwelt in a body together, during which time it is not reaſonable to ſuppoſe idolatry broke in upon them: then ſome time muſt be allowed after the diſperſion for the ſeveral nations, which were but ſmall at the beginning, to encreaſe and ſettle themſelves: ſo that if idolatry was introduced in Eber's time, it muſt have been towards the end of his life, and could not well have prevailed ſo univerſally, and with that obſtinacy which is imagined by authors. However, the Arabs have a tradition, that Hud (O), who is generally ſuppoſed to have been the ſame perſon with Eber, was ſent to preach to one of their antient tribes, named Ad, who had corrupted themſelves with the worſhip of idols, and were afterwards almoſt totally deſtroyed for not hearkening to him [w]. They alſo ſay, he ended his days in the province of Hadramaut, where they ſtill pretend to ſhew his ſepulchre, near Merbât, and within two miles of Hâſec, a port on the Indian ſea: there is a ſmall town built about it, which is now called Kabr Hûd, or the ſepulchre of Hud [x].

Year of the Flood, 401. Year before Chriſt, 2597

EBER is ſuppoſed by many to have built Hebron in Canaan, and Tanis in Egypt; but theſe are groundleſs imaginations [y]. Some refer the golden age to the time of him and his ſon Peleg [z]: and indeed, if we can ſuppoſe there ever was ſuch a pacific and innocent ſtate on this ſide of the flood, it is moſt likely to have been in the days of Noah and his three ſons [a], that is, during the time their poſterity continued in their firſt habitation, before their removal to Shinaar, and a while after the diſperſion, which probably gave it a ſhort interruption. EBER

[w] Vid. Pocock. Specim. hiſt. Arab. p. 36. D'Herbelot, Bibl. Orient. Art. Houd. [x] Vid. D' Herbelot, ibid. Art. Cabar Houd. [y] Vid. Heidegg. Hiſt. Patr. tom. 2. p. 11, 13. [z] Vid. Gordon, Chron. lib. 2. chap. 2. [a] Vid. Bochart, Phaleg. lib. 1. chap. 1.

proved to have begun as high as the times of Eber and Salah, who preached to their countrymen, the idolatrous Arab tribes of Ad and Thamûd (39): But we have already obſerved, that the apoſtle of the Thamudites was much latter than the patriarch Salah; and the miſſion of Eber is not an authority to build upon.

(O) It ſeems as if the Arabs had ſome notion of the Hebrews being ſo called from Eber; and therefore from the other name of that nation, viz. Jews, which they pronounce Hûd, and Yehud, they have given this prophet the name of Hûd alſo. Schickard,

(39) Hyde de Rel. vet. Perſ. p. 58.

Year of the Flood, 401. Year before Christ, 2579

EBER had two sons, Peleg and Joktan; Peleg was born just after the dispersion happened, on which occasion that name (P) was given to him. Venerable Bede affirms, that temples were first built in his days, and that several of the chiefs of nations were worshipped for gods. On the death of this patriarch we are told, that contention arose between his sons and those of his brother Joktan, whereupon men began to build castles for their defence [b].

THE scripture mentions only one son of Peleg's, besides which the orientals have given him another mentioned in scripture, though not as Peleg's son, namely, Melchizedec [c]. They say he begat him two hundred and nine years after the birth of his brother [d], which is a more rational opinion, though perhaps no better grounded, than that of the Jews, who make him to be the same with Shem. Of this person we have already related some particulars, and may have occasion to say more hereafter.

JOKTAN is generally supposed to have been Peleg's elder brother, upon a presumption, that he and his thirteen sons were leaders of colonies at the dispersion of Babel. They are indeed mentioned at the same time with the other heads of nations, and are doubtless to be included amongst those *by whom*, it is said, *the nations were divided in the earth after the flood* [e]: but we do not think it follows from thence, that they must have been leaders in that first dispersion, in case their ages would allow it. Besides, by that means we

[b] Abu'lfarag. p. 12. [c] Ebn Amîd. p. 28. Eutych, Annal. p. 48. [d] Ebn Amîd. ibid. [e] Ebn Amîd. p. 28. Eutych. Annal. p. 48. [e] Genes. x. 32.

Schickard, on the credit of two authors, one an Arab, who places Hûd between Salah and Eber; and the other a Turk, who sets him between Arphaxad and Eber, conjectures Hûd is Canaan (40). But this is against the current of Mohammedan writers, who make him the son of Salah (41), and the same with Eber (42).

(P) The name פלג Peleg, or Phaleg, signifies division. The division of the earth and dispersion of mankind was doubtless the same transaction, though several authors, especially those who follow the Hebrew chronology, make two of them, as we shall observe hereafter.

(40) Shickard Tarik regum Persiæ. (41) Tarîkh Montakhah apud D'Herbelot, Bibl. Orient. Art. Houd. (42) Vid. Ebn Amîd, p. 14. Eutych. Annal. p. 46.

we ſhould not only poſtpone the time of that tranſaction, which ſeems to be neceſſarily connected with the birth of Peleg (Q), but introduce five generations in the line of Shem as concerned in it, which are two more than we find of the deſcendants of Ham and Japhet, and therefore we have reſerved them for a ſecond remove or plantation. Year of the Flood, 401. Year before Chriſt, 2597

THE ſcripture gives to Joktan thirteen ſons; whereas the Arabs, who derive their original from Joktan, or, as they more uſually call him, Kahtân, aſſign him one and thirty by the ſame mother, by whom all but two, leaving Arabia (R), went and ſettled in India [f]. Yâarah, the elder of the two ſtaid, ſucceeded his father in the kingdom of Yaman, or Arabia Felix, and gave his name to that country, as well as to the Arabic language, which he firſt ſpoke [g]. Joram, the younger, founded the kingdom of Hejâz [h], which contained part of Arabia Petræa, and other territories.

WE find little ſaid concerning the three ſucceeding patriarchs, Reu (S), Serug, and Nahor: however, ſome authors refer

[f] Ahmed Ebn Yuſef, apud Pocock. Spec. Hiſt. Arab. p. 40.
[g] Pocock. ibid, p. 40. 55, 151. [h] Idem. ibid. p. 40, 78.

(Q) Thoſe who follow the Hebrew computation are at a great loſs, for an expedient to make Joktan and his thirteen ſons leaders of colonies at the diſperſion, ſuppoſing it to have happened at the birth of Peleg. For Eber having been but thirty four years old when he begat the latter, there cannot reaſonably be allowed above half that ſpace for Joktan's age at that time, granting him to be the elder: ſo that we cannot well conceive him to have been the father of more than one ſon before the diſperſion. Upon which account many poſtpone that tranſaction to a ſucceeding part of Peleg's life, ſuppoſing Eber impoſed that name prophetically (40). But the great Uſher thinks himſelf obliged to refer it to his birth, though he knows not how to get over the difficulty juſt now mentioned (41); which may be ſolved well enough by the Samaritan chronology, according to which time ſufficient may be allowed for Joktan and his ſons to propagate.

(R) D' Herbelot mentions four other ſons of Kahtân, namely, Hadramaut (the ſame with Hazarmaveth) Seba, Ofir, and Khawilah, or Havilah (42).

(S) According to the different pronunciation of the ע, this patriarch's name is variouſly written, Reu, or Ragau; and prefixing an א, ſometimes Eru, and Argu.

(40) See before p. 378. (41) Chronolog. Sacra, part 1. cap. 5, p. 26. (42) D' Herbelot Bibl. Orient. Art. Saba & Hegiaz.

Year of the Flood, 401. Year before Christ, 2597

refer the founding of certain kingdoms and cities (T), the invention of several arts (U), the spreading of idolatry (W) and some other particulars of less moment (X) to

(T) The building of Babel is by some placed in the seventieth year of Reu (43), and the beginning of Nimrod's reign in his hundred and thirtieth (44). About the same time others fix the founding of the kingdom of Egypt, and the city of Memphis, by Mizraim (45); of the city of Saba, in Arabia Felix, by a certain queen (46); of the kingdom of Bohemia, and its metropolis Prague (47); and of the kingdom of the Amazons (48): but these last are idle imaginations of the Jews. With more probability, though perhaps equal foundation, others attribute the building of Rages in Media to Rëû himself (49), as that of Sarûj, the capital of Diyar Modar (50), might be to his son Serug, who is supposed to have dwelt in the place where that city now stands (51). In Nahor's time we are told, that Armûnes, a king of Canaan, built Sodom, and Gomorrah, and Zoar, to the two first of which he gave the names of his two sons, and to the last that of their mother (52).

(U) It is pretended, that the first mint for coining, and the first foundary of gold and silver ornaments, were erected in the days of Rëû (53). Others attribute this invention to Terah (54), as that of coining gold and silver is ascribed to Serug (45). Weights and measures are said to have been invented by Samirus, king of the Chaldeans, in the days of the same patriarch (56), though the use of them seems not to have been instituted till Nahor's time (57). The art of weaving silks, and of dying, is also attributed to the said king (58).

(W) Though the generality of authors, and particularly of the fathers, agree to place the origin of idolatry in the time of Serug (59), whom some suppose to be the introducer of it, erroneously making him (if he be not a different person from the patriarch)

(X) to their times.

Year of the Flood, 401. Year before Chriſt, 2597

TERAH

triarch) of the race of Japhet (60); yet others make it more early (61), and it is ſaid, that in Rëû's days mankind was fallen into various kinds of falſe worſhip; ſome adoring the heaven, others the celeſtial bodies, others animals and plants, others the images of their deceaſed friends (62). About the ſame time alſo the cuſtom of men's ſacrificing their children to devils, is pretended to have been introduced on the following occaſion: A certain rich man dying, his ſon made a golden ſtatue in repreſentation of him, and placed it on his tomb, ſetting a ſervant to watch it. Some time after the ſon was robbed of all he had, and coming to make his complaints at his father's ſepulchre, the devil ſpoke out of the image, and promiſed to reſtore him all he had loſt, if he would offer his youngeſt ſon as a ſacrifice to him, and bath himſelf in his warm blood; which he did, and thereupon the devil coming out of the image entered into the young man, and taught him magic. But at length, this practice of human ſacrifices growing frequent, God ſent a violent earthquake, the firſt of the kind, with a whirlwind, which broke all their idols in pieces, and overthrew their temples (63). The riſe of the Sabian religion is by ſome referred to the age of Nahor (64).

(X) The oriental authors mention a king called Karûn, who reigned in the days of Rëu, but ſay not where. They pretend he was a famous chymiſt, and built a city called Ukîſh (65), or Ukinîn (66), with bricks of gold. But this ſeems to be the ſame perſon whom the Mohammedans make coeval with Moſes, and the Corah of the ſcriptures. We are alſo told, that, in the time of Serug, a king of Egypt, called Afifanus, built a ſhip, and invaded the inhabitants of the ſea-coaſt; and that he was ſucceeded by Pharaoh, the ſon of Sanes, from whom the Pharaohs were denominated (67): that the giants began to increaſe in Nahor's time, of whom one was Ad a famous king of the Arabs (62), and another Hellen, who aſſiſted at the building of the tower of Babel, and was worſhipped by the Greeks (69); and that the troubles of Job happened in the twenty fifth year of the laſt mentioned patriarch (70).

Year of the Flood, 401. Year before Christ, 2597

TERAH, the son of Nahor, was the father of Abraham, the founder of the Hebrew, or Jewish, nation. The scripture informs us, that Terah, after the seventieth year of his age, begat three sons, Abram, Nahor, and Haran [k]. But of these sons, Haran only, who was the eldest, at least much older than Abram, was born in that year; and the other two probably much later [l], and, as is supposed, by a different mother [m]. Haran died in his native country, in Ur of the Chaldees (Y), before his father, leaving a son, named Lot, and two daughters, one named Milcah, and the other Iscah [n]. Nahor married Milcah his niece, and Abram Sarai his half sister [o].

TERAH

[k] Genes. xi. 26. [l] See before p. 336. [m] Vid. Heideg. Hist. patr. tom. II. exerc. 3. § 3. [n] Genes. xi. 27, 28, 29. [o] Ibid. ver. 29, and xx. 12.

(Y) Several writers taking Ur, which signifies fire, for an appellative, pretend, that Haran was burnt; some saying, that that accident happened as he endeavoured to take the images of Terah out of the fire, into which Abraham had thrown them (71). Others, as he attempted to quench the flames of an idol temple which Abraham had set on fire (72). A third party say, that Abraham being thrown by Nimrod into a burning furnace, Haran was intent upon the event, resolving to follow the religion which prevailed; and seeing his brother come out unhurt by the flames, upon Nimrod's demanding who he believed in, Haran replied, in the God of Abraham; whereupon he was cast into the furnace, and *died in the presence of his father*, as the Rabbins express (73) what our translation renders *before his father*. It is said, the fire had power over him, because his faith was not so strong as Abraham's, nor was he destined to so great things (74). Epiphanius says, that Terah's surviving Haran was a punishment for his daring to make images of clay; and that before him no father had seen his children die a natural death (75). Josephus affirms, that Haran's sepulchre was to be seen at Ur in his time (76).

Shalshel hakkab. p. 8, (74) Judæi apud Lyranum & Tostatum citante Saliano Annal. tom. I. p. 402. (75) Epiphanius de Hæres. lib. 1. p. 8. (76) Antiq. lib. 1. cap. 6.

TERAH, who is generally ſuppoſed to be the ſame whom the Aſiatics call Azer (Z), is on all hands allowed to have been an idolater; nor can this be denied, ſince he is expreſly ſaid in ſcripture to have ſerved other gods [p]. The Eaſtern authors unanimouſly agree, that he was a ſtatuary, or carver of idols; and he is repreſented as the firſt who made images of clay, pictures only having been in uſe before [q], and taught, that they were to be adored as gods [r]: however, we are told his employment was a very honourable one, and that he was a great man (A); that at length he was

Year of the Flood, 401. Year before Chriſt, 2597

[p] Joſh. xxiv. 2, 14. [q] Epiphan. Adverſ. Hæreſ. lib. 1. p. 7, 8. [r] Suidas in Lexico, voce Σερούχ.

(Z) Some of the Mohammedan authors write, that Azer was the father of Abraham, and ſon of Terah (77); and D' Herbelot ſays, that the Arabs always diſtinguiſh them in their genealogies as two different perſons; but that becauſe Abraham was the ſon of Terah according to Moſes, it is therefore ſuppoſed [by European writers], that he is the ſame with the Azer of the Arabs(78). How true this obſervation may be in relation to ſome authors, we cannot ſay, but we are ſure, it cannot be true of all; for ſeveral Arab and Turkiſh writers expreſly make Azer and Terah the ſame perſon (79). Azer, in antient times, was the name of the planet Mars, and the month of March was ſo called by the moſt antient Perſians; for the word originally ſignifying fire (as it ſtill does), it was therefore given by them and the Chaldeans to that planet (80), which partaking, as was ſuppoſed, of a fiery nature, was acknowledged by the Chaldeans and Aſſyrians as a god, or planetary deity, whom they antiently worſhipped under the form of a pillar: whence Azer became a name among the nobility, who eſteemed it honourable to be denominated from their gods (81), and is found in the compoſition of ſeveral Babyloniſh names. For theſe reaſons, a learned author ſuppoſes Azer to be the heathen name of Terah, and that the other was given him on his converſion (82).

(A) The Eaſtern authors ſay, Azer was a great lord, and in high favour with Nimrod, whoſe ſon-in-law he was (83), becauſe he made his idols for him, in which art he excelled all others. This

Year of the Flood, 401. Year before Christ, 2597

was converted by the earneſt perſwaſions of Abraham (B), and prevailed upon to leave Ur. Joſephus ſays, he quitted Chaldea, being not able to endure the country after the loſs of his ſon Haran [s]. Some would have it, that he did not become an idolater till he was ſettled at Haran [t], which is abſurd [u]; and others ſay, he never was converted [x], any more than his ſon Nahor, who afterwards left Ur to join his father at Haran [y], which ſeems from him to be called the city of Nahor [z]: but there is more probability, that both

[s] Antiq. lib. 1. cap. 7. [t] Toſtat. apud Pererium in Geneſ. cap. 11. [u] Vid. Bayle Dict. Art. Abraham, Rem. C. [x] Chryſoſt. Hom. 31, & 37. [y] St. Auguſt. de Civit. Dei, lib. 16. cap. 13. [z] Compare Gen. xxiv. 10, with Gen. xxvii. 43, and xxviii. 10.

This employment was very honourable among the Chaldeans, the perſon who followed it being conſidered as the maker of gods: for it required profound ſkill in aſtrology to chooſe the proper materials, and fix the proper time for that work, every kind of wood, as well as ſtones and metals, being by the Chaldeans dedicated to its peculiar planet, of whoſe influence it was thereby believed to participate more than any other; and an idol thus formed under a happy poſition of the heavens, and of the matter appropriated to ſuch a planet, was conceived to be rightly prepared and made according to art (84). Some of the Rabbins ſay Terah was a prieſt, and the chief of them (85).

(B) Mohammedan authors relate, that Abraham often adviſed his father to forſake the worſhip of images, aſking how he could worſhip that which neither heard, nor ſaw, nor did him any good (86): that this offending Terah, he was often ready to fall from words to blows; but that at length Abraham got the better of his father's obſtinacy, refuſing to pray for him until he promiſed to become a convert (87); for while he was an enemy to God, he was an enemy alſo to Abraham (88). The Jews ſay he repented (89); and it is thought to have been owing to the merit thereof, as well as of his ſon Abraham, that the chain of the oral law deſcended from Adam to him, and thence to his ſon (90). There is ſome ground to think Terah was converted by Abraham's perſwaſions, becauſe he travelled with him from Ur to Haran, in order to go into Canaan (91).

both Nahor and Haran were converted, seeing Lot was bred in the true religion, and Abraham chose Isaac a wife out of the family of Nahor, not caring to marry him to the idolatrous daughters of Canaan [a]: wherefore a learned author supposes Nahor and Haran to have been the names given to those two brothers at the time of their conversion [b]. Year of the Flood, 401. Year before Christ, 2597

HOWEVER, Terah, towards the latter part of his life, designing to remove from Chaldea into the land of Canaan, took his son Abram, and Sarai his daughter-in-law, and his grandson Lot, and leaving Ur, came to Haran, a city in the north-west parts of Mesopotamia, where having dwelt for some time he died, being two hundred and five years old.

THUS have we collected, in the best method we could, what we have found worth notice, from writers of various times, religions, and countries, relating to the postdiluvian patriarchs. In the next section we shall proceed to give part of the fragments of a heathen author, whose history is supposed to relate to the earliest times of this period.

SECT. III.

The history of Sanchoniatho, after the flood.

HAVING in a preceding section brought down the Phœnician history of Sanchoniatho to the tenth generation, which probably perished in the flood, though he takes no notice of that great event; we shall here resume the thread of his narration: premising only, that, according to the plausible hypothesis which we have formerly mentioned (C), that writer proceeds to continue the idolatrous line Sanchoniatho's history continued.

[a] Gen. xxiv. 3. [b] Hyde de Rel. vet. Pers. p. 62.

(C) Bishop Cumberland, suspecting the Phœnician records to have been corrupted in this place, has proposed an amendment of them (92): He supposes a dislocation in the eleventh, twelfth, and thirteenth generations, either through neglect in transcribers, or rather purposely made by the Cabiri, who wrote those records, to conceal the great judgment of the flood, which swept away the race of Cain (93), and of which for that reason they have suppressed

(92) Cumberl. on Sanchon. p. 43. (93) Ibid. p. 49.

Year of the Flood, 401. Year before Chriſt, 2597.

line of Cain, by perſons taken out of the line of Noah, and ſuppreſſed all mention (94). To ſupport this opinion, he alledges, 1. That Sydyc and Miſor could not be the children of Amynus and Magus, becauſe the tenth generation in the line of Genus, or Cain, wherein thoſe two laſt perſons are placed, muſt have been drowned in the flood, together with ſuch children as might then be born of them (95), anſwering to Shem, Ham, and Japhet. 2. That Sydyc being Melchizedec, whom he takes to be Shem; and Cronus Ham, it was neceſſary to join them both together under the line of Uranus, which Sanchoniatho owns to be diſtinct from that of Genus (96). 3. That Miſor being manifeſtly Mizraïm, the ſon of Ham, or Cronus, there is a neceſſity of placing him one generation lower than he is placed in Sanchoniatho, viz. in the twelfth (97); and that without this change, the beginning of the Egyptian kingdom would be placed too near the flood (98). 4. That Japhet being ſtill wanting to make up the three ſons of Noah, and Nereus being the only perſon in Sanchoniatho's genealogies which anſwers the ſcripture account of him, he has joined him to Sydyc and Cronus in the line of Uranus (99). But the alterations will better appear, by giving the reader a table of Sanchoniatho's genealogies, from the place where the biſhop's corrections begin; referring him for our remarks on the ſcheme itſelf to the ſucceeding notes.

The two Lines as they ſtand in SANCHONIATHO.

	SETH's Line.	CAIN's Line.
9.	Eliun, or Hypſiſtus	Agrus, Agrouerus,
10.	Uranus,	Amynus, Magus,
11.	Cronus,	Myſor, Sydyc,
12.		Thoth. Cabiri, or Dioſcuri,
13.		The ſons of the Dioſcuri.

SETH's Line in SANCHONIATHO, corrected.

9.	Eliun, or Hypſiſtus,		
10.	Uranus,		
11.	Sydyc, or Shem,	Cronus, or Ham,	Nereus, or Japhet,
12.	Cabiri, or Dioſcuri,	Miſor,	Pontus,
13.	The ſons of the Dioſcuri.	Thoyth.	Poſidon, or Neptune.

and annexing them as ſons to Amynus and Magus, the laſt of that race.

FROM theſe men, ſays he, were begot Miſor (D) and Sydyc (E), i. e. Well-freed and Juſt: theſe found out the uſe of ſalt. Generation XI.

FROM

(D) This perſon Dr. Cumberland takes to be the Mizraïm of the ſcripture, and the Menes of the Egyptians, for theſe reaſons; 1. He ſuppoſes Miſor to be the ſingular of Mizraïm, the firſt king of Egypt according to the Hebrews, as Menes is according to the Egyptians (1). 2. That Eratoſthenes, in Syncellus and Scaliger's Euſebius (2), affirms Menes to be Meſtraïm, as the Greeks write the name of Mizraïm (3). 3. That Thoth was the ſon of Menes as well as of Miſor, and the ſecond king of Egypt (4). 4. That Miſor and Menes lived at the ſame time, and 5. Died the ſame violent death (5). We ſhall conſider this opinion, which we take to be abſolutely untenable, in another place; and ſhall only obſerve at preſent, that we cannot find Eratoſthenes has affirmed any ſuch thing, as that Menes is Meſtraïm; which is the meer imagination of thoſe authors who have tranſcribed him.

As to the tranſlation which Philo gives of the name Miſor, Ἔυλιυτος, or well-freed, Bochart, derives it from the Syriac ܡܫܪܐ Meſro; but biſhop Cumberland rather thinks the notion of freedom to be conſequent to his name, which he ſuppoſes to ſignify a prince from the root עָשַׂר aſar, to rule, or reſtrain, by addition of the ſervile Mim (6); [though to effect this the firſt radical muſt be thrown out] freedom from any coercive power being the conſequent of his dominion and ſuperiority (7).

(E) Sydyc the biſhop ſuppoſes to be Melchizedec, and Melchizedec Shem (8). All the arguments he brings in favour of the firſt ſuppoſition is, that Grotius (9) affirms Melchizedec to be Sydyc (10), probably on account of the ſimilitude of the names, Sydyc, or Sedec ſignifying juſt, and Melchizedec the juſt king. Nor does he bring any proof that Melchizedec is Shem: he only ſays, that he thinks the objections againſt that opinion are ſufficiently anſwered (11) by other authors. So that he produces no reaſon to ſupport theſe two opinions, on which his ſyſtem is chiefly grounded. If it be objected, that Miſor and Sydyc were the ſons of Amynus and Magus, he anſwers, that Sydyc was not the ſon of thoſe perſons, but brother to Ham, or Cronus, and ſon to Noah

(1) Ibid. p. 45, 55. (2) Chron. Græc. p. 17. (3) Cumberl. ibi ſup. p. 54, 185. (4) Ibid. p. 44, 55. (5) Ibid. p. 55. (6) Ibid. p. 98. (7) Ibid. p. 179. (8) Ibid. p. 47, 173. (9) In not. ad Heb. vii. 1. (10) Cumberl. in Sanchon. p. 174. (11) Ibid. p. 175.

Generation XII. FROM Miſor came Taautus (F), who found out the writing of the firſt letters; whom the Egyptians called Thoör, the Alexandrians Thoyth, and the Greeks Hermes: but from Sydyc came the Dioſcuri, or Cabiri (G), called alſo Corybantes, and Samothraces. Theſe firſt invented the building a complete ſhip.

Generation XIII. OF theſe others came, who found out herbs, the cure of bitings, and charms.

URANUS, whoſe parents lived in theſe mens age, as hath been already mentioned, ſucceeding his father Eliun in the kingdom, had by Ge, his ſiſter, four ſons; 1. Ilus, or Cronus; 2. Betylus; 3. Dagon, or Siton; and 4. Atlas (H); beſides

Noah (12); and that the Cabiri, who had corrupted the records by ſuppreſſing all mention of the flood (13), have taken the righteous king Sedec, or Melchizedec (14), with Miſor, and their children the Cabiri, and Thoth, and placed them in Cain's line, being willing to transfer all the honour gained by them to the family in which their falſe religion began; for which Sydyc's [or Melchizedec's] living in Canaan, might furniſh a pretence (15).

(F) Taaut, or Thoth is thought to be Athothes, the ſon of Menes, and the ſecond king of Egypt, according to Eratoſthenes, upon a preſumption that Miſor and Menes are the ſame; and becauſe he was alſo a king of Egypt, and ſon of a king [though it does not appear from Sanchoniatho, that Miſor was a king] as Athothes was (16). It is obſerved alſo, that as Sanchoniatho's line ends with Miſor and Thoth, ſo Eratoſthenes's line of Theban kings begins with Menes and Athothes (17), as does the firſt dynaſty of the Thinites in Manetho. And the difference between the names Thoth and Athoth is no objection, the biſhop producing ſeveral inſtances of proper names in the Eaſtern languages, where the initial A was frequently left out (18).

(G) Of the Dioſcuri, or Cabiri, the ſons of Sydyc, we ſhall ſpeak hereafter, when we come to the Græcian mythology. According to Dr. Cumberland's ſcheme, they were a little branch of Sydyc, or Shem's race, that lived with Ham, or near him (19).

(H); beſides much iſſue by other wives: wherefore Ge, being

(H) We ſhall conſider theſe four ſons of Uranus in their order. 1. Cronus is in all probability the ſame with the Ham of Moſes; the laſt ſeems to have been his proper name, and the other, which may be derived from קרן Keren, a horn, or power, and importing regal dignity, might have been his Phœnician title, as Belus, or בעל Baal, ſignifying a lord, was his Chaldean title (20); for the Babylonians are ſaid to have called the firſt Baal Cronus (21); Moloch and Milcom, names of the ſame ſignification, are alſo frequently uſed to deſign the ſame man (22): and Baal-Berith (23) probably ſignifies this Cronus worſhipped antiently at Berytus (24). That Cronus is the Ham of Moſes appears from the authority of Eupolemus, whoſe words are theſe: πρῶτον γενέσθαι Βῆλον, ὃν εἶναι Κρόνον· ἐκ τούτου δὲ γενέσθαι Βῆλον καὶ Χαναὰν, τούτον δὲ τον Χαναὰν γεννῆσαι τον πατέρα τῶν Φοινίκων· τούτου δὲ Χοῦμ υἱὸν γένεσθαι, ὃν ὑπὸ τῶν Ἑλλήνων λέγεσθαι Ἄσβολον, πατέρα δὲ Αἰθιόπων, ἀδελφὸν δὲ του Μεσραεὶμ πατέρα [πατρὸς] Αἰγυπτίων (25); which biſhop Cumberland renders thus: There was at firſt Belus, who is Cronus; but of him came another, 1. Belus, and 2. Canaan, who was, or begot, the father of the Phœnicians; his ſon too was 3. Chûm, whom the Greeks call Aſbolos, the father of the Ethiopians, the brother of 4. Meſtraim, the father of the Egyptians. It is eaſy, ſays that author, to adjuſt this tranſlation to the four ſons of Ham (26); for two of their names are plainly the ſame, Canaan and Miſraim; the third Chûm is but ſlightly altered from Cuſh, the ש being changed into מ only to expreſs the accuſative caſe, as Bochart has well noted; [though, by the way, this is an odd manner of accounting for that variation, the Greeks having no accuſative in m, nor indeed any word ending in m]: wherefore it only remains, that Belus, the ſucceſſor of Ham, in his dominions in Africa, be allowed to be the ſame with Phut in Moſes; and it is reaſonable to admit, that he who ſucceeded his father in that large empire, ſhould bear his title among the Babylonians, as he is here called by the Chaldean title of honour Belus, whereas Moſes calls him properly by the name given him at his birth (27). We find ſeveral footſteps of Cronus in that paſſage of the moſaical hiſtory, where Chedorlaomer and his confederates are recorded to have ſmitten the Rephaims in Aſhte-roth

(20) Vid. Ibid. p. 111, &c. (21) Eupolemus in Alex. Polyhiſt. apud Euſeb. de præp. evangelic. lib. 9. cap. 17. (22) Vid. Theophil. Antiochen. ad Autolic. lib. 3. being grieved at it, and jealous, reproached Uranus, so that they parted from each other. But Uranus, though he parted

roth Carnaim, and the Zuzims in Ham. Ashteroth will easily be admitted to be Astarte, and Carnaim being derived from Keren, the root of the name of Cronus, may relate to him. And as Ræphas is acknowledged by the learned to have been a title of Cronus, both from the Coptic name of his Star and from the Septuagint, who translate Chium (Cronus's known name) by Ræphas, written in some copies Remphas, which is the clearest account of that passage in Amos(28), so from him some of his posterity, who were most like him and other Antediluvians, of long life, great strength, and stature, were called Rephaim; especially those who dwelt in his city Ashteroth Carnaim, and seem to have been his children, and their cities to have taken their father's name (29). As to Ilus, or Il, it seems to be no other than אל El, which signifies strong, and is therefore in Hebrew one of the names of God.

2. Betylus bishop Cumberland does not find mentioned by any other writer; his name seems to be of eastern original, from the root בתל Betel, which, though it often signifies dishonourable idleness, yet sometimes denotes that quiet spirit which serves religious duties and study. And in Arabic it signifies a hero, who, by successful wars, procures to himself and subjects rest and peace (30).

3. Dagon is called, agreeably to Philo's skill in the eastern languages, Siton, because he was the inventor of sowing bread-corn; and Jupiter Arotrius, from his contriving of ploughs. He was worshipped by the Philistines in Canaan; and his name, which the bishop supposes was given him at his canonization, suggests to us the reason of the divine honours they gave him (31) [being derived from דגן Dagan, bread-corn].

4. Atlas is also reckoned one of the most celebrated sons of Uranus in the Atlantian theology; the Atlantij in Africa are derived from him. The bishop supposes the reason of his being cruelly buried alive by his brother (as Sanchoniatho tells us presently) was, to secure to him and Thoth the dominion over the western parts of Africa where the Atlantij were seated; though that design was not effected but by Hercules, or Arcles, called Assis (the pastor king of Egypt), in the reign of Antæus the son of Atlas (32). The bishop chooses rather to consider Atlas as the brother, than the son, of Japetus, as the Greeks represent him, because Sanchoniatho reports him to be the brother of Cronus, whom the Greeks also agree to be brother to Japetus.

parted from her, yet by force invading her, and lying with her when he lifted, went away again; and he alſo attempted to kill the children he had by her. Ge alſo defended, or avenged herſelf, gathering auxiliary powers unto her.

BUT when Cronus came to man's age, uſing Hermes Triſmegiſtus as his counſellor and aſſiſtant (for he was his ſecretary), he oppoſed his father Uranus, avenging his mother: but Cronus had children, Perſephone [Proſerpina] and Athena [Minerva]: the former died a virgin, but, by the counſel of Athena and of Hermes, Cronus made of iron a ſcimeter and a ſpear. Then Hermes ſpeaking to the aſſiſtants of Cronus with enchanting words, wrought in them a keen deſire to fight againſt Uranus, in behalf of Ge. And thus Cronus warring againſt Uranus, drove him out of his kingdom, and ſucceeded in the imperial power, or office.

IN the fight was taken a well-beloved concubine of Uranus, big with child. Cronus gave her in marriage to Dagon, and ſhe brought forth, at his houſe, what ſhe had in her womb by Uranus, and called him Demaroon.

AFTER theſe things Cronus builds a wall round about his houſe, and founds Byblus, the firſt city (I) in Phœnicia. Afterwards Cronus ſuſpecting his own brother Atlas, with the advice of Hermes, throwing him into a deep hole of the earth, there buried him.

AT that time the deſcendants of the Dioſcuri, having built ſome tumultuary, and other ſtronger, ſhips, went to ſea, and being caſt on ſhore near mount Caſſius, there conſecrated a temple (K).

THE

(I) It is urged as an objection to the veracity of this fragment, that Byblus is here ſaid to be the firſt city in Phœnicia, after mention has been made of Tyre in the fifth generation (33); but no more can be made of what is ſaid there, than that it was a place inhabited, perhaps by people living in tents, or ſcattered huts; for building with ſun-dried bricks was not found out till three generations after. Beſides, if it had been called a city, the expreſſion would have admitted of an explanation by prolepſis. Byblus ſeems to have been the imperial ſeat of Cronus; as it was of Mizraïm for ſome time, according to the biſhop (34).

(K) Dr. Cumberland obſerves, that this is the firſt navigation we have any account of in hiſtory after the flood (35); and perhaps

(33) See before, p. 258. (34) Cumberl. Orig. Gent. Antiquiſs. p. 174. (35) Ibid. p. 368.

The auxiliaries of Ilus, or Cronus, were called Eloim (L), which is as much as to say Cronij, for so were they named who were under Cronus. But Cronus having a son called Sadid (M), dispatched him with his own sword, having a suspicion of him, and deprived his son of life with his own hand. So also he cut off the head of his own daughter, so that all the gods were amazed at the mind of Cronus.

In process of time, Uranus, being in flight, or banishment, sends his virgin daughter Astarte, with two other of her sisters, Rhea and Dione, to cut off Cronus by deceit, whom Cronus taking, made those sisters his wives. Uranus, understanding this, sent Eimarmene and Hora [Fate and Beauty] with other auxiliaries, to war against him: but Cronus, having gained the affections of these also, kept them with him. Moreover, the god Uranus devised Bætylia, contriving stones that moved, as having life (N).

Cronus

haps this is the first temple founded also; for before they used itinerant temples, carried about on carts (36). Mount Cassius lay on the coast forty miles from Pelusium in Egypt eastward, in the road to Palestine (37).

(L) Eloim is אלהם the plural of אלה Eloah, and signifies the gods, as they are called just after. The bishop renders the word in this place Ilus's men, or those that were for Cronus (38); in which sense it may be understood, considering the persons who assumed it were the auxiliaries of Il, and took their name from him on that account.

(M) شديد Shadîd in Arabic signifies a strong man, and seems to be of kin to Shaddai.

(N) Bochart conceives that by the transposition of a letter by the transciber of Sanchoniatho, writing אנכים נפשים for נשפים, anointed stones, have been transformed into animated stones. Jacob seems to have set up the example of anointing stones, when he poured oil upon the top of the pillar which had been his pillow, calling the place Beth-el (39). The Jews say, the Phœnicians worshipped that pillar of Jacob, withal consecrating, and anointing stones in imitation of it, which they called Bætylia, and Bætyli, in memory of the stone erected at Beth-el. Hesychius says, the stone was so called which Rhea gave Saturn to devour instead of Jupiter. Priscian says, the same stone is called Abadir,

or

(39) Genes. xxviii. 18, 19. and xxxi. 13.

CRONUS begat on Aſtarte ſeven daughters, called Titanides, or Artemides; and he begat on Rhea ſeven ſons, the youngeſt of which, as ſoon as he was born, was conſecrated a god (O). Alſo by Dione he had daughters, and by Aſtarte two ſons, Pothos and Eros [Deſire and Love].

DAGON, after he had found out bread-corn and the plough, was called Zeus Arotrius.

To Sydic, or the juſt, one of the Titanides bare Aſclepius (P).

Cronus

or Abaddir, and that it is the Bætylus of the god Abaddir. But that name, taken for the ſtone, ſeems to be corrupted from the Phœnician אבן דיך Aban dir, ſignifying a ſpherical ſtone, which was the figure of the Bætylus, Damaſcius, a ſuperſtitious heathen writer in Juſtinian's time, ſays he ſaw ſeveral of theſe Bætylia, or Bætyli, of which many wonders were reported, in mount Libanus, near Heliopolis of Syria (40): nay, and pretends, he ſaw one of theſe ſtones moved in the air (41), and deſcribes it to be round, about a ſpan in diameter, and whitiſh, though it often appeared of different colours, (42); which ſhews there was a popular notion in thoſe days of the Bætylia being moving ſtones. They were generally conſecrated to ſome god or other, as Saturn Jupiter, the Sun, &c. (43).

(O) Dr. Cumberland ſuppoſes this ſon of Rhea was Muth, becauſe afterwards mention is made of a conſecrated ſon of Rhea, called Muth; but the laſt ſeems to be a different ſon from him ſpoken of in this place; for Muth was not conſecrated till his death, the other as ſoon as he was born.

(P) He was ſurnamed Eſmunus from שמיני Shemini, which ſignifies the eighth. His mother was one of the daughters of Cronus. This is hard to believe, yet is not impoſſible that Sydyc, in his latter time dwelling in Canaan, might, to ſecure his quiet life, (for we read of no warlike action of Shem) marry a daughter of Ham, and by her have this ſon Aſclepius; whom alone of all the ſons of Sydyc, Sanchoniatho, chiefly regarding his own country, hath taken notice of, probably, becauſe he only might have ſettled in Phœnicia, among the iſſue of Ham (44); and that he did ſettle among them appears from Apuleius's ſaying, that Apollo (whom Sanchoniatho makes Cronus's ſon) gave to Æſculapius, as he calls him, the herb Solanum (45), or night ſhade, called from his Phœnician name, Aſtir Eſmuni in Punic (46). Aſclepius is alſo called Memphites by Clemens Alexandrinus, and paſſed for a god in

Egypt

(40) Apud Photium. Bibl. p. 1047. (41) Vid. Photium. ibid. p. 1062. (42) Ibid. p. 1063. (43) Idem, ibid. Vid. etiam Bochart. Chanaan. lib. 2. cap. 2. (44) Cumberl. on Sanchon. p. 200. (45) Apuleius de virtutib. Herbar. (46) In Auctuar. ad Dioſcorid.

Cronus had also in Peræa (Q) three sons: 1. Cronus, of the same name with his father. 2. Zeus Belus, 3. Apollo (R),

Contemporary with these were Pontus and Typhon, and Nereus, the father of Pontus (S). From Pontus came

Egypt (47). And Pausanius (48) mentions a temple to Æsculapius, Apollo, and Hygeia, Egyptians. This is the eldest account the bishop meets with of skill in physic or medicines (49).

(Q) Peræa being the Greek name of the country of Bashan, beyond Jordan, the bishop supposes these three sons of Cronus to have been born at Ashteroth Carnrim (50), a noted city thereof, from the relation already mentioned, which that place hath to Cronus. The name of these sons are well known to belong to heathen deities by antient writers; but it does not appear from such writers, that they were the sons of Cronus; only Eupolemus says something to the purpose in the fragment above-mentioned; though neither Moses, nor Eupolemus, who writes the Babylonian traditions about them, do use, or own the names given them by the Canaanites; and indeed the same man was deified in one place, who was not honoured so in another; and often the same person was worshipped in several places under several names (51).

(R) The first of these sons, Cronus the second, the bishop conjectures to be Mizraïm, from a passage of Nonnus, where Apis, the living image of Osiris, whom he supposes also to be Mizraïm, is said to be likewise called Chronus; Belus, Hammon, and Zeus, all acknowledged to have been names belonging to Ham his father, and therefore he must be the second in them all, (52). By Belus, the bishop supposes Cush, the son of Ham, to be intended by our author (53); and that the third, whom he calls Apollo, was the Phut of Moses, known among the Greeks sometimes by the name of Pythius, which in radical letters agrees with Phut; and sometimes by that of Apollo Carneus, which he takes to signify the elder Apollo, the son of Cronus, from קרן Keren; from which root also his town was called Carnaim (54), or, as it is elsewhere (55) written, Carnion, (56).

(S) Bishop Cumberland has made another alteration here in Sanchoniatho's successions, placing Nereus and his descendants, whose line is uncertain, in the line of Uranus, and supposes Nereus to be Japhet: 1. Because being contemporary with Ham and his issue, and having found Shem under the name of Sydyc, it remains, that he

(47) Clem. Alex. Stromat. lib. 1. (48) In Corinthiac.

(56) Cumberl. on Sanchon. p. 116. 337.

came Sidon, who, by the exceeding ſweetneſs of her voice, or ſinging, found out firſt the hymns of odes, or praiſes; and Poſidon [or Neptune]. But to Demaröon was born Melicarthus, who is alſo called Hercules (T).

THEN again Uranus makes war againſt Pontus, and being ſeparated from him, joins with Demaröon. Demaröon invades Pontus, but Pontus puts him to flight, and Demaröon vows a ſacrifice for his eſcape.

BUT in the thirty ſecond year of his power and reign, Ilus, who is Cronus, having laid an ambuſcade for his father Uranus in a certain midland place, and having gotten him into his hands, cut off his privities (U) near fountains and rivers. There Uranus was conſecrated, and his ſpirit, or breath, was ſeparated, and the blood of his ſecrets dropped into the fountains and waters of the rivers; and the place is ſhewed unto this day.

THEN our hiſtorian, after ſome things interpoſed, goes on, ſaying: But Aſtarte called the Greateſt, and Demaröon, ſurnamed Zeus, and Adodus, the king of the gods, reigned

he takes Japhet and his iſſue to be here pointed at (57). 2. Becauſe every one knows Nereus, Pontus, and Poſidon, or Neptune, relate to the ſea, its iſles, and ſhores, which in ſcripture fall to Japhet's ſhare (58). 3. Becauſe this author never mentions Japhet and his line if it be not here (59); and it would be ſtrange, if an hiſtorian, writing of that age wherein mankind was repaired, ſhould omit him who peopled a third part of the world (60). 4. Becauſe through Nereus are not ſaid to be deſcended from Uranus, or Noah, yet we know by ſcripture, that they muſt come from him; and there is no other line known, in which they might come from Noah, but Japhet's. 5. Becauſe Sanchoniatho, being a Canaanite, has taken no care to clear other pedigrees, but only that of Ham and Cain (61).

(T) This is the old Phœnician Melcartus, or Hercules (62), whoſe temple at Gadira, or Gades, had no images in it, and continued to the time of Silius Italicus (63). Bochart ſuppoſes this way of worſhip, practiſed in this temple, was taken from the Jews; not conſidering that Hercules Phœnicius was long before the Jewiſh law, and that the patriarchal religion uſed no images (64).

(U) It may be preſumed, that this circumſtance gave occaſion to that notion of ſome, already mentioned (65), that Ham caſtrated Noah.

(57) Ibid. p. 257. (58) Ibid. p. 259. (59) Ibid. p. 257.

reigned over the country by Cronus's consent, or authority (W): and Astarte put on her head, as the mark of her sovereignty, a bull's head. But, travelling about the world, she found a star falling from the air, or sky, which she taking up, consecrated in the holy island Tyre. And the Phœnicians say, that Astarte is she, who is among the Greeks called Aphrodite [or Venus].

Cronus also, going about the world, gave to his own daughter Athena the kingdom of Attica: but when there was a plague and mortality, Cronus made his only son a whole burnt-offering to his father Uranus [c]. This fact our author relates more particularly in another place, saying, that

[c] Sanchoniatho apud Euseb. de præp. ev. lib. 1. cap. 10. p. 36, &c.

(W) It is conceived that Adodus, or Adad, which signifies among the Assyrians, the one, by way of eminence (66), was a title belonging either to Cush the son of Ham, or to Nimrod, who as his kingdom extended even to Assyria, might well have many subordinate kings under him, who are called gods, as Cronus's confederate princes were called Eloim. Agreeably hereto, we find that Hadad was antiently a kingly name in Edom (67) and Syria (68), sometimes written Hadâr (69). Adar, or Adir is the magnificent or mighty potentate, and therefore may also be a title. Adodus reigning over many gods or kings, can only be understood of the large dominion allowed him by Ham (70); and we may see what sort of gods they were, when the king of them seems to have been but a delegate of Cronus, and could not reign without his consent.

This Adodus may possibly be the Adad Josephus mentions, whom, together with Azaël, the Syrians worshipped as gods, boasting much of their antiquity; whereas that author observes, they were no other than Hadad and Hazael, kings of Syria (71), who reigned at Damascus, in the time of Joram king of Israel (72); the first of whom had thirty two kings serving under him in his army (73), from whence he might have acquired the title of king of the gods, kings antiently having been called gods.

(73) 1 Kings xx. 1. 24.

that it was eſtabliſhed as a cuſtom among the antients, that, in all extraordinary calamities of the public, the rulers of a city or nation ſhould give up their moſt favourite child to be ſlain, as an expiation to appeaſe the avenging dæmons; and the victims, in theſe caſes, were butchered with much myſterious ceremony. Cronus therefore, called by the Phænicians Iſrael, who reigned there, and was after his death conſecrated into the planet Cronus [or Saturn], having an only ſon by a certain nymph of the country named Anobret, and whom therefore he called Jeoud, which in the Phœnician tongue, at this day, ſignifies only begotten; and the country being involved in a dangerous war, he adorned this only ſon with royal attire, and ſacrificed him on an altar, which he had prepared for that purpoſe [d] (X). Cronus was alſo circumciſed in his privities, and

[d] Idem, apud eundem, l. 1. c. 10. p. 40. & l. 4. c. 16. p. 156.

(X) This is thought by ſome men of learning not to be a true account of any ſacrifice really performed, but only a miſrepreſentation of Abraham's intended ſacrifice of his ſon Iſaac, with ſome additions and miſtakes, which the heathen writers frequently made in all their relations (74). The reaſons alledged for this opinion are; 1. Cronus ſacrificed his only ſon; ſo was Abraham reported to have done. 2. That ſon was called Jeoud; and יחיד Yehid, or only ſon, is the epithet given to Iſaac by Moſes (75). 3. The mother of this only ſon is the ſame with Sarah; Anobret, or חן עברת Ann-oberet, ſignifying conceiving by grace, as Sarah did. 4. Cronus and his followers were circumciſed; ſo was Abraham and his houſhold. 5. Cronus was called Iſrael, which name the Canaanites gave to Abraham, from the nation of which he was the father.

To theſe reaſons it is anſwered: 1. That the ſacrificers in Moſes and Sanchoniatho are two different perſons; Cronus being plainly Ham, and here called Iſrael by a miſtake of tranſcribers, who took Il, the name of Cronus, to be an abreviation for Iſrael (76), as the letters אל frequently are. 2. The occaſion of the offerings, and of the circumciſions of Cronus and Abraham were alſo different; Cronus ſacrificed his ſon to remove a war and plague on the country, according to a ſettled cuſtom, and circumciſed himſelf for the ſame purpoſe, to appeaſe an angry deity; but what

(74) Vid. Bochart Chanaan, l. 2. c. 2. Shuckford's Connect. vol. II. p. 30, &c. and Dodwell's Dif. on Sanchon. p. 49.
(75) Gen. xxii. 2.
(76) Vid. Grot. de veritat. rel. Chriſt. l. 1. § 16. not. 50.

and forced his auxiliaries to do the ſame. And not long after he conſecrated, after his death another ſon, which he had by Rhea, called Muth; ſo the Phœnicians call death, or Pluto.

After theſe things Cronus gives the city Byblus to the goddeſs Baaltis, which is Dione; and Berytus he gave to Poſidon, and to the Cabiri, and huſbandmen, and to fiſhermen, who conſecrated the remains (Y) of Pontus in, or unto, Berytus.

But

what Abraham did was by a ſpecial command from God, as an inſtance of his faith and obedience. 3. The perſons to be ſacrificed were different; Cronus's ſon was his only ſon by Anobret a Canaanitiſh concubine; but Abraham's ſon was the only child of his wife Sarah, who was of Chaldea; and the name of Anobret, even according to the above-mentioned derivation, rather ſignifies a paſſing fair one. 4. The deities to whom the two ſacrifices were offered were not the ſame; Abraham certainly offered to none but the true God, Cronus to his father, and the avenging demons (77).

Bochart (78), beſides this notion, that Cronus (whom he elſewhere makes to be Noah) was Abraham, imagines alſo, that the Canaanites, miſunderſtanding that paſſage of Moſes, where Abraham is called a great prince, or as the Hebrew is, אלהים נשיא a prince of God, made a deity of him, dedicating the ſeventh day of the week, and ſacrificing their children to him; which is a meer fancy, and without the leaſt ground. A late writer (79) has endeavoured to prove Cronus, at leaſt the ſecond of that name (which laſt he ſuppoſes to be the perſon that ſacrificed his only ſon, though Sanchoniatho expreſly ſays, it was the ſon of Uranus), was not more antient than Abraham, from the order of Sanchoniatho's genealogies, placing Eliun's birth in the time of the Dioſcuri, who were a generation younger than Miſor, or Miſraim; but, even in this caſe, the elder Cronus could not be later than Reu, who was four generations older than Abraham, and therefore much earlier than that patriarch; notwithſtanding that, according to the Hebrew chronology, they might poſſibly have lived at the ſame time; for the ſame chronology is abſurd enough to make Ham himſelf contemporary with Abraham.

(Y) This is ſuppoſed to be the oldeſt conſecration of relicks to be met with in hiſtory (80).

(77) Vid. Cumb. on Sanchon. p. 134, &c. (78) Ubi ſup. (79) Shuckford ubi ſup. (80) Cumberl. on Sanchon. p. 262.

BUT before theſe things, the god Taautus, having formerly imitated or repreſented Uranus, made images of the countenances of the gods Cronus and Dagon, and formed the ſacred characters of the other elements. He contrived alſo for Cronus the enſign of his royal power, four eyes, partly before and partly behind, two of them winking as in ſleep; and upon his ſhoulders four wings, two as flying, and two as let down to reſt. The emblem was, That Cronus when he ſlept yet was watching, and waking yet ſlept: and ſo for his wings, That even reſting he flew about, and flying yet reſted. But the other gods had two wings each of them on their ſhoulders, to intimate, that they flew about with, or under, Cronus. He alſo had two wings on his head, one for the moſt governing part the mind, one for the ſenſe.

BUT Cronus coming into the ſouth country, gave all Egypt to the god Taautus, that it ſhould be his kingdom. Theſe things, ſaith he, the Cabiri, the ſeven ſons of Sydyc, and their eighth brother Aſclepius, firſt of all ſet down in memoirs, as the god Taautus commanded them.

ALL theſe things the ſon of Thabion, who was the firſt hierophant [or director of ſacred rites], that ever was among the Phœnicians, allegorized; and mixing the facts with phyſical and mundane phænomena, he delivered them down to thoſe that celebrated Orgia, and to thoſe prophets who preſided over the myſteries: who always contrived to improve their fables; and ſo delivered them down to their ſucceſſors, and to thoſe that were afterwards introduced among them. One of whom was Iſiris (Z), the inventor

(Z) Iſiris being here called the brother of Chna, or Canaan, the biſhop concludes him to be Miſor, or Mizraïm, the father of Thoth (81). He obſerves alſo, that Hellanicus, an author older than Herodotus, often heard the Egyptian prieſts pronounce the name Oſiris, Hyſiris (82): and ſays, that Sanchoniatho repreſented Iſiris, or Mizraïm, and Thoth, as Phœnicians, to do honour to his country. And the reaſon why our author calls the ſame perſon in his place Iſiris, whom he before called Miſor, was, becauſe in the preceding part of the work he wrote his name as he found it, thinking, he ought not to recede from the

(81) Cumberl. on Sanchon. p. 94, 99, &c. (82) Vid. Plutarch. de Iſide & Oſiride, p. 364.

ventor of three letters, the brother of Chna, the first Phœnician; as he was afterwards called [e].

Bishop Cumberland's amendments of Sanchoniatho considered.

THUS we have presented the reader with the small remains which are left of the Phœnician anitiquities, collected by Sanchoniatho: wherein a free and open confession is made of the beginning of idolatry, and their gods ingenuously acknowledged to have been once mortal men; a thing the Greeks were ashamed to do, and therefore turned all the stories of the gods into allegories and physical discourses [f]. A late learned prelate (A) who has endeavoured to explain this fragment, and reconcile it with scripture, has for that purpose made several corrections and alterations therein; supposing, that the records, from which Sanchoniatho extracted his history, were corrupted in those instances by the Cabiri, the first writers of them, who in particular suppressed all mention of the deluge for the reasons already given (B). The principal corruptions which

[e] Idem, apud eund. p. 40, 41:

[f] Stillingfleet Origin. Sacræ, book 1. chap. 2. § 7.

the records; and here he wrote it as it was spoken in his time, thinking he ought to comply with custom (83). To the objection, that Isiris cannot well be Mizraïm, because it is not likely, that he should make the doctrines of religion allegorical, and his son Thoth set them down in a different historical manner; it is answered, Thoth might cause the Cabiri to write this historical account or explanation before he went to reign in Egypt, for a help to his memory, or to shew the Egyptians the Phœnician form of worship was elder than their fabulous representations; and that this was not to abolish, but to explain, the religion established by his father. Lastly, All that allegorical scene of Egyptian solemnities delivered by Plutarch, cannot be so old as Mizraïm's establishment, since much of it relates to his death, and is owned by Plutarch (84) to have been added by Isis (85).

(A) Bishop Cumberland, whose notes on this author we have hitherto given, intermixing very little of our own, having reserved our observations for this place.

(B) But after all, it seems not necessary to suppose, the Cabiri purposely omitted to mention the flood, in order to suppress the memory of that judgment on the idolatrous race of Cain; because they might have retorted the reproach on their adversaries,

(83) Cumberl. on Sanchon. p. 101, 102. (84) Ubi supra.
(85) Cumberl. on Sanchon. p. 103, &c.

which the biſhop obſerves and would amend, are, 1. That Sanchoniatho and thoſe he tranſcribes have removed ſeveral perſons out of the line of Uranus, and placed them under that of Cain, in order to do honour to it; particularly Miſor and Sydyc, who are placed in the eleventh generation, as ſons of Amynus and Magus, the biſhop takes to be Mizraïm and Shem, both of the line of Uranus; and he accordingly places Sydyc in the ſame generation with Cronus, ſuppoſed to be Ham, and Miſor a generation lower, as the ſon of Cronus. 2. That they have introduced Nereus and his iſſue, as belonging neither to the line of Noah, nor to that of Cain, and as contemporaries with Cronus's children: but the biſhop finding Nereus to anſwer the deſcription of Japhet, better than any of the ſons of Uranus mentioned by Sanchoniatho, he raiſes him two, or three, generations higher, and makes him the ſon of Uranus; in which two alterations this author's ſcheme principally conſiſts. But however plauſible his hypotheſis may be, on a nearer examination it ſeems liable to ſeveral objections.

FOR as to the reaſon given for the Cabiri's making theſe diſlocations, viz. to do honour to the line of Cain, it may be aſked, why they, who were of Uranus's line (for they could be deſcended from no body elſe, ſuppoſing him to be Noah), ſhould deſire to do honour to that of another, by renouncing their anceſtors? why in doing this did they ſeparate Miſor from his father, and deny Cronus the honour which they did his ſon? or rather were they afraid Cronus would diſgrace the line of Cain, and would not have it thought Miſor and Thoth were deſcended from him, whom yet they acknowledge to be the founder of the Phœnician and Egyptian nations? how happened it, when they ſeparated Nereus, or Japhet, from Cronus, that they did not make him the ſame honourable amends as they did

ſaries, and pretended their religion to have been that falſe one for which the world was puniſhed; and this might have been the eaſier, conſidering, the tradition concerning that religion muſt have been much more uncertain than that of the deluge, to which a conſiderable part of mankind then living was able to bear teſtimony. It is more probable, that the writers of thoſe records were entirely ignorant of the deluge; and conſequently that they are not genuine, or of that antiquity which is pretended.

his brother Sydyc (C), but dropt him by the way two, or three, generations lower? was he a reprebate not fit to keep company even with Cronus? to be ſerious, it is not to be imagined, that Thoth, who directed the Cabiri to write theſe records [g], could think it a greater honour to be deſcended from a perſon in another line, who makes no figure in the hiſtory, than from Cronus, ſo renowned in the antient world: nor could he, as the caſe ſtood, have any proſpect of concealing his true pedigree, if he were ſo minded, or the Cabiri be ſuppoſed to have ſo little regard to themſelves, or their father Sydyc, if he were Shem, and in all probability ſtill living, as to place themſelves in the hateful line of Cain. The diſlocation of Miſor is oppoſed by a circumſtance which ſeems to require that he ſhould belong to the generation where he is placed in the hiſtory; for its being ſaid that Cronus, when he came to man's age, uſed the council of Hermes, or Thoth, who was his ſecretary, ſeems to imply, that Thoth was a man of more years and greater experience than Cronus himſelf, and conſequently could not be his grandſon. It is alſo unlikely, that Sydyc, if he were Shem, ſhould marry a daughter of Cronus, or Ham; which the biſhop ſuppoſes he did to ſecure his quiet in Canaan, upon the preſumption, that Shem was Melchizedec [h], which notion we have already ſhewn to be groundleſs [i], and ſhall conſider farther hereafter.

Nor can we approve of another ſuppoſition of the biſhop's, viz. that Iſiris is the ſame with Miſor, becauſe ſaid to be the brother of Chna, or Canaan; for they are certainly deſigned to be two perſons, differing as well in age as other circumſtances. Thoth was king of Egypt when the Cabiri wrote theſe records at his command; which ſhews that his father Miſor, whom the biſhop ſuppoſes to have been Menes, the firſt king of Egypt, who reigned but ſixty two years, was dead; as the biſhop himſelf confeſſes [k]:

[g] Cumberl, on Sanchon. p. 104. [h] Ibid. p. 200.
[i] See before, p. 368.

(C) The firſt writers of theſe memoirs ſeems to have nothing more in view, by the particulars relating to Sydyc and Nereus, and their deſcendants, than to account for the original of the Cabiri, and of navigation, and to do honour to Berytus, a Phœnician city, by making it the prime ſeat of their religion and trade.

ſes [k]: the ſon of Thabion, who turned the hiſtory into allegory, and mixed it with phyſical matters, came after the Cabiri, and delivered it in the new form he had given it to thoſe who preſided over the ſacred myſteries, from whom it paſſed to their ſucceſſors, and to thoſe that were afterwards introduced among them, of whom Iſiris was one. So that Iſiris ſeems not only to have been ſome generations later than the Cabiri and Thoth, who reigned but ſixty two years; but alſo to have been no more than one of the Phœnician prieſts, and not a king of Egypt. Nor is this in the leaſt repugnant to the ſcripture account; it being very probable, that the nation properly called Canaanites, or Phœnicians, did not take their name immediately from Canaan the ſon of Ham, but from ſome later deſcendant of his of the ſame name, ſince we do not find the Canaanites among his children, or deſcendants, in the place ſet apart for giving an account of them [l]; nor do we hear of them, or the Perizzites, another branch deſcended from Canaan, before Abraham's arrival in the land of promiſe [m].

MANY more objections ariſe againſt the biſhop's ſcheme, but we think it enough to have conſidered the fundamentals of it, leaving the reader to make his farther remarks from the hints we have given. Upon the whole, we think the hiſtory of Sanchoniatho will in no wiſe admit of the corrections the biſhop has made; it may be confuted by ſcripture, but it can never be reconciled with it; the plan is quite different from that of Moſes, and ſeems to be grounded upon a very different tradition relating to the firſt ages; if it be not rather a hiſtory framed long after the facts ſpoken of happened, by mixing fable, or invention, with ſome vulgar notions and glimmerings of antient tranſactions, which ſtill remained in the time of the author, or editor, when the genuine and more perfect tradition of things had been loſt.

BUT, before we cloſe this ſection, we muſt not omit mentioning a word concerning the chronology of this hiſtory of Sanchoniatho, in which the biſhop ſeems to vary from himſelf. In one place he ſays, it is bounded within the three firſt centuries after the flood, as ending with the beginning of Thoth's reign in Egypt [n]: in another, that it

[k] Cumberl. on Sanchon. p. 95. [l] Gen. x. 15. [m] Gen. xii. 6. and xiii. 7. [n] Cumberl, on Sanchon. p. 95.

ends within four, or five, hundred years after the event [o]. But the repugnancy is more obvious with regard to Cronus, or Ham. The biſhop allows in ſeveral places, and thinks it but reaſonable, that Ham and the other children of Noah ſhould live to near about the ſame age, though he thinks Ham did not live altogether ſo long as Shem [p]. He ſays, it appears plain enough from Sanchoniatho, as in fact it does, that Cronus, or Ham, out-lived his father Uranus, or Noah [q]: and as Noah's death is determined in ſcripture to have happened three hundred and fifty years after the flood, he concludes the life of Ham muſt be above four hundred and fifty years [r]. And elſewhere, from the circumſtance of Chedorlaomer's invaſion of Canaan [s], concluding Ham to be then dead, he fixes his death in the fifth year before Abraham's entrance into Canaan, A. M. 2078; that is, in the year of the flood 422 [t]. Notwithſtanding all which, in another place, ſpeaking of the age of Ham, he ſuppoſes him and his deſcendants to have ſhortened their days by debauchery, and that he only lived about three hundred years after the flood; and this, ſays the biſhop, may well be granted, becauſe his father lived fifty years longer, as it is certain his brother Shem outlived him two hundred years [u]. Such contradictions and miſtakes may the greateſt men run into when they have ſet their minds on an hypotheſis; notwithſtanding which, to do this learned writer juſtice, he has, in his remarks on our author, given great light into the hiſtory of thoſe ancient times, and made many valuable obſervations.

SECT.

SECT. IV.

Of the removal of mankind, from about mount Ararat, to the plain of Shinaar; and of the building of Babel.

AS there fall two or three very remarkable events within this period, namely, the building of Babel by the posterity of Noah, the confusion of languages, and the dispersion of mankind; it is incumbent upon us to give the reader some account of those important facts, the effects of which are felt to this day, and were doubtless of great benefit to mankind. Year of the Flood, 401. Year before Christ, 2597

AFTER the death of Noah, his sons, Shem, Ham, and Japhet, thought fit to remove, with their families, from the plains near Ararat, where we suppose they till then continued, and, *travelling from the east*, *found a plain in the land of* Shinaar, *and dwelt there* [w]. The wording of this passage has occasioned some doubt, whether by Ararat could be meant Armenia, since then their journeying would have been from the north-west. Wherefore others, instead of *from the east*, render it *eastward*. But there is no need to strain the text to explain a geographical difficulty. Moses spoke according to the best of his knowledge, or perhaps with reference to the wilderness where he wrote; from which Shinaar lying eastward, he might judge Ararat lay eastward too, as lying farther off: or the difficulty may be easily solved, by supposing with Kircher [x] and others, that as mankind multiplied they spread themselves in the country south eastward of Ararat, and made small removes between the times of their descending from Ararat, and their coming to the place from whence they are mentioned to have removed towards Shinaar, which might have lain westward of that place. But after all, the mistake seems to lie on the side of the critics, and not of Moses; for even the mountain, which at present passes with us for Ararat, lies above two degrees more east than the city of Shinaar, or Senjâr, from whence the plain in all probability took the name, and if the sons of Noah entered Shinaar on the north side, they must of necessity have *journeyed from the east*, or, which is the same thing, The first migration of the sons of Noah to Shinaar.

[w] Genes. ix. 2.

[x] Turris Babel. p. 12.

Year of the Flood, 401. Year before Christ, 2597

thing, have travelled westward, in order to arrive there; though at the same time they must have travelled southward too; for Ararat lies about north-east-by-north of Senjâr; but all the geographers (De Lisle excepted) having drawn that mountain a good way out of its place to the westward, the commentators, and historians who relied upon them, have been embarassed to reconcile the words of scripture with what they took for certain fact, viz. that Ararat lay to the westward, and not at all to the eastward of Senjâr.

The extent and situation of the land of Shinaar.

It is hard to determine what were the limits of the land of Shinaar (D) in the early times. We are informed from scripture, that the city and tower of Babel were built in a plain within that province [y], and that Nebuchadnezzar carried the vessels of the temple into the land of Shinaar into the house of his God [z], which in all probability was the temple of Belus in Babylon. Besides Babel there are three other cities mentioned in scripture to have been situate in Shinaar, viz. Erec, Accad, and Calneh [a]; but as all the four seem to have stood at no great distance from each other [b], we cannot thence judge of the extent of the country. Thus far in general may be presumed, that it took in no more to the north of Babel than to the south, and that it lay for the most part, though not entirely, between the Euphrates and Tigris; for Babylon, if it was the same with Babel, stood on the east side of the Euphrates (E), which passed along the west

[y] Genes. xi. 2, &c. x. 10. [z] Dan. i. 2. [a] Genes. x. 10. [b] See before, p. 363. in the notes.

(D) The name in Hebrew is שִׁנְעָר Shinaar, or Sennaar, in Arabic سنجار Senjâr. Bochart says, it is derived from נָעַר naar, which signifies to scatter, and dissipate (86); and if so, it could not have been imposed by the Noachidæ on the plain where they first fixed, as Josephus affirms (87), without supposing them to have foreseen the dispersion; to which that etymology, if it be right, plainly alludes.

(E) Among other circumstances it may be observed, that the modern travellers represent the Euphrates a mile and half broad in those parts; whereas Strabo says the breadth of the branch of that river which passed through Babylon was but a furlong (88), or the eighth part of a mile; though the bridge according to

(86) Phaleg. lib. 1. cap. 5. (87) Antiq. lib. 1. cap. 4. (88) Lib. 16.

west side of it, before Nebuchadnezzar built the new city on this side that river, which thenceforth ran though the middle of the whole. Year of the World, 401. Year before Christ, 2597

WE meet with footsteps of the name of Shinaar in those parts, both in ancient and modern authors; Sennaar of Babylon is mentioned by Hestiæus the Milesian [c], and the city of Singara in Mesopotamia by several [d]. Some speak of a territory of that name in the same quarters [e]; Ptolemy places both the city and mountain of Singara there [f]: all which seem to be the same city, mountain (F), and territory, which still bear the name of Senjâr in the east [g]. The part of Mesopotamia chosen out by the astronomers in the time of the Khalîfah al Mamûn, for measuring the content of a degree of a great circle, was the desart of Senjâr [h]; which the nature of the experiment shews to have been large, as well as a level country: and this we take to have been at least a part of the antient plain of Shinaar.

THE city of Senjâr stands, or stood, in the northern borders (as we conjecture) of its territory, in the desart, at the foot of a certain mountain (perhaps that of the same name), twenty one miles from Balad, and twenty seven from Mûsol

[c] Apud Joseph. Antiq. l. 1. c. 5. & Euseb. de pr. ev. l. 9. c. 15. [d] Plinius, Hist. Nat. Ammian. Marcellinus, Eutropius, Athanasius, in Epist. ad solitar. Vit. agent. [e] Sext. Rufus, Pomp. Lætus. [f] Tab. 4. Asiæ. [g] Geogr. Nub. p. 201. Thevenot. Voyages, part 2. c. 10. [h] Vid. Gol. Not. adAlfragan. p. 72.

to Diodorus (89), was five furlongs in length, if he does not mistake, but supposing the river as broad as the bridge was long, it will be but little more than one third of the present breadth of the Euphrates: which yet lower down, at Hella, becomes more narrow.

(F) Haitho the Armenian writes, that in Mesopotamia there are two mountains of great length, abounding with fruit trees, the more easterly of which is called Sinjâr, the other Lesson (90); probably the desart, or plain, of Senjâr lay between these two ridges of hills. We cannot conceive upon what ground Heidegger charges Haitho with a mistake, as if he made Sinjâr a mountain of Chaldea (91): on the contrary, that author seems to have mistaken Haitho, and placed what he found in the chapter concerning Mesopotamia, as belonging to the foregoing chapter which treats of Chaldea.

Year of the Flood, 401. Year before Chriſt, 2597

ſol, which two laſt are ſituate on the Tigris twenty one miles aſunder [i]. It is ſaid to lie to the ſouthward of Niſibîn, almoſt three ſtages weſt of the Tigris [k], or more particularly of Mûſol [l]; ſo that Ptolemy is in the wrong to place Singara on that river. As for the difference between the words Shinaar and Singar it is very ſmall, conſidering, in the Hebrew the ſame character ſtands for the Ain and the Gnain (G). We find Senjâr called alſo by another name, viz. al Sâmara [m], which ſeems to be the contraction of Sarra-man-rai, a city on the eaſt of the Tigris, three ſtages above Baghdâd, and for a time the ſeat of the Khalîfah [n].

The building of Babel began.

THE ſons of Noah, upon their arrival in this plain, began to think of building a city and tower. The learned are divided in their opinions about the ſenſe of the paſſage which gives an account of this enterprize: *And they ſaid go to, let us build us a city and tower, whoſe top may reach unto heaven, and let us make us a name, leſt we be ſcattered abroad upon the face of the whole earth* [n]. Many imagine, that the motive which induced them to undertake this building was, their apprehenſion of a ſecond deluge, and therefore they reſolved to raiſe a ſtructure of ſufficient height to fly to in caſe of danger [o]. Others think, there is no room for this ſuggeſtion, for in that caſe they would rather have built it on an eminence than a plain, and ſcripture expreſly aſſigns the reaſon of their ſetting about it, viz. to make them a name, or leave a memorial of themſelves, leſt they ſhould be ſcattered, or, as it is otherwiſe rendered (perhaps to ſerve the purpoſe), *before they ſhould be ſcattered abroad* [p]; which implies, they knew they ſhould be diſperſed before they begun to build, being warned by God, according to ſome, to ſeparate

(G) Thus עמרה may be written either Gomorrah, or Amorrah: עזה, either Gazah, or Azzah, as we find it in the margin of our Bibles (92).

(92) Geneſ. x. 19.

parate themſelves into colonies [q]. But a third ſort, to whom the text appears altogether unintelligible, as it now ſtands in the ſeveral tranſlations will have it, that the word שם ſhem ſhould not be rendred name, but ſign; and ſo the paſſage will run, *let us make us a ſign, leſt we be ſcattered*; that is, as Perizonius explains it, the tower was to ſerve them as beacon, or mark, by the ſight of which, or of a ſignal made from the top of it, they might avoid ſtraying in the open plains with their flocks (the firſt men being ſhepherds), and be brought back to the city which they had built for a place of abode, being unwilling to diſperſe themſelves [r]. Year of the Flood, 401. Year before Chriſt, 2597

BUT whatever the motives of the chiefs were, which ſeems to be dubiouſly expreſſed in the text, the effect of their conſultation was, that they ſet on foot the building of the city and tower of Babel. But this enterprize being diſpleaſing in the eyes of God, as tending to fruſtrate or delay the execution of his deſign, which was, that mankind ſhould always continue together in one place, he obliged them to give over their project before they had finiſhed it (H), by confounding their language, ſo that one could not underſtand what another ſaid; from whence the city took the name of Babel [s], which ſignifies confuſion: whereupon the diſperſion and planting of nations enſued. Their deſign fruſtrated.

THIS great event happened before the birth of Peleg, in the year of the flood four hundred and one, when the work, according to ſome, had been carried on twenty two years [t], and according to others forty [u]; ſo that the foundation muſt have been laid ten, or at moſt, but twenty eight years after Noah's death. The time of their enterprize.

MANY, conſidering the confuſion of tongues and the diſperſion of mankind thereupon as a divine judgment, have deemed Whether ſinful. A deſcription of Babel.

(H) Some pretend, that the tower was thrown down by tempeſtuous winds, on the builders heads; and that the city of Babylon was built out of the ruins (93).

(93) Abyden. apud Euſeb. de præp. ev. l. 9. c. 14. & Sibylla, apud Joſeph. Antiq. l. 1. c. 4.

Year of the Flood, 401. Year before Christ, 2597

deemed the building of Babel an evil attempt (I); and being concerned for the honour of Shem and his race, will not allow them to have been present at it, supposing that undertaking to be set on foot wholly by the unbelieving part of mankind [w], in which sense they understood the words *the children of men* [x]. On the contrary, others will have it, that not only Shem, but Noah and Abraham (who, according to one way of computing the Hebrew chronology, were contemporary) assisted in the raising of that structure [y], while some say Nimrod, who is generally looked on as the chief prompter of that work [z], retired into Assyria, because he would not give his assent to it [a].

That the building of Babel was a thing indifferent in itself and no way sinful, seems evident from the silence of scripture, which does not condemn that attempt as bold or presumptuous, or intimate any revelation of a previous command to the contrary, which only could make it criminal. And that the family of Shem were concerned in the work as well as the rest, appears from their sharing in the punishment, if it be a punishment, that is, the confusion of tongues; though this is denied by several [b]: for the lan-

(I) A learned divine of our nation, being of this opinion, supposes, that this tower (whose pyramidal form, he says, resembles fire, or the conic shape of its flame) was a monument erected to the honour of the sun, as the most probable cause of drying up the flood (94). But of this there is not the least footstep in scripture.

(94) Tenison of idolatry.

languages of Elam, or Perſia, and of Aſſyria, and Meſopotamia, were different, as were alſo thoſe even of the deſcendants of Eber, the Arabs, and Jews, whatever others [c] may pretend; and if ſpeaking the Hebrew language be a proof, then the Canaanites were not concerned in the building of Babel, any more than Eber and his deſcendants, for their language was the ſame with the Hebrew. Year of the Flood, 401. Year before Chriſt, 2597

BUT this ſuppoſed abſence of the Shemites, as alſo another common opinion, current amongſt thoſe who adhere to the Hebrew chronology, that ſeveral nations were planted before the diſperſion, are overthrown by the authority of ſcripture, which ſtrongly intimates, that all mankind then in being, without exception, were aſſembled in the plain of Shinaar (H); and it is probable, that after the buildings

[c] Epiphan. apud. Glycam, Annal. p. 3. Conſtant. Manaſſ. Annal. p. 14.

(H) There is not a fact in all the Moſaical hiſtory which ſeems to be more firmly eſtabliſhed than this. As ſoon as Moſes hath brought the three ſons of Noah out of the ark, he takes care to inform us, that *of them was the whole Earth overſpread* (93). And, after giving us the name of their deſcendants at the time of the diſperſion, he ſubjoins, *and by theſe were the nations divided in the earth after the flood* (94). Then, proceeding to give an account of that memorable tranſaction, he tells us, That *the whole earth was of one language, and of one ſpeech* (95). *That as they, namely, the whole earth, journeyed from the Eaſt, They found a plain in the land of Shinaar, and dwelt there; and they ſaid, let us make bricks, and build a city and a tower; and the Lord came down to ſee the city and the tower which the children of men builded, and ſaid, behold the people is one, and they have all one language* (96). Theſe ſeem to be convertible terms, and import, that as all mankind collected there in one body, had but one language, ſo all thoſe who had but one laugnage, were aſſembled in one body; which argument is the more cogent, becauſe it is allowed on all hands, that there was but one language in the world at the time of the building of Babel, which city was ſo called, *becauſe the Lord did there confound the language of all the earth, and from thence did ſcatter them abroad upon the face of the earth* (97).

From

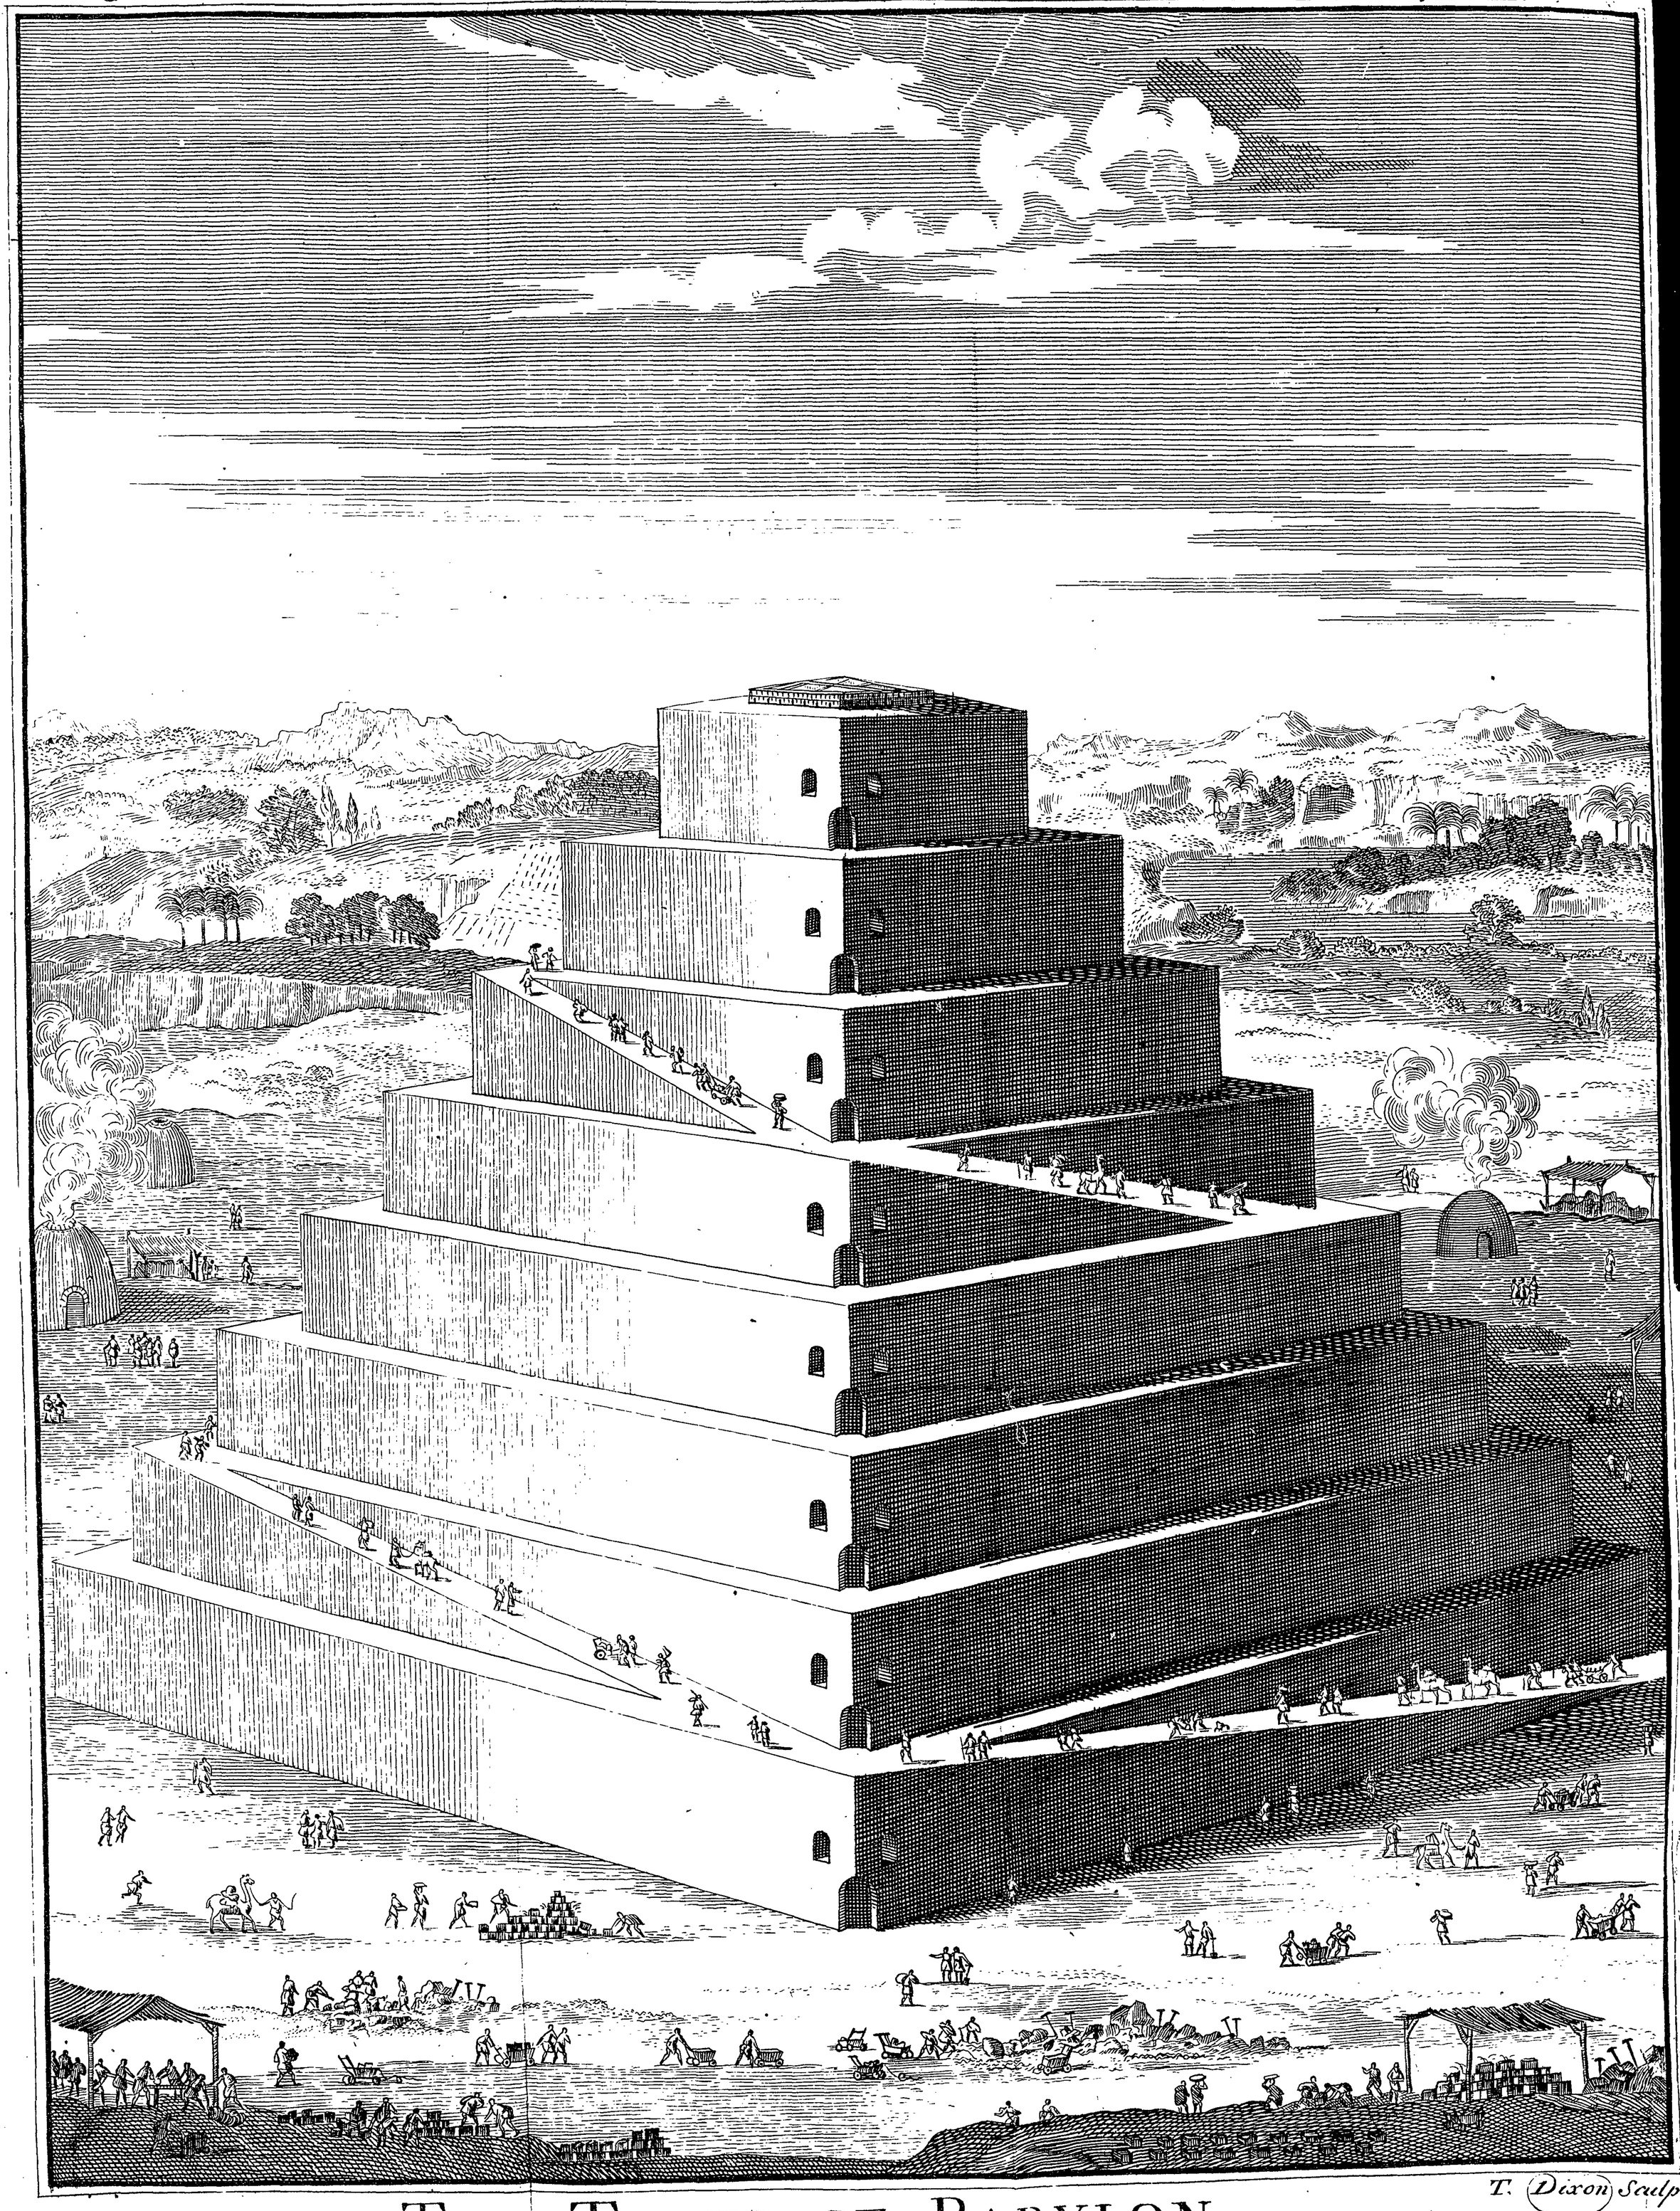
building of Babel, Shem and his descendants chose, or accepted of, the adjacent country for their settlement [d]. So that the most we can allow, with Buxtorf [e] and others, is, that they dissuaded the rest from that enterprize.



A description of Babel.

THE reader must needs have a curiosity to see some account of a city and tower, which employed all the men in the world for so many years in building them. The scripture informs us, that they made use of burnt bricks instead of stone, and slime instead of mortar [f]. According to an eastern tradition, they were three years employed in making and burning those bricks, each of which was thirteen cubits long, ten broad, and five thick [g]. The slime with which these bricks were cemented was a pitchy substance, or bitumen [h], brought from a city, in the neighbourhood of Bablyon,

[d] See § 6. [e] Dissertat. Philologico-theol. p. 70.
[f] Gen. xi. 3. [g] Ebn Amîd. p. 14. Eutych. Annal. p. 53. [h] Josephus Antiq. lib. 1. cap. 4.

From the beginning to the end of this narration, the connection is so well preserved between the antecedent and the relative, that there is no room to suppose, that any less than all mankind were gathered together in the plain of Shinaar, and assisted in the building of Babel; and Moses seems to have made those unusual repetitions to inculcate the certainty of that fact, and take away all ground for supposing any branch of Noah's posterity were in any other part of the earth at that time. Wherefore the arguments used by some, that the phrase, all the earth, is often taken, in a restrained and improper sense elsewhere in scripture, to signify only a part of the earth (98), and sometimes no more than the land of promise (99); as also that the expression, the children of men, confines the builders to the unbelieving part of mankind only, because that phrase is also used in such a sense in other places of scripture (1), are of no force here; the sense of the whole (by which that of a part is always to be governed) being directly against such a meaning, and this last expression being evidently used only to vary the diction: besides those who urge this last argument, do not seem to consider, that before the dispersion, infidelity could not well have crept in amongst mankind; who, it is but reasonable to conclude, while they kept together, were united in one faith, as well as government.

THE TOWER OF BABYLON.

Babylon, called Is [i], or Hît (I). The oriental authors say, that the city, built by the sons of Noah, was three hundred and thirteen fathoms in length, and one hundred and fifty one in breadth, that the walls of it were five thousand five hundred and thirty three fathoms high, and thirty three broad, and the tower ten thousand fathom, or twelve miles high [k]; which dimensions bear no manner of proportion to each other. Even Jerom affirms, from the testimony of eye-witnesses who examined the remains of the tower carefully, that it was four miles high [l]; but Ado raises the height to no less than five thousand miles [m]; but these are shameful extravagancies. The only account we can depend upon, as to the dimensions of this tower, supposing it to be same tower with that which stood in

Year of the Flood, 401. Year before Christ, 2597

[i] Herodotus Clio, p. 32. [k] Ebn Amîd & Eutych, ubi supra. [l] Hieron. lib. 5. Comment. in Esaiam. [m] In Chronica.

(I) It is much no modern author, that we know of, excepting Bochart (2), out of the many who have occasionally, or professedly, spoken of Babylon, have taken notice of this nice circumstance in Herodotus. That prince of historians observes, that by the city Is, eight days journey from Babylon, there runs a small river of the same name into Euphrates, whose waters carry along with them many lumps of bitumen, which are conveyed thence to the wall of Babylon. Diodorus says, the quantity of bitumen in those parts is so great, that it suffices the inhabitants not only for their buildings, but for fewel, being dryed and burned like wood (3). Hît is called Æliopolis by Isidore of Charax (4), who mentions the springs of bitumen near it, and places it on the Euphrates, about two hundred and fifteen miles west of Seleucia on the Tigris, which agrees better with Herodotus than the account of modern authors, who place Hît thirty one parasangs, or about one hunred twenty eight miles west of Baghdâd, (supposed to stand near, if not in the place of, Seleucia) and twenty one parasangs west of Ambâr, once a famous city, on the Euphrates (5), not far north from Felujiah, and eight to the north of Kadesiah, a town no less remarkable for the battle, wherein the Arabs gained the victory which decided the fate of Persia (6).

These

in the midst of the temple of Belus, afterwards built round it

These springs of bitumen are called Oyûn Hît, the fountains of Hît, and are much celebrated by the Arabs and Persians, the latter call it Cheshmeh kîr, the fountain of pitch. This liquid bitumen they call nafta, and the Turks, to distinguish it from pitch, give it the name of kara sakiz, or black mastic. A Persian geographer says, that nafta issues out of the springs of the earth, as ambergreese issues out of the sea (7). All the modern travellers, except Rauwolf, who went to Persia and the Indies by the way of the Euphrates, before the discovery of the Cape of Good Hope, mention this fountain of liquid bitumen as a strange thing. Some of them take notice of the river (8) mentioned by Herodotus, and assures us, that the people of the country have a tradition, that when the tower of Babel was building, they brought the bitumen from hence (9), which is confirmed by the Arab and Persian historians (10).

Hît, Heit, (11), Eit (12), Ait (13), or Idt (14), as it is variously written by travellers, is a great Turkish town (15), situate upon the right, or west, side of the Euphrates (16); and has a castle, to the south-west of which (17), and three miles from the town, in a valley, are many springs of this black substance (18), each of which makes a noise like a smith's forge, incessantly puffing and blowing out the matter so loud, that it may be heard a mile off; wherefore the Moors [Arabs] call it Bâb al jehennam, that is heil gate (19). It swallows up all heavy things, and many camels from time to time fall into the pits and are irrecoverably lost (20). It issues from a certain lake, sending forth a filthy smoke, and continually boiling over with the pitch, which spreads itself over a great field that is always full of it. It is free for every one to take; they used it to caulk or pitch their boats, laying

it by Nebuchadnezzar, muſt be taken from prophane authors. Herodotus tells us, it was a furlong in length, and as much in breadth [n] (K); and Strabo determines the height to have been a furlong [o], that is, the eighth part of a mile, or ſix hundred and ſixty foot, which is itſelf prodigious; for thereby it appears to have exceeded the greateſt of the Egyptian pyramids in height one hundred and ſeventy nine foot, though it fell ſhort of it at the baſis by thirty three [p]. It conſiſted of eight ſquare towers one above another, gradually decreaſing in breadth; which, with the winding of the ſtairs from the top to the bottom on the outſide, gave it the reſemblance of a pyramid, as Strabo calls it [q]. This antique form, joined to the extraordinary height of the ſtructure, eaſily induces us to believe it to be the ſame tower mentioned by Moſes; Nebuchadnezzar finiſhing the deſign, which the ſons of Noah were obliged, by the confuſion of tongues, to leave unexecuted.

WHAT

[n] Lib. 1. p. 33. [o] Lib. 16. p. 1073. [p] See Greaves Deſcr. of the Pyramids. p. 68, 69. [q] Lib. 16.

laying it on two, or three, inches thick, which keeps out the water (21); with it alſo they pitch their houſes made of palm-tree branches: if it was not that the inundations of the Euphrates carry away the pitch, which covers all the ſands from the place where it riſes to the river, there would have been mountains of it long ſince (22). The very ground and ſtones thereabouts afford bitumen, and the fields abundance of ſalt-petre (23)

(K) The words of Herodotus are; Ἐν μέσῳ δὲ τοῦ ἱροῦ πύργος στερεὸς ὁικοδόμηται, σταδίου καὶ τὸ μῆκος καὶ τὸ εὖρος, καὶ ἐπὶ τούτῳ τῷ πύργῳ ἄλλος πύργος ἐπιβέβηκε, καὶ ἕτερος μάλα ἐπὶ τούτῳ, μέχρις οὗ ὀκτὼ πύργων. *In the midſt of the temple a ſolid tower is built, of a furlong in length and as much in breadth; and upon this tower another tower is erected, and another again upon that, and ſo on to the number of eight towers.* It is true, the word μῆκος, which we here tranſlate length, may alſo ſignify height; but ſome authors having thence ſuppoſed, as the conſtruction ſeems to require, that the firſt tower was a furlong high, and concluding the other ſeven to be of equal height, have made the whole a mile high; to avoid which extravagant conſequence, it ſeems more reaſonable to underſtand Herodotus as we have rendered the paſſage, unleſs the furlong be taken for the height of all the eight towers.

Year of the Flood, 401. Year before Chriſt, 2597

WHAT this moſt wonderful city was in its flouriſhing ſtate, and the ſeveral changes of fortune which befel it till at length it was totally deſtroyed, the reader will find remarked in the courſe of this hiſtory. In the mean time, we would willingly gratify his curioſity with ſome account of the ruins of this celebrated antiquity, which are ſo defaced, that the people of the country are not certain of their ſituation; and this has occaſioned travellers to differ concerning it. Moſt of them, led by a tradition of the inhabitants, have judged a place about eight or nine miles to the weſt, or north-weſt, of Baghdâd, to be the tower of Babel (L). Rauwolf

(L) The name of this monument is variouſly written by travellers, Carcuftate Nemeru (24), Karkûf (25), Agarcuf (26); all who mention it call it the tower of Nimrod, and we are told, that the common people of the country believe it to be ſuch (27), and that it is at preſent called the remains of the tower of Babel (28). It is ſituate, according to ſome ſeven, or eight, miles from Baghdâd (29), according to others nine miles (30) towards the weſt north-weſt (31): it is conſpicuous at a vaſt diſtance (32), ſtanding by itſelf in a wide plain between the Euphrates and Tigris, with nothing great or high about it; which is the reaſon that, contrary to what is generally obſerved in other objects, it appears greater at a diſtance than when one draws near it (33). It is fallen to ruin on all ſides, and hath thereby made, as it were, a little ſhapeleſs mountain (34), which it reſembles more than a tower (35), only it is rather ſquare than round (36).

It is built of ſun-burnt bricks, each a foot ſquare and ſix inches thick (37); ſome ſay three quarters of a yard long and a quarter thick (38); others but ten inches ſquare and three thick (39). Authors differ as to the manner in which theſe bricks are ranged, and the

Rauwolf ſuppoſes he found the ruins of Babylon upon the Euphrates

Year of the Flood, 401. Year before Chriſt, 2597

the materials made uſe of for ſetting and binding them together: they obſerve firſt, that there is laid a bed conſiſting of canes, or reeds bruiſed to pieces, mixed with wheat-ſtraw, and ſpread an inch and half thick (40); ſome call them matts made of canes and palm-trees leaves (41); others ſay only ſtraw the thickneſs of three inches (42), which appears as yellow and freſh as if they were but newly laid (43), and are ſtill very durable (44). Upon this bed lie ſeven ranges of bricks; then another bed of reeds and ſix rows of bricks; then a third bed with five rows of bricks, decreaſing in that manner till you come to the top (45). Some ſay the ranges of bricks are interchangeably ſix and ſeven upon a bed (46); and others place a bed betwixt every courſe of bricks (47); but that is probably a miſtake, though between each courſe of bricks there is laid a little ſtraw (48), or rather they are ſet in bituminous mortar (49), conſiſting of pitch and earth, for which an inch may be allowed; which is at preſent the faſhion of building at Baghdâd, there being not far off a great lake of pitch (50), probably that of Hit before mentioned. There are fifty of theſe ranges of ſeven and ſix bricks, inſomuch, that the whole height may amount to one hundred and thirty eight feet (51): others ſay, 'tis reduced to one hundred and eight, or one hundred and twenty feet (52). This heap is in compaſs a quarter of a mile (53), or at moſt three hundred paces (54), not a mile, as one writes (55), the rains having waſhed it away on all ſides. It has no entrance (56), being a ſolid maſs, only at the foot of it one ſees a maghâra or lion's cave; and towards the middle there is an opening, which paſſes quite through the building about a foot and a half ſquare, beſides a great window towards the top, into which our author threw a grapple in order to aſcend it, but the bricks giving way, had like to have killed him with their fall (57).

Travellers diſagree in their ſentiments of this tower: one ſays, it has been ſo well deſcribed by Moſes, that the ſight of the remains and ruins, would make one admire the veracity with which

Euphrates, near Felujia (M), about thirty six miles to the south-

which the writings of that great prophet are penned (58); but another declares, that, according to Moses's description, there is no likelyhood, that this should be the tower of Babel; and therefore, rejecting the vulgar opinion of the country, he looks upon that of the Arabs to be more probable, who say, it was built by one of their princes for a beacon to assemble his subjects in time of war (59); and this seems to be the truth of the matter.

(M) Rauwolf, a German physician, who in the year 1574 passed down the Euphrates in his way to Baghdâd, being come to a village by him called Elugo, and by others, more properly, Felugia, which was the landing place for that city, writes thus; "The village of Elugo is situated where formerly Babylon "stood; but at present, there is not an house to be seen for the "shelter of passengers. The country is so dry and barren that "it cannot be tilled; and so bare, that I should have doubted "very much, whether this potent city (which once was the most "stately and famous in the world, seated in the pleasant and "fruitful country of Shinaar) did stand there, if I had not "known it by its situation and several delicate antiquities; which "still are standing in great desolation; first by the old bridge "over Euphrates, whereof there are some pieces and arches "still remaining a little above where he landed, built of "brick, and of wonderful firmness. It is admirable also how "they could build a bridge here, where the river is so deep, "and at least half a league broad; yet in all the way from Bir "[near Aleppo], where the river is much narrower, we saw no "bridge. Near the bridge are heaps of Babyloniſh pitch to pay "vessels withal; and just before the village is the hill whereon "the castle did stand, in a plain, whereon may still be seen some "remains of the fortification, which is quite demolished and un-"inhabited. Not far off, behind it, stood the tower of Babel, "still to be seen, half a league in diameter; but so entirely "ruined, so low, and so full of venomous beasts, that have made "holes through it, that one dare not approach within half a "mile of it, excepting two months of the year, when those "animals do not stir out (60).

"In the way to Baghdâd the road at first was very rough "and full of large and stately buildings, arches, and "turrets standing in the sand, whereof many were decayed "and lay in ruins; others pretty entire, very strong, and "adorned

(58) Idem, ibid. (59) Tavernier ubi sup. (60) See his Travels, part 2. chap. 7. p. 164.

south-west of Baghdâd. And della Valle was directed, by another tradition, to look for it about two days journey lower (N), near an ancient city called Hella, situate upon

Year of the Flood, 401. Year before Christ, 2597

" adorned with artificial work, well deserving a more exact in-
" spection. The steeple of Daniel is entire, built of black stone,
" and still inhabited. It hath some resemblance for height and
" building to that of the Holy Cross Church, or St. Maurice in
" Augsburg: from it may be viewed all the ruins of the old
" Babylonian tower, the castle hill, together with the stately
" buildings and the whole situation of the old town very exactly.
" We rested, after twelve hours march, near two ascents one be-
" hind the other, extending themselves like two parallel walls
" with openings in some places, which I take to have been the
" gates of the old town (61), and the rather, because I saw
" in some places, under the sand, wherewith the two ascents
" were almost covered, the old wall plainly appear—Our author saw several other antiquities afterwards; but night coming on, in which he groped his way to Baghdâd he lost them (62); and, in all probability, among the rest, the tower of Nimrod, described in the preceding note, which lies in this road. A late author has given some account of these ruins, but is much out as to the situation of them, as he generally is in his geography (63).

(N) Della Valle, who was at Baghdâd in the year 1616, was above five days travelling between that city and the ruins of Babel, which he went to see, taking the way, by the river side through Ruswania, a village in Thevenot's time the landing place for Baghdâd (64) instead of Felugia, which is not far off; though in his return, taking a short cut through the plain, he arrived at Baghdâd in two days, from which city this ruin lies south-westward, or more to the south. " In the middle of a vast
" and level plain, says that excellent traveller, about a quarter
" of a league from Euphrates, which in that place runs westward,
" appears a heap of ruined buildings like a huge mountain, the
" materials of which are so confounded together that one knows
" not what to make of it. Its figure is square, and rises in form of a
" tower or pyramid, with four fronts which answer to the four
" quarters of the compass; but it seems longer from north to
" south than from east to west, and is, as far as I could judge by
" my pacing it, a large quarter of a league. Its situation and form
" corresponds with that pyramid which Strabo calls the tower
" of Belus, and is in all likelihood the tower of Nimrod in Baby-
" lon, or Babel, as that place is still called. In that author's

(61) Ibid. p. 166. (62) Ibid. p. 167. (63) Mac Gregory, in his Sepulchres of the antients, p. 48. (64) See Thevenot's travels, part 2. book 1. chap 9. p. 40.

Year of the Flood, 401. Year before Chriſt, 2597

upon the ſame river. Here alſo muſt be placed the ruins deſcribed

" time, it had nothing remaining of the ſtairs and other orna-
" ments mentioned by Herodotus, the greateſt part of it having
" been ruined by Xerxes; and Alexander, who deſigned to
" have reſtored it to its former luſtre, was prevented by death.
" There appear no marks of ruins, without the compaſs of that
" huge maſs, to convince one ſo great a city as Babylon had ever
" ſtood there; all one diſcovers within fifty or ſixty paces of it,
" being only the remains here and there of ſome foundations of
" buildings, and the country round about it ſo flat and level,
" that one can hardly believe it ſhould be choſen for the ſituation
" of ſo great and noble a city as Babylon, or that there were
" ever any remarkable buildings on it: but for my part I am a-
" ſtoniſhed, there appears ſo much as there does, conſidering,
" it is at leaſt four thouſand years ſince that city was built, and
" that Diodorus Siculus tells us, it was reduced almoſt to nothing
" in his time. The height of this mountain of ruins is not in
" every part equal, but exceeds the higheſt palace in Naples;
" it is a miſhapen maſs, wherein there is no appearance of regula-
" rity; in ſome places it riſes in points, is craggy and inacceſſible,
" in others it is ſmoother and is of eaſier aſcent; there are
" alſo tracks of torrents from the top to the bottom cauſed by
" the rains, and both within ſide and upon it one ſees parts, ſome
" higher and ſome lower. It is not to be diſcovered whether ever
" there were any ſteps to aſcend it, or any doors to enter into
" it; whence one may eaſily judge, that the ſtairs ran winding
" about on the outſide, and that being the leſs ſolid parts, they
" were ſooneſt demoliſhed, ſo that not the leaſt ſign of any appears
" at preſent.

" Withinſide one finds ſome grottos, but ſo ruined that one can
" make nothing of them; and it is a doubt, with regard to ſome
" of them, whether they were built at the ſame time with that
" work, or made ſince by the peaſants for ſhelter, which laſt
" ſeems to me the moſt likely. The Mohammedans believe, that
" theſe caverns were appointed by God, as places of puniſhment
" to Harut and Marut, two angels, who, they ſuppoſe, were
" ſent from heaven to judge the crimes of men, but did not ex-
" ecute their commiſſions as they ought. It is evident from theſe
" ruins, that the tower of Nimrod was built with great and thick
" bricks, as I carefully obſerved, cauſing holes to be dug in ſeveral
" places for the purpoſe; but they do not appear to have been
" burnt, but dried in the ſun, which is extream hot in thoſe
" parts. In laying theſe bricks neither lime nor ſand was em-
" ployed, but only earth tempered and petrified; and in thoſe
" parts which made the floors, there had been mingled with that
" earth,

described by a late traveller (*) into these parts. We have

Year of the Flood, 401.
Year before Christ, 2597

" earth, which served instead of lime, bruised reeds or hard
" straw, such as large mats are made of, to strengthen the work.
" Afterwards one perceives at certain distances in divers places,
" especially where the strongest buttresses were to be, several o-
" ther bricks of the same size, but more solid and burnt in a kiln,
" and set in good lime, or bitumen; nevertheless, the greater
" number consists of those which are only dried in the sun. I
" make no doubt, but this ruin was the antient Babel and the
" tower of Nimrod; for besides the evidence of its situation, it
" is acknowledged to be such by the people of the country, being
" vulgarly called Babil by the Arabs (65).

This is the account of that curious traveller, whose painter, by his directions, had drawn the plan and several prospects of the ruins, which we do not find were ever published in any edition of his works; but Kircher, in his Turris Babel, has given two of them. However, after all, this seems to be only such another modern structure, built by the Arabs for a watch tower, as that already described.

(*) This gentleman (66) hath, by his penetration, made something of this rude mass, and discovered a great resemblance between it and the tower of Belus, as described by Herodotus, though it does not answer in dimensions. He distinguishes between the first original design upon which it was antiently begun, and the second different design upon which it was continued; it being built partly after one design, and partly after another. The original design our author describes to be a high tower, exactly square, in form of a pyramid; the length of one of whose sides at the base being two hundred and forty three Babylonish foot, each of which is equal to a London foot and two inches, it must be in compass two hundred and twenty six geometrical paces and four foot, or a little more than the fifth part of an English mile. The perpendicular height was intended to be likewise two hundred and forty three foot, equal to the root of the square, and the oblique height 271½ foot. The whole being a mass, or heap of brick and bitumen-work, incloising a solid hill or rock. The execution of this first design (so far as it was executed) is in this manner: it is divided into nine parts, which are, as it were, so many square towers, in form of parallelopipeds, or flat cubes, one raised above another pyramidically, each twenty seven foot in height, but gradually diminishing in breadth as many foot, so

(65) Vid. Viaggi di Pietro della Valle, part. 2. Lett. 17.
(66) Mac Gregory in his sepulchres of the antients, p. 35, &c.

Year of the Flood, 401. Year before Christ, 2597

have inserted in the notes abstracts of the several accounts; but as to make a gallery, or walk, quite round on the top of the tower below, and by the sides of the other above, 13½ foot broad. The last and highest tower was to have been an exact cube twenty seven foot square, and as many high.

This structure is built with bricks of earth hardened with fire, each nine Babylonish inches square, and three thick, laid in bitumen mixed with straw, or reeds, to the thickness sometimes of three quarters of an inch, and sometimes of three inches, in the following order: first there is a bed of bitumen mixed with reeds three inches thick, then a row of so many bricks as make up the square likewise three inches thick: next is another bed of bitumen mixed with straw, three quarters of an inch thick, then a row of bricks as before; and so alternately a bed of bitumen and straw, and a range of bricks seven times more, so as to make up in all from the base the height of three foot: then a new bed of bitumen mixed with reeds three inches thick being laid, the whole is repeated in the same order eight tirnes more, so as to compleat twenty seven foot, which is the height of the first tower. The next five towers are raised in the same manner; the structure so far, being one hundred and sixty two foot high, or two thirds of the whole, was built by Nimrod; but it was afterwards continued by Ninus Belus upon a second and different design, which was that of a tower, exactly round, in form of a cone, or round pyramid, of the same dimensions with the former, divided likewise into nine towers gradually diminishing in the above mentioned proportions, of which the last and highest would be a cylinder, or round tower, twenty seven foot in diameter, and as many in height. In pursuance of this second design, two round towers were built on the sixth square tower; the second of which round towers (the diameter of whose base is fifty four foot) or eighth of the whole, has a temple practised, or contrived in its solidity along along with the execution; which temple is likewise round twenty seven foot in diameter, and the same in height; with an entry, or door, made in the [west] side towards Babylon nine foot square, and thirteen and a half long, and a round opening, or, as it were, a window in the top nine foot diameter; the floor both of the temple and entry being plain, the sides perpendicular, and the roof arched; the arching being contrived in the uppermost third part of the height. This was built by Ninus Belus, who died before it was finished, when the structure was raised to the height of two hundred and sixteen foot, or just eight ninth parts of the whole: and though it wanted only one ninth part, which was the last and smallest of all, the compleating of it was never afterwards thought on more by any of his successors, so that it ended with a round

but muſt acquaint the reader, that they do not any of them ſeem to us to be the remains of the original tower, but rather ſome later ſtructures of the Arabs.

Year of the Flood, 401. Year before Chriſt, 2597

SECT.

a round flat of fifty four foot diameter, with the aforeſaid window of the temple in the middle, and ſtill continues ſo. And this tower as well as the temple, has ſerved as a model ever ſince for all nations to imitate, eſpecially the temple, which has conſtantly been followed by thoſe of all religions, who have always built their temples round with an overture at the top, except the Goths, who introduced the figure of Noah's ark in their churches. Though as to the overture, or window, it is a difficult queſtion among the architects, whether it was deſigned, or happened by the tower being left unfiniſhed, and wanting the laſt ninth part which according to the original deſign was to terminate it; and if ſo, would have ſtopped or covered that overture. It is commonly ſaid to have been deſigned ſo, and Moſes ſeems to have been of that mind, when giving an account of what followed upon the confuſion of Babel, he ſays, the further building of the city was given over, but is ſilent as to that of the tower, becauſe perhaps he reckoned it had been completed. Yet it is certain, from the knowledge of the deſign, that it never was completed, and that the overture happened by chance, as before obſerved: beſides, there are ſome temples of the ſame times to be ſeen in, and about, the ruins of Babylon, particularly that of Ninus Aſſur, done by his wife Semiramis, where there is no ſuch thing; which makes it more probable that it was not deſigned: though the greateſt part of the Babylonian temples of thoſe times, we ſee, have it, which renders the matter again ſomething doubtful.

Before Ninus Belus began the before-mentioned temple, he made a ſepulchre for his father Nimrod at the bottom of the the tower, cut out of the rock, at the bottom of the little hill which is incloſed by the tower. This burying place is a double grot, conſiſting of two ante-grots one within another, and ſix ſepulchres, or ſmall grots, in each, two on each inner ſide (67): the ſepulchres being eight foot long, ſix foot broad, and as many high; and their doors, or entries, cut upon the ſame level, four foot long, three broad, and three foot high. Within the ſepulchres, on the right hand, is a levée, or ſeat, the whole length of the ſepulchre, three foot broad, and $1\frac{1}{2}$ high, left uncut of the rock for laying the dead body on (68). The ſepulchre was made by hollowing a paſſage into the tower after it was built, as appears by the face of the opening, which is irregular, and the

SECT. V.

Of the confuſion of tongues.

Of the original of ſpeech.

BEING in this ſection to give ſome account of the confuſion of tongues, it may be expected, we ſhould firſt ſay ſomething about the origin of ſpeech: one of the moſt diſtinguiſhing differences between us and the animal creation; the great bonds which holds ſociety together, and the common conduit whereby the improvements of knowledge are conveyed from one man, and one generation to another.

IF

the bricks and earth broken. This overture was made through the brick-work and earth of the one, to ſerve as an avenue, or paſſage, leading to the entry of the other, made through the rock on the ſame ſide towards Babylon (69).

This antiquity is defaced ſomewhat on all the four ſides, eſpecially on the north and weſt, where the corners and edges of the parts are much decayed, and the body of the bricks worn away into a channel, or hollow, between the beds of bitumen, which, with the reeds and ſtraw incorporated with them, continue firm and entire; neither time, weather, nor any other accident having been able to make an impreſſion on them. The people of the country having dug caves in it to retire to, and thoſe who conduct paſſengers from Baghdâd to ſee it, break off pieces in one place to add to another, in order to make ſteps and hand-grips to render the going up and down it ſafe. So that the face of the antiquity is now very much changed from what it was, the lowermoſt ninth part [or tower] being entirely hid under ground by the earth and ruins: in ſhort, it is ſo diſfigured, that one muſt be at a great deal of pains to find out the architecture of it; and travellers, for want of being properly qualified, not knowing what to make of it, have given imperfect and confuſed accounts of it (70). As to the ſituation of this ruin, which ſeems to be the ſame with that already deſcribed by della Valle, whom he mentions (71), he is very much out in it, ſince he places it twenty ſeven miles to the ſouth-weſt of Baghdâd, and but twenty nine to the north-weſt from the caſtle of Corn, at the confluence of the Euphrates and the Tigris (72), whereas Corna is at leaſt one hundred and eighty miles diſtant from that city.

(69) Ibid. p. 28. (70) Ibid. p. 42, 43. 44. (71) Ibid. p. 35. (72) Ibid. p. 28.

IF the authority of Moſes be concluſive, it ſeems not to be denied, but that ſpeech was the immediate gift of God to the firſt man: not that we ſuppoſe God really inſpired him with any diſtinct, or primitive language; but that he made him ſenſible of the power with which he was endued, of forming articulate ſounds (O), and the uſe he might make of them as ſigns of his ideas, and then left the arbitrary impoſition of them to Adam himſelf (P), as is intimated by God's bringing the beaſts and birds to him *to ſee what he would call them: and whatever Adam called every living creature, that was the name thereof* [r]. So that excepting the firſt impulſe of the Almighty, informing Adam of his natural power, we are inclined to think, that ſpeech

Year of the Flood, 401. Year before Chriſt, 2597

[r] Geneſ. ii. 19.

(O) We cannot conceive, that inarticulate ſounds were ever made uſe of by any nation to communicate their thoughts; nor that there are any inſtances thereof to be found, notwithſtanding what ſome travellers have related concerning ſeveral remote people. We are told, the Samoyedes, inhabiting the coaſts of Siberia and the icy ſea, have nothing human about them, except their outward form; and that the uncertain ſound they utter has no more the reſemblance of ſpeech than the chattering of apes (73): that the natives of Greenland uſe a ſound like beaſts, ſo uncouth, that no Dane or Dutchman could ever yet imitate it (74); and that the ſpeech of the Hottentots comes nearer the gobbling of turkies than a human voice, though perhaps it may be intelligible among themſelves (75). But it may be queſtioned, whether theſe authors were proper judges in the caſe, as not being acquainted with the languages of thoſe nations: and the rather, becauſe upon enquiry, we are credibly informed, that the language of theſe laſt, though commonly thought to be the moſt inarticulate of all others, is not a deſpicable one; and that thoſe of the Dutch ſettlement at the Cape of Good Hope underſtand, and ſpeak it tolerably well.

(P) Mohammed in his Korân ſuppoſes Adam came by the names of things no otherwiſe than by revelation. That book pretends, that the angels at the creation of man expreſſing ſome contempt of him, God taught Adam the names of things, and then demanded of the angels how thoſe things were called; which they confeſſing to be above their knowledge, God ordered Adam to name them to them, which he did; and the angels afterwards, at God's command, paid their homage to Adam as their ſuperior (76).

(73) Ides, p. 94. (74) Ten Rhyne, p: 844. (75) Nieuhoff, p. 188. (76) Al Korân, c. 2. ver. 30, &c.

Year of the Flood, 401. Year before Christ, 2597

speech was attained by gradual invention of arbitrary sounds, to denote first the most obvious things, and after the less obvious, as they came to be taken notice of. That it is possible Adam might attain the use of speech by this method, we presume none will deny; and, if it be possible, we are sure, it must be the most reasonable and probable to all, but those who are for multiplying of miracles needlessly.

We cannot therefore approve of the opinion of those who imagine, that God himself formed the body of a language, and then infused it into Adam (Q). Besides, the much greater part of the primitive tongue, whatever that was; and the names of many things and operations must have been imposed several ages after Adam's creation, as mankind became acquainted with them, and arts and conveniences of life were invented. The birds and beasts indeed it is natural to suppose Adam might immediately name, the kinds not being many; but we do not think, he went so far as to name every species of them, much less all the reptiles, trees, or plants, though some of the most familiar to him no doubt he did. The fish we presume no body will imagine were brought to him to be named; and if they had by miracle appeared before Adam, no doubt Moses would have mentioned it, the fish of the sea being the first part of

(Q) The words which are generally translated, *man became a living soul* (77), the Chaldee paraphrasts render it, viz. *the breath breathed into him by God, became in man a speaking soul.* Most of the Jews suppose the first tongue (which they all imagine was their own) was formed and created by God himself, and so communicated to Adam (78). Some of them think this was done by generally acquainting him with the roots and fundamental parts of the tongue only (79); others in a more special and particular manner, by revealing to him the whole extent and propriety of the language, even the letters, points, and accents (80).

The notion, which some christians embraced, and particularly Eunomius, who, because God is introduced by Moses as speaking before the creation, held, that there was in words a certain eternal and immutable nature, was strenuously opposed by Gregory of Nyssa, who declared it a silly, ridiculous, and blasphemous opinion to imagine, the great God would condescend to turn grammarian, and set himself down subtilly to invent names for things (81).

(77) Genes. ii. 7. (78) Sepher Cozri. (79) R. Is. Abravanel. (80) R. Juda Hallevi Muscat. Ephodius, &c. (81) Greg. Nyssen. contra Eunom. l. 21.

of the creation, the dominion of which was given by God to man [s]

Year of the Flood, 401. Year before Chriſt, 2597

IT has, however, been thought by great numbers, that the firſt language was of divine formation; and of this ſentiment Plato himſelf ſeems to have been, who ſuppoſed, that the names of things originally had ſome natural connection or congruity with the things themſelves, and that the firſt names muſt have been juſtly impoſed, becauſe they were impoſed by the gods (R) [t]. And partly from this notion, in all probability, aroſe thoſe ſuperſtitious pretences of the holineſs of one tongue above the reſt, as being formed by God.

AS we cannot ſee any neceſſity for ſuppoſing the inſpiration of a language, ſo neither can we imagine, that Adam could attain the uſe of ſpeech ſo ſoon as is repreſented to us by Moſes, without divine aſſiſtance. We might ſuppoſe indeed, that mankind might of themſelves, by degrees, form a perfect language: for when men wanted ſigns to expreſs their ideas, and convey them to the underſtanding of others, they could find none more fit for that purpoſe, or which required leſs difficulty to invent, or labour to form, than articulate ſounds; but to frame a number of them ſufficient even for the few occaſions of the firſt men, muſt neceſſarily have taken up a conſiderable time; for which reaſon thoſe who were unacquainted with the Moſaical writings, have imagined, that men were at firſt no better than mute animals, till at length convenience taught them the uſe of ſpeech (S). Several of the antients were of

[s] Geneſ. i. 26, 28.

[t] Plato in Cratylo: Vid. eund. in Protagora.

(R) The words of this philoſpher are; Ὀνόματος ὀρθότητα εἶναι ἑκάστῳ τῶν ὄντων φύσει πεφυκυῖαν (82). And after; ὅτι τὰ πρῶτα ὀνόματα οἱ θεοὶ ἔθεσαν, καὶ διὰ ταῦτα ὀρθῶς ἔχει (83).

(S) This notion Horace has expreſſed in the following lines:

Quum prorepſerunt primis animalia terris,
Mutum ac turpe pecus,———
Donec verba, quibus voces ſenſuſque notarent,
Nominaque invenere (84).

Whe

(82) In Cratyl. p. 383. Ed. Serrani. (83) Ibid. p. 425.

of opinion, that men, in the beginning of the world, expressed their thoughts by dumb signs, or gesticulation only, or else by confused sounds of no signification; and afterwards endeavoured at a language, by imposing distinct names on things, which was not brought to any tolerable perfection but by a long course of time [u].

The first language consisted of few words.

If we consider the primitive state of Adam, and the few things he had occasion to name, it cannot be conceived, that his language at first was very extensive; for were we to expunge out of our lexicons all words introduced by the gradual invention of arts to serve the convenience of life, by accurate distinctions of the several species of creatures, and metaphysical conceptions about the operations of the mind, we should find the remainder contained in a very small compass; so that it must necessarily be several ages before a language could be completed to any degree, in comparison to our modern tongues. Scaliger, agreeably to this notion, divides speech into three sorts or degrees, as formed either for necessity, use, or delight: the first is that imperfect speech, or rather essay towards speech, above-mentioned, serving as the means of necessary intercourse between man and man. The second was somewhat more refined and polished, by being adapted and made fit for use and convenience, and by applying certain dimensions, bounds, and lineaments to the first rude sketch; whence arose

[u] Diodor. Sic. l. 1. p. 8. Vid. Lactant. de vero cultu, l. 10.

When animals crawl'd forth from parent earth,
A vile dumb herd they were ———
'Till words were found, to utter what they thought,
And names were set on things.———

And Lucretius to the same purpose:

At varios linguæ sonitus natura subegit
Mittere, & utilitas expressit nomina rerum (85).

Kind nature pow'r of framing sounds affords
To man; and then convenience taught us words. Creech.

The latter also ridicule those who suppose speech the invention of one man (86).

aroſe a certain rule of ſpeaking. The third ſort was yet more polite, there being added to the former the ornament of elegance as its dreſs [w].

Year of the Flood, 401. Year before Chriſt, 2597

WHETHER there was more than one language before the flood is a thing about which we are perfectly in the dark; though it is more reaſonable to ſuppoſe that there was but one, in which it is poſſible there might be ſome difference in dialect, but none conſiderable; for the few ages between the creation and the flood, and the long lives of the antediluvians, would effectually prevent any great alteration. However that be, it is probable only one language, and that the primitive, was preſerved by Noah, or at leaſt was ſpoken by his deſcendants till the confuſion of tongues at Babel (T).

Whether more tongues than one before the flood.

IT may be expected that we ſhould here enter into a formal enquiry concerning the primitive tongue, and endeavour to determine what particular language it was, that the firſt progenitors of mankind ſpoke. But as this is an enquiry rather of curioſity than uſe, and we cannot be certain whether that language, whatever it was, be now in being; the moſt we can do will be to ſhew the vanity of the pretenſions of thoſe languages which have laid claim to this honour, as a great number have done; each nation being fond of it, as an undeniable evidence of their own antiquity (U); though they generally argue in a circle, and urge their antiquity as a proof of the former.

Enquiry concerning the primitive tongue.

BESIDES

[w] Scaliger in Poetic. l. 1. c. 1. [x] Vid. Grot. in Geneſ. xi. 1. & Cluver. Germ. Antiq. l. 1. c. 8. p. 59, 60.

(T) Suppoſing there were more tongues than one before the flood, and that Noah and his three ſons could ſpeak them all, it is moſt reaſonable to believe, that they taught but one common tongue to their children, who propagated the ſame among their deſcendants; ſo that, the reſt expiring with thoſe firſt patriarchs, there remained but one language amongſt mankind at the building of Babel.

(U) Pſammetichus, a king of Egypt, appears to have been of this opinion; for wanting to know who were the moſt antient people in the world, after ſeveral fruitleſs experiments, he at laſt hit on the following expedients. He took two infants newly born, and gave them to a ſhepherd to be brought up, commanding him not to ſuffer any perſon to ſpeak a word in their hearing, but to nurſe them in a ſolitary cottage, by bringing them goats to ſuck, till they could take other food. Pſammetichus's intention herein

Year of the World, 401. Year before Christ, 2597.

Several languages claim this honour.

BESIDES those kindred languages, we commonly call the oriental tongues; the Armenian, the Celtic, the Coptic, the Greek, the Teutonic, and the Chineſe have aſpired to the preference in this reſpect. The Armenian, Celtic, and Coptic have little evidence to produce beſides the antiquity of their nations; though the former inſiſt, that as the ark reſted in their country, and Noah and his children muſt have continued there for ſome time, before the lower and marſhy country of Chaldea could be fit to receive them, it is therefore reaſonable to ſuppoſe they left their language there. The Greek ſome writes have fancied to be moſt antient, becauſe of its great extent and copiouſneſs [y]. The Teutonic, or the dialect of it which is ſpoken in lower Germany and Brabant, has found a ſtrenuous patron [z], who has endeavoured to derive even the Hebrew itſelf from that tongue. And the pretenſions of the Chineſe have been ſupported [a], not only from the great antiquity of that nation, their early acquaintance with arts and ſciences, and their having preſerved themſelves ſo many ages from any conſiderable

y Eutych. Annal. p. 50. z Goropius Becanus, in Origin. Antverp. a Vid. Webb's Eſſay towards the primitive language.

herein, was to find out what word the children would firſt utter when they began to articulate; imagining as others have ſince done, that they would naturally ſpeak the primitive language, if not taught otherwiſe. At two years end, as the ſhepherd one day entred the cottage, he had no ſooner opened the door, than the children ran to him, and, holding out their hands, cried Beccos. Of this the ſhepherd at firſt took no notice, but afterwards obſerving they frequently repeated this word at his coming in, he acquainted the king with it, and by his order brought the children into his preſence. Pſammetichus having himſelf heard them pronounce the ſame word, inquired whether any nation made uſe of it; and finding the Phrygians called bread by that name, he and his ſubjects allowed this to be a proof that the Phrygians were the more antient people. Herodotus remarks, that the Greeks, among other ridiculous things, reported, that theſe children were brought up by women, whoſe tongues had been cut out by the king's order for that purpoſe (87). The Scholiaſt of Ariſtophanes (88) tells the ſame ſtory of another king of Egypt, named Seſonchoſis.

(87) Herodot. Euterp. in initio. Vid. Suidam, in voce Βεκκος ἄρτος. (88) In Nubes, p. 149, 150.

rable mixture or intercourſe with other nations; but alſo from the nature and ſingularity of the tongue itſelf, which conſiſts of few words, all monoſyllables, is moſt ſimple in its conſtruction, having no variety of declenſions, conjugations, or grammatical rules; and ſo modeſt, that it is ſaid, they have no character to expreſs thoſe parts which we induſtriouſly conceal [b]: all which are conceived to be ſtrong marks of its being the firſt language of mankind: beſides the preſumption formerly mentioned, of Noah's being the founder of the Chineſe nation [c]. Year of the Flood, 401. Year before Chriſt, 2597

As to the oriental languages, though they have each of them their partiſans, yet the generality of eaſtern authors allow the preference to the Syriac, or that dialect of it which was ſpoken in Meſopotamia, Chaldea, and Aſſyria, in which countries mankind made their firſt ſettlements after the flood; and where it is preſumed the language of Noah and his ſons remained. For which reaſon the more judicious Arab writers acknowledge Yarah, the ſon of Kahtân (or Jerah, the ſon of Joktan) to be the firſt whoſe ſpeech deviated from the Syriac, to the Arabic; and little regard the pretences of ſome of their countrymen, that their language was ſpoken by Adam before the fall, and then changed into the Syriac, but reſtored again upon his repentance; that notwithſtanding in time it degenerated again into the ſame language, and would have been utterly loſt, had it not been preſerved by the elder Jorham, who eſcaped with Noah in the ark, and propagated it among his poſterity [d].

THE patrons of the Syriac tongue have, as another evidence of its right to the precedency, endeavoured to derive the names of perſons and places mentioned by Moſes from that language [e], and generally with better ſucceſs than ſome writers will allow (X): but this argument, though commonly

(X) It is ſaid in particular, that the paronomaſia, in this paſſage, he ſhall be called woman [אִישָׁה Iſhiſhäh], becauſe ſhe was taken [מֵאִישׁ

Year of the Flood, 401. Year before Chriſt, 2597.

commonly looked upon as concluſive, yet proves nothing of itſelf, as will be hereafter obſerved. However, thus much we muſt in juſtice acknowledge, that if any of theſe tongues in particular may claim to be the original or mother of the reſt, it ſeems to be the Syriac; which was probably ſpoken by all the patriarchs from Noah to Abraham, that being, after the confuſion, the tongue of the country where they were born and lived; though, it muſt be confeſſed, it will not thence follow, that it was in uſe there before the confuſion.

The pretenſions of the Hebrew tongue conſidered.

But the Jews are they who aſſert the antiquity of their tongue with the greateſt warmth. They pretend, that it was immediately framed by God; that he ſpake it himſelf, for which reaſon it is called the holy tongue; that it is the only language underſtood by the angels, and wherein we can pray and be heard with effect [f]. And ſeveral chriſtian writers [g], abating theſe ſuperſtitious fancies of the Jews, have

[f] Vid. Buxtorf. de ling. Hebr. orig. [g] Chryſoſt. Homil. xxx. in Geneſ. xi. Auguſt. de civit. Dei, l. 17. c. 11. Origen. in Numer. Hom. xi. Hieron. Comment in Sophon. Vid. etiam Selden. de Synedriis vet. Hebræor. l. II, c. 9. Bochart Phaleg. l. 1. c. 15. Heidegg. Hiſt. Patriarch. tom. I. exerc. 16. & alios pæne innumeros.

[מאיש me-iſh] out of man (89), is not preſerved in the Chaldee and Syriac tranſlations, which inſtead of Iſh and Iſhſhah, uſe the words בעל Baal and אתתא Itta, or ܓܒܪܐ Gabro and ܐܢܬܬܐ Atto: whence ſome have concluded, that the tranſlators were not able to expreſs the alluſion in the Syriac tongue (90); but this is a miſtake, for the Syrians from the maſculine ܓܒܪܐ regularly form the fæminine ܓܒܪܬܐ Gbarto; which word is to be found in their lexicons and grammars, though it be antiquated, and therefore not made uſe of by the tranſlators. It is likewiſe objected (91) with as little foundation, that Adam does not ſignify man, nor Cain poſſeſſion, in that tongue. We may obſerve hereafter, that ſome names in Moſes are more happily derived from the Syriac than the Hebrew.

(89) Geneſ. ii. 23. (90) Vid. Heideg. Hiſt. Patr. tom. I. exercit. 16. § 13. Nicholſon Diſſert. philologic. de univ. totius orbis linguis, p. 4. (91) Heidegg. ubi ſup.

have acknowledged and maintained, that the Hebrew tongue is the moſt antient in the world; the very ſame which was ſpoken by Adam and Noah, and preſerved in the family of Eber, who were not concerned in the building of Babel, nor conſequently ſhared in the puniſhment inflicted on thoſe that were. But, as we have already ſhewn this to be a groundleſs imagination, we ſhall proceed to conſider their principal argument, and indeed the only one which deſerves any conſideration, drawn from the etymologies of the names in Moſes; ſome of which that inſpired writer himſelf derives from the Hebrew, and the reſt are generally ſuppoſed to have been taken thence likewiſe. Year of the Flood, 401. Year before Chriſt, 2597

AND here it cannot be denied, that ſeveral proper names of perſons and places, before the confuſion of tongues, may be very regularly derived from the Hebrew; and that there are ſome very pertinent reaſons given, and alluſions made by the ſacred hiſtorian to evince their propriety, and the relation they have to the perſon, or place deſigned by them: and this is the moſt that can be allowed; for though all the names in general, mentioned by Moſes before the diviſion, may poſſibly be forced from ſome Hebrew root or other, yet much the greater part of them ſeem to be inſignificant, at leaſt to have no congruity with the ſubject; nor can it be expected they ſhould, unleſs we either imagine all ſuch names as ſeem to relate to a future part of a perſon's life were given by the ſpirit of prophecy; or elſe allow them to be impoſed after the events which occaſioned them happened, and ſo to be rather ſurnames than proper names; a conceſſion which manifeſtly weakens the argument drawn from them.

THUS much being premiſed, it will be eaſy to ſhew, that this demonſtrative argument, as it is called [l], will not bear examination. For, 1. It is not certain, that the names uſed by Moſes were the very original names themſelves, and not tranſlated by him from the primitive tongue into Hebrew, or at leaſt ſomewhat altered, to accommodate what he wrote to the underſtandings of the Jews. And how inconſiſtent ſoever ſome may think this method with hiſtorical veracity, it has been frequently practiſed by prophane as well as ſacred hiſtorians, as has been undeniably proved [m]: and Moſes him-

[l] Abravanel. [m] Vid. Platon. in Critica. Grot. in Geneſ. xi. 1. & de veritate rel. Chriſt. lib. 1. Huet. in Demonſtr. Evang. prop. iv. c. 13. § 4. Cleric. differt. de Lingua Heb.

Year of the Flood, 401. Year before Christ, 2597

himself has given a plain instance of his approbation of such changes, in altering his own name, which was of Egyptian original, to adapt it to a Hebrew etymology (H). 2. Supposing the names given by Moses were the true original ones, it would not be strange at all, if some of them might by accident aptly admit of a Hebrew derivation; such casual conformities sometimes happening in words which are certainly known to be of different origins. 3. Several of those names are more pertinently derived from some other of the oriental tongues than from the Hebrew(I): and not a few of the etymologies which Moses himself gives us, are deduced without any regard at least to the present rules of analogy (K). 4. A few lucky Paronomasiæ, or allusions, are no proof

(H) The original name is Moüse, or (as it is in the Coptic version) Moüses, with the Greek termination, and composed of two Coptic, or old Egyptian, words, Moü, Water, and se, to preserve. But Moses finding the Hebrew verb משה Masha, to draw out, bore some resemblance in sound to his name, and in signification to the occasion of it, writes it משה Mosheh; and introduces Pharaoh's daughter giving this reason for her imposing it, because משיתיהו Mashitihu, I drew him out of the waters (1).

(I) Thus Abel, or Hebel, which in Hebrew signifies Vanity, or a Vapour, seems a name not very apposite to Adam's second son, and therefore Moses has given no reason for this imposition. But if it be derived from the Syriac יהב איל Yhab îl, which answers to the Latin name Deus dedit, it is very proper; and accordingly in the margin of a manuscript copy of Abu'lfaragius, we find the name of Abel interpreted in Arabic by that of هبة الله Hebatallah, the Gift of God.

The name of Babel itself, which the Hebrew text tells us was so called because God did there בלל Balal, i. e. Confound the language of all the earth (2), may likewise more naturally be derived from Syriac, in which tongue Balbel is to confound, and Boblo, or Bobel, Confusion.

(K) We shall instance in the name of Noah and Abraham. The former was so called, because, said his father ינחמנו Yenahamenu, he shall comfort us, &c. (3) But if his name were derived from the root נחם Niham, to comfort, it should have been Nohem, or Menahem, not Noah, which can regularly come from no other verb than נוח nuah, to Rest; and the Septuagint have therefore, instead of he shall comfort us, rendered

(1) Exod. ii. 10. (2) Genes. xi. 9. (3) Genes. v. 29.

proof in this caſe, becauſe they may happen by accident; and in fact, ſome of thoſe mentioned by Moſes may be expreſſed in other tongues as well as the Hebrew (L).

Year of the Flood, 401. Year before Chriſt, 2597

THIS argument has been farther enforced from the ſignificancy of the names of ſeveral animals in the Hebrew tongue, which were thought to have been impoſed by Adam, becauſe of ſome peculiar qualities in the animal to which they were given, correſpondent to their reſpective roots [n]: but ſince the ſame may be as juſtly aſſerted of moſt other languages as the Hebrew, it will conclude nothing. Beſides, we are much deceived if we imagine (as has been yet generally ſuppoſed), that the verbs were really the original roots of the Hebrew tongue; on the contrary, the greateſt part of them, at leaſt, were themſelves at firſt derived from nouns, though they be now for grammatical convenience conſidered as the

[n] Vid. Bochart. Hierozoic & Heidegg. Hiſt. Patr. tom. 1. exerc. 16. § 16.

ed it διαναπάυσει he ſhall cauſe to reſt, &c. which has induced ſome learned men (4) to think the antient and true reading was יְנִיחֵנוּ Yanihenu. And Philo Judæus and St. Jerome tranſlate the name Noah, Reſt.

The name of Abraham was changed from Abram, which ſignifies High Father, by inſerting only the letter H, becauſe he was to be made אַב הָמוֹן Ab haman the father of a multitude of nations (5): according to which etymon he ſhould rather have been called Abhamon, or Abham (though we know ſome fancy the letter ה was inſerted from the word הֲרֵבּ Rab, many). But the names of theſe two perſons, eſpecially the latter, being too famous and well known in the eaſt to admit any conſiderable change, Moſes was therefore obliged to retain them, and give the beſt etymology he could from the Hebrew tongue. We might offer a more plauſible one of the name of Abraham from the Arabic, wherein ابو رهام Abu rohâm ſignifies the father of a multitude, did we not conſider, that it is one of thoſe caſual reſemblances we have already mentioned, and moſt certainly falſe.

(L) As Adam, which name is an appellative, common to all the ſpecies, was ſo called from Adamah the earth, ſo the Latins called man Homo, which the beſt etymologiſts derive from Humus the Ground (6). Yet we cannot think any body ever dreamed from hence that the Latin was the primitive tongue.

(4) Grotius ad loc. & Lud. Cappel. Critic. Sacr. l. 4. c. 8.
(5) Geneſ. xvii. 5. (6) Vid. Voſſii Etymol. ling Lat.

Year of the Flood, 401. Year before Christ, 2597

roots (M). On the whole it must be acknowledged, that no conclusive argument for the antiquity of any language can be drawn from etymologies, which ought, on all occasions, to be urged with great caution, being for the most part uncertain and precarious.

Whether all other tongues may be derived from the Hebrew.

Some learned men, however, have endeavoured to derive all languages in general from the Hebrew, which they imagine to be the parent of all others[o]. That they should succeed very well in finding a great conformity between that and the other oriental tongues is no wonder, since they are manifestly sprung from one common original; though it be difficult, if not impossible, to distinguish the mother from the daughters. That they have also given tolerable satisfaction in deducing from the same tongue several words not only of Greek and Latin, but in some other European languages, is not matter of much surprize, considering the great intercourse several nations of our continent had with the Phœnicians, whose mother tongue was the Hebrew. But when these writers venture out of their depth, and pretend to reduce the more remote languages from the same fountain, they only shew their ignorance, and make themselves ridiculous to all who have but a moderate skill in those tongues; for a proof of which we could produce a multitude of examples from a celebrated and laborious work of that kind[p]. As to the peculiar excellencies found in the Hebrew tongue by some of its patrons, and which they imagine to be an aditional proof of the justness of its pretensions, we may say something hereafter, when we come to give an account of this language.

If the Hebrew tongue therefore cannot make good its claim, we may, without taking the pains to refute what has been said in favour of the other pretenders, conclude, that the primitive language was entirely lost at Babel, at least, that no one can now tell where it was preserved, which is much the same thing.

The

[o] Vid. Heidegg. ibid. § 18. [p] Thomasini Glossar. Universal. Hebr.

(M) Many examples might be given of the verb's being manifesty derived from, and posterior to, the noun, in all the oriental tongues: so in English, Dog, Duck, &c. were certainly first imposed as names, and afterwards used as verbs, to express actions proper to those creatures.

The ſpeaking one common language (though it might be of advantage to mankind in other reſpects) yet being the great obſtacle to that diviſion of them into diſtinct nations, which God had for moſt wiſe purpoſes reſolved on [q], he thought fit to break this bond which held them ſo ſtrictly together, and confound their language, that they ſhould not underſtand one another's ſpeech; the natural conſequence of which was, that they were ſcattered abroad upon the face of all the earth [r]. This event is mentioned by prophane hiſtorians, who write, that mankind uſed one and the ſame language, till the overthrow of the tower of Babylon; at which time a multiplicity of tongues was introduced by the gods: whereupon wars enſued, and thoſe whoſe ſpeech happened to be intelligible to each other, joined company, and ſeized ſuch countries as they chanced to light upon [s]. Year of the Flood, 401. Year before Chriſt, 2597. The confuſion of tongues.

As to the degree of this Babyloniſh confuſion, and the manner wherein it was effected, there is great diverſity of ſentiments. Several learned men, prepoſſeſſed with an opinion, that all the different idioms now in the world did at firſt ariſe from one original language, to which they may be reduced *, and that the variety which we find among them is no more than muſt naturally have happened in ſo long a courſe of time, ſuppoſing the bare ſeparation of the builders of Babel [t], have been induced to believe, that there were no new languages formed at the confuſion, but that the moſt that was done was, only to ſet thoſe builders at variance, by creating a miſunderſtanding among them (N). This How effected

ſome

[q] Geneſ. xi. 6. [r] Ibid. ver. 7, 8. [s] Abydenus Euſeb. de præp. ev. l. 9. c. 14. Sibylla & Heſtiæus, apud eund. ib. c. 15 & apud Joſeph. Ant. l. 1. c. 4. * Stiernhielmius præfat. in Evang. Ulfilæ. p. 4. [t] Vid. Heidegg. ubi ſup. exerc. 21. § 21.

(N) To ſupport this opinion it is ſaid, that the Hebrew word שפה Shaphah, Lip, which we render Language and Speech (7), rather ſignifies Agreement, or unanimity, and is equivalent to פה אחד Phe ehhad, i, e. One Mouth (8), which is juſtly tranſlated, With one Accord. But this latter is an adverbial expreſſion, which the other is not: nor does it follow, that One Lip muſt import the ſame thing as One Mouth; the only paſſage that has been produced as an inſtance of its being uſed in that ſenſe.

(7) Geneſ. xi. 1, 6, 7. (8) Joſh. ix. 2. 1. Kings xxii. 13.

Year of the Flood, 401. Year before Christ, 2597

some think to have been affected without any immediate influence on their language [u], which seems contrary to the words and obvious intent of the sacred historian: others have imagined it brought about by a temporary confusion of their speech, or rather of their apprehensions, causing them while they continued together, though they spake the same language, yet to understand the words differently [w]. A third opinion is, that a variety of inflexions was introduced, and perhaps some new words, which disturbed and perverted the former manner of expression: and this might occasion different dialects, yet could not create new languages [x]. But none of these explications seem fully to answer the apparent design of Moses, which was not only to inform us how mankind were at first dispersed and broken into so many different nations, but to account for the diversity of their languages; a thing very difficult, if not impossible to do, without having recourse to some extraordinary interposition of the divine power. For though time, intercourse with foreign nations, commerce, the invention and improvement of arts and sciences, and the difference of climates (O) cause very considerable alterations in languages,

[u] Cleric. Comment. in loc. Vid. Pere Simon, Hist. Crit. du vieux Test. l. 1. c. 14. [w] Judæi apud J. C. Scaliger. exercit. in Cardan. 259. § 1. [x] Is. Casaub. Diatribe de ling. Heb. Vid, M. Casaub. de quatuor ling. p. 17, & sub initio.

sense (9), being far from proving any such thing (10). Another text has been alledged which seems to favour this interpretation much more; it is where David, praying against his enemies, begs of God to divide their tongues (11), that is, to set them at variance. But this cannot be Moses's meaning here, because he immediately explains what he means by One Lip, by adding, and of One Speech, or more literally, Of the same Words (12).

(O) It has been thought by several, that the air or clime of some countries disposes the inhabitants to a particular pronunciation, and renders them unapt for the uttering certain sounds or letters: whence, as they imagine, it come to pass, that some languages are so full of gutturals, or of consonants, while others have scarce any of the former, and comparatively few of the latter; that the Ephramimites could not pronounce the letter Shin

(9) Isai. xix. 18. (10) See Dr. Wotton's Disc. on the confusion of languages, p. 9. (11) Psal. lv. 10. (12) Gen. xi. 1.

languages, yet the utmoſt effect we can imagine them to have will not come up to the queſtion [y]. We cannot conceive a language can thereby be ſo much diſfigured, that all the general marks and characteriſtics ſhould diſappear. It is not eaſy to apprehend how all the words of a language ſhould be entirely changed for others; nor is there any one inſtance to be given of any ſuch total change: but it is next to impoſſible to conceive, that ſo great a diverſity as we find in the frame and conſtitution of languages, wherein the grand and eſſential differences between them conſiſt, rather than in the words which compoſe them, (as may be obſerved in the accounts we ſhall hereafter give of the ſeveral languages of which we have any knowledge) could ever have been occaſioned by the cauſes aſſigned above. The preſent diverſity of tongues in the world is prodigious [z]; and conſidering the time that has elapſed ſince the building of Babel, and the alterations made in ſome known languages in the courſe of one, two, and three thouſand years, (which alterations we conſtantly find greater or leſs

Year of the World, 401. Year before Chriſt, 2597

[y] See Dr Wotton's Diſc. concerning the conf. of languages, p. 57. Dr. Brett's Eſſay on the conf. of lang. p. 62, &c.
[z] Vid. Calvin. in Geneſ. xi. 1, 2.

Shin (13); and that the Chineſe find ſo much difficulty in the letter R, and the Arabs in P, &c. But we are far from being ſatisfied, that this difference is cauſed by any quality of the climate; on the contrary, it is much more reaſonable to believe, that ſuch varieties in tongues and dialects are perfectly caſual, no one language comprehending all the ſeveral ſounds, ſome making greater uſe of one ſound, and ſome of another; and that a man accuſtomed from his infancy to a peculiar pronunciation, for that reaſon and no other, muſt needs find it hard to imitate even the eaſieſt and ſeemingly moſt natural ſound that is not agreeable thereto. Thus the Hurons in America, who have no labials at all in their language, and therefore when they ſpeak have no occaſion ever to ſhut their lips (14), would not ſoon be brought to pronounce any one letter of that organ: yet experience ſhews us how readily and perfectly a child, whoſe organs are free and not ſtiffened by long habitude to a peculiar utterance, learns to form ſtrange ſounds, which a grown perſon is not perhaps able to do with the utmoſt pains and application.

(13) Judges xii. 6.

(14) Reland. Differ. de ling. Americanis, p. 219.

Year of the Flood, 401. Year before Christ, 2597

in proportion to the intercourse the nation has had with foreigners) and considering that there are many tongues, which when compared with others have not the least affinity, so that a man must be the greatest visionary in the world to imagine them the offspring of the same parent, it seems to us, that the variety of idioms now spoken can be no way possibly accounted for, without either approving the preadamite system, or allowing a formation of new languages at Babel [a]. A very learned man, who warmly espouses the notion of deducing all languages from one, is yet so sensible that exceptions must be made, that he himself excludes the languages of America and of the Indian islands, out of the number; adding, that some have thence rashly imagined, that the men who speak those tongues are of a distinct species, and not the descendants of Adam [b]: which concession is enough to overthrow the hypothesis he would maintain.

Another argument against the formation of new languages at Babel, which has been thought to be of some weight, is, that if such a division of tongues be understood, no good reason can be given, why those colonies, which spoke languages that were near a-kin, were not removed to the greatest distances, and those whose languages were entirely different, placed next one another [c]? To this it may easily be answered, that there is no necessity of supposing every family had a distinct language, or that the several dialects of the mother tongues were formed at the confusion. The dispersion might at first be effected without such an absolute separation of families derived from the same stock: mankind was not then so numerous, but that it would be sufficient to cut off the communication between the three great branches and their prime families by the introduction of new tongues, which alone we contend was the work of God; for dialects we allow might, and necessarily would, be formed by time.

Upon the whole, we think we may reasonably conclude, with a very learned person, whose sentiments on this head we entirely approve, that upon the confusion of Babel there were new languages framed; which languages have been the roots and originals

[a] Vid. Dr. Wotton, ubi sup. p. 36. Dr. Brett, ubi sup. & Diodor. Sic. l. 1. p. 8. [b] Stiernhielm. ubi sup. [c] Reland apud Wotton, ubi sup. p. 61. See also Stillingfl. Origi. Sacr. l. 3. c, 5. § 3.

originals from which the ſeveral dialects that are, or have been, or will be, ſpoken as long as this earth ſhall laſt (P), have ariſen, and to which they may with eaſe be reduced [d]. Year of the Flood, 401. Year before Chriſt, 2597

IN what manner theſe new languages were formed is a queſtion hard to be determined; it ſeems by the Moſaical account, which is ſo ſolemn, and repreſents God as coming down in perſon to view the work of theſe builders [e], that it was the immediate act of God; and ſome have thence concluded, that he effected it by inducing an oblivion of their former tongue, and inſtantaneouſly infuſing others into their minds, according to their ſeveral nations [f]. The Jews imagine this was done by the miniſtry of angels, ſeventy of whom deſcended with God, and were each of them ſet over a nation to which they taught a peculiar language; but Iſrael fell to the lot of his own inheritance, *the Lord's portion being his people* [g], and therefore, they ſay, they retained the primitive tongue [h]. Others have ſuppoſed, that God did no more then cauſe them to forget their firſt language, leaving them to form new ones as they could [i]; but this muſt have taken up ſome time, and could not anſwer the immediate occaſions of mankind. As it would be to little purpoſe to enquire ſo curiouſly into this matter, as ſome have done [k], the beſt we can do is to conclude, that it was effected inſtantly, in a way and manner of which we can give no account [l].

The number of languages formed at Babel, and the conſequence of the confuſion.

It would be of as little uſe to collect the ſeveral opinions in relation to the number of languages formed at Babel: we may as well allow the number of ſeventy, juſt mentioned, as any other. We only know from Moſes, that the Canaanitiſh, or Hebrew, the Syriac, and Egyptian languages were formed ſo ſoon as the time of Jacob [m]. It is moſt probable,

[d] Wotton, ubi ſup. p. 29. [e] Geneſ. xi. 5, &c. [f] Pererius in Geneſ. lib. 16. diſp. 9. [g] Deut xxxii. 9. [h] Eliezer Pirke, c. 24. Shalſhel. Hakkab. p. 93, &c. [i] Vid. Heideg. Hiſt. Patr. tom. (P) Perhaps we ſhould except thoſe languages, which, it is ſaid, have been invented and made by mutual agreement, ſuch as the Chineſe, and that of the Yncas of Peru; of which more in a proper place.

Year of the Flood, 401. Year before Christ, 2597

probable, that the languages of the chief families were fundamentally different from each other, and that the sub-languages, or dialects within each branch, for the sake of immediate intercourse, had a mutual affinity, some more, some less, according as they settled near, or farther from, each other. And this was sufficient to bring about the designs of God to divide mankind into distinct societies, kingdoms, and common-wealths, and thereby to occasion the making of wholsome laws, the keeping of strict discipline, the encouragement of labour and industry, of liberal arts, and all social virtues, and the suppression of such vices as weaken government, and introduce a corruption of morals. All which opened a new scene of providence, with a surprizing variety of wisdom, in the government of the world [n].

SECT VI.

Of the dispersion of mankind, and the planting of nations in the two first general migrations.

Of the dispersion.

COMING now to speak of the dispersion of mankind, which was the consequence of that confusion of tongues we considered in the last section, we beg leave to premise something as to the time, order, and other circumstances of that event.

THE primitive fathers distinguish between the division of the earth and the dispersion of mankind, and made them two different transactions. They suppose, that Noah to whom the earth was well known before the flood, a proprietor of the whole world, divided it among his three sons (A), before any of their posterity removed to Shinaar

[n] See Stackhouse's Body of Divinity, p. 332.

(A) The opinion of Epiphanius (1) on this occasion is very singular; he maintained, that they cast lots for their shares in the city of Rhinocorura, or Rhinocolura, in the confines of Egypt an

(1) In Ancorat. c. 114. Hæres. 66. §. 83. Syncell. p. 45. b.

naar (B), from whence they were afterwards disperſed to take poſſeſſion of their reſpective ſhares [a]. This Noachical diviſion, as groundleſs as it is, was ſo firmly believed, that one author condemns the contrary opinion as heretical [b]. Salianus [c], according to this diſtinction of the fathers, makes the diſperſion happen about the middle of Peleg's life, though he places the diviſion in his firſt year.

Year of the Flood, 401. Year before Chriſt, 2597

Not different from the diviſion in the days of Peleg

OTHER writers have ſuppoſed a double diſperſion, one at the birth of Peleg, and the other of the builders of Babel [d]; and an hiſtorian of ſome antiquity ſeems to have imagined, that mankind increaſed ſo very faſt, that they had peopled ſeveral countries and iſlands, and built ſeveral towns before they laid the foundation of Babel; abſurdly bringing them together again at that place, on purpoſe to be diſperſed a ſecond time according to the Noachical partition [e]. But the more

[a] Vid. Heidegg. Hiſt. Patr. t. I. exerc. 22. § 9. [b] Philaſtrius Brixiens. Hæreſ. 11. 8. [c] Annal. Eccleſ. [d] Spanheim. Hiſt. Eccleſ. col. 291, 292. [e] Sulpic. Sever. Hiſt. Eccleſ. l. 1. Vid. Hornium in eundem.

and Paleſtine. He ſeems to have been led into this notion by the Septuagint tranſlation, where the words נחל מצרים nahal Mizraim (2), which ſignify the torrent of Egypt, are rendered Rhinocolura, expreſſing (as Jerom obſerves) not ſo much the words of the ſcripture, as the ſenſe of the words. Whence he concluded Rhinocolura was in Hebrew called Nahal, which he interprets a Lot; as if that city had taken its name from Noah's dividing the earth by lot among his ſons at that place. But he is miſtaken in the ſignification of that word, as a learned man has ſhewn (3).

(B) What gave occaſion chiefly to this notion, was alſo a wrong underſtanding of the Hebrew text (4), which the Septuagint, inſtead of leaſt we be diſperſed, have rendered before we be diſperſed; from whence the fathers imagined, that Noah not only gave orders to the families ſprung from him to ſeparate, but actually gave to each of them a certain portion of the earth; and that before they obeyed his commands, they undertook to build the tower of Babel, as a monument of their having once dwelt together.

(2) Iſaiah xxvii. 12. (3) Heidegg. Hiſt. Patr. t. I. exerc. 22. § 10. (4) Geneſ. xi. 4.

Year of the Flood, 401. Year before Christ, 2597

more received opinion [f], and the most agreeable to scripture is, that the division of the earth in the days of Peleg, and the dispersion of mankind at Babel were one and the same transaction.

The time of the dispersion fixed.

THOSE who follow the Hebrew chronology, are driven to great straits to fix the time of this event. Some, in order to reconcile the sacred history with the prophane, or led by some fancies of their own, hold a dispersion or plantation of countries, even before the birth of Peleg. Sir John Marsham is of this number; he, to reconcile the Hebrew and Egyptian chronologies, will have Menes to be the same with Ham, who, in the earliest times after the deluge, travelled, as he supposes, into Egypt, settled there with his children, and was the first king of that country [g]. Others, on the contrary, place the dispersion at Babel towards the end of Peleg's life; for, being unable by any fair calaculation to find people enough to furnish colonies for a plantation of nations at his birth, which according to the Hebrew falls in the year of the flood 101, they are obliged to maintain, that his name was given him prophetically long before the dispersion began, in order to make it fall in such a part of his life as would allow time for propagating a sufficient number of mankind for the purpose. The Jews place it in the last year of his life [h], wherein they are followed by St. Jerom and several of the christian chronologers. Others fix it at various periods towards the middle of his age [i]; Petau about his 52d year, or 153 years after the flood; Cumberland about the 79th year, or the 180th after the flood [k]; Salianus and Kircher [l] in the year of the flood 275; and Usher in one passage seems to place it after the birth of Reu [m], which fell out in the 30th year of Peleg's age, or 131st of the flood, without mentioning the precise time; though elsewhere he is of opinion it ought to be referred to the time of Peleg's birth [n]. Thus those who follow the Hebrew account, seem to be agreed only in not connecting the dispersion of Babel with the birth of Peleg; which yet the scripture requires to be

[f] Vid. Usser, Petav. Cocceium. Natal. Alex. &c. [g] Marsh. Canon Chron. Secul. 1, p. 23. [h] R. David Ganz. ad ann. 1996. Seder Olam Rabba in ipso initio. Shalshel. Hakkab. p. 7. [i] Cornel. a Lapide, Torniellus, Abu'lfarag. p. 11. [k] Orig. gent. ant. p. 150. [l] See his Turris Babel, cap. 8. p. 20. [m] Ad ann. mund. 1757, & 1787. [n] Chronol. Sacr. part 1. cap. 5. p. 26.

be placed at that juncture [o]. For by the days of Peleg are to be underſtood the whole life of the man, or the middle, or the latter end of it, then Peleg will have nothing peculiar to deſerve the name; becauſe in that ſenſe the diviſion happened in the days of all his progenitors, and even of Noah himſelf: therefore it muſt have been peculiar to Peleg alone, of all the family of Eber or Shem, to be born juſt at the very time of the diviſion, or diſperſion of Babel; from whence, with very good reaſon, he had that name given him by his father [p]. Year of the Flood, 401. Year before Chriſt, 2597

PERIZONIUS, who finds himſelf obliged, by the authority both of ſcripture and reaſon, to place the Babyloniſh diſperſion at the time of Peleg's birth, to ſolve the difficulty, endeavours to prove, that neither the ſcripture ſuppoſes any great number of people in being at that juncture; nor did the nature of the tranſaction require it; the firſt plantations being made with only a few, and thoſe ſmall families, which removed no farther than the countries in the neighbourbood of Shinaar [q]. But after all, though he thinks theHebrew copy ought to be followed, yet he acknowledges, that the interval between the flood and the age of Abraham ſeems to be too ſhort according to that chronology [r]; and that is the only interval wherein it differs from the Samaritan after the flood.

IN a word, the diſperſion is the Scylla and Charybdis of thoſe who adhere to the Hebrew chronology: according to which, if any regard be had to prophane hiſtory, that event muſt be carried higher than the birth of Peleg; and if a proper number of people be required for planting nations, it muſt be brought down a good way below his birth, if not to the time of his death; which happened within ſixty years of the time wherein the Samaritan chronology places his birth (the true epocha of the diſperſion): a plain demonſtration of the defect of the one, and the truth of the other, computation.

HAVING ſettled the time of the diſperſion at Babel, let us next inquire into the number of mankind then in the world. Of the number of mankind at the diſperſion.

[o] Vid. Joſeph. Antiq. l. 1. c. 7. Auguſt. de Civit. Dei lib. 16. cap. 2. Mercerum & Thuſculum in Geneſ. Poſtell. de orig. c. 20. Beroald. Perkins, Broughton, Perer. & Uſſer. Chron. Sacr. ubi. ſup. Year of the Flood, 401. Year before Christ, 2597

world. Some authors, imagining that a greater part of the earth was planted in this first dispersion, than we are obliged, either by scripture or reason, to believe; have endeavoured to swell their calculations, as much as ever they can; and several as if the whole earth was to be peopled at once; whilst others would reduce the number of mankind to a smaller sum than the occasion seems to have required: but a medium is to be observed between these two extreams.

In this enquiry no computation can be made from the number of persons mentioned in scripture as concerned in this first dispersion, which are but fifty three, excluding Noah and his three sons; and if we have recourse to the number of generations, we shall meet with less satisfaction still from that quarter, for they were but three at most; Eber, the father of Peleg, (who could not be a leader in this dispersion, because it happened at his birth) being but the third from Shem: there are likewise only three generations mentioned in the line of Ham, and but two in that of Japhet: so that if we were to confine our calculation to that standard, it would fall vastly short. But as there were certainly many more generations procreated between the flood and the dispersion, the time that intervened ought therefore to be considered, as well as the longevity of those who lived in the first ages after the flood.

The chronologers (who have drawn this enquiry into their own province) have suited their calculations according to their different hypotheses. Some, relying too much on the prophane historians, have taken such a method as might account for the early beginning of monarchies, and the great armies set on foot by Ctesias and his followers in the time of Ninus, whom many take to be Nimrod, or at least his son. But the Hebrew chronology lays them under a difficulty which they cannot get over, by contracting the space between the flood and the birth of Peleg to 101 years; for if the calculation produces at that period such a number of men as they judge necessary, the world will be overstocked with the inhabitants, by the natural increase of the first planters, in a very few ages after; and if it be proportioned to the number of mankind in the succeeding ages, the number procreated at the dispersion must be excessive small: wherefore most of them, as have been observed, agree, contrary to the plain sense of the scripture, to remove that event towards the middle or end of that patriarch's life, according as it suited their purpose.

It

It is an eaſy thing when a man is determined upon the number, to find out a way to help himſelf to it. Petau has made a computation, which in 285 years after the flood (or within ſeven years of the birth of Abraham, according to his computation) fills the world with above 155 times the number of inhabitants which are ſuppoſed to be at preſent exiſting in it; and yet he cannot make them riſe at the birth of Peleg to many above 32,768 ſouls [s]. Dr. Cumberland, who hath alſo ſtrained the calculation to an extravagant height, can yet bring little more than 30,000 men upon the ſtage in the year of the flood 101; though 40 years after he encreaſes them to above 300,000; and in 40 years more to 3,000,000 [t]. Year of the Flood, 401. Year before Chriſt, 2597

HOWEVER, others have been much more moderate: Mr. Mede allows there could not be above 7000 men, beſides women and children, in the year of the flood 101 [u]; a late writer, who ſtrenuouſly defends the Hebrew chronology, and has taken a great deal of pains in his calculations of Noah's iſſue by his three ſons, cannot raiſe above 1416 males of 20 years old, at the birth of Peleg [w]; and Mr. Whiſton, whoſe principles ſeem more to be depended on than any of the others, produces by his computation about 2389, and no more, at that time [x]; the largeſt of which numbers muſt be allowed to be much too ſmall for the purpoſe: an evident demonſtration of the inconſiſtency of the Hebrew chronology with the circumſtances of this firſt plantation of the earth (C).

[s] Vid. Petavii doctrin. temp. lib. 9. c. 14. [t] Cumberl. Orig. gent. antiq. p. 150. [u] See Mede's works, book 1. diſc. 49. [w] See Bedford's Script. Chronol. p. 205, &c. [x] Whiſton's ſhort view of the Chron. of the old Teſtament, p. 65, &c.

(C) For the readers ſatisfaction we ſhall inſert tables of the gradual increaſe of mankind after the flood, according to the calculations of three of the above-mentioned authors; with the principles on which they are framed.

Year of the Flood, 401. Year before Christ, 2597

I. The Calculation of Father Petau (5).

Years of the Flood.	Number of Sons born.
8	8
31	64
54	512
77	4,096
100	32,768
123	262,144
146	2,097,152
169	16,777,216
192	134,217,728
215	1,065,741,824
238	8,525,934,592
262	68,207,476,736
285	545,659,813,888
	Total — 623,612,358,728
	The double — 1,247,224,717,456

This table shews the number of the male descendants of one only of Noah's sons, in so many years after the flood, and is formed on the supposition that they began to generate at the age of 17, and consequently between that and 24 might each have 8 sons; so that the 8 sons, which a son of Noah might have had by the 8th year of the flood, might by the 24th year of the flood have each 8 sons more. Thus adding continually 23 to the number of the years of the flood, and multiplying the next preceding number of sons by 8, you have the number of sons born in each interval. By this scheme one at least of the other two sons of Noah is to supply wives for the males. And because the parents were long lived, and saw many generations of their own off-spring, whereby an exceeding great number of persons multiplied, and were found alive together out of one stock, therefore the whole may be allowed to be cast up into one sum; and if another son of Noah be taken in to propagate males, the third being reserved to furnish wives for both, we shall have double the number which was found by the first calculation. This supputation was made to account for the number of mankind in the times of Ninus and Abraham. The method seems plausible at first sight; but the access of its production is a plain argument against it.

II. Bishop

(5) Doctrin. tempor. l. 9. c. 14.

Year of the Flood, 401. Year before Chrift, 2597

II. Biſhop Cumberland's Calculation.

Years after the Flood.	Couples born in the 1ſt Vicennium after the Flood; and the couples which deſcended from them.
20	30
60	300
100	3,000
140	30,000
180	300,000
220	3,000,000
260	30,000,000
300	300,000,000
340	3,000,000,000
The ſum ——	3,333,333,330

It muſt be obſerved, that this computation exhibits not quite a tenth part of the inhabitants which are ſuppoſed to have been in the world in the 340th year of the flood, which is that of Peleg's death, being only the iſſue of the 3 ſons of Noah, for the firſt of the 17 vicennia, or ſpaces of 20 years, into which that period of time is diviſible (6); and is grounded on the gradual ſhortning of mens lives recorded in ſcripture, and a ſuppoſition, that the male iſſue of thoſe 3 brothers began to generate ſoon after they were 20 years old; the biſhop maintaining againſt Voſſius, that they were no longer in thoſe early ages before they came to puberty, than men now are (7). But experience ſeems to be in favour of Voſſius in this point; for the more robuſt and long lived creatures are longeſt rearing; and we perceive that generally among brutes, the time of generation is proportioned to the length of their lives; and the births of all the patriarchs before, and a good while after, the flood, being much later in the fathers lives than the time in which men now a-days begin to generate, is ſome argument, that they did not propagate quite ſo early as they do now.

This calculation was made, like the former, to account for the founding of certain kingdoms, which according to the Hebrew chronology began very early after the flood. Ten times the ſum in this table, gives the number of inhabitants upon earth at the birth of Abraham (8), viz. 33,333,333,300, which is a ſum 8 times greater than its inhabitants are at preſent computed at.

This

(9) See his short View of the Chronol. of the old Test. p. 65.

This calculation of Mr. Whiſton's is leſs hypothetical than either of the former. It is now generally owned, that the number of ſouls upon the face of the whole earth, at preſent, does not exceed four thouſand millions, though our author imagines, it may come nearer to that ſum than many ſuppoſe (10). It is alſo now generally owned, and this from good obſervations, that mankind do double themſelves, at the longeſt, in four hundred years (11); which therefore is to be ſuppoſed the proportion ever ſince the preſent period of human life was fixed in the days of David. Mr. Whiſton thinks it alſo evident, that from the deluge till the days of David the lives of men were ſix, if not ſeven times as long as they have been ſince (though much more and leſs than that proportion at the earlieſt and lateſt times of that interval), whence he concludes, that the period of the doubling of mankind from the deluge till the days of David, in a mean, muſt have been, at the leaſt, ſix or ſeven times ſhorter than that which has ſince obtained, by reaſon of their ancient longer lives in that proportion (though ſtill this period of doubling muſt have been much ſhorter and longer in the earlieſt and lateſt times of the ſaid interval). Upon theſe grounds he has compoſed the preceding table, taking a ſeries of numbers beginning at eight (for ſo many ſouls ſurvived the deluge) and doubling themſelves in ſixty years at a mean, from the flood till David, i. e. for about 1300 years (according to the Hebrew account) and thence forward to our own times in four hundred years, i. e. for about two thouſand ſeven hundred years (12).

Year of the Flood, 401. Year before Chriſt, 2597

On this table Mr. Whiſton makes an obſervation, of which we are concerned to take ſome notice. He ſays, "We thereby ſee, "that the number of years, according to the Hebrew chronology, will very naturally account for the preſent number of ſouls "upon the face of the earth, and afford as many in every age "preceding, as any authentic accounts of ancient times do require. But if, inſtead of one thouſand three hundred years, in "the firſt interval, we take, with the Septuagint, above one "thouſand nine hundred, this addition of above ſix hundred "years, at a time when mankind, at a mean, doubled in ſixty "years, will produce above a thouſand times as many as this "table, or the earth for certain does contain at preſent. So that "if that longer chronology were allowed, the earth in all probability muſt have had many more inhabitants in the days of "David, than it has in our days, contrary to the certain obſervations of the increaſe of mankind. And the like is to be ſaid "in due proportion of the Samaritan, or any other chronology, "which lengthens the ſpace ſince the deluge (13).

However

(10) See Dr. Nicholl's Conference, part 1. p. 75, 76. (11) See before, p. 310. in not. (12) Whiſton's Chronol. of the Teſt. p. 65. (13) Ibid. p. 68.

Year of the Flood, 401. Year before Christ, 2597

But if we follow the Samaritan computation, which allows us 300 years more in the interval between the flood and the birth of Peleg than the Hebrew, these difficulties, which are otherwise insuperable, vanish at once; and we may venture to take even the lowest calculation. According to

However, Mr. Whiston having, since he wrote this, rejected the Hebrew chronology, and declared in favour of the Samaritan, it is to be presumed, he has changed his opinion in this respect also, and found a way to get over the objection, though he has taken no notice of it, as it might have been expected, in a later work, where he has made a calculation of the number of inhabitants before the flood (14). We shall therefore ourselves endeavour to solve the difficulty, which we imagine may be done, by observing only, that the space of sixty years, which he takes for the mean period of mankind's doubling from the flood to David, is much too short, and the least that can be allowed, even for the first 500 or 609 years after the flood, aceording to his own principles, the age of Shem himself being little more than 7 times, and that of Peleg, the 4th in descent from him, but 3 times as long as the present standard; whereas he reckons mens lives to be 6 or 7 times as long, quite down to the time of David. So that we cannot but think, that for the last 800 years, at least, of that interval, from the time of Abraham to David, the increase of mankind by the table, is above twice as great as it ought to be; allowance being made for which miscomputation, we doubt not, but the years added by the Samaritan Pentateuch will be thought requisite, instead of excessive.

That the reader may judge whether our objection to so much of Mr. Whiston's calculation be well grounded or not, we shall annex his own table of the ages of all the persons which are mentioned in, or can be collected from, scripture, from the flood to the death of David (15).

Year of the Flood, 401. Year before Christ, 2597

the center of their migrations, before they arrived at the countries in which they finally settled; for the earth was not planted at once, but by degrees; so that there is the less occasion for straining to inlarge the number of mankind at the time of the dispersion, as some have done.

Of the order of the first plantations.

As to the order, or method, wherein these first plantations of the earth were made, some have imagined there was little or none, but that each colony settled where they did by mere chance [y], every one seizing on such countries as he casually light upon [z]. Yet if we attentively consider the account given of this transaction by the sacred historian, we shall find nothing more foreign to his intention, than a precipitate and confused dissipation: for first we are told, with regard to the sons of Japhet, the eldest branch of Noah's posterity, that *by these were the isles of the* Gentiles *divided in their lands*; *every one after his tongue*, *after their families*, *in their nations* [a]; in like manner Moses concludes the account he gives us of the sons of Ham, the youngest branch of Noah's posterity, with these words: *These are the sons of* Ham, *after their families*, *after their tongues*, *in their countries*, *in their nations* [b]; and that of the descendants of Shem ends thus: *These are the sons of* Shem, *after their families*, *after their tongues*, *in their lands*, *after their nations* [c]. From which texts may well be inferred (as the learned Mede [d] has

[y] Heidegg. Hist. Patr. t. 1. exerc. 22. § 11. [z] Hestiæus Milesius apud Euseb. de præp. evang. l. 9. c. 15. [a] Genes. x. 5. [b] Ibid. ver. 20. [c] Ibid. ver. 31. [d] See his works, Book 1. Disc. 49 and 50.

till the days of king David; and that the 90th psalm, where the lives of the Israelites seem to be stated, if it was composed by Moses, as the title informs us, had regard only to the shortening the lives of the murmurers in the wilderness (17), by a divine judgment (when all those were to perish in the space of forty years who were grown men at the Exodus), without any respect to the common period of human life at that time. Barzillai in the days of David is the first mentioned in scripture who was reckoned so old, as not likely to live long at eighty years of age (18); and David himself is the first who is said to have died, and that in a good old age, and full of days (19), so soon as seventy years, which are the particular numbers mentioned in that psalm, and the standard of human life in all succeeding ages (20).

(17) Numb xiv. 29, 35. (18) 2 Sam. xix. 35. (19) 1 Chron. xxix. 28. (20) Whiston's Chron. of the old Test. p. 9 and 11.

has obſerved) that this great diviſion of the earth we are ſpeaking of was performed orderly, and was not a confuſed and irregular diſperſion, wherein every one went whither he liſted and ſeated himſelf where he liked beſt [e]. Year of the Flood, 401. Year before Chriſt, 2597

WE ſee a twofold order in theſe firſt plantations. Firſt they were ranged according to their nations, and then every nation was ranked after their families; ſo that every nation dwelt, and had his lot by himſelf, and in every nation the families alſo dwelt, and had their lots by themſelves; for the true import of the before-cited texts ſeems to be, that the land, or peculiar lot of each family, did lie within the general lot of each nation.

Of the firſt plantation of the earth.

THOSE who have undertaken to give an account of theſe firſt ſettlements of the children of Noah, having founded their conjectures chiefly on the ſimilitude of names, a guide too deceitful to be truſted ſo far as it has been by ſome, who on emergencies have ranſacked the whole world for names of people, countries, rivers, mountains, and cities, which had but the leaſt affinity with thoſe of the planters they were at a loſs to fix; others have therefore taken the precaution to lay down ſome rules [f] for the more ſure proceeding in this enquiry, and which we may reduce to two; 1. To ſuffer ourſelves to be directed chiefly by ſcripture, not neglecting, however, the light which may be had from prophane authors. 2. To ſeek for the original plantations within a reaſonable compaſs of the earth, and in an orderly diſpoſition; looking for the families where we find the nation, and for the nation where we find the families: and theſe rules, we think, may be admitted; but another, viz. that thoſe nations whoſe families are named by Moſes, are chiefly to be ſought for in the neighbourhood of Judæa, we conceive liable to too many exceptions to deſerve the name of a rule; for it was plainly the deſign of that hiſtorian to give us an account of the original of all nations in the world, as far as he had knowledge of them, and not only of ſuch as had to deal with the Jews, or were their neighbours.

BUT after all, this is one of thoſe enquiries about which we ought not to be over ſolicitous, for the originals of very few nations can be traced ſo high as the diſperſion of Babel, much the greater part being ſubject to the utmoſt uncertainty.

[e] Well's Geog. of the old Teſt. vol. 1. p. 93. [f] See Mede's works, and Wells's Geogr. of the old Teſt. ubi ſup.

Year of the Flood, 401. Year before Christ, 2597

tainty. Since the first migrations of mankind, countries have often changed their names, and people their countries, without being observed by historians (D). We may form conjectures, and please ourselves with the plausibleness of our schemes, but who can be sure that the principles on which they are built have any foundation? most of the arguments, in enquiries of this nature, result from the identity or similitude of the names of people and countries; but, for ought we know, the nations we take to be very ancient, are modern in respect of the times next after the flood; and the names we suppose to have been retained by cities from antiquity, are of late original as well as themselves: perhaps also many of the names of people and countries mentioned in scripture were peculiar to the Jews, since we find them nowhere else. And it must be observed, that that nation, by having lost the remembrance of the greatest part of their antiquities, are become as bad guides in matters of this nature as the Greeks, who began too late to keep records for us to expect any great assistance from them.

We shall from these considerations be the shorter in our account of this matter, which we shall begin, as the migrations of the colonies did, from Shinaar; about which we find the branch of Shem placed, inclosed by that of Japhet on the north, and Ham on the south. And it is observable, that, generally speaking, the nations and families in each of these great divisions took their stations according to seniority, the eldest remaining neareſt the center, and the youngest removing outermost.

The countries planted by the descendants of Shem.

Shem may be supposed for the few years, viz. eleven, which according to the Samaritan chronology, he lived after the dispersion of mankind, to have dwelt in Shinaar: his descendants seem to have settled from Media westward to the sea-coast of Aram, or Syria. The number of chiefs of his line concerned in the dispersion were seven, Elam, Ashur, Arphaxad, Lud, and Aram, the sons of Shem; Salah, the son of Arphaxad; and Eber, the son of Salah.

(D) Quotidie aliquid in hoc magno orbe mutatur, nova urbium fundamenta jaciuntur, nova gentium nomina, extinctis nominibus prioribus, oriuntur (21).

(21) Senec. de consol. ad Albin.

1. ELAM ſettled in the country of Elam, lying to the ſouth-eaſt of Shinaar; in the time of Daniel Suſiana, or Khuzeſtân, ſeems to have been part of it [g], and before the captivity it does not appear that the Jews called Perſia by any other name. Elymæ and Elymaïs are often mentioned by the ancients: Ptolemy, though he makes Elymaïs a province of Media, yet he places the Elymæi (for which the maps corruptly read Eldemæi) in Suſiana near the ſea-coaſt [h]. Stephanus [i] takes it to be a part of Aſſyria, but Pliny [j] and Joſephus [k] more properly, of Perſia, whoſe inhabitants, this latter tells us, ſprang from the Elamites [l]; and this ſeems to have been the moſt eaſterly bounds of the poſterity of Shem; for adjoining on the eaſt was Media, ſuppoſed to be poſſeſſed by Madai, the third ſon of Japhet. Year of the Flood, 401. Year before Chriſt, 2597 Elam.

2. As Aſhur was the ſecond ſon of Shem, ſo we find his country lying next to Elam's on the weſt, or north-weſt, called likewiſe after him Aſhur, and by the Greeks Aſſyria, at preſent Curdeſtân or the country of the Curds. Pezron ſuppoſes he was driven out of Shinaar by Nimrod, Ham's grandſon [m], which indeed ſeems to be the caſe, though it may be objected, that if he had not ſettled there originally, he would not have found room in that part, which muſt have been poſſeſſed by ſome other family. However that be, it was Aſhur [n], and not Nimrod, who went out of Shinaarinto Aſſyria, and built Niniveh and other cities, as Perizonius has clearly proved that text is to be underſtood [o], and circumſtances require. Aſhur.

3. ARPHAXAD is placed by ſome in Arrapachitis, a province of Aſſyria towards the north part of that country; but others ſettle him with his family in Chaldea, where indeed we find his deſcendants till the time of Abraham. And could it be proved, that the Chaſdîm, or Chaldeans, derive their name as well as deſcent from that patriarch, as Joſephus affirms [p], there would be no doubt of this laſt being the true opinion. Some who make but one and the ſame perſon of Arphaxad and Cainan, who is inſerted between him Arphaxad

Year of the Flood, 401. Year before Christ, 2597

him and Salah in the Septuagint version, suppose him to be the founder of the monarchy of China [q].

Salah.

Where Salah, the son of Arphaxad, settled, is very uncertain; some suppose it to have been in Susiana, or Khuzestân, in Persia, because they find a town there formerly called Sala; but Morocco, Spain, Phrygia, Armenia, and Hyrcania may claim this patriarch for their planter upon the same ground; having had each of them a town of the same name; and in Colchis we find a nation called Salæ [r], which seems to have the best pretensions to him of all, since he ought to be considered rather as the founder of a nation than of a town. But as affinity of names weighs very little with us, except backed by some other proof, we shall not remove him out of Chaldea, where we suppose room enough for all his descendants in the right line till Abraham; for which reason we settle Eber also in the same country.

Eber.

Lud.

4. We can see no more reason than Sir Walter Raleigh [s], why Lud, Shem's fourth son, should straggle so far from his friends as Lydia, where Josephus fixes him: besides there is a strong objection against this opinion, the Lydians having been first called Mæones, as all the ancients agree, and Lydians from Lydus, the son of Atys [t], except we suppose the Greeks were deceived, and that, the name of Mæones ceasing, they resumed their old name of Lydians, which often has happened. But even in that case we ought perhaps to consider Lydia as possessed by the Ludîm, or posterity of Lud, on a second, or third, remove, and to look for his first settlement nearer his brothers; but here the very similitude of names, which are generally upon these occasions ready at hand to help out at a dead lift, seems to fail us.

Aram.

5. Mesopotamia and Syria comprehending the countries westward of Assyria as far as the mediterranean sea, seem wholly (if we except Phænicia and Palestine) to have fallen to the share of Aram, Shem's fifth and youngest son, whose name is given both to the whole and the several regions thereof in scripture.

Uz.

Within, or bordering on, this country of Aram, it is likely the four sons of Aram settled. It is generally agreed, that Uz the eldest built Damascus, and gave name to the country

[q] Vid. Bolduc. de Eccles. ante leg. lib. 2. cap. 2. [r] Vid. Plin. Hist. Nat. lib. 6. c. 4. [s] Book 1 cap. 8. § 15. [t] Herod. lib. 1. Strabo, lib. 13. Plinius, lib. 5. cap. 29.

country about that city [u], which seems to be different from the land of Uz, where Job dwelt, lying towards Edom. 2. Bochart supposes Hul to have settled in Cholobetene, a part of the greater Armenia, where he finds several places whose names begin with Chol, or Col [w]. 3. Gether, according to Josephus, was prince of the Bactrians [x], but Bactria lay out of Shem's lot, as well as too far for the first plantation; and if we allow him a seat about the river Centrites, between Armenia and the Carduchi, it is not that we think there is the least affinity in the two names to induce us to it, as Bochart does. 4. Mash, or Meshek, Aram's fourth son, is supposed to fix in Armenia about the mountain Masius, the same with that commonly held to be Ararat, and called by the Armenians Masîs. The people who dwelt near this mountain are by Stephanus named Masieni. Bochart [y] refutes the notion of Josephus [z], who derives the Mesanæans near the mouth of the Tigris from them, not considering that they took their name from their situation between the rivers. However, the Armenians themselves do not lay claim to any of Shem's line as their progenitor, but say, they are descended from Togarmah of Japhet's posterity, as will be seen by and by.

Hul.
Gether.
Mash.

HAM probably removed from Shinaar. Supposing him to be the Cronus of Sanchoniatho [a], he reigned in Phœnicia. According to others, who make him to be the same with Menes, he must have settled in Egypt [b], which indeed in scripture is often called the land of Ham; and some from the similitude of Ammon, and other words of the like sound, would infer, that he at least dwelt there for some time; but nothing can be concluded from such weak evidence.

The nations descended from Ham.

1. CUSH, his eldest son, according to Josephus and the antients, was the father of the Ethiopians, who, he says, were in his time called Cushæans, not only by themselves, but all Asia over [c]. But it is not likely, that if Mizraim and Canaan settled themselves in the lands betwixt him and Shinaar, that his son Nimrod would be found erecting a monarchy so early in that country. It is more probable, that he seated himself in the south-eastern part of Babylonia, and in the adjoining part of Susiana, still called Khuze-

Khuzeſtân, or the country of Chuz; from whence his poſterity in the ſucceeding generations might have paſſed into other countries. That a part of Arabia near the red ſea was named Cuſh, appears from ſcripture. Cuſhan and Midian are joined together as the ſame, or neighbouring people, dwelling in tents [d]; and in another place [e] the Arabs are made to border on the Cuſhites, which therefore cannot be the Ethiopians; to which may be added other ſcriptural proofs [f]; in a word, by Cuſh in ſcripture is always to be underſtood Arabia. As for thoſe texts which are alledged to prove Cuſh is ſometimes taken for Ethiopia, they may alſo be expounded of Arabia [g]. Cuſh, according to the Arab and Perſian traditions, which name him Cutha, was king of the territory of Babel, and reſided in Erâk [h], where there were two cities of his name [i]; from whence among other reaſons, Dr. Hyde is of opinion, that Cuſh reigned in Babylonia, and that his deſcendants removed into Arabia [k], though it is hard to fix the quarters of any of them; which has given occaſion to thoſe who ſuppoſe Cuſh to be Ethiopia, to ſpread them all along the coaſt of Africa to the end of Mauritania [l].

THOSE who place them in Arabia are divided about their ſituations. To follow therefore the rules we have laid down, we will ſuppoſe, 1. That Seba ſeated himſelf ſomewhere in the ſouth of Chaldea, or the Arabian Erâk: becauſe, 2. His ſecond brother Havilah's country lay thereabouts, watered by the Piſon, as we have formerly obſerved. 3. Sabtah's ſeat perhaps lay more to the ſouth, where we find a city called Saphthah by Ptolemy, not far from the Perſian gulph, and another named Sabatha, lower down in Arabia Felix, which comes much nearer Sabtah. 4. Raamah or Rhegma may find a place more ſouthward ſtill, about a city called Rhegama by Ptolemy, on the ſame gulph. Some moderns mention a city not far from it called Daden [m], which Dr. Wells does not doubt was the reſidence of his ſon Dedan [n]. Though others will have

have Raamah and both his ſons, Sheba as well as Dedan, to people the parts adjacent to the Red-ſea [o]. They conclude Dedan to have been near Edom, becauſe Ezekiel joins them together [p]; as Raamah muſt have been near Sheba, being mentioned as joint-traders to Tyre in ſpices by the ſame prophet [q]; and elſewhere [r] Sheba and Seba are joined as neighbours, though diſtinguiſhed as different kingdoms: they ſeem to have poſſeſſed a larger part of Arabia, for Pliny obſerves, that the Sabæan nations inhabited from ſea to ſea, that is, from the Arabian to the Perſian gulph. A late writer ſuppoſes Sheba lived on the borders of the land of Midian, and gave name to the country whoſe queen in after-ages went to viſit Solomon [s]. But the Arabs ſay, the country of Sheba lies a great way more to the ſouth in Yaman, or, as we call it, Arabia Felix, near the Indian ſea; the chief city of which was formerly Saba, now called Mareb [t], and founded, according to their tradition, by a deſcendant of Joktan, or Kahtan. And it muſt be confeſſed, this ſeems to be the country of Sheba, mentioned in ſcripture, for the frankincenſe grows thereabouts. 5. Sabtecha has puzzled all the geographers to aſſign his quarters. Bochart [u] not finding a place in Arabia which bore any reſemblance to the name, paſſes over to Carmania in Perſia, and preſſes the city Samydace into the ſervice, obſerving, that the M and B are often changed the one for the other by the Arabs and their neighbours. On the other hand, Dr. Wells [v] imagines, that the Saracens are the deſcendants of Sabtecha, which nation being ſtiled at firſt by the Greeks Sabtaceni, that name was afterwards ſoftened into Saraceni; and the rather, he thinks becauſe alluding to the Arabic verb ſaraka, to ſteal, it ſerved for a nick-name. Though indeed the word Saraceni is no other than Sharkîîn, which in Arabic ſignifies Eaſterlings; as the African Arabs weſt of Egypt, are called Mogrebîns, or Weſterlings. For our parts, being afraid to meddle in a point of ſo much uncertainty, we think it the ſafeſt way to paſs this perſon by, and proceed. 6. and erected a kingdom there, making Babel the seat of his empire [w].

Mizraim.

2. Mizraim stands in the place of the second son of Ham; for there is a great dispute, whether this is the name of a single person or of a people, as having a dual termination, though the verb in the text, where he is said to beget Ludim, is in the singular number, which favours the former opinion. However that be, it is plain, that the names of Ludim and all the rest of his descendants are plurals, by what we read of the Caphtorim, namely, that *they came forth out of Caphtor* [x]. Nor do we see any harm in that opinion, which supposes them branches of a large body of people denoted by the name Mizraim, which divided between them the country called after their name by the Hebrews and other eastern people [y].

Ludim.

As to the nations descended from Mizraim: 1. The Ludim are judged to be the people above Egypt called by the Greeks Ethiopians, and at present Abyssins. Bochart endeavours to prove it by no less than ten arguments [z]. We rarely find them called otherwise in scripture than Lud, either from the name of the founder, or their country. In one passage of scripture Lud are called a mixt people [a]; in others [b], they are said to be very skilful in drawing the bow, which the Ethiopians were famous for; and in two of the above-mentioned passages [c], Lud is joined with Cush and Phut, as are the Lubims elsewhere with the Egyptians [d]; from whence it may be inferred, they were all neighbouring people.

Anamim.

2. The Anamim are thought by Bochart to be the Ammonians, or inhabitants of that part of Lybia where stood the temple of Jupiter Ammon [e], descended, according to Herodotus, partly from the Egyptians, and partly from the Ethiopians.

Lehabim.

3. The Lehabim are supposed to be the same with the Lubim, who, with the Sukkiims and Cushites, came out of Mizraim, or Egypt, with Shishak, to invade Judæa [f]: these therefore may not improbably be judged to be the Libyans of Cyrenaica, or proper Libya, near Egypt.

Naphtuhim.

4. The Napthtuhim are thought to have settled in Marmarica, adjoining to Cyrenaica [g]. It is observed,

[w] See p. 359.

[e] Phaleg. lib. 4. cap. 30.

[f] 2 Chron. xii. 3.

[g] Bochart Phaleg. lib. 4. cap. 29.

observed, that the Egyptians called all the skirts of a country, and promontories washed by the sea, Nephthys; and Bochart places the Naphtuhim rather on the coast of the Mediterranean than on that of the red sea, because the Troglodites and Ichthyophagi, who are the inhabitants of the latter, are in the scripture called Ziyim and Sukkiim [h]. Some place the Naphtuhim about Noph, or Memphis, in Egypt [i].

5. Pathrusim are evidently the inhabitants of Pathros, which some wrongly take for Pelusium; others, more justly, for Thebais, or the Upper Egypt, which is distinguished from the lower Egypt in prophane history as well as sacred [k]. Ezekiel [l] mentions it by itself; and Isaiah [m] distinguishes it from Egypt; but from Jeremiah the country of Pathros appears either to be a part of that kingdom, or adjoining to it, being mentioned with Migdol, Tahpanhes, and Noph [n], which are known to be cities, or districts, of Egypt. Pathrusim.

6. The Casluhim are supposed to have settled somewhere towards the entrance of Egypt, about mount Cassius, in that part of the lower Egypt called Cassiotis by Ptolemy and others, which places it is thought retain some likeness of the name; but, without relying on that argument, they appear to have been planted near the Caphtorim, because the Philistim, as it seems, were descended from both these people [o], and consequently in Egypt. Bochart, misled by following the Jewish notion about Capthor, fancies them to be the inhabitants of Colchis [p], at present called Mingrelia. As for the Philistim, who in the Mosaic account of the dispersion are derived from the Casluhim [q], we shall consider their original settlement in Egypt, before they removed into Canaan, when we come to their particular history. Casluhim. Philistim.

7. Caphtorim the last of the off-spring of Mizraim, are, as Bochart [r] observes, by all the fathers said to be the Cappadocians, and Caphtor Cappadocia; as the Septuagint have also rendered it [s]. In this doubtless they follow the Jews, who explain those names the same way, as do the three Chaldee paraphrasts. But by Cappadocia in these writings, is not to be understood Cappadocia in Asia minor, as Bochart, and perhaps the rest, judged, but some place in Egypt, generally supposed by the Rabbins to

Year of the Flood, 401. Year before Christ, 2597

to be Demyat [t], or Damietta, commonly confounded with Pelusium. One would be inclined to think the Caphtorim derived from Coptus, a noted city of the same country (which by many is supposed to have taken its name from thence), if it was not that Caphtor appears to have been an island [u], and more probably situate either in the lake of Tennîs, or Tanis, which extends from Damietta to Tina, the true Pelusium, or in the Arabic gulf, rather than Crete, as will be observed hereafter.

Phut.

3. AUTHORS are not agreed about the country, where Phut, the third son of Ham, planted himself. Bochart endeavours, to prove that Mizraim and he divided Africa between them [w]: what is most to the purpose is taken from St. Jerom, who affirms Phut to be Libya, and that in his time there was a river in Mauritania with the adjacent region, named from him Phut [x]. But to this it may be objected, that Ezekiel [y] mentions Phut with Cush and Persia as auxiliaries to the northern enemies of the Jews, and in the army of Gog; and we find Cush, Lud, and Phut, among the nations, who, according to Jeremiah's prophecy, were to over-run Egypt [z], as Nebuchadnezzar afterwards did; which looks as if Phut's quarters lay somewhere between Cush and Babylon. However, in points so uncertain, we will not presume to determine any thing.

Canaan.

4. WE are not so much to seek for the parts planted by Canaan and his posterity, viz. Sidon, Heth, the Jebusites, Amorites, Girgashites, Hivites, Arkites, Sinites, Arvadites, Zemarites, and Hamathites; of whom we shall speak more particularly when we come to treat of Phœnicia, in the land of Canaan, where they undoubtedly settled.

The countries planted by the descendants of Japhet.

THE scripture leaves us as much in the dark, as to the country where Japhet settled, as it does with regard to the particular residence of his brothers. All we can collect upon this occasion is, that he retired from Shinaar with his descendants, and settled among them to the north of the countries planted by the children of Shem. Some imagine him, from the affinity of names, to be the Japetus of the Greeks [a]; but there is no likelihood of his having ever been known to them, or that their traditions reach so high as this son of Noah by many ages.

1. GOMER

[s] Rabbi Saadias & Maimonides, apud Lightfoot, oper. tom. 2. p. 398. [u] Jerem. xlvii. 4. [w] Phaleg. l. 4. cap. 33. [x] Hieron ym in tradit. Hebr. [y] Chap. xxxviii. 5. [z] Chap. xlvi. 9. [a] Bochart Phaleg. l. 3. c. 1.

Year of the Flood, 401. Year before Christ, 2597

Gomer.

I. GOMER, the eldeſt ſon of Japhet, according to Joſephus, was the father of the Gomerites, called by the Greeks Galatians [b], who were the Gauls of Aſia minor, inhabiting part of Phrygia. Of this opinion is Bochart [c], and if it be right, thoſe who derive the Cimmerians, or Cimbri, from Gomer, have ſome grounds for it, the Cimmerians ſeeming to be the ſame people with the Gauls, or Celts, under a different name; and it is obſervable, that the Welſh, who are deſcended from the Gauls, ſtill call themſelves Kumero, or Cymro, and Cumeri. Be that as it will, the Chaldee paraphraſts muſt be out in placing Gomer in Africa, ſince it is plain from Ezekiel [d], that his country lay northward of Judea; and that it lay alſo to the weſt, or northweſt of Madai, or Media, may alſo be gathered from that prophet's making the houſe of Togarmah (one of Gomer's ſon's, and conſequently, according to our rules ſettled, in his father's lot or borders) trading to Tyre in Syria; which could not well be in caſe they had been ſituated beyond Media, through which it is not likely they would have been ſuffered to paſs. We may therefore let Gomer reſt where the learned Bochart ſettles him, viz. in Phrygia [e], without ſtraining to make that word to be the Greek tranſlation of his name.

Aſhkenaz.

THE plantations of Gomer's ſons may, not without ſome ground, be preſumed to be thereabouts. 1. Aſhkenaz, as it ſeems ſhould be ſeated near Armenia [f], in the eaſtern part of Aſia minor; for the ſcripture, among the nations which were to be called by the Medes under Cyrus to deſtroy Babylon, mentions Ararat, Minni, and Aſhkenaz: but if regard be had to the footſteps found of the name, the country which he planted ſeems to have been in the north-weſt part of that continent; for in Bithynia there was the Aſcanian lake, and river called Aſcanius, with a bay of the ſame name; and there was alſo antiently a city named Aſcania in leſſer Phrygia, or Troas, with iſles on the coaſt called the Aſcanian iſlands: and it is obſerved, that, beſides Aſcanius the ſon of Æneas, Homer mentions a king of that name, who was at the ſiege of Troy. And to prove that the Aſhkenaz mentioned by Jeremiah were the people of theſe parts, it is ſhewn out of Xenophon [g], that Hyſtaſpes having conquered Phrygia that lies on the Helleſpont

[b] Antiq. l. 1. c. 7. [c] Phaleg. l. 3. c. 10. [d] Chap. 48. 6. [e] In loco ſuperius citat. [f] Jeremiah li. 27. [g] Cyropæd. l. 7.

pont brought thence many of the horse and other soldiers which Cyrus carried with him to the siege of Babylon. In a word, the Pontus Euxinus, or Axinus, as it was first called by the Greeks, is supposed to be a corruption for the sea of

Riphath.

Ashkenaz [h]. 2. Because Riphath probably settled near his brother Ashkenaz, we may admit the testimony of Josephus, not always to be depended on, who says the Paphlagonians were originally called Riphathæans from Riphath [i]. Bochart finds the river Rhebas, Rhebæus, or Rhebanus near Paphlagonia j; Stephanus mentions not only the river but also a region of the same name, whose inhabitants were called Rhebæi, and Pliny places here a people called Riphæi, which comes nearer the name of Riphath. 3. Togarmah the

Togarmah.

last son of Gomer was probably seated to the east of Riphath; some think to the north of Armenia, among the Iberians, others in Cappadocia and Galatia; which opinions are not out of the way, since these countries lie contiguous to those of the rest of Gomer's family, and are situate conformable [k] to that expression of the prophet, *Gomer and all his bands, the house of Togarmah of the north quarters and all his bands* [l]; which seems to be spoken of their situation with respect to Judea. Turcomannia, where many have placed this colony, seems too remote, because they are said to have traded to the fairs of Tyre [m]; and what confirms their settling, they brought hither, viz. horses, horsemen, and mules, in, or about, Cappadocia; for that country produced excellent horses and mules, which last are supposed to have come first from thence, and was famous for good horsemen, as is attested by several of the antient prophane historians [n]. Besides, in the borders of Pontus and Cappadocia, we find a people called Trocmi [o], Trogmi, or Trocmeni, as Stephanus calls them. In the council of Calcedon they are called Trocmades, or Trogmades, which names have an affinity with Togarmah, or, as the Greeks usually write it, Thorgama.

But after all, the Armenians give themselves out to be descended from Togarmah (whom they make the son of Tiras the son of Gomer) by his son Haik, from whom they and their country from all antiquity have born the name

[h] Bochart Phaleg. l. 3. c. 9. [i] Josephus Antiq. l. 1. c. 7
j Bochart ubi supr. c. 10. [k] Idem, ibid. [l] Ezek. xxxviii. 6

name of Haikh. They ſay alſo, that the name of Armenia, made uſe of by other nations, is derived from Aram, the ſeventh in deſcent from Haikh, who much enlarged the bounds of his kingdom on all ſides [p]: the Armenians had alſo numerous breeds of excellent horſes, which they paid to Cyrus inſtead of tribute [q]; and many of thoſe creatures as a learned author [r] aſſures us, from the teſtimony of credible natives, are ſtill bred there for the uſe of the kings of Perſia, and for preſents to them from the governor. Upon theſe conſiderations we muſt leave Armenia to the deſcendants of Togarmah, or Thûrgûmai, as they call him. Year of the Flood, 401. Year before Chriſt, 2597

2. WE come now to Magog, the ſecond ſon of Japhet, with regard to whoſe ſettlement the learned have many different and confuſed opinions; Joſephus, Jerom, and moſt of the fathers held them to be the Scythians about mount Caucaſus, which name Bochart ſuppoſes was made by the Greeks out of Gog haſen ſignifying Gog's fort in Chaldee, a dialect of which he imagines to have been the language of the Colchi and Armenians [s]; but perhaps it is rather a wrong pronunciation of Cub Kaf, which in Perſian ſignifies the mountain of Kaf, as the Arabs alſo call it: that his plantation adjoined upon thoſe of Meſhech and Tubal appears from Ezekiel's [s] making Gog, king of Magog, to reign over the other two. And it is thought, we ſhould come nearer ſtill to a diſcovery of his quarters, if thoſe words, The chief prince, or as it is in our marginal tranſlation (the prince of the chief of Meſhech and Tubal [t], be rendered, according to the Septuagint, the prince of Roſh, Meſhech, and Tubal, becauſe in the Iſthmus, or neck of land between the Euxine and Caſpian ſeas, there formerly dwelt two ſorts of people; the one called Rhoſſi, on the river Cyrus, as Joſeph ben Gorion has it, or rather on the Ros, Ras, or Aras, called by the Greeks Araxes; the other called Moſchici, inhabiting a long chain of mountains, ſtretching, according to Ptolemy, along the north-weſt part of Armenia, and ſeparating it from Colchis and Iberia. From which two people, migrating or driven over Caucaſus, it is ſuppoſed, the Ruſſians and Muſcovites are deſcended. Magog.

Year of the Flood, 401. Year before Chriſt, 2597

Bochart alſo thinks the name of Magog is preſerved in a country of theſe parts [u] called Gogarene, according to Strabo and Stephanus; for Gog and Magog ſeem to be the ſame name, the *m* not being a radical letter. But we cannot ſtrain the matter ſo far as to ſuppoſe the name of Georgia, a well known country in this quarter, derived thence; much leſs, that the Palus Mæotis, and Comagene in Syria, draw their names from Magog [w], through ſuch a diſtorted courſe of changes, as to repeat them would put one quite out of conceit with etymologies.

The Arabs, who have borrowed the beſt part of their religion from the Jews, are acquainted with Gog and Magog, whom they call Yajuj and Majuj, and make them to inhabit the mountain of Kaf, or Caucaſus, but remove them at a great diſtance to the farther end of Tartary towards the north, or north-eaſt [x].

We are inclined to think the parts above-mentioned, between the Euxine and Caſpian ſeas, are moſt likely to be thoſe in which Magog ſettled; however, we can by no means omit this occaſion of taking notice of an error, which many of the modern writers have fallen into, who place Magog in Syria. Bochart's great judgment would not ſuffer him wholly to come into it, however, he ſuppoſes Magog himſelf gave his name to a town there [y]. Dr. Wells more cautiouſly ſuggeſts, that the name was long after taken from the Scythians, when they made an excurſion into Syria and took the city, as Bethſan in Judæa was alſo called after them Scythopolis [z]. But Mr. Shuckford fixes Magog himſelf there, with Gomer, Tubal, Togarmah, and Meſhech about him [a]. What gave riſe to this opinion is, a paſſage in Pliny, where he obſerves that Bambyce, otherwiſe Hierapolis, is called by the Syrians Magog [b]; but this proves to be a palpable miſtake of the tranſcriber, who has written Magog inſtead of Mabog, as has been obſerved by Dr. Hyde, who wonders no body had corrected that error in Pliny [c]. Aſſemani has taken notice of it ſince [d]; yet it ſtill remains uncor-

3. IT is generally agreed, that Madai planted Media, and the Medes are always called by this name in ſcripture [e]. To this a learned author [f], who makes Macedonia the ſettlement of Madai, objects, 1. That the Madai, or Medes, are not mentioned in ſcripture till the latter ages; but it may be anſwered, that the Jews always retained the name, and it is plain they made uſe of it as ſoon as they had occaſion. 2. That this ſituation removes Madai too far from the reſt of his brethren, and takes him out of their general lot, which was the iſles of the Gentiles, to put him into that of Shem. But according to our hypotheſis, their plantations hitherto have been contiguous, for the weſtern Media was bounded on the north by the river Roſs, or Aras; to which, as we have obſerved above, the dominion of Magog extended; and perhaps thoſe words, *by theſe were the iſles of the* Gentiles *divided* [g], relate only to Javan and his ſons, and not to Gomer and his ſons, or to a future plantation; the paſſages in ſcripture where theſe laſt are mentioned requiring a ſenſe which places them on the continent. 3. Several authorities are produced by this writer to ſhew there were a people in Macedonia called Medi, or Mædi, and a tract called the Medic region in the borders of Pæonia; but even ſuppoſing them ſome later colony of Madai, which is the moſt that can be allowed, we cannot ſee how it tends to prove, that Macedonia is compounded of Madai and Cetim, or Kittim, any more than that Æmathia, the ancient name of Macedonia, comes from Madai, upon the bare authority of a forced etymology.

Madai

4. JAVAN may probably be ſuppoſed to have ſettled firſt near his brothers in the ſouth-weſt part of the leſſer Aſia, about Ionia, which contains the radical letters of his name. Javan.

HIS four children may find places correſpondent with their names in the ſame parts. 1. The Æoles, who inhabited Æolia to the north of Ionia, are by Joſephus made to deſcend from Eliſha, Javan's eldeſt ſon; but there is a greater appearance of his name in Hellas, the ancient name of Greece; the iſles of which ſeem to be thoſe called the iſles Eliſha.

isles of Elisha by Ezekiel, and most probably supplied supplied Tyre with the purple and blue [h], wherewith, as Bochart proves at large, the coast of Peloponnesus and the adjacent islands abounded [i]. Peloponnesus, which may be well comprehended among the isles, as being almost one, contained moreover a city and province, by the name of Elis; and in Attica there was the city Eleusis, and the river Elissus, or Ilissus. 2. Tarshish, according to Josephus, gave name not only to Tarsus, but to all Cilicia, of which it was the capital [k]: it seems also to have been the Tarshish to which Jonas thought *to flee from the presence of the Lord* [l], as well as that also mentioned so often by the prophets, on account of its trading with Tyre [m]. 3. To the west of Tarshish it is supposed Kittim first planted. Homer mentions a people in those parts called Cetii [n] (from the river Cetius), which is the word by which the Septuagint have rendered Kittim. In Ptolemy we find two provinces in the western parts of Cilicia, one maritime called Cetis, the other towards the mountains called Citis. Josephus will have the island of Cyprus to be the seat of the Kittim, and the town called Citium, which belongs to it, to have taken its name from them [o]; but in the apocrypha Macedonia is plainly denoted by the land of Chettiim, Alexander being mentioned as coming from thence [p], and Perseus, king of Macedonia, is called king of the Citims [q]. Nor do we see any thing amiss in supposing that country to be the original plantation of the Kittim, at least in the intention of Moses, since it comes under the general denomination of the isles which were to be the portion of Japhet, at least of the posterity of Javan; and their brother Elisha has been already placed in that neighbourhood. 4. It is not so easy to find a place for Dodanim, the youngest of the sons, or rather of the descendants of Javan, except we admit the change of the D into R, (which letters in the Hebrew are scacely to be distinguished) and called him Rodanim, as the Septuagint have done, in order to settle the island of Rhodes upon him; which, for ought we know, is not a worse shift than to extract the name of Doris, and the Dorians, in Peloponnesus, from Dodanim.

Tarshish.

Tubal and Meshech.

As to, 5. Tubal, and, 6. Meshech, we have already shewn, under the article of Magog, that their lots lay contiguous to his; as may be gathered from the two places of Ezekiel there mentioned [r]; and that is enough, without distorting names of countries in order to provide them settlements in spite of all the rules of etymology. And, 7. That we may shorten this account, which the uncertainty of our evidence has made tedious, we shall in the last place allow Tiras, according to Josephus [s] and the general opinion, to have led his colony into Thrace.

Tiras.

THUS we have given an account of the nations concerned in the first dispersion of mankind, by which it does not appear, that they migrated eastward beyond Media, northward beyond the mountains of Caucasus, southward beyond Ethiopia, or Habashia, or westward beyond a part of Lybia and Greece, including Macedonia; tho' it is most probable, the more distant parts were not planted immediately by these first colonies, but by their posterity afterwards.

No tracing the original of most nations.

IT is not our design here to enter into a long detail of future migrations, in order to shew by what degrees, and in what manner, the several parts of the world came to be inhabited, as some with more labour than success have attempted to do; but shall reserve what may be gathered from antient writers in relation thereto, when we enquire into the original of each particular country.

The countries possessed by the descendants of Joktan in a second migration.

HOWEVER, we are obliged to say something with reference to the descendants of Joktan; who, if they were not concerned in the first dispersion, seem to have began their migration sometime within Peleg's life; with regard to which patriarch we shall only observe here, that it is not probable, the Pelasgians of Greece and Italy derive their original from him, as some imagine [t]; but it rather appears from scripture, that both he and his posterity remained in Chaldea, within the lot of their great ancestor Arphaxad, till Terah, the father of Abraham, left Ur of the Chaldees to remove into the land of Canaan.

MOSES assigns the habitation of Joktan's sons to have been *from Mesha, as thou goest unto Sephar a mount of the east* [u]. The want of knowing the situation of these places hath run authors into strange mistakes. Some suppose Mesha

Meſha to be mount Maſius, or Ararat, in Armenia (but it ſeems rather to be a city), and look for mount Sephar beyond Media, towards India. Jerom, after Joſephus, would have both Meſha and Sephar to be in the Eaſt-Indies. In ſhort, the antients have generally peopled all the eaſtern parts of Aſia beyond Media with theſe ſons of Joktan; which is ſo inconſiſtent, that Bochart might well wonder ſo many of the moderns have been led by them [x]; and yet ſome have done worſe, and peopled America immediately by Joktan, from whom Arias Montanus imagined the province of Jucatan took its name; and the ſame author judges mount Sephar to be the Andes, mountains of Peru.

In all probability, the places in queſtion are to be looked for in Arabia; but we cannot agree in opinion with Bochart [y], that Meſha is Muza (ſuppoſed to be Mokha, a noted port in the Arabian gulf), and Sephar the city Sapphar [z], any more than with the Arab paraphraſts, that they are Mecca and Medinah. We ſhould chooſe out of theſe two conjectures to form a third, and ſuppoſe Meſha and Sephar to be Mecca and Sapphar, or rather (if the Moſaical deſcription would agree with it) Dhafar, a port in the middle of that coaſt of Arabia waſhed by the Indian ſea, which would take in all the country lying beyond that of Cuſh, and which the Arabs allow to have been poſſeſſed by the poſterity of Yarab the ſon of Kahtân, or Joktan [a]. We do not indeed find Yarab among the ſons of Joktan mentioned by Moſes; but it is no difficult matter to ſet him there by a change of the *h*, in Jerah (the fourth ſon), into [b].

We meet with no good ſigns of the ſettlement of Almodad and Sheleph, the two firſt ſons of Joktan; but

Hazarmaveth. the name of the third, Hazarmaveth, or, as it is better written in the vulgar, Haſarmouth, is plainly found in Hadhramaut, a province of Yaman, or Arabia Felix; both having the ſame radicals, and ſignifying the court, or country, of death. 4. Bochart diſcovers the name of

Jerah. Jerah in the iſland Hieracon (or of hawks) in the Arabian gulf, and a town ſo called within land on the river Lar, near the Omanitæ; and 5. That of

Pliny, towards the Perſian gulf [b]. 6. Uzal is the name given to Sanaa, the capital of Yaman, by the Jews who dwelt there [c]; and it appears from Pliny to be the ſame city[d]; its port was Ocela, or Ocilis, as Ptolemy calls it, which ſo bears ſome reſemblance to the name. 7. Diklah ſignifying in the Chaldean, or Syriac, a palm-tree, or a country ſtored with palms, may have choice of ſeats in Arabia. 8. It is with reluctance that we muſt croſs the ſea with Obal from Arabia to the Avalitic port [e], in the Avalitic or Abalitic bay, on the coaſt of Africa, juſt without the ſtraits of Bab-al-mandad [f], for want of a place in Arabia bearing ſome likeneſs to his name to ſettle him in. It is true, there is a town called Obollah, towards Baſrah, which might ſerve the turn, if that part had not been already diſpoſed of by us to the family of Ham. Some may think the uncertainty of its antiquity might be another objection againſt Obollah; but that would be perhaps to call all that we have already done about the migrations in queſtion. 9. We might be obliged to look for a ſeat on the ſame coaſt for Abimael, if Theophraſtus [g] did not luckily furniſh us with the name of a place, in the aromatic quarters of Arabia, called Mali. It is true, other authors ſeem to write Minæi inſtead of it; and Ptolemy mentions the Minæi and Manitæ, but no Mali: but the authority of Theophraſtus muſt go againſt them all, ſince it makes for our purpoſe. This is a rule which has the ſanction of moſt authors who have wrote on this ſubject. 10. Sheba will not have the ſame difficulty with the reſt of his brethren to find a place in Arabia. Pliny ſays, the Sabæan nations extended themſelves from one ſea to the other; that is, from the Arabian to the Perſian gulf. Indeed there wants no proof of a people of this name poſſeſſing a large ſhare of the ſouth part of Arabia, moſt authors mentioning them as very numerous, and their country excellent [h], but they ſeem to differ in the name of their chief city; for ſome call it Saba [i], others Mariaba, or Maraba [k]. However, that

that causes no difficulty in the matter, since we learn from the Arab authors, that they are both names of the same place, and that it was the antient regal seat, which was afterwards translated to Sanaa. They also tell us, that Balkis, who visited Solomon, reigned there; and Christ seems to allude to this country, when he calls her the queen of the south; for yamin with the Jews, as well as yaman with the Arabs, signifies the south; and Saba, or Mareb, is

Ophir.

in that part of Arabia called Yaman [l]. 11. We are at a loss again about providing a settlement for Ophir; Arabia furnishes no place which resembles the name, except Copar [m], a place on the Arabian gulf, near the northern limits of the Cinædocolpitæ, and Ogyris an island in the same sea [n]. Bochart endeavours to squeeze Ophir in among the Cassanitæ, or Gassandæ [o], probably the tribe of Ghassân, consulting the similitude of sense in words, when that of sound fails: and he chooses rather to be put to his shifts, than to run into the common absurdity of planting Ophir in India, where the place which bears his name (so famous in scripture for gold) is supposed to be situate. We shall speak more particularly, with reference to this land, when we come to the reign of Solomon; and shall only observe here, that the gold of this place seeming in one passage of scripture to be called the gold of Parvaim [p], hath occasioned two conjectures: the first, that Ophir is the island of Taprobana [q]; the second, that it is Peru [r] in America. The reader may easily see the latter name comes nearest that of Ophir; but to shew what an ignis fatuus the similitude of names is, Peru, as sir Walter Raleigh assures us, is not the true name of the country, but was given to it by the Spaniards, on their mistaking the answers of the natives to a question they did not under-

Havilah.

stand. 12. Havilah is, by Bochart, supposed to have settled in the land of Khaulan [s] towards Yaman, mentioned by Al Edrisi [t]: but as there seem to be two places (as well as two persons) in scripture called by that name; one near the Persian gulph, possessed by Havilah the son of Cush already

already taken notice of, and another in the borders of the Amalekites, towards the Land of Promiſe, the reader, if he pleaſes, may fix this twelfth ſon of Joktan in this laſt country, and place his brother Jobab, who is the 13th and laſt, with him for company; unleſs he rather chooſes to quarter him upon the Jobarites, near the Sachalites, in the ſouth-eaſt part of Arabia, upon a preſumption that they ſhould be written Jobabites [u]. Jobab.

SECT. VII.

Of the origin of civil government, and the eſtabliſhment of the firſt kingdoms.

WE have formerly obſerved, that the firſt form of government was certainly patriarchal [a]. For though the father had no natural right to govern his children when out of their minority; and though that honour, reſpect, and ſupport which they indiſpenſibly owe to their parents all their life-time, and in all eſtates, give the father no power of making laws, and enacting penalties on his children, nor any dominion over their properties or actions; yet it is obvious to conceive, how eaſy it was in the firſt ages of the world, and ſtill is, in places where the thinneſs of people gives families leave to ſeparate and plant themſelves in yet vacant habitations, for the father of the family to become the prince of it. He had been a ruler from the beginning of the infancy of his children; and ſince without ſome government it would be hard for them to live together, it was likelieſt it ſhould, by the expreſs, or tacit, conſent of the children, when they were grown up, be in the father; where it ſeemed, without any change, barely to continue; when indeed nothing more was required to it, than the permitting of the father to exerciſe alone in his family that executive power of the law of nature which every freeman naturally hath, and by that permiſſion reſigning up to him a monarchical power while they remained in it. Thus it was almoſt natural for the children to make way for the father's authority: they had been accuſtomed in their childhood to follow his directions, and to refer their little differences to him; The firſt Government patriarchal

[u] Bochart Geog. Sacr, lib. 2. chap. 29. [a] Before, p. 309.

him; and when they were men, who fitter to rule them? Their little properties, and leſs covetouſneſs, ſeldom afforded greater controverſies; and when they ſhould ariſe, where could they have a fitter umpire than he, by whoſe care they had every one been ſuſtained and brought up, and who had a tenderneſs for them all? The government they were under continued ſtill to be more their protection than reſtraint; and they could no were find a greater ſecurity to their peace, liberties, and fortunes, than in the rule of a father.

Changed into the monarchical.

THUS fathers of families, by an inſenſible change, might become politic monarchs of them too, and as they chanced to live long, and leave able and worthy heirs, for ſeveral ſucceſſions or otherwiſe, lay the foundations of hereditary or elective kingdoms, under various conſtitutions and manners, according as chance, contrivance, or occaſion happened to mould them [b].

The policy of the Noachidæ.

NOAH therefore being the common parent of the new world, while he lived we may imagine all his deſcendants conſidered themſelves to be in a ſtate of dependance on him; and as he was the ſupreme governor of the whole race of mankind then in being, ſo his ſons, Shem, Ham, and Japhet, were in all probability chief governors of their reſpective branches in particular, as their ſons again were heads or rulers of their reſpective families under their fathers. Each ſon of Shem, for inſtance, as head of his own family, not only decided all differences among them, but probably gave laws to them, though his authority extended no farther; for in diſputes between their families, their powers being all equal, they were obliged to have recourſe to the deciſion of their common father Shem, whoſe authority alſo was limited to his proper deſcendants; ſo that in any difference between him and his brothers, Ham and Japhet, the appeal muſt have been to the judgment of their father Noah, as the only common ſuperior.

ON Noah's death, the unity of government was diſſolved, and mankind became divided into three grand parties, which no longer acknowledged one common head, but had each its own independent ruler in one of his three ſons. Upon their deaths the bonds of union were again looſed, and mankind became a ſecond time divided in their political ſtate; ſo that by degrees mankind became ranged under a great number of independent chiefs; which ſeems to have been

[b] Locke of Government, Treatiſe 2, c, 6, &c.

been the ſtate of the world for ſome time after the diſperſion.

BUT as families increaſed, and gradually extended their plantations, forming villages and towns, left their different intereſts and inclinations might trouble the public tranquillity, it became neceſſary to truſt the government of each ſociety in the hands of one, or at leaſt a ſmall number of perſons, who might reunite all the chiefs under one and the ſame authority, and execute ſuch laws and regulations as were thought conducive to the well-being of the community. The idea they ſtill retained of the patriarchal government, and the happy experience they had had of it, naturally directed them to the choice of a ſingle perſon rather than many, and of ſuch as were moſt conſpicuous for paternal care and tenderneſs. Ambition and intrigue had, it is to be thought, little part in this election, which was rather decided in favour of the moſt worthy by his known probity and moderation [c]. The eſtabliſhment of kingdoms.

IN the firſt beginning of political ſocieties, almoſt every town had its own king, who, more attentive to preſerve his dominions than extend them, reſtrained his ambition within the bounds of his native country [d], till diſputes with neighbours, which were ſometimes inevitable, jealouſy of a more powerful prince, an enterprizing genius and martial inclination, the deſire of aggrandizing ones ſelf and ſhewing ones abilities, occaſioned thoſe wars which often ended in the abſolute ſubjection of the vanquiſhed; whoſe poſſeſſions fell into the power of the conqueror, and, by enlarging his dominions, both enabled and encouraged him to puſh on his fortune by new enterprizes; and thus ſeveral cities and territories, united under one monarch, formed kingdoms of larger, or leſſer, extent, as the prince happened to have ambition and ſucceſs.

THESE firſt conquerors uſed their victory in different manners, according to their various tempers and intereſts. Some, looking on themſelves as abſolute maſters of the conquered, and thinking it was enough to grant them life, ſtripped them of every thing elſe, and reduced them into the ſtate of ſlavery, obliging them to the meaneſt offices and moſt laborious employments; which introduced the diſtinction between freemen and ſlaves, which has ſince been in the world.

OTHERS

[c] Juſtin. l. 1. c. 1. [d] Idem, ibid.

OTHERS brought in the cuſtom of entirely tranſporting the vanquiſhed people with their families into new countries, where they were to ſettle and cultivate the lands which were aſſigned them.

OTHERS, yet more moderate, contented themſelves with obliging the conquered to purchaſe their liberty by a ranſom, and allowed them the enjoyment of their own laws and priviledges on payment of an annual tribute, ſometimes even leaving their kings on their throne, on their acknowledging the ſuperiority of their conqueror, by certain marks of homage and ſubmiſſion.

THE wiſeſt and moſt politic gained the affections of their new ſubjects by admitting them into an equality with their old ones, and granting them the ſame liberties and priviledges; by that means making them one people, and uniteing their intereſts [e].

Nimrod the firſt uſurper on the rights of others.

IF the Phœnician hiſtory be to be credited, and their Cronus be allowed to be Ham, the deſire of rule began to make havock in the world, even during the life-time of Noah, who was driven out of his ſettlements, and at laſt ſlain by his rebellious ſon [f]. But the firſt act of violence and uſurpation we find recorded in ſcripture was, that of Nimrod, who, as it ſeems, diſpoſſeſſed Aſhur the ſon of Shem, who had at firſt ſettled in Shinaar, and obliged him to remove into Aſſyria. The acquiſitions he made on this occaſion muſt be allowed to be unjuſt, though he might have a legal right to govern thoſe who probably choſe him for their chief, on account of his perſonal merit. However, it is to be preſumed, that this revolution, which we ſuppoſe to have happened about thirty years after the diſperſion, extended only to ſome few of the new-planted nations. In the reſt, and eſpecially thoſe which lay outermoſt, we cannot but perſwade ourſelves, that a ſimplicity of manners continued ſeveral ages, and that wars did not ariſe in the world till the colonies, which were at firſt ſeparated, by the increaſe of their numbers began to preſs upon one another, and grow uneaſy for want of room; which inconvenience muſt have affected thoſe moſt who were ſettled near the center: and accordingly the firſt warlike motions we have any credible account of, were made by the kings of Shinaar and Elam [g].

IT

[e] Rollin Hiſt. ancienne, &c. p. 3, &c. [f] See before, p. 393, &c. [g] Gen. xiv. 1.

Great empires not soon formed.

IT is very difficult to settle the rise of the first empires, but it is scarcely possible, they should begin so early as historians have represented them. That the first kings were kings of single cities, not of many, much less of large countries, is evident from what we find in history relating to the early state of nations. How long was Greece divided into little states? how many ages did they continue jarring and contending for the mastery? By what slow degrees did Rome enlarge its territories and rise up to empire? and how many centuries passed before it subdued the neighbouring cities which surrounded it? The Israelites found Canaan in the same condition that Italy was in the time of Romulus, and, notwithstanding the great success of Joshua, were above four hundred years in reducing the petty monarchies under their dominion.

THE uniting therefore of many smaller states into one body by force, being apparently a work of time, those authors who place the rise of several great monarchies within two or three ages next after the flood, must be greatly deceived, either by following authors who have attributed too great antiquity to such events, or by adhering to a system of chronology which is too short; and of the two evils this last is the worst. How unfit the Hebrew computation is for adjusting the times of prophane history, will partly be seen in that of Egypt, which we are now going to enter upon: we shall only add here, that the first appearance we find of a potent and extensive monarchy is in that of Elam, whose king Chedorlaomer, in the time of Abraham, over-ran Canaan and the neighbouring countries as far as the borders of Egypt [h], some hundred of years before we hear any thing of an Assyrian monarchy; which could not have had a beginning any number of years before Menahem, when its kings first began to pass the Euphrates at the instigation of that prince [i].

Of the original of arts and sciences.

THOUGH Noah and his sons had doubtless some knowledge of the inventions of the antediluvians, and probably acquainted their descendants with such of them as were most obvious and useful in common life, yet it is not to be imagined, that any of the more curious arts, or speculative sciences, were improved in any degree, supposing them to have been known or invented, till some considerable time after

[h] Gen. xiv. 5, &c. [i] 2 Kings xv. 19.

after the diſperſion. On the contrary, one conſequence of that event ſeems to have been, that ſeveral inventions known to their anceſtors were loſt, and mankind gradually degenerated into ignorance and barbarity, till eaſe and plenty had given them leiſure again to poliſh their manners, and apply themſelves to thoſe arts, which are ſeldom brought to perfection under other circumſtances. For on their ſettling in any country they found it employment ſufficient to cultivate the land (which yet for want of ſeparate property and ſecurity in their poſſeſſions, in thoſe early times, they improved no farther than barely to ſupply preſent neceſſities), and to provide themſelves habitations and neceſſaries for their mutual comfort and ſubſiſtance [k]. Beſides this, they were often obliged to remove from one place to another, where they could more conveniently reſide; and it was a great while before they came to embody themſelves together in towns and cities, and from thence to ſpread into provinces, and to ſettle the bounds and extent of their territories [l]. Two, or three, ages at leaſt muſt have been ſpent in this manner; and it is not very likely, they ſhould amuſe themſelves with celeſtial obſervations in particular, when they had ſo many preſſing affairs to mind. So that the aſtronomical obſervations of the Babylonians, of which Calliſthenes ſent an account to his maſter Ariſtotle [m], if they reached ſo far backwards as we are told, viz. 1903 years, are a further proof of the inſufficiency of the Hebrew chronology, according to which thoſe obſervations muſt have began little more than 100 years after the flood.

—and of commerce.

COMMERCE was in all probability carried on with greater eaſe before the flood, when there was, as it ſeems, but one and the ſame language in the world; yet it was not ſo neceſſary then as it is become ſince, not only becauſe mens wants have been encreaſed by the ill effects of the deluge on the earth and its productions [n], but becauſe they dwelt more together, and might ſupply their occaſions by bartering with their neareſt neighbours, without being obliged to extend their dealings much farther; and that they had no ſhips to carry on a traffic to remote parts ſeems evident; for if navigation had been then found out, ſome

[k] Vid. Thucyd. l. 1. ſub. initio. [l] Stillingfl. Orig. Sacr. book. 1. c. 1. § 16. [m] Vid. Simplic. de cœlo, l. 2. [n] See before, p. 309, &c.

ſome others might have ſaved themſelves from the flood as well as Noah and his family. But after that deſtruction, and the diſperſion of mankind, as it became more difficult to trade with nations who ſpeak different languages, ſo their neceſſities were encreaſed by this diviſion; the colonies, who planted new countries, not only perceiving their own wants by the conveniencies they had left behind them, but finding ſomething uſeful in their ſettlements, which were before unknown to them or their founders. This engaged them to fetch what they wanted from the parts where they had formerly dwelt, and in exchange to carry what they had diſcovered thither; which ſeems to have given the firſt riſe to foreign trade, the gradual advances whereof we may occaſionally mention hereafter. The invention of ſhipping was certainly the greateſt ſtep to its improvement, which made the ſea, before the greateſt obſtacle to commerce, of the greateſt advantage to it °.

CHAP. III.

The Hiſtory of Egypt to the time of Alexander the Great.

SECT. I.

A deſcription of Egypt.

Its names.

EGYPT, called by its antient inhabitants Chemia [a], and by the Copts at preſent Chemi, was ſo named, as is ſuppoſed, from Ham the ſon of Noah, being more than once ſtiled, in the book of pſalms, *the land of Ham*. But the name by which it is generally denoted in ſcripture is, the land of Mizraim, from whence the Arabians and other oriental nations ſtill call it Meſr, which the Greeks write Meſre and Meſtræa. We have already obſerved, that Mizraim is a word of a dual termination [b], and is therefore by ſome thought to have been uſed in that number, becauſe of the twofold diviſion of Egypt hereafter mentioned, and thence given to its firſt planter, the ſon of Ham [c]: the ſingular Maſor ſignifies a fortreſs, and, according to ſome, is alſo uſed in ſcripture as a proper name of that country [d]; though others, and our verſion in particular, tranſlate the word as an appellative: Bochart is of opinion, Egypt received this name from the natural ſtrength of its ſituation [e].

THIS country is beſt known to us by its Greek name Ægypt, the original of which is variouſly accounted for by authors. Some ſay, it was ſo called from one of its kings named Ægyptus [f]; but the contrary ſeems to have been the caſe, not only the country, but its famous river Nile alſo, being antiently called by the ſame name. Others ſay, it ſignifies no more than the land of the Copts, the word Aia

[a] Plut. de Iſid. & Oſir. p. 364. [b] Before, p. 464. [c] Vid. Perizon. orig. Ægypt. p. 6. [d] 2 Kings xix. 24. Iſai. xix. 6. Micah. vii. 12. [e] Phaleg. l. 4. c. 24. [f] Didor. Sic. Euſeb. &c.

Aia being Greek for a country, and Ægoptus eaſily ſoftened into Ægyptus [g]: yet this derivation ſeems as ill grounded as the former; the city of Coptus, whence the remains of the antient Egyptians are ſtill called Copts, being ſituate far up in the higher Egypt, and in all likelyhood utterly unknown to the Greeks till long after the name was in uſe among them. The moſt probable opinion therefore, to omit ſome other conjectures ſtill more groundleſs, is, that this region was ſo called from the blackneſs of its ſoil, and the dark colour both of its river and inhabitants, atteſted by all relations. For ſuch a blackiſh colour is called by the Greeks ægyptios, from gyps and ægyps, a vultur, a bird of that hue; and by the Latins, ſubvulturius. And for the ſame reaſon other names of the ſame import have been given to this country by the Greeks, ſuch as Aeria and Melambolus; the river itſelf was alſo called Melo, or Melas; by the Hebrews Shihor, and by the Ethiopians Siris [h]; all which names ſignify black: and Plutarch ſeems to intimate, the inhabitants therefore called their country Chemia, becauſe its ſoil was very black, like the ſight of the eye [i].

Situation and extent.

EGYPT is ſituate between the 48th and 53d degrees of longitude, and the 24th and 33d degrees of north latitude. Its length from north to ſouth about 600 miles, and the breadth of its coaſt on the Mediterranean, from eaſt to weſt near 300 miles; but above the diviſion of the Nile it grows much narrower, ſo that in ſome places the two chains of mountains which riſe on each ſide of that river, leave a plain between them of leſs than a days journey to croſs [k]. It is bounded on the ſouth by the kingdom of Sennar, which is tributary to the king of Ethiopia, and the cataracts of the Nile; on the north by the Mediterranean ſea, on the eaſt by the Arabian gulph, or red ſea, and the iſthmus of Suez; on the weſt by a region of Libya called Marmarica.

THE old geographers differ as to the antient bounds of this country; ſome have thought, that the Delta only, or that part encompaſſed by the arms of the Nile, was properly to be called Egypt [l]; others make it reach weſtward

[g] See Well's Geog. of the old Teſt. Vol. II. p. 5. [h] Vid. Perizon. ubi ſup. p. 13. [i] Ubi ſup. [k] Vid. Lucas, Voyages, tom. II. p. 193. Gol. in Alfrag. p. 100. [l] Iones apud Herodot. l. 2. c. 15.

to the greater Catabathmus [m], or valley, which divides it from Cyrenaica; but this would give it too great an extent, and include Marmarica and Ammonis, which are by every body elſe agreed to be no part of Egypt. The true limits on that ſide therefore ſeem rather to be taken from Plinthine, a town beyond the lake Mareotis, and to extend eaſtward as far as the lake Serbonis [n], or more exactly to Oſtracine on the Mediterranean ſea, and Heroopolis at the head of the Arabian gulph. The ſouthern bounds were Syene, a city ſituate almoſt under the tropic of Cancer, and Elephantine and Philæ, two others which lie ſomething farther [o].

As the antients differ likewiſe in ſettling the limits of Aſia and Africa, ſome who make the Nile the boundary of thoſe two parts of the world [p], place ſo much of Egypt as lies eaſt of that river in Aſia; but others place it entirely in that part, by removing the limits of Aſia ſo far as Alexandria [q], or the Catabathmus [r]. But we think the common opinion the moſt natural, which divides Aſia from Africa by the Arabian gulph and the iſthmus of Suez. However, we hope the former authorities will excuſe our including the Egyptians among the Aſiatic nations, whoſe hiſtories we give in this book, which we have done meerly for convenience.

Its diviſion. ANTIENT Egypt is divided by ſome into two parts, the upper and the lower Egypt; by others into three, the upper Egypt, properly ſo called, or Thebaïs; the middle Egypt, or Heptanomis; and the lower Egypt, the beſt part of which was the Delta.

Thebais THEBAIS, which was ſo named by the Greeks from its principal city Thebes, is in the ſcripture called Patros, and at preſent al Saïd. It is the moſt ſoutherly part of Egypt next to Ethiopia, and is near as big as all the reſt, including the country on both ſides of the Nile down to the Heptanomis; its laſt city, according to the antients, being Lycopolis on the weſtern, and Antæopolis on the eaſtern ſide of the river; which agrees pretty exactly with the preſent extent of al Saïd, the moſt northern city of which is Manfalût [s].

THERE

[m] Strabo, l. 17. [n] Vid. Herod. ubi. ſup. [o] Vid. Cellar. Geogr. Ant. l. 4. c. 1. [p] Strabo l. 11. Dionys. Perieg. v. 18. Plin. Hiſt. Nat. l. 3. c. 1. [q] Hirtius de bello Alex. c. 14. [r] Salluſt. de bello Jugurth. c. 17. Pomp. Mela, l. 1, c. 8. [s] Lucas, Voy. t. IX. p. 209.

THERE were formerly in this part of Egypt a very great number of large and magnificent cities, with temples dedicated to ſeveral deities, and the tombs of their antient princes; and it is ſaid, there are not only ſeveral obeliſks and coloſſuſſes ſtill remaining there, more beautiful than thoſe to be ſeen in the lower Egypt, but alſo ſome pyramids higher than thoſe near al Kâhira (commonly called Cairo) with other ſtupendous works; ſome of which we may take notice of hereafter.

ITS metropolis Thebes, called afterwards Dioſpolis, or the city of Jupiter, was ſituate on the Nile, and deſervedly reckoned one of the fineſt cities in the world. Its hundred gates are mentioned by Homer, whence it had the ſurname of Hecatompylos (A). It was ſo incredibly populous, that it is ſaid it could ſend out of each gate at one and the ſame time 200 chariots [t], and 10,000 fighting men, if the numbers are true. Its length in Strabo's time was 80 furlongs [u], or 10 miles: but this was nothing in compariſon of its antient extent before it was ruined by Cambyſes; which, we are told, was no leſs than 420 ſtadia, or 52 miles and a half [w] (B). The riches of this city were ſo very great, that after it had been plundered by the Perſians, what was found on burning the remains of the pillage, amounted to above 300 talents of gold, and 2,300 talents of ſilver [x]. Who was the firſt founder of this city is uncertain; ſome ſay, it was built by Oſiris, who gave it firſt the name of his mother [y]; but others make it the work of a ſecond Buſiris [z]. It may not be amiſs to obſerve, that formerly the

[t] Homer, Il. 10. v. 387. Diod. Sic. l. 1. p. 43. Pomp. Mela. l. 1. c. 9. [u] Strabo. l. 17. p. 1170. [w] Euſtath. ad Dionys. &c. [x] Diod. Sic. ubi ſup. [y] Idem ibid. p. 18. [z] Ibid. p. 42.

(A) Others ſay this is not the number of the gates of the city itſelf; but the temples within it having many large porches, the city had thence the name, expreſſing a definite for an indefinite number (1).

(B) Yet it contained but 1700 aruras (a meaſure of 100 cubits ſquare); for which reaſon it is ſuppoſed its length much exceeded its breadth, being probably built chiefly on the banks of the Nile (2).

(1) Diodor. Sic. ubi ſup. p. 43. (2) Vid Voſſium in Melam. p. 371.

name of Thebes was given to all Egypt [a], which makes what is said above of its great power more credible.

The other antient cities of great note in Thebaïs, were the lesser Diospolis, This, Abydus, Tentyris Hermonthis, Latopolis, Syene, Coptos, and several others, all which are now either quite ruined, or become small towns and villages. The last deserves particular mention, not only as being a very antient city, but for having been the chief residence of the native Egyptians for many ages, since their country has been subject to a foreign power, and whence they received their present name of Copts.

Heptanomis

Hetanomis, or the middle Egypt, was so called from the seven nomes, or præfectures, into which it was divided, though Strabo says it contained sixteen [b]; which difference may have been occasioned by the adding of new nomes to those it originally comprized, as were in particular those of Oasis, of which name there were two cities, not properly in Egypt, but on the borders of Lybia. The Heptanomis comprehended all the country on each side of the Nile from Thebaïs to the point of the Delta, where that river divides itself into those branches by which it enters the sea. Some of the antients make this tract a part of the Thebaïs; and some of the eastern geographers also give the same extent to al Saïd [c].

This part of Egypt was also in old times very full of large and noble cities, the principal of which was Memphis, built by Menes their first king, and for many ages the capital of the whole kingdom. Here also were the lake of Mœris, the labyrinths, and the pyramids so celebrated by antiquity, of which we shall give some description hereafter.

Lower Egypt

The lower Egypt, reaching from Heptanomis to the Mediterranean sea, contained not only that part which is encompassed by the arms of the Nile, and from its triangular figure named Delta, but also Mareotis, and Alexandria with its dependencies, to the west; and Casiotis, and Augustamnica, with some other territories towards Arabia to the east.

Some have imagined the Delta, or the greater part of it, to have been an accession of land to Egypt, and that the

[a] Herod. l. 11: Aristot Meteor. 1.
[b] Strabo. l. 16.
[c] Vid. Golij not. ad Alfrag. p. 100.

the plains between the mountains beyond Memphis were formerly a bay of the ſea, which was at length filled up by the ſoil brought down by the Nile [d]. But this opinion ſeems very groundleſs, conſidering the little alteration which has been in this part of Egypt for above 2,000 years paſt, and the time allowed for this effect by Herodotus, which is no leſs than 20,000 years, a much longer ſpace than the world has laſted. Some Arabs divide the Delta into two parts, al Rif, and al Bahriya. The former, being the weſtern part, is ſuppoſed by Bochart to be the Rahab of the ſcriptures [e], and was ſo called becauſe of its form reſembling a pear, which the Egyptians call rib, or ribi [f]. Al Bahriya is the eaſtern part of the Delta according to ſeveral [g], though a late traveller more purely places al Bahriya, or as he writes it Beheiré, beyond the weſtern branch of the Nile [h]. The chief cities of the lower Egypt were Tanis, Saïs, and Xoïs, famous for being the ſeats of ſeveral races of princes; and in later times Alexandria, which was the metropolis of the whole kingdom, while in the poſſeſſion of the Greeks and Romans.

Its diviſions into nomes.

BESIDES this larger diviſion, Egypt was alſo diſtributed into ſeveral governments, or præfectures, called by the Egyptians Tabir, and by the Greek Nomes; whence that paſſage of ſcripture [i], which our verſion renders, *I will ſet the Egyptians againſt the Egyptians, and they ſhall fight kingdom againſt kingdom* the Septuagint have rightly tranſlated, *nome againſt nome.* The number of theſe are uncertain, being, according to the pleaſure of the prince, ſometimes more, and ſometimes leſs; for which reaſon antient authors differ in their accounts of them: but they were about thirty ſix, and generally named from the chief city of each nome. This diviſion is attributed to Seſoſtris [k].

IT is not our purpoſe here to enter into a particular detail of the cities of Egypt, or any geographical diſquiſitions as to their antient and modern ſtates, names, and ſituations; but we ſhall in the courſe of this work occaſionally make ſuch obſervations in relation thereto, as we ſhall judge curious or neceſſary.

Climate.

THE climate of Egypt muſt needs be very warm, from its near ſituation to the tropic. Though the air is generally dry, yet there fall great dews after the ſwelling of the Nile, which continue for ſeveral months; in the lower Egypt it often rains in the winter, notwithſtanding what ſome of the antients ſay to the contrary [l], and even ſnow has been obſerved to fall at Alexandria, contrary to the expreſs aſſertion of Seneca [m]. In the upper Egypt indeed, towards the catadupes, or cataracts of Nile, it rains very ſeldom [n]. The firſt ſummer (for they reckon two in Egypt), which is in March, April, and May, is the moſt inconvenient and ſickly ſeaſon, becauſe of the unequal weather, exceſſive heats, and hot winds which reign at that time, and cauſe ſeveral diſtempers: but in return, in their ſecond ſummer, in June, July, and Auguſt, and in their autumn and winter, one breaths a much cooler air, the weather is more conſtant, and it is then moſt delightful living in this country. Though the cold is ſeldom felt there, except only for about ſeven days, which the Arabs call Berd al ajûz, the old woman's cold, from the 7th to the 14th of February, yet thoſe who are tolerably rich wear furs, becauſe of the uncertainty of the ſeaſon [o].

Fertility.

THE fertility of Egypt, and the excellence of its productions and fruits are greatly celebrated by antient writers, and by Moſes himſelf [p], who muſt needs have been well acquainted with this country. It abounds in grain of all ſorts, but particularly rice; inſomuch, that, as it was formerly the granary of Rome, while ſubject to the Roman empire, it is now the principal country which ſupplies Conſtantinople.

THE moſt plentiful parts of Egypt are the Delta, and that province which is now called al Feyyûm, ſuppoſed to be the ancient Heracleotic nome [q]; the capital of which, bearing the ſame name, is thought to have been either Heracliopolis, Nilopolis, or Arſinoe, and is ſaid by the natives to have been built by Joſeph, to whom they own themſelves obliged for the improvements of this territory; which, being much the loweſt part of Egypt, was before nothing but a ſtanding pool, till that patriarch, by cutting

[l] Plato in Tim. Pomp. Mela. [m] Nat. quæſt. l. 4. [n] Vid. Greaves's Deſcrip. of the Pyramids, p. 74, &c. Ray's Collect. of Travels. t. II. p. 92. [o] Ibid. & Lucas, Voy. t. II. p. 239. [p] Geneſ. xiii. 10. [q] Vid. Strabon. l. 17.

ting canals, and particularly the great one which reaches from the Nile to the lake Mœris, drained it of the water, and clearing it of the ruſhes and marſhy weeds, rendered it fit for tillage. It is now the moſt fertile and beſt cultivated land in the whole kingdom, containing above 360 villages, and yields linen, grapes, and other fruits in abundance; and it fails not bearing, even in thoſe years, when the Nile's not riſing to its uſual height occaſions a ſcarcity in the other parts of Egypt[r].

Of the river Nile.

Having ſpoken of the plenty of Egypt, it would be an unpardonable omiſſion not to ſay ſomething of the river Nile, to which this country is indebted for all its fertility and happineſs. The ſources, or ſprings, of this river were ſo abſolutely unknown to the ancients, that they thought it even impoſſible to diſcover them: they are now well known to be in Ethiopia, though modern travellers differ in their accounts of them, as will be ſeen when we come to deſcribe them in a more proper place. The Nile enters Egypt almoſt under the tropic of Cancer, violently pouring itſelf, as it paſſes, down no leſs than ſeven cataracts, or falls, from a very conſiderable height, between ragged rocks and precipices, with ſo great a noiſe that it may be heard ſeveral miles off. The people of thoſe parts uſed formerly to entertain ſtrangers with a ſurprizing ſpectacle, which ſome modern travellers ſay is ſtill continued: two of them get into a ſmall boat, one to guide it, and the other to keep it clear of water; after having borne the violence of the agitated waves for ſome time, they dexterouſly ſteer their boat through the narrow channels, thereby avoiding the rocks, and letting themſelves be carried down by the falling river, direct their little veſſel with their hands, and ruſhing headlong, to the great terror of the ſpectators, who think them utterly loſt and ſwallowed up, they appear again on the water, far from the place from which they fell, as if they had been ſhot out of an engine[s]. The Nile, having paſſed through the upper and middle Egypt, a little below the ancient Memphis divided itſelf into two large arms, which afterwards forming ſeven channels, emptied themſelves into the ſea by as many mouths. Theſe ſeven mouths of the Nile, much ſpoken of by the ancient writers, were, to begin from the weſt, the Canopic, the Heracleotic, the Bolbitic, the Sebennytic, the Phatnic, or Pathmetic,

[r] Golij not. ad Alfrag. p. 157, &c. Kircher Oedip. Vol. I. p. 8. Lucas, ubi ſup. p. 205.

[s] Senec. Nat. quæſt. l. 4. c. 2.

Pathmetic, the Mendeſian, the Tanitic, or Saïtic, and the Peluſian; which had their names from ſo many cities ſtanding on their ſeveral branches. Beſides theſe, there were the two Pſeudoſtomata, or falſe mouths, as they called them, of Pineptimi and Diolcos, which were too ſmall to carry larger veſſels. But the greater part of theſe mouths have been ſince ſtopped up, and others formed, ſo that there are now reckoned to be above thirty channels which carry the waters of the Nile into the ſea, eſpecially at the time of its overflowing, the greater part of them becoming dry when the waters retire [t]; the two chief, and indeed only conſiderable, arms of that river at preſent, being that of Roſetta, or Raſhîd, to the weſt, and that of Damietta, or Dimyât, to the eaſt.

The annual overflowing

The annual inundation of the Nile, on which the fertility of Egypt depends, is one of the greateſt wonders of that country. The ancient writers tell us, that it begins to riſe in Egypt about the ſummer ſolſtice, and continues ſo to do till after the autumnal equinox, for about the ſpace of one hundred days; and then it gradually decreaſes for as many days, till it retires within its banks, and overflows no more till the next year. If the river did not riſe to the height of ſixteen cubits, or fifteen at leaſt, the country was not covered with water, and a dearth enſued [u]: this account comes very near to thoſe given by modern travellers. Though the river begins to ſwell in May, yet no public notice is taken of it till the 28th, or 29th, of June, by which time it is uſually riſen to the height of ſix, or eight, pikes (a Turkiſh meaſure of about twenty ſix inches); and then the public criers proclaim it through the capital and other cities, and continue in the ſame manner to publiſh how much the river increaſes every day, till it riſes to ſixteen pikes, and then they dut down the dam of the Khalîj, or great canal at Bulâk, which paſſes through the midſt of al Kâhira, and let in the water on their lands, by an artifice we ſhall mention by and by. If the river want but an inch of this height, they will not cut the dam, becauſe in ſuch caſe no tribute is due to the prince for the lands which ſhould be watered by them, the produce being then ſcarce ſufficient to maintain the tillers. And therefore at preſent, if the Baſhaw, or governor, of Egypt cut this dam before the river riſe to that determinate height, he is anſwerable for

[t] Lucas, ubi ſup. p. 313; [u] Herod. l. 2, Diod. Sic. l. 1. Vid. Plin. l. 5. c. 9.

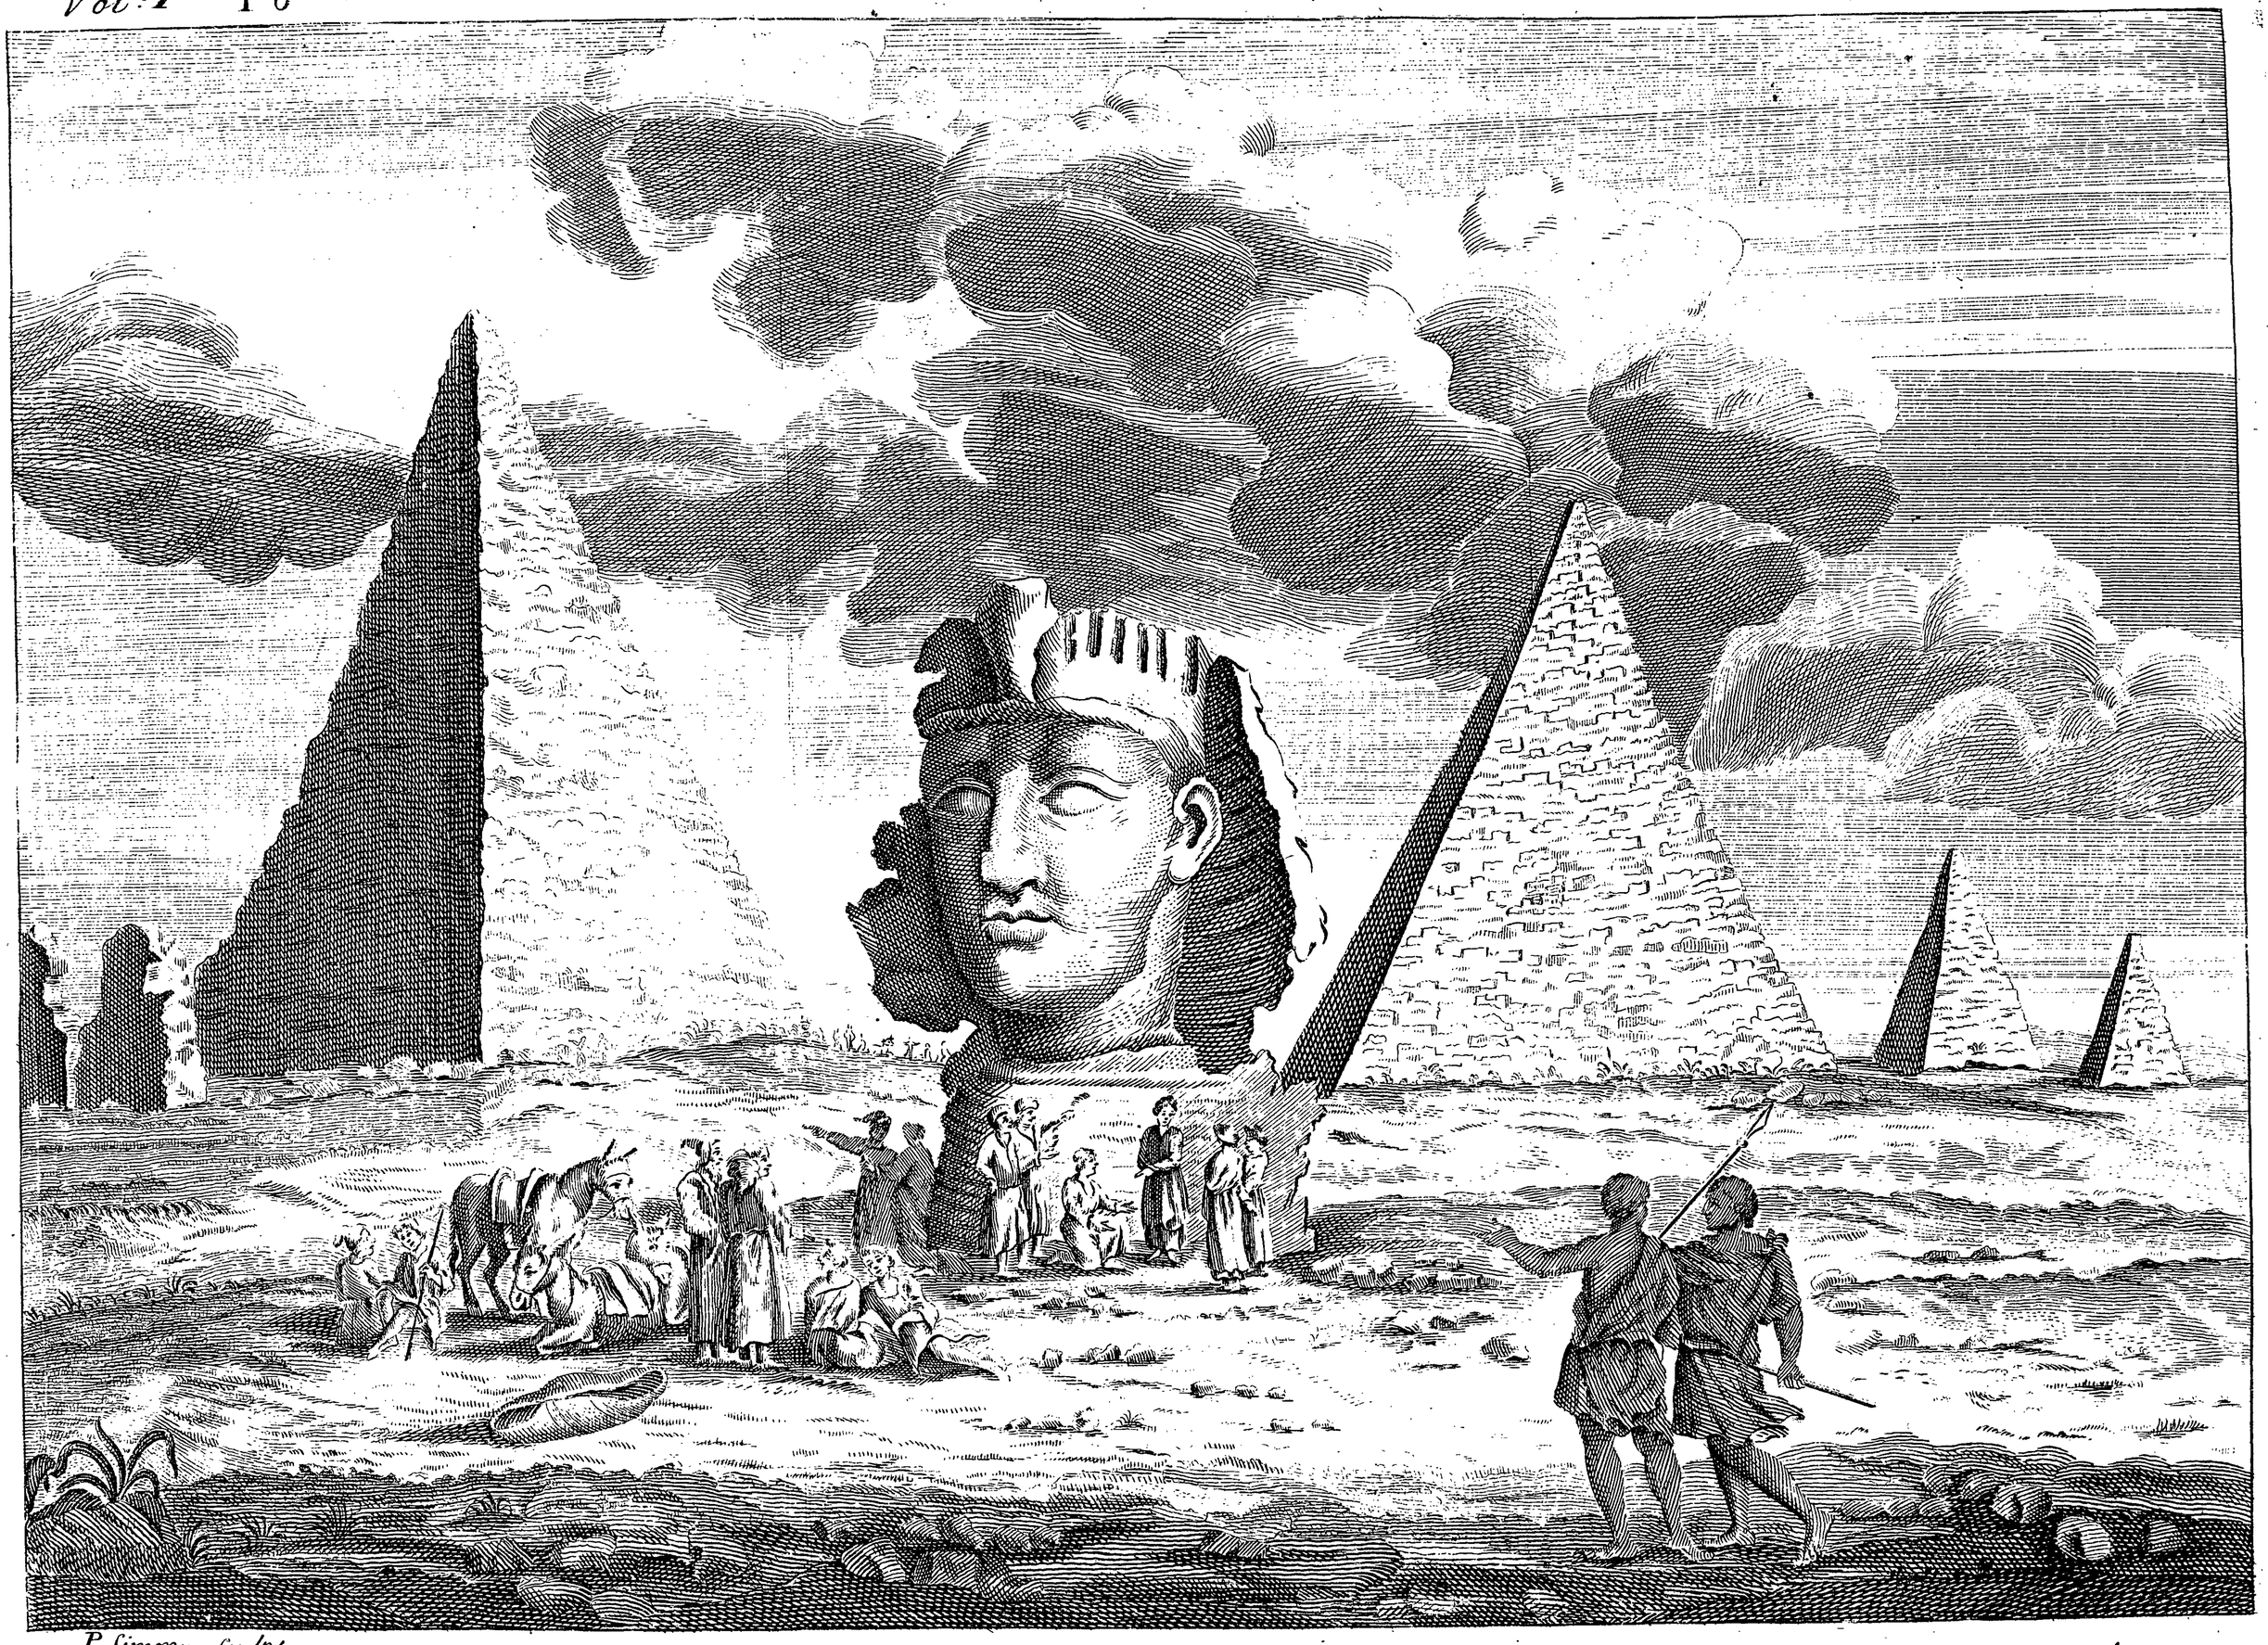
for the conſequence, and muſt pay the Turkiſh emperor his tribute, whether the year be plentiful or no. If the water encreaſe to the height of twenty three, or twenty four, pikes, it is judged moſt favourable; but if it exceed that, it does a great deal of miſchief, not only by overthrowing houſes, and drowning cattle, but alſo by engendering a great number of inſects, which deſtroy the fruits of the earth [w].

THE Khalîj abovementioned is always opened with great ſolemnity in the preſence of the Baſha, accompanied by all his great officers, ånd attended by an innumerable multitude of people, this being one of the greateſt feſtivals in Egypt [x]; and in former times, we are told, the Egyptians uſed annually at this ceremony to ſacrifice a girl, or, as others ſay, a boy and a girl, to the Nile, as a tribute paid to that river for all the benefits they received from it. And this inhuman cuſtom continued, it is ſaid, till the Turks made themſelves maſters of Egypt (C); the firſt governor under whom reſolved to aboliſh it, and by his prudent remonſtrances prevailed on the Egyptians to omit it: but the river unfortunately did not riſe that year to the accuſtomed height. The year following it was ſtill worſe, ſo that the people, apprehending a famine, began to murmur: whereupon the governor led all the inhabitants of the city, Turks, Jews, and Chriſtians, to a mountain on the eaſt of al Kâhira, and, after a pathetic exhortation, he obliged all that were preſent to offer up their prayers to God for the obtaining his mercy; in which exerciſe they paſſed all the reſt of that day and the following night. The next morning before day, ſome women came, with great joy, to acquaint the governor, that the Nile had riſen in the night no leſs than twelve pikes; whereupon nothing was heard but the praiſes of God and acclamations of the people. Coming down from

[w] Lucas, ubi ſup. p. 327, &c. Vid. Thevenot, Voy. part 1. c. 22, 45, 46, &c. [x] Vid. eoſd. ubi ſup.

(C) It ſeems very ſtrange, that ſuch a practice ſhould be ſuffered, not only during the time Egypt was ſubject to the chriſtian emperors of Conſtantinople, but while the Arabs were maſters of it. Amoſis, one of the ancient Egyptian kings, is ſaid to have aboliſhed the human ſacrifices offered to Juno, as will be obſerved hereafter; and it might be reaſonably ſuppoſed, he would alſo have put a ſtop to thoſe offered to the Nile. Perhaps we may ſet this matter in a clearer light, when we come to the Arabian and Turkiſh hiſtory.

from the mountain, they erected an altar at the mouth of the canal ten foot high, whereon they threw a great quantity of flowers, and a branch of olive, which laſt, as they ſay, took root there, as a more agreeable offering to God than the former innocent victim; and they continue ſtill to erect ſuch an altar every year, and when they break down the dam, and the waters enters the Khalîj, it carries down the altar and flowers with it. The year when this event happened the Nile roſe two pikes higher than it uſed to do, and there was very great plenty; ſince which time, a final ſtop being put to the abovementioned ſuperſtitious practice, whenever the waters fail of their accuſtomed height, they have recourſe to prayers on the ſame mountain [y].



Of the Nilometers.

THAT they may the better judge of the daily encreaſe of the water, and the conſequent plenty or ſcarcity of the enſuing year, the gradual riſe of the river is very exactly meaſured either by wells ſunk, or pillars erected and divided for that purpoſe. There was one of the former, we are told, on the bank of the Nile, in the upper Egypt near Syene [z]; and one of the latter was ſet up in Memphis [a]. A very antient column, which ſerved for the ſame uſe, is alſo yet to be ſeen in the caſtle of old Kâhira, ſaid to be erected in the time of the emperor Heraclius. The preſent Nilometer (D), or Mikyâs, as the Arabs call it, is in the ſame caſtle; it is a large ſquare reſervoir, round which runs a handſome

y Lucas, ubi ſup. Vid. Thevenot, ubi ſup. z Strabo, l. 17. p. 817. a Diodor. Sic. l. 1. p. 33.

(D) This Nilometer is different from that built in an iſland of the Nile, between Jîzah and al Foſtât (which from its pleaſant ſituation, and being planted with ſeveral ſorts of fruit-trees, is much celebrated by the oriental writers, and called al Rawdat, or the Garden) by Aſâmah ebn Yazîd (3), collector of the tribute in Egypt, in the reign of the Khalîfah Soleymâan ebn Abd'almalek. Some years after the Khalîfah al Mâmûm ordered it to be pulled down, on account of ſome defect therein, and a new one to be built in its room, which was at laſt finiſhed in a magnificent manner by al Motawakkel (4). The eaſtern hiſtories mention ſeveral other ſtructures of this ſort, built, or repaired by the Khalîfahs, while maſters of Egypt.

(3) Elmacin. in vita Solymân. (4) Vid. Golij Not. ad Alfrag. p. 156. & D'Herbelot Bibl. orient. p. 672.

P Simms Sculpt

handſome gallery, ſuſtained by twelve marble pillars, which form arches, with a baluſtrade to lean on when one looks into the water. In the midſt of this baſon, through which paſſes a canal drawn from the Nile, is an octogonal pillar of white marble, divided into twenty two equal parts; the firſt is again divided into twenty four inches, but the ſecond is not; however, the others are all marked to the top of the column. They are very careful, during the time of the inundation, to obſerve the height of the water by the meaſure; and every day proclaim it in the city. This work is ſo exactly finiſhed and nicely levelled, that the water in the reſervoir is neither higher nor lower than that in the river [b].

Of the Sphinxes.

As theſe Nilometers ſerved to meaſure the overflowing of the river, the Sphinxes, of which there were alſo a great many in ſeveral places, ſhewed the beginning of the waters riſing; being a ſymbolic repreſentation, or figure, with the head of a woman and the body of a lyon, ſignifying, that the Nile began to ſwell in the months of July and Auguſt, when the ſun paſſes through the ſigns of Leo and Virgo [c]. There are ſeveral of theſe Sphinxes ſtill to be ſeen; one in particular near the pyramids much ſpoken of by the antients, being of a prodigious ſize, and cut out of the rock itſelf: the head and neck only appear at preſent, the reſt of the body being hid in the ſand. It is, according to Thevenot [d], twenty-ſix foot high, and fifteen foot from the ear to the chin; but Pliny aſſures us, that the head was no leſs than one hundred and two foot about, and ſixty two foot high from the belly, and that the body was one hundred and forty three foot long, and was thought to be the ſepulchre of king Amaſis [e]. There is another alſo at the end of the lake of al Matariya, which lies on its ſide, the head being ſeparated from the body [f].

The manner of conveying the water on their lands.

As it may eaſily be conceived, this river could not of itſelf overflow the lands every where in the neceſſary proportion, the inhabitants have been obliged, with infinite labour, to cut a vaſt number of canals and trenches from one end of Egypt to the other, to convey the water to every part; ſo that each town and village has its canal, which is opened at the proper time, and the water ſucceſſively conducted to the moſt diſtant places. Theſe canals, or trenches, are not permitted to be opened till the river has roſe to a certain height,

[b] Lucas, ubi ſup. p. 313, 321, &c.
[c] Ibid. p. 323.

[e] Pliny Nat. Hiſt. l. 36. c. 12.
[f] Lucas, ubi ſup.

height, nor yet all at once, because in such case some lands would have too much water, and others too little; but they begin to open them first in the upper Egypt, and then gradually lower, according to a public regulation of the measures made for that purpose. By this means the water is so carefully husbanded, that if it rises to twenty four pikes it suffices the whole country; which is so large, and the canals so numerous, that it is thought scarce a tenth part of the waters of the Nile enter the sea for the first three months of its overflowing. However, as some places lie too high to be watered by the canals, they are obliged to raise the water to cover them by engines. Formerly they made use of Archimedes's screw, thence named the Egyptian pump [g]; but they now generally use wheels, which carry a rope or chain of earthen pots, holding about seven, or eight, quarts apiece, and draw the water from the canals. There are besides a vast number of wells in Egypt, from which the water is drawn in the same manner to water the gardens and fruit trees; so that it is no exageration of the matter to say, that there are in Egypt above two hundred thousand oxen daily employed in this labour, without reckoning the men who draw water in wicker baskets, so close and well made that not a drop runs through. As the land lies perfectly even, they cut their gardens into little square beds, which are all surrounded with trenches higher than the level of the gardens, so that when they want to water one of these beds, they open one of the trenches, which immediately furnishes as much water as is necessary; after which they stop it up again, and thus they manage the rest; by which means they have the finest and most fertile gardens in the world. Pomgranats, oranges, lemons, and several other sorts of trees, afford a shade and coolness, which, notwithstanding the heat of the climate, make it delightful walking. When a tree is wanting in any place, they only cut down a branch, which they plant by the side of a little trench, and in two, or three, years it grows to be a tree big enough to transplant.

The fecundity occasioned by the Nile.

The Nile differing in this from other rivers, which generally carry off the heart of the land they overflow, by the mud, or slime, it brings down with it. fattens the earth and makes it exceeding fruitful, without any other manure. The Egyptians have not the laborious task of ploughing digging, or

[g] Vid. Diod. Sic. l. 1. p. 30, & l. 5. p. 313.

or breaking the clods, but when the river is retired they have no more to do, than to mingle a little ſand with the earth to abate its ſtrength; after which they ſow with little pains, and almoſt without charge. Antiently, we are told, they uſed to put their hogs to tread the ſeed into the ground, expecting the harveſt without any further care; and when that ſeaſon came they let in the hogs again to ſhake the grain out of the ear, and had no other trouble than to gather and lay up the corn [h]. They ſow ordinarily in October and November, as the waters fall: within two months the ground is covered with all ſorts of grain and pulſe; and their harveſt is in March and April. The ſame piece of ground produces the ſame year three, or four, different ſorts of fruits and garden-ſtuff: firſt, they ſow lettice and cucumbers, then corn; and after harveſt, melons, and thoſe ſorts of pulſe which are peculiar to Egypt.

WHAT is moſt extraordinary is, that this ſurprizing fecundity, cauſed by the inundation of the Nile, reaches not only to the earth, but alſo to mankind and animals [i]. It is found by conſtant experience, that the new waters make the women fruitful, whether they bath in them, or only drink them: they uſually conceive in July and Auguſt, and are delivered in April and May. As to the cattle, the cows almoſt always bring two calves at a time; the ſheep yean twice a year, having two lambs the firſt time, and but one the ſecond; and a goat is often ſeen followed by four kids, which ſhe has brought in ſix months: the paſtures of Egypt are moſt excellent, the graſs generally growing to the height of the cattle: on this they feed in winter, during which ſeaſon great numbers are driven thither from the Euphrates; in ſummer, the grounds being either burnt up by the ſun, or overflowed by the Nile, they are taken up, and fed with hay, beans, and barley.

THERE is not a more pleaſant ſight in the world than Egypt in two ſeaſons of the year; for if you aſcend ſome mountains, or one of the great pyramids of al Kâhira, about the months of July and Auguſt, you ſee a wide ſea, out of which there ariſe a vaſt number of villages, turrets, and ſpires, appearing like the iſles in the Ægean ſea [k], with ſome cauſeways for communication, intermixed with groves and a great number of fruit-trees, whoſe tops only are ſeen; all which affords a moſt enchanting proſpect. This

Two different appearances of Egypt in two ſeaſons.

[h] Herod. l. 2. Diod. Sic. l. 1, p. 32. [i] Vid. Diodor. Sic. l. 1. p. 32. [k] Vid. Herod. & Diodor. Sic. ubi ſup.

This view is terminated by mountains and woods, which at a distance forms the most agreeable perspective in the world. On the other hand, in the winter, that is, about January and February, all the country is like a fine meadow, whose verdure, enamelled with flowers, charms the sight. You see on every side herds and flocks of cattle scattered over the plain, with an infinite number of husbandmen and gardeners. The air is then embalmed by the prodigious quantity of flowers, furnished by the oranges, lemons, and other trees; and is so pure, that a man cannot breath one more wholesom or agreeable: so that nature, which is then as it were dead in so many other climates, seems to revive only for the sake of so delightful an abode. If there be any places left which are not quite dried, they are covered with water-fowl in great plenty, which afford diversion to the sportsmen, who kill as many of them as they please.

The cities, towns, and villages in Egypt, to secure them from the inundation of the Nile, are all built either on some rising ground formed by nature, or else, which is generally the case, on mounds raised by infinite labour; the communication between one town and another, while the country is under water, being carried on either by the causeways above-mentioned or boats. When the river is retired within its banks, the canals serve for the same purpose, and to furnish the inhabitants and cattle with water, which the maidens are continually to be seen fetching thence, according to the ancient custom so often taken notice of in scripture [l].

The cause of the inundation of the Nile.

As the ancients were ignorant of the true cause of the inundation of the Nile, which seemed the more unaccountable to them, because, contrary to other rivers, it overflowed in the summer, and was lowest in winter, they made several subtil conjectures to explain this phænomenon [m]. But it has been since well known to be occasioned by the great rains which fall in Ethiopia, about the springs of the Nile, and swell that river into the sea, which first lays Ethiopia almost entirely under water, as it afterwards does Egypt. Agatharchides of Cnidos [n], and some others, guessed this to be the cause, though they were not certain of it; but it was afterwards confirmed by eye-witnesses;

[l] Vid. Lucas, ubi sup. p. 328, &c.
[m] Vid. Herodot l. 2. Diod. Sic. l. 1. p. 33, &c.
[n] Diod. Sic. ibid. p. 39.

witneſſes; Ptolemy Philadelphus, a very inquiſitive prince, having ſent ſome perſons to examine into the matter. It has been thought, that this piece of natural hiſtory was not unknown to Homer himſelf, and that he alludes to it when he ſays [o] that the Nile came down from heaven [p]. Theſe rains conſtantly fall in Ethiopia during the months of April and May [q]; at which time it alſo rains with the ſame regularity in the Indies, cauſing the Indus and the Ganges to overflow their banks, in the ſame manner as the Nile does [r].

THE divine providence has been juſtly admired, in ſending the rains in Ethiopia ſo very punctually for the ſupply of Egypt, where it rains ſo ſeldom, and thereby rendering a moſt dry and ſandy ſoil one of the moſt fruitful in the univerſe. Nor is it to be omitted, that in the beginning of June and the four following months, the Eteſian winds (which ſome formerly imagined to be the great cauſe of the inundation [s]) conſtantly blow from the north-eaſt, and keep back the water from flowing down and emptying itſelf into the ſea too faſt [t]. As the fertility of the land of Canaan was owing to a very different method of providence, that is, to the former and latter rains, which regularly fell at two appointed ſeaſons of the year, while the children of Iſrael continued in their duty, Moſes thought proper to acquaint them before-hand with ſo material a difference between the promiſed land and that they had lately left: *The land whither thou goeſt in poſſeſs to it*, ſays that lawgiver, *is not as the land of Egypt, from whence ye came out, where thou ſowedſt thy ſeed, and wateredſt it with thy foot, as a garden of herbs; but the land whither ye go to poſſeſs it, is a land of hills and valleys, and drinketh water of the rain of heaven; a land which the Lord thy God careth for; the eyes of the Lord thy God are always upon it, from the beginning of the year even unto the end of the year* [u].

Of the animals of Egypt.

LET us now take a view of the animal and vegetable productions of Egypt. The crocodile and hippopotamus, or river-horſe, are, it is to be preſumed, too well known to the reader, to need a particular deſcription here *:

[o] Hom. Odyſſ. 4. v. 581. [p] Strabo, l. 17. p. 1137. [q] Vid. Lucas, ubi ſup. p. 321. [r] Bernier, Voyage de Cachemire, p. 343, &c. [s] Herod. ubi ſupr. [t] Le Bruyn Voyag. tom. II. [u] Deut. xi. 10, 11, 12.

* Vid. Herod. l. 3. Diod. Sic. l. 1. p. 32, Strabo. l. 17.

they are both inhabitants of the Nile. The crocodiles are often killed by the natives. One way of taking them is, by a piece of flesh stuck on an iron hook, and let down into the river by a rope, the other end of which is fastened to a stake: when the crocodile has seized the bait, he is drawn to land, and knocked on the head [w]. Herodotus describes this manner with very little variation [x]. Another more dangerous way is sometimes practised, by striking them, as they sleep, under the belly, with a stake armed with a bearded point of iron, and also fastened to a rope [y]. A more extraordinary method still was made use of to catch one of these creatures that had done much mischief: the person, who undertook it for a reward, bound his son, a young lad, to a stake in the place where the crocodile used to come, and laid himself flat on his belly with two short clubs in his hand, one of which was wound round at the end with a very large ball of course thread dipped in pitch, and so waited for the crocodile; who coming out of the river and smelling the boy, made directly towards him; but as he opened his mouth to seize him, the father thrust the staff with the pitched ball into his jaws, which sticking in his teeth and entangling them as he bit it, the man broke his back, and killed him with the other [z]. The inhabitants of Tentyris are reported to have been very bold and dexterous in hunting these creatures, and that they would even leap on their backs in the water, and clapping a stick across their mouths, as they opened them to bite, manage them as with a bridle, and bring them to land: so that these creatures were terrified even by their voice and smell [a]. The flesh of the crocodile is white and fat, and is a delicious dish when young; the Arabs of the upper Egypt are very fond of it [b], and formerly the inhabitants of Elephantis used also to eat these animals [c].

The hippopotami are common in the upper Egypt, especially near the cataracts, but are scarce to be met with in any part of the lower Egypt. These creatures never go in herds, and it is rare to see two of them together. They are

[w] Lettres du P. Sicard, dans les Mem. des Missions. tom. vi. p. 252. [x] Ubi supr. [y] Sicard, ubi supr. [z] Lucas, ubi supr. tom. i. p. 88. [a] Plin. Nat. Hist. l. 8. c. 25. [b] Sicard, ubi supr. Herod. ubi supr.

are ſo diſtruſtful, and fly with that ſwiftneſs from their purſuers, that they are very ſeldom taken [d].

BESIDES wild and tame oxen, camels, aſſes, goats, and ſheep, of which there is great plenty in Egypt, and the fleſh of the laſt very delicate food, there are vaſt number of antelopes, and a large kind of ape, with a head ſomewhat like a dog, whence it was called cynocephalus: the Egyptians often uſed the figure of this beaſt as a hieroglyphic. The camelion is alſo common in the hedges near al Kâhira.

THE animal called the little, or land crocodile (which we take to be the ſcincus of Pliny [e]) is about the bigneſs of a lizard, and has a round tail covered with ſcales. It is found near the Nile and the red ſea, and uſually feeds on the moſt odoriferous flowers: the fleſh is of uſe in phyſic, great numbers of them being for that reaſon carried to Venice and other places.

THE Egyptian rat, called by the ancients ichneumon, is of the ſize of a cat, with very rough hair, ſpotted with white, yellow, and aſh colour; its noſe like that of a hog, with which it digs up the earth: it has ſhort black legs, and a tail like a fox. It lives on lizards, ſerpents, ſnails, camelions, rats, and other animals; and is of ſo great ſervice in Egypt, by its natural inſtinct hunting out and breaking the eggs of the crocodile, and thereby preventing too great an increaſe of that deſtructive creature. The naturaliſts alſo ſay, that it is ſo greedy after the crocodile's liver, that rowling itſelf in mud, it ſlips down his throat, while he ſleeps with his mouth open, and gnaws its way out again [f]. This animal is eaſily tamed, but muſt not be kept where cats are, with which they are at perpetual enmity [g].

OF birds there are alſo great numbers in Egypt, particularly oſtriches, eagles, hawks, and a prodigious number of water-fowl, as pelicans, flamingoes, or phænicopteri, wild geeſe, herons, ducks, and various other ſorts. Thoſe which are proper to the Nile, are the ibis, the gooſe with golden feathers, the rice-hen, or hen of Dimyât, and the ſakſak; which laſt is the trochilus of the antients [h], obſerved by them to be the only creature with which the

[d] Sicard, ubi ſupr. p. 251.
[e] Nat. Hiſt. ubi ſupr.
[f] Vid. Diod. Sic. p. 32, 78.
[g] Vid. Lucas, ubi ſupr. p. 245.
[h] Sicard, Mem. des Miſſ. Tom. VI. p. 249.

crocodile is in friendſhip, becauſe this bird picks and clears his mouth of the leaches which infeſt it [i]. The ibis deſerves particular notice, not only becauſe it is ſo peculiar to Egypt, that it pines away and dies if carried elſewhere, but for the great uſe it is of in that country, by deſtroying flying ſerpents, which the ſouth winds bring from the deſarts of Libya, and are ſhaped, as the water-ſnakes, with wings like a bat: in the proper ſeaſon of the year, theſe birds in vaſt numbers, by a peculiar inſtinct, go and wait on the frontiers for theſe ſerpents, and devour them as they fly before they enter Egypt. There are two kinds of the ibis, one is of a deep black, and about the bigneſs of a heron: this is the ibis which kills the ſerpents, and is ſeldom found except in the lower Egypt: the other is white, but has the head, neck, and end of the wings and tail as black as the former; and are ſo common, that one often ſees vaſt numbers of them. The bill and legs of this bird reſemble thoſe of a ſtork; its uſual food (beſides the ſerpents above-mentioned) are ſnails, locuſts, and other inſects *.

Besides the lakes which are in other parts of Egypt, thoſe in the Delta near the ſea, of which there are three pretty large ones between Alexandria and Tinah [k], the antient Peluſium, afforded great numbers of fiſh, though not above ſeven or eight ſorts; two of which they ſalt; and ſend large quantities to Syria, Cyprus, and Conſtantinople. The revenues of one of thoſe lakes alone, called Manzalah, bring into the Turkiſh emperor's treaſury no leſs than forty thouſand crowns a year. Thoſe who live near theſe lakes eat a great deal of freſh fiſh, and very cheap, as the Iſraelites formerly did [l]; but the heat of the climate will not ſuffer them to be carried far; for which reaſon the inhabitants of al Kâhira are obliged to content themſelves with the fiſh which the Nile affords them. The bed of the river, being very full of mud and ſlime, communicates a muddy taſt of all the fiſh that are fed in it, except four ſorts, which are very excellent. Theſe are the keſher, or lates, the latos of the antients, which is often ſo large as to weigh two or three hundred pounds; the cuſhouc, formerly called oxyrinchus, from the ſharpneſs of its noſe; the bonni, which weighs ſometimes twenty or thirty

[i] Herodot. ubi ſupr.
ubi ſupr. p. 246.
[l] Numb. xi. 5.

* Vid. Herod. ibid. Lucas,
[k] Sicard, ubi ſupr. p. 233, &c.

thirty pounds, and is the lepidotus ſo much eſteemed by the old Egyptians; and the karmûd, known in antient writers by the name of phagrus: this laſt is black, grows to the ſame ſize as the bonni, and is a very voracious fiſh. What makes theſe fiſh the more ſerviceable to the inhabitants of al Kâhira is, that they are to be found in the Nile at all ſeaſons of the year, and are very eaſily taken [m].

Of the vegetables of Egypt.

THOUGH woods are very rare in Egypt, yet there are ſome foreſts of palm-trees towards the deſarts of Libya; and near Dandera, the antient Tentyra, there is one of doms, or wild date-trees [n], whoſe fruit is exceſſive hard, but much admired by thoſe of the country. Palm-trees are the moſt common of all others in this country; beſides which there are ſeveral ſorts of fruit-trees, and alſo ſome cedars, though not ſo large, or ſo frequently ſeen as in Syria; and a great thorny tree called al hilaji, out of which perhaps the antient Egyptians made thoſe boats mentioned by Herodotus [o]. However, Egypt is not a country proper for trees, which thrive not there without great care and cultivation. As to the plants, the caſe is very different; the kinds are ſo very various, that we ſhall mention only a few, and chiefly thoſe which may give ſome light into antient hiſtory.

THE firſt we ſhall take notice of is the red papyrus, or byblus, called at preſent by the natives al berdi. It grows on the banks of the Nile, and ſhoots out a ſtalk of nine or ten foot high; the trunk is compoſed of a great number of long ſtrait fibres, which produce ſmall flowers; the leaves are like the blade of a ſword, and they make uſe of them to keep wounds open; the aſhes of the ſtalk alſo cure thoſe that are not inveterate. This is the plant whereof the antients made their writing-paper, which thence took its name. The way of making it was, by taking out the pith of the ſtalk, which they worked into a white paſte, or glew, and of that made the paper, almoſt in the ſame manner as we do our linen rags; but others ſay, it was made of the inner rind of the plant. Before agriculture was improved in Egypt, this reed was of great ſervice; for they did not only uſe it as food, but made cloaths, boats, and domeſtic utenſils of it; and alſo crowns for their gods, and ſhoes for their prieſts. But more

[m] Ibid p. 245, &c. Lucas, ubi ſup. p. 242. [n] Sicard, ubi ſupr. p. 157. [o] Lib. 2.

uſeful inventions have ſet all this aſide, and the plant is now entirely neglected [p].

The flax of Egypt, eſpecially one ſort of it, was ſo exceeding fine, and they dreſſed and ſpun it ſo curiouſly, that the threads could ſcarce be ſeen [q]. It grew in ſo great plenty, that they had not only enough to cloath their prieſts (who wore nothing elſe) and people of condition [r], and to make ſhrouds for the dead, but to drive a very great trade with it into foreign parts. The fine linen of Egypt was in great requeſt over all the eaſt [s]; that ſuperfine ſort of it, called byſſus, often dyed in purple, and was ſo dear, that none but rich people could afford to wear it.

The lotus, which grows plentifully in the lower Egypt, eſpecially near Raſhîd, or Roſetta, is called by the inhabitants al baſhnîn, and is a ſpecies of nenuphar, nymphæa, or water-lilly. Its leaves float on the water, and cover the ſurface of it, producing many flowers, which were formerly wove into the crowns of conquerors. The antient Egyptians made bread of the middle, or pulp of this plant dried, which reſembled that of a poppy; and the root of it, which is round, and as big as an apple, was alſo eaten by them [t]. This lotus is different from that fruit of the ſame name whereon the Lotophagi lived [u]: the Arabs at this day make a drink of the Egyptian lotus, which is very good for inward heat: and they eat the ſtalk and heads of them raw, which are moiſt and cooling [w].

The henna, called alcanna by the botaniſts, is a ſhrub which ſhoots forth a great many branches, Its leaves are like that of an olive tree, but ſhorter, broader, and of a more pleaſant green. The flowers, which are ſet like thoſe of the elder, have an agreeable ſmell, and are thrown by the inhabitants into their baths [x]. The women dye their nails and other parts with a reddiſh colour extracted from this plant, by way of ornament.

Other

[p] Lucas, ubi ſupr. p. 249, &c. Vid Rollin. Hiſt. anc. v. i. p. 106. Vid. Plin. l. 13. c. 11. [q] Vid. Nat. Hiſt. l. 19. c. 1. [r] Vid. Geneſ. iv. 42. [s] Prov. vii. 16. Ezek. xxvii. 7. [t] Herod. l. 2. Diod. Sic. l. 1. p. 30. [u] Herod. l. 4. [w] Lucas, ubi ſupra p. 257. Idem, ibid.

OTHER plants, the fruits or roots of which are eaten by the inhabitants, are in so great abundance, and so excellent in their kind, that they are almost sufficient to maintain them without the use of corn [y]; and formerly the labouring people scarce lived on any thing else. It is not therefore so surprizing, that the Israelites in the wilderness regretted *the cucumbers, and the melons, and the leeks, and the onions, and the garlick* [z], which they used to eat so freely in Egypt.

Of the artificial rarities of Egypt.

THE buildings and other works of the antient Egyptians, which have raised the admiration of all succeeding ages, deserve a more peculiar view.

The pyramids.

THE first enquiry generally made by those who would be acquainted with this country, is concerning the pyramids, those stupendous structures, which were deservedly reckoned by the antients among the wonders of the world.

THERE are many of them in several parts of Egypt, and particularly in the upper Egypt, as we have already observed; but those which have been chiefly taken notice of and described by travellers, stand on the west side of the Nile, not far from Jizah, which succeeded the antient Memphis. The number of those pyramids is about twenty, of which three, standing pretty near together, are most remarkable, and are those which have been so often described. The other lie far scattered in the Libyan desart, and are lesser models of the other, though some of them are very considerable, particularly one, which stands south and by west from them, at about twenty miles distance more within the desart, and has been undeservedly neglected both by antient and modern writers, though it be as worthy of memory, and as near a miracle as any of the former three.

Whence so named.

IT is the common opinion, that the word pyramid is derived from the Greek pyr, or pur, fire; and that these structures were so called from their shape, ascending from a broad base, and ending in a point like a flame of fire; others, whose opinion Vossius [a] seems to approve, say, they took the name from pyros, which in the same language signifies wheat, because they will have them to be the granaries of the antient Egyptian kings; but a late writer, versed in the Coptic tongue, has given us another etymology

[y] Plin. l. 21. c. 15. [z] Numb. xi 5. [a] Etymol. ling. Lat. voce Pyramis. Vid. Steph. de urb. voce Πυραμίδες.

etymology from that language, wherein pouro signifies a king, and misi, a race, or generation: and the reason why the pyramids had this name given them was, as he tells us, because they were erected to preserve the memory of those princes and their families; and that those who were descended from them, had therefore recourse to those pillars to prove their pedigree [b] (E).

By whom built.

Who were the builders of these pyramids has been matter of much dispute. Josephus [c], followed by some modern writers [d], supposed, they were erected by the Israelites during their heavy pressure under the tyranny of the Pharaohs. The scriptures, however, seem to be against this opinion, for they expressly make the slavish employment of that people to have been the making of bricks, whereas all these pyramids are of stone. Others pretend, they were built by the patriarch Joseph, for granaries to lay up the corn of the seven plentiful years [e]; and, to support this imagination, alledge the abovementioned derivation from pyros, wheat: but this opinion is much more groundless than the former; for besides that their figure is the least capacious of any regular mathematical body, and therefore improper

[b] Wilkins Differ. de ling. Copt. p. 108. [c] Antiq. l. 2. c. 5. [d] Spondanus de cœmet. sacr. l. 1. c. 6. Perizon. Orig. Ægypt. p. 387, &c. [e] Steph. de urb. ubi sup. Nicetas, Nonnus, &c. apud Greaves, ubi infra.

(E) This gentleman endeavours to support his assertion by the authority of Herodotus, as if he affirmed, that the Egyptians preserved their genealogies on pillars, and that those pillars were called pyramids: but we do not remember any such thing in that author. The passage quoted is no more than this; that when Hecatæus the historian acquainted the priest of Jupiter with his genealogy, and derived himself from no less than sixteen gods, the priests would by no means admit, that a man could be begotten by a god, but shewed him three hundred and forty five large wooden images of their high-priests in a spacious edifice, which stood in regular order, the son being placed after the father; and told him, that none of them had been reputed either a god or a hero; but that each image which he saw represented a piromis, begotten by another piromis; the word piromis signifying no more in their language, than an honest man (1). It may be observed, that romi, and, with the article, piromi, signifies a man in the present Coptic.

(1) Herod. l. 2.

improper for ſuch a purpoſe, the ſtraightneſs and fewneſs of the rooms within (the reſt being a ſolid fabric of ſtone) do utterly overthrow ſuch a conjecture.

HERODOTUS ſays, the firſt or greateſt of the three moſt remarkable pyramids was built by Cheops, whom Diodorus names Chemmis; for that they were the ſame perſon will appear hereafter. The ſecond, both thoſe hiſtorians agree to have been erected by Cephren, brother and ſucceſſor to the former prince. And the third was the work of Mycerinus, the ſon of Cheops [f]. This laſt, ſome of the Greeks pretended was built by Rhodopis [g], or Rhodope, a courtezan, whom Sappho called Doricha, miſtreſs to her brother Charaxus [h]. But this is very improbable, if we conſider either her condition, or the vaſtneſs of the expence; though ſome, to amend the ſtory, ſay ſeveral governours of provinces, who were in love with her, built it for her by contribution [i]: beſides, Herodotus has ſhewn that ſhe lived long after theſe pyramids were in being [k]. Yet, after all, Diodorus confeſſes, that there is little agreement as to theſe pyramids, either among the natives or hiſtorians; ſome ſaying, that the largeſt was built by Armæus, the ſecond by Amaſis, and the third by Inaron [l]; and this uncertainty Pliny mentions as a juſt reward of the vanity of the undertakers [m].

THE Arab writers aſſign other founders of theſe three pyramids different from thoſe mentioned by the Greeks. To omit the fancy of thoſe who thought them built by Jân ebn Jân, univerſal monarch of the whole world before Adam [n], and the abovementioned opinion, which attributes them to Joſeph; ſome ſay, they were erected by Nimrod; ſome, by queen Dalûka; and others, by the Egyptians before the flood. The Copts report, that the eaſt pyramid is the ſepulchre of king Saurid, the weſtern of his brother Hûjib, and the coloured pyramid of Fazfarinûn the ſon of Hûjib. The Sabians pretend, that one of them is the ſepulchre of Seth, the ſecond of Hermes (or Enoch), and the third of Sabi, from whom this ſect ſay they are denominated: it is alſo ſaid, they go in pilgrimage thither, and ſacrifice at them a cock and a black calf, and offer up incenſe [o].

[f] Vid. Herod. l. 2. Diod. Sic. l. 1. [g] Herod. ubi ſupr. [h] Strabo. l. 17. [i] Diodor. ubi ſupr. [k] Herod. ubi ſupr. [l] Diodor. ubi ſupr. [m] Plin. nat. hiſt. l. 36. c. 12. [n] D'Herbel. Bibl. Orient. p. 311. [o] See Introd. p. ult.

incenſe [o]. But the general opinion is, that they were built by Saurid before the flood; and the Copts mention an inſcription engraven on them to this effect. I Saurid, the king, built the pyramids in ſuch and ſuch a time, and finiſhed them in ſix years: he that comes after me, and ſays he is equal to me, let him deſtroy them in ſix hundred years; and yet it is known, that it is eaſier to pluck down than to build; and when I had finiſhed them I covered them with ſattin, and let him cover them with mats [p].

As the antients have omitted ſpeaking of ſeveral pyramids ſtill remaining in the Libyan deſart, ſo have they on the other hand mentioned the names and founders of ſome others, not much inferior to theſe three in magnitude, which have been long ſince ruined and defaced by time. Herodotus ſays, there was one of forty fathoms, or two hundred and forty feet, which ſtood at the end of the labyrinth, with large figures of animals in ſculpture, and a ſubterraneous paſſage to it [q]. This ſeems to be that pyramid wherein Strabo tells us Imandes, or, as Diodorus names him, Oſymanduas, was buried [r], and therefore probably built by him; though he differs from Herodotus as to the dimenſions, making each ſide of it to be four hundred feet, and the height as much [s]. Pliny, who agrees with Herodotus in this laſt particular, mentions ſeveral pyramids built near the labyrinth, but, if his expreſſion [t] be not miſtaken, deſcribes them to be ſexangular. Mœris, who lived after Oſymanduas, but long before Cheops, alſo built two pyramids, one for himſelf and the other for his wife, in the midſt of a lake which he dug, and which we ſhall take notice of by and by. Theſe pyramids were each a furlong in height, and ſtood one half above the water, and the other half under the water; and on the top of each there was placed a marble ſtatue, or coloſſus, ſitting on a throne [u]. It is ſaid, that Cheops, having exhauſted his treaſures in building the firſt and largeſt pyramid, proſtituted his own daughter, commanding her to get as much money as ſhe could; and that ſhe, at the ſame time ſhe obeyed her father, contrived to leave a monument of herſelf alſo, and aſked every one that came to her to give her a ſtone towards the ſtructure ſhe deſigned;

[o] Merat alzeman. apud Greaves, ubi infr. Vid. Kirch. Oedip. vol i. p. 74. [p] Ebn Abdial Hokm. [q] Herodot. l. 2. [r] Diod. Sic. l. 1. p. 44. [s] Strabo, l. 17. [t] Senas radicum oras obtinentes. Plin. l. 36. c. 13. [u] Herod. & Diod. ubi ſupr.

deſigned : by which means ſhe built a pyramid, which ſtood in the midſt of the three, within view of the great pyramid, and extended to the length of a plethron and a half (or about one hundred and fifty foot) on every ſide of the baſis [x]. This ſtory has ſome reſemblance to that of Rhodopis abovementioned, and might perhaps have given occaſion to it. After all theſe, Aſychis, the ſucceſſor of Mycerinus, built a pyramid of brick, with this inſcription cut in ſtone : Compare me not with the pyramids of ſtone, for I as far excel them as Jupiter does the other gods : for, ſtriking the bottom of the lake with long poles, and gathering the mud which ſtuck to them, thereof they made bricks, and formed me in that manner [y]. Diodorus mentions three other pyramids, each ſide of which contained two hundred feet, and ſays, that Chemmis, Cephren, and Mycerinus were reputed to have erected them for their wives [z]. Theſe likewiſe are not now to be ſeen, unleſs they ſhould be ſome of thoſe in the deſart, which well anſwer the meaſure aſſigned by Diodorus ; but if thoſe princes built them for their queens, it may be wondered why they placed them ſo remote from their own ſepulchres, or at ſuch large and unequal diſtances of ſeveral miles from one another [a].

The time when the pyramids were built.

SINCE it is uncertain who were the founders of the pyramids that are now ſtanding, it would be in vain to endeavour to determine the time when they were built. The ages of the ſeveral princes to whom they have been attributed, will beſt appear when we diſcourſe of the Egyptian chronology : in the mean time, we ſhall obſerve, that the leaſt antiquity, which can be allowed the ſtructures, ſeems to be near three thouſand years ; ſince Herodotus, who lived two thouſand two hundred years ago, was able to find ſo little ſatisfaction in his enquiries after them ; and Diodorus, who lived before the birth of our Saviour, ſuppoſes the great pyramid to have been built at leaſt one thouſand years before his time [b].

The end for which they were erected.

NOT to mention a ſecond time the improbability of their conjecture, who imagine theſe buildings were deſigned for granaries, it is the conſtant opinion of moſt authors who have wrote on this ſubject, that they were intended for ſepulchres and monuments of the dead. Diodorus expreſly tells us, that Chemmis and Cephren deſigned thoſe built by them

[x] Herod. ubi ſupr. [y] Idem ib. [z] Diod. Sic. ubi ſupr. [a] Greaves Deſcr. of the pyramids, p. 113. [b] Diodor. Sic. l. 1. p. 57.

them for their sepulchres, though it happened that neither of them were buried in them [c]; and Strabo judges all those near Memphis to have been royal sepulchres [d]: to which the writings of the Arabs are consonant, as has been observed above. And if none of these authorities were extant, the tomb, which stands at this day in the first pyramid, puts it out of controversy.

Why the Egyptian kings should have been at so vast an expence in building of these pyramids, is an enquiry of a higher nature. Aristotle makes them to have been the works of tyranny [e]: and Pliny conjectures, that they built them partly out of ostentation, and partly out of state policy, to divert the people, by this employment, from mutinies and rebellions [f]. But the true reason depends on higher considerations, and sprang from the theology of the Egyptians; who not only believed the resurrection, but that as long as the body endured, so long the soul continued with it; which last was also the opinion of the Stoics [g]. And hence it was, that this nation took that excessive care to preserve the corps from corruption, and were at so great costs in raising monuments for them, as will be specified hereafter.

The reason why they frequently made use of the pyramidal figure for these monuments (for they were not always of that shape), to omit several philosophical fancies of little solidity [h], seems to have been, because it is the most permanent form of structure; for by reason of the gradual contracting and lessening of it at the top, it is neither overpressed with its own weight, nor is subject to the sinking in of rain, as other buildings: or else they might thereby intend to represent some of their gods; pyramids, and obelisks, which are but a lesser sort of pyramids, being, both by them and other heathens, antiently made use of and worshipped as images of several deities [i].

This practice of the Egyptians of erecting pyramids, or columns of that shape, for sepulchres, was also sometimes, though not very frequently, imitated by other nations. That of Porsena king of Etruria, built by him near Clusium in Italy, was accounted almost miraculous; though it was more to be admired for the number and contrivance of the pyramids, which were fourteen, than for any excessive magnitude [k].

tude [k]. The tomb of C. Cæſtius, now ſtanding at Rome near the mons teſtaceus, or il Doliolo, is built after the model of thoſe of Egypt, but is much leſs.

Their deſcription.

THE dimenſions and deſcriptions of the three greateſt of the pyramids of Memphis have been given by ſeveral writers, both antient hiſtorians and modern travellers. They differ pretty much from one another as to the dimenſions. A countryman of our own, who meaſured them with great care, and wanted not ability to do it with the greateſt accuracy, ſeems to have been the moſt exact; for which reaſon we ſhall chiefly adhere to his obſervations.

The dimenſions of the firſt pyramid.

THE firſt and faireſt of theſe three pyramids is ſituated on a rocky hill, in the ſandy deſart of Lybia, about a quarter of a mile from the plains of Egypt; above which the rock riſes 100 feet or better, with a gentle and eaſy aſcent. Upon this advantageous riſe and ſolid foundation is the pyramid erected; the height of the ſituation adding to beauty of the work, and the ſolidity of the rock affording it a ſtable ſupport. The north ſide, near the baſis, being meaſured by a radius of 10 feet in length, taking two ſeveral ſtations, was found by our author to be 693 Engliſh feet. The other ſides were examined by a line, for want of an even level, and a convenient diſtance to place the inſtruments. The altitude, if meaſured by its perpendicular, is 481 feet; but if it be taken as the pyramid aſcends inclining, then is it equal, in reſpect of the lines ſubtending the ſeveral angles, to the latitude of the baſis (F). Whereby

[k] Vid. eund. ibid. p. 64. Ammian. Marcel. l. 23.

[l] Vid. Solin. Polyhiſt. c. 45.

(F) According to Herodotus, each face of this pyramid contains 8 plethra, or 800 Grecian feet, in length (1). Diodorus Siculus (who comes neareſt the truth) makes this dimenſion but 7 plethra, or 700 feet (2): and Strabo, leſs than a furlong (3); that is, leſs than 600 Grecian, 625 Roman feet. Whereas Pliny equals it to 883 (4). As to the height, Herodotus ſays, it is equal to the breadth of one of its ſides; which is true, if taken for the inclining, and not the perpendicular, altitude. By Strabo's computation, the height exceeds the breadth: but Diodorus rightly acknowledges it to be ſomething leſs. The altitude of this pyramid was taken by Thales the Mileſian; but his admeaſurement

(1) Herod. l. 2. (2) Diod. Sic. l. 1. p. 57. (3) Strabo. l. 17. p. 1161. (4) Plin. l. 36. c. 12.

by it appears, that though several of the antients have excessively magnified the height of these pyramids, yet the biggest of them falls short of the height of St. Paul's church in London: which, from the ground to the top of the lanthorn only, is no less than 470 feet. If we imagine on the sides of the basis, which is perfectly square, four equilateral triangles mutually inclining till they meet in a point (for so the top seems to those who stand below), then we shall have a just idea of the true dimensions and figure of this pyramid; the area of whose basis contains 480,249 square feet, or something more than eleven English acres of ground; a proportion so monstrous, that did not the antients attest as much, and some of them more (G), it might appear incredible.

THE

ment is not preserved. The method proposed by him to do it, must be very uncertain; for it was by observing the hour when the shadow of the body is equal to its height (5).

Of the modern travellers, Belon or rather Gyllius (for the other it is said was a plagiary, and published the observations of Gyllius in his own name), (6) makes the breadth of each side 324 paces; and the height 250 steps, each step being 45 inches high (7). Marco Grimani, Patriarch of Aquileia and afterwards cardinal, computes it to be 270 paces broad, and as much in height (8). Prince Radziville says, it is reported to be 300 cubits every way (9). Della Valle sets down nothing precisely, but acquiesces in the measures of Belon (10). Thevenot tells us it is 520 feet high, on a square base of 682 feet (11). And Le Bruyn calculates the height to be 112 fathom; which at 5 feet and a half to the fathom, is 616 feet: and the breadth 300 paces, or 128 fathom; that is, according to the same proportion, 704 feet (12). Wansleb says, the sides of the pyramids are not equal; it being visible in the largest, and so in the others, that the north side is longer than that which stretches from east to west; (which expression perhaps the reader may understand, but we do not): the dimensions he gives us, are those of Thevenot (13). The Arab writers make the perpendicular height 317 cubits, and the breadth of each side 460 (14).

(G) The area, according to Herodotus, must be 640,000; and according to Diodorus 490,000 square feet. Pliny assigns the basis

The outside of the pyramid.

THE aſcent to the top of the pyramid is contrived by degrees, or ſteps, the lowermoſt of which is near 4 feet in height, and 3 in breadth; and running about the pyramid in a level, made a narrow walk, when the ſtones were entire, on every ſide. The ſecond degree is like the firſt, benching in near 3 feet. In the ſame manner is the third row placed on the ſecond; and the reſt in order, like ſo many ſtairs, riſing one above another to the top; which ends not in a point, as mathematical pyramids do, but in a little flat, or ſquare of 13,280 Engliſh feet broad, and conſiſting of 9 ſtones, beſides two which are wanting at the corners (H). This pyramid, by reaſon of the ſtones being worn by the weather, cannot be conveniently aſcended, except on the ſouth ſide, or at the north-eaſt angle. The ſteps are made baſis to be but 8 Roman jugera; which is probably a miſtake of the tranſcriber; for the ſquare of the ſide, by his admeaſurement, muſt be no leſs than 779, 689 Roman feet, almoſt equal to 28 jugera (1).

(H) Herodotus gives no dimenſions of this flat; Diodorus ſays, it is 9 feet (2); but Pliny ſeems to make it 25 feet, if we rightly underſtand the paſſage of that author; for Hardouin is ſurely miſtaken, in ſuppoſing him to mean that the pyramid was 15,000 feet high (3). Belon ſays, the diameter is 2 paces (4), Radziville 10 cubits (5), and Thevenot about 16 feet and 2 thirds (6). They differ alſo in the number of ſtones which cover it; one will have it a ſingle ſtone (7); another counts 3 (8); and a third 11 or 12 (9).

On this platform Proclus ſuppoſed the Ethiopian prieſts made their aſtronomical obſervations (10); but it is far from being probable, that theſe ſtructures were deſigned for obſervatories. And it is ſcarce to be conceived, that the prieſts would take the pains to aſcend ſo high, when they might make the ſame obſervations with more eaſe, and as much certainty below; having as free and open a proſpect of the heavens, and over the plains of Egypt, from the rock itſelf, as from the tops of the pyramids (11).

(1) Vid. Plin. l. 36. c. 12. (2) Diod. Sic. l. 1. p. 57. (3) Plin. ubi ſupr. Vid. Harduin. in loc. (4) Belon, ubi ſupr. (5) Radziv. Ieroſ. pereg. p. 162. (6) Theven. ubi ſupr. (7) Voy. de Villamont. (8) Sandys's Trav. p. 100. (9) Theven. ubi ſupr. (10) Procl. in Tim. (11) Greaves, ubi ſupr. p. 73. Vid. Ciceron. de divinat. l. 1.

made of maſſy and poliſhed ſtones, ſaid to have been hewn out of the Arabian mountains [m], which bound the upper Egypt on the eaſt; and are ſo vaſt, that the breadth and depth of every ſtep is one ſingle ſtone. Herodotus makes the leaſt ſtone to be 30 feet [n]; and this may be granted in ſome, but not in all, unleſs his words be underſtood of cubical feet; which dimenſion, or a greater, in the exterior ones, may, withour difficulty, be admitted. It is alſo to be obſerved, that the ſteps are not all of equal depth; for ſome are near 4 feet, and others want of 3, diminiſhing the higher one aſcends: and the breadth of them is proportionable to their depth; ſo that a right line, extended from the baſis to the top, will equally touch the outward angle of every degree. The number of theſe ſteps is not mentioned by any of the ancients; but modern travellers differ very much in their computation (I). Our author and two others counted them very carefully, and found them to be 207; though one of them in deſcending reckoned 208.

Hence it may be conſidered, how far we may credit what ſome ſay, viz. that an arrow ſhot from the top of this pyramid cannot fly beyond the baſis, but will fall on ſome of the ſteps; it being certain, that an indifferent arm can eaſily ſhoot an arrow much farther than one half of the breadth of this pyramid: it is confeſſed, however, that a man, unleſs he be very ſtrong, cannot throw a ſtone from the top, ſo as to make it fall beyond the ſteps [o]. Some of the antients have reported, that theſe pyramids caſt no ſhadow [p]; which, if taken ſtrictly, muſt be alſo a miſtake: it is true for almoſt three quarters of the year they caſt no ſhadow at noon; but in winter they certainly do.

As

[m] Herod. & Diod. ubi. ſupr. Pomp. Mela. l. 1. c. 9. Lucas, t. i. p. 45. Auſon. Idyll. 3. Amm. Marcell. l. 22. Caſſiodor. var. 7. form. 15.

[n] Herod. ubi ſup.

[o] Le Bruyn. voy.

[p] Solin. Polyhiſt. c. 45.

(I) Belon counts 250, Sandys 255, Lewenſtein 260, Helfricus 230, Grimani and Le Bruyn 210, Lucas 243, and Thevenot 208 (12). This laſt author obſerves, it is very difficult to count them exactly; not only becauſe a man may miſcount, but becauſe ſeveral of the lower ſteps are, in ſome places, covered with ſand.

(12) See the places quoted above, and Lucas Voy. t. I. p. 45.

As to the inſide of this pyramid, the antients are altogether ſilent; except only that Herodotus ſays, there were ſubterraneous vaults built within the hill on which it ſtands; and that the founder of it conveyed the water of the Nile thither by a trench, and formed a little iſland in the midſt of the water, deſigning to place his ſepulchre on that ground [q]. Strabo alſo mentions an oblique entrance into this pyramid, to be ſeen on removing a ſtone which covered it [r]; and Pliny takes notice of a well of 86 cubits in depth, into which he ſuppoſes the water of the Nile was brought by ſome ſecret aqueduct [s]. What the Arabs relate of the inner parts of theſe buildings, is no better than a romance; for which reaſon we ſhall proceed to thoſe accounts that may be better depended on. The inſide of it.

THE entrance into the pyramid is by a ſquare narrow paſſage, which opens in the midſt of the north-ſide on the 16th ſtep, or aſcending 38 feet (K), on an artificial bank of earth. The ſtone that is over it is very big, being near 12 feet long, and above 8 feet wide. This entry goes declining with an angle of 26 degrees, and is in breadth exactly 3,463 Engliſh feet, and in length 92 feet and an half. The ſtructure of it has been the labour of an exquiſite hand, as appears by the ſmoothneſs and evenneſs of the work, and cloſe knitting of the joints, a property long ſince obſerved by Diodorus to have run through the whole fabric of this pyramid. At the end of this paſſage there is another like the former, but goes a little riſing: at the meeting of thoſe two paſſages, the one deſcending, and the other aſcending, the lowermoſt ſtone of the roof, perpendicular to it, forms a ſharp ridge, between which and the ſand there is ſometimes not a foot ſpace to paſs through; ſo that a man muſt ſlide on his belly cloſe to the ground, and yet grate his back againſt the above-mentioned ſtone, unleſs he be very ſlender. However, this difficulty is occaſioned chiefly by the ſand which the wind drives into this palace; for if the paſſage be cleared, it is of the ſame dimenſions there as at the entrance. There being no window, or other opening in this pyramid

[q] Herod. ubi ſupr. [r] Strabo ubi ſupr. [s] Plin. ubi ſupr.

(K) In the following deſcription we have only given the meaſures of Greaves, though other travellers vary both from him and one another therein. But we do not think thoſe variations conſiderable enough to be particularly ſet down.

to admit the light, it may eaſily be conceived, that thoſe who would view the inſide muſt carry lights with them.

Having paſſed this ſtreight, on the right hand there is an ugly broken hole of about 89 feet in length, the height and breadth various, and not worthy conſideration: whether this part be decayed by time, or has been dug away for curioſity, or hopes of diſcovering ſome hidden treaſure, is uncertain. On the left hand, adjoining to the narrow entrance, climbing up a ſteep and maſſy ſtone, 8 or 9 feet in height, one enters on the lower end of the firſt gallery; the pavement of which riſes with a gentle acclivity, conſiſting of ſmooth poliſhed marble, and where not ſmeered with duſt and filth, appearing of a white and alabaſter colour; the ſides and roof of unpoliſhed ſtone, not ſo hard and compact as that of the pavement; the breadth of this gallery is almoſt 5 feet, the height about as much, and the length 100 feet. At the end of it there are two paſſages, one low and horizontal, or level with the ground, and the other high and riſing like the former. At the entry of the lower paſſage, on the right hand, is the well mentioned by Pliny, which is circular, and a little above 3 foot diameter: the ſides are lined with white marble, and the deſcent is by fixing the hands and feet in little open ſpaces cut in the ſides within, oppoſite and anſwering to one another in a perpendicular; which is the contrivance for deſcending into moſt of the wells and ciſterns at Alexandria. This well might lead to the vault above-mentioned; but it is almoſt now ſtopped up with rubbiſh, and not above 20 feet deep.

Leaving the well, and going ſtrait on the diſtance of 15 feet, one enters another paſſage opening againſt the former, and of the ſame dimenſions, the ſtones of which are very maſſy and exquiſitely joined. This paſſage runs in a level 110 feet, and leads to an arched vault, or chamber, ſtanding due eaſt and weſt, of a grave-like ſmell, and half full of rubbiſh; its length not quite 20 feet, and breadth about 17, and the height leſs than 15: the walls are entire, and plaiſtered over with lime; the roof is covered with large ſmooth ſtones, not lying flat, but ſhelving, and meeting above in an angle. On the eaſt ſide of the room, in the middle of it, Greaves ſays, there ſeems to have been a paſſage leading to ſome other place, but neither Thevenot, nor Le Bruyn could diſcover any ſuch.

Returning back through the narrow horizontal paſſage, you climb over it, and enter into the other, or ſecond gallery,

gallery, on the left, divided from the firſt gallery by the wall, in which is the entrance to the laſt mentioned paſſage. This ſecond gallery is a very ſtately piece of work, and not inferior, either in curioſity of art, or richneſs of materials, to the moſt ſumptuous and magnificent buildings: it riſes with an angle of 26 degrees, and is in length 154 feet from the well below; but if meaſured on the pavement, ſomewhat leſs, by reaſon of a little vacuity of about 15 feet before deſcribed, between the well and the ſquare hole: the height of it is 26 feet, and the breadth 6,870 feet, of which one half is to be allowed for the way in the midſt, there being a ſtone bench on each ſide of the wall, of one foot and $\frac{717}{1000}$ in breadth, and as much in depth. On the top of theſe benches, near the angle where they cloſe with the wall, are little ſpaces, cut in right-angled parallel figures, ſet in each ſide oppoſite to one another; intended, no queſtion, for ſome other end than ornament. The ſtone, of which this gallery is built, is a white and poliſhed marble, very evenly cut in large tables; and the joints are ſo cloſe, that they are ſcarce diſcernible by a curious eye: but what adds grace to the whole ſtructure, though it makes the paſſage the more ſlippery and difficult, is the acclivity and riſing of the aſcent. However, the going up is not a little facilitated by certain holes made in the floor, about ſix hands breadth from one another, into which a man may ſet his feet, while he holds by the bench with one hand. In the ranging of the marble tables, in both the ſide walls, there is one piece of architecture very graceful; and that is, that all the courſes, which are but ſeven, do ſet and flag over one another about three inches, the bottom of the upper courſe overſetting the higher part of the next below it, in order as they deſcend.

HAVING paſſed this admirable gallery, one enters another ſquare hole, of the ſame dimenſions with the former, which leads into two ſmall antichambers, or cloſets, lined with a rich and ſpeckled kind of Thebaic marble. The firſt of theſe is almoſt equal to the ſecond, which is of an oblong figure, one ſide containing 7 feet, and the other 3 and a half: the height is 10 feet, and the floor level. On the eaſt and weſt ſides, within 2 feet and a half of the top, which is ſomewhat larger than the bottom, are three ſemicirlar cavities, or little ſeats.

THE inner antichamber is ſeparated from the former by a ſtone of red ſpeckled marble, which hangs in two mortices (like the leaf of a ſluice) between two walls, more

than 3 feet above the pavement, and wanting two of the roof. From this ſecond cloſet you enter another ſquare hole, over which are five lines cut parallel and perpendicular; beſides which, no other ſculptures, or engravings are obſerved in the whole pyramid (L). This ſquare paſſage is of the ſame wideneſs as the reſt, and in length near 9 feet, being all of Thebaic marble moſt exquiſitely cut, and landing you at the north end of a very ſumptuous and well proportioned room. The diſtance from the end of the ſecond gallery to this entry, running upon the ſame level, is 24 feet.

This magnificent and ſpacious chamber, in which art may ſeem to have contended with nature, the curious work being not inferior to the rich materials, ſtands, as it were, in the heart and center of the pyramid, equidiſtant from all the ſides, and almoſt in the midſt between the baſis and top. The floor, the ſides, and the roof of it are all made of vaſt and exquiſite tables of Thebaic marble, which, if they were not obſcured by the ſteam of torches, would appear gliſtering and ſhining. From the top of it deſcending to the bottom, there are but ſix ranges of ſtone, all which being reſpectively ſized to an equal height, very gracefully in one and the ſame altitude, run round the room. The ſtones which cover this chamber are of a ſtupendous length, like ſo many huge beams lying flat and traverſing the room, and withal ſupporting that infinite maſs and weight of the pyramid above. Of theſe there are nine which cover the roof; two of them are leſs by half in breadth than the reſt, the one at the eaſt end, and the other at the weſt. The length of the chamber on the ſouth ſide, moſt accurately taken at the joint, or line, where the firſt and ſecond row of ſtones meet, is 34,380 Engliſh feet; the breadth of the weſt ſide, at the joint, or line, where the firſt and ſecond row of ſtones meet, is 17,190 feet; and the height 19 feet and a half.

Within this glorious room ſtands the monument of Cheops, or Chemmis, of one piece of marble, hollow within,

(L) It may therefore be juſtly wondered, whence the Arabians borrowed thoſe vain traditions, that all ſciences are inſcribed within the pyramids in hieroglyphics; and alſo upon what authority Cornelius (or rather Ælius) Gallus is ſaid to have therein ingraven his victories (1).

(1) Xiphil. in Cæſ. Aug.

within, uncovered at the top, and ſounding like a bell; which laſt particular is mentioned not as a rarity, but becauſe ſome authors have taken notice of it as ſuch. Some write, that the body has been removed hence; but it has been already obſerved, that the founder was not buried in it. This monument is of the ſame kind of ſtone with which the whole room is lined, being a ſpeckled marble, with black, white, and red ſpots, as it were, equally mixed, which ſome call Thebaic marble; but Mr. Greaves rather conceives it to be that ſort of porphyry which Pliny calls Leucoſtictos, of which there were, and ſtill are, an infinite number of columns in Egypt; though Burretini, who accompanied him, imagined this kind of marble came from mount Sinai, where he affirmed the rocks to be of the ſame colours, and that he had ſeen among them a great column of the ſame marble left imperfect, almoſt as big as that called Pompey's pillar, near Alexandria.

THE figure of the tomb is like an altar, or two cubes finely ſet together; it is cut ſmooth and plain, without any ſculpture, or engraving. The outward ſuperficies is in length 7 feet 3 inches and a half, and in depth 3 feet 3 inches and 3 quarters. The hollow inſide is in length on the weſt ſide of 6.488 feet, in breadth at the north end 2.218 feet, and in depth 2.860 feet. As this monument could not have been brought hither through the above-mentioned narrow paſſages, it is ſuppoſed to have been raiſed and placed there before the roof of the chamber was cloſed. It ſtands exactly in the meridian, or due north and ſouth, and as it were equidiſtant from all ſides of the chamber, except the eaſt, from whence it is doubly remoter than from the weſt. Under it there is a little hollow ſpace dug away, and a large ſtone in the pavement removed at the angle next adjoining to it, which Sandys imagined to be a paſſage into ſome other apartment, but more probably done in hopes of finding ſome treaſure hidden there; it being a ſuperſtitious prodigality practiſed by the antients, and continued to this day in the Eaſt-Indies, to conceal money in their ſepulchres. In the ſouth and north ſides of the chamber there are two inlets oppoſite to one another, ſeven tenths of a foot broad, four tenths of a foot deep, evenly cut, and running in a ſtraight line 6 feet and farther into the thickneſs of the wall: that on the ſouth ſide is larger and ſomewhat round, not ſo long as the former, and by the blackneſs within ſeems to have been made uſe of for ſetting of lamps.

This is all that is to be ſeen within this firſt pyramid; but there is one thing more to be obſerved, and that is a very ſurprizing echo, which Plutarch takes notice of, and ſays, that it anſwers four or five times [t]; but a late traveller aſſures us, that it repeats no leſs than ten or twelve times very diſtinctly [u]. If we conſider the entrance of the pyramid and the length of the two galleries, which all lie as it were in one continued line, and leading to the middle of the pyramid, we need not be at a loſs to account for this effect; for the ſound being ſhut in, and carried in thoſe ſmooth paſſages, as in ſo many pipes, or trunks, finding no iſſue out, reflects on itſelf, and cauſes a circulation of the air, which by degrees vaniſhes as the motion ceaſes [w].

The ſecond pyramid.

Scarce the flight of an arrow diſtant from the firſt, towards the ſouth, ſtands the ſecond pyramid, of which, beſides the miracle, both antient and modern writers have delivered very little. Herodotus ſays it falls ſhort of the other in magnitude, he having meaſured them both, but he does not give the dimenſions: he adds, that it has no ſubterraneous chambers, neither is the Nile conveyed into it by a channel, as into the former, but that it is of equal altitude [x]. Diodorus is ſomewhat more particular, and tells us, that for the architecture it is like the former, but much inferior to it in reſpect of magnitude; each ſide of the baſis containing a ſtadium, or 600 Grecian feet, in length [y]; ſo that, by his computation, each ſide ſhould want 100 Grecian feet of the former pyramid. Pliny makes the difference to be greater by 46 feet [z]. Moſt of the modern travellers do alſo agree this pyramid to be leſs than the other [a]. Thevenot makes it but 631 feet ſquare [b]. However, Strabo ſuppoſes theſe pyramids to be equal [c]; and Mr. Greaves, on the credit of a perſon who meaſured the ſecond with a line, aſſures us, the baſes of both are alike; and that the height taken by a deliberate conjecture (which it is eaſy to do by reaſon of the nearneſs of this and the former, and their

[t] Plut. de placitis Philoſph. l. 4. c. 20. [u] Lucas, ubi ſupr. t. i. p. 43. [w] Vid. Greaves, ubi ſupr. p. 67—101. Thevenot., part 1. c. 5. Le Bruyn. t. 2. Della Valle, lit. 11. p. 359, &c. [x] Herod. l. 2. [y] Diod. Sic. l. 1. [z] Plin. l. 36. c. 12. [a] Badzivil. p. 163. Lucas, ubi ſupr. p. 46. Sandys, p. 102, &c. [b] Theven. ubi ſupr. [c] Strabo, l. 17. p.

their ſtanding on the ſame plain) is not inferior to that of the firſt. This pyramid has no entrance, and is built of white ſtones, not near ſo vaſt as thoſe of the firſt; the ſides riſe not with degrees like that, but are ſmooth and equal; the whole fabric (except where it is oppoſed to the ſouth) ſeeming very entire, free from any deformed breaches [d].

The prieſts lodgings near it.

ON the north and weſt ſides of this ſecond pyramid are two very ſtately and elaborate pieces, about 30 feet in depth, and above 1400 in length, cut out of the rock in a perpendicular, and ſquared by the chiſſel; being deſigned, as is ſuppoſed, for lodgings of the Egyptian prieſts. They run parallel to the two ſides of the pyramid, at a convenient diſtance from it, and meeting in a right angle make a very fair proſpect. The entrance is by ſquare openings hewn out of the rock, much of the ſame ſize with the narrow paſſages of the firſt pyramid, each leading into a ſquare chamber, arched above with the natural rock. In moſt of them was a paſſage opening into ſome other apartments, but dark, and full of rubbiſh. On the north ſide without, there is a line engraven in ſacred Egyptian characters [e].

The third pyramid.

THE third pyramid ſtands at the diſtance of about a furlong from the ſecond, on an advantageous riſing of the rock, whereby afar off it ſeems equal to the former, though the pile be much leſs and lower. Herodotus ſays it is 300 feet on every ſide (M), and to the middle built of Ethiopic marble [f]. Diodorus gives the ſame dimenſions of the baſis, and adds, that the walls were raiſed fifteen ſtories with black ſtone, like Thebaic marble, and the reſt finiſhed with ſuch materials as the other pyramids are built with; that this piece of work, though it be exceeded by the two former in magnitude, yet for the ſtructure, art, and magnificence of the marble, it far excels them; and that in the ſide, towards the north, the name of Mycerinus, the founder, is engraved [g].

[d] Greaves, ubi ſupr. p. 103, &c. [e] Idem ibid. p. 106, &c. [f] Herodot. l. 2.

(M) Yet he tells us that it wants but 20 feet on each ſide of the firſt pyramid, which muſt be a miſtake; unleſs we charge it rather on the copies, and inſtead of 20 read 500 feet. Mr. Littlebury, in his tranſlation of Herodotus, ſuppoſes the meaning to be, that this pyramid was 20 feet lower than the former. As great a miſtake as the other.

graved [g]. Pliny writes to the same effect, except only that he makes this pyramid 363 feet between the angles [h]. Belon tells us, that it is but a third part greater, than that of C. Cæstius at Rome; and that it is still perfect, and no more decayed than if it had been newly built, consisting of a kind of Ethiopic marble called Basaltes, harder than iron itself [i]. The descriptions of others of the moderns concur in the same tale as to substance, only differing as to some circumstances; so that they all seem to have copied Herodotus, or one another, and surfeited with the view of the two other pyramids, not to have been near this, since they so constantly agree in what is most evidently false; for they have mistaken both the quality of the stone, and the colour of the pyramid, the whole appearing to be of a clear and white stone somewhat choicer and brighter than that in either of the two other pyramids: there are indeed the ruins of a pile of buildings on the east side of it, of a sad and dusky colour, which might be the occasion of the error. But Belon, and those who follow him, are more inexcusable in making this pyramid but a third part greater than that of Cæstius, which exactly measured, on that side which stands within the city, is completely 78 English feet in breadth, to which if we add a third part, the result will be 104, which should be equal to this Egyptian pyramid. An unpardonable oversight, of no less than 200 feet in a very little more than 300. For so much, besides the authority of Herodotus and Diodorus, Mr. Greaves takes the side of this pyramid to be, and the altitude to have much the same proportion. The name of Mycerinus is not now to be seen on it, the engraving having been defaced by time [k].

A fourth pyramid.

To the descriptions of these three pyramids we shall add that of a fourth, which stands near the mummies, and which we take to be that remarkable one mentioned above. This pyramid would fall nothing short of the beauty of the first, if it had been finished: it has 148 steps of large stones like the first pyramid; the platform of it is not even, the stones being set together without order, which shews, that it has not been finished, and yet it is much more antient than the other; as is evident by the stones which are all worn out and crumbled into sand. It is 643 feet square, and has its entry at the fourth part of its height on the

[g] Diod. Sic. l. 1. p. 57. Vid. Strab. ubi sup. [h] Plin. ubi supr.
[i] Belon Observ. l. 2. c. 44. [k] Greaves, ubi supr. p. 108, &c.

the north ſide, as the former, being diſtant from the eaſt ſide 316 feet, and by conſequence 327 from the weſt. There is but one paſſage into it, 3 feet and a half broad, and 4 feet high, which reaching 267 feet downwards, ends in a hall with a ſharp arched roof 25 feet and a half in length, and 11 in breadth. In the corner of the hall there is another paſſage, or gallery, parallel to the horizon, 3 feet ſquare within, and 9 feet and a half long, which leads to another chamber 21 feet in length and 11 in breadth, with a very high arched roof alſo, having at the weſt end a ſquare window raiſed 24 feet and two thirds from the floor, by which one enters into a paſſage indifferent broad, and of a man's height, parallel to the horizon, and reaching in length 13 feet and 2 inches. There is a great room, or hall, at the end of this paſſage. with an arched roof, containing in length 26 feet 8 inches, and in breadth 24 feet and 1 inch: the floor of it is the natural rock, which on all ſides is rough and unequal, leaving only a little ſmooth and even ſpace in the middle encompaſſed round with the rock, and much lower than the entry into the room or the foundation of the wall [l].

How the pyramids were built.

IN what manner theſe wonderful ſtructures were erected, and by what contrivance the ſtones, eſpecially thoſe vaſt ones in the firſt, were raiſed to that height, has been the ſubject of much ſpeculation. Herodotus, whoſe expreſſions are not very clear, ſuppoſes, that when they had laid the firſt range, they raiſed other ſtones thither from the ground, by ſhort engines made of wood; that when the ſtone was lodged on this row, it was put into another engine ſtanding on the firſt ſtep, from whence it was drawn up to the ſecond row by another, there being as many engines as orders of ſtone; or elſe there might be but one engine, which they might remove as there was occaſion. He ſays alſo, that the higheſt parts were firſt finiſhed, and the reſt in order, but laſt of all thoſe that are loweſt and next the ground [m]. Diodorus imagines the work was erected by the help of mounds, which he ſays the Egyptians pretended were raiſed of ſalt and nitre, and that they were diſſolved and waſhed away by letting in the river [n]. With this writer Pliny agrees, adding, that others were of opinion, that bridges were made of bricks, which, the work being ended, were diſtributed into private houſes; conceiving that the Nile, being

[l] Thevenot, Voy. part 1. c. 6.
[m] Herod. l. 2.
[n] Diod. Sic. l. 1. p. 57.

being much lower, could not come to wash them away [o]. Greaves thinks, it was done none of these ways; but that they first built a large tower in the midst, reaching to the top; to the sides of which he conceives the rest of the building to have been applied, piece after piece, like so many buttereſſes, still lessening in height, till at last they came to the lowermost degree. A difficult piece of building taken in the easiest projection.

If what the antients deliver be true, that the stones made use of in the building of these pyramids, were fetched either from the quarries in the Arabian mountains, Thebaïs, or Ethiopia, we need not be surprized when we are told, that Cheops employed 100,000 men in this labour, 10,000 every three months [p]. But some modern travellers, observing that these structures are built not with marble, but with a white sandy stone, and very hard, rather believe it was dug out of the rock whereon they stand [q]. We think a middle opinion the most probable; that the aforesaid rock indeed supplied them with great part of the materials, but that the marble of the inner rooms and passages was brought thither from some other place. Wansleb imagines the greatest pyramid to be nothing but a rock cut in that shape, and covered with a wall of stone [r]; a piece of work, to our apprehension, full as difficult as erecting a like mass of stones from the quarry.

Diodorus makes the number of men employed in building the first pyramid 360,000, and Pliny 366,000. It is agreed, that twenty years were spent in the work: and Herodotus adds, that there was in his time an inscription on the pyramid, though it be since worn out, declaring, how much was expended in radishes, onions, and garlick for the workmen, which, his interpreter told him, amounted to no less than 1600 talents of silver, or about 413,333 l. 6 s. 8 d. sterling [s].

Some late writers think, there is no beauty in these structures, except their prodigious size [t], though they might formerly be reckoned among the wonders of the world, when they were, as is supposed, cased with marble, before the later kings of Egypt took it away to adorn their palaces [u]; which is a piece of history we cannot warrant. However,

[o] Plin. ubi supr. [p] Herod. l. 2. [q] Thevenot, part 1. c. 5. Wansleb, ubi supr. [r] Wansleb, ibid. [s] Vid. Herod. Diodor. & Plin. ubi supr. [t] Figueroa Emb. di Persia. Sicard, Mem. des Miss. t. ii. p. 281. [u] Sicard, ibid.

However, a very intelligent traveller judges them, in their preſent condition, worthy the magnificence of the old Egyptian kings; adding, that no prince now in the world (without diſparagement to any) is able to raiſe ſuch a pile of building [w]: and antient writers ſay, that they were magnificent beyond expreſſion, and ſingly comparable to many of the greateſt ſtructures in Greece conſidered together; that they exceeded all other works in Egypt, not only in the maſſineſs of the building, and in the expence, but alſo in the induſtry and ſkill of the workmen; the Egyptians themſelves, thinking (very juſtly), that the architects were more to be admired than the kings who were at the expence; for the former erected them by their own abilities and contrivance, the latter by their wealth received by inheritance, and the labours of others [x].

ONE thing more remarkable in the firſt pyramid is, that the ſides of it do ſtand exactly facing the four quarters of the world, and conſequently mark the true meridian of the place (N); which preciſe poſition could not well have been owing to chance, but was in all probability the effect of art and deſign; and that it was really ſo, is confirmed by the ſame poſition of the tomb within. A permanent proof of the early progreſs made by the Egyptians in aſtronomy [y].

HERODOTUS mentions a bridge near this pyramid, and little leſs conſiderable than the pyramid itſelf: but there are now no remains of it to be ſeen. It was 40 ſtadia, or about 5 miles in length, 60 feet broad, and in the higheſt part 80 feet in altitude; all of poliſhed ſtones, and carved

[w] Thevenot, ubi ſupr. [x] Herod. & Diodor: ubi ſupr.
[y] Vid. Fountenelle, Elog. de Mr. de Chazelles. p. 91: Lucas, tom. i. p. 366.

(N) Mr. de Chazelles, who made this obſervation, and was on the ſpot in the year 1693, being an excellent mathematician, we ſhall here ſet down the dimenſions of this pyramid as taken by him, and the rather, becauſe they come the neareſt to thoſe of Mr. Greaves. The ſide of the baſe is, according to this gentleman, 110 toiſes, which is, as we compute, 704.880 Engliſh feet; and the perpendicular height 77 toiſes and 3 quarters, or 498.222 Engliſh feet (1).

(1) Vid. Rollin, Hiſt. anc. t. i. p. 201.

carved with the figures of various animals. This was the work of ten years [z].

Other pyramids.

HAVING been so diffusive in the description of the pyramids of Memphis, we may be excused taking notice of those which are to be seen in other parts of Egypt; observing only, that they are not all of the same form, some being round and almost like a sugar-loaf, and others rising with a lesser inclination, and not so pointed at the top [a]. Lucas assures us, that there are no less than twelve pyramids near the cataracts, and two in al Feyûm, nothing inferior to those of al Kâhira [b].

Of the labyrinth.

THE Egyptian labyrinth, from whence Dædalus is supposed to have taken the model of that which he afterwards built in Crete, though he therein intimated but the hundreth part of it [c], was a celebrated structure; and yet Herodotus, who saw it, says, that it had far surpassed the report of fame, being, in his judgment, even more admirable than the pyramids [d]. As there were at least 3 buildings of this kind, antient writers, not distinguishing them, generally speak but of one, and consequently with great confusion and disagreement.

THEY tell us, it stood in the Heracleotic nome, near the city of Crocodiles, or Arsinoe, a little above the lake Mœris [e]. Pliny says, it was built by Petesuccus, or Tithoes, one of the demigods, 4600 years before his time; but that Demoteles would have it to be the palace of Motherudes; Lyceas the sepulchre of Mœris; and others the temple of the sun [f]. It is recorded by Manetho, that Lachares, or Labares, the successor of Sesostris, provided a labyrinth for his monument [g]. And Diodorus writes, that Mendes, or Marus, also built one for the same purpose, which was not so considerable on account of its magnitude, as for the artificial contrivance of it [h]: but this seems to be a different building from that described by him a little after, which, in all probability the same with the labyrinth of Herodotus; for they both agree in the situation, that it was the work of twelve kings, among whom Egypt was at one time divided; and that they built

[z] Herod. ubi supr. [a] Lucas Voy. t. ii. p. 10. [b] Idem, t. i. p. 99, and ii. p. 75. [c] Diodor. Sic. l. 1. p. 1. 55. [d] Herodot. l. 2. [e] Idem, ibid. Plin. l. 36. c. 13. [f] Plin. ibid. [g] Syncell. Chronogr. p. 59, 60. [h] Diod. ubi supr.

built it at their common charge, as a public monument of their reign, and were buried there [i].

THIS ſtructure ſeems to have been deſigned as a pantheon, or univerſal temple of all the Egyptian deities, which were ſeparately worſhipped in the provinces. It was alſo the place of the general aſſembly of the magiſtracy of the whole nation, thoſe of all the provinces, or nomes, meeting here to feaſt and ſacrifice, and to judge cauſes of great conſequence [k]. And for this reaſon every nome had a hall, or palace, appropriate to it; the whole edifice containing, according to Herodotus, twelve; Egypt being then divided into ſo many kingdoms. But Pliny makes the number of theſe palaces ſixteen, and Strabo, as it ſeems, twenty ſeven [l]. The firſt of theſe writers tells us, that the halls were vaulted, and had an equal number of doors oppoſite to one another, ſix opening to the north, and ſix to the ſouth, all encompaſſed by the ſame wall; that there were three thouſand chambers in this edifice, fifteen hundred in the upper part, and as many under ground; and that he viewed every room in the upper part, but was not permitted, by thoſe who kept the palace, to go into the ſubterraneous part, becauſe the ſepulchres of the holy crocodiles, and of the kings who built the labyrinth, were there. He reports, that what he ſaw ſeemed to ſurpaſs the art of man: ſo many ways out by various paſſages, and infinite returns, afforded a thouſand occaſions of wonder, as he paſſed from a ſpacious hall to a chamber; from thence to a private cabinet; then again into other paſſages out of the cabinets, and out of the chambers into the more ſpacious rooms. All the roofs and walls within were incruſted with marble; but the walls farther adorned with figures of ſculpture. The halls were ſurrounded with pillars of white ſtone finely poliſhed; and at the angle, where the labyrinth ends, ſtood the pyramid formerly mentioned [m], which Strabo will have to be the ſepulchre of the prince who built the labyrinth [n].

To this deſcription of Herodotus others add, that it ſtood in the midſt of an immenſe ſquare, ſurrounded with buildings at a great diſtance; that the porch was of Parian marble, and all the other pillars of marble of Syene; that within it

[i] Idem, ibid. p. 59. Herod. ubi ſupr. [k] Strabo, l. 17. p. 1165. [l] See the places above quoted. [m] Herod. ubi ſupr. See before, p. 508. [n] Strabo, ubi ſup.

it were the temples of their several deities, and galleries, to which one ascended by 90 steps, adorned with many columns of porphyry, images of their gods, and statues of their kings, of monstrous size; that the whole edifice consisted of stone, the floors being laid with vast tables, and the roof appearing like a field of stone; that the passages met, and crossed each other with so much intricacy, that it was impossible for a stranger to find his way, either in or out, without a guide; and that several of the apartments were so contrived, that on opening of the doors, there was heard within a terrible noise of thunder [o].

We shall subjoin part of the description given by Diodorus of a fabric, which though he does not call it a labyrinth, but a sepulchre, yet appears to be the same we are now speaking of. He says it was of a square form, each side being a furlong in length, built of most beautiful stone, the sculpture and other work of which posterity could not exceed; that when one had passed the outer enclosure, a building presented itself to view, surrounded by a piazza, every side consisting of 400 pillars; and that it contained the ensigns, or memorials, of the country of each king; and was, in all respects, a work so sumptuous, and of such vast dimensions, that if the twelve princes who began it, had not been dethroned before it was finished, the magnificence of it could never have been surpassed [p]. Whence it seems, that Psammetichus, one of the twelve, who, expelling his associates, made himself master of all Egypt, finished the design, but not with a grandeur answerable to the rest of the structure; though Mela attributes the glory of the whole to that king [q].

The solidity of this wonderful building was such, that it withstood for many ages not only the rage of time, but that of the inhabitants of Heracleopolis, who, worshipping the ichneumon, the mortal enemy of the crocodile, which was the peculiar deity of Arsinoe, bore an irreconcilable hatred to the labyrinth, which served also for a sepulchre to the sacred crocodiles, and therefore assisted to demolish it. Pliny says, it was remaining in his days, and that about 500 years before Alexander, Circummon, eunuch to king Nectabis, was reported to have bestowed some small reparations on it, supporting the building with beams of Acacia,

[o] Plin. & Strabo, ubi supr. [p] Diod. Sic. ubi supr. p. 59, 60. [q] Pomp. Mela. l. 1. c. 9.

Acacia, or the Egyptian thorn boiled in oil, while the arches of ſquare ſtone were erecting [r].

THOUGH the Arabs have alſo, ſince the days of Pliny, helped to ruin this ſtructure, yet a conſiderable part of it is ſtill ſtanding almoſt at the ſouth end of the lake Mœris, a little to the eaſt, and about ten leagues from the ruins of Arſinoe. The people of the country call it the palace of Charon, of whom we ſhall ſay ſomething by and by.

THE remains we ſpeak of retain yet ſome marks of the antient ſplendor of the whole. The firſt thing one ſees is a large portico of marble, facing the riſing ſun, and ſuſtained by four great pillars of marble alſo, but compoſed of ſeveral pieces: three of theſe pillars are ſtill ſtanding, and one of the two middle ones is half fallen. In the middle is a door, whoſe ſides and entablature are very maſſy; and above is a frize, whereon is repreſented a head with wings ſtretched out along the frize, and ſeveral hieroglyphics underneath. This head is covered with a kind of vail, and ſurrounded with four points of marble, like rays; over this firſt entablature runs a frize, the ſtones of which are cut into the figures of ſerpents, very big below the head, but growing inſenſibly leſs to the tail. On this frize are the ruins of ſeveral doors, in different ſtories, by which probably they entered into the apartments that were above, but they are at preſent entirely ruined: on each ſide of that in the middle there is an Anubis full of hieroglyphics.

THIS edifice reſembles none of the four orders of architecture which we received from the antients. Having paſſed through the portico, one enters into a fine large hall, all of marble, the roof conſiſting of twelve tables of marble, exquiſitely joined, each 25 feet long and 3 broad, which croſs the room from one end to the other; the roof, being not arched (as Herodotus ſays) but flat, ſtrikes one with admiration at the boldneſs of its architecture; it being ſcarce conceivable, how it could continue ſo many ages in a poſition ſo improper to ſupport ſo prodigious a weight. This hall is at preſent 40 feet high, without making any allowance for the duſt and rubbiſh with which the floor is covered. At the end of this hall, over-againſt the firſt door, there is a ſecond portico, with the ſame ornaments as the firſt, but leſs, by which one enters into a ſecond hall, not ſo big as the firſt, which is covered with eight ſtones.

[r] Plin. ubi ſupr. Vid. Strabo, p. 1166.

ſtones. At the end of this room, ſtrait forwards, there is a third portico, ſtill leſs than the ſecond, as well as the hall into which it leads, though it has thirteen ſtones to roof it. At the end of this third hall there is a fourth portico, ſet againſt the wall, and placed there for ſymmetry only to anſwer the reſt. The length of theſe three halls is the whole depth of the building in its preſent condition: it was on the two ſides, and eſpecially under ground, that the prodigious number of rooms and avenues, mentioned by the antients, were built; the halls we have deſcribed having ſeveral openings made in them, through which one may go into other rooms on the ſame level, from whence there are ſtair-caſes to go up into thoſe above, and down into thoſe under ground. Our author having firſt taken the precaution which Ariadne taught Theſeus, and provided himſelf with above 2000 fathom of thread, and ſome chopped ſtraw to ſtrew in his way; went into above 150 of theſe chambers, but was often obliged either to creep on his belly, or to remove the rubbiſh which choaked up the paſſages; but with all his endeavours he was not able to go very far.

To have a perfect idea of the conſtruction of this edifice, you muſt imagine, that you go from one chamber into another, ſometimes into an alley, which has apertures in ſeveral places anſwering to other avenues, from which often, without perceiving it, you come to the place from whence you ſet out. All theſe chambers and paſſages, where a perfect obſcurity reigns, are not of equal dimenſions, nor of the ſame figure; ſome being long, ſome ſquare, and others triangular.

The diſagreement which may be found between this relation and the accounts of the antients, and even among the ſeveral deſcriptions of the antients themſelves in a building of ſo great variety and extent, need not be wondered at. What is now remaining of it, ſeems to be no more than a fourth part of the inner edifice, which, in all probability, had four fronts, and twelve halls anſwering to them; the reſt being decayed by time, or demoliſhed by deſign, as appears from the prodigious ruins which are to be ſeen all around it [s].

Of the lake Mœris.

How admirable ſoever the labyrinth was, yet the lake Mœris, by which that monument ſtood, is ſaid to be yet more wonderful. The antients make it no leſs 3600 ſtadia in

[s] Lucas Voy. t. ii. p. 18, &c.

in circumference [t], which is somewhat incredible (O); but later relations assure us, that it is not above half a league broad and a day's journey in length, being in circuit about 12 or 15 leagues [u]: which is prodigious enough, if we consider, that it was the work of mens hands, as appeared from the two pyramids built in the midst of it, which were standing in the time of Herodotus. In the deepest parts it has 50 fathom of water. This lake stretches from north to south, and is not fed by the sea, the adjacent country being excessively dry, but by water derived from the Nile, by a channel cut for that purpose, 80 stadia long and 300 feet broad, through which the water flowed into the lake six months of the year, and back again to the river the other six months: yet we are told, by a modern traveller, that there are two considerable springs in the lake, which keep it from becoming ever quite dry; though in those years that the Nile encreases but little, it has not much water, and then several fine ruins are discovered, which at other times are not to be seen [w].

THIS lake was dug by a king of Egypt, called by Herodotus Mœris, and by Diodorus Myris, whose name it afterwards received, to correct the irregularities of the Nile, by receiving the superfluous waters when that river rose too high, and thereby preventing their stagnation in other places to the detriment of the land, and by supplying water for the lands when the river failed; which was effected by many canals and ditches cut from the main channel [x]. These canals are still subsisting, and almost entire at this day, their

[t] Herod. ubi supr. Diod. Sic. l. 1. p. 49. [u] Lucas Voy. t. iii, p. 63. [w] Lucas, ubi supr. p. 53. [x] Diodor. ubi supr.

(O) Pomponius Mela makes the circuit of this lake no more than 20 miles; which being so very dissonant from what Herodotus and Diodorus have delivered, the critics will have it to be a mistake in Mela's copy, and have corrected it by those authors (1); but, as we imagine, without reason: though we must not dissemble the tradition of the people of the country, who say, the lake was formerly much larger than it is now; and one place in particular, which the water has left, is become a dangerous quicksand, wherein men and cattle are sometimes lost (2).

(1) Vid. Vossium & alios in Melam, l. 1. c. 9. (2) Lucas, ubi supr. p. 64, 71.

their number and ſtructure being worthy admiration. And as they were of the greateſt benefit to the antient inhabitants, ſo are they no leſs ſerviceable to the preſent, who, as has been obſerved, attribute theſe works, and indeed almoſt all other antient works of public utility, to Joſeph [y].

The canal of communication between the Nile and the lake, had antiently large ſluices to let the water in or out as occaſion required; and whenever they were either to be opened or ſhut, the charge of doing it was no leſs than 50 talents, or about 12,916 l. 13 s. 4 d. On the other hand, the lake brought in a very conſiderable revenue to the prince; the fiſhery, during the ſix months of the river's retreat, yielding a talent of ſilver, or about 258 l. 6. s. 8 d. every day to the royal treaſury; and the reſt of the time 20 minæ, or a fourth part of that ſum; there being twenty two ſorts of fiſh in this lake, and in ſuch plenty, that though a great number of people were employed in ſalting them, yet there wanted hands for the work. Mœris, it is ſaid, gave theſe revenues to his wife, to buy her ointments, or, as we expreſs it, for pin-money. The earth dug for the making of the lake, was, as the Egyptians told Herodotus, carried to the Nile, and diſperſed by the current of that river [z].

There is an iſle in the middle of the lake Mœris, of about a league in circumference: but nothing is now to be ſeen of the two pyramids which were built here, though they ſay there are ſeveral ruins of temples and tombs in the iſle, with large figures of men and animals. On the farther ſide of the lake there are ſome little mountains with grottos in them, which were formerly made uſe of for ſepulchres [a].

The inhabitants, at preſent, call this lake, the lake of Charon, concerning whom they tell the following ſtory; that being a perſon of mean extraction, and reſolved to get money by any means, he planted himſelf by this lake, and exacted of every corps that was ferryed over to be interred a certain ſum: though he did this without any authority from the prince, yet he carried on the impoſition for ſeveral years, till refuſing paſſage to the dead body of the king's ſon, unleſs the uſual ſum were paid him, the cheat was diſcovered: however, he made the king ſo ſenſible of the great advantage it would be to him to continue this duty by his royal

[y] Lucas, ubi ſupr. See before p. 490. [z] Herod. & Diodor. ubi ſup. [a] Lucas, ubi ſup.

royal authority, that he ordered it to be conſtantly paid for the future, appointing Charon his firſt miniſter, and confirming him in his old employment, which he made the firſt poſt in the kingdom. And Charon got ſuch vaſt riches in it, that he became powerful enough to aſſaſſinate the king, and mount the throne in his ſtead [b]. There is ſo much correſpondence between this fable and what the antients ſay of Charon, that we could not omit it.

THE time would fail us if we ſhould go through an exact deſcription of the other buildings and admirable works of the antient Egyptians, though perhaps they deſerve it equally with what we have already mentioned; the very ſpoils of them making at this day the principal ornament of Rome; where is ſcarce a column, or an obeliſk, worthy of note, but what has been formerly brought thither out of Egypt. We may, however, find occaſions in the progreſs of this work to ſpeak of what we here omit; and ſhall only take notice, as briefly as we can, of two or three things more, which we judge extraordinary, and for which, we apprehend, we may not hereafter find a more proper place.

A palace near the Cataracts.

ONE is a moſt magnificent palace in the upper Egypt, not far from Aſwân, the antient Syene; the ruins whereof are enough to ſtrike a ſpectator with aſtoniſhment. It is as large as a little city, having four avenues of columns, leading to as many porticos. At each gate, between two pillars of porphyry, there ſtand two gigantic figures of fine black marble, armed with maces. The avenues conſiſt of columns, ſet three and three together in a triangle on one pedeſtal; on the chapiter of each triangle is placed a Sphinx and a tomb alternately. Every column is 70 feet high, all of one ſtone. There are in the whole, in all the four avenues, above five or ſix thouſand of theſe columns, a great many of which are fallen down.

THE firſt hall of this palace is painted with fine pieces of hiſtory, and it ſeems as if the painting had not been long finiſhed. In ſome places they have repreſented the hunting of antelopes, in others feaſts, and a great many young children playing with all kinds of animals. From hence you go into other apartments, encruſted with marble, the roofs being ſupported by pillars of porphyry and black marble. Notwithſtanding the vaſt quantity of rubbiſh, our author made ſhift to get up to the top of this building, from whence

[b] Idem.

whence he had a proſpect of the ruins of the greateſt city that had ever been, as he thought, in the world. He ſuppoſes it might be the antient Thebes [c], though that city probably ſtood much lower.

Grots near Oſyût.

The grots near Oſyût ought not to be neglected. One of them is large enough to contain above 600 horſe in battle array: it is cut out of the rock by the chiſſel, and ſupported by vaſt ſquare pillars of the ſame rock. In this grotto ſeveral little ſeats are made to reſt on; and it ſeems by ſome footſteps which ſtill remain of them, that formerly the figures of ſeveral deities were painted there; but they are now almoſt entirely defaced. There are a great many other grots in the ſame mountain, more beautiful than this. They are ranged in order, with doors anſwering one another, on which there are ſeveral images of the antient gods of Egypt in baſſo relievo; ſome having a ſtaff in their hand, as if they guarded the entrance. In theſe grottos various apartments have been made, and ſome wells ſunk; but, what is moſt wonderful of all, at the further end there are catacombs hollowed in the rock, where there are a great number of mummies and tombs adorned with ſepulchres in baſſo relievo, which have been almoſt all diſfigured by the Arabs. Our author went into above two hundred of theſe grots, each of them more ſingular than the other; and he aſſures us there are above a thouſand of them. It is ſurpriſing to conſider the time and number of men that muſt have been employed in a work of ſuch difficulty; there being ſcarce a monument in any other part of the world, which carries ſuch evidence of the power of thoſe who executed it; for which reaſon the people of the country believe theſe grots the works of dæmons, who have hid immenſe treaſures in them. As to the time when they were cut, and for what purpoſe, it is in vain to expect any light from hiſtory [d].

A magnificent ſtructure at Dandera.

Among the antiquities of Dandera, the antient Tentyra, there is ſtanding part of a temple, or palace, of ſurpriſing height and dimenſions. The back-part of this ſtructure is a vaſt wall, without any windows, built of large ſtones of greyiſh granite, covered with baſſo relievos bigger than the life, repreſenting the antient Egyptian deities, with all their attributes in different attitudes. Two lions of white marble, as big as horſes, ſtand above half the length of their bodies out of the wall. The ſide is about 300 paces long, filled alſo

[c] Idem, t. i. p. 98, &c.

[d] Lucas, ubi ſupr. t. ii. p. 76, &c.

ſo with ſculptures of the ſame kind, and has three lions jutting out, of the ſame ſize with the former. The front of this glorious edifice expoſes to view, in the midſt, a porch, ſuſtained by ſquare pilaſters of a prodigious ſize; a large piazza ſupported by three rows of columns, one of which eight men can hardly fathom, extends itſelf on each ſide the porch, and bears up a flat roof, made of ſtones of 6 or 7 feet broad, and of an extraordinary length. This roof appears to have been formerly painted, and ſome colours, which time has ſpared, are ſtill to be perceived. The columns, made of great ſtones of granite, and full of hieroglyphics in relief, have each, on their corniſh, a capital compoſed of four womens heads, with their headdreſs, ſet back to back, and appearing like the faces of a double Janus: theſe heads are of a proportion ſuitable to the columns: there is above them an abacus of a ſquare ſtone, of about 6 feet high, ſomewhat longer than it is broad, which ſupports the roof. A kind of corniſh, of a ſingular conſtruction, runs all round this piazza; and in the middle, over the porch, there are two great ſerpents interwoven, whoſe heads reſt on two large wings extended on each ſide. Though theſe columns are above half buried in the ruins, yet one may judge of their height by their circumference; and according to the proportions of architecture, they ought to be, at leaſt, 44 or 45 feet high, and 120 including the baſis with the capital. From this porch one enters directly into a large ſquare hall, where there are three doors, opening into different apartments which lead ſtill into others, ſupported alſo by a great many fine columns, though dark and full of rubbiſh.

As this edifice is almoſt entirely buried on one ſide under the ruins and heaps of ſtones, which have formed a kind of mountain, one may eaſily get up to the top; and to give ſome idea of its dimenſions, it is ſufficient to ſay, that the Arabs had formerly built a very large town upon it, the ruins of which are ſtill to be ſeen. At ſome diſtance from the front, there is a large arch of a beautiful order of architecture, and above 40 feet high, which ſeems to have been the firſt gate.

THE tradition of the country is, that this was a temple of Serapis; which ſeems to be confirmed by a Greek inſcription on the frize, wherein the name of that deity appears; but the whole is ſo imperfectly taken, that there is no making any certain judgment of it. They alſo pretend, that this

temple had as many windows as there are days in the year, and that those windows were so disposed, that each answering to one of the degrees of the ecliptic, the sun every day saluted the deity who presided there, through them in order, one after another [e].

We shall conclude this section, which is perhaps already too long, with a reflexion made on occasion of this structure: That if in such cities as Tentyra, and some others of inferior note, there are found monuments of such exquisite beauty and grandeur, what ought we to think of those erected in the principal cities, which were the ordinary residence of the kings; as Thebes, Memphis, and Alexandria? and how great an idea ought we to entertain of the power and magnificence of the antient inhabitants of Egypt [f]?

SECT. II.

Of the antiquity, government, laws, religion, customs, arts, learning, and trade of the ancient Egyptians.

The antiquity of the Egyptians.

THERE are few nations in the world which can pretend to an equal antiquity with the Egyptians. Their country is the only one in the world which has born the name of a son of Noah; though it be uncertain, whether Ham himself made any settlement there. However, his son Mizraïm certainly peopled Egypt with his own issue, which inhabited several parts of it, under the names of Mizraïm, Pathrusim, Casluhim, and Caphtorim [a].

And yet the Egyptians themselves, being ignorant of their true descent, pretended even to a greater antiquity than this, asserting themselves to have been the first men in the world, which (as well as animals) they imagined must have been originally produced in their country, rather than in any other part of the world, because of the benign temperature of the air, the natural fecundity of the Nile, and its spontaneous bringing forth several kinds of vegetables, as proper food for the newly produced men and animals. And to support this opinion by fact, they instanced in the

[e] Sicard, Mem. des missions, t. ii. p. 158. Lucas, t. 2. p. 133, &c. [f] Lucas, ibid. p. 139. [a] See before, p. 464.

the great numbers of mice which were every year bred out of the mud left by the Nile on its retreat, ſome of them, as they ſay, appearing alive, and formed ſo far as the fore-part of the body only, the other part being inanimate and without motion, as having not yet quite put off the nature of earth [b]. That the concurrence of proper cauſes, in certain ſeaſons, will occaſion a prodigious encreaſe of thoſe vermin, is obſerved in other countries; but as to the other part of the relation, it is not improbable, that the mice which are generated at that ſeaſon in Egypt, are of the ſame kind with thoſe mentioned by antient authors to breed in that country, and ſome other parts, which have but two legs [c], and which an incurious ſpectator might therefore eaſily take to be imperfect animals, and but half formed. On this miſtaken notion of their original, the Egyptians built their hiſtory, reckoning an extravagant number of years, during which they pretended they had the moſt flouriſhing kingdom in the world, under the adminiſtration of their own native kings. However, we are told, that in the time of Pſammetichus they acknowledge the Phrygians to be more antient, yielding that nation the priority, and challenging only the ſecond rank to themſelves [d].

Their government and laws.

THE Egyptians are ſaid to have been the firſt who found out the rules of government, and the art of making life eaſy, and a people happy; the true end of politics. Their laws and inſtitutions were not only highly reverenced by thoſe who lived under their immediate influence, but by other nations, and particularly the Grecians, whoſe firſt ſages and law-givers travelled into this country to acquaint themſelves therewith, and borrowed thence the beſt part of thoſe which they afterwards eſtabliſhed at home.

Their kings manner of life.

THE crown of Egypt was hereditary; their firſt kings did not live after the manner of other monarchs, or govern by their own arbitrary will and pleaſure, ſubject to the controul of none; but they were obliged to conform themſelves to the eſtabliſhed laws of the land, not only in the management of public affairs, but even in their private way of life. No ſlave bought with money, or ſervant born in their own houſe, was admitted into their ſervice; but they were attended by the ſons of the prieſts of moſt diſtinguiſhed birth;

[b] Diod. Sic. l. 1. p. 9. [c] Theophraſt. in fragm. de animalibus. Plin. nat. hiſt. l. 10. c. 65. Herodot. l. 4. [d] Herodot. l. 2. ſub init. See before, p. 431. not. U.

birth; who, after having had a ſuitable education, were at the age of twenty placed about the king's perſon; that, being waited on both day and night by men of ſuch extraordinary merit, he might learn nothing unworthy of the royal majeſty, and be in the leſs danger of falling into any vicious exceſs; which princes ſeldom do, unleſs they find, among thoſe who approach their perſons, encouragers of their debauchery, and miniſters of their paſſions.

There were ſtated hours of night as well as day, when the king could not do what he had a fancy to, but was indiſpenſably obliged to give attention to buſineſs and ſerious employment. When he aroſe early in the morning, the firſt thing he did was to peruſe the public diſpatches and letters, which came from ſeveral parts of his dominions, that ſo he might be well acquainted with the ſtate and affairs of his kingdom. Then bathing himſelf, and putting on ſplendid attire, and aſſumeing the enſigns of his regal office, he went to the temple to ſacrifice: the victims being brought to the altar, the chief prieſt, in the preſence of the king and the aſſiſtants, prayed with a loud voice for the health and proſperity of the king, who governed according to juſtice and the laws of the kingdom. And on this occaſion he enlarged on his royal vertues, obſerving, that he was pious towards the gods, tender towards his people, moderate, juſt, magnanimous, of ſtrict veracity, liberal, maſter of himſelf, puniſhing below, and rewarding above, defert. He then ſpake with execration of the faults which the king might have committed through ſurprize or ignorance; but withal abſolving him, and laying the guilt on his miniſters and council. And this method they took to win their kings to the practice of vertue; not by ſharp admonitions, but by the pleaſing praiſes due to good actions. The ſacrifices being duly performed, the ſcribe read, out of ſacred records, ſuch of the counſels and actions of the moſt famous men as might be of uſe in life, and fit for imitation; that the king might thereby be inſtructed to govern his ſtate by their maxims, and regulate his adminiſtration, in every reſpect, according to the eſtabliſhed laws.

Nor was the king obliged to this exactneſs in public affairs only; but he was ſo little maſter of himſelf in private, that he could not take the air, lie with his queen, bath, or do the moſt indifferent thing, but at certain times,

which

which were particularly appointed, and ſet apart for this or that purpoſe. He was not permitted to chooſe what he would eat, but his table was furniſhed with the moſt ſimple food, generally veal or gooſe ; and hewas allowed but a certain quantity of wine to drink. And this regulation was ſo moderate, that it ſeemed not to have been the inſtitution of a legiſlator, but the preſcription of an experienced phyſician for the preſervation of health ; to which it was ſo conducive, that one of the kings of Egypt, named Tachos, who had the beſt of conſtitutions while he lived after the frugal manner of his own country, retireing into Perſia, ſoon ruined it by the luxurious diet of that nation [e]. It is ſaid, that there was in a certain temple in Thebes. a pillar, with an inſcription on it, containing imprecations againſt a king, who firſt had introduced luxury among the Egyptians [f].

So great a reſtraint laid on the prince in matters ſeemingly of little conſequence, is indeed extraordinary ; but what deſerves greater admiration is, that it was not in his power to ſatisfy more dangerous appetites, by wronging or oppreſſing the ſubject ; for he could not puniſh any perſon out of paſſion or caprice, nor give judgment in any caſe otherwiſe than as the laws ordained. And all this was ſo far from being thought hard or diſhonourable by the kings, that on the contrary they eſteemed it a ſingular bleſſing, that while other men were ſubject to the ill conſequences of indulging their natural paſſions, themſelves were exempt from ſuch dangers, by living up to a rule of life approved by the muſt prudent perſons. While the princes behaved themſelves with this juſtice and moderation, they were infinitely dear to their people ; not only the colleges of prieſts, but the whole Egyptian nation being more ſolicitous for the king's ſafety, than that of their wives, children, or poſſeſſions. Wherefore, ſo long as theſe laws were obſerved, their ſtate was flouriſhing, and the people happy ; they extended their dominions by the conqueſt of ſeveral nations, became exceeding rich and populous, and enabled to adorn the ſeveral provinces of the kingdom with works of inimitable magnificence [g].

THE affection of the Egyptians to their king appeared in nothing more than in the lamentations they made for them, and the honours they paid them when dead ; for upon

The honours paid them when dead.

[e] Ælian. var. hiſt. l. 5. c. 1. [f] Plutarch de Iſid. & Oſirid. p. 354. [g] Diodor. Sic. l. 1. p. 63, &c.

on the death of any of their kings, the whole kingdom went into mourning, rending their garments, ſhutting up their temples, and putting a ſtop to all ſacrifices, feaſts, and ſolemnities, for the ſpace of ſeventy two days. Companies of 200 or 300, both men and women, having thrown dirt on their heads, and being girt with linen girdles, marched ſolemnly in proceſſion twice a day, ſinging his praiſe in mournful dirges, calling on the virtues of the deceaſed. All this while they abſtained from fleſh and wheat, as alſo from wine and all delicacies; they neither bathed, nor anointed themſelves, nor ſlept in their beds, nor uſed the company of their wives; but every one mourned both night and day, as for the loſs of a beloved ſon. In the mean time, the funeral pomp being prepared with great magnificence, on the laſt day, the body was expoſed in a coffin at the entrance of the ſepulchre, where, in purſuance of a law, the actions of his life were recited, and every one was at free liberty to accuſe him. The prieſts pronounced his elogy; and if it ſo happened that the deceaſed had reigned worthily, the numerous multitude, aſſembled on the occaſion, ſeconded the applauſes of the prieſts; but if he had governed unworthily, they boldly expreſſed their diſapprobation. It even depended on the inclinations of the people, whether the deceaſed prince ſhould be honoured with a ſolemn burial, which through their diſlike was denied to ſeveral. Upon which account (among others), and leſt their dead bodies ſhould be abuſed, and their memory blaſted with eternal infamy, they did their utmoſt to deſerve the good opinion of their ſubjects by an unblameable conduct.

The political diviſion of the kingdom.

As to the adminiſtration of public affairs, each nome, or province, had its peculiar governor, who ordered and took care of every thing within his juriſdiction. The lands were divided into three parts; of which one was allotted to the prieſts, and the revenues thereof were employed not only for the maintenance of them and their families, but for the providing ſacrifices and all other expences of public worſhip. The ſecond belonged to the king, and was appropriated to defray the charges of his wars, for and the ſupport of the regal dignity with ſplendor. By ſuch an abundant proviſion, he was enabled liberally to reward men of diſtinguiſhed merit; and had no occaſion to lay any burthenſome taxes on his people. The third part was the ſoldiers, who, having ſo handſome a maintenance, were thereby encouraged to venture their lives in defence

defence of their country: for they thought it abſurd to truſt the ſafety of the whole nation in the hands of thoſe, who had nothing dear or valuable at home to fight for [h].

HERODOTUS ſays, the Egyptians were diſtinguiſhed into ſeven orders of men; prieſts, ſoldiers, herdſmen, hogherds, traders, interpreters, and ſeamen; who took their names from the profeſſions they exerciſed. But Diodorus mentions no more than five; prieſts, ſoldiers, ſhepherds, huſbandmen, and artificers, including probably ſome of the former denominations under ſome of theſe.

Of the prieſts.

THE king, prieſts, and ſoldiery made as it were the three eſtates of the kingdom. The prieſts were held in great reverence and eſteem, not only for their attendance on the worſhip of their gods, but becauſe by their learning and prudence they were of great ſervice to the ſtate; being for that reaſon always near the king's perſon, as the chief of his council to aſſiſt him with their advice, to give their judgments as to the event of any enterprize, by their ſkill in aſtronomy, and in divination by inſpection of the ſacrifices; and to read uſeful points of hiſtory out of the ſacred commentaries. Theſe were exempt from all taxes, and were the next in power and dignity to the king [k].

THE prieſts wore linen garments, and ſhoes, being not permitted to dreſs in any other manner; they took particular care to waſh them often, and have them always clean; and for greater neatneſs, they ſhaved all parts of their bodies once in three days, and bathed conſtantly, twice by day and twice by night, in cold water, with a great deal of ſuperſtition. The ſervice of every god was performed, not by one, but by many prieſts; and they had a chief prieſt over them, in whoſe room, when he died, his ſon was ſubſtituted. The prieſthood enjoyed very great advantages, being never diſturbed with domeſtic cares; for they eat the conſecrated bread, and were daily furniſhed with beef and geeſe in abundance, and had alſo an allowance of wine; but they might not taſte of fiſh. Beans, which were never eaten by the other Egyptians, the prieſts abhorred the ſight of, accounting them impure and abominable: whence Pythagoras took the averſion he had to that kind of pulſe.

Of the ſoldiery.

THE military men were called Calaſirians, or Hermotybians, according to the different nomes they inhabited. Thoſe of the latter were the nomes of Buſiris, Saïs, Chemmis, Papremis, and one half of the iſland Proſopis, from

[h] Diodor. ubi ſupr. p. 66. [i] Herod. ubi ſupr.
[k] Diodor. ubi ſupr. [l] Herod. ubi ſupr.

from whence 160,000 men might be drawn, when they were moſt numerous. The nomes of the Calaſirians were thoſe of Thebes, Bubaſtis, Aphthis, Tanis, Mendes, Sebennytus, Athribis, Pharbæthus. Thmuïs, Onuphis, Anytis, and Myecphoris; which laſt was ſituate in an iſland over-againſt the city of Bubaſtis, And theſe nomes of the Calaſirians might furniſh 250,000 men at the moſt. The ſoldiers of both denominations were not permitted to learn, or exerciſe, any mechanical art, but were obliged, from father to ſon, to apply themſelves to the art of war only [m]; wherein it may be ſuppoſed, they therefore, made a more than ordinary proficiency; but their great excellency ſeems to have been in horſemanſhip, and the ſkill of guiding chariots; for which they were particularly and early famous, as appears from ſcripture [n]. For neglect of duty, flying in battle, or cowardice, they were puniſhed only by marks of infamy; it being thought more adviſeable to keep them in order by the motive of honour, than the fear of chaſtiſement [o].

The lands conferred on the militia were exempted from public taxes, as well as thoſe of the prieſts. The portion aſſigned to each man was 12 aruræ, every one containing a ſquare of 100 Egyptian cubits (A). The king's guard conſiſted of 1000 Hermotybians and as many Calaſirians, who were changed every year, that they might all have that honour and advantage in their turn. For, beſides the revenues of their lands, thoſe that were on duty at court had a daily allowance of five pounds of bread, two pounds of beef, and two pints of wine. This liberal proviſion for the militia was alſo an encouragement for them to marry, helping to people the country, and leaving behind them a ſucceſſion of troops ſufficient for the defence of the kingdom [p].

But after all, the Egyptians cannot be ſaid to have been a warlike nation; it being real and not imaginary combats that form a ſoldier. They rather extended their dominions by ſending out colonies, than by their arms: however, we ſhall find ſome conquerors of great fame among their kings.

We

[m] Idem. ibid. Iſai. xxxviii. 9. Diodor. ubi ſupr.

[n] Exod. xiv. 7, &c. Cant. i. 9.

[o] Diodor. l. 1. p. 70.

[p] Herod. & Diodor. ubi ſupr.

(A) The Egyptian Arura muſt therefore have been ſomewhat more than three quarters of an Engliſh acre.

WE had almoſt forgot to obſerve, that if the Egyptians at any time created a new king by election (which ſometimes happened), he was always choſen, either out of the prieſts, or the ſoldiers; and if out of the latter, he was immediately received into the order of prieſts, and initiated in their learning and myſteries [q].

Of the inferior claſſes.

THE huſbandmen taking the lands from the king, prieſts, and ſoldiers, at an eaſy rent, and employing themſelves wholly in their tillage, and the ſon continually ſucceeding the father in the ſame occupation, they became the moſt expert in agriculture of any people in the world. The ſhepherds, in like manner, were always ſhepherds from generation to generation; and, by the obſervations of their fore-fathers and their own experience, arrived at great ſkill in their way; endeavouring to vie with one another in contrivances to encreaſe the breed of the animals they fed. One thing in particular deſerves to be mentioned, which was practiſed by thoſe who fed hens and geeſe. For, not contented with the ordinary way of natural encreaſe, they did not ſuffer them to ſit, but themſelves hatched the eggs by an artificial fecundation; and by that means raiſed prodigious flocks of thoſe fowls [r]. The method was moſt probably by ovens, which are ſtill uſed in Egypt for the ſame purpoſe, and much ſpoken of by travellers (B).

THE

[q] Plut. de Iſid. & Oſirid. p. 354.

[r] Diod. Sic. ubi ſupr.

(B) It may not be amiſs to give a ſhort account of this method; which perhaps might be practicable in other countries as well as Egypt.

The houſes built for this uſe have a long entry, on each ſide of which are fourteen ovens on the ground (ſome places have more, and ſome leſs): the bottoms and ſides of which are all of ſun-dried bricks; upon them they put mats, and on the mats eggs. The tops of theſe ovens are flat, and covered with ſticks, except two long channels or hearths, of ſun-dried bricks; three or four inches deep, wherein the fires are made, to heat the eggs lying under them in the lower ovens.

Above theſe lower ovens are ſo many other, alſo of ſun-dried bricks, and arched at the top; where are ſome holes, which are ſtopped, or left open, as they pleaſe, to govern the heat in the ovens below. Theſe upper ovens have not only mouths opening into the long entry, but mouths of communication with each other.

The law which obliged the son of the husbandman and shepherd to follow the vocation of his father, extended to all

ther, and every one of them has two of the above-mentioned hearths. The depth of the lower oven is about two feet and a half English; that of the upper above four.

They begin to heat the ovens in the middle of January, burning every morning one hundred Kintars (or hundred weight) of camels or buffaloes dung, and the like proportion at night, till the middle of February, about which time the ovens are so hot, that one cannot well endure to lay his hand upon the walls.

After this they put the eggs into the ovens to hatch the chickens; which they continue successively to the end of May. The eggs are first put on mats in the lower ovens, seven or eight thousand eggs in number, and laid only double, one upon another. In the upper ovens the fire is made in the long channels, or hearths, from whence the heat is conveyed into the lower ovens. The eggs which are directly under these hearths, lie treble one upon another; the rest, as was said, only double.

At night, when they make new fires in the hearths, they remove the eggs that were directly under them, and lay treble, into the place of those which lay on the sides, and double only; and these being now removed lie treble under the hearth, because the heat is greater there than on the sides.

These eggs continue in the lower ovens fourteen days and nights. afterwards they remove them into the upper ovens, which are just over the lower. In those (there being now no more fire used) they turn all the eggs four times every twenty four hours. The twenty first, or twenty second day the chickens are hatched; which the first day eat not; the second they are fetched away and fed.

The master of the oven has a third part of the eggs for his cost and pains; out of which he is to make good unto the owners, (who have two thirds in chickens for their eggs) if any happen to be spoiled or miscarry.

The fire in the upper ovens, when the eggs are placed in the lower, is thus proportioned. The first day the greatest fire; the second less than the first; the fourth more than the third; the fifth less; the sixth more than the fifth; the seventh less; the eighth more; the ninth without fire; the tenth a little fire in the morning; the eleventh they stop all the holes with flax or straw, making no more fire; for if they should, the eggs would break. They take care that the eggs be no hotter than the eye of a man, when they are laid upon it, can well endure.

When the chickens are hatched, they put them into the lower ovens,

all arts and trades: for amongſt the Egyptians a man was under an indiſpenſible neceſſity of taking up his father's employment, and of applying himſelf wholly to that, without meddling with any other. Thus being cut off from all hopes of riſing to the magiſtracy, and having no room left for popular ambition, they ſtuck cloſely to what they profeſſed. They were never permitted to concern themſelves with civil affairs; and if they happened to attempt it, or undertook any buſineſs that did not belong to their herditary profeſſion, they were ſeverely puniſhed.

Of the courts of juſtice.

THE Egyptians were very careful in the adminiſtration of juſtice; for they rightly judged the ſentences pronounced from the tribunals to be of the greateſt conſequence to the public; and that as nothing could conduce more to the reformation of mens manners, than the puniſhment of offenders, and the relieving of the oppreſſed; ſo nothing could be more deſtructive of ſociety or a greater cauſe of confuſion, than the ſuffering of bribery, or favour in ſuch caſes For this reaſon, they were very ſcrupulous in the choice of their judges; who were men of the beſt reputation, and taken from the three chief cities, Heliopolis, Thebes, and Memphis; ten from each; ſo that their whole number was thirty. This tribunal was thought to be inferior neither to that of the Areopagus at Athens, nor to the Lacedæmonian ſenate.

THIS venerable aſſembly choſe a preſident out of their own number, whoſe place, as an inferior judge, was upon his election ſupplied by the city that ſent him. Their ſalaries were paid by the king, who allowed the preſident a ſtipend in proportion to his ſuperior rank; and that he might be more viſibly diſtinguiſhed from his brethren, he wore a chain of gold about his neck, from which hung an image of precious ſtones, which they called Truth. Whenever the preſident aſſumed this enſign of his office, it ſignified, that he was prepared to hear cauſes. The court being ſeated, and the eight books, which contained all the laws, laid before them, the plantiff preferred his complaint, clearly and diſtinctly ſet forth in writing; a copy of which being granted

to

ovens, which are covered with mats. Under theſe mats is bran to dry them; and upon the mats ſtraw for them to ſtand on (1).

(1) Greaves, manner of hatching chickens at Cairo. Phil. Tranſ. No. 137. Vid. Lucas voy. vol. 1. p. 279, &c.

to the defendant, he gave in his answer. To this the plantiff replied, and then the defendant rejoined. Each party having given in two writings, the court took them into consideration; and after consulting together, proceeded to sentence; and the president turned the effigies of truth towards the party in whose favour judgment was given. All this was done without the clamorous harangues of lawyers, who are too apt to disguise truth, or falshood, to serve their turn, and pervert judgment by their specious rhetoric. The Egyptians therefore, sensible of the fallacies of oratory, and the evil arts of public pleaders, banished them from the tribunal; nor would they even suffer a man to speak in his own cause, well knowing the advantage one person might have over another by more artful speaking, or greater confidence; but contented themselves with a simple and intelligible state of the case in writing, which being readily understood, was as readily decided. By which means every man stood upon a level with his antagonist, and nothing but the merits had any weight in the determination of a cause.

Their remarkable laws.

HAVING spoken of their courts of judicature, it may not be amiss briefly to mention such of their laws as are most remarkable, for their antiquity or use.

I. PERJURY was punished with death; it being looked on as sinful in the sight of the gods, and destructive of human society.

II. HE that saw a man killed, or violently assaulted on the high-way, and did not endeavour to rescue him if he could, was punished with death. If it appeared, that he was unable to give assistance, he was nevertheless obliged to discover, and prosecute the offenders according to law; which if he neglected, he received a certain number of stripes, and was kept without food for three days.

III. FALSE accusers underwent the same punishment as the accused should have undergone in case of conviction.

IV. EVERY Egyptian was enjoined to give in his name, and by what means he gained his livelihood, in writing, to the governor of the province where he lived. But if it could be proved, that he had given in a wrong information, or got his living in an unlawful way, he was punished with death. This law was made by Amasis, and Solon is said to have introduced it, from Egypt among the Athenians [f].

V. He

[f] Vid. Herod. ubi supr.

V. He that wilfully killed any perſon, whether freeman or ſlave, was condemned to die.

VI. PARENTS that killed their children were not adjudged to die; but were obliged to embrace their dead bodies for three days and three nights together; a guard being ſet over them to ſee that they punctually obeyed this law.

VII. BUT parricides were put to a moſt cruel death; firſt they had their limbs mangled, and their fleſh cut into ſmall pieces with ſharp reeds, after which they were laid upon thorns, and burned alive.

VIII. WOMEN with child were not executed till they had been delivered; that the innocent might not be involved in the puniſhment of the guilty.

IX. MUTINY and deſertion were puniſhed only by degradation and diſgrace; which could never be wiped away, but by brave actions and amendment.

X. THOSE who betrayed their ſecret deſigns to the enemy had their tongues cut out.

XI. COINING falſe money, uſing falſe weights, and forgery of all ſorts, were puniſhed by cutting off the offending parts, both the hands.

XII. HE that committed a rape on a free-woman, had his privities cut off; for they held a raviſher guilty of three moſt enormous crimes, having, beſides the injuſtice of the action, brought infamy on the woman, and baſtardized her iſſue.

XIII. ADULTERY by conſent was puniſhed in the man by giving him a thouſand laſhes with rods; and in the woman by the loſs of her noſe.

XIV. ACCORDING to the commercial laws, which are ſaid to have been made by Bocchoris; if a man borrowed money without giving a note in writing for it, he was diſcharged from the debt, provided, he would make oath that he was no ways indebted to his creditor. The oath in this caſe was very ſolemn, and preceded by ſacrifice.

XV. In caſes where the debt was acknowledged by proper inſtruments, the intereſt was not to exceed the double of the capital or ſum lent. The debtor's goods, and not his body, were anſwerable for the debt; for his body was claimed by the city, or place, where he lived, which had the greateſt intereſt in him, and had a right to his ſervice, both in peace and war. In ſhort, they did not apprehend wherein lay the policy of ſacrificing an uſeful member of the republic, to the cruelty or avarice of a private perſon.

This law, or one very like it, is said to have been established by Solon [s].

XVI. To help the circulation of money, Asychis made a law, that a man might borrow on the pledge of his father's dead body, which was to be put into the hands of the creditor; and if he did not redeem it, he was to be deprived of the honour of a funeral himself, nor could he have the liberty of burying any person descended from him; which was accounted the greatest ignominy [t].

XVII. The Egyptian priests were allowed no more than one wife, but all others might marry as many as they pleased: nor was any child reckoned a bastard, though begotten on a slave bought with money; for they held the father to be the sole cause of generation, and that the mother only provided nourishment and lodging for the infant [u].

XVIII. By the laws of Egypt brothers were permitted to marry their sisters; because they had an instance of the happiness of such marriages in that of Isis with her own brother Osiris; for having vowed, on his death, never to suffer the embraces of any other, she revenged his murder, and governed the kingdom during her widowhood with great prudence, being the author of infinite benefits to mankind. For which reason, in Egypt, the queen had more power, and more honour shewn her than the king; and in private contracts the greater authority was given to the women, the husbands thereby promising to be obedient to their wives in all things [w].

XIX. There was a very remarkable law, or rather a custom which had the sanction of law, with regard to the Egyptian robbers and sharpers. Whoever entered himself of their gang, gave in his name to their chief, promising to deliver him all the booty he should from time to time purloin. Upon this account it was customary for such as had any thing stolen from them to apply themselves to the chief of the gang, and give him a very particular account and description, in writing, of what they had lost, as also of the day, hour, and place, when, and where, they lost it. This information being given, the stolen goods were easily found, and restored to the right owner, upon his paying a fourth part of their value. The institutor of this extraordinary

[s] Diod. Sic. ubi supr. p. 69, &c. [t] Herod. ubi sup.
[u] Diod. Sic. l. 1. p. 72. [w] Idem ibid. p. 23.

extraordinary law thought, that since it would be impossible to prevent thieving entirly, it would be more tolerable for the injured party to lose a fourth, by way of redemption, than the whole [x].

As much as the Egyptians seemed to excel other nations in the wisdom of their laws and constitutions, they yet surpassed them more in bigotry and superstition. Of the religion of the Egyptians.

IDOLATRY was so antient among them, that the Grecians confessed, they borrowed, not only their religious ceremonies, but the names of almost all their gods from Egypt. For the Egyptians are said to have been the first people who erected altars, images, and temples, and the first inventors of festivals, ceremonies, and transactions with the gods by the mediation of others; and also to have first given names to the twelve gods [y].

THE Egyptians had a great many deities of different ranks and orders. Those who were chiefly honoured in Egypt, were Osiris and Isis; by which it is most probable they originally meant the sun and the moon (C), whose influences governed and preserved the world; those two planets being reckoned by them to be the great causes of nutrition and generation, and as it were the sources from whence the other parts of nature, which also they looked upon as gods, and to which they gave distinct names, were derived. These were Jupiter, or spirit, the vis vivifica of living creatures; Vulcan, or fire; Ceres, or the earth; Oceanus (by which the Egyptians meant their Nile), or moisture;

[x] Idem ibid. p. 69. [y] Herod. ubi supr.

(C) Agreeably hereto, the name of Osiris, we are told, in the Egyptian tongue signifies many-eyed; an epithet very proper for the sun; and Isis ancient (1).

There are several other mythological interpretations of these two deities. Sometimes Isis is the earth in general; sometimes only the land of Egypt; and Osiris is the moon, or else the Nile, which is lost, or destroyed, in the sea, which they call Typhon. At other times Osiris is Pluto and Bacchus, and Isis Ceres, Proserpine, Cybele, &c. One supposes Osiris to signify the efficient cause of things, and Isis matter; and another thinks Isis denotes nature in general (2).

(1) Diod. Sic. ubi supr. p. 10, 11. (2) Vid. Plut. de Isid. & Osirid. Apuleium, Metam. l. 2.

moisture; and Minerva (called also by that nation Neith), or air.

Besides these celestial and eternal gods, they had also terrestrial and mortal deities, which had merited the honours paid them, by the benefits they conferred on mankind in their life-time; several of them having been kings of Egypt: some of these bore the same names with the celestial gods, and others had proper names of their own. Such were the Sun, Cronus, or Saturn, Rhea, Jupiter (called by them Ammon), Juno, Vulcan, Vesta, Hermes, or Mercury, Orus, Venus, Pan, Arueris, Nephthys, Harpocrates, and others [z]. Serapis is said to have been an upstart deity, introduced by one of the Ptolemies at Alexandria [a]; but others suppose it to be only another name for Osiris [b], who was also called Bacchus. As Osiris was supposed to have been of a good and beneficent nature, so his brother Typhon was esteemed the reverse, and held in universal detestation, for the evils brought by him on his family and nation, as will be mentioned hereafter. The other names of Typhon were Seth, Bebon, and Smy [c].

Though the bodies of these mortal deities remained in their sepulchres on earth, yet they believed their souls shone in the stars in heaven; the soul of Isis in particular in the dog-star, called by them Sothis; the soul of Orus in Orion; and that of Typhon in the bear [d].

Notwithstandig this polytheism of the Egyptians, they are yet said in reality to have acknowledged one supreme god, the maker and ruler of the world, whom they sometimes denoted by the name of Osiris, or Serapis, sometimes by that of Isis, and at other times by that of Neith, on whose temple at Saïs was the following remarkable inscription; I am all that hath been, is, and shall be; and my vail hath no mortal yet uncovered [e]. There is also an inscription to Isis still remaining at Capua, to this effect; To thee who, being one, art all things, the goddess Isis [f]. The inhabitants of Thebaïs are reported to have worshipped only the immortal and unbegotten god Cneph, or Emeph; for which reason they were exempt from all contributions towards the maintenance of the sacred animals which were worshipped

[z] Vid. Diod. Sic. ubi supr. p. 11, &c. [a] Origen. cont. Cels. Vid. Tacit. Hist. l. 20. [b] Plutarch. de Isid. & Osir. p. 362. [c] Idem ibid. p. 367. [d] Idem ibid. p. 359. [e] Idem ibid. p. 354. [f] Vid. Cudworth Intell. Syst. p. 412, &c.

worſhipped in the lower Egypt [g]. From this God Cneph they ſuppoſed a ſecondary god proceeded, repreſenting the world, and was called Phtha, which word is at preſent uſed among the Copts to ſignify the divine being [h].

HOWEVER, the idolatrous humour which prevailed at firſt, perhaps only in ſome parts of Egypt, appears at length to have entirely over-run it, and, which ſeems ſcarcely credible, they came at length to give divine honours to ſeveral animals, nay even to vegetables themſelves, as leeks and onions; and that with ſo great variety and diſagreement among themſelves, that except ſome of the principal gods who were honoured all over the kingdom, the worſhip of every deity was confined to one or two cities or provinces; whence it came to paſs, that the names of a great number of the chief cities of Egypt were by the Grecians named after the gods, or animals, that were worſhipped there; as Dioſpolis, or the city of Jupiter, Heliopolis, or the city of the ſun; and in the ſame manner others bore the names of Pan, Apollo, Latona, Hermes, Hercules, and Venus; and alſo of the Dog, the Lion, the Wolf, the Crocodile, the fiſhes Latos, Oxyrynchus, and Phagrus, and other animals.

THIS diverſity of worſhip was ſometimes attended with very ill conſequences, eſpecially if their deities happened to be ſuch as were naturally enemies to one another; the inhabitants of one place often paying their adoration to that kind of animals which were held in the greateſt abhorrence by their neighbours. Hence proceeded inveterate quarrels and dangerous wars; as happened in particular between thoſe of Heracleopolis, who worſhipped the ichneumon, and thoſe of Arſinoe, who worſhipped the crocodile; and, to mention no more, between the cities of Oxyrynchus and Cynopolis, the former of which ſacrificed and eat dogs, the deity of the latter, in revenge for their eating that ſort of fiſh, which was the object of their own worſhip [i]. It was thought, however, that the kings themſelves, out of policy, firſt occaſioned, or at leaſt encouraged and fomented, theſe diſſenſions, to prevent the people's attempting any thing againſt the ſtate; for Diodorus tells us, that one of their firſt and moſt prudent kings, finding the Egyptians very prone to ſedition, enjoined to

[g] Plut. ubi ſupr. p. 359. Vid. Iamblich. de myſt. § 8. c. 3.
[h] See before, p. 100.
[i] Plutarch. ubi ſup. p. 380. Vid. Juven. Sat. 15. & Athanaſium, orat. contr. Julian.

each province the worship of some particular animal different from all the rest, and likewise to use a different diet; so that the Egyptians, being by this means divided into so many distinct societies, prejudiced against each other in religious matters, and mutually despising one another on account of their different customs in the ordinary affairs of life, there was no likelihood of their ever uniting again [k].

It would be rather tedious than entertaining, to set down all the fables and uncertain traditions, which might be found in ancient authors, concerning the Egyptian gods; some of them may perhaps be occasionally taken notice of hereafter: wherefore we shall immediately proceed to give an account of the images, by which they represented those deities which were most peculiar to this nation, and of their sacrifices, festivals, and religious ceremonies.

Osiris was variously represented; sometimes by a sceptre and eye, to express his power and providence; at other times by the image of a hawk, because of its sharp sight, swiftness, and other qualities; and in later times in a human form, in a posture not very decent, signifying his generative and nutritive faculty [l]. But the greatest adoration was paid to his living image, the bull, as we shall observe by and by.

The image of Isis was usually in the form of a woman, with cow's horns on her head [m], representing the appearance of the moon in her increase and decrease, and holding the Siftrom (a kind of cymbal) in her right hand, and a pitcher in her left; the former signifying the perpetual motion there is in nature, and the other the fecundity of the Nile. But sometimes she was represented a Cybele, having her body full of breasts, to express her nourishing of all things [n].

The statue of Serapis was of a human form, with a basket, or bushel, on his head, signifying plenty; his right hand leaned on the head of a serpent, whose body was wound round a figure with three heads, of a dog, a lion, and a wolf; in his left hand he held a measure of a cubit length, as it were to take the height of the waters of the Nile [o].

Jupiter,

[k] Diod. ubi sup. p. 80. [l] Plut. ubi sup. p. 371. [m] Herod. ubi sup. [n] Vid. Plut. ubi sup. p. 376. Serv. in Virg. Horapoll. l. 1. c. 3. Apuleium, Metam. l. 2. [o] Vid. Macrob. in Saturn. l. 1. c. 20. Suidam in Σάραπις.

JUPITER, or Ammon, was by the Egyptians repreſented by an image with the head of a ram; the reaſon of which, they ſay, was this; Hercules being very deſirous to ſee Jupiter, did not without great difficulty obtain his requeſt, for the god was unwilling to be ſeen: but at length Jupiter yielded to his importunity, and having ſeparated the head from the body of a ram, and flayed the whole carcaſs, he put on the ſkin with the wool, and in that form ſhewed himſelf to Hercules. And in this manner of repreſenting Jupiter, the Egyptians were imitated by the Ammonians, who were a colony of them and the Ethiopians [p].

THE other more famous deities of the Egyptians were Anubis, Harpocrates, Orus, and Canopus. The firſt was uſually painted with the head of a dog, becauſe he accompanied Oſiris in his expedition clothed in a dog's ſkin [q], and was the guard of him and Iſis [r]. Sometimes this deity is confounded with Hermes, and then the dog's head may denote his great ſagacity. Harpocrates was the ſon of Iſis, begotten, as is ſaid, by Oſiris on her after his death; for which reaſon he was weak in his lower limbs [s]. This was the god of ſilence, being therefore uſually repreſented with his finger on his mouth; he was always placed near the ſtatues of Oſiris and Iſis, to intimate, that their having been once mortals was not to be ſpoken of [t]. Orus is often confounded with Apollo: he was the ſon of Iſis and Oſiris; and was generally repreſented as a child wrapped up in ſwadling-cloaths, and ſometimes, by thoſe of Coptos, as holding in one hand the privities of Typhon [u]. Canopus was the pilot of Oſiris's ſhip, whoſe ſoul, after his death, migrated into the fixed ſtar of that name [w], which is one of the firſt magnitude, but not viſible in Europe [x]. This god became famous for the victory obtained by him over the Chaldean god, Fire; the ſtory of which, in brief, is this: the Chaldeans carried about their god, to combat with thoſe of other provinces, all which it eaſily overcame and deſtroyed, none of their images being able to reſiſt the force of the fire, till at length the prieſt of Canopus deviſed this artifice; he took an earthen water-pot full of holes, which he ſtopped up with wax, and having filled it with

[p] Herod. ubi ſup. Plut. ubi ſup. p. 357. [q] Diod. Sic. p. 15. [r] Ibid. p. 77. [s] Plut. ubi ſup. p. 358. [t] Varro apud Auguſt. de civit. Dei. [u] Plut. ubi ſup. p. 373. Vid. Kircher Oedip. v. 1. p. 214. [w] Plut. ibid. p. 359. [x] Vid. Plin. l. 6. c. 22.

with water, painted it over, and placed the head of an old image upon it, and produced it as a god. In the conflict the wax being ſoon melted, the water ruſhed out at the holes, and quickly extinguiſhed the fire: In memory of this victory, Canopus is uſually repreſented in the manner we have juſt deſcribed, without arms, and having ſcarce any feet to be ſeen [y]. Yet others ſuppoſe, theſe were really no more than veſſels filled with the water of the Nile, which the antient Egyptians uſed alſo to worſhip.

Of the ſacred animals adored by the Egyptians, none was held in ſo great reverence as the bull, by which they repreſented Oſiris. There were two of this kind kept in Egypt, one at Memphis, called Apis, by the Grecians Epaphus, and the other at Heliopolis, called Mneuïs: this laſt was black, and the honours paid to him were inferior to thoſe due to Apis [z]. The Apis was to be the calf of a cow incapable of bearing another, and no otherwiſe to be impregnated (as the Egyptians imagined) than by thunder. The marks which diſtinguiſhed him from all others were theſe: his body was black; except one ſquare of white on the forehead; he had the figure of an eagle on his back; a double liſt of hair on his tail, and and a knot like a beetle under his tongue [a]. And others reckon no leſs than twenty-nine marks peculiar to this beaſt [b]. They ſacrificed bulls to Apis, but were ſo nice in the choice of them, that if they found but one black hair upon them, they judged them to be unclean. This ſearch was made by the prieſt with the utmoſt precaution; after which he drew out his tongue, to ſee if he were clean in that part; and in the laſt place he examined his tail, to ſee whether the hairs were natural, and as they ought to be. The beaſt being found without blemiſh, the prieſt tied a label about his horns, and ſealing it with his ſignet, ordered him to be taken away and ſecured; for it was death to ſacrifice any beaſt of this kind that was not marked with ſuch a ſeal. The order and ceremony of the ſacrifice was thus: the victim being brought to the altar, they immediately kindled a fire, and pouring wine upon him, they offered their prayes to the god. Then killing the beaſt they flayed him, and ſtruck

[y] Suidas in Canop. Ruffin. Hiſt. Eccleſ. l. 11. [z] Plut. ubi ſup. p. 364. [a] Herodot. l. 3. Vid. Plin. l. 8. c. 46. [b] Ælian. Hiſt. anim. l. 11. c. 6.

ſtruck off his head, which they carried with many imprecations, to the market, or other public place, and ſold it to ſome Grecian, if they met with any; but if no ſuch perſon were to be found, they threw it into the river, with this form of execration; May the evils impending over the perſons now ſacrificing, or the Egyptians in general, fall upon this head. This ceremony of libation, and the manner of devoting the head of the victim, was an univerſal practice over all Egypt; for which reaſon no Egyption would eat of the head of any animal. But in the choice of their victims, there were different cuſtoms in different places[c].

WHEN the Apis died, and his funeral pomp was over, the prieſts who had this office, ſought out for another with the ſame marks, and when they had found one, the lamentations immediately ceaſed; and the prieſts led the calf firſt into the city of Nile, where he was fed for forty days: from thence he was tranſported in a veſſel with a gilded cabin to Memphis, as their god, and turned into the grove of Vulcan. For the abovementioned forty days women only were admitted into his preſence, who ſtanding before him, lifted up their coats, and ſhewed him their privities; after which time they were not permitted to ſee the new god. The reaſon they gave for this worſhip was, becauſe the ſoul of Oſiris, as they pretended, migrated into a bull of this ſort, and by ſucceſſive tranſmigration paſſed from one to another, as often as one died, and another was found. But others ſay, that it was becauſe when Oſiris was killed by Typhon, Iſis threw his limbs into a wooden cow, covered with fine linen, from whence the city of Buſiris received its name[d].

THE feſtival of Iſis was celebrated with the utmoſt ſolemnity; for on the vigil thereof they faſted, and, having prayed, ſacrificed a bullock; taking out the bowels, and leaving the fat and vitals in the carcaſs; then cutting off the legs, rump, neck, and ſhoulders, and filling the body with fine bread, honey, dried raiſins, figs, incenſe, myrrh, and other perfumes, they proceeded to the conſecration, pouring in great quantities of oil. They ſacrificed faſting, and beat themſelves all the while the fleſh lay on the fire, and afterwards they feaſted on the remainder. The offerings of this

[c] Herod. l. 2. [d] Diod. Sic. ubi ſup. p. 76.

this kind of cattle, whether young or old, were to be unblemiſhed males; for the females, being ſacred to Iſis, could not be offered. Whence it was, that the Egyptians paid the firſt degree of veneration to that creature, and abominated the Grecians for not doing the ſame. When a cow died, they threw her into the river; but a bull was buried without the cities, leaving one horn, and ſometimes both, ſticking up as a mark of the grave. The fleſh being perfectly conſumed, and nothing but the bare bones left, they were tranſported to an iſland of the Delta, called Proſopitis, from whence veſſels were diſpatched to ſeveral parts of the kingdom, to collect the bones, and carry them away, and bury them together: the ſame was obſerved in relation to other cattle, the Egyptians being forbidden to kill any [e].

Jupiter was principally worſhipped at Thebes, thence named Dioſpolis; they eſteemed the ram ſacred on that deity's account, and, abſtaining from ſheep, ſacrificed goats only; only once a year, at the feſtival of Jupiter, they killed a ram, and flaying the carcaſs, put the ſkin on the ſtatue of the god, bringing at the ſame time an image of Hercules into his preſence, in memory of the abovementioned paſſage between thoſe two deities: after which, every one preſent gave the ram a blow, and he was buried in a conſecrated coffin.

The inhabitants of Mendes, on the other hand, ſacrificed ſheep, and no goats, becauſe they worſhipped Pan, whom they took to be one of the eight moſt antient gods, and always repreſented him with the face and legs of a goat, juſt as the Grecians did. Not that they imagined him to have been really of that ſhape (for as to that they deemed him to be like other gods), but for ſome myſtical reaſon. Though the Mendeſians had a religious veneration for goats of both ſexes, yet they eſteemed the male above the female, and paid great reverence to goatherds; and particularly to one, who at his death was univerſally lamented. In the Egyptian tongue, Mendes ſignified both Pan and a goat [f].

To the moon it was their cuſtom to ſacrifice when ſhe was at the full. The victims offered to her were ſwine, which the Egyptians held to be impure animals, and were forbidden to offer them to any other deities, than to that planet and Bacchus. When they made their ſacrifice to the moon, and had

[e] Herod. ubi ſup. [f] Idem, ibid.

had killed the victim, they put the end of the tail, with the ſpleen and fat, into the caul, and burned them on the ſacred fire, and eat the reſt of the fleſh on the day of the new moon, though they would not have taſted it at any other time. Thoſe whoſe poverty would not admit of the expence of this ſacrifice, moulded a bit of paſte into the ſhape of a hog, and offered up that.

AT the feſtival of Bacchus, though every one was obliged to kill a hog before the door of his houſe in the evening, yet they inſtantly returned the carcaſs to the ſwineherd of whom it was bought. The reſt of this feſtival was celebrated in the ſame manner in Egypt as in Greece; excepting that, inſtead of the Phallus, the Egyptian women carried about little images of a cubit in height, each of which had a priapus almoſt as big as the reſt of its body, and ſo contrived with ſtrings as to move. With theſe the women marched in proceſſion, all the while ſinging the praiſes of Bacchus, and preceded by a flute [g].

THEY did not think it ſufficient in Egypt to ſolemnize the feſtivals of their gods at annual periods only; but they had ſeveral times in the year appointed for that purpoſe, when they viſited the ſeveral cities, where the particular deities were worſhipped, with great devotion.

THOSE of Iſis at Buſiris, and of Jupiter at Thebes, we have already mentioned; only, in reſpect to the former, we muſt add, that after the ſacrifices were duly performed, the men and women who met together on that occaſion, to the number of many thouſands, diſciplined themſelves with an inſtrument our author dared not diſcover. In which devotion the Carians who lived in Egypt ſurpaſſed all others, cutting their foreheads with ſwords. The other moſt remarkable feſtivals were thoſe of Diana, at Bubaſtis, which was the Egyptian name of that goddeſs; of Minerva, at Saïs; of the ſun, at Heliopolis; of Latona, at Butus; and of Mars, at Papremis. Thoſe who aſſembled on ſuch ſolemn occaſions, at Heliopolis and Butus, offered ſacrifices only, without any farther ceremony: but the other deſerve a more particular deſcription.

THE feſtival of Diana, in the city of Bubaſtis, was obſerved after this manner: great numbers of men and women embarked promiſcuouſly together, and during the voyage ſome of the women beat on the tabor, whilſt ſome of the men

[g] Idem ibid.

men played on the pipe; the reſt of both ſexes ſinging and ſtriking their hands together at the ſame time. They ſtopped at every city they came to; where during their ſtay, the women were partly employed in their muſic, and partly in railing at the women of the place where they had ſtopped, or in dancing, and ſhewing themſelves naked. At length being arrived at Bubaſtis, they celebrated the feſtival with numerous ſacrifices, and conſumed more wine than in all the reſt of the year; for the concourſe of people upon this occaſion was reported to have uſually amounted to 700,000 men and women, beſides children.

When they met to ſacrifice to Minerva at Saïs, they hung up by night a great number of lamps filled with oil mingled with ſalt, round every houſe, the tow ſwimming on the ſurface. Theſe burned during the whole night, and the feſtival was thence named, the lighting of lamps. The Egyptians, who were not preſent at this ſolemnity, obſerved the ſame ceremonies, where-ever they happened to be; and lamps were lighted that night, not only at Saïs, but throughout all Egypt. The reaſons for uſing theſe illuminations, and paying ſo great reſpect to this night, were kept ſecret.

At Papremis a very extraordinary cuſtom was obſerved; for after having gone through the uſual form of worſhip, a few of the prieſts, towards the ſetting of the ſun, attended about the image of Mars, whilſt the far greater part of them poſted themſelves before the gates of the temple with ſtaves or clubs in their hands; on the other hand, a company of men, who had devoted themſelves to this ſervice, and frequently amounted to above a thouſand, armed in like manner, drew up oppoſite to the prieſts, who guarded the avenues of the temple. The image of the god, which was kept in a gilded wooden ſhrine, and had been removed out of the temple on the eve of the feſtival, and placed in another chapel, was drawn by thoſe few who were appointed to attend it, together with the ſhrine in which it ſtood, on a four-wheeled chariot back again to the temple. But the prieſts who guarded the entrance refuſing to give them admittance, the beforementioned votaries, in duty to the god, began to lay on the opponents with their clubs, whereon a violent conflict enſued, the blows being chiefly dealt on the head: inſomuch, that in all probability many muſt have died of their bruiſes, though the Egyptians would never allow it. The inhabitants of the place accounted for this barbarous inſtitution, by relating, that Mars having been

educated

educated abroad till he attained to man's eſtate, and coming home to ſee his mother, who was an inhabitant of this ſacred place, her ſervants, having never ſeen him, refuſed to admit him, and forcibly drove him away. Whereupon, retiring to another city, he got together a good number of men, and returning, fell upon his mother's ſervants, and entered by force; in commemoration of which action this combat was inſtituted.

BUT there was nothing ſo remarkable in the Egyptian religion, as the prepoſterous worſhip that nation paid to animals; ſuch as the cat, the ichneumon, the dog, the ibis, the wolf, the crocodile, and ſeveral others; which they had in high veneration, as well dead as living. Whilſt they were living, they had lands ſet apart for maintenance of each kind; and both men and women were employed in feeding and attending on them, the children ſucceeding their parents in the office, which was ſo far from being declined, or thought deſpicable, by the Egyptians, that they gloried in it as a high honour, wearing certain badges and enſigns, by which being diſtinguiſhed at a diſtance, they were ſaluted by bending of the knee, and other demonſtrations of reſpect. To theſe, and to the deities to which they were ſacred, the inhabitants of the ſeveral cities, where they were worſhipped, offered up their prayers, and in particular for the recovery of their children, whoſe heads they ſhaved ſometimes all over, ſometimes only one half, or a third part, and putting the hair into one balance, and ſilver into the other, when the ſilver overbalanced, they gave it to the keepers of the animals; who therewith provided food for them, which was uſually fiſh cut in pieces; but the ichneumons and cats were ſometimes fed with bread and milk.

IF a perſon killed any of theſe ſacred animals deſignedly, he was puniſhed with death; if involuntarily, his puniſhment was referred to the diſcretion of the prieſts; but if a man killed either a cat, a hawk, or an ibis, whether with deſign or not, he was to die without mercy; the enraged multitude hurrying away the unfortunate perſon to certain death, ſometimes without any formal proceſs or trial [h]: an inſtance of which is given in a Roman, who happening accidentally to kill a cat, the mob immediately gathered about the houſe where he was, and neither the entreaties of ſome principal men ſent by the king, nor the fear of the Romans,

[h] Herod. & Diod. Sic. ubi ſupra.

Romans, with whom they were then negotiating a peace, could save the man's life [i]. For this reason, if any one by chance found one of these creatures dead, he stood at a convenient distance from it, and with great lamentation protested, that he found it dead. And, what may seem still more incredible, it is reported, that at a time when there was a famine in Egypt, which drove the inhabitants to so great a distress that they fed on one another, there was no one person accused of having tasted of any of these sacred animals.

The extravagant worship which the Egyptians paid to these deities, as to the bull at Memphis and Heliopolis, the goat at Mendes, the lion at Leontopolis, and the crocodile at the lake Mœris (D), and to many others in different places, exceeds all belief. For they were kept in consecrated enclosures, and well attended on by men of high rank, who at a great expence provided victuals for them, which consisted of the greatest dainties, such as the finest flour boiled in milk, cakes of several sorts made with honey, and the flesh of geese boiled and roasted: those who fed on raw meat were supplied with several sorts of birds. And not only this, but they were washed in hot baths, anointed with most precious ointments, and perfumed with the most odoriferous scents: they lay on the richest carpets and other costly furniture; and that they might want nothing to make their life as happy as possible, they had the most beautiful females of their several kinds provided for them, to which they gave the title of their concubines, bestowing extravagant attendance and expence upon them.

When

[i] Diod. ibid. p. 75.

(D) The crocodile seems to be the last animal to which mankind could be tempted to pay divine adoration. That it might be done with safety, one of these creatures was trained up to be tame and familiar for the purpose, and had his ears adorned with strings of jewels and gold, and his fore feet with chains. He was fed with consecrated provisions at the public charge; and when strangers went to see him, which often happened out of curiosity, they also carried him a present of a cake, dressed meat, and wine, or a drink made with honey, which was offered to him by the priests; one opening his mouth, and the other feeding him. When he died, his body was embalmed, and buried in a sacred coffin at Arsinoe (1).

(1) Herod. ubi supr. Strabo, l. 17. p. 165.

WHEN any of these animals died, they lamented them, as if they had been their dearest children, and frequently laid out more than they were worth in their funeral: as an instance of which, it is said, that in the beginning of the reign of Ptolemy, the son of Lagus, the Apis dying of old age (E) at Memphis, his keeper bestowed no less than fifty talents of silver, or almost 13,000 l. over and above all his substance, in the burying of him. And lest this should seem improbable, we are told, that some keepers of these creatures had squandered away 100,000 talents, a most immense sum, in the maintenance of them [k]. In whatever house a cat died, all the family shaved their eye-brows; and if a dog, their whole body; nor would they make use of any provision which happened to be in the house at such times. In case of a fire, there was generally great lamentation among the Egyptians on account of their cats; for though, when such accidents happened, they took greater care to preserve the cats than their houses, yet those creatures, either by creeping slily on the ground, or leaping over the mens heads, for the most part found a way to throw themselves into the fire. The dead bodies of the sacred animals were wrapped up in fine linen, and carried to be embalmed, and being anointed with oil of cedar, and other aromatic preparations, to preserve them from putrefaction, were buried in sacred coffins. Dead cats were carried to be interred to the city of Bubastis; hawks and the venemous mole were carried to Butus; dogs, bears (of which there are but few in Egypt), and a small kind of wolves, no bigger than foxes, were buried where they were found dead. And in performing this last honour to them, the Egyptians were so exact, that when they had been abroad in foreign wars, they frequently brought home dead cats and hawks along with them for that purpose, with great demonstrations of sorrow, though at the same time they often wanted necessaries [l].

How

[k] Idem, ibid.

[l] Idem, & Herod. ubi supr.

(E) This contradicts that assertion of some, that the Apis was not suffered to live beyond a certain time; after which the priests drowned him in a sacred fountain (2).

(2) Ammian. Marcell. l. 22. p. 227.

How abſurd and ridiculous ſoever theſe ſuperſtitions may ſeem, yet they wanted not thoſe who endeavoured to defend them by various reaſons; though the prieſts generally affected ſilence on theſe occaſions, referring all to certain myſteries which they might not reveal.

1. The firſt reaſon alledged was from the fabulous tradition, that the gods, in the early ages, were obliged to transform themſelves into ſeveral kinds of animals, to avoid the aſſaults and cruelties of men, who had conſpired againſt them; but afterwards, out of gratitude for the many benefits beſtowed by them on mankind, thoſe in power ordained, that the creatures, whoſe ſhapes the gods had aſſumed, ſhould be well maintained while they lived, and honourably buried when they died.

2. Some pretended this worſhip had the following original; They ſay, that the antient Egyptians being often routed by their neighbours, for want of a regular diſpoſition of their troops, they at length invented the uſe of ſtandards, to diſtinguiſh the different companies; and for that end fixed the images of the animals they afterwards adored on ſo many ſpears, and cauſed the leaders to carry them at the head of each troop; by which means every man knew his poſt: their obſerving this order often gained them the victory, the honour of which they aſcribed to the animals whoſe figures they had uſed for enſigns. Others will have theſe images to have been made uſe of in the moſt early times, to diſtinguiſh the firſt civil ſocieties, who united for mutual defence againſt the violence of their fellow creatures.

3. A third reaſon is taken from the great uſe and ſervice the ſeveral animals are of to mankind: as the ox for tilling the land; the ſheep by ſupplying milk and wool; the dog for guarding the houſe and hunting; the ibis and hawk for deſtroying the ſerpents and noxious inſects; the crocodile for defending the country againſt the incurſions of the Arabian robbers; the ichneumon for preventing the too great multiplication of the crocodiles; and the cat againſt the aſp and other venemous reptiles [m].

4. But men of better judgment, not ſatisfied with these reaſons, which ſeemed to them too weak to excuſe practices ſo diſhonourable to paganiſm, and at which they bluſhed in private [n], urged ſomething more ſpecious in favour of it

[m] Vid. Diod. Sic. ubi ſupr. Plut. de Iſid. & Oſirid. p. 38

[n] Vid. Plut. ibid. p. 379.

by pretending, that the worſhip paid by the Egyptians to animals, did not terminate in the animals themſelves, but in the gods, whoſe ſymbols they were, and to whom they had ſome peculiar relation. The philoſophers, ſay they, honoured the image of god where-ever they met with it, even in inanimate beings, and conſequently much more in thoſe which partook of life. They therefore are to be commended who worſhip not the creatures, but the ſupreme Deity through them; which ſhould be eſteemed as ſo many mirrors, offered us by nature, reflecting the divine image; or as ſo many inſtruments of God in the eternal ſupport and preſervation of the world. Wherefore, if ſtatues ſhould be adorned with all the gold and precious ſtones in the world, it is not to them that men ſhould direct their worſhip; for the divine nature cannot dwell in the artful diſpoſition of colours, nor in matter which is ſubject to decay, and deſtitute both of ſenſe and motion. And they add, that as the ſun, moon, heaven, earth, and ſea are common to all men, but have different names in different nations; ſo there is but one Mind, and one Providence, which governs the univerſe, and has ſeveral ſubordinate miniſters, though called by different names, and worſhipped in divers manners, and with different ceremonies, according to the laws and cuſtoms of every country [o].

AGREEABLY to this notion, they pretended, that the hawk was an emblem of the ſupreme Deity, becauſe of its piercing ſight and ſwiftneſs. The aſp, the cat, and the beetle were alſo honoured as images of the divine power; the firſt, as not ſubject to old age, and moving without the aſſiſtance of limbs; the cat, becauſe they imagined ſhe conceived by her ear, and brought forth her young by her mouth, repreſenting the generation of ſpeech; and the beetle, becauſe they ſuppoſed there was no female in the whole ſpecies. The crocodile alſo they took to be another image of the Deity, becauſe of all animals it has no tongue, which organ God has no occaſion for [p].

THE relation the ſacred animals bore to ſome particular gods, or the ſervices they had rendered on ſome particular occaſions, or their being typical reſemblances of ſome parts of nature, are alſo mentioned as further reaſons for the great reſpect ſhewn them. Thus it is ſaid, that dogs were worſhipped becauſe they guided Iſis when ſhe ſought for the body of Oſiris, which they had guarded from wild beaſts [q]; though this creature afterwards loſt much of its reputation, by eat-

[o] Idem, ibid. p. 377, 382, &c. [p] Idem, ibid. p. 363, 80, &c. [q] Diod. ubi ſupr. p. 77.

ing part of the Apis, which had been killed by Cambyſes, when no other annimal approached the dead body [r]: that the hawk was deified becauſe one of thoſe birds in antient times, brought a book to the prieſts of Thebes, tied round with a ſcarlet thread, containing the rites and ceremonies which were to be obſerved in the worſhip of the gods; for which reaſon the ſacred ſcribes wore a ſcarlet fillet, with a hawk's feather on their head: that the wolf was adored becauſe Oſiris aroſe in that ſhape from the infernal regions, and aſſiſted Iſis and her ſon Orus, in the battle againſt Typhon, wherein that uſurper was ſlain; or elſe becauſe when the Ethiopians once broke into Egypt, a great company of wolves fell upon the invaders, and drove them beyond Elephantis; whence that nome was called Lycopolites; though others give no other reaſon for the reſpect paid them, than the near relation they bore to dogs: that the crocodile attained this honour becauſe one of thoſe creatures ſaved Menas, an antient king of Egypt, from being worried by his own dogs, which purſued him to the lake Mœris, where a crocodile took him on his back, and carried him to the other ſide of the lake [s]: that the cat was revered as an emblem of the moon, for its various ſpots, fruitfulneſs, and activity in the night [t]: and the goat, the moſt luſtful of all creatures, was the hieroglyphic of that violent impulſe by which men are urged to propagate their ſpecies; and in honouring this animal, they teſtified their gratitude to the gods for the populouſneſs of their country [u].

Not to take up the reader's time in enumerating the animals worſhipped in the ſeveral parts of Egypt, we ſhall conclude what we intend to ſay of them, with Herodotus's account of the Phœnix, which fable has given riſe to whatever has been ſince related of that imaginary bird. He tells us, that the Phœnix was one of the ſacred birds, which himſelf had never ſeen but in effigy; for he appeared in Egypt but once in five hundred years, immediately after the death of his father, as thoſe of Heliopolis affirmed. The painters repreſented him with a plumage of crimſon and gold, and of the ſhape and ſize of an eagle. They pretended, he came from Arabia, and brought the body of his father embalmed, which he buried in the temple of the ſun.

[r] Plut. ubi ſupr. p. 368. [s] Diod. ubi ſupr. p. 78, &c. [t] Plut. ubi ſupr. p. 376. [u] Diod. ubi ſupr.

ſun. And this he performed in the following manner: firſt he moulded as much myrrh, as he could carry in the ſhape of an egg, and having tried its weight, hollowed the egg, and put his father into it; he then ſtopped up the aperture again with myrrh, in ſuch proportion that the weight of the whole might equal that of the egg before the body was put in, and carried it to Heliopolis [w].

Some other inſtitution of the Egyptians.

THE Egyptians are reported to have been the firſt who ordained, that men ſhould abſtain from women in temples, and not enter any ſacred place without waſhing after the uſe of women. They are alſo the firſt who aſſigned each month and day to a particular deity, and obſerved times of each perſon's nativity; by which they judged of their future fortunes. They carefully regiſtred all prodigies (in which their country is ſaid to have abounded more than any other) with an account of their conſequences; ſuppoſing, that if the like happened at another time, the event would be the ſame. However, they did not pretend to foretel any thing themſelves, but all predictions were delivered by the gods. For if they were not the firſt nation which erected oracles, and introduced the cuſtom of conſulting them, it is, however, allowed, that the moſt antient and famous oracle among the heathens, particularly thoſe of Jupiter in Libya and at Dodona, owed their original to Egypt [x]; as will be mentioned in a more proper place.

THERE were ſeveral oracles in Egypt, as thoſe of Hercules, Apollo, Minerva, Diana, Mars, and Jupiter; but that which they reverenced above all others was, the oracle of Latona, in the city of Butus [y]: and in aftertimes there was a very famous one of Serapis at Alexandria [z]. The ſacred animals alſo themſelves had their ſeveral oracles; as the Apis, the goat, the lion, and the crocodile [a]. The manner of conſulting the Apis was, by obſerveing into which chamber, of two that were prepared forhim, he entered; his going into one of them being conſtrued as a good omen, and into the other as a bad one: or elſe they offered him food, and from his accepting, or refuſing, of it, concluded the anſwer favourable, or the contrary. It is ſaid, that Germanicus Cæſar conſulting this oracle ſome

[w] Herodot. ubi ſupr. [x] Idem ibid. [y] Idem ibid. [z] Pauſan. l. 7. Rufin. Hiſt. Eccl. l. 2. c. 23. [a] Vid. Van Dale de Orac. p. 274.

short time before his death, the beast would not eat out of his hand [b].

We must not omit to say something of the human sacrifices, which are said to have been offered by the antient Egyptians. As red oxen were allowed to be sacrificed, because of their resemblance to Typhon, who, it is said, was red-haired; so men of that complexion were reported to have been slain in former times by their kings at the tomb of Osiris: but few of the Egyptians having red-hair, strangers were the usual victims; whence it is supposed, the fable, so current among the Greeks, of the cruelty of Busiris to strangers, took its rise; not from any king of that name, but because Osiris's tomb was so called in the Egyptian tongue [c]. Men were also in old times sacrificed at Heliopolis, and to Juno, or Lucina, at a city in the upper Thebaïs, called by the name of that goddess, who was worshipped there under the form of a vultur. These human victims were to be approved of in the same manner as the calves that were searched and sealed as clean; and three were sacrificed every day, at a certain season in the dog-days, being burnt alive, and their ashes scattered abroad; to these unhappy men they gave the epithet of Typhonian [d]. This barbarous custom was abolished by Amosis, who ordered, that so many images of wax should be offered in their stead [e]: and there was so little remembrance of it left in the days of Herodotus, that mentioning a fable of the Grecians, that when Hercules arrived in Egypt, the Egyptians, designing to sacrifice him to Jupiter, conducted him to the altar with great ceremony; but that he delivered himself, by killing all that were present; that historian judges those who invented that story utterly ignorant of the Egyptian laws and customs; for how, says he, can we imagine, that a people forbidden to kill any kind of animal, except geese, swine, and such bulls, and calves as they find without blemish (F), would sacrifice men [f]? however, that there

[b] Plin. Nat. Hist. l. 8. c. 46. Amm. Marcell. l. 22. c. 15. [c] Diod. Sic. l. 1. p. 79. [d] Manetho, apud Porphyr. de abstin. l. 2. c. 55. Euseb. de præp. ev. l. 4. c. 16. & Plut. de Isid. & Osir. p. 380. [e] Idem apud eosd. [f] Herod. ubi supr. c. 45.

(F) From this passage, and what has been said above, we cannot but think those mistaken who have asserted, that it was never lawful

there was really ſuch a cuſtom ſeems undeniable from good authority; and is confirmed by the impreſs of the prieſts ſeal, which was ſet on the oxen that were to be ſacrificed; and on which a man was engraved kneeling, with his hands bound behind him, and a ſword at his throat [g]. We have formerly mentioned the human ſacrifices which were offered to the Nile, according to a tradition of the Egyptians [h]; but we do not find any notice taken of them in antient authors.

WE have mentioned the worſhip of leeks and onions as one part of the Ægyptian ſuperſtition; but as the hiſtorians mention nothing of this, we imagine the ſatyriſt, to heighten the ridicule, might go a little beyond ſtrict truth [i]: though there might poſſibly be ſome foundation for ſuch an opinion, from the ſcrupulous abſtinence of ſome of that nation from particular vegetables, as lentils, beans, and onions; the latter of which the prieſts abominated, as ſome pretend, becauſe Dictys, who had been brought up by Iſis, was drowned in hunting after them; or rather becauſe onions alone of all plants thrive when the moon is in the wane [k].

BEFORE we quit this ſubject, the ſtructure of the Egyptian temples deſerves ſome notice. The firſt thing which offered itſelf to the view was, an avenue, or ſtone pavement, of a plethron in breadth, or ſomething leſs, and about three or four times as long; having on each ſide a row of ſphinxes, twenty cubits diſtant from each other. This avenue led to a portico, behind which was a ſecond, and ſometimes a third (the number of theſe porticoes being not always the ſame). The temple it ſelf conſiſted of a ſpacious and magnificent court, and a well proportioned chapel; in which was generally no image (for the Egyptians in the eldeſt times uſed none [l]), or if there was any, it was not of human form, but in the ſhape of ſome irrational animal [m].

[g] Plut. ubi ſupr. p. 363. [h] See before, p. 493. [i] Juven, Sat. 15. v. 10. [k] Plut. ubi ſupr. p. 353. Vid. Diod. p. 80. [l] Lucian. de Dea Syria. [m] Strabo, l. 17. p. 1158.

lawful for the Egyptians to appeaſe the gods with cattle or blood, but only with prayers and incenſe (1).

(1) Vid. Macrob. Saturnal. l. 1. c. 7.

The miscellaneous customs of the Egyptians.

Few nations in the world observed their original laws and customs so long as the Egyptians; and their exactness in observing ordinances of a higher nature was not to be admired, considering their strict attachment to their own usages and manners in trivial things; for a new custom was a prodigy in Egypt [n].

In the education of their children they were very careful; but they brought them up with great frugality, feeding them with cheap broths, made of common things, and with the stems of the papyrus roasted under the ashes, and the stalks and roots of other plants which grew in the marshes, sometimes raw, and sometimes dressed. They went for the most part naked and barefooted during their childhood, because of the warmth of the climate: so that the whole expence of a child, from his birth till he arrived at the state of manhood, did not exceed twenty drachmæ, or about thirteen shillings; which was one great cause that Egypt was so exceeding populous. As to the instruction they gave their children, the priests taught them two sorts of letters, those called sacred, and those in which their common learning was written: but exercised them chiefly in geometry and arithmetic: however, there were few of the inferior classes who learned to write and read, except the tradesmen. But that they might be useful members of the commonwealth, and be enabled to maintain themselves, they began very early to learn their paternal art, or profession, either from their fathers, or near relations. Music and wrestling they never taught their children, as disapproving them both: the first they esteemed not only useless, but rather hurtful, serving only to emasculate the mind; and the other they believed did not tend to the preservation of health, the strength gained by it being of short duration, and the exercise it self dangerous [o]. One particular of the education of the Egyptian youth was very commendable; for they were taught to behave with great respect towards their elders; being obliged to rise up from their seats, and to retire at the approach of those that were more aged; which custom was also practised at Sparta [p].

As to the diet of the Egyptians we have already made some occasional observations; to which we may add, that among them it was a reproach to eat bread made of barley

[n] Plato in Tim. p. 656.
[o] Diodor. ubi supr. p. 72.
[p] Herod. ubi supr.

ley or wheat; inſtead of which they uſed a fine flower, called by ſome olyra, and by others zea, or ſpelt; and this bread they named colleſtis, probably from its glutinous quality [q]. Their uſual drink was (as it is at this preſent) the water of the Nile, which is very agreeable to the taſte, and ſo fattening, that they never gave it to the Apis, leſt he ſhould grow too corpulent [r]. It is true, the water of this river is pretty muddy, but the Egyptians have a way of clarifying it by rubbing the veſſel with a little pounded almonds [s]. Their better ſort of drink, or wine, as Herodotus calls it, was made of barley, becauſe they had antiently no vines in that country [t], or rather did not cultivate them, nor do they yet in any other part than the province of al Feyyûm [u]. So that we are probably indebted to this nation for the invention of beer.

The Egyptians abſtained from different ſorts of animals, in different parts of the kingdom, according to the different deities they worſhipped; but they all agreed in the averſion they had to ſwine's fleſh; which was accounted by them ſo impure, that if a man but touched one of thoſe animals by accident, he went immediately and plunged himſelf in the river with his cloaths on. And for this reaſon hogherds alone of all the Egyptians were not ſuffered to enter any of their temples; neither would any man give his daughter in marriage to one of that profeſſion, or take a wife born of ſuch parents; ſo that they were forced to intermarry among themſelves. They eat fiſh, either pickled or dried in the ſun; and alſo quails, ducks, and ſmaller birds, preſerved in ſalt, without any other preparation: all other birds, or fiſhes, except ſuch as they accounted ſacred, they eat without ſcruple, either boiled or roaſted. Thoſe who dwelt in the marſhes made food of ſeveral plants, which annually grew there, particularly the lotus, of which they made a ſort of bread, and the lower ſtems of the papyrus, the head of which was reſerved for other uſes [w].

AT their principal feaſts it was their cuſtom, when they began to taſte the wine after ſupper, to bring in a coffin with the image of a dead man carved in wood and painted, of one or two cubits in length, or, as others ſay, a real corps [x];

[q] Idem ibid. [r] Plutarch. de Iſid. & Oſir. p. 353. [s] Sicard. Mem. des Miſſ. v. 2. p. 13. [t] Herod. ubi ſupr. [u] Lucas, v. 2. p. 226. [w] See before, p. 503.

corps [x]; which was carried about to all the company by a a person appointed for that purpose, who repeated these words distinctly; Look upon this, and be merry; for such as this shalt thou be, when thou art dead [y]. This image some will have to be that of Maneros, in memory of whom they sung a mournful song at their entertainments, which they called by his name. Of this person there are various traditions: the Egyptians made him the son of their first king, who died in the flower of his age; others say, he was the son of a king of Byblus, in Phœnicia, and was frighted to death by the angry look of Isis, for his prying too near into her behaviour to the dead body of Osiris. This Maneros is reported to have been the first inventor of music; for which reason, and the conformity of the song to that sung by other nations in honour of the Grecian Linus, Herodotus supposes him to be the same with that poet: but after all, some pretend, Maneros was not the name of a person, but of the song itself; and that the dead image represented the fate of Osiris [z].

The Egyptians were very cleanly, both at their meals and in other respects; carefully scouring the drinking vessels, which were of brass, every day; and using frequent ablutions and purifications: they scrupulously avoided eating with strangers, as unclean [a]; and for neatness chiefly it was, that they circumcised themselves, which was a custom among them from time immemorial [b], and esteemed by them so necessary, that Pythagoras, to have the liberty of conversing with the Egyptian priests, and entering into their temples, was obliged to submit to this operation [c]. One of the fathers tells us, they were circumcised at the age of fourteen [d]; but whence he had his information we do not know. Whether the Jews learned this custom of the Egyptians, as some of the prophane historians pretend, is a point we shall consider in another place.

The habit of this nation was a linen vest, fringed at the bottom, which they called calasiris; and over that they wore a white mantle of woollen cloth. But to enter any of their temples in that upper garment, or to bury their dead in

[x] Lucian. de luctu. Silius de bello Pun. l. 3. [y] Herod ubi supr. [z] Plutarch. de Isid. & Osir. p. 357. Herod. ubi supr. [a] Gen. xliii. 32. Herod. ibid. [b] Herod ibid. Diod. Sic. ubi supr. p. 24. [c] Clem. Alex. Stromat. 1. p. 30. [d] Ambros. de Abrahamo, l. 2. c. 11.

in woollen, was accounted prophane. Their manner of saluting one another abroad, was by bowing very respectively, letting their hands fall down to their knees [d].

THE Egyptians, in several of their manners and customs, seemed industriously to act in contradiction to the rest of mankind. For amongst them it was the custom for the women to be employed in trade and business abroad, while the men staid at home to spin, and minded domestic affairs; and this perhaps gave occasion to that extraordinary law, by which the sons were not obliged to provide for their parents, but the daughters were. In carrying of burthens, the men bore them on their head, and the women on their shoulders; and when they made water, the women stood upright, but the men sat. They used to ease nature at home, and eat publicly in the streets; saying, very justly, that such things as were filthy, though necessary, should be done in private, and such as were decent in public. They kneaded dough with their feet, and tempered mortar with their hands. And whereas in other countries, the apartments of the cattle were separated from those of the men, in Egypt men and beasts dwelt together [e]. And we might mention several other instances of the like singularity.

THE great virtue of the Egyptians, and wherein they pretend to excel all mankind, was gratitude; which they esteemed to be of the greatest service in life, as the only encouragement to beneficent actions. And for this reason it was, that they honoured their princes as gods, supposing that those whom providence had exalted to the throne, and endued with both the power and will to do good to mankind, participated in some measure of the divine nature; hence also proceeded the great respect they shewed to the remains of their dead ancestors, and their constant endeavour to testify their gratitude to every person and thing from which they received benefit [f].

Of their funeral ceremonies.

THE Egyptians are said to have been the first who asserted the immortality of the soul, which, according to their doctrine, when the body was corrupted, entered into some other animal, and, passing by a continual metempsychosis through the different kind of animals, belonging to the air, earth, and water, returned again into a human body, after the revolution of 3000 years [g]. For this reason they

[d] Herod. ubi supr. [e] Idem ibid. [f] Diod. ubi supr, p. 81. [g] Herod. ubi supr.

they endeavoured by art to preserve the body as long as possible, that the soul might be obliged to continue with it, and not soon pass into another [h]: and as the dead bodies, by the means they used, were of long duration, they spared no labour nor cost in building their sepulchres which they termed their eternal mansions; at the same time being little curious in the structure of their houses, calling them inns, where they staid but for a short time whereas they remained in the other for a long course of years [i].

The mourning for the dead, and funeral rites, in Egypt, were antiently these: when a man of any consideration died, all the woman of that family besmeared their heads and faces with dirt, then making bare their breasts and girding their waists, they left the body at home, and marched through the streets of the city, lamenting and beating themselves as they went, attended by all their relations of the same sex; the men at the same time forming another company, mourned in the same manner. And this they continued till the corps was interred; abstaining in the main time from bathing, wine, and the more delicate meats, and laying aside their best attire. The first lamentation being over, the body was carried to those who professed the art of embalming, which, like other trades, they learned from their ancestors. These shewed the kindred of the deceased several models, or patterns, in wood, and painted, together with a bill of the charges of each manner of preparation, and asked them which they would choose: for there were three different ways of preparing dead bodies for burial. One was very exquisite and expensive, and came to a talent of silver, or about 258*l.* 6*s.* 8*d.* the second was inferior, and of a moderate price, the charge being 20 minæ, or a fourth part of the former sum; and the third was very mean, and cost but a trifle. This preliminary being settled, the embalmers took the body, and first drew out the brains through the nostrils with a crooked instrument of iron, and filled the vacancy with certain medicaments. Then one, whom they called the scribe, marked out on the left side of the belly, how far the incision was to be made; and the parachistes, whose office it was to make the incision, taking a sharp Ethiopic stone,

[h] Servius in Virgil Æn. 3. v. 67. Vid. August. Serm. de diversis, & Platon. in Phædon. [i] Diod. ubi supr p. 47.

ſtone, cut open the body, as far as the law ordained, and immediately ran away as faſt as he could, all that were preſent purſuing him, throwing ſtones at him, and curſing him, to turn the execration upon him: for they thought it a very heinous crime to wound, or offer violence to a dead body; but the taricheutæ, or embalmers, were highly eſteemed and reſpected, converſing with the prieſts, and being with them admitted, as perſons of ſanctity, into the more ſacred parts of their temples. When theſe came to dreſs the diſſected body, one of them thruſt his hand into it by the wound, and drew out all the inteſtines, except the heart and kidneys; another cleanſed all the entrails, waſhing them with wine of palms and aromatic odours (G). Then the belly was filled with pounded myrrh, caſſia, and other odoriferous drugs (frankincenſe only excepted); and the inciſion being ſewed up, the body was carefully anointed with the oil of cedar and other things for above 30 days, or elſe laid in nitre for 70 days, which was the longeſt time allowed. At the expiration of which term, they waſhed the whole body, and bound fillets of fine linen round every part, covering it with gum, which the Egyptians uſed inſtead of glue. And all this was done without diſfiguring the body; ſo that the very hairs remained on the brows and eye-lids, and the reſemblance of the countenance was preſerved, and eaſy to be known (H). The embalmers having done their parts, the relations received the corps, and put it into a wooden coffin, ſhaped like a man, which they ſet upright againſt the wall of the edifice deſigned for that purpoſe (I). For ſeveral of the Egyptians kept

(G) Plutarch writes, that when the belly was opened, they firſt expoſed it to the ſun, and caſt the bowels into the Nile, as what defiled the body (1).

(H) This ſeems a little extraordinary, conſidering how the fleſh of the face muſt have been dried by the ſalt; but an eye witneſs aſſures us, that he ſaw ſome embalmed bodies in Egypt, with the hair, beard, and nails, the fillets which covered the head and feet being rotted off (2).

(I) To the deſcription of Herodotus and Diodorus given above, we beg leave to add ſome obſervations as to thoſe embalmed bodies, or mummies, as they are now called, which are frequently taken up and brought from Egypt.

The

(1) Plut. apud Greaves, ubi inf.

(2) Voyages de M. de Breves.

kept their dead at home with them above ground [k], in magnificent apartments, having by this means the pleasure of

[k] Cicer. Tusc. quæst. l. 1. c. 9.

The coffins in which they lie are very thick, and generally of sycamore, which in Egypt they call Pharaoh's fig-tree, and does not rot so soon as other wood; though some are of stone, and others of cloths pasted together and very strong. The top of the coffin is usually cut into the shape of a head, with a face painted on it, resembling a woman; the rest is one continued trunk, and at the end of it is a broad pedestal, to set it upright upon in the reconditory. Some of these coffins are handsomely painted with several hieroglyphics.

The bodies appear in this manner: they are wrapped up in a shroud of linen, upon which are fastened divers scrolls of linen also, painted with sacred characters: these scrolls generally run down the belly and sides, or else are placed on the knees and legs. The face is covered with a kind of head-piece of linen cloth fitted with plaister, on which the countenance of the person is represented in gold; and the feet have also a cover of the same, painted with hieroglyphics, and like a high slipper. The whole body is swathed with fillets, or narrow bands of linen, beginning with the head and ending with the feet, so artificially, and in so inimitable a manner wound round with so many casts and turnings, and so often one upon another, that there cannot be less than a thousand ells of filletting upon one body. Those which cover the head and face being so neatly done, that they hinder not, but one may see the shape of the eyes, nose, and mouth. On the breast is a sort of breast-plate, made with folds of linen cut scollop-wise, richly painted and gilt: on which is usually the face of a woman with her arms expanded.

The inside of the body is filled with medicaments of the consistence, colour, and scent of pitch, or bitumen, which waxes soft by the heat of the sun. In a scull of one of these bodies, there was found the quantity of two pounds of this preparation, which could not be infused any other way than by the nostrils, as Herodotus intimates. And the tongue of one being weighed, was less than seven grains English (3). Some curious persons in vain searched one of these mummies for the piece of money, which the antient Grecians are said to put in the mouths of the dead, to pay Charon his fare (4). We are told, however, that the greater part of these embalmed bodies have under the tongue a small plate of gold, worth about two pistoles (5).

(3) Thevenot. Voy. part. 1. c. 6. Greaves Pyramidogr. p. 49, 50. (4) Vid. Gassend. de vita Peiresc. l. 4. (5) Buretini apud Thevenot, Relat. part. 1. p. xxv.

of ſeeing the lineaments of their anceſtors, who died many ages before they were born; and they often brought the dried corps of a friend as a gueſt to their feaſts [l]. The way of embalming, which we have deſcribed, was the moſt coſtly manner of preſerving the dead: thoſe who were unable or unwilling to be at ſo great an expence, were contented with a more ordinary preparation, which was done in this manner: they injected a clyſter of oil of cedar by the common way, without opening the belly, or taking out the bowels, and laid the body in nitre the number of days abovementioned; at the end of which they let out the oil of cedar by the fundament, which by a peculiar efficacy, brought away the whole paunch and intrails ſhrunk and putrified; the nitre having conſumed the fleſh, and left nothing but the ſkin and bones. And when this was done, they delivered the body to the relations without any further operation. The third and laſt manner of preſerving the dead, uſed only for the poorer ſort, was performed by cleanſing the belly by injected lotions, and ſalting the body for ſeventy days; after which it was taken away [m]. The wives of conſiderable perſons, and all women who had been beautiful and dear to their relations, were not delivered to the embalmers preſently after death: but were kept at home three or four days before they were carried out, to prevent thoſe artiſts from abuſing the bodies of ſuch perſons; for one of them was caught in ſuch an action, and accuſed of it by his companion. If any Egyptian, or even a ſtranger, was found killed by a crocodile, or drowned in the river, where-ever the body came aſhore, the inhabitants were by law obliged, at their own charge, to embalm and place it among the conſecrated monuments, in the moſt coſtly manner; for none of his friends, or relations, or any other might touch his body, except the prieſts of the Nile, who buried him with their own hands, as ſomething more than human [n].

WHEN the corps of the deceaſed was prepared for the ſepulchre, his neareſt relations gave public notice of the day when ſuch a one, by name, was to paſs the lake, in order for his interment; to which the judges and all his friends were invited. At the time prefixed, above forty judges aſſembled, and ſat in a ſemicircle in a certain place beyond the lake (which we ſuppoſe to be that of Mœris). The

[l] Lucian. de luctu.
[m] Herod. & Diodor. ubi ſupr.
[n] Herod. ibid.

The veſſel, whoſe pilot was, in the Egyptian tongue, called Charon, being ready hauled up to the ſhore, before the coffin which contained the body was ſuffered to imbark (K), every one was at liberty to accuſe the deceaſed. If an accuſer appeared, and made good his charge, that the deceaſed had led an ill life, the judges gave ſentence accordingly, and the body was denied the uſual burial: but if the accuſer was convicted of having accuſed him unjuſtly, he incurred a ſevere puniſhment. If no accuſer appeared, or if the accuſation proved falſe, then the relations, laying aſide their lamentation, proceeded to recite the praiſes of the deceaſed; in doing which they took no notice of his deſcent, for all the Egyptians were held equally noble; but having mentioned in what manner he had been brought up and educated, they declared how he had lived and behaved himſelf after he became a man, enlarging on his piety, juſtice, temperance, and other virtues; and beſeeching the infernal gods to give him a favourable reception among the pious. The aſſiſtants joined their acclamations to this funeral oration, and celebrated the praiſes of the departed, as of one who was going to dwell for a long ſpace of time with the juſt below. After this the body was depoſited in the ſepulchre of the family, if they had one; and if they had not, they kept it at home with them in the manner abovementioned. Thoſe that were forbidden to be interred, either for crimes by them committed, or for debt, were depoſited privately in their own houſes. But it often happened, that the poſterity of ſuch perſons growing rich, paid their debts, or obtained their pardon, and buried them in an honourable manner.

It muſt be acknowledged, that this inſtitution of the Egyptians, in relation to their treatment of dead bodies, was excellently contrived for the encouragement of virtue, and the diſcouragement of vice. It is very plain, that the Greeks took all they fabled concerning the infernal judges, and the happineſs and puniſhments of men after death, from this practice of the Egyptians: but Diodorus obſerves, that inſtead of bringing men to amendment of life by thoſe fables, they incurred the ridicule and contempt of profligate perſons: whereas in Egypt the reward of the good and puniſhment

(K) This is the ſenſe of the original; though it ſhould rather ſeem, by the judges ſitting on the farther ſide of the lake, that the corps was actually ferried over, but was not ſuffered to be diſembarked, till ſentence had paſſed.

punishment of the wicked, after death, was not fabulous or imaginary, but really and daily distributed in public, in the sight of all men [o].

THE sepulchres, wherein the Egyptians deposited the bodies of their dead, were built in various manners, according to the person's condition. The magnificence of the royal tombs have been already hinted; those of the antient kings at Thebes, it is said, could not be exceeded by their posterity. The sacred commentaries mentioned forty seven of them; but in the time of Ptolemy, the son of Lagus, there were but seventeen remaining; most of which where quite decayed when Diodorus visited those parts in the 180th Olympiad. Of the pyramids, which were built for the same purpose, we have spoken sufficiently; and the sepulchre of Osymandyas we may mention hereafter. The Egyptians of lower quality, at a great expence, cut subterraneous grots, or dormitories, in the rocks; such as those in the Libyan deserts, of which travellers speak so much, calling them catacombes, or mummy-pits. The entrance into them is by a square well, by which one may descend, setting the feet in the holes cut on each side for that purpose. These wells are not of equal depth, but the shalloweſt are above six men's height. At the bottom of the well there is a square opening, and a passage of ten or fifteen feet long, leading into several square vaulted chambers, each side of which are usually fifteen or twenty feet; and in the midst of every one of the four sides of the chamber is a bench cut out of the rock, upon which the embalmed bodies lie. At the head of them there is commonly an idol, at the feet the image of a bird; and on the walls are several hieroglyphics, which might serve for epitaphs. Besides the principal bodies, there are other smaller ones, and particularly of children, which lie on the ground. Sometimes there are no less than twenty five or thirty of these chambers, or grots, having communication with one another; and the descent to them all is by one well [p]. The stones, of which Strabo observed a great number in a plain between Syene and Philæ, are also by some thought to have been tombs. That author calls them Hermæa, from the resemblance they bore to the heaps of stones frequently erected by the highways in honour

[o] Diod. ubi supr. p. 82, &c:

[p] Burrettini, ubi supr.

nour of Mercury ; and he describes them to be a great smooth stone, almost spherical, of that hard and black marble of which mortars were made, placed upon a greater stone, and surmounted by another ; some of them lying by themselves : the greatest of them was no less than twelve feet diameter, and all of them above half so big [q].

The antient Egyptians were the inventors of many useful arts and sciences : and though they did not perhaps carry them afterwards to that perfection which might have been expected from them, since among them every man was obliged to apply himself to his paternal profession, and was confined to one particular art, or branch of learning only ; yet, whoever considers how difficult it is to lay the first foundations of any science, be they ever so small, will allow them great commendation.

Of their arts and sciences.

As they acknowledge themselves indebted to their first kings for instructing them how to provide the common necessaries and conveniences of life, so they attributed the honour of the first invention of the sciences to their Hermes, or Mercuries [r]. How many there were of this name, when they lived, and what they invented, or wrote, we shall enquire in another place, contenting ourselves here with a short account of the arts and learning which the Egyptians are supposed to have communicated to the rest of mankind, and the progress they made therein.

That the Egyptions were early famous for wisdom and learning, appears from many antient writers, and even from the scriptures themselves : it is said, among other things, to the honour of Moses, that *he was learned in all the wisdom of the Egpptians* [s] ; and to magnify the wisdom of Solomon, we are told, that *it excelled all the wisdom of Egypt* [t]. Prophane authors also unanimously testify this nation to have been the parents of all philosophical knowledge, and the only men that perfectly understood divine things [u].

Of their geometry.

Geometry is on all hands agreed to have been first found out in Egypt [w] ; and is said to have owed its rise to the setting out and measuring of their lands, the bounds of which were annually disturbed by the overflowing of the

[q] Strabo, l. 17. p. 1173. [r] Diodor. ubi supr. p. 41. [s] Acts vii. 22. [t] 1 Kings iv. 30. [u] Macrob. in Somn. Scip. l. 1. c. 19. & Saturn. l. 1. c. 14. & l. 7. c. 13. [w] Diog. Laert. in Proœm. Strabo, l. 16, 17. Plato, in Phædro, Achill. Tatius ad Arati Phæn. Jamblich, de vita Pythag. p. 144.

the Nile [x]. How far the Egyptians improved this ſcience, is not very certain; but their ſkill therein ſeems not to have been very profound, or to have extended to all geometrical quantities and ſubtile theories, like that of the moderns: the utmoſt they knew was probably no more than plain meaſuring, and ſuch rules as were of common uſe in life. For Pythagoras, who travelled into Egypt for the ſake of their learning, after his return home offered an hecatomb, on his finding out the proportion of the longeſt ſide of a right-angled triangle to the other two [y]; and Thales, who alſo learned geometry in Egypt, ſacrificed an ox to the gods, for joy that he had hit on a method of inſcribing a rect-angled triangle within a circle [z]: both which inventions they could not have had from the Egyptians; unleſs we ſhould ſay that the Egyptians did not teach them all they could, or that thoſe two philoſophers unjuſtly arrogated to themſelves what they were beholden to their maſters for. Now, if theſe more ſimple, though noble, propoſitions, were not then to be found in the Egyptian geometry, much leſs can it be ſuppoſed to have contained thoſe more abſtruſe theorems, and analytical methods, which were afterwards known, and for which we are indebted to the Greeks, who built ſo fine a ſuperſtructure on the old Egyptian foundation [a].

Arithmetic. As arithmetic is not only of great uſe in itſelf, but abſolutely neceſſary both in the theory and practice of geometry, that ſcience was diligently cultivated in Egypt. That there was in later ages a kind of algebra known in that country, appears from the writings of Diophantus; but whether it was not an improvement made by the Grecians, after their ſettling there, cannot be affirmed; however, it was greatly inferior to the modern algebra in many reſpects [b].

Aſtronomy. IT is generally ſuppoſed, that aſtronomy was alſo an invention of the Egyptians [c], who, by reaſon of the conſtant ſerenity of the air and the flatneſs of their country, might obſerve the heavenly motions earlier, and with more eaſe than other people. Herodotus indeed gives the honour of this

[x] Herod. ubi ſupr. Diod. p. 73. [y] Diog. Laert. in Pythag. [z] Idem in Thalete. [a] Vid. Burnet Archæol. l. 1. p. 72. Wotton's Reflections on antient and modern learning, c. 9. p. 115. [b] Ibid. c. 14. p. 180. [c] Plato, in Epinom. Ariſtot. Metaph. l. 1. Diog. Laert. & Achill. Tatius, ubi ſupr. Manil. Aſtron. l. 1.

to the Babylonians [d]; but Diodorus makes the Babylonians themselves, as well as their sciences, to have been transplanted from Egypt. He attributes the first invention to those of Thebes; and says, the Egyptians were accurate observers of the places and motions of the stars, and kept registers of their observations for an incredible number of years, having addicted themselves to this study in the most early ages; that they were well acquainted with the motions, periods, and stations of the planets, and with their influences and effects; and by long experience were often able to make surprizing predictions of events in life, and to foretel famines, plenty, pestilential diseases, earthquakes, the appearances of comets, and other things which seemed to exceed human capacity. The phænomena they seem to have observed were indeed the most obvious and easy; but thereby they were directed to adjust the length of the year to the annual revolution of the sun, which this nation first did, by adding to their twelve months, of thirty days a-piece, five additional days and six hours, while the Greeks and Romans used the more rude and inconvenient form of lunar years, intercalating a month every third year [e]. But the great use they seem to have made of their astronomy was, either for the use of husbandry, or else for astrological calculations, with which the Egyptians were much in love. It is probable, they might have a true notion of the system of the world, and of the matter of the planets and fixed stars; for they called the moon, an ethereal earth, and affirmed the stars to be fire [f]; however, they were far from having an exact knowledge of the theory of the planetary motions, so as to make any artificial calculations; since Thales was the first man who ventured to foretel an eclipse [g], and Eudoxus and Ptolemy first reduced the heavenly motions into hypotheses and tables [h]

Physic. The science of physic seems also to have owed its original to the Egyptians [i]. The invention of it is generally ascribed to Æsculapius, which name was given to Tosorthrus,

[d] Herod. ubi supr. [e] Diodor. ubi supr. p. 46. Herod ubi supr. [f] Procl. in Tim. Platonis, l. 1 p. 45. [g] Diog. Laert. in Thalet. Cicer. de Divinat. l. 1. Plin. l. 2. c. 12. [h] Vid. Burnet ubi supr. p. 73, &c. [i] Plin. Nat. Hist. l. 7. c. 56.

ſorthrus, or Seſorthrus, a king of Memphis, and the ſecond of the third dynaſty of Manetho, for his great ſkill in that art [k]. This prince was much more antient than the Grecian Æſculapius; and though Africanus places him ſome ages after Athothis, the ſucceſſor of Menes, and ſuppoſed to be the ſame with Thoth, or the firſt Hermes; yet others make them contemporaries [l], as they muſt have been, if this Æſculapius was the ſame with the ſon of Sydyc, and the brother of the Cabiri [m]. Athothis is alſo ſaid to have been a phyſician, and to have written ſome books of anatomy [n], unleſs we rather aſcribe thoſe writings to the ſecond Hermes, who might publiſh ſeveral inventions of the firſt Hermes, and of Æſculapius; for we are told, that among the Hermaic books there were ſix which treated of phyſic, and that the firſt of them was anatomical [o]. Iſis herſelf is ſaid alſo to have invented ſeveral medicines, and to have taught the art to her ſon Orus, or Apollo; whence ſhe was held by the Egyptians to be the goddeſs of health [p].

THE Egyptian phyſicians mentioned by Moſes [q], ſeem rather to have been embalmers than phyſicians, in the ſtrict ſenſe of the word; unleſs we ſuppoſe both arts were originally profeſſed by the ſame perſon, which poſſibly might be the caſe, though in after-times it was otherwiſe. For every phyſician was not permitted to practice every branch of the art; but it was diſtributed into diſtinct parts, and each man applied himſelf to the cure of one diſeaſe only, pretending to no more. This occaſioned a great number of phyſicians in Egypt: ſome profeſſing to cure the diſeaſe of the eyes; others thoſe of the head, teeth, or parts about the belly; ſome applied themſelves to chirurgical operations, whilſt others undertook the care of internal diſtempers [r]: by which regulation great improvements might have been expected from them in their ſeveral provinces, had not the laws as it were ſhut the door to any future diſcoveries, by obliging the phyſicians to preſcribe according to fixed rules and receipts, ſet down in their ſacred regiſters, which had

[k] Vid. Syncell. Chronogr. p. 56, 57. [l] Marſham. Canon. Chron p. 40. [m] See before, p. 395. [n] Syncell. ubi ſupr. [o] Clem. Alex. Str. l. 1. p. 634. [p] Diodor. Sic. l. 1. p. 22. [q] Geneſ. l. 2. [r] Herod. ubi ſup.

been collected from long observation and experience, and approved by the most famous men of the profession. So long as the physician followed these legal prescriptions he was safe, let the success of the medicines be what it would; but if once he ventured to depart from them, and to follow his own private judgment, he was answerable for the event, and run the hazard of his life in case the patient died [s]. It must be confessed, however, that this was a most essential method to prevent the mischievous practice of empirics. Another thing observable, in respect of the Egyptian physicians, is, that they had a public provision made for them by law; for which reason they were not to take any fee from those who happened to be sick in the army, or on a journey within the kingdom.

The Egyptian medicines seem rather to have been calculated for prevention than cure; they chiefly prescribed evacuations, which they effected either by glisters, potions, or emetics, or else by fasting; and this they repeated every day, or let the patient rest three or four days, according to the case: for they were of opinion, that in the digestion of all food, the greater part was superfluous, and loading nature caused diseases [t]; for which reason those who lived in the corn country used to vomit and purge themselves every month, three days successively, to preserve health, though otherwise they were by nature one of the most healthful people in the world [w]. The better to promote the operation of their medicines, the physicians, together with their proper art, also studied astrology and their ritual mysteries [x]; for the Egyptian practice of physic depended much on astrological and magical grounds, either the influence of some particular planet, or some tutelar dæmon were still considered [y]; which precarious foundations must needs depreciate their skill, and stop any increase of knowledge which might be made on other principles. However, we cannot wholly assent to the opinion of a modern writer, who thence imagines the antient Egyptian prescriptions were not medicinal, but religious purifications only; and their pharmaceutic books were filled, not with recipes for sickness and distempers, but with meats and drinks

[s] Diodor. ubi supr. p. 74. [t] Idem, ibid. [u] Idem ibid. p. 73. [w] Herod. ubi supr. [x] Scholiast. in Ptolem. Tetrabibl. l. 1. [y] Vid. Conringium de Hermetica. Ægyptior. vetere, & Paracelsica novâ medicina, and Wotton's Refl. on antient and modern learning, p. 119, &c.

drinks, unguents, lotions, and purgations, proper to be used in the several services of each deity [z]. What we have already observed from good authority, cannot agree with this notion.

THERE seems much less foundation for the assertion of some moderns who tell us, there was a particular medicine used only among the Egyptian priests, and kept secret from the Greeks, and the generality of the natives themselves; which medicine was of such efficacy, that it could do any thing but restore life to the dead. This, they say, was the grand Elixir, a chymical preparation made with the philosophers stone, the invention of Hermes; by the help of which the Egyptian kings were enabled to build the pyramids with the treasures their furnaces afforded them [a]. But such fancies are sufficiently confuted by the profound silence of antient authors in the matter, and the weak arguments of those who contend for this antiquity of chymistry, built on suspicious authorities, uncertain conjectures, and allegorical interpretations of the fabulous stories of the Greeks, which they will have to be chymical secrets disguised; fancying the golden fleece, which Jason fetched from Cholcis, was only a receipt to make the philosophers stone; and that Medea restored Æson, his father, to his youth again, by the grand elixir [b]. Chymistry.

As they began to cultivate anatomy in Egypt very early, if credit may be given to what is said above, and their kings ordered dead bodies to be dissected for the perfection of this part of physic, it might be presumed, they made greater progress therein than we can allow, if two instances that are given of the accuracy of the Egyptian anatomists be genuine. One of their observations was, that there is a particular nerve which goes from the heart to the little finger on the left hand; for which reason the Egyptians always wore rings upon that finger, and the priests dipped that finger in their perfumed ointment [d]. And the following reason is given, why a man cannot live above one hundred years; because the Alexandrian embalmers observed a constant encrease and diminution of the hearts of those found persons whom they opened, whereby they judged of their age; finding, that the hearts of infants of a year old Anatomy

[z] Shuckford's Connection, vol. ii. p. 408, &c. [a] Vid. Borrichium de ortu & progressu Chemiæ. [b] Vid. Wotton, ubi supr. p. 120, &c. [c] Plin. l. 19, c. 5. [d] A. Gellius Noct. Attic. l. 10. c. 10. Macrob. Sat. l. 7. c. 13.

weighed two drachms, and this weight encreased annually by two drachms every year till men came to the age of fifty; from which time they as gradually decreased till they came to an hundred; when, for want of a heart, they must necessarily die [e].

Natural philosophy.

Of the Physiology of the old Egyptians (to consider it here distinctly from their theology, which two the ancients constantly joined together) we have not much to say. Their opinion as to the origin of things, and the mundane revolutions, we have considered elsewhere [f]. Their philosophical doctrines, as it seems, may best be known by looking into that of the ancient Greeks, who were their scholars, and travelled into Egypt for instruction in these higher parts of learning; from whence it was, in all probability, that Pythagoras brought home the knowledge of that antient system of the world which bears his name, and is now so generally received; though it seems to have been part of the secret doctrine of the Egyptians, and not revealed to the vulgar. It may not be amiss to observe, that the antient Barbarian philosophers did not employ their studies in the explication of this or that particular phænomenon, or direct their enquiries to the examination of things taken singly; it being in vain to expect from them, for example, the cause of the attractive power of the loadstone, or the colours of the the rainbow; what is the substance of fire, and what the particles of water, or how great the force of compressed air? but their speculations were about the mundane phænomena, or those which affected universal nature; such as the first beginning of things, their revolutions, periods, and final catastrophe [g].

But the science for which the Egyptians were particularly famous, and the attainment whereof was esteemed the highest pitch of knowledge [h], was magic. Some, imagining the invention of this art to exceed human capacity, pretend, the angels, who fell in love with the antediluvian women, first taught it; that Ham preserved the principal rules of it from being lost at the deluge; and that Mizraim learned those secrets of his father [i]. But others ascribe the invention

[e] Plin. l. 9. c. 37. Censorin de die natali, c, 17. [f] Introd. p. 98, &c. [g] Burnet Archæol. l. 1. p. 78. Vid. Strabon. l. 17. [h] Plin. l. 30. c. 1. [i] See before, p. 247, and 354, in the notes.

invention to Hermes [k]; though it is said to have been much improved by Nechepsos, a king of Egypt [l]. However, the art was certainly very antient in Egypt; they had magicians, who pretended to the interpretation of dreams, and a way of divining by a cup in the time of Joseph [m]; and very extraordinary instances were given of the power of inchantments in the days of Moses [n]. The professors of magic among the Egyptians were the priests and sacred scribes, two of which order, named Jannes and Jambres, were pitched upon to withstand that prophet [o]. Nor was this science confined to that nation in those early times: from the caution given by Moses to the Israelites against them [p] it is evident, there was pretenders to it under various denominations, among most of the idolatrous people; and Balaam, in particular, seems to have been a considerable proficient therein [q]. The claim of Zoroastres, and the Babylonians, to the honour of the first practising and teaching magic, shall be considered in another place.

WHAT were the real grounds of this science we cannot say; there is an innocent kind of magic, which consists only in an excelling knowledge of nature, and its various powers and qualities in its several productions, and the application of certain agents to certain patients, which, by force of some peculiar qualities, produce effects very different from what fall under vulgar observation and comprehension [r]; but the magical wisdom of the Egyptians must have been something very different from this, or have gone much beyond what we are now masters of, notwithstanding those vast and various discoveries which have been lately made in the properties of natural bodies; there being no one, as we presume, who will now pretend to do those wonderful things, which Pharoah's magicians did when they contended with Moses, not to insist on the improbability, that the law-giver would forbid the practice of an art, which he must know to be not only innocent, but valuable.

IT is therefore supposed, that these antient magicians formed the rules of their art either from their superstitious belief

belief of the great influence the heavenly bodies had on this lower world; or, from that other, though more late, opinion, that the world was governed by inferior intelligences, or dæmons, and the spirits of heroes and extraordinary men deceased. As to the first foundation of this science, we have already observed, that the Egyptians assigned each month and day to a particular god; they imagined, that seven planets governed the seven days of the week [s]; and pretended, that, by the observation of the motion of the celestial bodies, through a long series of years, they had obtained the art of foreseeing future events [t]. They also thought the influence of those heavenly bodies on the elements caused such effluxes, as might affect the mind of those who were duly prepared to receive them, so as to enable them to deliver oracles; and even that they might, by a proper discipline, make them capable of working wonders, and procuring prodigies [u]. For they believed the sun, moon, stars, and elements were endued with intelligence, and appointed by the supreme Deity to govern the world [w]; and though they acknowledged, that God might [x], upon extraordinary occasions, work miracles, reveal his will by audible voices, divine appearances, dreams, or prophecies; yet they imagined also, that, generally speaking, prodigies were caused, oracles given, and visions occasioned in a natural way, by the observation, or influence of the courses of Heavenly bodies, and by the operations of the powers of nature: and they conceived, that their learned professors could work miracles, obtain oracles and omens, and interpret dreams, by a deep study of, and profound enquiry into, natural knowledge, and, assisted by a proper temper and disposition of mind, attainable by the use of such means as they thought had a natural power to raise warm conceptions, produce enthusiastic fury, and fetter their reason, which they fancied averted the divine instinct, such as inebriating liquors, music, and the like [y]; and in all these things they supposed the Deity not immediately concerned, but that they were the natural effects of the influence of the planets and elements, seeming strange and unaccountable to the vulgar and unlearned, but fully understood by persons

[s] Dion Cassius, l. 36. p. 37. [t] Cicero de divin. l. 1. c. 1. [u] Plutarch. de defect. orac. [w] Vid. Cicer. de nat. Deor. l. 2. c. 15. & Acad. quæst. l. 4. c. 34, 37. [x] Vid. eund. de divinat. l. 1. c. 55. [y] Vid. Plut. ubi supr. p. 432.

perſons of ſcience and philoſophy [z]. The other foundation of magic was built on an opinion which was ſomething laterthan the former, viz: that ſpirits, or dæmons, of a nature ſuperior to men, were employed in the government of the world, and had their ſeveral provinces appointed them by God [a]; and to this honour they imagined the ſouls of departed heroes and extraordinary men were alſo admitted: for which reaſon they ſuppoſed, they had not only powers far exceeding thoſe of mortal men, but aſcribed oracles, viſions, and omens to the miniſtry of ſuch ſpirits. And thoſe notions are not greatly different from the almoſt unanimous opinion of the Jews and Chriſtians, who acknowledge the ſuperintendence of angels over human affairs, the malicious intermeddling of evil ſpirits therein, and the great knowledge and abilities of both [b]. Whether, by the law of nature all kind of commerce with theſe inviſible agents was prohibited, or not, has been thought not ſo clear; though it be plainly forbidden to Chriſtians, either becauſe the government of the intellectual world was changed at the coming of Chriſt [c]; or rather becauſe of the miſchiefs that ill-deſigning men might thereby be enabled to do, and the door it might open to idolatry and ſuperſtition. That ſuch a commerce is, or at leaſt formerly was, poſſible, we cannot but confeſs; and we conceive it very difficult to account for ſeveral paſſages in ſcripture, without allowing it to have been practiſed; as we may obſerve hereafter: however, much the greater part of what has been attributed to this ſort of magic, was undoubtedly the effect of impoſture and deluſion, which have been ſo apparent in ſeveral inſtances, as to tempt one almoſt to believe the ſame of all the reſt.

And other arts.

SOME of the other arts of the Egyptians, which were leſs conſiderable, we have already occaſionally taken notice of. The Greek writers tell us, that all trades and profeſſions in Egypt, even the moſt inferior, were not reckoned ignoble; huſbandmen [d] and thoſe who fed cattle, in particular, were much conſidered [e]; though theſe latter, in ſome parts of the country, were not ſuffered, but counted an abomination [f]; the reaſon of which was chiefly the difference in religion. For the ſkill of the Egyptians in architecture, mechanics, painting, and ſculpture, we need only refer to what

[z] Vid. Shuckford. ubi ſupr. p. 391, &c. [a] Plut. ubi ſupr. p. 418. [b] See before, p. 176, 177. [c] See Burnet Archæol. l. 1. p. 203. [d] See before, p. 543, 568. [e] Diod. Sic. l. 1. p. 67, &c. [f] Geneſ. xlvi. 34.

what we have ſaid in the preceding ſection; yet, as to the laſt, we may add, that their ſtatuaries worked by the moſt methodical rules of proportion, and not by the eye, as the Grecians did; and they judged of the exactneſs of the ſymmetry by the ſame. For they divided the whole body into twenty one parts and one fourth; and after the artiſts, who were employed, had come to a reſolution as to the ſize of the ſtatue, they went home, each taking his taſk, which they performed with ſuch ſingular ſkill, and made the ſeveral parts ſo accurately proportionable to one another as was wonderful. It is ſaid, the moſt famous ſtatuaries among the antients lived ſometime in Egypt; particularly Telecles and Theodorus, the ſons of Rhœcus, who made the famous ſtatue of Apollo Pythius in Samos, after the Egyptian manner; for it was divided into two parts, from the head to the groin; Telecles cutting one half in Samos, and his brother the other half at Epheſus; which being joined together, fitted ſo exactly, that they ſeemed to have been made by one hand: and this ſeemed the more admirable, conſidering the attitude of the ſtatue, which had its hands ſtretched out, and its legs at a diſtance from each other, in a moving poſture [g].

Of the Navigation of the Nile.

We had almoſt forgot to ſpeak of the extraordinary conſtruction of the veſſels which the old Egyptians made uſe of on the Nile. Their ſhips of burthen were made of the Acantha, or Egyptian thorn [h]; from which they cut ſmall planks about two cubits ſquare: theſe pieces of timber they ſet together like tiles, and faſtened with a great number of long pins: and when the whole was thus well compacted, they erected benches for the rowers. For they uſed no kinds of ribs, or bent timber in their work, but ſecured the joints of the inſide with band of Papyrus. They had but one rudder, which paſſed quite through the keel, a maſt of Acantha, and a ſail made of the Papyrus. Theſe veſſels were very unfit to mount the river againſt the ſtream, and therefore were always towed up, unleſs the wind proved very freſh and favourable. But when they came down with the current, they faſtened a hurdle of Tamariſk with a rope to the prow of the veſſel; which hurdle they ſtrengthened with bands of reeds, and let it down into the water: they alſo hung a ſtone, pierced through the middle, and of a conſiderable weight, by another rope to the poop. By this means the ſtream bearing on the hurdle, carried down the boat with great expedition,

[g] Diod. Sic. ubi ſup. p. 88.

[h] See before, p. 503.

expedition, the ſtone at the ſame time balancing and keeping it ſteady. Of theſe veſſels they had great numbers on the river, and ſome very large [i]. The Egyptian navigation by ſea we ſhall mention by and by, when we come to ſpeak of their trade.

How the Egyptians preſerved their knowledge.

THE manner wherein the old Egyptians preſerved their knowledge, and tranſmitted it to poſterity, deſerves to be particularly conſidered. Their prieſts, as we have already intimated, were the depoſitaries of all their learning; they had the care of their philoſophy and other ſciences, as well as of their religion and ſacred rites [k]; and were the perſons to whom thoſe who deſired to be inſtructed therein were obliged to apply themſelves [l]; for which purpoſes they had divers colleges, or academies, in ſeveral parts of the kingdom: one of which, at Heliopolis, is mentioned by Strabo, who viſited the apartments where Eudoxus and Plato had ſtudied for ſeveral years [m]. The Egyptian learning was partly inſcribed on columns, and partly committed to writing in the ſacred books. Not only the Egyptians, but ſeveral other antient nations uſed to preſerve the memory of things by inſcriptions on pillars: to ſay nothing of thoſe which Seth, as it is pretended, erected before the flood for the ſame purpoſe [n]; we are told, the Babylonians kept their aſtronomical obſervations engraven on bricks [o]; and Democritus is ſaid to have tranſcribed his moral diſcourſes from a Babyloniſh pillar [p]. But the moſt famous of all others were the columns of Hermes in Egypt, mentioned by ſeveral valuable authors: upon them he is reported to have inſcribed his learning, which was afterwards explained more at large by the ſecond Hermes in ſeveral books. It is certain, at leaſt, that from theſe pillars the Greek philoſophers and Egyptian hiſtorians took many things. Pythagoras and Plato both read them, and borrowed their philoſophy from thence [q]: Sanchoniatho and Manetho likewiſe made uſe of the ſame monuments [r], which were ſtill remaining in the time of Proclus, or not long before [s]. They ſtood in certain ſubterraneous apartments near Thebes [t]. To theſe inſcriptions ſucceeded

[i] Herod. l. 2. [k] Vid. Porphyr. de Abſtin. Strab. l. 17. p. 1159. [l] Clem. Alex. Str. 1. Diod. Sic. l. 1. p. 86. [m] Strabo, ubi ſupr. [n] See before, p. 346. [o] Plin. l. 7. c. 56. [p] Clem. Marcell. l. 22. p. 232.

ſucceeded the Sacred Books, ſomewhat more recent, but not leſs famous; to which Sanchoniatho [u] and Manetho [w] are alſo ſaid to have been beholden for the perfecting of their hiſtories. For theſe books did not only contain what related to the worſhip of the gods, and the laws of the kingdom, but hiſtorical collections, nay, even all kind of miſcellaneous and philoſophical matters of conſiderable moment. For it was part of the buſineſs of the prieſts, or ſacred ſcribes, to inſert in thoſe public regiſters whatever deſerved to be recorded and tranſmitted to poſterity, as well as carefully to preſerve what had been delivered down to them from their anceſtors [x].

These were the literary monuments of the Egyptians. Of each kind there were ſome that were obvious and plain to be underſtood by the common people and ſtrangers; and others more dark and myſterious, which were laid up in the inner receſſes of the temples, and communicated but to a very few. For there were two ſorts of learning among the ancients, and particularly the Egyptians, the vulgar and the ſecret; the difference between which conſiſted not ſo much in the matter, as in the manner of delivering it [y]. The firſt was open to all, who might be inſtructed therein by the public monuments, and the ordinary maſters; but the other, leſt it ſhould grow cheap, or be corrupted by paſſing through vulgar hands, was veiled and diſguiſed by more methods than one. For the monuments of this ſuperior ſort of learning, beſides being hidden in the private apartments of the temples, were written in a character not commonly underſtood, and guarded by the prieſts, who were extremely difficult of acceſs, and could not be prevailed on to explain them, but after abundance of preparation and initiatory ceremonies [z]; a memorable inſtance of which was their uſage of Pythagoras. This perſon, deſigning to travel into Egypt, deſired Polycrates, the tyrant of Samos, to recommend him by letter to Amaſis king of Egypt, who was his particular friend, that he might have the free admiſſion to the ſecret learning of the prieſts; and when he came to Amaſis, he obtained alſo of him letters to the prieſts, ordering them to communicate their knowledge to him. Thence he went, firſt to thoſe of Heliopolis, who referred him to the college at Memphis, as their

[u] Euſeb. de præp. ev. l. 1. c. 9. [w] Joſeph. cont. Apion. l. 1. [x] Vid. eund. ibid. Plat. in Tim. Strab. l. 17. p. 139. [y] See before, p. 197. [z] Plutarch de Iſid. & Oſir. p. 354. Strab. l. 17. p. 1159.

their ſeniors; and from Memphis he was ſent, under the ſame pretext, to Thebes: after much tergiverſation, not daring to diſobey the king's command, by any farther dilatory excuſes, they endeavoured to deter Pythagoras from his purpoſe, by the infinite labour and trouble he was to expect, injoining him, in his noviciate, things that were very hard, and contrary to the religion of the Greeks [a]. And when he had undergone all this with invincible courage, he obliged them at length, againſt their wills, to admit him to a participation of their ſacred myſteries and profoundeſt learning [b].

THE laſt method, which the Egyptians took to conceal their doctrines from popular conception was, by wrapping it up in hieroglyphics, ſymbols, ænigmas, and fables. Of the hieroglyphic figures we ſhall take notice immediately. As to the reſt, it is well known, that the antients in general uſed to deliver their inſtructions under thoſe dark veils of allegory and fiction; inſtances of which are too frequent, both in ſacred and prophane writers, to need quotation: there being few, or none, in the moſt early times, either among the Greeks or Barbarians, who taught any part of philoſophy plainly or intelligibly [c]; as if they thought, that to expreſs things in a familiar and eaſy manner argued want of acuteneſs; or elſe imagined, that modeſty forbad them to ſhew truth naked to the vulgar. The Egyptians ſeem to have excelled other nations in the obſcurity of their fictions; wherein the footſteps of truth were often ſo faint, that they required a ſagacious tracer, and one able to diſcern things of moment from trifles [d].

IN their inſcriptions and writings, the Egyptians made uſe of three ſeveral ſorts of characters; the firſt and moſt antient was that of hieroglyphical figures of various animals, the parts of human bodies, and mechanical inſtruments; of which three things the hieroglyphics, both of the Ethiopians and Egyptians, conſiſted [e]: though there is reaſon to think, the Egyptians had alſo another ſort of characters, called hieroglyphical, and made uſe of by the prieſts, ſomething reſembling the preſent Chineſe characters [f]. They are ſaid to have been the invention of Hermes; and a ſpecimen of his performance therein is given us by Sanchoniatho [g]. The conjecture

[a] See before, p. 570. [b] Porphyr, de vita Pythag. [c] Vid. Diog. Laert. in præm. Phornut. cap. de fab. antiq. trad. Clem. Alex. Strom. l. 5. p. 556, &c, [d] Plut. Erotic, p. 762. [e] Diod. Sic. l. 3. p. 145. [f] Vid. Porphyr, de vita Pythag. p. 13. [g] See before, p. 401.

conjecture of Sir John Marsham is by no means improbable, that the use of these hieroglyphical figures of animals introduced the strange worship which was paid them by that nation [h]; for as those figures were made choice of according to the respective qualities of each animal, to express the qualities and dignities of the persons they represented, which were generally their gods, princes, and great men; the people became gradually accustomed to these figures, which they used to place in their temples as the images of their deities; whence it is not absurd to imagine, that they came at length to pay a superstitious veneration to the living animals themselves. And this opinion we rather approve, than the contrary one of a late learned writer, who supposes the sacred animals were first appointed and consecrated to each god, and the hieroglyphics afterwards formed from them [i].

There are large collections among the antiquaries of hieroglyphical inscriptions, images, and pictures, which they have taken a great deal of pains to explain, but with very little success [k]; for if we except a few of these characters, the meaning of which has been preserved by old writers (L), there is great reason to suspect their conjectures are very ill founded; and particularly as to those figures which they suppose to represent the old Egyptian gods; the greater part of them being in human form, with the head of some animal, or else distinguished by some animal representation set upon their heads, or near them; whereas images of human form, as we have observed, were not introduced among the Egyptians till later times; and why such figures might not be made in memory of some of their most famous men, we cannot see, since it was the old Egyptian custom to represent, not the man's person, but his manners, characters, station, and honour [l]; and this they did by hieroglyphics.

Besides

[h] Marsh. Can. Chron. p. 38. [i] Shuckford, Connect. vol. ii. p. 331, &c. [k] Vid. Kircher. Oedip. Montfaucon, Antiq. expliq. Pignorii Mens. [l] Vid. Plut. ubi sup. See Shuckford, Connect. vol. ii. p. 348, &c.

(L) Thus we are told, they represented the supreme Deity, by a serpent with the head of a hawk (1). The hawk itself was the hieroglyphic of Osiris; the river-horse of Typhon; the dog of Mercury; the cat of the moon, or Diana; the beetle of a couragious warrior; a new-born child of the rising sun, and the like (2).

(1) Euseb. de præp. ev. l. 3. c. 10. p. 41. (2) Vid. Plut. de Isid. & Osir. Diod. l. 3. p. 145. Clem, Alex, Strom. l. 5, p. 566.

BESIDES theſe, the Egyptians alſo uſed literal characters, of which they had two ſorts, one of them they called the ſacred letters, in which their public regiſters, and all matters of a higher nature were written; and the other the vulgar, or epiſtolographic, made uſe of by every body in common buſineſs [m]. The Egyptians were not the only people who obſerved ſuch a diſtinction in their writing; ſeveral of the eaſtern nations, particularly the Ethiopians and Babylonians, had two different kinds of letters [n]; and the modern Bramins among the Indians, have not only a ſacred character, but a ſacred language alſo, in which they are very ſhy of inſtructing ſtrangers [o].

WHEN, and by whom, letters were invented, we ſhall not now enquire; it will be ſufficient to obſerve here, that though moſt other nations are ſuppoſed to have received them from the Egyptians, yet themſelves poſſibly learned them of their neighbours the Ethiopians, among whom letters were in uſe very early, and whoſe vulgar character became the ſacred one of the Egyptians [p]. Both theſe ſorts of old Egyptian letters are now loſt, or if the forms of them remain in any old inſcriptions, they are unintelligible, and cannot be decyphered. All that we know of them is, that the alphabet conſiſted of twenty-five letters [q], and that they wrote from the right hand to the left [r], as moſt of the oriental nations ſtill do. We can by no means come into the opinion of thoſe who imagine the preſent Coptic letters to have been thoſe of the antient Egyptians (M); for the Coptic

[m] Herod. l. 2. Diodor. l. 1. p. 72. Vid. Clem. Alex. Strom. l. 5. p. 555. Porphyr. de vita Pythag. p. 185. [n] Vid. Diodor. l. 3. p. 144. Diog. Laert. in Democrito. Lucian. de Macrob. [o] Vid. (M) Della Valle thinks the modern Coptic letters were the vulgar letters of the antient Egyptians, and not taken by them from the Greeks; becauſe, 1. the Greeks, when they expreſs numbers by letters, according to the order of the alphabet, for the number 6, uſe ϛ, which is ſuppoſed to be not a ſingle letter, but the compound character Sigma-tau; for which they are not able to give any reaſon; whereas by the Coptic alphabet it appears

Coptic alphabet is manifestly nothing else but the Greek; with the addition of some few letters, to express sounds which

pears to have been originally the sixth letter, though it be wanting in the Greek. 2. The Copts pronounce the vowels and diphthongs, not according to the corrupt pronunciation of the modern Greeks, but after the antient manner. 3. He found some Coptic letters on a mummy among hieroglyphics; which shews they were in use before that way of writing was lost (3). But it may be answered, that the Greek numeral ϛ, and the Coptic So, are really no other than the Samaritan Waw set backwards, or the Æolic Digamma, which the Greeks afterwards threw out of their common alphabet, as they did the Koppa and Sanpi (the Samaritan Koph and Sade), they being also used as numerals only; but the Copts have retained the figure of the Waw, calling it So, or Sou which signifies six, the number it stands for) though they never use it, we believe, otherwise than as a numeral; nay, in some Coptic alphabets, the Koppa or Sanpi are still inserted (4). Which joined with the other two arguments of Della Valle, may prove the Greek letters to have been used very early in Egypt, but not that they were originally Egyptian.

Kircher (5) goes something farther. He endeavours to prove Coptic letters were invented by Hermes, and most of them formed from some of the sacred animals, as the ibis, the serpent, the bull, the ram, and the hawk. And to such as have not pertinent names, he gives others, which have an apt signification in Coptic: Zida, for example, he calls Zeuta, i. e. Life, of which the serpent, whose form this latter bears, is the symbol; & Xi he calls Xanuti, i. e. A Chain, the links of which it seems to resemble. Plutarch indeed tells us, that the first Egyptian letter was the ibis (6); that bird, with its legs devaricated, and bill inserted between them, making the form of an equilateral triangle (7). which comes something near the Coptic Alpha; but we know not how this can be carried farther with any certainty. Clemens Alexandrinus mentions four golden images of gods, viz. two dogs, a hawk, and an ibis, which used to be carried in procession at a certain solemnity, and that they called them Four Letters (8). Now though Kircher has derived seven letters from the ibis, and one from the hawk, yet he could find none that seemed to have any affinity with the dog; which shews how precarious

(3) Della Valle, viag. let. ii. (4) Vid. Ed. Bernardi Tab. alphabetor. n. xxvi (5) In Oedip. Ægyp. tom. 3. p. 42, &c. (6) Plut. sympos. l. 4. quæst. 5. (7) Ibid. l. 9. quæst. 3. (8) Clem. Alex. strom. l. 5. p. 567.

which the Grecians had not, and probably came to be uſed in Egypt after the time of Alexander, though we know the Greek language, and perhaps their letters alſo, was taught there long before, in the reign of Pſammitichus [s]. That the reader may judge of this affinity, we have here inſerted the Coptic alphabet.

[s] Idem. ibid. Diodor. l, 1. p. 61.

carious thoſe conjectures are, though we confeſs them to be ingenious. It is not improbable, that the Egyptians in later times, when they had loſt their antient letters and learning, and had for ſome centuries made uſe of the Greek alphabet only, the introduction of which they had forgotten, might imagine their preſent letters to be thoſe antient ones uſed by their anceſtors, and thereupon endeavour to find myſteries in them, which it is eaſy for men of warm conceptions, and a peculiar way of thinking, to do in the moſt trivial things.

Another learned author ſeems alſo to have been once of opinion, that the Greek alphabet was derived from the Coptic; for he ſays, the letters uſed by Moſes, and throughout all Aſia, have not the leaſt affinity with the Greek (contrary to the ſentiments of almoſt all learned men beſides); but that the Coptic, or Egyptian, letters have the utmoſt reſemblance to them, and, which he thinks more obſervable, the manner of writing in all Aſia is from the right hand to the left; but the manner of writing in Egypt and Greece, is from the left hand to the right; and this he wonders Sir Iſaac Newton could not diſtinguiſh (1). We agree, that the manner of writing in Egypt is now, as this gentleman ſays, (we mean when they write Coptic) but that it was ſo antiently he would have been much in the wrong to affirm, Herodotus expreſly teſtifying the contrary (2); and the derivation of the Greek alphabet from the Samaritan is ſo apparent, that this writer himſelf, in a later work of his, ſeems to make no doubt of it; and goes a little too far, as we apprehended, on the other ſide, in aſſerting the Samaritan characters to have been the old Egyptian (3); which may poſſibly be true, but is more, we believe, than he is able to prove.

We will not deny, however, but that the ſeven letters added by the Egyptians to the Greek alphabet, may be the remains of their antient character; though we are rather of a contrary opinion.

Of their language.

The Egyptian language is certainly one of the moſt antient in the world, and in all probability an original, or mother, tongue, formed at the confuſion of Babel [t]. It was certainly a diſtinct tongue, at leaſt ſo early as the time of Joſeph, who, when he was made governor of Egypt, had a new name given him of Egyptian derivation [u], and ſpeaking to his brethren in that language, was obliged to make uſe

[t] See before, p. 442.

[u] Geneſ. lxi. 45.

uſe of an inrerpreter [x] : and yet this very language is in a great meaſure preſerved to our own times in the preſent Coptic, though, by reaſon of the almoſt continual ſubjection of that nation to foreigners, ever ſince their conqueſt by Cambyſes, a conſiderable part of it has been loſt ; in return for which it has received a great number of Greek, and ſome Perſian, Latin, and Arabic words, during the long time they were under the ſucceſſive government of thoſe people. The Arabic at preſent prevails ſo univerſally in Egypt, that the Copts, or native Egyptians themſelves, generally ſpeak no other, the common people having utterly loſt the knowledge of their antient tongue, which few, even of their prieſts, underſtand to any degree of perfection [y].

THE Coptic tongue at preſent conſiſts chiefly of the old Egyptian and Greek ; ſtill bearing evident marks of primitive antiquity in its ſtructure and conſtitution, wherein it differs ſo widely from all the oriental and European languages, that it is impoſſible to conceive it derived from any of them. For the Copts neither decline their nouns, nor conjugate their verbs (not even thoſe of foreign extract) otherwiſe than by prefixing particles ſometimes of one or more ſyllables, and ſometimes of a ſingle letter, which denote the caſe, gender, number, and perſon ; ſeveral of them being often joined together in one word, and the primitive word uſually placed laſt. So that the difficulty of this tongue conſiſts in the incredible combination of the words and particles, in the change of the vowels, and in tranſpoſing the middle part of the word, and adding of ſuperfluous letters ; to diſtingniſh which requires great labour and ſkill [z].

Of their trade and navigation.

As Egypt is excellently ſituated for commerce, the trade of the weſtern parts of Aſia, all Europe, and the north lying open to it by the Mediterranean ſea, and that of Arabia, Perſia, India, and the ſouthern and weſtern coaſts of Africa by the red ſea ; the eaſtern merchandizes being commodiouſly brought into Egypt on camels by the iſthmus of Sues ; it is to be preſumed, ſo induſtrious and ſenſible a people were not long without making uſe of thoſe advantages ; which they might be induced to, not only by the proſpect of gain, but alſo to ſupply themſelves with thoſe things which their country wanted, ſuch as metals, wood, pitch, roſin, and the like ; which they might do by diſpoſing of

[x] Geneſ. lxii. 23.

[y] Vid. Sicard. dans les Memoires des Miſſions, tom. ii. p. 61.

[z] Vid. Wilkins, Diſſert. de ling. Coptica, p. 120, &c.

of their own, many and rich productions and manufactures, such as corn, linen, paper, glass and several other valuable commodities. Sir John Marsham [a] supposes, that the Egyptians did not apply themselves to merchandize till the time of the Ptolemies; but in this he seems to be mistaken; for though those princes did very much encourage trade, recovering that of the east of their subjects, by building of Berenice, Myos hormos, and other ports on the Arabian gulph, so that Alexandria became the greatest mart in the world; yet the Egyptians certainly traded very considerably with foreigners long before. For, not to insist on their claim to the first invention of commerce, which they say was found out by Osiris, and their Mercury [b], Diodorus does not only tell us, that Psammitichus gained great riches by trade before he was king of Egypt [c], but we learn from scripture, that the Midianites and Ismaelites traded thither so early as the time of Jacob [d]; and it is presumed, that they had antiently the sovereignty of the red sea, by which means they engrossed all the trade of the Indies, and other parts which were then carried on that way [e]. They seem indeed to have been dispossessed of it, if what Philostratus [f] relates be true, by a certain prince named Erythras (whom some imagine to be the same with Esau, or Edom); for he, being master of the red sea, made a law, or regulation, that the Egyptians should not enter that sea with any ships of war, and with no more than one merchant ship at a time. To evade which, the Egyptians built a vessel so large and capacious, that it might supply the place of several. However, afterwards David became master of Elath and Esiongeber, two ports on the red sea belonging to Edom, which he had conquered, built ships there, as some say, and fetched gold from Ophir [g]; but whether that be true or no, Solomon his son certainly established a very great trade there [h], which it is not improbable he might do by permission, or connivance of the Egyptians, to whose king he was son-in-law. And this trade the Jews continued to share with

[a] Canon. Chron. Sec. 14, p. 367. [b] Vid. Huet. Hist. du Commerce & de la Navig. des anciens, c. 7. [c] Diod. Sic. l. 1. p. 60. [d] Genes. xxxvii. 25, 36. [e] Vid. Huet. ubi supr. c. 48. [f] De vita Apollonii, l. 3. c. 35. [g] Eupolem, ap. Euseb. de præp. evang. l. 9. c. 30. [h] 2 Chron. viii. 17, 18. 1 Kings ix. 26, &c.

with them, with ſome little interruption, till the time of Ahaz, when they entirely loſt it, and it fell into the hands of the Syrians [i], and after of the Tyrians [k], till the Ptolemies recovered the whole again to their own ſubjects, as has been ſaid.

SOME writers [l] have indeed expreſly aſſerted, that Pſammitichus was the firſt king of Egypt who opened the ports to ſtrangers, and granted foreign traders ſecurity in his dominions; and that the antient princes, being content with the abundant riches of their own country, permitted ſtrangers to have no acceſs to it, fortifying the frontiers againſt them, and particularly againſt the Greeks. But this cannot be underſtood of any other commerce than that which was driven by the Mediterranean ſea, where the Greeks exerciſed their piracies along the coaſts of Egypt [m], and being themſelves excluded thence on that account, complained of ſuch treatment as a great injuſtice, and an attempt againſt the law of nations, repreſenting the Egyptians as a barbarous nation, which had renounced all humanity and hoſpitality; whence aroſe the fable of the cruelty of Buſiris: for that the Egyptians did before this trade with other nations, is evident from the abovementioned inſtance of the Midianites and Iſmaelites, the eaſy acceſs which Abraham and the ſons of Jacob had to Egypt [n], and from Solomon's having horſes from thence [o].

TOWARD the Greeks indeed they behaved themſelves with ſome caution and reſerve, even after they were admitted; for after the time of Pſammitichus, though Amaſis, who was their great friend, ſuffered them to build the city of Naucratis for the ſettlement and reſidence of their merchants; yet that was the ſole place in the whole kingdom where he allowed them to have a factory. They ſailed up to it by the Canopic mouth of the Nile (N); and if by any accident a veſſel entered any other mouth of that river, the owners, after making oath that they were forced in there againſt their will, were obliged to go back to that channel; or if the winds were contrary, to unlade, and ſend up their goods to Naucratis by the river veſſels [p].

THOUGH

(N) Yet others make this city of Naucratis to be a colony of the

Though the Egyptians, on a religious account, bore a great averſion to the ſea, which they called Typhon, becauſe it ſwallows up their Nile, and hated ſailors ſo much that they would not ſpeak to them [q]; and though they were not fond of going out of their own country, for fear of introducing foreign luxury and cuſtoms [r], yet were they not ignorant of ſea affairs, having an order of men among them who followed nothing elſe; nay, the Grecians confeſs, they learned navigation from them [s]. Seſoſtris built a formidable navy of four hundred ſhips of war for his expedition to the ſouthern ſeas; and alſo a very large veſſel of cedar, two hundred and eighty cubits long (O), gilt without, and beautified with ſilver within, which he dedicated to Oſiris [t]. And it is to be preſumed, they improved in this art in ſucceeding times.

We ſhall here conclude this account of the antient Egyptians, and hope we may be excuſed, if we have been ſomewhat prolix in ſpeaking of ſo extraordinary a people.

SECT. III.

Of the Egyptian chronology to the time of Alexander the Great.

Before we enter on ſo intricate a ſubject as the Egyptian chronology, it will be neceſſary, for the better underſtanding of what ſhall be ſaid, to exhibit the ſeries of the kings of Egypt, according to the ſeveral authors who have recorded their ſucceſſions.

I. A

[q] Plut. de Iſid. & Oſirid. p. 363. Sympoſ. l. 8. p. 729. [r] Clem. Alex. ſtrom. 1. p. 302. Euripid. in Troad. [t] Diod. Sic. l. 1. p. 50, 52.

the Mileſians, and to ſtand on the Bolbitic, or Heracleotic, mouth of the Nile (4). But this we ſhall examine hereafter.

(O) This ſhip muſt vaſtly exceed any modern veſſels in bulk, being near twice as big as one of our largeſt firſt rates; the length of the royal Sovereign being no more than 175 feet on the middle gun-deck; and the breadth about 70 feet by the beam.

The disagreement between these several successions of Egyptian kings, both in their names and the years of their respective reigns, is so great, and there are such chasms, and such apparent corruptions and mistakes therein, that it should seem lost labour to go about to reduce them into a chronological series, so as to agree with one another, much less with scripture and the chronological observations of other historians. However, we shall say something of each of the preceding tables.

Of the numbers of the old chronicle

And, to begin with the first of them, the sum total of the thirty dynasties, according to the old chronicle, is not only an immense number, vastly exceeding the age of the world, but appears to be an astronomical calculation, by which the Egyptians would have their dynasties to have run

run through a whole periodic revolution of the zodiac [e]; and therefore we ſhall not offer to make any uſe of it. It may only be obſerved, that though this ſum be ſaid to be the amount of the thirty dynaſties, yet therein muſt be included the 30,000 years which the Sun reigned, the 3984 years reign of Saturn, and the other twelve gods, and the 217 years reign of the eight demi-gods, making together 34,201 years. As to the fourteen firſt dynaſties, which we conceive to be omitted in the fragment we have remaining of this chronicle, the meaning of the original may perhaps be, that the fifteen generations of the cynic circle, which are placed in the table, in the fifteen dynaſty, and reigned 443 years, do make up the firſt fifteen dynaſties: and this ſeems to be confirmed by the ſum total of the years of the ſixteen laſt dynaſties, as in the table, which is 2140 years, and with the ſaid 34,201, years, makes 36,341; to which, if we add 184 years, for the duration of the twenty eighth dynaſty, the number of which is omitted, we ſhall have the compleat ſum of 36,525. And conſequently deducting thence the ſum of the reigns of the gods and demi-gods, the remainder will be 2324 years, for the duration of the ſucceeding dynaſties, according to this chronicle; which is a number reaſonable enough, though it cannot be reconciled to thoſe of Manetho.

Of the Dynaſties of Manetho.

THE ſucceſſions of Manetho, which are given in the ſecond table, have this additional corruption, that their order has been diſturbed by tranſcribers; and as in their preſent diſpoſition they cannot poſſibly be reduced to any one ſyſtem of chronology, ſome have altered that diſpoſition according to their various hypotheſes, while others make ſhort work with them, and abſolutely reject theſe dynaſties, or great part of them, as fabulous.

THE credit of Manetho has been called in queſtion by ſeveral writers [f], not only becauſe of the incredible antiquity to which his hiſtory is ſuppoſed to have aſcended, but from the account which, it is ſaid, he himſelf gave of the records from whence he took it, pretending to have extracted it from certain pillars in the Seriadic land, on which inſcriptions had been made in the ſacred dialect and letters,

[e] See before. 272. in the notes.

[f] Vid. Jac Cappell. in Hiſt. Sacr. & Exot. ad Ann. M. 2269. Stillingfleet Orig. Sacr. Book i. c. 2. § 10, &c.

letters, by Thoth, the firſt Hermes, and were tranſlated, after the flood, out of the ſacred dialect into the Greek (N) tongue in ſacred letters (O), and laid up in books by Agathodæmon, the ſon of the ſecond Hermes, the father of Tat, in the inner receſſes of the Egyptian temples [g]. Now it is abſolutely impoſſible, that the firſt Hermes, who lived in the earlieſt ages of the Egyptian monarchy, could write a hiſtory of ſo many generations which came into the world after his death, unleſs he did it by inſpiration; and if Manetho could be ſo ſtupid as to aſſert this, it muſt neceſſarily have overthrown the credit of his whole work. But we do not think that writer could mean any ſuch thing; the words cited from him do not ſay he took his whole hiſtory from thoſe pillars; though he might probably quote thoſe records to ſupport the ancient hiſtory, which preceded the time of Thoth; and ſuch pillars, or at leaſt ſome pillars which were of great antiquity, and by the prieſts attributed to Thoth, muſt have been extant in the days of Manetho, or he could never have appealed to them in ſo public a manner, eſpecially in writing to his prince. It may alſo be anſwered,

[g] Syncell. p. 40. See before, p. 244. and the note there.

(N) Dr. Stillingfleet (13), with great reaſon thinks this abſolutely incredible, the Greek language being not known in Egypt, at leaſt not in requeſt there, ſo early as this; for the Grecians had little or no commerce with the Egyptians till the time of Pſammitichus, as we have obſerved more than once. It ſeems alſo very unlikely that Manetho ſhould aſſert this; for, beſides the improbability abovementioned, the Egyptian hiſtory was ſo far from being tranſlated to his hand, that he himſelf was obliged to tranſlate it into Greek from the ſacred regiſters (14); for which reaſon we ſuſpect ſome corruption in this paſſage; and, if it be not too bold a conjecture, we ſhould gueſs, that, inſtead of ἑλληνιδα φωνὴν, the Greek tongue, it ought to be read ἕλκησχον φωνὴν, the vulgar tongue; but we dare not dictate in ſo dubious a point.

(O) The original words are γράμμασιν ἱερογλυφικοὶς, which the learned writer named in the preceding note, tranſlates hieroglyphic characters, and very juſtly wonders, how any tranſlation can be made into ſuch characters, which repreſent things, and not words (15). But as theſe characters are plainly called letters, we conceive they could not be hieroglyphical in the common acceptation of the word, but rather ſuppoſe them to be the ſame with the hierographic, or ſacred letters abovementioned.

(13) Orig. Sacr. Book i. c. 2. (14) Joſeph. cont. Apion. l. i. p. 1336. (15) Stillingfl. ubi ſup.

ſwered, that though Thoth made the firſt inſcriptions on thoſe pillars, yet it is not impoſſible, but in ſucceeding times other inſcriptions might be added to thoſe of Thoth; for the pillars might be in common phraſe aſcribed to him, though the hiſtorical inſcriptions were continued after his death by others. But after all it may be queſtioned, whether Manetho really intended to ſupport his hiſtory by the authority of thoſe pillars; for the paſſage wherein he mentions them, ſeems to have been taken out of another book of his, called Sothis, or Seth, which was not hiſtorical, but prophetical; for, in his dedication of that work to Ptolemy Philadelphus, he ſays, that his interpreting the ſacred books of Hermes was in obedience to that prince's command, who enquired of him concerning the future events that were to happen in the world [h]. And as to the records from whence he took his hiſtory, we are elſewhere aſſured, it was from the ſacred regiſters [i] which were kept by the prieſts, and written in the Egyptian language, ſince he tranſlated them into Greek.

THE ſtronger prejudice therefore againſt the credit of this writer ariſes from his chronology. The Egyptians, it is true, pretended to an exceſſive antiquity, and to have certain records for a prodigious length of time paſt. This appears not only from the old chronicle abovementioned, but from the extravagant numbers of years their prieſts impoſed on Herodotus, Plato, and Diodorus (P); but Manetho ſeems to

[h] Vid. Syncell. p. 40. [i] Joſeph. cont. Appion. l. 1. p. 1336. Euſeb. de præp. ev. l. 2. in prooem.

(P) Some of theſe random accounts are follows:

	Years.
From Vulcan to Alexander (16)	48,863
From the reign of the Sun to Alexander (17)	23,000
From Oſiris to Alexander (18) above	10,000
Or almoſt	23,000
From Hercules to Amaſis (19)	17,000
From Bacchus to Amaſis (20)	15,000
The gods and heroes reigned (21)	18,000
From Orus, the laſt of them, to the 180th Olympiad (22)	15,000
Kings of Egypt before Amaſis reigned (23)	13,000
From their firſt mortal king to Sethon (24)	11,340
There were chronicles at Laïs (25) of	8000

(16) Diog. Laert. in Prooem. (17) Diodor. Sic. l. 1. p. 22. (18) Idem, ibid. p. 20. (19) Herod. l. 2. (20) Idem, ibid. (21) Diodor. ubi ſup. p. 41. (22) Idem, ibid. (23) Pomp. Mela. l. 1. c. 9. (24) Herod. ubi ſup. (25) Plato in Tim.

to have been much more modeſt. The ſum of his thirty one dynaſties from Menes to fifteen years before Alexander (without taking the reigns of the gods and demi-gods into the account), if caſt up, will amount to above 5300 years, which will reach higher than the creation of the world; and Joſeph Scaliger [k] has accordingly ſettled their chronology in ſuch a manner that, by his own way of reckoning, it exceeds the epoch of the creation 1336 years. But there is a leſſer number mentioned by Syncellus, who ſays the account of the years of all the dynaſties was 3555, which is much more reaſonable than the other, and yet will agree with no ſyſtem of chronology, unleſs we take part of this number for the reigns of the antediluvian princes of Egypt. Manetho, as we have already obſerved, began his hiſtory with ſeven gods and nine demi-gods [l], who reigned 1985 years; and then ſucceeded mortal kings, the firſt of whom was Menes. Theſe three races ſeem to be the ſame with thoſe called in the old chronicle Auritæ, Meſtræi, and Egyptians [m]. Now, if we allow (as is moſt reaſonable, in caſe there be any ſhadow of truth in this part of the hiſtory), that the gods, or Auritæ, were antediluvians; the demigods, or Meſtræi, the poſtdiluvians of the race of Mizraim; and the mortal men, or Egyptians, Menes and his ſucceſſors; and, if we allow 1200 years part of the 1985 for the reigns of the firſt [n], the remainder, 785, will be the years of the reign of Mizraim and his deſcendants. And deducting the whole 1985 out of the ſaid 3555, there will remain 1570 years, the diſtance from Menes to the fifteenth year before Alexander; from which time, if we compute backwards, the beginning of Menes's reign will fall about eleven years before Abraham went into Egypt, according to the Samaritan chronology; and that of Mizraim about 298 years after the flood. This way of computing would be plauſible, were it not that the epoch of the Egyptian kingdom will by this means precede the diſperſion of mankind 103 years, which can hardly be ſuppoſed, unleſs it be allowed, that the Egyptians reckoned the years of the government of their firſt anceſtors over their deſcendants, before they left Shinaar, and arrived in Egypt. But the great objection of all is, that Manetho's number of 3555 appears to belong wholly to the ſucceſſors of Menes, and

[k] Canon Iſagog. l. 2: p. 228. [l] See before, p. 273. [m] See ibid. [n] See before, p. 273, 277.

and we have no manner of warrant to make any deduction from it.

SOME chronologers therefore, particularly father Petau [o], (who took delight in contradicting Scaliger) reject the whole ſcheme of Manetho's dynaſties as fabulous, and of no manner of value or credit. And others [p], to whom Euſebius led the way in his canon [q], omit the firſt ſixteen dynaſties only, and begin their chronology with the ſeventeenth; though they differ among themſelves in their computations. The firſt who, without rejecting any, earneſtly ſet about reducing the entire ſeries to the ſcripture chronology, was the learned Sir John Marſham [r], who firſt gueſſed that theſe dynaſties were not ſucceſſive, but collateral. He ſuppoſes, that Egypt, immediately, after the death of Menes, was divided into four diſtinct kingdoms, of Thebes, This, Memphis, and the lower Egypt, beſides ſome of leſſer note which aroſe afterwards, and whoſe epochs are more difficult to be ſettled, and that it continued ſo divided for almoſt ſeven centuries, till the paſtors made themſelves maſters of all, except that of Thebes; after whoſe expulſion, in about 500 years after, Egypt became ſubject to one prince. By this means the duration of the whole empire, from Menes to the end of the reign of Amaſis, is reduced to 1819 years. This gentleman's work is full of uncommon learning and curious obſervations; but his great misfortune ſeems to have been his adhering ſo very ſcrupulouſly to the Hebrew chronology; whereby he is obliged to make Menes the ſame with Ham, and not Mizraim, (as almoſt all other writers imagine) and abſurdly to begin the date of his reign immediately from the flood. He follows Diodorus [s] in reckoning 1400 years from Menes to Seſoſtris, whom therefore he aſſerts to be the Shiſhak of the ſcriptures, though Diodorus plainly reckons a much larger interval between them. In which laſt particular, as he has been ſtrenuouſly oppoſed by ſeveral writers [t], ſo he has been followed by others [u]. It muſt be obſerved, that Sir John Marſham makes great uſe of the table of the Theban kings given us by Eratoſthenes, of which we ſhall ſpeak by and by.

THE

[o] De Doctr. Tempor. l. 9. c. 15. [p] Calveſius, Uſſerius, & Jac. Cappellus. Perizonius eſteems the firſt fourteen or fifteen to be fabulous. [q] Chron. Græc. p. 89. [r] In his Canon Chronicus Ægyptiacus, &c. [s] Lib. 1. p. 42. [t] Pezron, Perizonius, Whiſton, Bedford, &c. [u] Sir Iſaac Newton, Shuckford, Boſſuet, Le Clerc, &c.

The next who undertook to model this Egyptian chronology is father Pezron, who, by following the larger chronology of the Septuagint, has more latitude, and allows the duration of the Egyptian empire 2619 years from Menes to Nectanebus. This author likewiſe goes on the ſame foundation with Sir John Marſham, in making the firſt ſeventeen dynaſties not ſucceſſive but collateral. He is of opinion, that the Meſtræans, or offspring of Mizraim, the firſt inhabitants of Egypt, were thoſe whom their poſterity honoured with the titles of gods and demi-gods; and that, though they began to people the country, yet they formed no kingdom there till Menes who began his reign 648 years after the deluge, and 117 years after the diſperſion. Seſoſtris he places in the time of the judges of Iſrael, Deborah then preſiding over that people [x].

From the plans of theſe two great men, ſeveral other chronological writers have formed ſyſtems of their own, differing in ſome reſpects from them, as well as from each other. The chief care of them all is to fix the times of Menes and Seſoſtris; which, when they have done, they imagine the reſt follows almoſt of courſe. The opinions, as to theſe two princes, are ſo various, that it would lead us into too great a detail to mention them all in this place; and what we judge moſt curious and worthy notice in ſuch diſquiſitions, will be more properly introduced, when we give their hiſtories. What is generally to be obſerved in all theſe writers, and eſpecially in one of them, Perizonius by name, is, that they are much oftener in the right in refuteing and detecting the errors and miſtakes of one another, than in ſettling or adjuſting any thing that may be ſafely relied on.

The fundamental hypotheſis which all theſe writers go upon, that there were, in the moſt early times, ſeveral kingdoms in Egypt at once, ſeems to be very probable, the ſcripture mentioning the kings of the Egyptians in the plural, even ſo late as the time of Jehoram [y]. The kingdoms of Thebes and Memphis divided Egypt between them for ſeveral centuries; and it is certain, from Herodotus and Diodorus, that there were, at leaſt, two kings in that country at the time of the invaſion of the Ethiopians under Sabbaco. But it does not appear, that Manetho himſelf, though he wrote the hiſtory of five Egyptian nations [z],

[x] Pezron, Antiq. des temps retablie. c. 13.

[y] 2 Kings vii. 6.

tions [z], did make any of the dynasties he has given us collateral or contemporary; on the contrary, unless his transcribers have done him more wrong than we have reason to suspect, he placed them all in a continual succession [a]; and it is taking the utmost liberty with Manetho to alter it, unless we charge the fault on the records of which he made use.

AFTER Cambyses had carried their records, the Egyptian priests, in all probability, to supply their loss, and keep up their pretences to antiquity, began to write new records, wherein they not only necessarily made great mistakes, but added a good deal of their own invention, especially as to distant times. From these materials, for want of better, Manetho collecting his history, must have intermixed a good deal of fable, as there is in the antiquities of all nations (the Jews excepted); for it cannot be expected, that people in the circumstances of these early nations could have begun to keep records till some ages after their settlement. It is unjust therefore to lay the whole blame of the confusion and uncertainty we find in the Egyptian history at the door of Manetho: he collected, for ought we know, faithfully from the records he had, and we have so little genuine remains of him, and what we have has been so mangled by transcribers and pretenders to correct him, that Isis found less difficulty in gathering the dispersed remains of her dead husband, than it must be to patch up a figure which might bear some resemblance of that historian. Several antient writers of good judgment, as Josephus, Plutarch, Porphyry, and Eusebius, looked on him as a writer whose authority was to be depended on; and the curious fragment transcribed from him by Josephus, before his copies had been corrupted, seems to confirm this good opinion, being the most valuable and authentic piece of Egyptian history, of so great antiquity, that is extant; and the series of kings we have exhibited thence, in the third table, is a pretty exact record, connecting, if there be any credit in Manetho, the Egyptian and Grecian histories, by acquainting us that Sethosis was Ægyptus, and his brother Armaïs Danaus.

THE list of Theban kings given by Eratosthenes has had a very favourable reception among the learned, not only as a supplement to Manetho, who has entirely omitted

Of the catalogue of Eratosthenes.

that

that ſucceſſion, but as a certain foundation for fixing the Egyptian chronology (Q). His authority has been preferred to that of Manetho [b], in regard he was no Egyptian prieſt, but a Cyrenæan, a man of eminent learning, and keeper of the Alexandrian library, and took his catalogue from the ſacred records of Thebes, or had it from the ſacred ſcribes there [c]. Together with the Egyptian names of the kings, he has given their interpretation in Greek, which thoſe ſkilled in the Coptic tongue allow to be juſt in ſome inſtances; but ſeveral of them being corrupted and unintelligible, we have choſen to omit them.

This Eratoſthenean ſeries is ſuppoſed to be connected with a known epoch in the Grecian hiſtory, by a remark of Dicæarchus, Ariſtotle's ſcholar, who ſays, that from the reign of Seſonchoſis, who ſucceeded Orus, the ſon of Iſis and Oſiris, to the reign of Nilus, are 2500 years; and from Nilus to the firſt Olympiad 436 years [d]. Who Seſonchoſis was is very uncertain; the firſt king of the twelfth dynaſty of Manetho ſeems to have born this name, or one very near it; but he muſt have lived too late to be the perſon here meant; and if he be taken to be the immediate ſucceſſor of Orus, he muſt have been one of the demi-gods, and the ſame with Ares, or Mars; which carry us back into fable. The firſt of theſe obſervations therefore can be of no great uſe, for the time of Seſonchoſis, after this way of reckoning, will precede the deluge, even according to the Samaritan chronology, near 700 years. But the other king named by Dicæarchus is found in the catalogue of Eratoſthenes, the laſt king but one in which is Phruron, or Nilus; and therefore his time being known, the years of all the preceding kings

[b] Vid. Marſh. Can. Chron. p. 8, 26, 297, Cumberl. on Sanchon. p. 416, &c. [c] Vid. Syncell. p. 147. [d] Dicæarch. apud Scholiaſt. Apollon. Argon. l. 4. ver. 272.

(Q) Beſides the obſervation of Dicæarchus, mentioned hereafter, there is another affixed to Mares, the ninth king of this catalogue in Scaliger's edition of Euſebius's Greek chronicle (26), purporting, that he was contemporary with the ſixteenth dynaſty of Thebans in the lower Egypt; which obſervation may be of uſe to thoſe who have a mind to frame a table of the dynaſties, though Goar, in his edition of Syncellus, has omitted it, and taxes Scaliger with adding it of his own invention (27).

(26) Pag. 18. l. 34. (27) Goar, in Not. ad Syncell. p. 521.

kings are eaſily adjuſted to any ſyſtem of chronology. This ſeems plauſible enough; yet we are afraid, it will not altogether agree with the account of Diodorus. It is plain, Dicæarchus ſuppoſed Nilus reigned at the time of the Trojan war: for his calculation will carry us up thither; but according to Diodorus, Nilus muſt have been ſeveral generations later than Proteus, who reigned in Egypt at the time of the Trojan war, by the joint teſtimony of him and Herodotus [e]; ſo that Dicæarchus ſeems only to have given a tolerable gueſs at his age, and not fixed it with ſuch certainty as to enable us to determine it within a century at leaſt. Beſides, it is more than probable, that this table of Eratoſthenes has ſuffered by time and tranſcribers, as well as the dynaſties of Manetho; and there are doubtleſs ſeveral miſtakes in the numbers as well as names; the ſum total, for example, which Syncellus reckons to be 1075, will not agree with the particulars; for, if carefully caſt up, they amount to no more than 1055.

HOWEVER, according to this calculation of Dicæarchus, the table of Eratoſthenes will ſuit well enough with the Samaritan chronology; for if to the year before Chriſt 776 (the epoch of the firſt Olympiad) we add 436, the reign of Nilus will end in the year before Chriſt 1212; to which, if we again add 992, the number of years between the laſt year of Nilus and the firſt of Menes, this laſt king's reign began 794 years after the flood; that is, 393 years after the diſperſion, and about 300 years before Abraham's deſcent into Egypt. But if we abate three or four generations in this calculation, it will ſtill better agree with Diodorus, and allow more time for the riſing of the kingdom of Egypt.

Of the ſeries of Syncellus.

As to the ſeries of Syncellus, given in the fifth table, on which Sir John Marſham built much [f], we have a worſe opinion of it than of any of the other, eſpecially in the more early ages, where it is ſupported by no concurring evidence at all. He ſeems to have compoſed it by picking here and there ſuch names and numbers, and ſometimes adding both out of his own head, as he fancied, in order to accommodate it to the ſacred chronology [g], and therefore we ſhall take no further notice of it.

Of the ſucceſſions according to Herodotus and Diodorus

We need not ſpend many words to ſhew that it is next to impoſſible to frame a conſiſtent chronology as ſome have

[e] Diodor. Sic. l. 1. p. 56. Herod. l. 2.

[f] Vid. Can. Chron. p. 7.

[g] Vid. Perizon. Orig. Æg. p. 53, &c.

have attempted[h]; from the successions of kings in Herodotus and Diodorus. For, besides their irreconcileable disagreement in several instances, they confessedly omit a great number of princes, and mention no years of the reigns of others; whereby such chasms are left, that no body can tell how to fill up; and their manner of reckoning by descents, or generations, is too visibly uncertain. Before Psammitichus the Egyptian chronology is very dark; and though after that prince's time it begins to clear up, yet the variations between all the historians since his reign are considerable, as appears by the tables.

We shall not therefore waste our time in composing a hypothetical scheme of these kings of Egypt; of such performances there are choice already; and they are much more easy to frame, than to support; calculations by numbers of years, which are so liable to mistake and corruption, must needs be very precarious; and it seems much more reasonable to rely on the coincidence of facts and historical synchronisms, from which chiefly we shall, in the course of our history of Egypt, endeavour to fix the times of such events as we judge capable of it, and shall represent them accordingly in the general chronological tables. And this we think is the most that can be done with any degree of certainty: considering, which it is amazing to us, that men should pretend to adjust the Egyptian chronology, from the most early times, to so great a nicety as a few years, and dictate dogmatically in a matter of such absolute uncertainty and confusion.

Before we conclude, we will only observe, as to the Hebrew chronology, the imperfection of which we have mentioned more than once, that if there be any dependance to be made on the foregoing accounts of the Egyptian affairs, the beginning of that kingdom must be placed much earlier than that computation will allow. For, according to the most moderate calculation, which is that of Eratosthenes, as fixed by the observation of Dicæarchus, the reign of Menes must begin within two centuries of the flood; which is, in our opinion, improbable in the highest degree[i]; even though we should admit, that Menes was the same with Mizraim, as the patrons of that chronology generally suppose; the contrary of which we believe to be true, and shall endeavour to prove hereafter.

END of the First VOLUME.

AN INDEX TO THE FIRST VOLUME.

The Figures direct to the Page, and Letter *n* to the Notes.

A.

ABEL, when probably born, 225. The import of the word ibid. *n.* His offerings 226. Murdered, 227. Various opinions as to the place and manner of his murder, 228. *n.* Whether married, 229, *n.* How GOD declared the acceptance of his offering, 227, *n.* Abel or Hebel, etymology of, 225, *n.* & 436, *n.*

Abelard Peter, accuſed of holding the opinion that all things were GOD, and GOD all things, 88.

Abimael, one of the ſons of Joktan, where placed, 475.

Abram and Abraham, etymology of, 437, *n.*

Abu Moſlem held that all things returned into one common principle, or GOD, 88.

Abydus, an antient city of Thebaïs, 488

Accad, city of, where ſituate, 363, *n.* & ſeq.

Achthoes, king of Egypt, a moſt inhuman prince, ſlain by a crocodile, 604, *n.*

Adam, in what place created, 175. Whether men before him. See Preadamites. Placed in paradiſe, and forbidden the tree of Knowledge, 195. His happy ſtate in the garden of Eden, 184. Names the birds and beaſts, 195. Takes Eve to wife, ibid. His fall, as related by Moſes, 196. Some objections to the letter of that relation, 197, & ſeq. The literal ſenſe defended, 199. By whom tempted, ib. His trial, by forbidding a fruit, very rational, 206. And the puniſhment juſt, ib. The circumſtances of the aprons and coats explained, 207. The effects of his fall on man and the ground, 209. Change in the conſtitution of man, 210, & ſeq. Change in the conſtitution of the earth how effected, according to Dr. Burnet, 212. & ſeq. And Mr. Whiſton, 213. Where he dwelt after his expulſion from paradiſe, 224. The eaſtern tradition, ib. *n.* Dies, 239. Uncharitable opinion with reſpect to his repentance, 240, *n.* Conjectures concerning the place of his burial, ibid.

Adam an appellative rather than a proper name, and includes both ſexes 166, *n.* According to ſome Rabbins made firſt with a tail, 167, *n.* Other ridiculous notions of the Talmudiſts, ib. And Mohammedans, ib. Etymology of the name Adam, 166, *n.* & 437, *n.*

Adodus or Adad, called, in the Phœnician records, the king of the gods, 397, 398. Perhaps the Adad mentioned by Joſephus, 398, *n.*

Æoles, who inhabited Æolia to the north of Ionia, made by Joſephus to deſcend from Eliſha, Javan's eldeſt ſon, 471.

Æon and Protogonus, Eve and Adam, in the hiſtory of Sanchoniatho, 256, & *n.* Their iſſue, 257, & *n.*

Aeria Egypt, why ſo called by the Greeks, 485.

Æſculapius, a name given to Toſorthrus, or Seſorthrus, king of Memphis, more antient

tient than the Grecian Æſculapius, 580, 581.

Africa and Aſia, their boundaries, 486.

Agreus and Halieus, inventors of hunting and fiſhing, according to Sanchoniatho, 260.

Agriculture improved by the offspring of Cain, 243. Tools of agriculture, ſaid by ſome to be the invention of Noah, 253, *n.*

Agrouerus, or Agrotes, 261, 262.

Agrus, who, 261, 262.

Ahârimâm, or Ahriman, the evil dæmon in the phyſiology of the Perſian mages, 139, & 181.

Ahl al tahkik, or people of certainty, a ſect ſprung up lately among the Mohammedans, 88. Their opinion touching the Origin of things, ibid.

Al Bahriya, thought the eaſtern part of the Delta in Egypt, 489. Placed more truly beyond the weſtern branch of the Nile, ibid.

Alcanna, a ſhrub growing in Egypt, an account of, 504.

Alexander the Epicurean, his opinion of the origin of things, 87. Holds that all things are eſſentially God, and that forms are imaginary accidents, ib.

Alexandria, with its dependencies, part of the lower Egypt, 488, & ſeq. Metropolis of the whole kingdom under the Greeks and Romans, 489.

Algebra among the Egyptians, 579.

Almodad, one of the ſons of Joktan, uncertain where ſettled, 474.

Alorus, the ſame with Adam, 269.

Amalric, his body taken up and burnt, for having taught, that all things were God, and God was all things, 87.

America, how peopled, and how animals got into it, unaccountable, 299.

Americans ſpeak of a flood, 280.

Amida, god of the *Japoneſe*, 145.

Ammonius, ſcholar of Proclus, 81. Teaches publickly in Alexandria the world's co-eternity with God, ib.

Amoſis, Amos, or Tethmoſis, king of Dioſpolis in Egypt, ſuppoſed to have reigned when the Iſraelites departed out of Egypt, 607. *n.* ſaid to have aboliſhed the cuſtom of ſacrificing men to Juno at Heliopolis, 566.

Amynus and Magus in the Phœnician records, 389.

Anamim, who ſo called, 464. Where ſettled, ibid.

Anatomy, very early cultivated in Egypt, 583.

Anaxagoras, philoſopher of the Ionic ſect, 110. The firſt who rejected all chance in the diſpoſition of the univerſe, ib. Reforms the Ionic philoſophy, by admitting an intelligent being diſtinct from matter, 112, & ſeq. Held two diſtinct and independent principles co-exiſtent from eternity, 126, & ſeq. His notions of the origin of the univerſe, 132, 133.

Anaximander, his account of the origin of things, 111. Denies an intelligent being, ibid. Said by ſome to have been the firſt who publiſhed a book of natural philoſophy, ibid. *n.*

Anaximenes, diſciple of Anaximander, 112. His coſmogony, ibid.

Andes, Mountains of Peru, their height, 295. *n.* Thought by ſome to be the Sephar mentioned by Moſes, 474.

Anebo, an Egyptian prieſt, 99, & ſeq.

Angels, the import of the word, 175. Their nature, 177. Their exiſtence generally acknowledged even by the antient heathens, 176. Epicurus the only one among the antient philoſophers who denied them, ibid. Reaſonable to ſuppoſe their exiſtence, ibid. & 177. When created, 177. Their nature, power, employments, &c. ibid. Greatly reſpected by the antient Romans, Perſians, Jews, Mohammedans, &c. 178, & ſeq. Several orders and degrees among them, 179. The fallen angels, 180. The time of their fall, their offence, &c. ibid. Angels tutelar, or guardian, believed by the Jews and Gentiles, 178. Opinion of thoſe who think the angels defiled themſelves with women, 246. By what originally occaſioned, ibid. *n.* Traditions concerning them not unknown to the Mohammedans, Perſians, &c. 249, *n.* Their ſtories concerning them, ibid, & ſeq.

Animals, half men half fiſh, mentioned by Beroſus, 266.

Animals, worſhipped by the Egyptians, 551, & ſeq. What gave riſe to this worſhip, 562. Some pretended, that the worſhip paid thoſe animals did not terminate in them, but in the gods, ibid. & ſeq. Vid. Egyptians.

Annedotus, a conjectural explanation of the word, 266, *n.*

Antediluvian patriarchs, a chronological table of their years, 218. Their genealogical table, between 232, & 233.

Antediluvian kings of Chaldæa, 268. Length of their reigns, and remarkable events under them, 269, & ſeq. Antediluvian world the ſtate of, 307, & ſeq. More populous and fertile than the preſent. 309.

Antediluvians, their religion, arts, ſciences, polity, &c. 308. & ſeq. Their longevity, 310. d the cauſe of it, 312.

Antelopes, common in Egypt, 501.

Antilibanus mount, whence ſo called in the Phœnician hiſtory, 258.

Anubis, one of the Egyptian deities, how repreſented, 553.

Aphobis king of Egypt, or Dynaſt of the race of the Phœnician ſhepherds, ſuppoſed by ſome to be the Pharaoh, who advanced Joſeph, 606. *n.*

Apis, by the Greeks Epaphus, a bull ſo called, repreſenting Oſiris, and worſhipped at Memphis, 554. Was to be the calf of a cow incapable of bearing another, and impregnated, as the Egyptians believed, by thunder, ibid. By what marks he was to be diſtinguiſhed from all others, ibid. Bulls ſacrificed to Apis, ibid. The choice of this victim, and ceremonies of the ſacrifice, ibid. What reaſon they gave for worſhipping Oſiris in the ſhape of a bull, 555. When the Apis died another with the ſame marks was ſought for, and put in his room, ibid. How his oracle was conſulted, 565. Began to be worſhipped at Memphis in the reign of Cæacos, 602. *n.*

Apollo, ſon of Cronus ſuppoſed to have been the ſame with Phut of Moſes, 396 & *n.*

Arabia, from whom ſo called, 381.

Aram, ſon of Shem, one of the chiefs at the diſperſion, 458. Where ſettled, 460. According to the Armenians, the ſeventh in deſcent from Haikh ſon of Togarmah, enlarged the bounds of his kingdom, which from him was called Armenia, 468, 469.

Ararat mountains of, where the ark reſted, 305. The ſituation of theſe mountains, 318 & ſeq. Traditions about them, 319 & ſeq. An account of them from Tournefort, 327 & *n.* From a Dutch traveller, 331. *n.* Several traditions relating to them, 319 & ſeq. Called by the Armenians, Masîs, 323. Firſt migration of the ſons of Noah from about theſe mountains, 407.

Archelaus, the ſucceſſor of Anaxagoras, his notions of the origin of the univerſe, 133

Archytas the Tarentine, a Pythagorean, held two ſubordinate principles, 130 & ſeq.

Ariſtophanes, his antient coſmogony, 109.

Ariſtotle, the firſt at leaſt of the Greeks who aſſerted the world's eternity, 78. His doctrine, ibid. The great reaſon which induced him to aſſert the world's eternity, 79. His deſcription of the ſupreme being, ibid. His ſentiments embraced by many learned Mohammedans, ibid.

Ark, its ſize and figure, 296 & ſeq. The number of the animals in it, 298. *n.* Objections againſt the preſervation of animals in it, 299. Its materials, 300. Where built, ibid. & ſeq. In what time built, 301. How many perſons ſaved in it, 302. *n.* Noah enters into the ark, 302. Remains of it, 321. Monaſtery of the ark, ibid. Fables of the Armenians concerning it, 326 & ſeq.

Armenia, the name of, derived from Aram, 469.

Armenians, give themſelves out to be the deſcendants of Togarmah, by his ſon Haikh, 468. Their fables concerning the ark, 326 & ſeq.

Aroueris, mentioned by Plutarch, who, 261. *n.*

Arphaxad, the third ſon of Shem, 371. Thought to be the founder of the Chaldeans, 372 & *n.* When born, 373. Several conjectures of writers relating to him, ibid. *n.* Who was his ſon, 374. One of the chiefs of the line of Shem, 458. Where ſettled, 459.

Arts and ſciences, their original after the deluge, 481 & ſeq.

Arura, a meaſure of land among the Egyptians, 542.

Aſcania, a city in leſſer Phrygia, or Troas, 467.

Aſcanius, a river ſo called, with a bay of the ſame name, 467. A king of that name mentioned by Homer to have been at the ſiege of Troy, ibid.

Aſclepiades, his natural principles indiviſible bodies, 114.

Aſclepius, ſon of Sydyc, 395. Paſt for a god in Egypt, ibid. *n.*

Aſhkenaz, one of Gomer's ſons, where ſeated, 467.

Aſhur, ſecond ſon of Shem, one of the chiefs of that line, 370, 458. Where ſettled, 459. Cities founded by him, 370.

Aſia minor, flood of, 281. *n.* Aſia and Africa, their boundaries, 486.

Aſps, why worſhipped by the Egyptians, 563.

Aſſyrian kingdom, epoch of its foundation, 370.

Aſtarte, daughter of Uranus, 394. Called by the Greeks, Aphrodite or Venus, 398.

Aſtronomy foundations of, laid by the offſpring of Seth, 243. Said to be an invention of the Egyptians, 579.

Athena, daughter of Cronus, 398. Reigns over Attica, ibid.

Athos mount, its height, 295. *n.*

Athothis, king of Egypt, ſaid to have been a phyſician, 581. Suppoſed to be the ſame with Thoth or Hermes, 601. *n.* Built the palace at Memphis, ibid.

Atlas, ſon of Uranus, 390. His cruel death, by the hands of his brother Cronus, 393. Atlantian theology and the Atlantij in Afric derived from him, 392. *n*

Atomic ſyſtem, by whom invented, 113, The principles of this ſyſtem, according to Leucippus and Democritus, 115. The ſame according to Epicurus, ibid. Difference between the two hypotheſes, 116. This ſyſtem raiſed to a high degree of reputation by Epicurus, 117. Revived by ſome moderns, both Chriſtians and Mohammedans, 118.

Atticus, his opinion of the origin of the univerſe. 136.

Averroes, or Ebn Roſhd, ſuſpected of favouring the world's eternity, 79.

Auguſtamnica, part of the lower Egypt, 488

Avicenna, or Ebn Sina, ſuſpected of favouring the world's eternity, 79.

Auritæ, the firſt race that governed Egypt, according to the accounts of the Egyptians, 273. From whence ſo named, ibid. *n.*

Azer, of the Aſiatics, the ſame as Terah, 385. By ſome ſuppoſed to be the ſon of Terah, ibid. *n.*

B.

BAAU, wife of Colpias, according to the Phœnician tradition, and mother of the firſt pair, 170. The import of the word, ibid. *n.*

Babel, by whom built, 354, 364 & *n.* Etmology of the word, 410, 411 & 436. *n.* Its building begun, 410, 378. What induced them to undertake that work, 410, 411. The deſign fruſtrated, 411. The time of their enterprize, ibid. Whether ſinful, ibid, & ſeq. All mankind concerned in the work, 412 & ſeq. Deſcription of it, 414. Some account of its ruins, 418 & *n.* Traditions relating to them, ib. & ſeq. Called alſo the tower of Nimrod, 421. *n.*

Babylon, according to ſome, built out of the ruins of Babel, 411. *n.* An account of its ruins, 418 & ſeq. & *n.*

Babylonian antediluvian hiſtory, according to Beroſus, 265 & ſeq.

Babylonians attributed the orderly diſpoſition of the world to Bel, or Belus, 103.

Bacchus, worſhipped by the Egyptians, 557. Obſcene ceremonies uſed on his feſtival, ibid.

Bætylia, or Bætyli, anointed ſtones worſhipped by the Phœnicians, 394, 395. *n.* Why ſo called, ibid.

Balkis, who viſited Solomon, reigned at Sanaa, or Saba, 476.

Barbara, or Barabara Waſtu, the ſupreme being among the Malabarians, 143.

Bdolah and Shoham, differently interpreted, 187.

Beelſamen, what in the Phœnician language, 258.

Beetle, why worſhipped by the Egyptians, 563.

Belus, the ſupreme god of the old Babylonians, 103.

Beelzebub, Satan, or Sammael, prince of the fallen angels, 181.

Beroſus, his account of the Chaldean or Babylonian coſmogony, 101. He collected the Babylonian antiquities, 265. The ſubſtance of the few fragments of them that are ſtill remaining, ibid. & ſeq.

Beruth, 262.

Betylus, ſon of Uranus, 390 & 392. *n.*

Blacks, their origin according to ſome, 355. *n.* Not the deſcendants of Ham, 353. How their blackneſs may be accounted for, 173, &c.

Boëthus, an heterodox Stoic, 89. Aſſerts the world's eternity and incorruptibility, ibid.

Brachmans, old Indian philoſophers, 141 & ſeq. Their opinion as to the creation of the world, ibid.

Bramins, Indian philoſophers, their phyſiology, 141 & ſeq.

Bramma, a god among the Malabarians, 143.

Brathys mount, why ſo called in the Phœnician hiſtory, 258.

Bremaw, what meant by, in the phyſiology of the Bramins, 142 & 307.

Bull, worſhipped by the Egyptians, 554. Repreſented Oſiris, ibid. Two of this kind kept in Egypt, ibid.

Burnet Dr. his theory of the earth, 149 & ſeq. How he accounts for the change in the conſtitution of the earth after the fall, 212. His theory of the deluge, 289 & ſeq. How he accounts for the changes made in the world after the deluge, 313.

Buſiris, his cruelty to ſtrangers gave riſe to the fable, 566.

Byblus, in Phœnicia, by whom founded, 393.

Byſſus, ſuperfine linen, 504.

C.

CAin when probably born, 224. The import of the word, 225 & 257, *n.* His offerings, 226. Why not accepted, 227, *n.* Murders his brother, ibid. His puniſhment, 229. Goes into baniſhment, and builds a city, 230 & ſeq. Grows more wicked, 232. Traditions relating to his death, 233. His deſcent between, 232 & 233. His poſterity wicked, 235. His race ſuppoſed to be meant by *men, and the daughters of men*, ib. & 236. His poſterity employed in improving agriculture, and inventing mechanical arts, and muſical inſtruments, 243. The pedigree of his line, as given by Sanchoniatho, 256 & ſeq. compared with that given by Moſes, 264 & ſeq. A table of his deſcendants according to Sanchoniatho and Moſes, 265.

Cain, a city in Canaan, 257, *n.*

Cainan, one of Seth's deſcendants, 236.

Calah city, where ſituate, 370.

Calaſirians, name of the military men in Egypt, 541.

Canaan, the fourth ſon of Ham, 357. Signification of the word, ibid. *n.* According to ſome born in the ark, 358. The curſe of Noah

Noah peculiar to, and wholly compleated in, him, ibid. Why curſed by Noah for the crime of his father, 352. Probably lived and died in the country called after his name, 358. His tomb formerly ſhewn not far from Tripoly in Syria, ibid. & 359. Known to the antient heathens, 359. Opinions of the Mohammedans concerning him, ibid. *n.*

Canal, ſtill in being, cut from the Euphrates to the Tigris, 191.

Canopus, one of the Egyptian deities, 553 How he obtained a victory over the Chaldean god Fire, by the craft of a prieſt, ibid. How repreſented, 554.

Caphtor, probably an iſland ſituate either in the lake of Tennis or Tanis, extending from Damietta to Tina, 466.

Caphtorim, the laſt of the offspring of Mizraïm, by all the fathers ſaid to be the Cappadocians, and Caphtor Cappadocia, 465 By Cappadocia here underſtood ſome place in Egypt, generally ſuppoſed by the Rabbins, to be Demiat, ib. & 466.

Cappadocia, in Aſia minor, and ſome place in Egypt of the ſame name, 465 & ſeq.

Cardu mountains, remains of the ark ſaid to have been formerly ſeen there, 321.

Caſluhim, where ſettled, 465.

Caſiotis, part of lower Egypt, 488.

Caſſius mount, whence ſo called in the Phœnician hiſtory, 258.

Cats in high veneration among the Egyptians, 559. The killing of one was certain death, ibid. Inſtance of this in a Roman, ibid. Why ſo much veneration paid to them, 563 & ſeq.

Caucaſus mount, called by the Arabs the mountain of Kaf, 469. Its height, 295. *n.*

Cayumarras, firſt king of Perſia, ſaid to have been the ſon of Shem, 370.

Celſus would have had the Chriſtians take Orpheus rather for a god than Chriſt, 105.

Celts, the ſame people with the Gauls, deſcended from Gomer, the eldeſt ſon of Japhet, 467.

Cephren, king of Egypt, erected the ſecond of the three moſt remarkable pyramids, 507.

SECT. IV.

The Hiſtory of Oſiris, Iſis, Typhon, *and* Orus.

BEFORE we enter upon the hiſtory of the mortal kings of Egypt, we are in ſome ſort obliged to inſert the following dark and antient fiction. Oſiris and Iſis were ſaid by ſome to be the ſon and daughter of Saturn and Rhea; but according to others their grand-ſon and grand-daughter, being deſcended from Jupiter and Juno, who had a deity born to them on each of the five intercalary days of the Egyptians. Theſe five deities were called Oſiris, Iſis, Typhon, Apollo, and Venus[a]. We have their origin and generation again differently, and, with the ſeveral particulars, related as follows: Sol ſurprizing Rhea in a private congreſs with Saturn, prayed that ſhe might not be delivered in the ſpace of any one month, or of the year. Soon after Mercury, ſmitten with love of the goddeſs, embraced her alſo; and, beating Luna at dice, took from the lunar year the ſeventy

[a] Diod. Sic. lib. 1. p. 13.

ſecond part of every day, and thereof compoſed five days, and added them to the year of 360 days, that ſhe might bring forth in them: and theſe they celebrated as the birth-days of Oſiris, Iſis, Typhon, Orus, and Nephthe. On the firſt day Oſiris was born, and at his birth a voice was heard crying out, *The lord of all things is come into the world:* or, according to others, a damſel called Pamyles going to fetch water from the temple of Jupiter at Thebes, heard a loud voice commanding to proclaim, *The great and beneficent king* Oſiris *is born.* He was delivered to this damſel, who was directed to nurſe him, which ſhe did with all the veneration due to him, performing the myſteries called Pamylia, like thoſe ſtiled Pallephoria, in honour of him. On the ſecond day Arueris was brought forth, whom ſome called Apollo, and others the elder Orus. The third was the birth-day of Typhon, who came not into the world in proper time and place, but by a violent eruption leaped out of his mother's ſide. On the fourth day Iſis, and on the fifth Nephthe, or Nephthys, took birth; which laſt was alſo called Finis, and Venus, and Victoria. Sol was the father of Oſiris and Arueris; Mercury was the father of Iſis; and Saturn was the father of Typhon and Nephthe. The third, being the birth-day of Typhon, was counted inauſpicious, or unluckly; ſo that the kings thereon ſuſpended all buſineſs, and abſtained from eating and drinking. Nephthe married Typhon, and Iſis married Oſiris. As for theſe laſt it is ſaid, that, impelled by a mutual love, they embraced whilſt yet in their mother's womb; and it was thought, that Arueris, the elder Orus of the Egyptians, and the Apollo of the Greeks, ſprang from that early conjunction (A). Oſiris had no ſooner obtained the kingdom of Egypt than he reclaimed the inhabitants from their ſavage and brutal way of living, ſhewed them the

(A) Herodotus gives them a daughter, Bubaſtis, or Diana; and ſeems to have heard the ſtory of theſe fabulous princes, with ſome variation from what is related by Diodorus and Plutarch, the only authors we have, who have written this fiction at length. And particularly ſpeaking of the floating iſland Chemmis, near the city of Butus, he writes, that, by an Egyptian tradition, Latona, one of the primary deities, reſiding at Butus, had Orus committed to her care, at a time when Typhon was in ſearch after him to deſtroy him; and ſhe accordingly concealed him in the aboveſaid iſle. Now, according to Plutarch, Typhon was kept within bounds by the prudence of Iſis, during all the expedition of Oſiris;

the fruits of the earth, and inſtituted divine worſhip [b]; building the city of Thebes, as is (with great uncertainty) ſaid, and erecting ſeveral temples, and, amongſt the reſt, one to Jupiter Uranius, and another to Jupiter Ammon, his father, who reigned before him [c]. But that his beneficence might not be confined to the bounds of his own country, he undertook to viſit the ſeveral nations on the earth, all which he civilized and brought into order; not by the forcible conſtraint of arms, but by dint of perſuaſion, and by the allurements of muſic and poetry [d]. His outſet, and the more remarkable particulars of his travels are thus told.

HAVING in view the vaſt and beneficial deſign abovementioned, he raiſed a great number of followers, amongſt whom was his brother Apollo, who claimed the laurel as ſacred to him, juſt as the ivy was to Oſiris. He took alſo his two ſons with him, Anubis (which will be ſeemingly contradicted by and by) and Macedo. Theſe two wore coats of mail, and over them the ſkin of ſuch a beaſt as correſponded with the nature of their courage: ſo Anubis had a dog's ſkin, and Macedo the ſkin of a wolf; and hence, ſaid they, the dog and the wolf were worſhipped in Egypt. Pan alſo was of the company; he was afterwards highly revered over all the country, inſomuch, that he had not only ſtatues and temples erected to him, but alſo the city of Chemmis, which ſignified Pan's city. Add to theſe Maro, famous for the planting and dreſſing of vines; and Triptolemus for the ſowing of corn, and gathering in the harveſt. Finally, Oſiris took with him nine virgins, proficients in muſic, who being committed to the care o Apollo, he thence obtained the title of maſter of the nine ſiſters, or muſes; as alſo ſome ſatyrs he met as he went towards

[b] Plut. de Iſid. & Oſirid. p. 355. [c] Diod. Sic. ubi ſupra. [d] Plut. ubi ſupr.

Oſiris; with which account this violent proceeding cannot conſiſt; and Herodotus does not in the leaſt hint at this ſearch afterwards. Diodorus ſays Orus accompanied his father in his travels; he was therefore out of the reach of his enemy; and after his father's murder, this author ſays, he was ſo far from flying from Typhon, that he made head againſt him, overcame him in battle, and ſlew him. It appears then, that Herodotus heard this fiction related in a third and different manner (1).

(1) Herodot. lib. 11.

wards Ethiopia, who were acceptable for their jocund diſpoſition, and diverting by their antic behaviour, ſkipping, and dancing.

But before he left Egypt he provided againſt any diſturbances that might ariſe in his abſence, by committing the adminiſtration to truſty and ſagacious perſons. For he inveſted Iſis with the regency, in which he left his friend Hermes to aſſiſt her. Hermes was alſo called Mercury, Thoth, Thoyth, Tauautes, Triſmegiſtus, and by other names. It is a common opinion, that there were two perſons or more who bore *theſe* ſeveral appellations; but, leaveing the diſcuſſion of ſo dark a point, we will here ſpeak as of one perſon, and enumerate the inventions and books aſcribed to him. He, ſaid they, invented articulate ſounds, appellatives, letters, religion, aſtronomy, muſic, wreſtling, arithmetic, ſtatuary, the three-ſtringed lyre, and the uſe of the olive, and not Minerva, as the Greeks miſtakenly aſſerted. He was ſtiled the father of eloquence, and thence he derived his name of Hermes the interpreter, or ſpeaker [e]. Now as to the books he wrote, Seleucus reckoned them at no leſs than 20,000 [f]; and Manetho exceeds him, computing them at 36,525 [g]. Theſe numbers are ſo enormous, that it has been a ſtumbling block to the learned, to conceive how one perſon could be the author of ſuch myriads of tracts. Therefore ſome have ſuppoſed theſe computations to refer to verſes, others to leaves of the Papyrus; and others again to ſuccinct diſcourſes and proverbs. But Clement of Alexandria will lead us out of this labyrinth, by the following account of an antient Egyptian proceſſion: The firſt that advanced, ſays he, was a Chanter, or ſinger, who bore ſome ſymbol or other of muſic: his buſineſs it was to receive two of the books of Mercury, or Thoth; of which the one contained hymns to the gods, and the other rules for the king to obſerve. Secondly, an Aſtrologer, bearing a dial and a palm, which were ſymbols of aſtrology: he was obliged to have the four aſtrological books of Mercury by heart; the firſt of which contained the places of the fixed ſtars, and the three others treated of the ſun and moon, their eclipſes, illuminations, riſing, and the like. Thirdly, an Hierogrammateus, or ſacred ſcribe, with a feather on his head, bearing a book and a rule,

[e] Diod. Sic. l. 1. p. 14, &c. de Myſt. Ægypt. § 8. cap. 1. ibid.

[f] Seleuc. apud Jamblich.

[g] Manetho, apud eund.

rule, in which were ink and a reed to write with: he was verſed in the ſubjects of ten books, the 1. of hieroglyphics; 2. of coſmography; 3. of geography; 4. of the order of the ſun and moon; 5. of the five planets; 6. of the chorography of Egypt; 7. a deſcription of the Nile; 8. a deſcription of the ſacred utenſils, and of the places conſecrated to them; 9. treated of meaſures; and the 10th of whatever was neceſſary in their worſhip. Fourthly, a Stoliſtes, a kind of ſolemn marſhal, holding the cubit of juſtice and a cup for libations: he knew whatever concerned the inſtitution of youth, and the ſealing of victims. The whole Egyptian religion was comprehended in ten books; the 1. related to the ſacrifices; the 2. to firſt-fruits; 3. to hymns; 4. to prayers; 5. to proceſſions; 6. to feſtivals; and the other four on the like ſubjects. Fifthly, and laſt of all came the prophet, bearing a water-pot openly in his boſom, and followed by thoſe who carried the proceſſional bread: he, as preſiding over the temple, ſtudied the ten books called ſacerdotal, which ſpoke of the laws, the gods, and the whole diſcipline of the prieſthood. Here we have an account of thirty ſix books of Hermes; beſides which he wrote ſix more, which treated of anatomy, diſeaſes, medicaments, and the like; ſo that he was author of forty two in all [h]. This is ſome rational account of the matter. But to return from whence we digreſſed; this ſagacious perſon or one ſuch was left behind to aſſiſt Iſis in the government of the kingdom.

MOREOVER, Hercules was appointed over the forces at home, and Antæus, Buſiris, and Prometheus were conſtituted governors over ſeveral provinces. Oſiris having thus ſettled affairs in Egypt, began his progreſs, moving firſt towards Ethiopia. In this country he raiſed the banks of the Nile, and dug ſeveral canals, thereby to prevent the too frequent inundations, and to abate and diſtribute the waters of the Nile. Whilſt he was thus employed in Ethiopia, the Nile broke down its banks in Egypt, and overflowed a great part of the country; and this it did with ſo furious a tide, and ſo ſudden a ſpread, as ſwept away all before it, and drowned great multitudes of people, doing particular damage in Prometheus's juriſdiction, whereat he was grieved almoſt to deſpair. But Hercules ſoon drained off the waters, and thence is ſaid to have

[h] Clem. Alex. Strom. lib. 6. p. 633.

ſhot through the eagle which preyed on Prometheus's heart; for the ſuddenneſs of this flood was compared to the flight of an eagle, and the river from thence was ſometimes called after that bird. But to return to Oſiris; he inſtructed the Ethiopians in all rural matters, and built them ſeveral cities; which done he departed, leaving ſome behind him to act as his governors, and others to gather in his tribute. From Ethiopia he went into Arabia, and ſo continued his travels till he got beyond India. In India he built ſeveral cities, and particularly Nyſa, which he ſo called from the place where (according to ſome) he was bred up. Here he planted the ivy, which was no where elſe to be found in India, and left ſo many monuments of himſelf behind him, as afterwards gave room to diſpute, whether he was not originally of this part of the world. Having ſurveyed all Aſia, he croſſed the Helleſpont, and landing in Thrace, killed Lycurgus, the king of that country, who oppoſed his progreſs. Here he left Maro to cultivate the land, and commanded him to build a city, and call it, in derivation from his own name, Maronea. Afterwards he beſtowed on his ſon Macedo the country of Macedon, which borrowed its name from him; and Triptolemus had charge of Attica. At length Oſiris returned back into Egypt, laden with the choiceſt productions of the earth, and with the bleſſings of the whole race of mankind, who conſented to his deification.

But his brother Typhon ſlew him ſoon after his arrival, and cut his body into twenty ſix pieces, giving one to each of his accomplices [i]. It was thus that ſome ſpoke concerning the death of Oſiris; but the ſtory was alſo told after the following manner: Typhon, hearing that his brother was on his return, entered into a conſpiracy with ſeventy two others, excluſive of the queen of Ethiopia, called Aſo, to kill him. And privately taking meaſure of Oſiris's body, he ordered a very magnificent coffin to be made, and contrived that it ſhould be brought home to him as he was entertaining his friends. This was done, and his gueſts failed not to take notice of the coffin and admire it. Whereupon Typhon, in a jeſting way told them, that the perſon amongſt them whom it beſt fitted ſhould have it. Several of the company tried, but to no purpoſe,

[i] Diod. Sic. ubi ſupra, p. 15, &c.

purpoſe, till Oſiris went into it, which he had no ſooner done, than they ſhut the lid on him, and locked it. Then, pouring melted lead over it, they conveyed him to the Tanitic mouth of the Nile, and there threw him into the ſea; wherefore that entrance of the river was abhorred by the Egyptians. This cruelty was tranſacted on the ſeventeenth day of the month Athyr, in which the ſun went through the Scorpion, and in the twenty eighth year of the reign of Oſiris; though, according to ſome, not of his reign, but of his life. When the Pans and Satyrs told it to the men, they were ſeized by thoſe ſudden conſternations as have ever ſince borne the name of Panic fears. And Iſis hearing it, cut off a lock of her hair, and, putting on mourning, ſet out from the city of Coptus, where ſhe received the doleful news, and went in queſt of the body of Oſiris. As ſhe went along, ſhe aſked all ſhe met, if they had ſeen or heard of the coffin; but ſhe enquired in vain, till ſome children, who had ſeen Typhon's friends carrying it, gave her ſome information. Hence the Egyptians held children to have been indued with a predictive faculty, and drew conjectures from what they ſaid whilſt playing in temples.

Isis knowing that Oſiris had, by miſtake, lain with his ſiſter Nephthe, and that ſhe had expoſed a ſon ſhe had by him, through fear of Typhon, reſolved now to ſeek after him; and after much fatigue, ſhe was guided by dogs to the place where he was. Having found him, he afterwards ſerved her for a guard and companion, and was called Anubis. He was thought to have guarded the gods in the ſame manner as dogs take care of men. At length ſhe came to underſtand that the coffin was thrown up by the ſea, and lodged in a tuft of broom, or heath, at Byblus, and that the broom had ſuddenly ſprouted up with a large ſtalk, which incloſed and concealed it from ſight. Therefore ſhe repaired thither, and to paſs over the methods ſhe practiſed to poſſeſs herſelf of the coffin, ſhe there obtained it. When ſhe firſt caſt her eyes on it, ſhe cried out with ſo loud a voice as ſtruck the king of Byblus's youngeſt ſon dead; for ſhe had inſinuated herſelf into his family, as the moſt ready means to obtain what ſhe wanted, he having out of curioſity built over the broom which hid the coffin. With his eldeſt ſon and the coffin ſhe ſtraightways embarked; and, in her paſſage, dried up the river Phædrus, which diſpleaſed her, becauſe

becauſe of a ruffling breeze which iſſued from its mouth as ſhe paſſed by about break of day. Being now private and at leiſure, ſhe opened the coffin, and laying her face to the face of the deceaſed, bathed it with her tears. As ſhe was thus giving vent to her grief, the king's ſon ſhe had brought away with her from Byblus came behind her, and ſaw what ſhe was about; whereat enraged, ſhe turned on him with ſo dreadful a countenance, as frighted him ſo that he died. Some ſaid he jumped into the ſea. This is ſuppoſed to be Maneros [k]. She brought the body to Butus and hid it; but Typhon, one night hunting by moon light, fell on it, and tore it into fourteen pieces, which he ſcattered abroad. Iſis then traverſed the lakes and watery places in a boat made of the Papyrus, ſeeking after the limbs of Oſiris. Whence it was held, that thoſe who went on the water in boats made of that wood were in no danger from crocodiles, who either revered or dreaded the goddeſs. In whatever place ſhe found a limb, ſhe there buried it; for which reaſon there were many tombs aſcribed to Oſiris: but others ſaid, ſhe made ſeveral counterfeits of his body, and preſented them to as many cities, pretending to each that they had the original, and ſo eſtabliſhed the worſhip of him in many places, and made it difficult for Typhon, to find out the right monument, in caſe he ſhould ever get the ſuperiority, and continue in his implacable malice againſt Oſiris [l]. This burial was alſo related after a third, and almoſt quite different, manner. For the author, from whom we took the firſt account of his death, reports that Iſis got together the twenty ſix pieces of his mangled carcaſs, joined them, and embalmed them; and afterwards prevailed on the Egyptian prieſts to conſent to, and promote his deification, in conſideration of a third part of Egypt which ſhe gave them, and they buried him at Memphis. But the place of his burial was a matter of great diſpute and controverſy; though ſome produced the following inſcription in ſacred characters, which they ſaid was on a pillar in Arabia.

SATURN,

[k] See before in ſect. 2. ch. 3.

[l] Plut. de Iſid. & Oſirid. p. 357, 358.

SATURN, *the youngeſt of all the gods, was my father. I am* Oſiris, *that king who led an army as far as the deſarts of* India, *and from thence northward as far as the ſprings of the river* Iſter, *and thence quite to the ocean. I am the eldeſt ſon of* Saturn, *ſprung from a noble ſtock, and of generous blood; couſin to the day. Nor is there a place where I have not been, I, who freely diſpenſed my benefits to all mankind.*

ISIS, after the moſt diligent ſearch, could never recover the privities of Oſiris, which, being thrown into the river, were devoured by the lepidotus, the ſquameus, the phagrus, and the oxyrynchus, which four ſorts of fiſh the Egyptians hated upon that account: but ſhe made ample amends for this irreparable loſs by inſtituting a kind of ſeparate worſhip, which was devoutly, and univerſally paid to the image of that part afterwards.

THERE were various reports concerning the actions of Iſis and Orus after the death of Oſiris, as alſo relating to Typhon. And firſt it was affirmed, that they overcame him in battle, and ſlew him [m]. Secondly, he was ſaid to have been thunderſtruck by Jupiter, and plunged under the lake Sirbon [n] (B), where being ſuppoſed to lay ſubmerſed, it

[m] Diod. Sic. ubi ſupra, p. 79. [n] Apollon. Rhod. Argo. lib. 11.

(B) According to Diodorus Siculus the lake, or bog, Sirbon, Serbonis, or Selbonis, under mount Caſius, was two hundred furlongs in length, very narrow, but very deep. Many, miſtaken in their road, nay, whole armies, miſguided in their march, have been ſwallowed up in it. The ſhore all round it was heaps of ſand, which the winds blowing over the ſurface of the bog, the lower particles lighted thereon, and by degrees formed a looſe ſkin, or cruſt, over it; which, though weak, was ſufficient to deceive the eye of the wandering traveller, who no ſooner ſet foot upon it, than he felt it give way under him, and was irrecoverably loſt, and this even at the very brink of it. It was alſo called Barathra, or the profound gulphs (2). But it has from time to time decreaſed in extent; for Pliny ſpeaks of it as a ſmall place to what it had formerly been (3); and it is now thought to be quite choaked up, its place being no more to be found (4).

(2) Diodor. Sic. l. 1. p. 26. (3) Plin. Hiſt. Nat. lib. 5. c. 13. (4) Voyage de P. Lucas, tom. III. p. 306.

it was thence called Typhon's exhalations [o]. And thirdly, it was aſſerted, that Oſiris, aſcending from the infernal regions, inſtructed Orus, and prepared him to war with Typhon; and that after a battle, which continued ſeveral days, this laſt was made priſoner. But Iſis, reſtoring him to his liberty, ſo enraged Orus, that he tore off the royal attire from her head, when Mercury, being preſent, clapped on her a helmet made of an ox's head inſtead thereof. Typhon after this renewed the war twice, and was both times vanquiſhed [p]; and being no longer able to withſtand, or make head againſt his enemies, concealed himſelf (as ſhould ſeem) under the abovementioned lake Sirbon [q]. Oſiris moreover appeared to Iſis, and had a ſon by her, called Harpocrates, but he proved a weak and ricketty perſon. Here Plutarch breaks off, and, aſſuring us that his is the genuine ſtory, proceeds to explain away the whole into an allegory [r]. But ſeeing that Diodorus continues to the death of Iſis and Orus, we now turn to him. Iſis, having thus quelled her enemies, reigned with great prudence, juſtice, moderation, and beneficence. And becauſe of her great and conſtant affection towards Oſiris, which appeared in nothing more than in the vow ſhe made of widowhood, a law was enacted, which allowed of the marriage contract between brother and ſiſter: and from the ſame ſource ſprang the cuſtom of preferring the queen before the king, and the wife before the huſband [s]. At laſt ſhe died, and was buried at Memphis, as the common opinion was; but this alſo was diſputed. And particularly thoſe who laid a ſtreſs upon the above-inſerted inſcription, affirmed, there was another pillar near to the former in Arabia, and that the following words in ſacred characters were legible upon it.

I, Isis, *am the queen of this country, and was tutored by* Mercury. *What I have ordained, no one may make void. I am the eldeſt daughter of* Saturn, *the youngeſt of the gods. I am the ſiſter, and wife of king* Oſiris. *I am ſhe who firſt found corn for the uſe of man. I am the mother of king* Orus. *I am ſhe who ariſeth in the dog-ſtar. The city of* Bubaſtus *was built in honour of me. Farewel! rejoice, O* Egypt, *my nurſing mother!*

This

[o] Plutarch. in vita Antonii, p. 916. [p] Idem Iſid. & Oſirid. ubi ſupra. [q] Herodot. lib. 3. [r] Plut. ubi ſupra. [s] See before, in ſect. 2. ch. 3.

——— This was all, ſaid they, that was to be diſtinguiſhed of this inſcription [t].

She had a moſt ſtately temple erected to her at the city of Buſiris, ſituate near the middle of the Delta [u], ſome remains of which are thought to be ſtill ſtanding (C).

There is nothing ſaid of Orus any farther than that he was the laſt of the gods and demi-gods [x]; and therefore we here conclude this fabulous, or myſterious, ſection.

SECT.

[t] Diodor. Sic. ubi ſupra. [u] Herodot. lib. 2. [x] Idem, ibid.

(C) Take the deſcription and account of theſe ruins in the author's own words; "I here ſaw the remains of one of the fineſt, "vaſteſt, and moſt antient temples of Egypt. All the ſtones are "of enormous length and thickneſs, and all of granate. They "are, for the moſt part, adorned with ſculptures in Relievo, "which repreſent men and women, and all ſorts of hieroglyphics. Many of theſe ſtones bear the image of a man ſtanding upright, with a long peeked cap on his head, and holding a goblet or bowl in each hand, which he preſents to three or four young women, which ſtand alſo upright, one behind another. Theſe young women have each of them a javelin in one hand, and a ſtaff ſhorter than the javelin, in the other; and on each of their heads is a ball between two long taper horns. Others of theſe ſtones are embelliſhed with hieroglyphical repreſentations of birds, fiſhes, and terreſtrial animals. A lofty and very ſubſtantial pillar of fine granate, having each of the four faces of its upper part wrought with four angular flutings, or notches, ſeems to have been erected to ſupport the arcades and vaults of this ſumptuous edifice. On each face of this pillar there is alſo carved the head of a woman bigger than the life. Theſe ſculptures have not been in the leaſt injured by time, nor by the ſun, nor by the Arabs. . . . It ſeems to be more than probable, that this temple, whoſe remains I have here deſcribed, was the very temple of the goddeſs Iſis, and that the city of Buſiris, mentioned by Herodotus, is now the very town of Bahâbeit, ſituated in the middle of the Delta near Sebennytus, or Sammanûd. My opinion is the more rational, in that throughout all the iſland it was never heard nor known, that any monument of marble, or ſtone, either little or big, was ever found there, that could ſuit with any other deity than the goddeſs Iſis. . . . Theſe ruins which are near to Bahâbeit are about a 1000 paces in circumference. They are about a

" league

" league from the Nile, about two or three leagues from Sam-
" manûd, and about twenty five or thirty leagues north of Kâ-
" hira. There is neither brick, nor plaiſter, nor mortar, nor
" common ſtone amongſt theſe reliques; there is nothing to be
" ſeen but great blocks of granate (5).

SECT. V.

The reigns of the kings of Egypt.

Menes, or Menas.

MENES, or Menas, is univerſally agreed to have been the firſt man that reigned over Egypt (A). In his time the whole country, except Thebais, was a moraſs; and no land appeared between the lake Mœris and the Mediterranean ſea, which was ſeven days paſſage on the river. He diverted the courſe of the Nile, which was wont to waſh the feet of the ſandy mountain towards Libya, and built the city of Memphis within the antient bed of the river. On the north and weſt ſide of it, without the walls, he made a lake, both which were fed by the Nile, which flowed along on the eaſt ſide of the town: and in the city itſelf he built the ſtately and famous temple of Vulcan [a]. He

[a] Herodot. lib. 11.

(A) It is on all hands agreed, that Menes was the firſt king of Egypt; but all are not of one mind concerning him in any other reſpect. And though we have reſolved to follow no particular hypotheſis in the arrangement of the Egyptian affairs, as thinking them all pretty dubious and exceptionable; yet we ſhall in the moſt ſummary way (ſo as to be conſiſtent with perſpicuity) entertain you, from time to time. with the diſcordant notions and conjectures of ſome of the moſt noted chronologers, that have laboured in the ungrateful work of ſettling the Egyptian antiquities. In conformity to what we now propoſe, we ſhall take notice. that, according to Sir John Marſham, this Menes was the Cham, or Ham, the ſon of Noah in ſcripture, the Jupiter Hammon, or Ammon, of the Egyptians, the Thamus, or Adonis, of the Phœnicians, the Saturn of Sanchoniatho, and the firſt that taught the Egyptians to fare ſumptuouſly; which alone, as it is reported of him, were a ſufficient inducement to think, that he could not

He was the firſt that inſtructed the Egyptians in religious matters, that introduced domeſtic magnificence and luxury, and that inſtituted the pomp of feaſts; on which account his

not have lived in the early and ſimple times which were immediately ſucceſſive to the deluge. But we ſhall have no need to contradict him, ſeeing that will be done preſently by one of no mean fame, who wrote profeſſedly with that intent. In a word, he lays it down that he was king of all Egypt, and the father of the Egyptian god Mercury, or Athothes (1).

It will now be worth while to hear what Perizonius has to object in anſwer to this gentleman. He ſays, that the firſt that reigned in Egypt were the Meſtræi, or Semigods. Then comes Menes, whom he denies to have been either Ham or Mizraim, or that Hammon is properly the ſame with the Egyptian Jupiter, or that Menes was the father of the Egyptian Mercury. We will now give you an argument of his in proof of theſe ſeveral heads ſeparately, and then conclude with his conjectures concerning the age and family of Menes, and of this remote period of the Egytian affairs. 1. Menes ſucceeded the Meſtræi: this he proves by very ample teſtimony, and then obſerves, that he could not be the founder of their race, but their ſucceſſor; and ſince it is ſaid, that he firſt taught the Egyptians to feed deliciouſly, and to adorn their beds, it muſt follow, that there had been Egyptians before his time, who were uſed to a coarſer and more ſimple way of living. 2. For the ſame reaſon it is very improbable, that he was either Ham or Mizraim. 3. Hammon is not properly the Egyptian Jupiter; for that Ham, or Hammon, was, by the Greeks, in after-times dignified with the name of Jupiter, was owing to their being ſo ſolicitous after foreign gods, to whoſe original or proper name they prefixed that of Jupiter; ſo Jupiter Belus, Jupiter Hammon, Jupiter Caſius, and many more; wherefore this had no affinity with the antient Egyptian genealogy, which knew nothing of the Grecian Jupiter. In a word, he thinks, he was ſtiled Dionius, or ſprung from Jupiter by Eratoſthenes, becauſe he was the firſt that reigned after the Meſtræi, or Semigods, as is related by the ſame author. It is his opinion, that Menes lived ſomewhat about the days of Abraham, but does not lay it down for certain; and though Eratoſthenes calls him the father of Athothes, or Mercury, he can by no means admit it (2).

Father Pezron, who wrote before Perizonius, brings the reign of Menes much later down than the days of Ham, or Mizraim. According to his hypotheſis Menes began to reign 2904 years

(1) Vid. Marſh. Can. Chron. (2) Perizon. Ægypt. Orig. & Temp. Antiquiſſimorum, Inveſt.

his memory was loaded with the execrations of one of his ſucceſſors, as will be obſerved hereafter [b].

AFTER this Herodotus declares, that the Egyptians produced a catalogue of 130 kings, extending from Menes to Mœris, who was the laſt of the number; and that there was nothing worth notice recorded of any of them, except one Ethiopian woman called Nitocris. On the other hand Diodorus writes, that Menes's family enjoyed the throne to the fifty ſecond deſcent, and that their ſeveral reigns took up a ſpace of 1400 years. Since therefore there is ſo vaſt a chaſm in both of them, we think, we may

[b] Diod. Sic. lib. 1. p. 42.

years after the creation, and 648 after the flood. This he endeavours by all means to prove, and ſeems to be pretty confident that he is in the right: but it would be endleſs to enter into the arguments of the chronologers we ſhall from time to time reſort to, and we ſhall avoid it as much as poſſible, except when their reaſoning is very clear and important, or their notions very ſingular (3).

We will now conſult the incomparable Sir Iſaac Newton. As this chronologer is of opinion, that Seſoſtris was Oſiris, he places Menes after him, and, in conſequence thereof and for other cogent reaſons, he tranſpoſes the ſeries of the kings of Egypt mentioned by Herodotus after this manner; Seſoſtris, Pheron, Proteus, Menes, Rhampſinitus, Mœris, Cheops Chephren, Mycerinus, Nitocris, and the reſt in the ſame order as they ſtand in Herodotus. He ſuppoſes Menes to be the ſame with Amenophis and Memnon, and that by corruption he was called Menes, Mines, Minæus, Minies, Minevis, Enephes, Venephes, Phamenophis, Oſymanthyas [Oſymandyas.] Oſimandes, Iſmandes, Imandes, Memnon, Arminon. According to his hypotheſis Menes is about 300 years older than Pſammiticus. He holds it irrational to ſuppoſe, that there was any king of all Egypt, till after the expulſion of the Shepherds; and obſerves, that the miracles of Memphis were not ſpoken of, or known in Greece till ſome ages after the Trojan war; for Homer celebrates Thebes as the glory of its days, and makes no mention of Memphis; which and the temple of Vulcan, that ſtood in the midſt of it, he grants to have been built by Menes. In a word, this hypotheſis reduces the antiquity of the Egyptian empire, of which Menes was the firſt king, much lower than any other (4.)

(3) Pezron. Antiq. des temps retab. & defen. (4) Sir Iſaac Newton's Chron. of the antient Kingdoms amended, p.

may safely venture to fill it up in part with what we find concerning the shepherds who ruled over Egypt; and the rather, because this whole transaction seems to belong to some very remote period of the Egyptian history.

The irruption of the Pastors, or Shepherds.

It happened in the reign of Timaus king of Egypt, that God being displeased with the Egyptians, they suffered a great revolution; for a multitude of men, ignoble in their race, took courage, and pouring from the East into Egypt, made war with the inhabitants, who submitted to them without trying the event of a battle. Having reduced the princes, they inhumanly burnt the cities, threw down the temples of the gods, and behaved in the most cruel and insulting manner over the antient inhabitants, putting them them to death, and carrying away their wives and children into captivity. At length they made one of their own number king, whose name was Salatis. He usually resided at Memphis, and, leaving garisons in the most proper places, kept both the upper and lower region under tribute. But particularly he fortified the eastern parts, fearing an invasion of the Assyrians, who were at that time most powerful. Finding therefore a convenient city in the Saitic Nome, which was seated on the eastern banks of the river Bubastis, and which was called Abaris in the antient theology, he rebuilt it, and surrounded it with a very strong wall, and kept a garison of 24,000 soldiers therein. It was his custom, about the time of harvest, to come hither to gather in his corn, and to pay and exercise his soldiers, that they might always be ready and fit for action, and be a constant terror to any who should attempt an invasion. Salatis died, and was succeeded by 5 others [c], who did their utmost, as well as their predecessor, to root out the whole nation of the native Egyptians. This people was called Hycsos, or King Shepherds *(B)*, Hyc, in the sacred

They set up Salatis for their king.

[c] See before, in sect. 3. ch. 3. [d] Manetho apud Jos. contra Appion, l. 1. p. 1039.

(B) We will barely transcribe the opinions of the above-cited chronologers as to the time of this irruption, as it is represented, of the Shepherds into Egypt. Sir John Marsham places it 157 Years before the Exodus of the children of Israel (1). Perizonius, drawing a very substantial parallel between what is recorded of the Shepherds by Manetho, and what is said of the obscurity of the

(1) Vid. Marsh. ubi supr.

facred dialect, fignifying a king, and Sos in the common dialect, fignifying a paſtor, or ſhepherd; and of theſe two came the compound Hycſos. Some would have it that theſe people were Arabians. They held Egypt 511 years. This is all the genuine account we have of the irruption of the ſhepherds, their expulſion may occur hereafter.

We now return to Herodotus and Diodorus; and this laſt making mention of ſeveral princes between Menes and Myris, let us hear what he ſays concerning them.

Buſiris I. and II. Busiris (C) in proceſs of time became king, and was ſucceeded by 8 princes of his line, the laſt of which was called alſo Buſiris, and was the founder of the city of Thebes, which he made the capital of the kingdom [c].

Oſymandyas. Osymandyas (D) appears next. It is uncertain whom, or when, he ſucceeded. The Bactrians revolting from him,

[c] Diod. ubi ſupr.

Iſraelites, the power and dignity of Joſeph, and the miraculous works of Moſes which almoſt utterly deſtroyed the country; upon the cloſe, pronounces the Shepherds ſo heinouſly ſpoken of, to have been the Iſraelites themſelves (2). Sir Iſaac Newton makes the Paſtors to have been the Canaanites which fled from Joſhua and went into Afric, but in their flight ſeized on the kingdom of the lower Egypt in the reign of Timaus, whom the ſame author calls Thamus, or Thammuz, (3). Greaves, after a parallel drawn by him between the hiſtory of the Shepherds and of the Iſraelites, which ſeems as natural and as plauſible as that of Perizonius, will by no means allow them to have been the ſame (4).

(C) Sir John Marſham and Sir Iſaac Newton think, that no ſuch king ever reigned, and that what is ſaid concerning his cruelty is merely fabulous (5). Perizonius, on the contrary, that there was ſuch a king of Egypt, but who was not ſo antient as Diodorus makes him; taxing that hiſtorian with too great indulgence towards the Egyptian vanity (6).

(D) If we rely on Sir John Marſham, we ſhould call Oſymandyas, Amenophis and Memnon; as alſo Imandes, Iſmandes, and Oſimandes: this perhaps, ſays he, derived from Oſiris, and that from Iſis. What ſeems to be his chief argument in ſupport of this opinion, is, that in the deſcription of the city they pretend he beſieged, it is ſaid to have been ſurrounded by a river, which he will have to have been the river Eulæus, and the city itſelf Suſa; for

(2) Perizon. (3) Sir Iſaac Newt. ubi ſupr. (4) Greaves's Pyramid, p. 21, 22. (5) Marſh. ubi ſupr. (6) Perizon. ubi ſupr.

him, he reduced them, as is ſaid, with an army conſiſting of 400,000 foot, and 20,000 horſe. Of all the ancient monuments of the kings, for which the city of Thebes was ſo renowned, his was of the greateſt note. It conſiſted of vaſt courts, porticos, ſhrines, temples, a library, his own tomb, and other buildings. The firſt court, which was of various kinds of ſtone, was 200 foot in extent, and 45 foot high. Next to this was a ſquare portico, each of whoſe ſides was 400 foot long; and, inſtead of pillars, ſupported by repreſentations of animals of 15 cubits high, all of one ſtone, and adorned with figures after the antient manner. The ceiling was blue and beſpangled with ſtars. From this portico they went into a ſecond court, in all reſpects like the firſt, except that it was more enriched with various ſculptures. In the entrance thereof were three ſtatues, all of one ſtone, the workmanſhip of Memnon the Sicnite: one of them was in a ſitting poſture, and the largeſt in all Egypt, the length of its foot exceeding 7 cubits. This was his own ſtatue; the other two, which ſtood one at each knee, repreſented his mother and daughter. This wonderful piece was not ſo admirable for the exquiſite art of the carver, as for the beauty of the ſtone, which was free from the leaſt flaw or blemiſh. It had this inſcription; *I am* Oſymandyas, *king of kings: he that would know my grandeur, or where I lie, let him ſurpaſs me in any of my works.* Here was alſo another ſtatue of his mother, ſtanding by herſelf, of 20 cubits high, and cut out of one ſtone: ſhe had 3 queens on her head, ſignifying that ſhe had been the daughter, wife, and mother of a king. This court led to a ſecond portico or piazza, far exceeding His tomb.

for Pliny ſays, that river ſurrounded the fortreſs of the Suſiaks, and obſerves, that Suſa was commonly called by the Greeks, Memnonia. He obſerves moreover, that Memnon's expedition into Aſia, was more celebrated by the Greeks than that of Seſoſtris, which he attributes to the poets who ſprang firſt up in, or near, his time: and concludes, that he dwelt ſome time in Suſa. All this, according to his cuſtom, he endeavours to prove from antient teſtimony (7).

Perizonius uſes much argument upon this king's reign, and who he was; but comes to no poſitive deciſion, and ſcarce offers a conjecture, ſo dark this period appears to him (8). We have already told you, that Sir Iſaac Newton takes Oſymandyas and Menes to be the ſame.

(7) Vid. Marſh. ubi ſupr. (8) Periz. ubi ſupr.

the firſt. On the firſt wall of this the king was repreſented with his army beſieging a town encompaſſed by a river, and fighting in the front of the battle accompanied by a lion: concerning which ſome ſaid, he always fought with a tame lion at his ſide; and others, that the figure of that beaſt was purely emblematical of his extraordinary courage. On the ſecond wall were the captives, with their hands and privities lopped off, to expreſs their cowardice. On the third were all ſorts of ſculptures and paintings, which repreſented his ſacrifices and triumph. In the middle of this piazza was an altar in the open air, built of the moſt ſhineing marble, of excellent workmanſhip, and wonderful proportion. On the fourth ſide, or wall, were two gigantic ſtatues, all of one ſtone, in a ſitting poſture, and 27 cubits high. Near unto theſe were three paſſages which gave admiſſion into a great hall, ſupported by columns, after the manner of a muſic theatre, and 200 feet ſquare. In this place were many wooden ſtatues, repreſenting parties engaged in law, and the judges hearing the cauſes. Theſe laſt, to the number of thirty, were carved on one ſide, with their preſident in the midſt of them, at whoſe neck hung an image with its eyes ſhut, to repreſent truth, and with many books about him. By this they choſe to ſignify, that judges ought to be proof againſt bribery, and reſpect nothing but truth and equity. From hence they went into a gallery, or walk, in which were apartments ſtored with the moſt delicious eatables. Here the king was moſt curiouſly wrought, and painted with the moſt lively colours, as preſenting to God the gold and ſilver annually dug out of the mines in Egypt, the amount whereof was 32,000,000 minas, or 96,000,000 of pounds ſterling. Next was the ſacred library with this inſcription; *The diſpenſary of the mind.* Contiguous thereunto were the images of all the Egyptian gods, with the king paying the offerings due and peculiar to each of them; that Oſiris, and the reſt of the deities placed beneath him, might know that he had paſſed his life with piety towards the gods, and with juſtice towards men. Next to the library was an edifice of curious architecture, wherein were twenty couches to feaſt on, and the ſtatues of Jupiter, Juno, and the king; who was thought to be here intombed. Around this were ſeveral pavilions, in which moſt curious pictures of the conſecrated animals were ſeen. From hence was the aſcent to the ſepulchre, which being ſurmounted, you ſaw a ring, or circle of gold 365 cubits

in

in circumference and one in thickneſs, ſurrounding the monument. This ring was divided by the days of the year, and ſhewed the riſing and ſetting of the ſtars, and their ſignifications or portents, according to the Egyptian aſtrology. This circular border was carried away by Cambyſes the Perſian. Such was the tomb of Oſymandyas, whoſe deſcendants reigned after him to the eighth generation. The laſt of them was called Uchoreus [f].

THE building and fortifying of Memphis, which have already been aſcribed to Menes, are attributed to this UCHOREUS (E) alſo. He is ſaid to have given that city a circuit of 150 ſtadia, or near 20 miles, and by mounds and trenches to have ſecured it from the inſults either of the Nile, or of the invader. He adorned it with palaces, which, though they ſurpaſſed thoſe in any other country, yet fell ſhort of what had been done in that way by his predeceſſors. For the inhabitants held this tranſitory life in no eſtimation, if compared with the joys the virtuous were to poſſeſs hereafter; and were proportionably leſs ſplendid in the lodgings they prepared for the former; than in the repoſitories they founded for the latter. This king tranſlated the imperial ſeat from Thebes to Memphis [g]. Uchoreus. Saſychis.

AFTER him, uncertain when, reigned SASYCHIS, the ſecond Egyptian legiſlator.

WE have now brought Diodorus down to Myris; and that we may do the ſame with Herodotus, we muſt relate what he has recorded concerning NITOCRIS (F). She ſucceeded her brother, an Ethiopian, whom the Egyptians murdered, but afterwards conferred the ſucceſſion on her. She, meditating revenge for her brother's untimely end, put many of the Egyptians to death privately and by ſtratagem; and is particularly ſaid to have contrived a ſubterraneous building, whither ſhe invited the principal actors againſt her brother to partake of a feaſt, and in the midſt of their mirth turned the river upon them by a private Nitocris.

[f] Diodor. l. 1. p. 44. [g] Idem ubi ſupr. p. 46.

(E) The laſt mentioned chronologer thinks the works of Uchoreus and Mœris ſavour of the ſame genius, and therefore would willingly think them one and the ſame perſon (1).

(F) Her name ſignifies Minerva victrix. Sir John Marſham places her ſoon after the Iſraelites came into Egypt. He thinks Joſephus means her by the name of Nic-aule, queen of Egypt and Ethiopia;

(1) Vid. Sir Iſaac Newt. ubi ſupr.

paſſage, and drowned them all. Then, to ſcreen herſelf from the rage of the people, ſhe took refuge in a place well fortified with aſhes [h]. She was of a fair complexion, her hair was yellow, her perſon beautiful; but it appears, that though her mind was great, as is ſaid, ſhe was not a little inclined to cruelty. She is reported to have built the third great pyramid [i].

AFTER twelve generations MOERIS, or MYRIS (G) came to the throne. This was he who dug the famous lake which bore his name, and erected the two pyramids which ſtood in the midſt of it [k]: He alſo built a ſumptuous portico on the north ſide of Vulcan's temple at Memphis [l]. According to Herodotus he was the 330th king from Menes, and the immediate predeceſſor to Seſoſtris.

Seſoſtris. SESOSTRIS, Seſooſtris, Seſooſis, Seſonchis, Seſonchoſis, Sethoſis, and ſeveral other appellations are by (H) ſome held

[h] Herod. ubi ſupr. [i] Syncell. p. 58. See before, in ſect. 3. ch. 3. [k] See before, in ſect. 1. ch. 3. [l] Idem ibid. Diod. ubi ſupr. p. 47.

Ethiopia; but that he is miſtaken in alledging that the Nitocris of Herodotus was ſhe who viſited Solomon. According to this chronologer ſhe was queen of This, Thebes, and Memphis; and much older than the Babylonian Nitocris (2). Father Pezron writes much to the ſame purpoſe (3). Sir Iſaac Newtown makes her the ſiſter and ſucceſſor of Mycerinus (4).

(G) He recovered Memphis from the Paſtors, ſays Marſham (5). Perizonius fixes upon nothing concerning him. Mœris was alſo called Maris, Myris, Meres, Marres, Smarres, and more corruptly, by changing M into A, T, B, Σ, ϒX, Λ, &c. Ayres, Tyris, Byires, Soris, Uchoreus, Labaris; ſo ſays Sir Iſaac Newton (6).

(H) Sir John Marſham allows him to have been called by theſe ſeveral appellations, and others beſides, which we may perhaps have occaſion to mention by and by. He is clearly of opinion, that the Seſoſtris of the prophane hiſtorians is the Seſac, or Shiſhak of the ſacred: he takes notice, that the more antient kings of Egypt, with whom the patriarchs and Iſraelites were formerly concerned, are always ſtiled Pharaoh; whereas Shiſhak is the firſt Egyptian king in ſcripture called by his proper name; except Rameſes be rather the name of a king than a country. This famous chronologer thinks, that when Seſoſtris, or Shiſhak as he terms him, ſat out to invade Aſia, he could not well avoid falling upon

(2) Marſh. ubi ſupra. (3) Pezron ubi ſupra. (4) Sir Iſaac Newton, ubi ſupra. (5) Marſh. ubi ſupra. (6) Sir Iſaac Newton, ubi ſupra.

held to belong to one man, whoſe reign is eſteemed the moſt extraordinary part of the Egyptian hiſtory. He is

 repreſented

upon Judæa, and accordingly took the capital thereof Jeruſalem, which he ſtripped of its riches, and reduced Rehoboam the king to ſerve him; for there is expreſs mention made in the LXX and vulgate verſions, that he was followed by multitudes of Lybians, Troglodytes, and Ethiopians, nations whom, according to prophane accounts, he had previouſly conquered. He then lays a ſtreſs upon Joſephus, who ſays, That Herodotus through miſtake aſcribed the actions of Seſac to Seſoſtris: and again; That Herodotus was only miſtaken in the king's name. This does not ſeem to us ſo concluſive as it might appear to this gentleman; for we do not ſee how from thence it muſt naturally follow that Seſoſtris and Shiſhak are the ſame perſon. Let us, for example, ſuppoſe, that a foreign hiſtorian ſhould through miſtake aſcribe the great actions of our fifth Henry to our king Stephen; it would not thence be allowed that he meant king Henry, but it would be apparently putting back thoſe great actions a great length of time before they were undertaken, or perhaps even thought of. However, this gentleman holds, that ſince Herodotus and Joſephus agree as to fact, there is no great matter in the difference of the names they uſe; and becauſe Herodotus profeſſes to have ſeen ſome of Seſoſtris's ignominious pillars in the Syrian Paleſtine; and becauſe it is ſaid by the ſcripture and Joſephus, that Rehoboam gave up the city without the leaſt reſiſtance, he ſeems to be perfectly of opinion that Seſac, or Shiſhak, ſat them up upon that very account. We ſhall here leave him with this general obſervation, that to what is related concerning Seſoſtris by the prophane authors, which he grants, he adds what the ſcripture ſays of the reduction of Judæa by Shiſhak; and holds, that his monarchy did not expire with himſelf (8).

Let us now ſee what Perizonius has to offer in contradiction to this; for we have already obſerved, that he makes it his chief buſineſs to confute the foregoing chronologer. He then lays it down with great poſitiveneſs, that Seſac and Seſoſtris are kings widely different and remote from each other. How he proves this, we ſhall give in the briefeſt and cleareſt order we are able.

1. He handles the expreſſions above cited from Joſephus: and after proving that ſeveral of the learned, as well as Sir John Marſham, have taken them wrong, he proceeds. Firſt, he inſiſts, that, by the common conſent of the Greeks, Seſoſtris was much older than the Trojan war. So ſays Herodotus; and the ſame is reported by Diodorus, only with this difference, that he makes a much greater ſpace between this king and that war than Herodotus

(8) Vid. Marſh. ubi ſupr.

represented as potent at land and on sea, wise, just, generous, valorous, magnificent, but ambitious almost beyond compare.

tus does. This also is evidently confirmed by Strabo (9); and by Aristotle (10), who places him before Minos the Cretan lawgiver: as also by the writers of the Argonautic expedition, the scholiast of Apollonius (11); by Arrianus (12), who makes him contemporary to Jandysis the Scythian; by Jornandes (13), who says he flourished before the Amazons; and lastly, by Justin and Ælian (14); the former declaring, the Sesostris lived before the days of Ninus, and the latter, that he was instructed by Mercury, and so makes him equal to the Egyptian Mercury, who must certainly have been more antient than the time of Rehoboam. After these citations, he blames Sir John Marsham for making slight of such abundant testimony, and for pronouncing the whole a mistake which arose from the ignorance of the Greeks, and then proceeds. But could the Greeks be strangers to the age of Sesostris, if he lived so late? it is certain, there was no very great interval between Homer and Rehoboam: and who can conceive, that he who was born in Asia Minor, and spent the greatest part of his days there, or in the adjacent isles, and who, as Marsham allows, lived after the days of Sesostris; who, says he, can account for his not making mention of Sesostris in any of his Poems, as he did of Memnon, who must have followed this conqueror very near? Memnon was celebrated, says Marsham, because he lived nearer to the poetical times; but Perizonius will have it, that Homer wrote soon after the death of Rehoboam; and therefore must have followed him near enough to have had perfect information and fresh records of the deeds of Sesostris: besides, Asia Minor at that time was all Greek, by the Æolic and Ionic colonies which were transplanted thither somewhat before the Reign of Rehoboam; and the inhabitants must have principally been Greeks when Sesostris invaded Asia Minor, if Marsham be right. What is here said of the Asiatic Greeks, is to clear the way for a further confutation of Marsham, who observes, that *if* Sesostris *had extended the war into* Greece, *we should have had clearer lights concerning him, nor would he have been involved so much in obscurity*; *seeing that the* Athenians, Lacedemonians, *and* Corinthians *had begun to preserve the memory of things*; continuing, that *the* Greeks *were not at this time very regardful of foreign transactions, were unskilful in letters, and that* Homer *was not yet born, who preceded any* Greek *historiographer very much*: and from hence concludes, that *we ought not to wonder that the* Egyptian

(9) Vid. l. i. p. 38. & l. xvii. 824. (10) Vid. Politic. vii. 10. (11) L. 4. v. 272. (12) Apud Photium cod. 53. (13) Geticis c. 6. (14) L. 1. c. 1. Var. Hist. l. 12. 4.

compare. Both the Greeks and Egyptians who recorded his actions, whether in profe or verfe, differed widely from

tian *affairs are almoft buried in ignorance.* To this it is anfwered, that the Afiatic Greeks were more likely to tranfmit the hiftory of Sefoftris down to pofterity, as being fuperior and fenior in learning to the European; that if they did not immediately keep written records, they undoubtedly preferved very faithful traditions of paft occurrences, which they propagated from one generation to another, and particularly in the cafe of Sefoftris, the monuments of whofe conqueffs they had before their eyes; and if his monarchy defcended to his fucceffors, as Marfham thinks it did to the firft olympiad: and if Homer was not yet born, it is certain, that he muft have been born foon after, and whilft the fame and power of this monarchy muft have fubfifted. In a word, Perizonius prefers the Afiatic before the European Greeks, as to what concerns the remembrance of antient matters, and proves, that the latter received the greateft part of the arts and fciences, nay, of their alphabet from the former; obferving, that if not all, yet moft of the antienteft Greek writers were Afiatics. He continues; Now if Sefoftris invaded Afia Minor after the Grecian fettlement there, the Afiatic Greeks, who firft of all delivered down the memory of things both in profe and verfe, muft certainly have known fomething of this celebrated expedition, either from the writings or the traditions of their forefathers, and have given as juft and accurate an account thereof as the European Greeks could have given. But nothing of this appears; for Herodotus, the moft antient of the Greek hiftorians we have, profeffes to have received the whole ftory of Sefoftris from the Egyptian prieffs. He thinks moreover, that, fuppofing Marfham to be in the right, the European Greeks muft have had fufficient knowledge of Sefoftris, feeing he carried on the war into Thrace, and that Lycurgus within an hundred years afterwards muft have travelled into Afia, whence he brought over with him the works of Homer. He certainly would have alfo brought fome account with him of fo great a victory from the Afiatic Greeks, if it had been obtained only feventy years, or thereabouts, before.

2. But, fays he, the Greeks alone did not put Sefoftris many ages more backward than Sefac; the Egyptians did it alfo. Manetho expreffly fays, that *Æ*gyptus and Danaus were only different names for Sethofis [Sefoftris] and his brother Armais: now Danaus came into Greece, as is faid, three ages before the Trojan war; and he could borrow this from no Greek author at leaft that is extant; and therefore, that Sefoftris and Armais were Ægyptus and Danaus, feems to have been the opinion of the Egyptians, or at leaft of Manetho, who could not have borrowed this from the Grecian mythology.

3. The

from each other; but they could never differ more, nor sure so much as our modern chronologers and historians do

3. The sacred history does not favour the opinion of Sesostris's being Sesac: for by the prophane accounts, Sesostris, in a continued expedition of nine years, ran over all Asia: but the scripture mentions no farther of Sesac, than that he spoiled the temple and the city, and returned back (15). Josephus says expressly, that he returned back into his own country.

4. What Marsham says of the duration of Sesostris's monarchy, as that it reached down to Amaziah and Uzziah kings of Judah, and down to the beginning of the first olympiad; by the scripture it appears, that the kings of Judah after Rehoboam never served any foreign power, or paid any tribute, till the Assyrians came upon them. So that if Sesostris and Shishak be the same as Marsham would have them, it does not appear, that the Egyptian monarchy was of any duration; so that here he is also mistaken.

So far we have given you the substance of Perizonius against Marsham. We will now insert his opinion as to the times when this conqueror lived.

And concerning this he speaks with great uncertainty and caution; but, however, we will in brief give a general idea of his manner of investigating this (as he thinks) dark period. He begins thus; Herodotus declares, that king Mœris had not been dead quite 900 years when he was in Egypt. Now the same historian makes Sesostris the immediate successor of Mœris, and moreover says, that the Trojan war was about 800 years older than when he wrote, and that Hercules the son of Alcmena was about 900 years before himself. By this chronology Sesostris lived about an age or century before the Trojan war, and was coetanous to the abovesaid Hercules, or a little later. So it follows from this computation; but in fact he must have been older, if he be the same with Egyptus, whose brother Danaus was the sixth predecessor of Perseus, who was the great grandfather of Hercules: and from hence he conjectures, that Sesostris may be fixed in the days of the Judges. After a pretty long discussion of the point, continues he; but it may be objected, that there is not the least mention made of Sesostris and what he did in holy writ? To this he answers, that the Israelites, when Sesostris came into Palestine, were under subjection to the various nations which inhabited the country; for that Palestine bent under the incursion of Sesostris, appears plain from Herodotus, who there saw the ignominious pillars which he used to raise in countries where he met with no resistance. And since the Israelites were not principals in this calamity, they might imagine it not primarily to concern them, but accidentally to have fallen upon them in common with their masters, and therefore took no notice thereof, as thinking it could be no immediate part of their own history. Add to this, that

(15) Chron. B. 2. ch. 12.

do in fixing his age, and in ſpeaking concerning him: However we ſhall collect the beſt account we can of his reign.

SESOSTRIS

that Seſoſtris could make no long ſtay there, conſidering that they voluntarily ſubmitted to him, and that he had no leſs a conqueſt in his eye than all the eaſtern parts of the world, if not the whole habitable earth, which required diſpatch: and thence he takes occaſion to ſpeak in the words of Juſtin, that though Seſoſtris gloried in his conqueſts, he abſtained from empire; and made no change in the government of any country. Finally he ſuppoſes alſo, that Seſoſtris might have come into Paleſtine when Iſrael was under the Moabites; and owns, that it is no way important, whether or no Danaus was the brother of Seſoſtris; deems what Manetho ſays on that head, to be calculated to pleaſe the Greeks; and in a word concludes, that he has deſtroyed Sir John Marſham's hypotheſis, by proving that Menes is not Ham, or Mizraim; or Seſoſtris, Shiſhak (16).

We will now in general terms inſert the opinion of Pezron. He teaches, that Sethoſis and Seſoſtris are one and the ſame perſon, and that he was the Egyptus brother to Danaus; that he was a prince widely diſtant from Seſonchis, whom he will have to have been the ſame with Shiſhak; and that neither Seſonchoris, or Seſonchoſis was Seſoſtris, but diſtinct both from him and from each other. We forbear entering into his reaſons, and proceed to another learned man, who has no one notion in common with what has entered into the heads of theſe three celebrated chronologers (17).

We mean Mr. Whiſton, who becauſe he is pretty ſingular in that he takes this king for the very Pharaoh, who periſhed in the Red-ſea, and the very Typhon of the Mythologiſts, we will give you his own words. And firſt he premiſes this propoſition. Harmeſſes Mi-Amôun, or Rameſtes the Great, *the grandfather of* Seſoſtris, *was king of the* Lower-Egypt *when* Moſes *was born*: Amenophis III. *his ſon was there king after him, during* Moſes's *youth*; *and* Seth-os, *or* Sethoſis, *or* Seſoſtris the Great, *the ſon of* Amenophis III. *was ſo during the reſt of the ſervitude of the children of* Iſrael *in* Egypt; *and was that very* Pharaoh *who periſhed in the* Red-ſea. He then offers thirteen reaſons or arguments in demonſtration of this propoſition; but paſſing over to the tenth of them, he there ſays, that "the preſervation of Moſes "and his education by Pharaoh's daughter (18), are very agree-"able to what her brother, Amenophis III. did about, or ſoon "after the birth of Moſes; I mean, when he called together, "and educated with his ſon Seſoſtris no fewer than 1700 boys (19), "or

(16) Vid. Perizon. ubi ſupr. (17) Vid. Pezron. Antiq. des Temps retab. (18) Exod. ii. (19) Marſh. p. 353.

SESOSTRIS then is by some thought to have been the son of Amenophis; but whether Amenophis, or any one else, it

" or all the male children that were born in Egypt the same day " with him : which might well be in imitation of Thermutis " [the daughter of this Pharaoh, who was otherwise called Har- " messes Mi-Amôun, or Rameses the Great] when she drew " Moses out of the river, and educated him for her own son (20). " And, by the way, if this Thermutis were but as sagacious and " learned as her great niece Athirtes, the daughter of Sesostris, " is described by Diodorus (21), we shall have no reason to won- " der at what St. Stephen informs us, that Moses *was learned in all* " *the wisdom of the* Egyptians, *and was mighty in words and in* " *deeds*, even before he received any particular commission from " GOD for the delivery of his people out of Egypt. Nay indeed, " these last words concerning Moses, that he was so early mighty " *in words and in deeds*, seem to me to confirm those accounts " we have in Artapanus an heathen, and Josephus the Jew, " considering Moses's wise and valiant conduct under the king of " Egypt, when he was young, against the Ethiopians, who at- " tempted the conquest of that country at that time. Which " successes of these Egyptians, under the conduct of Moses, might " probably enough encourage king Sesostris to undertake those " other vast expeditions, which raised the Egyptian monarchy, " and spread his empire over almost all the then known world. " Nor is it impossible to suppose, that the Ethiopic war, which " is known to have been undertaken both at sea and land by this " Sesostris, might be when he was young ; and might be that very " Ethiopic war which was managed by Moses under the king of " Egypt, as mentioned by Artapanus and Josephus.

Mr. Whiston's eleventh argument runs thus; " There are " evident remains of this Sesostris's perishing in or near the Red- " sea, as did this Pharaoh at the Exodus out of Egypt. Diodo- " rus assures us, that Sesostris at last became blind ; and that he " was voluntarily the occasion of his own death ; and that he de- " servedly obtained the admiration of the priests and people of " Egypt on account of that his magnanimous death. But what " sort of voluntary and magnanimous death this was, it seems " the Egyptian priests did not inform him. But then, if we con- " sider that Sesostris's real or Egyptian name was Seth-os, or " Seth-osis ; and that there was an antient famous Egyptian king, " whose fictitious name among the Greeks was Typhon, the " Proud ; but his real or Egyptian name was no other than Seth, " as Plutarch himself, a great master of old Egyptian learning, " more than once assures us ; that Typho's own city Pelusium " was peculiarly the city of this Sesostris, whither he first came " when

(20) Exod. ii. 10. (21) Marsh. p. 354.

it is ſaid, that the god Vulcan appeared to him in a dream, and admoniſhed him, that the ſon which was, or ſhould be,

" when he returned from his famous eaſtern expedition; and
" where he and his queen received a ſort of miraculous deliver-
" ance from the murderous deſigns of his brother Armais, and
" was by the Egyptians called according to his own name
" Seth-ron; and the Nomos thereto belonging, the Seth-roite
" Nomos; we ſhall find, that what the Egyptians could not, or
" would not, directly inform Diodorus of in the way of plain
" hiſtorical fact, and thereby concealed the true manner of his
" death from foreigners; yet did ſome of thoſe Egyptians pre-
" ſerve the memory of it under another form; and that this
" Seth, or Seth-os, or Seth-oſis, or Typho, came to the ſame
" end that the Egyptian Pharaoh did, and was drowned in, or
" near to, the ſame Red-ſea. For as they, in ſome places at leaſt,
" long keep the memory of Oſyris, the uſual name of any be-
" loved king of Egypt that was murdered; as was Iſis, the uſual
" name of ſuch a king's wife, or queen; and Typho, the uſual
" name of ſuch a murderer; ſo was it here. Oſyris ſeems to
" have been ſome beloved king that Seſoſtris had ſlain [perhaps
" his own brother Ramaſſes], and himſelf ſeems thence to have
" had the hateful name of Typho given him by the other's
" ſubjects. And certainly this name Typho, or the Proud, was
" never apply'd more fitly than to thisSeſoſtris; who after his con-
" queſt uſed ſometimes to take his horſes out of his chariot, and
" to harneſs a certain number of his captive kings, and to be
" drawn in ſtate by them inſtead of the other. And as to the
" death of this Typho, the Egyptian records are plain and di-
" rect, and aſſure us, that he was *ſtruck by a thunderbolt, and his*
" *blood ran out at Heroopolis*, a city very near the place where
" the Iſraelites entered the Red-ſea; the very ſame, I ſuppoſe,
" that Moſes calls by its elder name Baalzephon; that the ſame
" city was called *Blood*, or *the bloody city*, from that *firſt ſhed-*
" *ding of the blood of Typho there*; and that he *lies drowned under*
" *the waters of the lake Sirbon*, which is not far from the Red-
" ſea; and was antiently ſuppoſed to communicate therewith un-
" der ground. The city alſo itſelf ſeems to me to have had its
" later name Heroopolis, or *the city of Heroes* on this very ac-
" count, that near thereto the moſt potent Egyptian king, and
" his mighty commanders, with their entire army, thoſe great
" heroes, became martyrs for the Egyptian idols, idolatry, and
" tyranny, in oppoſition to the GOD of Iſrael and his people:
" nor do I meet with any other in hiſtory for that appellation.
" And very remarkable it is, how exactly all this agrees to the
" other more direct Egyptian account already ſet down; viz.
" That Seſoſtris's death was voluntary and magnanimous, and

" ſuch

His father gathers in all the boys in Egypt that were born on the same day with him.

be, born to him, would be lord of the whole earth. Fraught with this vision, he got together all the males in Egypt born

" such indeed as was highly extolled both by the priests and peo-
" ple of Egypt. And what Paulinus in Ausonius could mean,
" when, in the distinct mention of two of the most illustrious
" kings of Egypt, Necepsos and Sesostris, he says of the latter,
" *Et qui regnavit, sine nomine mox, Sesoostris*; *That he who had*
" *been so great a king, was by and by without a name*; unless he
" refer to some such ignominious death of his, as we have here
" described, is hard to say. Nor is that *thunderbolt*, or *storm of*
" *thunder and lightning*, mentioned in this account of Typho's
" destruction, other than what we have hinted at in the case of
" Pharaoh's destruction in our present copies of the Pentateuch;
" where we find, that GOD looked through the pillar of fire, and
" of the *cloud*. and so *troubled the hosts of the Egyptians*, that *their*
" *chariot wheels were taken off, and they drave heavily*; *and the*
" *Egyptians resolved to flee from the face of Israel, because* they
" now perceived that GOD *himself fought for them against the*
" *Egyptians*: while with the *blast of his nostrils the waters were*
" *gathered together*; and directly set down by Josephus and Ar-
" taphanus in the history itself; and also by the psalmist in his
" celebration of this most wonderful deliverance and judgment;
" who declares, that besides the pouring out of water from the
" *clouds* at that time, *the skies* then *sent* out a sound. and GOD's
" arrows went *abroad*: that *the* voice of his thunder was in the
" *heaven*; that *the* lightnings lightned the *world*; and that *the*
" earth trembled and *shook*: in exact agreement with the hea-
" thens account of the destruction of Typho." To conclude; the same writer thinks it a plain solution to the question *of what became* of the famous Egyptian monarchy after the death of Sesostris? that he and his numerous host was lost in the Red-sea, which together with the loss of 600,000 slaves, as the Hebrews were no better in Egypt, he thinks must have given a great shock to the Egyptian power, and naturally ruin their newly acquired monarchy. In a word, it is his opinion, that the sudden extinction of this vast monarchy, at the death of its founder Sesostris, is little else than a demonstration, that he was that very Pharaoh who with all his host perished in the Red-sea, and no other (22).

The great Sir Isaac Newton is of opinion that Sesostris is the Osiris of the Egyptians, the Bacchus of the Greeks, and the Sesac, or Shishak, of the scripture; towards the proof of which he produces the following arguments.

" 1. Bac-

(22) Vid. Whiston's Appendix.

born on the ſame day with his ſon, and appointed nurſes and proper perſons to take care of them, and had them treated

" 1. Bacchus the Conqueror loved two women, Venus and " Ariadne, by the laſt of theſe he had ſons who were Argonauts; " therefore the great Bacchus flouriſhed but one generation be- " fore the Argonautic expedition. This Bacchus was potent at " ſea (23), conquered eaſtward as far as India, returned in " triumph, brought his army over the Helleſpont; conquered " Thrace, left muſic, dancing, and poetry there; killed Ly- " curgus king of Thrace, and Pentheus the grandſon of Cadmus; " gave the kingdom of Lycurgus to Tharops; and one of his " minſtrels, called by the Greeks Calliope, to Oeagrus the ſon of " Tharops; and of Oeagrus and Calliope was born Orpheus, " who ſailed with the Argonauts: this Bacchus was therefore " contemporary to Seſoſtris; and both being kings of Egypt, " and potent at ſea, and great conquerors, and carrying on their " conqueſts into India and Thrace, they muſt be one and the " ſame man.

" 2. Dicæarchus, as he is cited by the Scholiaſt upon Apol- " lonius (24), repreſents Oſiris and Orus, two generations older " than Seſoſtris, ſaying, that after Orus, the ſon of Oſiris and " Iſis, reigned Seſonchoſis. The people of Naxus made Bacchus " two generations older than Theſeus, and for that end feigned " two Minoſes and two Ariadnes. Now, by the conſent of all " antiquity, Oſiris and Bacchus were one and the ſame king of " Egypt: this is affirmed by the Egyptians as well as by the " Greeks; and ſome of the antient mythologiſts, as Eumolpus " and Orpheus (25), called Oſiris by the names of Dionyſus and " Sirius. Oſiris was king of all Egypt, and a great conqueror, " and came over the Helleſpont in the days of Triptolemus, and " ſubdued Thrace, and there killed Lycurgus; and therefore his " expedition falls in with that of the great Bacchus. Oſiris, Bac- " chus, and Seſoſtris lived about the ſame time, and by the re- " lation of hiſtorians were all of them kings of all Egypt, and " reigned at Thebes, and adorned that city, and were very po- " tent by land and ſea: all three were great conquerors, and car- " ried on their conqueſts by land through Aſia, as far as India: " all three came over the Helleſpont, and were there in danger " of loſing their army: all three conquered Thrace, and there " put a ſtop to their victories, and returned back from thence " into Egypt: all three left pillars with inſcriptions in their con- " queſts: and therefore all three muſt be one and the ſame king " of Egypt; and this king can be no other than Seſac. All

" Egypt

(23) Vid. Hermippum apud Athenæum, l. 1. (24) Argonaut. l. 4. v. 272. (25) Diod. l. 1. p. 7.

treated in all respects like his own child; persuaded, that they, who had been the constant and equal companions of his

" Egypt, including Thebais, Ethiopia and Libya, had no com-
" mon king before the expulsion of the Shepherds, who reigned
" in the Lower Egypt; no conqueror of Syria, India, Asia Mi-
" nor, and Thrace before Sesac; and the sacred history admits
" of no Egyptian conqueror of Palestine before this king.

" 3. Bacchus had Libyan women in his army, and they were
" commanded by Minerva, herself a Libyan (26). Diodorus (27)
" calls her Myrina, and saith, that she was queen of the Ama-
" zons in Libya, and there conquered the Atlantides and Gor-
" gons, and then made a league with Orus the son of Isis, sent
" to her by his father Osiris, or Bacchus, for that purpose; and
" passing through Egypt subdued the Arabians, and Syria, and
" Cilicia, and came through Phrygia, viz. in the army of Bac-
" chus, to the Mediterranean; but passing over into Europe
" was slain with many of her women by the Thracians and
" Scythians, under the conduct of Sipylus, a Scythian, and Mop-
" sus, a Thracian, whom Lycurgus king of Thrace had banish-
" ed. This (says our most sagacious author) was that Lycurgus
" who opposed the passage of Bacchus over the Hellespont, and
" was soon after conquered by him and slain: but afterwards
" Bacchus met with a repulse from the Greeks, under the con-
" duct of Perseus, who slew many of his women, as Pausanias
" (28) relates, and was assisted by the Scythians and Thracians
" under Sipylus and Mopsus; which repulses, together with the
" revolt of his brother Danaus, put a stop to his victories: and
" in returning home, he left part of his men in Colchis and at
" Mount Caucasus, under Æetes and Prometheus; and his wo-
" men upon the river Thermodon near Colchis, under their new
" queens Marthesia and Lampeto; for Diodorus (29), speaking
" of the Amazons who were seated at Thermodon, saith, that
" they dwelt originally in Libya, and there reigned over the
" Atlantides, and, invading their neighbours, conquered as far
" as Europe: and Ammianus (30), that the antient Amazons,
" breaking through many nations, attacked the Athenians, and
" then receiving a great slaughter retired to Thermodon: and
" Justin (31), that these Amazons had at first, (he means at their
" first coming to Thermodon) two queens, who called them-
" selves daughters of Mars; and that they conquered part of
" Europe, and some cities in Asia, viz. in the reign of Minerva,
" and

(26) Vid. Diod. l. 3. p. 140. (27) Lib. 3. p. 131, 132. (28) Pausan. lib. 2. c. 20. p. 155. (29) Lib. 3. p. 130. & Schol. Apollonii, lib. 2. (30) Lib. 22. c. 8. (31) Lib. 2. c. 4.

his childhood and youth, would prove the moſt faithful miniſters, and moſt affectionate fellow-ſoldiers. They were

" and then ſent back part of their army with a great booty un-
" der their ſaid new queens; and that Marthesia, being after-
" wards ſlain, was ſucceeded by her daughter Orithya, and ſhe
" by Pentheſilea; and that Theſeus captivated and married An-
" tiope the ſiſter of Orithya. Hercules made war upon the Ama-
" zons, and in the reign of Orithya and Pentheſilea they came
" to the Trojan war: whence the firſt wars of the Amazons in
" Europe and Aſia, and their ſettling at Thermodon, were but
" one generation before thoſe actions of Hercules and Theſeus,
" and but two before the Trojan war, and ſo fell in with the
" expedition of Seſoſtris: and ſince they warred in the days of
" Iſis and her ſon Orus, and were a part of the army under
" Bacchus, or Oſiris, we have here a farther argument for make-
" ing Oſiris and Bacchus contemporary to Seſoſtris, and all three
" one and the ſame king with Seſac.

" 4. The Greeks reckon Oſiris and Bacchus to be ſons of
" Jupiter, and the Egyptian name of Jupiter is Ammon. Ma-
" netho (32), in his eleventh and twelfth dynaſties, as he is cited
" by Africanus and Euſebius, names theſe four kings as reigning
" in order; Ammenemes, Geſongeſes, or Seſonchoris the ſon of
" Ammenemes, Ammenemes who was ſlain by his eunuchs, and
" Seſoſtris who ſubdued all Aſia and a part of Europe: Geſon-
" geſes and Seſonchoris are corruptly written for Seſonchoſis: and
" the two firſt of theſe four kings, Ammenemes and Seſonchoſis
" are the ſame with the two laſt Ammenemes and Seſoſtris, that
" is, with Ammon and Seſac; for Diodorus ſaith, that Oſiris
" built a temple at Thebes to his father Jupiter Ammon, who
" reigned in that city (33): and Thymæſtes, who was contem-
" porary to Orpheus, wrote expreſly, that the father of Bacchus
" was Ammon, a king reigning over part of Libya; that is, a
" king of Egypt reigning over that part of Libya antiently cal-
" led Ammonia: Πᾶσα ἡ Λιβύη οὕτως ἐκαλεῖτο ἀπὸ Ἄμμωνος (34).
" All Libya was called Ammonia from Ammon; that is, that
" king of Egypt, from whom Thebes was called No-Ammon,
" and Ammon-No, the city of Ammon, and by the Greeks,
" Dioſpolis, the city of Jupiter Ammon. Here again our author
" ſeems to demonſtrate that Seſoſtris and Oſiris were the ſame
" perſon.

5. And to corroborate what is ſaid in the preceding article; Seſoſtris upon his returning home divided Egypt by meaſure amongſt the Egyptians; and this gave a beginning to ſurveying

(32) See before, ch. 3. ſect. 3. Dyn. 12th of Dioſpolites.
(33) See Vol. II. p. 3, 4. (34) Steph. in Ἄμμωνία.

were abundantly furniſhed with every thing needful, and as they grew up they were by degrees inured to laborious and

and geometry: and Jamblichus derives this diviſion of Egypt and the beginning of geometry, from the age of the gods of Egypt. And becauſe Seſoſtris, or Seſac, to render the Nile more uſeful, dug canals from it, and thereby made a general diſtribution of its water; this chronologer is of opinion, that the river was conſecrated to him, and he was called by its names, Ægyptus, Siris, Nilus; and obſerves from Plutarch, that the ſyllable O, put before the word Siris, by the Greeks, made it ſcarce intelligible to the Egyptians.

6. He thinks it appears, "That Seſoſtris was alſo Shiſhak, or "Seſac, becauſe the firſt conqueſts this king is ſaid to have "made were Troglodytica, Libya, and Ethiopia, and in the "firſt year of Rehoboam, Seſoſtris [Seſac] came out of Egypt "with a great army of Lybians, Troglodytes, and Ethiopians, "and ſpoiled the temple, and reduced Judæa into ſervitude, "and went on conquering firſt eaſtward towards India, and then "weſtward as far as Thrace; for GOD *had given him the king-*"*doms of the countries* (35).

7. There is no one argument on which this great chronologer lays a greater ſtreſs, for the proof of what he lays down concerning Seſoſtris, than the following: "Solon having travelled "into Egypt, and converſed with the prieſts of Saïs about their "antiquities, wrote a poem of what he had learned, but did not "finiſh it (36); and this poem fell into the hands of Plato, "who relates out of it, that at the mouth of the Straits, near "Hercules's Pillars, there was an iſland called Atlantis, the peo-"ple of which, nine thouſand years before the days of Solon, "reigned over Libya as far as Egypt, and over Europe as far as "the Tyrrhene-ſea; and all this force collected into one body "invaded Egypt and Greece, and whatever was contained with-"in the pillars of Hercules, but was reſiſted and ſtopped by the "Athenians and other Greeks, and thereby the reſt of the na-"tions not yet conquered were preſerved: he ſaith alſo, that in "thoſe days, the gods, having finiſhed their conqueſts, divided "the whole earth amongſt themſelves, partly into larger, partly "into ſmaller, portions, and inſtituted temples and ſacred rites to "themſelves; and that the iſland of Atlantis fell to the lot of "Neptune, who made his eldeſt Son Atlas king of the whole "iſland, a part of which was called Gadir; and that *in the hi-*"*ſtory of the ſaid wars mention was made of Cecrops, Erech-*"*theus, Erichthonius, and others before Theſeus, and alſo of the*"*women who warred with the men, and of the habit and ſtature*

of

(35) 2 Chron. xii. 2, 3,—8. (36) Plat. in Timæo & Critia.

and manly exercises, and were in particular never permitted to taste of any thing till they had performed a course of 180 furlongs, or upwards of 22 miles. By this exercise of the body, and by a proper cultivation of the mind, they were equally fitted to command and to execute. Amenophis, after he had been at this vast expence and trouble in laying the foundation of his son's future grandeur, resolved to give him and his companions an opportunity of displaying the good effects of their institution; and therefore he sent him and them with an army into Arabia. In this expedition the young Sesostris surmounted

Sends him into Arabia and Afric.

" *of Minerva, the study of war in those days being common to men*
" *and women.* By all these circumstances it is manifest, that these
" gods were the *Dii magni majorum gentium*, and lived between
" the age of Cecrops and Theseus; and that the wars which
" Sesostris, with his brother Neptune, made upon the nations by
" land and by sea, and the resistance he met with in Greece, and
" the following invasion of Egypt by Neptune, are here describ-
" ed; and how the captains of Sesostris shared their conquests
" amongst themselves, as the captains of Alexander the Great did
" his conquests long after, and instituting temples and priests, and
" sacred rites to themselves, caused the nations to worship them
" after their death as gods: and that the island Gadir, or Gades,
" and all Libya, fell to the lot of him who after death was dei-
" fied by the name of Neptune. The time therefore, when these
" things were done, is by Solon limited to the age of Neptune
" the father of Atlas; for Homer tells us, that Ulysses presently
" after the Trojan war found Calypso the daughter of Atlas in the
" Ogygian island, perhaps Gadir, and therefore it was but two
" generations before the Trojan war. This is that Neptune who,
" with Apollo, or Orus, fortified Troy with a wall, in the reign
" of Laomedon the father of Priamus, and left many natural chil-
" dren in Greece, some of which were Argonauts, and others
" were contemporaries to the Argonauts; and therefore he flou-
" rished but one generation before the Argonautic expedition,
" and by consequence about 400 years before Solon went into
" Egypt: but the priests of Egypt in those 400 years had mag-
" nified the stories and antiquity of their gods so exceedingly, as
" to make them 9000 years older than Solon, and the island
" Atlantis bigger than all Afric and Asia together, and full of
" people; and because in the days of Solon this great island did
" not appear, they pretended that it was sunk into the sea with
" all its people: thus great was the vanity of the priests of Egypt
" in magnifying their antiquities." These are the most obvious and direct arguments concerning Sesostris, which we meet with in Sir Isaac Newton.

ed all the dangers of ſerpents and venomous creatures, all the wants and hardſhips of a dry and barren country, and in the end ſubdued the Arabians, who till that time had never been conquered. His father then ordered him weſtward, and he ſubdued the greateſt part of Afric [k], nor ſtopped his career (as ſhould ſeem) till he ſaw the Atlantic ocean [l]. Whilſt he was on this expedition his father died; and having now the reins in his own hands, and being elated by the ſucceſs which had hitherto attended him, he graſped at no leſs an object than the whole earth. For he called to mind the prediction of the god, and prepared for the enterprize. Some reported that his daughter Athyrte, a young lady of great wit and ſagacity, excited him thereto by her counſel, repreſenting it as an eaſy matter: others, that ſhe obtained aſſurances of her father's ſucceſs by divination, by dreams in temples, and prodigies in the air, and the like [g]; ſo that, according to theſe, he could be no very young man at this time. Laſtly, it was ſaid that he was inſtructed by Mercury, who prepared him for the war [h].

Undertakes to conquer the whole world.

HAVING this view of a general conqueſt, and knowing that he muſt be long abſent, and far remote from Egypt, he bethought him how he might retain the hearts and affections of his own people: wiſely deeming it the moſt natural means of preparing thoſe who followed him, to lay down their lives chearfully in his ſervice; and of preventing thoſe at home from attempting any innovations dureing his abſence. He therefore, as much as was in his power, indeared himſelf to all his ſubjects, by largeſſes in money, by donations in land, or by the remiſſion of puniſhments: he diſcharged all that were guilty of treaſon with impunity, and paid the debts of all that were thereby incumbered, of which laſt he had many in his army. In fine, he wrought upon the minds of all by fair ſpeeches and a familiar deportment. In the next place he divided the whole kingdom into 36 nomes, or provinces; aſſigned a governor to each of them [i]; and conſtituted his brother Armaïs ſupreme regent, inveſting him with ample power; but forbad him the uſe of the diadem, and commanded him to offer no injury to the queen and her children, and to abſtain from the royal concubines [k]. Having thus ſettled

Divides Egypt in 36 nomes.

[k] Diod. lib. 1. p. 48. [l] Lucan. 10. v. 27. [g] Diod. ubi ſupr. p. 49. [h] Ælian. Var. Hiſt. l. 2. c. 4. [i] Diod. ubi ſupr. p. 50. [k] Manеth. apud Joſeph. contra Apion, l. 1. p. 1041.

tled the government, he picked out the choiceſt of his ſubjects, and liſted an army equal to the vaſtneſs of his deſigns, and beſtowed the chief commands of it on his beloved companions, who were upwards of 1700 in number. As an earneſt of his benevolence, and beſides the favours he had beſtowed on them in common with the reſt of their countrymen, and that he and his ſucceſſors might always have a regular force ready at hand, he ſettled certain portions by lot, of the moſt fertile land in Egypt, on his whole army; whence a handſome income ariſing to them, neither they nor their poſterity might lie under the neceſſity of ſeeking a livelihood by mercantile or mechanic callings, but wholly apply themſelves to the military exerciſes. His army conſiſted of 600,000 foot, 24,000 horſe, and 27,000 warlike chariots. He firſt marched into Ethiopia, and reduced the inhabitants to a tribute of ebony, gold, and ivory [l]. He is generally believed to have been the firſt that ſubdued Ethiopia and Troglodytica, and is ſaid to have reached the promontory of Dira, near the ſtraits of the Red-ſea, where he ſat up a pillar with a ſacred inſcription on it; and went on as far as the cinnamon country, or at leaſt ſome place from whence cinnamon was brought, where he raiſed monuments and pillars with inſcriptions, which were to be ſeen many ages afterwards [m].

He inſtitutes the military order.

Conquers Ethiopia.

His land forces alone were not anſwerable to the conqueſt he intended; and therefore, breaking through the antient ſuperſtition of the Egyptians, he was the firſt of their kings that fitted out fleets of tall ſhips. He had two; the one of 400 ſail in the Arabian Gulph, if we may add faith to Diodorus [n] who gives us this number, and to Herodotus [o] who mentions the ſame fleet in general terms; and the other in the Mediterranean-ſea, if we may believe Manetho [p] by Sethoſis underſtands Seſoſtris. By theſe naval armaments, and by the great ſervices they are ſaid to have done, it ſhould ſeem, that Seſoſtris wiped away the averſion the Egyptians had to ſea affairs, [q] at leaſt for a time, and inſtituted the marine claſs, as by what appears hitherto he did the military order. But to have done with this conjecture, we ſhall only add, that the ſpacious and magni-

His fleets.

He inſtitutes the marine claſs or order.

[l] Diod. ubi ſupr. [m] Vid. Strabo, lib. 16. p. 769, 770. Vid. etiam lib. 17. p. 790. Plin. Hiſt. Nat. lib. 6. c. 29. [n] Ubi ſupr. [o] Ubi ſupra. [p] Apud Joſeph. contra Apion, ubi ſupr. [q] See before, Ch. 3. paragr. ult.

magnificent ſhip he conſecrated to the ſupreme god of the Thebans [r], looks as if he deſigned to bring navigation into credit in Egypt. With the firſt of theſe fleets he ſailed out of the Arabian Gulph into the Red, or Indian ſea, and ſubdued the coaſts thereof, and continuing his courſe till he was ſtopped by certain ſhoals and difficult places, returned back to Egypt [f]: or according to another author, he went not on board himſelf, but ſent them out againſt the iſlands and maritime places of the continent as far as India [s]. With his Mediterranean ſquadron he conquered Cyprus, the ſea coaſt of Phœnicia [t], and ſeveral of the Cyclades [u]. This is all we know concerning his exploits by ſea.

Continuation of his conqueſts and wars.

Now as to his further conqueſts on the land; it is by almoſt all antiquity agreed, that he over-ran and pillaged all Aſia, and ſome part of Europe. He croſſed the Ganges, on the banks of which river he erected pillars; and, to uſe the poets expreſſion, did the ſame in the remoteſt mountains of India [w]; and indeed he is ſaid to have marched on till he was ſtopped by the main ocean eaſtward [x]. From thence returning he invaded the Scythians and Thracians; but the accounts of his war with the former do not all agree in giving him a complete conqueſt over them. Herodotus, Diodorus, Agathias [y], and others repreſent him victorious; but ſome relate, that he met with a repulſe, and fled from the Scythians, and was worſted by the Colchians. For Juſtin tells us, that Vexores, or Seſoſtris, diſpatching ambaſſadors before him to ſummon the Scythians to ſurrender, they ſent back his meſſengers with contempt, and threats, and defiance, and immediately took up arms. Seſoſtris, being informed that they were advancing towards him by haſty marches, ſuddenly faced about, and fled from before them, leaving all his baggage and warlike apparel to the purſuers, who followed him till they came on the borders of Egypt [z]. Pliny relates, that he was overthrown by the king of Colchis [a]; and Valerius Flaccus inſinuates, that he was repulſed with great ſlaughter, and put to flight in theſe parts [b]. But whether he had good or bad ſucceſs in theſe countries, it is a common opinion, that

[r] See before, ibid. [f] Herod. ubi ſupr. [s] Diod. ubi ſupr. [t] Maneth. apud Joſeph. contra Apion, ubi ſupr. [u] Diod. ubi ſupr. p. 51. [w] Dionyſ. in Perie. v. 625. [x] Diod. ubi. ſupr. p. 50. [y] Lib. 2. p. 55. [z] Lib. 2. c. 3. [a] Lib. 33. c. 3. [b] Argonaut. l. 5. v. 420.

that he ſettled a colony in Colchis, though Herodotus, whom we chiefly rely on in this matter, does not decide, whether it was of his own planting, or whether part of his army tired out, loitered in the rear, and voluntarily ſat down on the banks of the river Phaſis in that kingdom. He ſays, from his own experience, that the inhabitants were undoubtedly of Egyptian deſcent, as was viſible from the perſonal ſimilitude they bore to the Egyptians, who were ſwarthy and frizle-haired; but more eſpecially from the conformity of their cuſtoms, particularly circumciſion, and from the affinity of their language with that of Egypt. And many ages afterwards at Æa, the capital of Colchis, they ſhewed maps of their journies, and the bounds of ſea and land for the uſe of travellers [c], and hence came geography. This relation to each other was acknowledged on both ſides [d]. We now attend upon him into Thrace, the utmoſt boundary of his progreſs weſtward in Europe. Here he was in danger of loſing his army through want of proviſions and the difficulty of the paſſes; and therefore he here ſtopped his progreſs *. But the more probable opinion is, that his return was haſtened by advice he received from the high prieſt of Egypt, concerning his brother's revolt and diſobedience [e]. However this was, his pillars were no where to be ſeen in Europe beyond Thrace [f]. For it was his cuſtom to ſet up pillars in every country he conquered, with this inſcription, or one to the like effect; *Seſoſtris, king of kings, and lord of lords, ſubdued this country by the power of his arms.* If the nation had ignobly crouched to him, he, beſides the inſcription, cauſed the privities of a woman to be carved, as a mark of their effeminacy and baſeneſs [g]; if they had defended themſelves bravely, their pillars bore the diſtinction of the contrary ſex, in teſtimony of their courage [h]. Beſides theſe he left ſtatues of himſelf behind him, two of which are ſtill to be ſeen, ſays Herodotus, the one on the road between Epheſus and Phocæa, and the other between Smyrna and Sardis: they were armed after the Ethiopian and Egyptian manner, were five palms high, and held a javelin in one hand, and a bow in the other. Acroſs the breaſt they had a line drawn from one ſhoulder to the other, on which there was this inſcrip-

Suppoſed to ſettle a colony in Colchis.

His pillars and ſtatues.

[c] Apollon. Rhod. Argon. l. 4. v. 272. [d] Herod. ubi ſupr. * Diod. ubi ſupr. p. 51. [e] Maneth. apud Joſeph. contra Apion, ubi ſupr. [f] Herod. Diod. ubi ſupr. [g] Herod. ubi ſupr. [h] Vid. Syncell. p. 59, 60.

inscription; *This region I obtained by these my shoulders.* They were mistaken for images of Memnon [i].

Return to Egypt.

UPON advice therefore of the rebellious proceedings of his brother, who, encouraged by his long absence and great distance, had assumed the diadem, violated the queen, and made promiscuous use of the royal concubines [k], he hastened from Thrace, and at the end of nine years came to Pelusium, attended by an infinite multitude of captives of all nations, and laden with the spoils of Asia [l]. Here the rebel Armaïs, or Danaus received him with outward submission and joy, but with inward designs to take away his life, and root out his family. Accordingly he invited the king his brother, the queen, and her children to a banquet he had prepared for their refreshment, which they accepting, and drinking very freely, were overcome thereby, and betook them to rest. In the mean time, he caused a great quantity of dried reeds to be laid all round the apartment where they slept, and setting fire thereto he hoped to burn them all together. Sesostris perceiving the danger he was in, and that his guards, overcharged with liquor, were heavy and incapable to assist him, lifted up his hands, and, imploring the gods in behalf of his wife and children, rushed through the flames, and they followed him. In thanksgiving for this wonderful deliverance, and to perform the vows he had made in his extremity, he presented donations to several gods, and particularly to Vulcan [m], as will be observed hereafter. Herodotus seems to have been misinformed in the particulars of this happy escape; saying, that his wife perswaded him to lay two of his sons across the fire, and to tread over them. He then took revenge on his brother Armaïs [n], who is said to have been the Danaus of the Greeks [o], and is thought to have been now driven out from Egypt, and to have proceeded to Greece.

Is miraculously delivered from the murderous designs of his brother.

HIS brother's unnatural designs thus defeated, and himself in the quiet repossession of his kingdom, he adorned all the temples with spoils and rich gifts, and rewarded his army in proportion to merit. His army was not only glorious in their return for the mighty actions they had performed, and the great riches they had acquired, but also for the great variety of conveniencies and necessaries they

[i] Herod. ubi supr. [k] Maneth. ubi supr. [l] Herod. ubi supr. [m] Diod. ubi supr. p. 53. [n] Ubi supr. [o] Maneth. ubi supr.

they brought home with them, and with which they ſtored the whole kingdom. Seſoſtris now laying aſide all thoughts of war, diſbanded his forces, leaving every one to the undiſturbed enjoyment of what fortune had favoured him with. As for himſelf, he from henceforward applied his mind to ſuch ſtupendous works as might immortalize his name, and everlaſtingly contribute to the public good.

His works were of three ſorts; religious, military, and civil. And firſt he erected a temple in every city in Egypt, which he dedicated to the peculiar and ſupreme deity of each place. In the courſe of ſo univerſal an undertaking as this no Egyptian was ſet to work; wherefore upon all theſe temples there was this inſcription: *No one native laboured hereon* [o]. In the city of Memphis, before the temple of Vulcan, he raiſed ſix gigantic ſtatues, which were each of one ſtone; two of them were 30 cubits high, and repreſented himſelf and his wife; the other four were 20 cubits, and repreſented his four ſons [p]. Theſe he dedicated to Vulcan, in remembrance of his and his family's preſervation at Peluſium [q]. Many ages afterwards it was ſaid, that Darius would have placed his own ſtatue above this of Seſoſtris; but the prieſt of Vulcan ſtifly oppoſed it, urging, that the Perſian, though great, had not yet equalled the Egyptian, and particularly had never conquered Scythia; and that therefore it was unjuſt to prefer him to one he had not yet excelled, and ſo put a ſtop to the attempt [r]. He moreover raiſed two obeliſks of hard ſtone [marble] 120 cubits high; and charged them with inſcriptions, which deſcribed the greatneſs of his power, the amount of his revenues, and the nations he conquered. Theſe are his works, which may be ſaid particularly to commemorate his own piety and glory. Let us now take a view of what he did for the benefit and laſting welfare of his people. His works.

In order to prevent the incurſions of the Syrians and Arabians, he fortified the eaſt ſide of Egypt with a wall, which ran from Peluſium through the deſart to Heliopolis, 1500 furlongs, or 187 miles and a half. He moreover raiſed an incredible number of vaſt and lofty mounts of earth, to which he removed ſuch towns as had before too low a ſituation, to ſecure the men and cattle from the

[o] Diod. ubi ſupr. p. 51, 52. [p] Herod. ubi ſupr. [q] Diod. ubi ſupr. p. 53. [r] Herod. ubi ſupr.

the dangers of the Nile in its inundations. All the way from Memphis to the ſea he dug canals which branched out from the Nile, and not only gave an eaſier communication from one place to another, and greatly advanced the trade and proſperity of the kingdom; but alſo rendered the country impracticable to an enemy, or at leaſt very incommodious and difficult. So that Egypt, which had hitherto been famous for her horſes and chariots, and was admirably well adapted for either, was now no longer the ſame place in thoſe reſpects, and put on a new face [s]. This looks as if Seſoſtris feared, that the ſeveral nations he had diſturbed, or at leaſt ſome of them, might unite againſt Egypt; but quite the reverſe appears by his haughty carriage towards the tributaries, as will be ſeen by and by. In the mean time, it is ſaid, that ſome of the captives grew deſperate under the intolerable ſlavery impoſed on them, and that particularly the Babylonians aroſe and reſolved at all hazards to ſhake off their bondage. They firſt ſeized upon a ſtrong hold, and acting offenſively againſt the Egyptians, waſted the country round about them. But on the offer of pardon, and a place for their dwelling, they were pacified, and built them a city which they called Babylon: the like was ſaid of the Trojan captives [t]. According to Herodotus there was a report that this king, after he returned from his wars, divided the land equally amongſt all the Egyptians: this claſhes with what has been ſaid of the lands he beſtowed on his army before his outſet; which we take to be more conformable to the genius and policy of this warlike prince, and therefore are inclined to think that Herodotus was miſinformed. The ſame author upon this occaſion ſays; that the king reſerving to himſelf a ſmall rent out of the lands ſo divided, whenever it happened that the waters of the Nile in their retreat waſhed away any part of a perſon's ground, he gave information thereof to the king, who in ſuch caſe remitted a proportionable part of the rent, and by ſending ſurveyors to meaſure it, gave riſe to the invention of geometry *.

His inſolence.

His behaviour towards the conquered princes, who waited on him with their tribute, is moſt remarkably inſolent; for upon certain occaſions he would unharneſs his horſes, and yoke kings together, and make them draw his chariot [u]: this practice he continued, as is ſaid, till a certain day,

[s] Diod. ubi ſupr. 52. [t] Idem ibid. * Herod. ubi ſupr.
[u] Diod. ubi ſupr. p. 53. Plin. lib. 33. c. 3.

day, when obſerving one of the kings who drew him along, look with great ſtedfaſtneſs back on one of the wheels, he aſked what took up his thoughts, that he kept his eye ſo fixed behind him? he anſwered, "Oh king, the going "round of the wheel calls to my mind the viciſſitudes of "fortune; for as every part of the wheel is uppermoſt "and lowermoſt by turns, ſo is it with men, who one "day ſit on a throne, and on the next are reduced to the "vileſt degree of ſlavery." This anſwer ſhocked the inſulting conqueror, and he gave over the practice. It was thus he was wont to triumph over his tributaries, but at all other times he treated them with great humanity. At length he loſt his ſight, and laid violent hands on himſelf, and died. The manner of his death was extolled by the prieſts into the higheſt act of magnanimity [w]; and that nothing might be wanting to make his hiſtory compleatly glorious, they reported, that the phœnix came to Thebes during his reign [x]. By what has been here ſaid concerning Seſoſtris, it may ſeemingly be gathered, that he was the firſt that divided Egypt into nomes, and its inhabitants into orders and claſſes; that he was the firſt Egyptian king who was conſiderable at ſea; and that he erected the firſt great empire in the world. Juſtin ſays, he neither aimed at it, nor kept it, being contented with the bare glory of the conqueſt he made [y]. But all are not of his opinion.

PHERON was the ſon of Seſoſtris, and ſucceeded him. He is alſo ſtiled Seſooſis [Seſoſtris] II. The ſtory of his reign, as it is handed down to us, ſavours more of fiction than of truth. He performed nothing in the military way; but had the misfortune, in common with his father, to be ſtruck blind. Though this might be properly owing to ſome infirmity derived from his parent, yet it is reported, that his loſs of ſight was a puniſhment inflicted on him for his impiety towards the river. For upon a time that the Nile had overflowed the country to an unuſual height, a gale of wind aroſe, and greatly diſturbed the waters, whereat he capriciouſly took offence, and inſolently darted a javelin among the waves. Upon this he was immediately ſeized with a pain in his eyes, and ſoon after by a total darkneſs, which oppreſſed him for ten years. In the eleventh year the oracle at Butus declared, that the Pheron, or Seſoſtris II. He is ſtruck blind.

term

[w] Diod. ubi ſupr. [x] Tacit. Ann. 6. p. 154. [y] Lib. 1. c. 1.

term of his affliction was elapſed, and that his ſight would return to him if he paid particular devotions to the god at Heliopolis, and waſhed his eyes with the urine of a woman, who had never known any man beſides her huſband. He began with his own wife, but receiving no benefit from her, went on from one woman to another, till at length a poor gardener's wife afforded him the relief the oracle had promiſed. Her therefore he made queen; but as for the adultereſſes he ſent them to a city called Erithybolus, which, together with them, he burnt. He paid his vows to the gods in ſeveral rich donations, and particularly raiſed two magnificent obeliſks in the temple of the Sun at Heliopolis [z].

He recovers his ſight again, and raiſes two obeliſks.

Many ages after the ſcepter fell into the hands of Amasis, or Ammosis. He miſuſed his people with the utmoſt violence and injuſtice. Many he condemned to death without a cauſe; many he deprived of their poſſeſſions, upon no other motive than his own imperious will; and towards all he behaved with inſupportable arrogance. Under this oppreſſor they groaned for a while, not daring to reſiſt ſo dreadful a power. But in time Actiſanes king of Ethiopia made war againſt Ammoſis, and entering Egypt the people joined him, and aſſiſted to drive their unnatural prince from the throne [a].

Amaſis, or Ammoſis, a tyrant.

But, before we take in hand the hiſtory of Actiſanes, we muſt obſerve, that a king, very near allied in name to Ammoſis, blocked up the Shepherds in the city of Abaris, or Peluſium, with an army of 480,000 men; but deſpairing, as is ſaid, to carry the place by ſiege, he made a capitulation with them, by which it was agreed, that they ſhould go out of Egypt, and march which way they pleaſed without moleſtation (I). This article they executed, and went

His ſubjects join with the Ethiopians to drive him out.

[z] Herod. ubi ſupr. Diod. ubi ſupr. p. 54. [a] Idem ibid.

(I) We have already obſerved to you, that Perizonius reckons what is called the expulſion of the Shepherds, and the Exodus of the children of Iſrael, to be one and the ſame event (1).

Sir John Marſham is of a quite different opinion, but decides nothing (2).

Father Pezron ſays nothing of the expulſion of the Shepherds in particular, but thinks he has ſufficiently proved, that the Iſraelites went out of Egypt under Moſes in the reign of Themoſis, the ſame who is ſaid to have expelled the Shepherds (3).

Sir

(1) Vid. Periz. ubi ſupr. (2) Marſh. ubi ſupr. (3) Pezron. ubi ſupr.

went away with their families to the number of 240,000, and taking the way of the defart entered Syria, but fearing the Aſſyrians, they built them a ſtrong city in Judæa, called Jeruſalem. This favours the opinion of thoſe who take the Shepherds to have been the Iſraelites themſelves; but the Egyptian hiſtory being hitherto, and for a conſiderable time to come, involved in palpable darkneſs, we ſhall only ſay, that this is confeſſedly a contradiction to the hiſtory of Moſes, by whom it plainly appears, that theſe Shepherds could not be the Iſraelites, and him we chooſe to confide in. This king is called Amoſis, Thummoſis, Tethmoſis, Thomoſis, and Themoſis the ſon of Haliſphragmuthoſis. One Amoſis is alſo ſaid to have aboliſhed the cuſtom of ſacrificing men to Juno at Heliopolis, and inſtead of them to have ſubſtituted waxen images. They were examined and ſealed like pure calves, and were called Typhonians [b]. Three of them were burnt in a day, and their aſhes were ſcattered abroad ſo as to be no more ſeen, and this publickly every year during the dog-days. This is ſaid to have been done at the city of Idithia [c].

The expulſion of the Shepherds.

As to the 200,000 Shepherds, which we are told came from Jeruſalem to aſſiſt the leprous Egyptians under Oſarſiphus, and the wars they were engaged in with Amenophis king of Egypt, we refer our reader to Joſephus againſt Apion, not knowing where to give a place to theſe tranſactions in the courſe of the Egyptian hiſtory. Joſephus arraigns the whole ſtory as fabulous [d].

We now return: Actiſanes united Egypt and Ethiopia under him, and was the common king of both. He bore his proſperity with great moderation and prudence, and behaved affectionately towards his new ſubjects. He cauſed a general ſearch to be made after the Egyptian thieves and robbers, and giving them a juſt hearing commanded their noſes to be cut off, and ſent them away to the remoteſt part of the defart between Syria and Egypt, where he built them a town which was called Rhinocolura, from the diſ-

Actiſanes the Ethiopian.

He ſends all the Egyptian thieves and robbers to Rhinocolura.

figurement

[b] Joſeph contra Apion, l. 1. p. 352, &c. [c] Manetho apud Porph. de abſtin. l. 2. c. 55. [d] Joſephus ubi ſupr.

Sir Iſaac Newton places this expulſion in the year 1070 before Chriſt, or 62 years before the firſt expedition of Seſoſtris, or Seſac, as he calls him, into Africa. (4).

(4) Sir Iſaac Newton's ſhort Chronology.

figurement of its infamous inhabitants. This part was ſo barren, that it ſcarce afforded any one neceſſary of life; for even the few wells and ponds there found were brackiſh, bitter, and moſt unpleaſant to the palate. Hither he baniſhed them, that they might not injure their honeſt neighbours by living among them, nor be hid in corners among the innocent. But as frightful and barren as their ſituation was, neceſſity the mother of invention, ſuggeſted means to them of ſupplying themſelves with food: for it is reported, that they made long nets of ſlit reeds, and with them caught great numbers of quails which came in flocks from the ſea-ſhore; and of theſe they had barely ſufficient to live upon [e].

Mendes, or Marus.

ACTISANES died, and the Egyptians were left to their own diſpoſal; and therefore they choſe them a king, named by ſome Mendes, and by others Marus. He is celebrated for the ſepulchral labyrinth he built. It was not ſo admirable for its extent as for its inimitable contrivance, which was ſo intricate and perplexing, that it was impoſſible to find the way out, but by the help of a moſt experienced guide [f].

He builds a labyrinth.

Proteus is choſen king.

AFTER Mendes there enſued an anarchy, or interreign, for five generations. At length a Memphite of obſcure birth was choſen king. His Egyptian name was Cetes, which the Greeks rendered Proteus (K). Both Herodotus

[e] Diod. ubi ſupr. p. 55. [f] Idem ibid. See before, ch. 3. ſect. 3.

(K) According to Perizonius Proteus was the Sethos of Manetho, and the Typhon of the poets. He thinks, that Homer's Proteus and this king are the ſame; and that he was ſtiled a ſea-god, becauſe he had commanded the coaſt of Egypt. He gives no credit to Herodotus as to the arrival of Paris and Helen under this king. It is not conſiſtent with his hypotheſis (1).

Sir Iſaac Newton, on the contrary, ſeems to give credit to Herodotus as far as relates to Paris and Helena, but makes him cotemporary with Amenophis, whom, as we have already obſerved, he makes the ſame with Menes. He thinks, he might have been governor of ſome part of the Lower Egypt under Amenophis: and obſerves, that Homer places him on the ſea coaſt, and calls him the ſervant of Neptune, and that his Greek name ſignifies only a prince, or preſident (2).

(1) Vid. Perizon. ubi ſupr. (2) Sir Iſaac Newton's Chron. of the antient Kingdoms amended.

Herodotus and Diodorus make him coætaneous with the Trojan war. The prieſts gave him out for one ſkilled in the weather, or a magician, and pretended, he could aſſume any ſhape or form he pleaſed, even fire. This fable, as it was told by the Greeks, drew its origin from a cuſtom among the Egyptians (and perhaps introduced by Proteus), who were uſed to adorn and diſtinguiſh the heads of their kings with the repreſentations of animals, or vegetables, or even with burning incenſe, as ſo many enſigns of royalty, and to ſtrike the beholders with dread and ſuperſtition [g]. Whilſt Proteus reigned, Paris, or Alexander, was driven on the coaſts of Egypt by a ſtorm, and there landed with Helen, whom he was carrying from Greece to Troy. But when he heard the perfidious breach of hoſpitality this young man had committed, he ſeized upon him, his miſtreſs, and his companions, with all the riches he had brought away with him from Greece. As for Helen and her huſband's effects, he detained them, promiſing to reſtore both to the injured party whenever demanded, and ſo he did: but Paris and his companions he commanded to depart out of his dominions in three days, upon pain of being treated as enemies. In fine, he had a very rich and ſumptuous temple erected to him at Memphis, and left a ſon and ſucceſſor behind him called Rhemphis, [h].

The fable of Proteus whence derived.

Paris and Helen arrive in Egypt.

RHEMPHIS is alſo called Rhampſinitus (L), and was of an inclination to hoard up money. Diodorus reports him

Rhemphis, or Rhampſinitus.

[g] Idem p. 56. [h] Herod. ubi ſupr.

(L) Sir John Marſham is inclined to think him the eldeſt ſon of Seſoſtris, and to be the ſame with Rhampſes; and this he advances, fraught with the authority of Manetho, who calls him the ſon of Sethos: and that the famous inſcription, which was interpreted to Cæſar Germanicus at Thebes, related to him: and indeed there is no very great difference between the Rhamſes of Tacitus and the Rhampſes of Manetho. In fine, that he enjoyed by right what his father had obtained by conqueſt (1).

Perizonius ſuppoſes, that the Rhamſes of Tacitus is Seſoſtris himſelf. But Rameſſes, or Rhamſinitus, the ſon of Proteus, he makes cotemporary with the Trojan war; in which he is ſupported by a paſſage from Pliny (2).

Sir

(1) Vid. Marſh. ubi ſupr. (2) Periz. ubi ſupr.

him to have been ſo ſordidly avaritious, that during his whole reign he rather acted the part of a mean-ſpirited ſteward than of a king; and never could find in his heart to be at the leaſt expence in any thing, that might tend either to the honour of the gods, or the good of men: and that to this retentiveneſs it was owing that he left ſo immenſe a treaſure behind him, no leſs than 400,000 talents [i]. Now Herodotus ſufficiently inſinuates, that he was fond of riches, but does not reduce him to ſo wretched a degree of baſeneſs as this. Let us give ear to what he ſays. Rhampſinitus added the weſtern portico to the temple of Vulcan, and erected two ſtatues before it, each 25 cubits high: one of them faced towards the north, and was adored by the Egyptians under the title of Summer; the other looked towards the ſouth, and went by the name of Winter, and was abhorred. Moreover, he had accumulated a far greater ſtore of wealth than any king of Egypt that ſucceeded him, and, being deſirous to depoſite it in ſome ſecure place, commanded a treaſure-houſe to be firmly built for that purpoſe. The architect employed in this work, placed one of the ſtones in ſo artful a manner, that it might be taken out and put in again by one man only, it being his intention to partake in the riches of the place. But about the time that the treaſure was lodged in it, this man fell into a violent ſickneſs; and finding himſelf at the point of death, ſent for his two ſons. To them he declared the whole artifice, and gave them the moſt exact directions in the management of the buſineſs, which he foreſaw would never be his fate to accompliſh. The father died, and the young men went to the treaſury, and finding every thing to be as their father had told them, they gained an eaſy admittance, and robbed the king to a conſiderable value; and this they repeated every night. Some time after Rhampſinitus

builds the weſtern portico to the temple of Vulcan,

and a treaſure-houſe,

which is plundered by the architects two ſons.

[i] Diod. ubi ſupr.

Sir Iſaac Newton conjectures him to have been the ſon of Amenophis, or Menes, and to be ſhadowed under the different names of Rhamſinitus, Ramſes, Ramiſes, Rameſes, Rameſſes, Rameſtes, Rhampſes and Rhempſis; and that the obeliſk which was ſent to Rome by the emperor Conſtantius, with an inſcription interpreted by Hermapion an Egyptian prieſt, expreſſing that he was long-lived and reigned over a great part of the earth, as alſo that pompous inſcription mentioned by Tacitus belonged to him (3).

(3) Sir Iſaac Newt. ubi ſupr.

nitus went in to view his heaps, and was ſurprized to find a viſible diminution of them; and the more, becauſe his ſeal was whole on the door, the only part of the building that could give entrance. The two brothers continued their nightly expilations, till the king, after two or three further ſurveys, was perfectly ſenſible that ſome how or other his wealth ſuffered a ſucceſſive decreaſe. And now convinced that ſome body muſt do this, he ordered ſnares to be laid all around the veſſels which held his money. The brethren failed not to come at night, and taking out the ſtone, one of them went in, and going up to a veſſel full of ſilver was immediately enſnared. Under this ſurprize he called to his brother who ſtood without, and earneſtly beſought him to come in to him and cut off his head, that ſo he might ſave his own life, and effectually prevent the diſcovery of their intrigue. The brother, perceiving the reaſonableneſs of his requeſt, went in and did as he was deſired, and putting the ſtone in its place again, took the head away with him. Early the next morning, the king came in to ſee the event of his project, but was quite aſtoniſhed to find a man caught without a head. He went out again in great confuſion of thought, but, however, directed that the body ſhould be hung on the outſide of the wall, and expoſed to public view; charging the guard appointed to take care of it, that they ſhould make a narrow inſpection into the countenances of the ſpectators, and in whomſoever they perceived ſigns of ſorrow and mourning to bring ſuch perſon into his preſence. When the mother of the deceaſed heard that the body was expoſed in this manner, ſhe was diſtracted with grief, and upbraiding her ſurviving ſon, threatened that if he did not procure her his brother's body, and bring it home, ſhe would let the king know who had robbed his treaſury. The young man did his utmoſt to bring her to ſome temper, by remonſtrating to her the impracticability of her requeſt; but to no purpoſe; for ſhe perſiſted ſtill in her threats. Therefore finding that ſomething muſt be contrived to gratify her, he conſulted how he might ſucceed in ſuch an enterprize: and at length loading his aſſes with ſkins of wine, he drove them towards the place where the body hung up. Having reached the guard, he privately opened ſome of the ſkins, and as ſoon as the wine poured down he ſtruck himſelf upon the head, and counterfeited the trouble and conſternation of a perſon utterly undone. In the mean time, the ſoldiers upon duty ran to the aſſes with pots, to ſave as much of the li-

quor as they could for themſelves; which he ſeeing, fell on them with the moſt bitter reproaches, and reviled them for the pleaſure they took in his misfortune, inſtead of giving him their aſſiſtance: but they ſpeaking him fair, he pretended to be pacified, and leading his aſſes out of the way, feigned to be very buſy in ſecuring the remainder of his wine. Whilſt he was doing this the guards ſtood about him, and laughing and joking with him, he at laſt conſented to give them a ſkin of wine; and they in return for ſo great a favour preſſed him to ſtay and take a part of it with them. He did ſo, and when this ſkin was emptied he gave them another; ſo that by exceſſive drinking the whole guard was overcome, and fell into a deep ſleep. Then watching his opportunity, and perceiving it to be the dead of night, he went to the body, and taking it down, laid it acroſs an aſs; and ſhaving the right cheek of each of the ſoldiers by way of deriſion, went away with the body and carried it home to his mother. The news of this was matter of additional wonder to the king, who, that he might find out the perſon who had done it, bethought him of the following expedient. He ordered his daughter to proſtitute herſelf in a certain apartment of the palace to all comers promiſcuouſly: but under this reſtriction, that ſhe ſhould previouſly extort from each of them a confeſſion of the moſt ingenious intrigue he had ever managed, and the moſt wicked crime he had ever committed. His daughter obeyed, and did as ſhe was inſtructed, and when the thief heard of this extraordinary procedure, he reſolved to perplex the king a little farther. With this view he got the arm of a newly-dead body, and taking it under his cloak, went in to the king's daughter. She examined him in the ſame form, and to the ſame purpoſe as the reſt who had been with her before him; and in return, he frankly confeſſed, that the moſt abominable and wicked action of his life was, the cutting off his brother's head when enſnared in the treaſury; and that the moſt ingenious thing he had ever done, was the ſtealing the body from the guard that kept it. She then offered to lay hold on him; which he perceiving, held out the dead arm to her; which ſhe graſping, he ran out, and by the favour of the night made his eſcape. Rhampſinitus's rage was now converted into an admiration of the boldneſs and ingenuity of the man; and therefore he had it proclaimed in every city, that if the perſon, whoever he was, would diſcover himſelf, he ſhould not only be pardoned, but alſo greatly rewarded.

rewarded. The young man confiding in this, went ſtrait to the palace, and made himſelf known. In the end the king gave him his daughter in marriage, and accounted him far ſuperior in wiſdom to any man then living upon earth. Our author does not warrant every particular of this ſtory.

AFTER this it was fabled, that Rhampſinitus deſcended alive into the infernal regions, where he plaid at dice with Ceres, but neither won or loſt; and that at his departure ſhe preſented him with a golden bowl. The ſpace between his deſcent and reaſcenſion was obſerved with great ſolemnity by the Egyptians many ages afterwards. And now that we may conclude the hiſtory of this king with ſome air of truth and probability, he reigned with great prudence and juſtice, and was a conſtant and ſtrict obſerver of the good order, which, till his death, had uninterruptedly ſubſiſted throughout the kingdom from its firſt foundation [k]. Rhampſinitus goes down to hell.

THIS king was ſucceeded by 7 others, all of nameleſs fame and ignoble character, except one called Nilus. He is celebrated for the great number of canals he dug all over the country, and for his endeavours to make the Nile as univerſally ſerviceable as poſſible. Whence it was that the river, which had been hitherto called Ægyptus, was now called after his name [l]. Nilus.

CHEOPS, Chemmis, or Chembes, (M) is by Diodorus reckoned the eighth from Rhampſinitus. Herodotus places no diſtance between them. This king is branded for his impiety and tyranny. He began his reign with ſhutting up the temples, and forbidding all public ſacrifices. And then trampling on the laws and invading the liberties of his people, reduced them to a ſtate of the moſt laborious ſlavery. Great numbers he ſent to dig out ſtone in the quarries among the mountains of Arabia, and to tranſport them into Egypt [m]: and haraſſed them in the end in raiſing the largeſt of the three great pyramids [n]. By this, and other vain glorious works of the ſame kind, he was reduced ſo low, that he expoſed his daughter to common proſtitution; Cheops, Chemmis, or Chembes, a tyrant. Builds the largeſt pyramid.

[k] Herod. l. 2. [l] Diod. ubi ſupra. p. 57. [m] Herod. ubi ſupr. [n] Idem ibid. & Diod ubi ſupr. See before, ch. 3. ſect. 1. par. 50.

(M) Sir Iſaac Newton ſuſpects, that he intended to be worſhipped himſelf after death; and ſuppoſes that he was alſo called Chemnis, Phiops, Apaphus, Apappus, Suphis, Saophis, Syphoas, Syphaoſis, Soiphis, Syphuris, and Anoiſis.

Prostitutes his daughter, who builds a small pyramid.

telling her in general terms to earn what she could. She obeyed, and, by her father's example desiring to perpetuate her memory, required each of her gallants only to contribute a stone towards a building she had in view. With the stones so collected, she built a small pyramid. * This tyrant reigned fifty years and died °.

Cephrenes, Cephren, or Chabryis a tyrant.

He was succeeded by Cephrenes, Cephren, or Chabryis. It was doubted, whether Cephren and Chabryis were one and the same person; some saying, that Cephren was the brother, and that Chabryis was the son, of Cheops. But leaving this obscure controversy; this king trod in the foot-steps of his predecessor, and particularly in building a pyramid; but it fell much short of the former. He reigned fifty six years. Though both he and his predecessor designed these pyramids for their eternal mansions, to use the Egyptian phrase, yet neither of them were deposited in them after death, dreading what the rage of the multitude might prompt them to, their friends buried them where no body could ever find them [p].

Builds a pyramid.

Mycerinus, or Cherinus, a good prince.

After Egypt had been thus afflicted by tyranny for one hundred and six years, Mycerinus, or Cherinus, (N) the son of Cheops, a serene and merciful prince, ascended the throne. Abhorring the impiety and injustice of his father and his uncle, he opened the temples, reinstituted the sacrifices, and left the miserable people to the pursuit of their private affairs. His clemency is reported to have been such, that if at any time complaint was made to him of a hard sentence, adjudged in a matter of property, he would satisfy the party aggrieved, to the amount of the loss, out of his own treasure [q]. Whilst he was thus intent upon the happiness of his people, a heavy misfortune fell upon him, meaning the death of his daughter. He mourned for her with great bitterness, and honoured her with an extraordinary funeral: For causing an hollow wooden image of a cow to be made and richly gilt with gold, he therein deposited her body. This cow was never interred, but was exposed in a magnificent chamber of the palace in the city of Sais; where they burned the most exquisite odours by day, and illuminated the place by night with a lamp.

His daughter dies, and he buries her in an extraordinary manner.

* Herod. ubi supr. See before, in ch. 3. sect. 1. par. 52.
° Herod. ubi supr. [p] Idem ibid. Diod. ubi supr. p. 57, 58.
[q] Idem ibid. Herod. ubi supr.

(N) The last cited chronologer calls him also Cheres, Bicheres, Moscheres, Mencheres.

lamp. In a room contiguous to this were twenty naked images of women, which the prieſts of Sais reported to have been the concubines of Mycerinus. But, as it generally happens in caſes of remote antiquity, this was not the only report that was ſpread concerning this cow and theſe ſtatues. A ſtory went, that Mycerinus falling in love with his daughter, forced and deflowered her; whereupon ſhe fell into a deep melancholy and hung herſelf. The twenty naked ſtatues in the next room, ſaid they, were her women, who had been inſtrumental in betraying her to her father's unnatural luſt, and therefore had their hands cut off by the queen. They appeared indeed without hands; but our author, who was an eye witneſs of theſe things, tells us they were dropped off with age, and lay ſcattered upon the floor. He tells us alſo, that the cow was in a kneeling poſture, and as big as the largeſt living cow. Its neck and head were richly laid over with gold, and between the horns there was a golden circle in imitation of the ſun, and its body had a fine Tyrian carpet thrown over it. This ſepulchral image was removed once a year from the apartment where it ſtood, and expoſed to the open day, in purſuance of a requeſt the deceaſed made to her father, that ſhe might behold the ſun once every year.

Now to return whence we digreſſed; the death of his daughter was not the only misfortune that befel Mycerinus; a more dreadful one enſued: For it was denounced againſt him from the oracle at Butus, that he had but ſix years more to live, and that in the ſeventh he ſhould ſurely die. At this he was greatly troubled, and ſent to expoſtulate with the oracle, and remonſtrated, that ſince his father and uncle, who had been monſters of impiety and cruelty, had been bleſſed with great length of days, it would be ungrateful to requite his piety and humanity with the execution of ſo rigid a ſentence. To this it was anſwered; That his father and uncle knew the decree of fate, which had condemned the Egyptians to a hundred and fifty years of bondage and miſery, and acted conformable thereto; but that his ignorance of this, which had induced him to interrupt the courſe of their affliction, was the cauſe that he was ſo ſuddenly to be cut off. Finding therefore that his doom was irreverſible, he conſulted how to make the moſt of the ſmall remainder of his life; and, commanding a great number of lamps to be lighted up every night, he ſpent his whole time in drinking and revelling. So thence-forward making no diſtinction between day and night, he roved

The oracle at Butus declares him to be ſhort liv'd.

about among the groves and the meadows, and where-ever he heard of the moſt gay and ſportive company. Thus he went on, thinking to convict the oracle of falſhood, and inſtead of ſix to live twelve years. Finally Mycerinus is ſaid to have built a pyramid, which from the baſis to the middle was Ethiopian ſtone; and on the northern front of it he inſcribed his own name. This pyramid the Greeks, by a groſs miſtake, attributed to the courtezan Rhodopis, who flouriſhed in the days of Amaſis, ſeveral reigns lower [r].

Endeavours to convict the oracle of falſhood.

We now proceed to Gnephachthus, the father of Bocchoris the wiſe. He is alſo named Technatis by Plutarch [s], and Neochabis by Alexis. What interval there was between him and Mycerinus, or whether any, does no where plainly appear. This king is famed for his abſtinence, and for the execration he denounced againſt Menes. For it is recorded of him, that leading an Army into Arabia, and travelling the vaſt and barren deſarts, he there fell into great ſtreights and want of proviſion; and being one day obliged to take up with the poor and ſlender diet he met with, he afterwards fell into a profound ſleep. This ſo delighted him, that he forbad all exceſs and luxury, and curſed Menes, who firſt introduced them: And ſo earneſtly did he perſecute the memory of this his predeceſſor, that, by the conſent of the prieſts, he engraved his curſe upon a pillar, which was ſeen in the temple at Thebes; from whence it came to paſs, that the fair name of Menes was ſeen through a cloud by ſucceeding generations.

Forbids all luxury, and curſes Menes.

Bocchoris. Bocchoris, the ſon of Gnephachthus, was ſirnamed the wiſe. He was a deſpicable perſon to look at, but for prudence and wiſdom far beyond any of his predeceſſors. He is reckoned the fourth Egyptian law-giver; but his laws [t] ſeem not to have concerned any thing, except commerce and the regulation of the public revenue. His judgments were for their excellence retained many ages after his death; but his great qualities were ſomewhat debaſed by his propenſion to avarice [u]. So high was the veneration his ſubjects paid him, that they fabled Iſis to have ſent an aſp to prevent his ſight, that he might judge righteouſly [w]. However, he drew a general odium upon himſelf, by letting in a wild bull to the ſacred one, called Mnevis; but this got the better, and killed his antagoniſt.

At

[r] Idem ibid. See before, ch. 3. ſect. 1. par. 75. [s] De Iſide & Oſirid. [t] See before, ch. 3. ſect. 2. par. 27. [u] Doid. l. 1. p. 59. 85. [w] Plut. περὶ δυσωπίας, p. 529.

At laſt, with all the equity of his judgment [x], and the purity of his mind, he is ſaid to have been taken by Sabbaco the Ethiopian, and burnt alive [y].

ASYCHIS is by Herodotus placed next in order to Mycerinus; but, in compliance with Diodorus, we have put two reigns between them, notwithſtanding our full perſuaſion that Bocchoris and Aſychis were the ſame king, as we ſhall take occaſion to obſerve by and by: In the mean time, it is recorded of Aſychis, that he built the eaſtern portico to the temple of Vulcan, with a magnificence that eclipſed the others. And finding that the riches of Egypt were lodged in a few hands, and that credit was decayed, he enacted a law, whereby a man might borrow money upon the ſepulchre of his father, and depoſite the body, as a pledge, in the hands of the creditor. And till it was redeemed, the debtor might neither be buried in the ſepulchre of his father, or in any other, nor put any of his deſcendants there. This king, to ſurpaſs all his predeceſſors, built him a pyramid of brick, which he charged with a very vaunting inſcription [z].

Aſychis.

builds the eaſtern portico to the temple of Vulcan,

and a brick pyramid.

AFTER Aſychis, a blind man named ANYSIS, from a city of the ſame name became King. In his reign Sabbaco king of Ethiopia broke into Egypt with a powerful army, and Anyſis fled for ſhelter to the fens, leaving the kingdom to the invader [a].

Anyſis.

BUT, before we enter upon the reign of Sabbaco, let us take a curſory retroſpect of theſe three laſt reigns, and perhaps we may find reaſon to think, that Bocchoris and Aſychis are different names for one King, and that the blind man Anyſis was his contemporary. For the law ſaid to have been inſtituted by Aſychis ſavours ſo much of Bocchoris's genius as might incline one to think them but one man. And if it be true, that Bocchoris was burnt alive by Sabbaco, they muſt not only have been ſo, but Anyſis muſt alſo have been king of another part of Egypt at the ſame time. Furthermore, it is declared by Herodotus, that NECUS, the father of Pſammiticus, was ſlain by the ſame Ethiopian [b]. Here we have three kings, if we may ſuppoſe Necus to have been of royal dignity, ſubdued by one and the ſame enemy, and all in Egypt. From hence it may appear, that many of the kings of Egypt are placed in order of ſucceſſion, that were collateral, merely out of

Bocchoris and Aſychis the ſame king, and contemporary to Anyſis, and Necus, the father of Pſammiticus.

[x] Ælian. de Anim. l. 11. c. 11. [y] Syncel. p. 74. [z] Herod. l. 2. See before, ch. 3. ſect. 1. par. 52. [a] Herod. ubi ſupr. [b] Idem ibid.

oſtentation, and to ſupport the pretenſions the prieſts made to the exceſſive antiquity of their kingdom.

Sabbaco the Ethiopian.

WE now return to SABBACO; and if it be true that he dealt ſo rigidly with Bocchoris, thoſe are ſurely right who ſuppoſe he began his reign with barbarity and cruelty towards others. But no ſooner was he eſtabliſhed firmly on the throne, than he became a new man; ſo that he is highly extolled for his mercy, clemency, and policy. He is thought to have been the So in ſcripture, and to have entered into a league with Hoſhea, king of Samaria, againſt Shalmanaſſar, king of Aſſyria. He was excited to the

His firſt viſion.

invaſion of Egypt by a dream, or viſion, which aſſured him he ſhould hold Egypt fifty years; and when that term was expired, he voluntarily retired into Ethiopia again, reſigning his conquered kingdom. But whilſt he was in Egypt, he gave the higheſt proofs of his wiſdom and piety, and yielded to none of his Egyptian predeceſſors in the art of

His policy.

governing. He never would conſent to the death of any criminal, though capitally condemned; commuting the puniſhment into hard labour, which purely conſiſted in the raiſing of mounts, and digging of canals; ſo that the cities of Egypt were raiſed higher, and rendered more commodious than by Seſoſtris; and particularly the city of Buba-ſtis, where ſtood a moſt delightful temple to the Goddeſs of the ſame name, whom the Greeks interpreted to be their Diana. At length Sabbacco had a viſion as he ſlept,

His ſecond viſion.

wherein the tutelar god of Thebes admoniſhed him, that he could not hold the kingdom of Egypt with ſafety and happineſs, except he maſſacred the prieſts as he paſt through them with his guards. This viſion he had at ſeveral repetitions; but his heart abhorring ſo dreadful an undertaking, he ſent for the prieſts, and declared to them what the gods would have prompted him to, and that thereby he began to apprehend it was their pleaſure he ſhould remain no longer in Egypt; and that therefore with pure hands and a clear conſcience he would return into his native kingdom, rather than lie under the neceſſity of polluting his life by ſo general a bloodſhed, to preſerve himſelf on the throne of Egypt. And upon the whole, conſidering that the predicted fifty years were expired, he accordingly retired into his own country [c].

Anyſis again.

As ſoon as Sabbaco had departed the kingdom, Anyſis came out from his hiding place, and reaſſumed the government.

[c] Idem ibid. Diod. Sic. ubi ſupra, p. 59.

ment. He had been abſent fifty years, and in that time had formed an iſland for his habitation, compoſed of aſhes and earth; for when any Egyptian came to him with proviſion, he always deſired that aſhes might be brought to him unknown to the Ethiopian. This iſland was called Elbo, and lay undiſcovered ſeven hundred years and upwards, till the reign of Amyrtæus.

Sethon king and prieſt.

AFTER him there reigned one SETHON, who was both king and prieſt of Vulcan. He not only neglected the military claſs or order, but injuriouſly diveſted them of their privileges and lands; whereat they were ſo incenſed, that they thought themſelves abſolved from their allegiance, and entered into a combination not to bear arms under him, if he ſhould ever ſtand in need of them. But he, regardleſs of their threats and murmurs, gave himſelf wholly up to contemplation and the functions of religion. This was the ſtate of affairs when Sennacherib king of Aſſyria drew near to Peluſium, deſigning to enter Egypt. Sethon perceiving his danger, and that now his only truſt muſt be on the military order whom he had ſo unjuſtly dealt with, he ſought their aſſiſtance; but in vain: They obſtinately perſiſted in their refuſal to march under his banner. The prieſt, now deſtitute of all other advice and ſupport, repaired to his god, and in the utmoſt dejection of mind implored his aid. Whilſt he was yet in the temple, he fell into a deep ſleep, during which it ſeemed to him that the god ſtood at his ſide, and exhorted him to take courage, and promiſed, that if he would but go out againſt the Aſſyrians, he ſhould obtain a complete victory over them. Fraught with this viſion, he aſſembled together a promiſcuous body of artificers, ſhopkeepers, and labourers; and, with this unexperienced multitude, bent his march towards Peluſium. The very night after his arrival there, an infinite number of field-rats entered the enemy's camp, and gnawed their quivers, bow ſtrings, and ſhield-ſtraps to pieces. This is very conſonant to the prophecy of Iſaiah, if we may be allowed to inſert it here: *The king of Aſſyria ſhall not come into this City*, (meaning Jeruſalem) *nor ſhoot an arrow there, nor come before it with a ſhield* [d]. For Sennacherib (as ſhould ſeem) had broke up the Siege of Jeruſalem for a time to fall upon Egypt; but whether this Sethon be the ſame with Tirhakah, or Sevechus, is more than we can decide.

[d] Kings 2 xix. 32.

decide. But to return; when Sethon next morning found the enemy thus diſarmed, and moving off, he purſued them with a great ſlaughter. In memory of this miraculous event, there was a ſtone ſtatue of this king erected in the temple of Vulcan, with a rat in one of his hands, and delivering theſe words from his mouth; *Whoſo beholdeth me, let him be pious* [e].

The twelve kings.

A ſhort time after the death of Sethon, Egypt was (upon what motive is not preciſely known) divided into twelve kingdoms, and twelve of the chief Egyptian lords were appointed over them. Theſe twelve entered into the ſtricteſt aſſociation for the public welfare. The mutual league between them was conceived in the moſt obligatory manner, and cemented by all the ſtricteſt ties that could poſſibly conduce to a perpetual union and harmony between them; becauſe it had been foretold by an oracle, upon their aſſuming the Government, that he of their number that ſhould perform a libation in a brazen cup would in time be king of all Egypt. This new regulation was attended with peace and happineſs, and the twelve kings reſolved to raiſe a monument, which might perpetuate their names to lateſt ages; and accordingly they raiſed the famous labyrinth [f] near the lake Mœris. At length it came to paſs, that at a ſtated time they all met together to ſacrifice in the temple of Vulcan, and being to offer a libation on the laſt day, the high prieſt, through miſtake, brought out only eleven of the twelve gold bowls, which were reſerved for the uſe of the twelve princes; and Pſammitichus, ſtanding the laſt in order, and being unprovided for the ceremony, took off his helmet, which was of braſs (they all twelve wore the ſame), and performed his libation with that. This he did inadvertently; but it being obſerved by the reſt, they called to mind the oracle which promiſed him to be ſole king of Egypt, who ſhould happen to perform a libation in this place with a braſs bowl. Wherefore, though they were ſatisfied he had no ill intention, and for that reaſon would not ſentence him to die, yet they were unanimous for expelling him to the marſhy country, and for diveſting him of the greateſt part of his diſtrict, and forbidding him to concern himſelf with the affairs of the public [g]. The reaſon of this diſcord is told differently by ſome, and the whole is attributed to envy: For at the diviſion of the country into twelve provinces, as

[e] Herod ubi ſupr. [f] See before, ch. 3. ſect. 1. art. labyrinth.
[g] Herod. ibid.

as has been obſerved, the ſea-coaſts fell to the lot of Pſammitichus; and he greatly encouraging all commerce with the Grecians and Phœnicians, not only accumulated great wealth, but acquired alſo the favour and friendſhip of ſeveral foreign kings and nations, which drew on him the envy of his collegues; who, fearing he ſhould grow too formidable, and affect to rule over them, reſolved to reduce him betimes. Wherefore they all declared war againſt him; and he, finding himſelf unequal to the conflict, hired an army of mercenaries, conſiſting chiefly of Ionians, Carians, and Arabians, and repelled force with force, and in the end ſubdued the other kings, and put an end to the duodecemvirate [h]. On the other hand it is related, that, in purſuance of his ſentence, he retreated to the fens; but, greatly reſenting the ſeverity of his uſage for ſo trifling a thing, in which he meant no harm, either preſent or future, he ſent to the oracle of Latona at the city of Butus, to know how, and when, he might hope for redreſs. The anſwer he received was, That Brazen would ſuddenly riſe out of the ſea and avenge his cauſe. This he received as a flat abſurdity; But not long after ſome Ionian and Carian pyrates landed in braſs armour. And an Egyptian, who had never ſeen men armed ſo before, going up to Pſammitichus, and acquainting him, that certain brazen men had riſen out of the ſea, and were pillaging the land near the ſea-ſhore, he perceived that the oracle was come to paſs: Therefore, perſwading them to ſtay by the large promiſes he made them, if he ſucceeded; and joining to them ſuch Egyptians as were well affected to him, he ſubdued, and dethroned the eleven kings, and ſeized on the whole kingdom for himſelf [i]. It is ſaid, the deciſive battle was fought at Monemphis, and that ſome of the kings were ſlain, and others took refuge in Afric. Thus was the government by twelve diſſolved, after it had ſubſiſted fifteen years [k].

HITHERTO the Egyptian hiſtory has been covered with an impenetrable miſt: it now begins to clear up a little. PSAMMITICHUS of the tribe of Sais, thus poſſeſſed of the whole kingdom of Egypt, reigned with as much wiſdom, magnanimity, and ſplendour as any of his predeceſſors. He was the ſon of Nechus, whom Sabbaco put to death when he conquered Egypt: and, had he not fled into Syria, would

Year of the Flood, 2329. Year before Chriſt, 670.

Pſammitichus. Gives great encouragement to the Greeks.

[h] Diod. Sic. ubi. ſupr. p. 60. [i] Herod. ubi ſupr. [k] Diod. ubi ſupr.

would have ſhared in his father's fate. He made good his engagements with his allies, and over and above preſented them with certain lands on each ſide of the Nile, and called their ſettlements the Camp. He alſo put ſeveral children under their tuition, that they might be inſtructed in the Grecian language; and thoſe who afterwards performed the office of interpreter deſcended from theſe. They had their ſituation near the ſea, below the city of Bubaſtis in the Peluſian mouth of the Nile: and here they continued till Amaſis removed them to Memphis, as will be ſhewn in its proper place. However, it is here proper to obſerve, that theſe Grecians are ſaid to have been the firſt foreigners that were permitted to dwell in Egypt; and that from the intercourſe and correſpondence which was conſtantly kept up between them and their Countrymen in Greece, we are well aſſured of the truth and exactneſs of the Egyptian hiſtory from the days of Pſammitichus.

His public buildings.

CONCERNING the public edifices he erected, there is ſome diſcrepancy: Herodotus ſays, he added the ſouthern, and Diodorus, that he added the eaſtern, portico to the Temple of Vulcan. The former ſays, that he built a ſpacious edifice oppoſite to this portico for the reception of the god Apis whenever he ſhould appear; and that it was enriched with ſculptures, and ſurrounded by gigantic ſtatues of twelve cubits high, inſtead of pillars. The latter, that he encompaſſed the temple with a wall, in which he ſubſtituted coloſſuſes inſtead of pilaſters [k].

His wars.

NOW in conſideration of the fidelity and warlike experience of the foreigners, by whoſe aid he ſeated himſelf on the throne, he always kept ſome of their countrymen in pay, and went ſo far as to compliment them with the poſt of honour, when he marched his army into Syria, where he warred many years. This ſo incenſed the Egyptians, that upwards of 200,000 deſerted him, and marched off in a body. Perceiving his error in thus affronting his own ſubjects, he at firſt ſent ſome of the chief officers after them to excuſe the matter: but finding that their perſwaſions had no effect, he took ſhipping with ſome of his friends, and overtook them on the banks of the Nile. And there entreating them to halt, in conſideration of all the natural obligations that could endear their country to them, their gods, and fireſides; they unanimouſly ſtruck their ſpears upon their ſhields, and cried out, that, as long as

[k] Herod. ubi ſupr. Diod. ubi ſupr. p. 61.

as they had arms, they did not doubt but they ſhould find a convenient country to ſettle in: then betraying their nakedneſs, that they ſhould never want wives and children whilſt they were ſo perfect. This done, they ſullenly marched on till they came into the territories of Ethiopia, where they ſat down on a fertile ſpot, and dwelt there.

Opens the ports of Egypt to ſtrangers.

To repair this loſs, he earneſtly applied himſelf to the advancement of commerce, and opened his ports to all ſtrangers, whom he greatly careſſed, contrary to the cruel or reſerved maxims of his predeceſſors. At the ſame time, that he was thus intent upon his affairs at home, he alſo entered into, or renewed an alliance, with the Athenians, and others of the Greeks [l]. But his reign is for nothing more remarkable than for the long and tedious ſiege he laid to Azotus in Syria, on the borders of Egypt, and which a ſhort time before had been taken by Aſar-haddon, king of Babylon; for it was twenty nine years before he reduced it [m]. His conduct towards the Scythians, who about this time conquered the Medes, and poſſeſſed themſelves of Aſia, and were now marching with deſign to pour themſelves into Egypt, is highly commended: For, inſtead of oppoſing them, he joined them in Syria, and by his preſents and intreaties prevailed on them to march back again [n]. After a reign of fifty four years [o] he died, and was buried in the temple of Bubaſtis, or Minerva, at Sais, the place where all the Saitic kings were depoſited. He is reported to have been the firſt king of Egypt that drank wine [p], to have ſent to diſcover the ſprings of the Nile [q], and to have made an experiment to find out which was the moſt antient nation in the world: to which purpoſe, he got two new-born children, and brought them up after ſuch a manner, that they never heard any body ſpeak; and becauſe when at two years old they pronounced a word *(beccos)* which ſignified bread in the Phrygian tongue, the Egyptians no longer vaunted of their ſeniority before all other nations, but ſubmitted to the Phrygians [r].

His ſiege of Azotus, and tranſaction with the Scythians.

NECHUS was the ſon and ſucceſſor of PSAMMITICHUS. He is the Pharaoh-Necho of ſcripture. He was a prince of a magnificent and warlike genius, and great both at land and ſea. In the beginning of his reign he attempted

Year of the Flood, 2383. Year before Chriſt, 616. Nechus.

[l] Idem ibid. [m] Herod. ubi ſupr. [n] Idem l. 1. [o] Idem l. 2. [p] Eudox. apud Plutarch. de Iſide & Oſiride, p. 333. [q] Herod. ubi ſupr. & Athenæus, l. 8. p. 345. [r] Herod. ubi ſupr.

ed to cut a canal from the Nile to the Red Sea [s]; and after the loſs of 120,000 of thoſe employed on this work, he was warned by an oracle to deſiſt, and leave the finiſhing of it to a Barbarian, or foreigner. The oracle he obeyed; but thenceforward turning his thoughts towards warlike enterprizes, he built a fleet of gallies in the northern [mediterranean] ſea, and another in the ſtraits of the Arabian gulph, where footſteps of his naval preparations were ſeen many ages afterwards. The warlike actions of this naval force, if any, are no where extant; but, as his mind was bent upon the empire of the ſea, he ſent ſome of the experteſt Phœnician mariners he could procure to go out upon a diſcovery of the African coaſts. Accordingly, ſailing out of the Red Sea through the ſtraits of Babelmandel, as now called, they ſteered down the eaſtern ſhores of Afric; and doubling the Cape of Good-Hope, coaſted up northward, till they came to the ſtraits of Gibraltar; by which they entered into the Mediterranean, and ſo returned into Egypt; and this voyage they performed in three years [t].

Affects the empire of the ſea.

His wars at land.

He was not only great at ſea, but was alſo formidable by land. Joſephus following Cteſias ſays, that he made war upon the Medes and Babylonians; who had juſt then diſſolved the Aſſyrian monarchy, and were grown dreadful to the nations far and near [u]: but the ſcripture expreſly ſays, that he went out againſt the king of Aſſyria, who was then on the river Euphrates, perhaps at Babylon. In his march thither, Joſiah king of Judah, refuſed to let him paſs through Judæa, and drew up an army to prevent his deſign, which was to beſiege Carchemiſh [w]. Finding therefore that Joſiah oppoſed him, he ſent meſſengers to him to remonſtrate, that his arms were not taken up with deſign to do Joſiah the leaſt prejudice; that the war, he was going to engage in, was undertaken by the expreſs command of God; wherefore he would do well not to incur the wrath of heaven by withſtanding its decree. But, finding that Joſiah gave no ear to this, he reſolved to give him battle; and both armies being drawn up in the valley of Megiddo (or Magdolus, as Herodotus has it [x]), Joſiah was wounded mortally with an arrow, as he was driving his chariot up and down the ranks; and perceiving his end to be near, he commanded his army to retreat,

[s] See before. [t] Idem ibid. [u] Joſephus Antiq. l. 10. c. 6. [w] 2 Kings xxiii. 29. 2 Chron. xxv. ver. 20. [x] Herod. ubi ſupr.

retreat, and Necho held on his march [y]. He arrived on the banks of the Euphrates, and there overthrew the king of Aſſyria, and took the great city of Carchemiſh; where he lodged a ſufficient gariſon, and after three months returned towards Egypt [z]. As he drew near to Jeruſalem, he heard that Jehoahaz had taken upon him to be king; and ſending him an order to meet him at Riblah in Syria, he there bound him in chains, and ſent him away priſoner to Egypt. After which he went to Jeruſalem, and made Eliakim, whoſe name he changed into Jehoiakim, king over Judah, impoſing on him at the ſame time a tribute of an hundred talents of ſilver, and one talent of gold [a]. And thus he became maſter of Judæa and Syria. Herodotus ſays, that he took the great and mountainous city of Cadytis in Paleſtine, which is very rationally underſtood to mean Jeruſalem. It is plain Nechus was there; but it is almoſt as plain that he entered it in a peaceful manner [b]. Hitherto then he was ſucceſsful in his wars, by which he weakened the declining power of Aſſyria; which very ſoon after ceaſed to give name to a monarchy: and in commemoration of his good fortune, or in gratitude to the god, he is ſaid to have conſecrated the garments he wore in theſe actions to Apollo, and ſent them to Branchis in the land of the Mileſians [c].

His turn of fortune.

But he did not long enjoy his new acquiſitions; for, about three years afterwards, Nebuchadnezzar came from Babylon, which, in conjunction with Media, had ſubverted the Aſſyrian empire, deſigning to drive the Egyptians from Carchemiſh, and recover the Syrian and Phœnician provinces, which Necho had ſubdued [d]. But he, no way daunted at the formidable power of this newly-erected monarchy, marched towards the Euphrates with a very numerous army, againſt Nebuchadnezzar; but in the end Necho was routed with a terrible ſlaughter, and loſt Carchemiſh, and all Syria and Judæa, quite home to Peluſium [e]. He afterwards entered into a confederacy with Jehoiakim, and made as if he intended to renew the war againſt the Babylonians; but he did nothing of moment afterwards, nor ſtirred out of Egypt; and died about eight years after he

[y] 2 Chron. xxxv. Joſephus Antiq. ubi ſupr. [z] Idem ibid. [a] 2 Kings xxiii. [b] Vide Prideaux Connect. p. 56, 57. Herod. ubi ſupr. [c] Idem ibid. [d] Jerem. xlvi. 1, 2. 2 Kings xxiv. 9. [e] Joſephus ubi ſupr.

he had been defeated by Nebuchadnezzar [f], having reigned sixteen, and left his son Psammis to succeed him in the kingdom [g].

Year of the Flood, 2399. Year before Christ, 600. Psammis.

In the reign of Psammis the son of Necho there came ambassadors into Egypt from the Elæans, to know, if the most sage Egyptians could add any thing to their regulations concerning the olympic games, or could perceive any defect in them. When the king was informed of their business, he called a council of the wisest heads in the nation; and sending for the ambassadors to come before this assembly, he asked them, if their own citizens were allowed to contend at their games: to which they answered in the affirmative. Whereupon the Egyptians pronounced, that they erred from all the rules of hospitality; observeing, that it was natural for them to favour their fellow citizens more than strangers. That if they were come to be informed concerning what ought, or ought not, to be done, in the matter they had proposed, the most equitable law they could make, would be to exclude their own countrymen, and admit none but strangers to contend for the prizes. Psammis reigned six years, and died in an expedition against the Ethiopians, leaving his son Apries to succeed him [h].

Year of the Flood, 2405. Year before Christ, 594. Apries.

His affairs with the Jews.

Apries is the Pharaoh-hophra of scripture. The first of his reign was great and prosperous; the last insolent and miserable. In the first year of his reign he received ambassadors from Zedekiah king of Judah, and with them he entered into a league, promising to assist their king against the king of Babylon [i]; and about two years afterwards marched out of Egypt with seeming intent to relieve Jerusalem, then closely besieged by Nebuchadnezzar; who no sooner heard of his motions than he raised the siege, and resolved to meet Apries half way [k]. He did so; but the Egyptians, afraid of venturing a battle, retreated as fast as the Babylonians approached, and so continued till they had fallen back into their own country [l], leaving the Jews to the mercilesss rage of their enemy, in contempt of the most solemn engagements. And for this breach of faith it was, that Ezekiel denounced the heavy doom against them, that they should be confounded and desolate for forty years ensuing [m]; and that afterwards they should degenerate to

[f] 2 Kings xxiv. 9. Josephus ubi supr. [g] Herod. ubi supr. [h] Idem ibid. [i] Ezek. xvii. 15. [k] Jerem. xxxvii. 5. [l] Idem ibid. c. 7. [m] Ezek. xxix.

to ſo baſe a degree, as not to have it in their power ever to ſet up a king of their own for the time to come [n]; which will be ſeen accompliſhed in the courſe of this hiſtory. The ſcriptures paint him in very diſadvantageous colours, and in the end threaten him with a violent death; which came to paſs, as we ſhall ſee anon. In the mean time, it may not be amiſs to take notice, that Herodotus gives this king twenty five years of greater proſperity than any of his predeceſſors, except Pſammitichus, had enjoyed; though Diodorus allows his whole reign no more than twenty two years. However, they both agree in giving him the character of a martial prince, and ſpeak of ſucceſsful wars which he waged, both by ſea and land, againſt the Tyrians, and Sidonians, and Cypriots [o]. The city of Sidon he took by ſtorm, and vanquiſhed both the Phœnicians and Cypriots in a ſea-fight; and returned with immenſe ſpoil into Egypt [p]. And all this no way claſhes with what the ſacred writings record of him; but is rather conſonant therewith: For ſure it muſt have been a mighty king, in whom the Jews dared to confide againſt the monarch of Babylon. And as to the feint Apries made to relieve Jeruſalem, and his ſhameful retreat, that rather reflected diſhonour on him, than amounted to a misfortune. His victories

But now, in order to harmonize the ſacred and prophane hiſtorians, let us hear the former denounce judgment againſt him, and then ſee how the latter execute it; which is the moſt obvious and diſtinct method we can think of in this caſe, where we are obliged to reſort to both. We have already in general terms obſerved, that the ſcripture threatened this king with a violent death, let us attend to the words of the prophet himſelf: *Thus ſaith the Lord, Behold I will give* Pharaoh-hophra *king of Egypt into the hand of his enemies, and into the hand of them that ſeek his life; as I gave Zedekiah king of Judah into the hand of Nebuchadnezzar king of Babylon his enemy, and that ſought his life* [q]. Many predictions of the ſame kind are uttered againſt him in Ezekiel, but there he is only involved with the reſt of his ſubjects, and therefore we ſhall paſs them over. We are now to ſee how his deſtruction was brought about. The Cyrenæans, a colony of the Greeks, had a very numerous acceſſion of their country-men under their third king Battus the happy; and, being impelled by an oracle from the Pythian, fell to ſharing the lands, and unjuſtly driving the

[n] Idem xxx. 13. [o] Herod. ubi ſupr. Diod. ubi ſupr. p. 62. [p] Idem ibid. [q] Jerem. xliv. 30.

Libyans, their neighbours, from their poſſeſſions, their king Andicran ſent an embaſſy of ſubmiſſion to Apries, and implored his protection from the violence of theſe new comers. Apries condeſcended to his requeſt, and ſent a powerful army to relieve him. But the Egyptians were beaten by the Cyrenæans with ſo cruel a ſlaughter, that the few who eſcaped were incenſed with the fierceſt rage againſt their king, as if he had ſent them to certain deſtruction, in hopes that they being cut off, he might tyrannize at will over the remainder of his ſubjects. What ground there was for this clamour does not appear, but the giddy multitude were ſo taken with it, that almoſt an univerſal defection enſued. Upon news that they were embodied in a tumultuous manner, and were talking loud of a revolution, Apries ſent a truſty friend, as he thought, and one much reſpected by the people, called Amaſis, to appeaſe them. He went; but inſtead of reconciling them with Apries, he made intereſt with them for himſelf; and as he was pretending to reproach them, and recall them to their allegiance, one of them came behind him, put an helmet on his head, and ſaluted him king of Egypt; and from that inſtant he prepared himſelf to war againſt his maſter [r]. Apries, finding himſelf ſo foully betrayed, commanded one Patarbemis, the moſt conſiderable of all the Egyptians, who as yet adhered to him, to go to the rebellious camp, and bring Amaſis to him alive. He obeyed; and coming in ſight of Amaſis, called out to him, and charged him to attend on him to the king. At this, Amaſis, who was ſitting on horſeback, lifted up his thigh with the utmoſt ſcorn, and breaking wind, bid him carry that back to his maſter. Notwithſtanding this, Patarbemis ſtill urged him to obey the royal ſummons; but all he could obtain was this anſwer from Amaſis, That indeed he had been ſome time preparing to viſit the king, but that he might do it in a proper manner, he would bring a ſuitable equipage along with him. Patarbemis had now heard and ſeen too much to imagine he ſhould ſucceed in the buſineſs he was charged with, and began to think, that the beſt ſervice he could do for Apries, at this conjuncture, would be to give him the moſt early notice of the poſture and temper of the rebels. He therefore returned back; but when the king ſaw him come into his preſence without Amaſis, he ſpoke

The cauſe of his ruin.

Is betrayed by Amaſis.

[r] Herod. ubi ſupr. Diod. ubi ſupr.

ſpoke not one word to him, but ordered his ears and noſe to be cut off. This inſolent and tyrannical behaviour completed his ruin: for when the reſt of the Egyptians, who had continued faithful to him, beheld the inhuman mutilation of ſo worthy and noble a perſon, they all withdrew from him and went over to Amaſis. And now the tyrant on the one hand, and the uſurper on the other, prepared for war; the one having the whole body of the natives under his banner; the other only ſuch Carians, Ionians, and other mercenaries and foreigners he could engage in his ſervice [s].

Nebuchadnezzar waſtes and plunders Egypt.

DURING theſe inteſtine broils, and theſe diviſions, which muſt have greatly weakened Egypt, it is probable, that Nebuchadnezzar, who much about this time broke up his thirteen years ſiege of Tyre, and had at laſt nothing but an empty town for his pains, took advantage of the troubled ſtate of this kingdom, in hopes here to acquire ſuch ſpoil as might make amends for what he miſſed at Tyre. And this is perfectly conſonant to the ſcripture, where it is ſaid, *Nebuchadnezzar king of Babylon cauſed his army to ſerve a great ſervice againſt Tyrus ..... yet had he no wages nor his army for Tyrus .... Therefore, ſaith the Lord God, Behold, I will give the land of Egypt unto Nebuchadnezzar king of Babylon ..... and it ſhall be the wages for his army* [t]. A nation in ſuch diſtraction, as Egypt muſt have been in at this time, was an eaſy prey to a number of experienced veterans; and beſides, muſt have been in the moſt proper condition to gratify an army already worn out with fatigue, as the Babylonians doubtleſs were. Nebuchadnezzar therefore entered Egypt, and miſerably haraſſed the country, and ſlew and led away great numbers of its inhabitants; ſo that ſome think it did not recover this incurſion for forty years, as had been foretold. At length he left the country; but whether he appointed Amaſis for his lieutenant, or what terms he made with him, is what we do not take upon us to ſay; no more than whether Amaſis and Apries ſtood their ground, and made head againſt the enemy; or whether they left him to act his pleaſure in Egypt. This alone is certain, that the Babylonian carried away immenſe ſpoil with him.

Civil war between Apries and Amaſis.

AND now we reſume the civil war, which we have been obliged to interrupt, by taking a view of the devaſtation of

[s] Herod. ubi ſupr. [t] Ezek. xxix. 18, 19.

of the country by a foreign enemy. Apries marched from Sais, where he had a moſt ſumptuous and delightful palace, at the head of 30,000 Carians and Ionians; and Amaſis, on the other hand, was in motion at the head of an army of Egyptians [u]. They met in the fields near Memphis; and Apries was ſo far from doubting the victory, that he is ſaid to have entertained a notion, That it was not in the power even of any god to diveſt him of his kingdom [w], as he is upbraided by the prophet, *the river is mine, and I have made it* [x]. But his confidence availed him nothing; the armies drew up at Memphis, and though the foreigners did wonders, yet they were overpowered by the multitude of the Egyptians, and were utterly overthrown, and Apries himſelf was taken priſoner.

Year of the Flood, 2430. Year before Chriſt, 569. Amaſis.

AND now AMASIS of the tribe of Sais uſurped the kingdom. He confined Apries in the palace of Sais formerly his own; and treated him with great care and reſpect. But the people were implacable, and could not reſt while Apries enjoyed his life *: and therefore murmuring againſt Amaſis, and remonſtrating that his lenity was wrong applied in extending it to his and their common enemy, he found himſelf under a neceſſity of delivering Apries into their hands. And now, being fallen under the power of thoſe who *ſought his life* [y], they ſtrangled him, and laid his body in the ſepulchre of his anceſtors, which was in the temple of Minerva, adjoining to the palace, on the left hand going in. Here it was that all the princes of the tribe of Sais were intombed [z].

Apries is ſtrangled.

WE know it is ſaid, that Amaſis did not thus ſeat himſelf on the throne; and that he did not ſucceed Apries. It was one Partamis, ſay they, whom Amaſis ſucceeded, and that, by the following incident. Partamis celebrating his birth-day, Amaſis, as yet a private perſon, preſented him with a moſt beautiful and elegant garland of flowers: whereupon being invited to the table as a gueſt, and thenceforward added to the number of the king's friends; he was at laſt ſent at the head of an army to reduce the Egyptians who had rebelled; but the army made him king, out of the hatred they bore to Partamis [a]. We are inclined to think, that the Partamis here and the Patarbemis above are the ſame man; and if ſo, he was rather the idol of the people's

[u] Herod. ubi ſupr. Diod. ubi ſupr. [w] Herod. ubi ſupr. [x] Ezek. xxix. 3. * Plato in Tim. [y] Jerem. ubi ſupr. [z] Herod ubi ſupr. [a] Hellanic. apud Athenæ Deipno. l. 15. p. 680.

people's affections, than the object of their hatred. But we forbear enlarging any farther on this, and ſhall only ſay, that our author, in which we find this, is not always the moſt faithful tranſcriber.

WHOEVER Amaſis ſucceeded, and which way ſoever he came by the crown, it is commonly allowed, that he was of plebeian extraction. And perceiving at firſt, that it was with reluctance the people payed him the reſpect due to the ſublimity of his ſtation, he took a golden ciſtern, in which his gueſts were uſed to waſh their feet, and ordered it to be melted down, and caſt in the ſhape of a god. This precious idol was ſet up in the moſt frequented part of the city; and all paid devout reverence and honour to it. He then called an aſſembly of the Egyptians, and acquainted them, That the god they now worſhipped was made of the veſſel in which they had often piſſed, vomited, and waſhed their feet: that his own caſe was the ſame; formerly he was a mean perſon, but, being now their king, he expected and required to be honoured and obeyed as ſuch. It was a rule with him to attend cloſely to buſineſs every morning, and to divert himſelf with his friends the remainder of the day, drinking and making merry with them: but his mirth was ſomewhat of too low an allay for a king; at which ſome of his friends were ſcandalized, and aſſured him, that ſuch forgetfulneſs of his dignity would draw the contempt of all his ſubjects upon him. To this he replied, that as a bow always bent would undoubtedly loſe much of its ſpring and energy, and in the end be wholly uſeleſs; ſo a man, who ſhould uninterruptedly attend upon ſerious matters, would grow ſtupid and loſe his ſenſes: and being perfectly convinced of this truth, he was determined to divide his time between buſineſs and diverſion. And indeed it is ſaid of him, that, when a private man, he delighted in his cup and his jeſt; and was ſo averſe to buſineſs, that he ſupported himſelf in his riot and luxury by thieving. And in conſequence of this heinous practice, being oftentimes accuſed, and continually denying his guilt, they were uſed to carry him to the oracle of the place, where-ever he was, by which he was ſometimes convicted, and ſometimes acquitted. When he came to the throne, he recollected the former tranſactions of his life, and calling to mind the deceitfulneſs and ignorance of the oracles, who had pronounced him innocent, he ſlighted the temples of ſuch gods, abſtained from their ſacrifices, and refuſed to preſent them with any donations. On the contrary, he highly revered

those for veracity and omniscience, who had charged him with his odious crime.

The public works of Amasis.

He built a portico to the temple of Minerva at Sais, which was of the utmost magnificence, both in the vastness of its proportion, and the massiveness of the materials, adorning it with colossuses, and the monstrous images of Androsphynges. Part of the stones of this building were taken out of the quarries at Memphis; but the largest of them came by water from the city of Elephantis, twenty days passage on the river, and a great many of these he prepared for other works. But what is most to be admired, he removed a house all of one stone from the same city to Sais. The exterior dimensions of it were twenty one cubits in front, fourteen deep, and eight high: the interior measures were eighten cubits, twelve, and five. Two thousand mariners were employed three years in transporting this extraordinary edifice. It stood near the entrance of the temple, and was never carried quite in, either, as was said, because the chief engineer sighed one day, as if he was tired out with the work, and therefore Amasis who stood by, taking offence, would never suffer him to have any thing more to do with it; or because rolling it in towards the temple, one of the men was crushed to death by it, and therefore might not be advanced any farther. He was very magnificent in the gifts and ornaments he bestowed upon the other celebrated temples, and particularly at Memphis; where, before the temple of Vulcan, he caused a colossus of seventy five foot in length to be laid on its back, the face looking upwards: and on the same basis, or pavement, whereon this lay, he erected two statues of twenty foot high, cut out of the same stone, and standing one on each side of the great one. In Sais there was just such another colossus as this. To conclude on this head, he built the great temple of Isis at Memphis.

The state of Egypt under him and his laws.

Moreover, Egypt is said to have been perfectly happy during his reign, in the fæcundation of the Nile, and to have now contained no less than 20,000 populous cities. And, that good order might the better subsist in the midst of so vast a multitude, Amasis enacted a law, whereby every Egyptian was bound once a year to inform the governor of the province by what means he earned his living, and in default thereof to suffer death; which also was the punishment now ordained for those who were not able to give a very satisfactory account of themselves [b]: and for this, and for

[b] See before, ch. 3. sect. 2. par. 25. Herod. ubi supr.

for other laws he enacted, he is ſtiled the fifth lawgiver of Egypt [c].

He was a great friend to the Greeks, and had a viſit from Solon *. And, beſides the favours he conferred on particular perſons and cities of that nation, he allowed as many as pleaſed to come into Egypt, and either to ſettle in the moſt celebrated mart of Naucratis, or drive on their trade upon the ſea-coaſts; and granted them places where they might erect altars and temples to their own deities. Accordingly they erected ſeveral temples, the moſt frequented and noted of which was called the Grecian temple, being built at the joint charge of the Ionian cities of Chio, Teos, Phocæa, and Clazomene; together with the Dorians of Rhodes, Cnidus, Halicarnaſſus, Phaſelis; and of Æolians only the city of Mitylene. Thoſe of Ægina alſo built a temple to Jupiter at their ſole expence; the Samians another to Juno, and the Mileſians a third to Apollo. And to conclude, the Greeks elected officers to preſide over their commercial affairs, and over their religion, and from henceforward were a conſiderable body in Egypt.

Is very favourable to all the Greeks.

So great was the fame of Amaſis for his generoſity and humanity, that when the Delphians, whoſe temple had been burnt, were going about from city to city to raiſe ſuch a contribution, as might enable them to pay that part of the expence which was impoſed on them, they applied not only to the Greeks in Egypt, but alſo to Amaſis himſelf, who gave them a thouſand talents of alom. He made an alliance with the Cyrenæans, and being deſirous of a Grecian woman, or elſe willing to give an ample teſtimony of the affection he had for that people, he married Ladice, the daughter of Battus, according to ſome; but others ſaid, ſhe was daughter of Arceſilaus; and others again, of Critobulus, a perſon of high authority among the Cyrenæans. This marriage was very extraordinary in its beginning, and could not be conſummated without the intervention of a deity. For Amaſis, though he at the ſame time found no impediment in himſelf with regard to other women, was ſenſible of a total inability in reference to his wife. Whereupon he, after ſome time, concluded, ſhe had inchanted him, and practiſed ſome infernal art to debilitate him; and therefore told

Marries a Greek.

[c] Diod. ubi ſupr. p. 85. * Herod. lib. 2.

told her one night as they lay together, That as deeply verſed as ſhe was in ſupernatural contrivances, ſhe ſhould not have it in her power to eſcape the vengeance he intended to take on her, for the wickedneſs and ingratitude ſhe had been guilty of towards him. She earneſtly denied the unkind accuſation, and endeavoured to give him a better opinion of her; but in vain. In this diſtreſs ſhe ſighed out a prayer to Venus, and implored her aid, vowing, in caſe of deliverance, to ſend a ſtatue of her to Cyrene, and erect it there. The goddeſs was propitious, and Amaſis found himſelf like other men (the only expedient that could be effectual in this extremity), and continued to uſe Ladice as his wife, with the greateſt tenderneſs and affection. Ladice performed her vow to the goddeſs, whoſe ſtatue ſet up by her was ſeen without the gates of Cyrene ſome ages afterwards. This miracle, as it was doubtleſs called, brought the gods of the Grecians into as much credit with Amaſis as themſelves; as ſhould ſeem by his conſecrated donations to Greece. To the city of Cyrene he ſent a gilded ſtatue of Minerva, and his own picture done from the life. To the city of Lindus he gave two ſtone ſtatues of the ſame goddeſs, with a linen pectoral or ſtomacher, wonderfully wrought and adorned. To Samos he ſent two wooden images of himſelf, which were ſeen ſtanding, ſeveral ages afterwards, behind the gates of the great temple of Juno. This donation he made to Samos for the ſake of Polycrates, with whom he was in eſpecial alliance. As for Lindus, it was reported, that the daughters of Danaus founded the temple of Minerva there, when they fled from the ſons of Egyptus. And add to all the great things which have been hitherto ſaid of him, he was the firſt that ſubdued Cyprus, and that exacted tribute from the Cypriots its inhabitants [d].

A miracle.

His conſecrated donations to Greece.

Conquers Cyprus.

HITHERTO we have repreſented this reign in the majeſtic colours the Egyptian prieſts beſtowed on it; and under ſo prudent a prince, as it is likely Amaſis was, the greateſt part of what they ſaid may be true enough: but they dwelt ſo much on the glory of this reign, as well as of thoſe that preceded it, as to forget all the ignominy that was mixed with it. Xenophon writes, that Cyrus conquered Egypt [e]; and if ſo, it muſt have been during

[d] Herod. ubi ſupr. Diod. ubi ſupr. [e] Cyropædia ſub fine.

during this long reign; and Herodotus says, that Amasis and Crœsus were leagued together against Cyrus [f]. It is certain, that Nebuchadnezzar almost ruined the whole kingdom; but we find no acknowledgment of it among prophane authors, who, so far as they have touched upon the Egyptians, have copied their archives, or depended upon the oral traditions of their priests. But now that it was no longer in their power to conceal their dishonour, they frankly confessed it. For, according to themselves, the latter days of Amasis were darkened by a dreadful storm, which threatened the utter ruin of Egypt; and, though he died just soon enough to escape the rage of it, yet his dead body was so cruelly abused and destroyed, that could he have been sensible of the hard fate he was doomed to in that particular, he, according to the Egyptian superstition, would have thought the loss of his kingdom a trifle, if compared with it. His latter days unhappy,

For by some means or other Amasis had incensed Cambyses the Persian (who was naturally a rash and hot-headed prince) against him to so implacable a degree, as has scarce its parallel in the history of any nation. The seeds from whence this enmity sprang are not positively, nor perhaps at all, known to us. On one hand it is said, That Amasis sending an Egyptian oculist to Cyrus king of Persia, who had desired to have the best in his kingdom; the man, whose fortune it was to be chosen by the king for this purpose, took it much at heart, that he should be thus, as it were, exiled from his wife and children, and sent into Persia; and especially since Cyrus had desired the best oculist in Egypt, which he was conscious was not himself. The angry Egyptian continuing in Persia, and plainly perceiving the turbulent genius of Cambyses, prevailed on him to send an herald to Amasis, to demand his daughter to wife, assured, that whether Amasis complied with this request or not, he should have his full measure of revenge on him. Cambyses hearkened to this man, and did as he had suggested. When the Persian herald came to Amasis, he knew not which way to resolve: he dreaded the Persian power if he refused, and was ashamed of the dishonour which must be reflected on his family if he complied, knowing, that, instead of being a wife, his daughter would be no better than the Persian's concubine. At last he bethought him, that his predecessor was survived by an only daughter, and why.

[f] Herodot. l. 1.

daughter, of great beauty and majeſtic deportment, called Nitetis. Her therefore he ſent, with all the pomp and ſplendor befitting his own daughter, to Cambyſes in Perſia; who, when he ſaw her, ſaluted her by the title of daughter to Amaſis. To this ſhe immediately anſwered, that Amaſis had deceived him; that ſhe was not his daughter; but the unhappy child of the unfortunate Apries, whom Amaſis had put to death, and whoſe throne he had ungratefully uſurped. At this Cambyſes was fired with indignation, and vowed deſtruction to Amaſis. This was the ſtory the Perſians told: but this is not likely to be true; for at this time Nitetis muſt have been ſomewhat upwards of forty years old, or at leaſt near it; and therefore but ill qualified for the bed of Cambyſes. But ſecondly, the Egyptians, to give themſelves ſome credit, even in this deſtructive miſunderſtanding, claimed kindred with Cambyſes, and ſaid, that it was Cyrus who ſent for the daughter of Amaſis, and that Cambyſes was the ſon of Nitetis. This may give a better account of the dreadful malice he wrecked upon Amaſis, in revenge of his unhappy grand-father Apries, which, as is ſaid, he was excited to by his mother. But Herodotus declares it was contrary to the cuſtom of the Perſians to admit of a ſon of the half blood to ſucceed as heir to the kingdom. Thirdly, it was reported, that a Perſian lady being admitted to the preſence of the king's women, and admiring the children of Caſſandana, was anſwered by her, That notwithſtanding ſhe was the wife of Cyrus and the mother of thoſe fine children, yet he neglected her, and preferred an Egyptian ſervant, meaning Nitetis, before her: which Cambyſes her eldeſt ſon, at that time but ten years of age, hearing, told her, that when he came to be a man he would for her ſake ruin all Egypt. This, ſay they, he remembered, and acted accordingly. But, notwithſtanding what is here ſaid, we chooſe to think with Dr. Prideaux, that Amaſis having ſubjected himſelf a tributary to Cyrus, upon his death withdrew his obedience from his ſucceſſor. Having thus laid before you the ſeveral cauſes of this war, as we find them, we leave Cambyſes to his preparation for it, and return to Amaſis.

Amaſis is betrayed by Phanes of Halicarnaſſus.

WHILST this cloud was gathering, Phanes of Halicarnaſſus, a commander of the Grecian auxiliaries, in the pay of Amaſis, took ſome private diſguſt, and embarked from Egypt to go into Perſia. He was a prudent counſellor, and a valiant captain, and perfectly well acquainted with every

every thing that related to Egypt; and beſides, had great credit with the Greeks in theſe dominions. Amaſis was immediately ſenſible how great the loſs of this man would be to him, and how much he had it in his power to ſtrengthen the hands of Cambyſes, or any prince elſe, who ſhould undertake to invade him; and therefore in all haſte he ſent a truſty eunuch with a ſwift galley to purſue him; and he was taken in Lycia. However, he was not brought back to Egypt; for, making his guard drunk, he continued his way to Perſia, and preſented himſelf to Cambyſes, as he was meditating the downfal of Egypt, which he forwarded by his counſel and diſcoveries, as Amaſis had dreaded [g].

Makes Polycrates his enemy.

We have already obſerved, that there had been an eſpecial harmony between Amaſis and Polycrates the tyrant of Samos; but, a miſunderſtanding ariſing between them, Polycrates, when occaſion offered, joined Cambyſes againſt his former Egyptian ally. For Amaſis, receiving continual accounts of the uninterrupted ſucceſſes and depredations of this Samian, feared, that in the end ſome heavy diſaſter would fall upon him, equal to the glory of his triumphs; and therefore ſent him this letter, adviſing him as follows: Amaſis to Polycrates ſpeaketh thus .... "It is "with pleaſure I hear of the happy ſtate of my friend and "ally. Nevertheleſs I fear for thy great proſperities, "knowing the unſtableneſs of fortune. For my part, I "ſhould rather chooſe, that my affairs and thoſe alſo "of my friends ſhould be ſometimes proſperous, and ſome-"times unhappy, than have them go on with continued "ſucceſs. Therefore do thou now hearken to my coun-"ſel, and do as I ſhall bid thee, to take away from thy "happineſs: conſider then with thyſelf what thou poſ-"ſeſſeſt of greateſt value to thyſelf; and what would the "moſt bitterly grieve thee if loſt: and when thou haſt "found it, caſt it away from thee, ſo that it may never "more be beheld by man. If thy happineſs, after this, "knoweth no mixture of evil, preſerve thyſelf againſt the "ſorrow that may come upon thee, by repeating the re-"medy I have ſhewn thee." When Amaſis heard that Polycrates had taken his advice, and had accordingly thrown a very valuable ſignet into the ſea, but that it was found a few days afterwards in the belly of a fiſh, and reſtored to him; he gave him over as the moſt unhappy of men, and

[g] Herod. l. 2.

and dreading to partake as a friend in ſome diſmal calamity, which he feared muſt befal him, he diſpatched a herald to Samos to renounce the alliance, and all the obligations between him and Polycrates, that he might not mourn his misfortune with the ſorrow of a friend [h]. Amaſis, by thus diſſolving the cement of this conjunction, left Polycrates to act againſt him, if his inclination led him ſo to do; and accordingly he offered a fleet of ſhips to Cambyſes to aſſiſt him in his invaſion of Egypt. Thus we ſee Amaſis in danger of an inexorable, cruel, and moſt powerful enemy, in concert with a diſguſted and formidable friend. But before the dreadful day came his life ended, after he had reigned forty four years. His dead body was embalmed, and depoſited in a ſepulchre he had built for himſelf in the temple at Sais; but there, to ſpeak in the antient Egyptian phraſe, he enjoyed but a ſhort repoſe, as will be ſeen hereafter. He was ſucceeded by his ſon, called Pſammenitus.

His death.

Year of the Flood, 2474. Year before Chriſt, 525.

Pſammenitus.

THIS following reign, in which Egypt ſubmitted to a foreign yoke, was of very ſhort duration, and deeply calamitous. For PSAMMENITUS the ſon of Amaſis was ſcarce ſeated on the throne, when he was forced to put himſelf at the head of an army, with which he marched to Peluſium, and there encamped to receive the Perſian, who now drew near to vent his fury upon Egypt. Under this new king a fearful prodigy happened: ſhowers of rain fell at Thebes, where it had never been known to rain before. This was doubtleſs conſtrued to portend a change, and a great one ſoon followed it: for now Cambyſes, by the aid and aſſiſtance of the king of Arabia, and the politic counſel of Phanes, had croſſed the dry and ſandy deſarts, and coming in ſight of the Egyptian camp, immediately drew up to give them battle. The Egyptians prepared themſelves for an aſſault, and in the interim their Carian and Ionian auxiliaries gave a dreadful inſtance of their zeal in the cauſe of Pſammenitus, and deteſtation of their traiterous countryman Phanes. For they led his ſons he had left behind him out of the camp, and butchered them over a bowl, which received their blood in ſight of the father and his new friends; and pouring wine and water into the ſame, drank off that cruel and unnatural mixture, and then began the onſet. The fight was obſtinately maintained on both ſides; but in the end the Egyptians

He is overthrown by Cambyſes.

[h] Idem. l. 3.

tians gave ground and fled in great confuſion to Memphis. Here they ſoon after were guilty of a horrid and imprudent outrage towards a herald, whom Cambyſes ſent to them in a ſhip of Mitylene; for they no ſooner ſaw her come into the port, than they flocked down to the ſhore, and deſtroyed the ſhip, and tore the Perſian herald and all the crew to pieces, carrying their mangled limbs in a barbarous triumph into the city. Not long after, they were cloſely beſieged by the Perſians, and in the end obliged to ſurrender: and ſo fell the glory of Egypt. The news of this ſtruck ſuch a terror upon the minds of the Libyans, Cyrenæans, and Barcæans, that they humbled themſelves to Cambyſes, and implored his protection.

Taken priſoner, and loſes his kingdom.

UPON the tenth day after Memphis had been taken, Pſammenitus and the chief of the Egyptian nobility were ſent ignominiouſly into the ſuburbs of that city, to act a part in one of the moſt doleful tragedies that can be conceived: for, being there ſeated in a proper place, he ſaw his daughter coming along in the habit of a poor ſlave, with a pitcher to fetch water from the river, and followed by the daughters of the greateſt families in Egypt, all in the ſame miſerable garb, and going on the ſame errand, with pitchers in their hands; all weeping and wailing with the utmoſt lamentation. When the fathers ſaw their children in this diſtreſs, and reduced to ſo ſordid a degradation, they burſt out into tears, and could not contain themſelves, all but Pſammenitus, who, though ready to ſink under the burthen of his grief, only threw his eyes towards the ground, and there fixed them. Theſe paſt by; came the ſon of Pſammenitus and two thouſand of the chief Egyptian youths, all with bits in their mouths, and halters round their necks, going to be executed, to expiate the murder of the Perſian herald and Mitylenæan ſailors. But Pſammenitus, like one perfectly ſtupified, as they paſſed by, obſerved the very ſame conduct as before, whilſt the Egyptians about him cried out with the loudeſt lamentations. A ſhort ſpace afterwards, he ſaw an intimate friend and companion, who, now that he was advanced in years, was plundered of all he had, and walking up and down the ſuburbs begging his bread. As ſoon as he perceived this man he wept bitterly, and calling out to him by his name, ſtruck himſelf on the head as one frantic. Now Pſammenitus had ſpies privately ſet over him to mark his behaviour, and they inſtantly repaired to Cambyſes, and

The particulars of his captivity.

gave

gave him a particular account of it; and ſoon after a meſſenger came from him to the captive king to know what might be the reaſon of it. To this he anſwered, "That "the calamities of his own family confounded him, and "were too great to be lamented by any outward ſigns of "grief; but the diſtreſſed neceſſity of a boſom friend gave "him more room for reflection, and therefore extorted "tears from him." By this anſwer he wrought ſo much upon Cambyſes, that he ſent to ſtop the execution of his ſon; but his orders were given too late; for the young prince was the firſt put to death. At the ſame time Pſammenitus himſelf was ſent for into the city, and reſtored to his liberty: and had he not betrayed a deſire of change and revenge, he might have been entruſted with the adminiſtration of Egypt; but being vindictively diſpoſed, he was ſeized, and condemned to drink bull's blood [i]; and ſo ended his life, after a diſmal reign of ſix months, and a ſhort captivity; and with him died the antient ſplendor and liberty of Egypt.

and death.

The dead body of Amaſis burnt; and the god Apis ſlain.

THE Egyptians now felt the heavy preſſure of conqueſt in a very extraordinary manner. They ſaw their late king Amaſis inhumanly taken out of his tomb, and cruelly mangled, and finally burnt. They ſaw their god Apis ſlain, and their prieſts ignominiouſly ſcourged; all which made ſuch dreadful impreſſions on the minds of the whole nation, that they afterwards bore a moſt uncommon averſion to the Perſians, and never reſted eaſy under their dominion.

Egypt a province of the Perſian empire.

THUS were the Egyptians reduced to the loweſt degree of ſubmiſſion; their royal line was extinct; their religion was trampled on in the moſt outrageous manner; and themſelves perſecuted and deſpiſed for the profeſſion they made of it.

A PEOPLE, who had been bred up to ſuch a ſolemn obſervance of the inſtitutions of their forefathers, muſt needs think themſelves unhappy under ſuch governours as held their laws in deriſion; and therefore they continually conſulted, how they might ſhake off the intolerable yoke of their Perſian oppreſſors.

The Egyptians revolt from the Perſians; but are ſubdued again.

AT length they broke out into an open revolt in the reign of Darius Hyſtaſpis, and continued in a ſtate of rebellion againſt the Perſians all the firſt year of Xerxes [k]; but

[i] Herod. lib. 2. [k] Herod. lib. 7.

but in the ſecond year [l] of the ſame prince they were reduced to harder ſubjection than before, as is uſually the caſe; and had one Achæmenes, brother to Xerxes, for their governour.

BUT the more ſeverity they ſuffered, the more they were exaſperated. In the fifth year of Artaxerxes Longimanus they revolted again; choſe INARUS king of Libya to fill their throne; and called in the Athenians to their aſſiſtance, who chearfully embraced this opportunity of expelling the Perſians out of Egypt [m]. The Egyptians almoſt ſucceeded in their project. The Athenians falling on the Perſian fleet at ſea, took and deſtroyed fifty ſail of them; and then, ſailing up the Nile, landed under the command of Charitimis, and joined the Egyptians and Lybians under Inarus. They all attacked Achæmenides the Perſian general, though his army was 300,000 ſtrong; of whom there fell 100,000, together, with the general himſelf. The reſt betook themſelves to flight, and returned to Memphis; but, being purſued by the Egyptians, they took refuge in a very conſiderable, and by much the beſt fortified, part of that city, called the white wall. The Egyptians had the reſt of it, and blocked up the Perſians three years within the white wall.

Year of the Flood, 2539. Year before Chriſt 460. Revolt a ſecond time, and chooſe Inarus for their king.

By this ſucceſs the Egyptians hoped they had wrought a total deliverance for themſelves and deſcendants; but their proſperity was by no means of long duration. They were at the end of three years obliged to raiſe the ſiege of the white wall by the Perſian army, under the command of Artabazus governour of Cilicia, and Megabyzus governour of Syria [n]. In the mean time, when Inarus heard of the formidable preparations which were making by theſe Perſian governours to relieve the beſieged, he redoubled the attacks on the white wall, and made the utmoſt efforts to carry it; but the Perſians within defended themſelves with ſuch bravery, that the Egyptians made no conſiderable progreſs towards the reduction of the place [o].

IN the third year of this ſiege, and the ninth of Artaxerxes, Inarus and his auxiliaries were not only obliged to raiſe the ſiege of the white wall, but alſo defeated with a fearful ſlaughter, which fell chiefly on the Egyptians.

[l] Idem ibid. [m] Thucydid. lib. 1. Cteſias. [n] Thucydid. ubi ſupr. Cteſias. Diod. Sic. l. xi. [o] Cteſias. Diod. ubi ſupr. p. 281.

tians. In this fight Inarus was wounded by Megabyzus; but nevertheleſs he retreated with his Athenian confederates, and ſuch of the Egyptians as adhered to him, to the city of Biblus in the iſland of Proſopitis, which being waſhed on each ſide by navigable branches of the Nile, the Athenian fleet was ſtationed in one of them; and here they held out a ſiege of a year and a half. But the bulk of the Egyptians ſubmitted to the conqueror, and acknowledged Artaxerxes for their ſovereign; all but Amyrtæus: he retreated with a party into the Fens, where he ruled many years; not in the leaſt moleſted by the Perſians, who were never able to get at him through the inacceſſibleneſs of the place.

Inarus taken priſoner, and Egypt reduced again to the Perſians.

In the mean time Inarus and his auxiliaries on the iſland of Proſopitis were buſy in defending themſelves againſt the Perſians, who attacked them with great vigor: but theſe, finding that bare ſtrength was not like to effectuate a reduction of the beſieged, had recourſe to art and ſtratagem; for draining that branch of the Nile in which the Athenian fleet rode, they at once rendered the ſhipping uſeleſs, and made a paſſage, by which the whole body of their army might march over to the iſland. When Inarus ſaw this, he and all the Egyptians, and fifty of his Athenian auxiliaries, delivered themſelves up to Megabyzus, on the condition of being ſecured in their lives: the reſt of the Athenians, being ſix thouſand in number, ſet fire to their ſhips, reſolved to die ſword in hand; which the Perſians perceiving, thought it adviſable to offer them ſome reaſonable terms: and this they did, and their propoſals were accepted [p]. The Athenians had ſent a fleet of fifty ſail to relieve the iſland of Proſopitis, where their citizens were in conjunction with the Egyptians; but they arrived too late, and as ſoon as they entered the river were aſſaulted by the Perſians, both on the river and from the ſhore; ſo that they all periſhed [q]. And thus ended the war between Inarus king of Egypt and Artaxerxes king of Perſia, under whom the Egyptians ever afterwards kept quiet, and made no attempts to recover their liberties. Sartamas was appointed governour of Egypt, and Inarus was carried priſoner to Suſa, and was there crucified, notwithſtanding the promiſe he had of his life when he ſurrendered [r].

Amyrtæus

[p] Thucydid. ubi ſupr. Cteſias. Diod. ubi ſupr. p. 282.
[q] Thucydid. ubi ſupr.
[r] Cteſias.

AMYRTÆUS the Saïte in the mean time held the Fens, and in the fifteenth year of Artaxerxes was joined by a fleet of ſixty ſail of Athenian ſhips[s]; but nothing of moment was tranſacted at this time to the prejudice of the Perſians in Egypt.

The Egyptians revolt a third time, and Amyrtæus heads them.

IN the tenth year of Darius Nothus, the Egyptians revolted once more from the Perſians. For Amyrtæus, being apprized of the diſcontents of the Egyptians, and that they were ripe for any attempts to regain their liberty and independence, ſallied out of his Fens, and being joined by all the Egyptians, he drove the Perſians out of the kingdom, and became king of the whole country of Egypt[t].

Year of the Flood, 2583. Year before Chriſt 414.

AMYRTÆUS thus in poſſeſſion of the kingdom of Egypt by the total expulſion of the Perſians, reſolved to attack them in Phœnicia alſo, having the Arabians in confederacy with him in this undertaking[u]. But he was engaged by Darius in perſon and overthrown; about which time Amyrtæus either died or was ſlain in the battle.

Amyrtæus king.

PAUSIRIS his ſon ſucceeded him in the kingdom, with the conſent of the Perſians[w]. And now the Egyptians, though perhaps tributary to the Perſians, had a governour of their own nation to alleviate the burthen of it.

Pauſiris.

PSAMMITICHUS ſucceeded Pauſiris. He was deſcended from the famous Pſammitichus, whoſe hiſtory we have given above. He was a barbarous and ungrateful man, as appears by the only incident we have of his reign: for Tamus, who had been admiral in the Perſian ſervice, though he was a Memphite by birth, thinking it adviſable for reaſons of ſtate to leave the Perſian ſervice, and confiding in the friendſhip of Pſammitichus, whom he had formerly obliged by many friendly offices, put all his family and effects on board his ſhips, and ſailed for Egypt. But when Pſammitichus heard of his arrival, and that he had brought great riches with him, he, unmindful of what Tamus merited of him, and of all the laws of humanity and hoſpitality, fell upon him as an enemy; and having ſlain him, his family, and all his followers, ſeized on thoſe treaſures, which Tamus hoped to have enjoyed in his native country[x]. This is all we know concerning this cruel prince.

[s] Plutarch in vita Cimon. Thucydid. ubi ſupr. Diod. Sic. ubi ſupr. [t] Euſebius in Chronico. [u] Diod. Sic. lib. 13. p. 355. [w] Herod. lib. 3. [x] Diod. Sic. lib. 14. p. 415.

Nephereus. HIM ſucceeded NEPHEREUS. This king was invited by the Lacedæmonians into a confederacy againſt the Perſians; and he ſent them a ſquadron of an hundred gallies to carry on the war by ſea, and 600,000 meaſures [buſhels] of corn for the ſubſiſtence of their army; but the veſſels, which were laden with this valuable preſent, ignorantly putting into Rhodes, whoſe inhabitants had juſt then thrown themſelves under the protection of the Perſian fleet, which then rode at anchor there under the command of Conon the Athenian, they fell a prey to him, and never reached the Lacedæmonians [y].

Acoris. ACORIS ſucceeded Nephereus. He joined Euagoras king of Cyprus, and the Arabians, and Tyrians, and Barcæans, a people of Libya, againſt the Perſians [z]. Acoris ſent ſome forces to the aſſiſtance of Euagoras, the chief of this league, who being defeated came into Egypt, to engage Acoris to aſſiſt him with his full ſtrength; but Acoris could not be prevailed on to come ſo totally into his meaſures, and only diſmiſſed him with a ſupply of money, by no means equal to the neceſſitous occaſions of that diſtreſſed prince. Soon after Gaus, the only ſurvivor of the family of Tamus, whom Pſammitichus murdered for the ſake of his wealth, and as well as his father had been now promoted to the degree of an admiral in the Perſian ſervice, being diſguſted at the ill uſage of Tiribazus, the king of Perſia's general in the former part of the Cyprian war againſt Euagoras, revolted from the Perſians, in which he was followed by a great part of the fleet and army; and entered into a league with Acoris and the Lacedæmonians. But the year after Gaus was treacherouſly ſlain by ſome under him; and Tachos, who had undertaken to execute the ſame project, dying in the midſt of it, the whole fell to the ground, and the Perſians were freed from the troubleſome effects which threatened them from this new alliance [a].

IT was now thirty years ſince the Egyptians had ſhaken off the Perſian yoke under Amyrtæus, and had all along, upon all occaſions, ſignalized their averſion to the Perſian government. But Artaxerxes Mnemon being now at full leiſure to chaſtiſe them, they once more were threatened with

[y] Idem ubi ſupr. p. 438. Juſtin, lib. 6. c. 2. Oroſius lib. 3. [z] Theopomp. in Excerpt. Photii. Diod. Sic. lib. 15. p. 459. [a] Idem ibid.

with a cruel war. Great preparations were made on both ſides. Acoris joined a great number of Greeks and other mercenaries, under the command of Chabrias the Athenian, to his own ſubjects [b]; but, the Perſians being pretty dilatory in their proceedings towards this war, Acoris died before it commenced, and was ſucceeded by

PSAMMUTHIS, who reigned only a year [c]. Pſammuthis.

AFTER him NEPHEROTES (who is called the laſt of the Mendeſian race) reigned four months [d]; Nepherotes.

AND then NECTANEBIS, the firſt of the Sebennytic race *. In the ſecond year of his reign the Perſian army and fleet came upon his coaſts and borders, and made their attempts firſt upon Peluſium: but, Nectanebis having had time ſufficient to prepare himſelf, that city and adjacencies were ſo well provided for the reception of an enemy, that no impreſſion could be made there. The commanders on the Perſian ſide differing in their counſels, and entertaining jealouſies of each other's glory, they did nothing in this war; for, though they entered the Mendeſian mouth of the Nile, and poſſeſſed themſelves of the fortreſs that guarded it, and ſtruck the Egyptians with the utmoſt conſternation; yet they gave them time to recover heart again: For Nectanebis lodged a ſufficient gariſon in Memphis, and taking the field, with the reſt of his forces, ſo annoyed Pharnabazus the Perſian general, that he could make no conſiderable progreſs up the country; and the Nile, at the accuſtomed period, overflowing the land, the Perſians were obliged to march off; which they did not without conſiderable loſs [e]. Thus ended this war. Year of the Flood, 2618. Year before Chriſt, 379. Nectanebis.

ABOUT five years afterwards, Ageſilaus king of Sparta came as an ambaſſador to Nectanebis, to ſolicit ſuccours for the Lacedæmonians, then driven to great diſtreſs by the Thebans [f]. Seven years after this Nectanebis died.

TACHOS ſucceeded him. He gathered together all the ſtrength he was able, to defend his country againſt the ambitious deſigns of the Perſians, who, notwithſtanding their many miſcarriages, had not laid aſide the thoughts of ſubjecting Egypt to their dominion once more. To ſtrengthen himſelf the more he ſent to Greece to raiſe mercenaries; and ſucceeded ſo well in his application to Year of the Flood, 2630. Year before Chriſt, 367. Tachos.

[b] Idem ubi ſupr. p. 471. [c] See before, ch. 3. ſect. 3. dyn. 29. [d] See before, ibid. * See before, ibid. [e] Diod. ubi ſupr. p. 478, 479. Cornel. Nepos, in Iphicrate. [f] Plutarch. in Ageſilao.

His impolitic conduct towards Agesilaus.

the Lacedæmonians, that they dispatched a good number of forces to him, under the command of Agesilaus [g]. Tachos had promised this king, that he should be generaliſſimo of all the forces; but, upon the first interview, he conceived such disadvantageous ideas of the old gentleman, that he thenceforward slighted his counsels, and despised his person. He expected to have seen a gay and magnificent man, whose habit and train were equal to the fame and splendor of his exploits, and not a plain, mean-looking, old man. This hasty and ill-grounded impression may be properly enough said to have been the ruin of Tachos, as will be plainly seen. For Tachos allowed Agesilaus to be nothing but general over the mercenaries at land, which alone had been sufficient to disgust so great, so old, and so experienced a commander, and was the first cause of his aversion to Tachos. The command of the fleet he gave to Chabrias the Athenian, reserving to himself the supreme dignity over all. Having joined his mercenaries and Egyptians together, he marched out of Egypt, designing to attack the Persians in Phœnicia, contrary to the advice of Agesilaus, who represented to him the unsettled state of Egypt, and remonstrated how much more it would be for his interest to manage the war by lieutenants, and stay himself in his kingdom. The event

Is driven out of his kingdom.

shewed, that Agesilaus's counsel was the result of a very prudent forecast; for while Tachos was in Phœnicia the Egyptians revolted, and set up his kinsman Nectanebus in his stead. Agesilaus, taking this opportunity to vent his resentment against Tachos, joined Nectanebus, and deprived the other of his kingdom, who fled through Arabia, and went to the king of Persia.

Year of the Flood, 2630. Year before Christ, 367.

Nectanebus the last king of Egypt.

NECTANEBUS was scarce seated on the throne, when a Mendesian rose up in opposition to him, with a force consisting of 100,000 men. Nectanebus was now advised by Agesilaus to fall on them immediately, and disperse them before they had formed themselves into a regular body by discipline: but he took it into his head, that Agesilaus intended to betray him, as he had betrayed Tachos, and therefore gave no ear to him. In the mean time, the enemy gathered strength and regular order every day, and became so formidable a body, that Nectanebus was constrained to shut himself up in one of his towns, and endure a siege. He would now have urged Agesilaus to sally out upon

A rebellion against him.

[g] Idem ibid. Diod. ubi supr. p. 506.

upon the beſiegers, that, putting them into diſorder, he might in the mean time march out himſelf and take the field: and becauſe he refuſed to comply, Nectanebus grew more and more jealous of him. The enemy had run their lines almoſt round the town; which when Ageſilaus perceived, he told Nectanebus, that now was his time to ſally out; that by the lines the beſiegers had raiſed, they would not be able to encompaſs him; and that the gap, which was not yet filled up, was wide enough for him to march through with ſafety and convenience. Hereupon a battle enſued, in which the beſiegers were defeated; and the remaining part of the war being left to the management of Ageſilaus, Nectanebus's competitor was every where driven out of the field, and at length taken priſoner. And thus was Nectanebus ſettled in the full and quiet poſ- which is quelled.

ry good barrier, ſeeing the Perſian forces could not ap- Perſians.
proach his borders, but by marching through Phœnicia. Therefore, to keep up their ſpirits, Nectanebus detached a body of four thouſand Greek mercenaries, under the command of Mentor the Rhodian, to join them, in hopes to manage the war at a diſtance. The Phœnicians, encouraged by this ſupply, drove the Perſians out of their territories [i]; and, immediately after, the Cypriots made themſelves of the alliance againſt Perſia [k]. Darius Ochus, finding that his lieutenants made no progreſs in the ſuppreſſion of theſe revolters, reſolved to head his troops in perſon, keeping his eye chiefly upon Egypt. Mentor the Rhodian, when he heard this and the prodigious numbers of the Perſian army, went over to the king of Perſia, by whom he was kindly received, as one who might do him ſignal ſervice by his knowledge of the country of Egypt, and every thing that related to it: but we are not now on the affairs of Perſia, which will be particularized in their proper place; let us therefore turn our eyes towards Nectanebus. When he found that the king of Perſia was tho-

[h] Idem ibid. Plutarch. ubi ſupr. [i] Diod. lib. 16. p. 531, 532, 533. [k] Idem ubi ſupr. p. 532.

thoroughly reſolved to ruin him, and that he was by all means endeavouring to do it without interruption, and effectually, he got together an army of 100,000 men, conſiſting of 20,000 mercenaries from Greece, as many from Lybia, and the reſt Egyptians; but all of them did not amount to a third part of the Perſian army. With ſome of them he gariſoned his frontier-towns, and with the others he guarded the paſſes through which the Perſians were to march. The Perſian detached three bodies from his army. The firſt of them, commanded by Lachares the Theban, ſat down before Peluſium, gariſoned by five thouſand Greeks. The ſecond, under the command of Nicoſtratus the Argive, embarked on board a ſquadron of the Perſian fleet, and ſailing up the Nile into the midſt of the country, landed there, and made a ſtrong encampment. Hereupon the whole country being alarmed, Clinius of the iſland of Cos muſtered all the neighbouring gariſons, and offered to diſlodge Nicoſtratus from his intrenchments. This led them to a battle, which was fought with great obſtinacy; but at laſt the Egyptians gave way, having loſt Clinius and five thouſand more of their number, and were utterly broken and diſperſed. The loſs of this battle was the ruin of Egypt. For when Nectanebus heard it, he drew off from the paſſes, where he had very prudently poſted himſelf, and marched for Memphis to defend that city againſt Nicoſtratus, whom he feared had a deſign upon that capital with his victorious fleet and army. When the Greek gariſon in Peluſium heard that Nectanebus had deſerted his poſt, they thought there was no further room for hope; and therefore they came to a parley with Lachares, and delivered up the city to him, upon condition that they and their effects ſhould be ſafely conveyed to Greece. Mentor the Rhodian, who commanded the third body of the Perſian detachment, finding the paſſes unguarded, entered the country through them, and cauſing it to be univerſally ſpread abroad, That Ochus would graciouſly receive all that ſubmitted; but utterly cut off ſuch as reſiſted, as he had been known to have done before; both the Egyptians and the Egyptian Greeks ſtrove which ſhould make the moſt humble and ready ſubmiſſion. This when Nectanebus ſaw, he was driven to deſpair, and taking what treaſure he could carry with him, he fled from his palace in Memphis into Ethiopia, and never returned more. He was the very laſt Egyptian that ever governed Egypt, which has ever ſince been

Is invaded by the Perſians,

and flies into Ethiopia.

been under foreign ſubjection. Nectanebus loſt his kingdom by relying too much on himſelf. He, as has been ſhewn, was ſeated on the throne by Ageſilaus: his wars againſt Perſia (for they were always attempting a reduction of Egypt) were managed by the prudence and valour of Diophantus the Athenian, and Lamius the Lacedæmonian; but, arrogating to himſelf a ſhare of their ſucceſſes, he took upon him to act by his own ſuggeſtions [l], and ſo brought ruin upon himſelf, and ignominy and ſlavery upon his ſubjects, even to this day. For henceforward Egypt was a province of Perſia, till Alexander ſubverted that monarchy, and was received by the Egyptians with open arms, as their deliverer from the Perſian tyranny. They never had any tolerable underſtanding with that nation; which, it is likely, may have purely, if not chiefly, been owing to the wide difference between them in religious matters. We now conclude this ſection with the ſevere prediction of the prophet; *There ſhall be no more a prince of the land of Egypt* [m].

SECT. VI.

The ſucceſſion of the kings of Egypt, according to the oriental hiſtorians.

AS the oriental hiſtories differ entirely from the Greeks in their accounts of the Egyptian affairs, it may be perhaps deemed an omiſſion, if we ſhould take no notice of the ſeries of the kings of Egypt given us by the Eaſtern writers. Wherefore we ſhall ſet down their names, and briefly mention their principal actions, leaving the reader to judge what credit ought to be given thereto.

SOME [n] write, that before the flood Nakraüs, or Bakraüs, the ſon of Meſr, the ſon of Tarakil, the ſon of Zarayîl, the ſon of Aryân, the ſon of Adam, when contention and violence began to reign among mankind, retired into Egypt with ſeventy eight perſons, and finding it a fine fruitful country, ſettled there, and built a city on the banks of the Nile, which he called after the name of his father. But this city, others ſay, was built after

[l] Idem ubi. ſupr. p. 534, 535.
[m] Ezek. xxx. ver. 13.
[n] Al Soyuti.

after the flood, as will be observed by and by; and that the kings who reigned in Egypt before that destruction, were of the race of Cain. Their names follow.

Antediluvian kings of Egypt.

1. NAKRAUS called also Amasûs; who reigned 180 years.

2. NATRAS, son of Nakraüs, built several cities.

3. MESRAM, brother of Natrâs. These three princes are said to have been great diviners and magicians.

4. AICAM also practised divination. In his reign Edrîs, or Enoch, was translated.

5. ARYAK, son of the preceding prince. In his time the angels Harût and Marût, it is said, came down from heaven [o].

6. HASILIM, who first invented and built a nilometer.

7. HUSAL. In his reign Noah was born.

8. TEDARSAN, son of Hûsál, was the first who cut canals from the Nile.

9. SARKAK.

10. SAHLUK, his son.

11. SAURID, son of Sahlûk. This prince, as the Copts affirm, built the pyramids, and lies buried in one of them, with all his treasures [p].

12. HUJIB, brother of Saurîd; who, as the same people assure us, is buried in the next pyramid [q].

13. MANUS, or Mankaüs.

14. AFRUS, his son.

15. MALINUS, son of Afrûs.

16. PHARAOH, cousin of the last prince; who perished in the flood.

AFTER the flood, Kibt, or Kût (which we imagine to be a mistake for Phût,) one of the sons of Ham, founded a monarchy in Egypt; and the greater part of that nation were his descendants [r]. But after the dispersion, Ham himself went into Egypt, and there begat Beisar; who having settled near the place where he afterwards built Mesr, was declared by the idolatrous inhabitants of the country king of Monf, or Memphis, the most ancient city of Egypt, and the royal seat in the time of Joseph.

Kings

[o] See before, ch. 1. sect. 4. par. 23. in the notes. [p] See before, ch. 3. sect. 1. par. 49, 50. [q] Ibid. [r] Ebn Shohnah.

Kings of Egypt after the deluge.

1. BEISAR, the ſon of Ham, built Meſr; being aſſiſted therein by Cancahendi, or Cancah, the Indian, a perſon famous for his great learning and knowledge in nature, and the inventer of ſeveral noble arts; by whoſe ſkill in architecture this prince erected many magnificent ſtructures.

2. MESR, the ſon of Beiſar, ſucceeded his father. He was ſo named becauſe he happened to be born while the city of Meſr was building. This prince was employed, during his whole reign, in building cities, and warring againſt his enemies. It is ſaid, he divided Egypt among his ſons, giving the middle part to Kift, the upper to Aſhmun, and the lower to Athrîb and Sa.

3. KIFT, or Kibt aſcended the throne on the death of his father Meſr; and from him the Copts received their name.

4. ASHMUN (who ſeems to be the ſame with Eſmunus, or Æſculapius [s],) ſucceeded his brother; though ſome reckon him not among the kings. From him the city Aſhmunain in the upper Egypt took its name.

5. ATHRIB, the ſon of Meſr, built Ain Shams, or Heliopolis, ſome miles diſtant from Meſr. Athribis, the capital of a nome in the lower Egypt, was ſo called from this prince.

6. SANA, or Sa, another ſon of Meſr, is ſuppoſed to have built the city Saïs; and was the firſt who made laws, and eſtabliſhed rules for the government of the ſtate.

7. TEDARIS, or Edris.

8. MALIK.

9. KHARAYA, the ſon of Malîk.

10. KELKELI, the ſon of Kharâya, a wiſe and potent prince. Some ſay, he was the firſt who introduced the uſe of magic, which, others tell us, was firſt taught Solomon by the Genii.

11. HARBIYA, the uncle of Kelkeli; of whom nothing is recorded, but that he was an infidel, and very wicked.

12. TULIS was as bad as his predeceſſor, and a great lover of women; to obtain whom he ſcrupled not, on occaſion, to uſe force. In his reign Abraham came into Egypt, and knowing the king's character, to preſerve the honour

[s] See before, ch. 2. ſect. 3. not. P.

honour of his wife Sarah, ſhut her up in a cheſt, thinking to paſs the guards poſted at the city gate by that means; but they, opening the cheſt, and finding a beautiful woman in it, carried her before the king. Tulis no ſooner ſaw her, than he determined to enjoy her; but was not able to effect his purpoſe, being ſuddenly ſtruck with frigidity; ſo that after he had in vain attempted it thrice, he was obliged to deſiſt, and ſent her back to her huſband, having given her Hagar for a maid-ſervant, as ſome reparation for the affront he had offered her; but ſtill continued an infidel.

13. JURIAK Khatûn, daughter of Tulís.

14. DHALKA, or Zalkâ, daughter of Manûn Khatûn. This princeſs being unable to defend her kingdom, Walîd, the ſon of Thardân, king of the Amalekites, who originally dwelt in Syria, took that opportunity of invading Egypt; and, having ſubdued the Copts, ſeized the crown. Theſe Amalekites ſeem to have been the ſame people who are by the Greek hiſtorians ſtiled Shepherds; whoſe invaſion of Egypt was, in all probability, a famous piece of hiſtory in the eaſt.

15. WALID, the firſt king of Egypt, of the race of Amalek, took the ſurname of Pharaoh, which in the Coptic tongue ſignifies King, and was uſed by all his ſucceſſors. He is ſaid to have been an impious man, and rebellious againſt GOD; and delighting too much in hunting, and paſſing his time abroad and in the deſarts for the ſake of that exerciſe, he was at length ſlain.

16. RIYAN, the ſon of Walíd, ſucceeded his father; and firſt dwelt at Ain Shams, but afterwards removed to Memphis. In his reign Joſeph was ſold into Egypt, and having lain in priſon twelve years, was at length delivered thence, on his interpreting of a dream, and, being brought to court, was made Wazir (or Viſir) in the room of Kolfair, and had the management of the whole kingdom put into his hands. This Riyàn is reported to have embraced the true religion, and to have been a ſtrict adminiſtrator of juſtice. One author [t] tells us, that he ſpoke no leſs than ſeventy different languages; in every one of which he put queſtions to Joſeph, who anſwered him in the ſame. This prince flouriſhed four hundred years before the Pharaoh of Moſes.

17. DA-

[t] Kitab Tafafir.

17. DAREM, the ſon of Riyân was an impious perſon, rebellious againſt heaven, and exceſſively proud; for which he was, by a juſt judgment of GOD, drowned in the Nile.

18. CATHIM, the ſon of Mádân, an Amalekite, was famous throughout the world for the magnificent buildings erected by him. Some aſcribe the pyramids to this prince; adding, that thoſe ſtructures being in after-times propoſed to be demoliſhed, for the ſake of the treaſures hidden in them, that deſign was laid aſide, on a remonſtrance of the wiſe men of the country; who made it appear, that the riches, which might be found in them, would not countervail the charge of pulling them down. Cathim was the laſt king of Egypt, of the race of the Amalekites.

SOME writers ſay, that the Wazir of Cathim ſucceeded to the crown, and was the Pharaoh of Moſes; but the more exact, leaving out both theſe laſt princes, tell us, that Riyân was ſucceeded by his grandſon.

19. KABUS, the ſon of Maſáb [u], who being invited by Joſeph to embrace the true religion, refuſed, and died ſoon after that patriarch. Some hiſtorians will have Kabûs to be the Pharaoh of Moſes, pretending, that he lived ſix hundred and twenty years, and reigned four hundred; which is more reaſonable, at leaſt, than the opinion of thoſe who imagine his father Maſáb, or his grandfather Riyân, to have been that Pharaoh [w],

20. WALID, the brother of Kabûs, is generally ſuppoſed to be that king of Egypt with whom Moſes had to do, and who was drowned in the red ſea. Moſt of the commentators on the Korân tells us, this prince was an Arab, of the tribe of Ad, or, as others ſay, of Amalek, who were alſo Arabians; though ſome pretend he was of Coptic deſcent. What the oriental authors write concerning this Pharaoh, and his conteſts with Moſes, we may take notice of in another place.

21. DALUKA, ſurnamed al Ajûz, or the old woman, of the royal blood, ſucceeded the Pharaoh who periſhed in the red ſea. This queen is ſaid to have been the moſt expert woman of her time in magic. She lived an hundred years; and encompaſſed the city of Meſr with walls, which were looked on as one of the wonders of the world; and ſome attribute the pyramids to her.

22. DARKUN,

[u] Ibid. [w] Kitab Taffir Lebab, et al Keſhaf.

22. Darkun, the ſon of Maltûs, came to the crown very young; and, being of an illuſtrious family among the Copts, was greatly beloved and reverenced by his ſubjects.

23. Tardas reigned a long time.

24. Lofash ſucceeded; but who he was is unknown.

25. Marina.

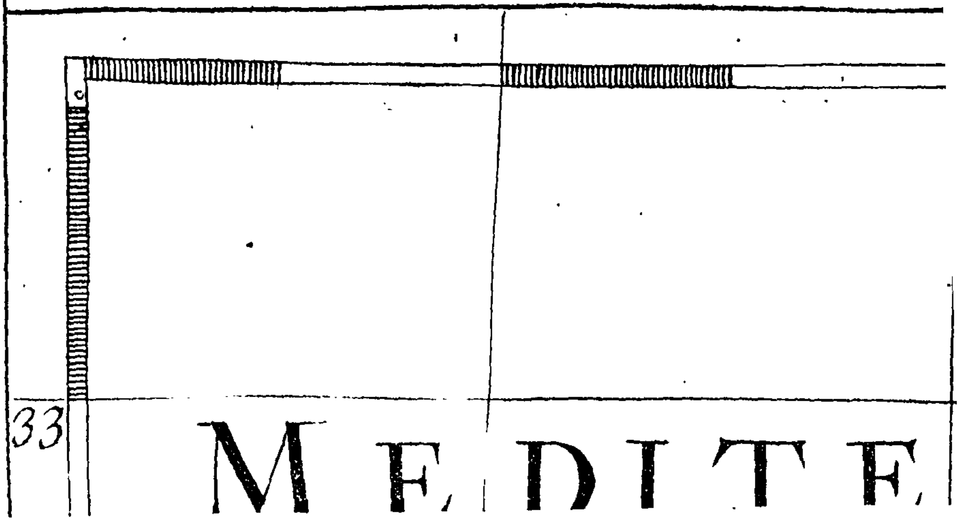
26. Malus.

27. Manakil.

28. Bula. The actions of theſe ſix laſt kings are not recorded; and there ſeems to be an omiſſion of ſome intermediate princes; as alſo between the two following.

29. Ashyaf; or, as Ebn Shohnah more correctly writes the name, Shiſhâk, was contemporary with Solomon; and after his death took Jeruſalem, and greatly diſtreſſed the Iſraelites.

30. Pharaoh, ſurnamed al Araj, or the lame. In his time Nebuchadnezzar, governour of Babylon, led an army of 600,000 men againſt Jeruſalem, and ſlew a third part of the Iſraelites, carried a third part of them into captivity, and impoſed a tribute on the remaining third. But many of them flying into Egypt, he purſued them thither, and demanded them of Pharaoh; who refuſing to deliver them up, Nebuchadnezzar beſieged his capital city Meſr; and having taken it, hanged him. Then he burnt and demoliſhed the city, and proceeded forward into Africa. Meſr, they ſay, remained deſolate forty years; but was afterwards rebuilt, and the nation ruled by governours, who reſided there, firſt for the kings of Perſia of the ſecond race, called Cayânians; then for Alexander, who conquered Perſia: afterwards for the Greek kings, or Ptolemies; and at length for the Romans, and the Chriſtian emperors of Conſtantinople, who held Egypt, till it was ſubdued by Amru Ebn al As, a general of Omar, the ſecond Khaliff, or ſucceſſor of Mohammed; ever ſince which that kingdom has been in the hands of Mohammedan princes [x].



There is a ſeries of the kings of Egypt, ſomewhat different from this, given by a Jewiſh hiſtorian [y]: but as the names are moſt of them corrupted, and ſeem to have been originally taken from the Arab writers, we ſhall not trouble the reader with them; having perhaps already ſaid too much of ſo apocryphal a piece of hiſtory.

CHAP. IV.

The Hiſtory of the Moabites, Ammonites, Midianites, Edomites, Amalekites, Canaanites, *and* Philiſtines.

SECT. I.

The Hiſtory of Moab.

DESIGNING in this chapter to write the hiſtories of thoſe nations with whom the children of Iſrael had to do, before, or upon, their ſettling in the land of Canaan, we ſhall begin with that of the Moabites. The deſcent of the Moabites.

THIS people were deſcended from Moab, the ſon of Lot, by his eldeſt daughter: but, before we mention the occaſion of that inceſt, it may be proper to take the hiſtory a little higher.

LOT was the ſon of Haran, the brother of Abraham [z] and after his father's death was brought by his grandfather, Terah, together with the reſt of his family, from Ur of the Chaldees, their native city, to Haran in Meſopotamia; where Terah dying, Abraham afterwards took his nephew under his protection, and, as Joſephus tells us [a], adopted him, deſpairing of any children of his own. He therefore carried him with him into Canaan [b]; where, after they had dwelt ſome time, they were obliged by a famine to go into Egypt [c]; ſoon after their return from whence, they parted; for their flocks and herds were ſo much encreaſed by this time, and their ſubſtance was ſo great, that they could not dwell together any longer; the paſture and water not being ſufficient for both; which occaſioning diſputes between their herdſmen, Abraham propoſed, to prevent any miſunderſtanding between ſo near relations, that they ſhould ſeparate; and gave Lot the choice of removing to what part of the country he thought fit. Whereupon Lot choſe the plain of Jordan, lying eaſtward of Bethel and Ai, between which [z] The life of Lot their anceſtor.

Abraham

[z] See before, ch. 2. ſect 2. at the latter end. [a] Antiq. l. 1. c. 7. [b] Gen. xii. 4, &c. [c] Gen. xii. 10. & xiii. 1.

Abraham and he then dwelt, and which, at that time, before the terrible destruction of Sodom and Gomorrah, was so fruitful and well watered, that it is compared to the land of Egypt, and even to Paradise it self [d]. To this delightful plain or valley therefore Lot came, and pitched his tent not far from Sodom, infamous for the unnatural wickedness of its inhabitants; and afterwards dwelt in the city it self [e]: but that city, with others in the same plain, being not long after taken by Chedorlaomer and his allies, Lot, who, as Josephus tells us [f], assisted the Sodomites, had the misfortune to be taken by the enemy, with his family and all his substance; and had been carried into captivity, had he not been timely rescued by Abraham, who not only delivered him, but recovered all his goods [g]. Notwithstanding this warning, and the abominable wickedness of the inhabitants, Lot still continued to live in Sodom, and had perished in the fearful catastrophe of that people, if he had not been miraculously preserved, and that partly for Abraham's sake [h]. Two angels, who were sent to destroy the place, came to Sodom in the evening, in the appearance of travellers; and Lot, sitting in the gate, no sooner saw them, than he invited and pressed them to be his guests that night, according to the hospitality of the eastern nations. They had scarce refreshed themselves, when the inhabitants of the city, both old and young, being informed that Lot had strangers with him, and in all probability tempted by the beautiful forms which the angels had assumed [i], encompassed the house, and demanded them to be delivered to them, that they might abuse them. Lot endeavoured to dissuade them from their purpose; and, rather than violate the rights of hospitality, offered to give up his two virgin daughters to their discretion, if they would not molest his guests; but, instead of accepting this offer, they came to violence, and pressed forward to break open the door: whereupon the angels suddenly pulled Lot into the house, shut the door, and struck the riotous assembly with blindness (A); so that they sought in vain to find the door, till they were tired.

Whilst

[d] Gen. xiii. 10. [e] Gen. xiv. 12. [f] Antiq. l. 1. c. 10. [g] Gen. xiv. 16, &c. [h] Gen. xix. 29. [i] Joseph. Antiq. l. 1. c. 11.

(A) It is a very probable opinion, that those men were struck, not with actual blindness, but with a dizziness, which disturbed their

WHILST they were thus buſied, the angels acquainted Lot with their commiſſion; that they were ſent to execute the divine vengeance upon that ſink of iniquity; and adviſed him, if he had any friends, for whoſe ſafety he was concerned, that he would immediately let them know their danger, and warn them to depart in time. Whereupon Lot, before it was light, went to his ſons-in-law, to whom his daughters were contracted (B), and, telling them what they muſt expect if they ſtaid longer in the city, earneſtly perſuaded them to leave it: but they, thinking he either laughed at them, or was out of his wits, rejected his advice [k].

THIS circumſtance is the only one which Moſes mentions of Lot's admoniſhing his fellow-citizens; though it is probable this juſt perſon omitted no opportunity of endeavouring their reformation; for it is ſaid, that *in ſeeing and hearing he vexed his righteous ſoul from day to day with their unlawful deeds* [l]: which words give countenance to the tradi-

[k] Gen. xix. 1—14. [l] 2 Pet. ii. 8.

their ſight, and repreſented objects falſely, and in confuſion (1), as were the Syrians, who were ſent to take Eliſha (2): and this is the ſenſe of the Septuagint. The author of the book of Wiſdom ſuppoſes ſome change in the air, ſaying, that they were compaſſed about with horrible great darkneſs, which he compares to that with which Moſes plagued the Egyptians: he adds, that they could not even find the way home; but every one ſought the paſſage of his own doors (3).

(B) The Septuagint, Syriac, Arabic, and other tranſlations, and ſome of the Rabbins ſuppoſe, theſe were the huſbands of other daughters of Lot, who were married, and had left their father's houſe: which ſeems to be confirmed by the angels ordering Lot to take with him his wife and his two daughters which were there preſent (4). But the original words, which in our verſion are rendered his ſons in law which married his daughters (5), may be tranſlated, according to the interpretation of Onkelos, his ſons in law, which were to marry, &c; the contract having been paſſed, but the marriage not conſummated; and there is no mention in ſcripture of any daughters Lot had, except the two who were ſaved with him; but if he had, they muſt have periſhed with their huſbands.

(1) Vide Auguſtin. de civit. Dei. l. 22. c. 19. Heidegg. Hiſt. Patr. T. 2. Exerc. viii. § 16. Cleric. in Loc. (2) 2 Kings vi. 18. (3) Wiſd. xix. 17. (4) Gen. xix. 15. (5) Ibid. ver. 14.

traditions, adopted afterwards by Mohammed, of Lot's being ſent to preach to the inhabitants of Sodom [m].

Lot not having been able to prevail on his ſons-in-law to ſave themſelves; as ſoon as it was day-break, the angels ordered him immediately to depart, with his wife and two daughters, leſt they ſhould be involved in the common ruin: but he delaying to go, being probably intent on preſerving ſome of his moſt valuable goods, the angels haſtily laid hold on them, and brought them out of the city, commanding them to make a ſpeedy eſcape, for that their lives were in danger; and in particular directed them not to look behind them, nor to ſtay in the plain; but to make the beſt of their way to the mountains. Upon which Lot, conſidering the mountains were at a good diſtance, began to fear, he could not reach them time enough, and begged, he might be permitted to eſcape to a ſmall city not far from Sodom, then called Bela, but from this accident Zoar, or the little, which was elſe to have been deſtroyed with the other cities of the plain. This requeſt was granted; and the angels promiſed him, that their commiſſion ſhould not be executed till he got thither; which he did by ſun-riſe. Immediately upon which the fearful deſtruction of thoſe cities enſued: and Lot's wife, contrary to the expreſs command of the angel, looking back, was changed into a pillar of ſalt [n] (C), which Joſephus [o] tells

[m] Korân, c. vii. ver. 81. c. xxvi. ver. 159. c. xxvii. ver. 55. c. xxix. ver. 28, &c. [n] Gen. xix. 15—26. [o] Antiq. l. 1. c. 11.

(C) It is not agreed by commentators what was the crime for which Lot's wife was thus ſeverely puniſhed. Some are of opinion, ſhe deſerved it meerly for diſobeying the command of the angel, and expreſſing too much concern for a people who deſerved no compaſſion (6): which yet ſhe might be the more apt to entertain, as ſhe was probably a native of Sodom (7), and had near relations among them. Others ſay, that being anxiouſly ſolicitous for her daughters, who were married there, and turning about to ſee whether they followed her, ſhe ſaw the divine Shechinah, or majeſtic appearance of God, deſcending to deſtroy the place; which was the occaſion of her metamorphoſis. The writer

(6) Joſ. Ant. l. 1. c. 13. Heidegg. ubi ſupr. § 18. p. 23.
(7) Targum Hieroſol.

tells us was remaining in his days, and that himſelf had ſeen it.

AFTER

writer from whom we take this, calls her Adith (8). Mohammed, from ſome traditions he met with, goes farther, and repreſents her as rebellious to her huſband (9); and the commentators of the Korân, who name her Waïlah, ſay, ſhe was in confederacy with the Sodomites; telling them her huſband was diſtracted, and giving them notice when any ſtrangers came to lodge with him, by a ſign of ſmoke by day, and of fire by night (10); or, according to others, by knocking at the wall, and crying, Give me ſome ſalt (11). Others, however, think the ſcripture does not repreſent the fate this woman met with as a puniſhment for any crime; but ſuppoſe it meerly accidental, as will be obſerved immediately.

The manner of her transformation or death is alſo differently apprehended. From the various acceptations of the word we render pillar, ſome have fancied ſhe was turned into an heap of ſtones (12); others into a pillar (13), without any reſemblance of human ſhape; and a third party have imagined ſhe was changed into a ſtatue (14), having the perfect form of a woman. Nor is there any better agreement as to the matter of this monument, than the figure of it. Some ſuppoſe it to have been of rock ſalt, which laſts a long while, and is not ſubject to be waſted or diſſolved by the weather, as common ſalt is (15). Aben Ezra is of opinion, that Lot's wife was burnt with fire mixed with ſalt; and Grotius is of the ſame ſentiment (16). But others think the word ſalt does not relate to the matter of the pillar or ſtatue, but either deſcribes the place where it ſtood; and then the meaning of the paſſage is no more, than that it was in a ſalt, or barren ſoil (17); or elſe that it ſignifies only the permanency of the ſtatue's duration; as a covenant of ſalt is elſewhere (18) uſed to expreſs a laſting, or perpetual covenant (19). Hence the Rabbins take occaſion, according to their cuſtom, to carry the matter farther, and ſay this ſtatue was deſigned for an everlaſting monument of divine juſtice, and ſhall remain till the day of judgment (20). They add, that though it is continually licked by the cattle, yet it is always miraculouſly repaired again (21); that it has not only the lineaments of a woman, but alſo the diſtinction of ſex, and

AFTER this cataſtrophe, Lot ſtaid not long in Zoar, fearing ſome further misfortune; but went with his daughters to the mountains on the eaſt of the dead ſea, and dwelt in a cave there. In this ſolitude the two young women ſeeing no hopes of their ever being married (D), and

regular purgations, as if it were alive (22): which fable has been ſwallowed by ſome Chriſtian writers (23). Some late commentators (24), after all, think, that there was no miraculous metamorphoſis at all in the caſe; but that ſhe either turned back out of curioſity to ſee the burning nearer, and ſo periſhed in the dreadful ſhower, or by ſome poiſonous vapour; or elſe that the horror of the ſight, when ſhe looked back, and plainly beheld the terrible deſtruction of a place ſhe had but juſt quitted, ſtruck her ſtiff, and motionleſs like a ſtatue, and that ſhe died of the fright. And as to what is urged from Joſephus (25), and ſome books of travels (26), that this ſtatue or pillar was many ages after, or is now to be, ſeen, it is anſwered, that Joſephus might be deceived therein, as many others have been, and daily are, in things of this nature: which really ſeems to have been the caſe; becauſe the more intelligent and credible travellers ſay they could never ſee it; and when they have aſked the people of the country after it, they either aſſured them there was no ſuch thing (27), or pretended it ſtands ſomewhere in the mountains, where the acceſs to it is very dangerous, becauſe of the wild beaſts and ſerpents, but more ſo on account of the Arabs (28).

(D) Several writers (29) excuſe this act of Lot's daughters, by ſuppoſing what they did was for the reparation of mankind, which, as they thought, had been utterly deſtroyed, and none left, except their father and themſelves. But there is no manner of foundation for ſuch an opinion; wherefore St. Auſtin very juſtly condemns the action, ſaying, they ought never to have been mothers, rather than to have made ſuch uſe of their father (30). One of theſe daughters a Jewiſh writer calls Pelotith (31).

and being very deſirous of having children, to want which was reckoned a great reproach and ſcandal in thoſe days, plotted together to deceive their father, and have iſſue by him. Accordingly they put their project in execution; and making him drink wine plentifully one evening, the eldeſt daughter lay down by him the firſt night, and the old man knew not when ſhe lay down, nor when ſhe aroſe: not that we ſuppoſe he was ſo far overcome as not to be ſenſible of what he did, which would have rendered him rather unfit than fit for their purpoſe; but he knew not who it was he lay with, imagining, probably, that it was a ſervant, to make uſe of which was then reckoned no crime. The next night they imployed the ſame artifice, and the youngeſt took her turn. They both proved with child; and from this inceſtuous commerce proceeded two ſons; that of the eldeſt daughter was therefore named Moab, ſignifying (though not in pure Hebrew, yet perhaps in ſome dialect of that tongue) *Of a father*, and was the progenitor of the people we are now ſpeaking of [p].

Of the country poſſeſſed by the Moabites.

THE poſterity of this perſon ſettled in the country bordering on the mountain where he was born, which ſome authors make part of Cœle-Syria [q], others of Arabia [r]; and, having driven out the old inhabitants, poſſeſſed a large tract, thence called Moabitis, or the land of Moab, bounded on the weſt by the mountains, on the eaſt of the lake Aſphaltites, or the Dead-Sea, and by the river Jordan; on the north by the country poſſeſſed by the Ammonites, the deſcendants of Lot by his younger daughter; on the ſouth by the brook, or little river, Zered, which runs into the Dead-Sea, and by the countries of Midian and Edom; and on the eaſt by the deſarts of Arabia; which tract might be about forty miles long, and as many broad. This country, which is chiefly mountainous, intermixed with vallies proper for paſturing of cattle, was given by GOD to the children of Moab; and the Iſraelites, notwithſtanding the great provocations they received from them, were expreſly forbidden to diſturb them [s]. However, by the time of Moſes, the Amorites, who had poſſeſſed themſelves of great part of the land of Ammon, took alſo the adjoining part of the land of Moab, reducing their limits on that ſide to the brook Arnon, called alſo the river of Gad [t], which empties itſelf

[p] Gen. xix. 30—37. [q] Joſeph. Antiq. l. 1. c. 12. [r] Stephan. de urb. in Μωάβ. [s] Deut. ii. 9. Judg. xi. 15. [t] 2 Sam. xxiv. 5.

into the lake Asphaltites, and before passed through the midst of their territories. This the Israelites, seizing on as part of Sihon's kingdom, which was theirs by right of conquest, keep it for several centuries, till recovered by the Moabites, when they brake into the borders of Reuben and Gad, on the declension of the kingdom of Israel, as will be observed hereafter.

THE chief city of Moab was Ar [u], situate on the river Arnon, called also Rabbah [w], or, The Great; and, to distinguish it from a city of the same name in the land of Ammon, Rabbath Moab [x]. In after-times it was called Areopolis [y], by addition of a Greek word signifying a city. The other cities of Moab were Mizpeh, Luthith, Horonaim, and some others, whose situations are not certainly known.

Their government, customs, &c.

THE customs and manner of life of these people we know very little of. They were governed by kings, used circumcision [z], and seem to have employed themselves mostly in pasturage and breeding of cattle, wherein their riches chiefly consisted. They were one of the nations whose good the Jews were forbidden to seek [a]; nor were they to be admitted to intermarry with the Israelites, even to their tenth generations [b]. However, they appear to have cultivated a good understanding with that people after their settlement in Canaan, as appears from the sojourning of Elimelech there [c], and the reception David met with in his troubles at Mizpeh [d]. What language they used we cannot say; but suppose they spoke a dialect of the Canaanitish, or Hebrew.

Their religion.

THAT this people had once the knowledge of the true GOD, we may not only conclude from the piety of their great ancestor, who, without doubt, instructed his offspring in their duty, but it appears from scripture; for they retained this knowledge till the time of Moses, even after they had monstrously corrupted their religion by introducing the worship of false gods [e]; which they seem to have done pretty early, though the time cannot be fixed.

THE idols of the Moabites taken notice of in scripture are Chemosh [f] and Baal-peor [g], sometimes simply Peor [h]; or,

[u] Deut. ii. 9. 18. 29. Numb. xxi. 15, 28. Isaiah xv. 1, &c. [w] Josh. xiii. 25. [x] Hieron. in Moab. [y] Idem Ibid. [z] Jerem. ix. 25, 26. [a] Deut. xxiii. [b] Ibid ver. 3. [c] Ruth i. 1, 2. [d] 1 Sam. xxii. 3, &c. [e] See Numb. xxiv. 11. [f] Numb. xxi. 29. 1 Kings xi. 7. Jerem. xlviii. 13. [g] Numb. xxv. 1, and 3. [h] Ibid ver. 18. Josh. xxii. 17, &c.

or, as the Septuagint write the name, Phegor. But what gods theſe were, learned men are not agreed. St. Jerom ſuppoſes, that they were both names of one and the ſame idol [i]: and from the debaucheries into which thoſe fell who defiled themſelves with their worſhip, ſeveral writers, both ancient and modern, have repreſented them as obſcene deities, not much different from Priapus [k]. This opinion they endeavour to ſupport from the etymologies of the names, and fancy ſome filthineſs is employed therein (E). Others [l], however, imagine, that though the Iſraelites and Solomon were drawn in to worſhip thoſe idols by debauching themſelves with Moabitiſh women [m]; yet it does not thence follow, that any immodeſt ceremonies were uſed in their worſhip; nor are any ſuch mentioned in the moſt ancient authors [n]; and the etymologies, we think, are not much to be built on. Peor was the name of a mountain, where the high places of Baal [o], which word ſignifies no more than Lord, and was a title of the ſun, were ſituate;

[i] Hieronym. in Eſai. l. 5. [k] Idem in Oſeam, & contr. Joven. l 1. c. 12. Origen. in Numer. Homil. 20. Theophylact. in Hoſeam. Cumberland on Sanchon. p. 67, &c. [l] Selden de Diis Syris. Syntag. 1. c. 5. Cleric. in Numer. Patrick's Comment. on Numb. xxv. [m] Numb. xxv. [n] See Patrick's Comment. ubi ſupr. [o] Numb. xxiii. 38.

(E) Peor they derive from פער paar, to open, or ſtretch; becauſe they uſed an indecent poſture before the idol (*diſtendebant coram eo foramen podicis*,) and offered him dung; which the Jews pretend was the worſhip proper to this Idol (31). If this derivation be true, it was moſt probably a name of contempt impoſed by the Jews; and the naſty ceremonies they mention may have been invented to give ſome reaſon for the name.

Chemoſh, for want of a better etymology, they will have to come from the verb משש Maſhaſh, to feel: but Dr. Hyde derives it from the Arabic Khamuſh, which ſignifies gnats (though in the particular dialect of the tribe of Hodail), ſuppoſing it to have been an aſtrological Taliſman in the figure of a gnat, made to drive away thoſe inſects (32): and Le Clerc, who takes this idol for the ſun, from Camoſha, a root in the ſame tongue, ſignifying to be ſwift (33).

(31) Solom. Yarhi in Numer. 25. 3. Maimonides More Nev. part 3. c. 46. Vid. Philon. Jud. de nomin. mutatione, p. 1061. (32) Hyde de rel. vet. perſ. c. 5. p. 131. (33) Cleric in Numb. xxxi. 28.

and probably was added to that name by way of distinction, to denote the deity adored in that place [r], though he had probably also a temple in Beth-Peor, which stood in the plain [q]. Vossius [r] supposes Baal-peor to be Bacchus; and Dr. Cumberland [s] says he was properly called Meon, and will have him to be the same with Menes, Mizraim, and Osiris (F), who, according to his hypothesis, were all one and the same man [t]. Chemosh seems to have been a different idol. Nebo is thought by some to have been another deity of the Moabites. It was, without dispute, an idol of the Babylonians, and possibly the same with Mercury: but whether the Moabites worshipped it is not so certain. There was

[r] Theodoret ad Psal cv. Vid. Suid in Βεελφεγώρ. [q] See Josh. xiii. 17 & 20. [r] De idolatr. l. 2. c. 7. [s] On Sanchon. p. 67. [t] See before, ch. 2. sect. 3. latter end. [u] Isai. xv. 2. Jerem. xlviii. 1——22.

(F) This learned prelate supposes Peor was not his true name; and finding Baal-Meon (34) and Beth-Meon (35), and Beth-Baal-Meon (36), mentioned in scripture, as a place lying within the old territories of Moab, concludes Meon was the proper, or honourable, title of this deity, whom he will have to be the same with Osiris, because of the obscene processions used in honour of the latter, agreeing very well with the immodest ceremonies used in the worship of the former, and from the affinity between the names of Meon and Menes, The chief reason he gives, why Meon was the name of an idol, and the same with Peor, are, 1. The Septuagint and Arabic versions have Meon for a proper name or title of a deity (37). 2. The Targum of Jonathan (38) calls Baal-Meon a city of Balak in which Israel destroyed the idol Peor in the house of altars. 3. Meon was so great a title of honour, that it is given to God himself in scripture (39), though it is translated dwelling-place. But we think nothing can be concluded from passages where the word is plainly an appellative. 4. Beth-Meon signifies the house or temple of Meon; and no other than a supposed deity can be said to have a temple dedicated to it. Yet there are several names of places compounded with the word Beth, which have no relation at all to idols. 5. The Israelites changed the name of the city Baal-Meon, when they had rebuilt it, as they did that of Nebo, because they were so named from false gods (40). But this is no necessary consequence.

(34). Numb. xxxii. 38. 1 Chron. v. 8. Ezek. xxv. 9. (35) Jerem, xlviii. 23. (36) Josh. xiii 17. (37) Ibid. 1 Chron. v. 8. Jerem. xlviii. 23. (38) On Numb. xxxii, xxxviii. (39) Psal. xc. 1, and xci, 9. (40) See Cumberland on Sanchon. chap. 2.

was a town of this name in that part of the ancient dominions of Moab, conquered by Sihon, which the Iſraelites rebuilt, and changed its name [u]; and a part of mount Abarim in the ſame tract was alſo called Nebo.

Of their religious rights and ceremonies we can ſay very little. The obſcenity attributed to them by ſome authors we have already mentioned; of which, however, the Pſalmiſt takes notice, in ſpeaking of thoſe who *were joined* to Baal-peor; but ſays only, that they *eat the offerings of the dead*: by which words he may either mean, that the idol, to which they impiouſly gave divine honour, was no more than a dead man; or elſe that their oblations were made to the infernal gods. They ſacrificed both in the open air, on mountains dedicated to that ſervice [w], and alſo in temples built to their idols in their cities; and, beſides oxen and rams, on extraordinary occaſions offered human victims, according to the Phœnician cuſtom; an inſtance of which will be given by and by.

The Moabites drive out the Emims.

The firſt inhabitants of the land, afterwards poſſeſſed by the poſterity of Moab, were the Emims, a great and powerful people and of extraordinary ſtrength and ſtature [x]. They were, moſt probably, deſcendants of Ham, and of the ſame gigantic race with the Anakins and Rephaims, though the Moabites called them by the name of Emims [y], which in Hebrew ſignifies terrible. Theſe having been much weakened by the invaſion of Chedorlaomer, king of Elam, and his allies [z], became the eaſier conqueſt to the Moabites; who drove them out, and took poſſeſſion of their country; but about what time is uncertain. However, they kept not their new dominions long entire; for in the days of Moſes, Sihon king of the Amorites, who bordered on them eaſtward, fought againſt the king of Moab, the predeceſſor of Balak, and took from that nation all their land, to the north of the river Arnon [a].

But loſe part of their acquiſitions to the Amorites.

Balak ſends to Balaam to curſe the Iſraelites

Year of the Flood 1547. Year before Chriſt, 1451.

Balak, the ſon of Zippor, was on the throne of Moab when the Iſraelites, having ſubdued Sihon, were incamped in part of their new acquiſitions, called the plains of Moab, becauſe they had lately belonged to that nation [b]. This prince being exceedingly diſmayed at the approach of the victorious people, whom he was not in a condition to reſiſt, and not knowing that God had forbidden them to attempt

[u] Iſai. xlvi. 1. Pſal. cvi. 28. [w] See Numb. xxii. 41. & xxiii. 2. [x] Deut. ii. 10. [y] Ibid. 10, 11. [z] Gen. xiv. 5. [a] Numb. xxi. 26. [b] Numb. xxii. 1.

the conqueſt of his remaining territories, aſſembled the nobles, and alſo the princes of the Midianites (a branch of which nation dwelt within the borders of Moab, as we ſhall obſerve hereafter), and acquainted them with his apprehenſions, that the Iſraelites ſhould, as he expreſſed it, *lick up all that were round about them, as the ox licketh up the graſs of the field.* Having conſulted together, and not daring to truſt to their arms alone, the aſſembly agreed to ſend for Balaam, the ſon of Beor, a famous prophet (G), or diviner, of that time, in the prevalency of whoſe prayers and imprecations they had great confidence, that he might come and curſe the people, which gave them ſo much

(G) Some Jews imagine this Balaam was an aſtrologer, who obſerving when men were under a bad aſpect of the ſtars, pronounced a curſe upon them; which, ſometimes coming to paſs, in neighbouring nations gained him a great reputation. Several of the ancient fathers ſuppoſe him to have been no more than a common ſoothſayer (41), who pretended to foretel future events, but by no juſtifiable arts. Origen will have it, that he was no prophet, but only a ſorcerer, who went to enquire of the devil; but that God was leaſed to prevent him, and to put what anſwer he thought fit into his mouth. It cannot be denied, however, but that the ſcripture expreſly calls him a prophet; and therefore ſome later writers (42) are of opinion, that he had been once a good man, and a true prophet, till, loving the wages of unrighteouſneſs (43, and proſtituting the honour of God to his covetouſneſs, he apoſtatized from God, and, betaking himſelf to idolatrous practices, fell under the deluſion of the devil, of whom he learned all his magical enchantments; though at this Juncture, when the preſervation of his people was concerned, it might conſiſt with God's wiſdom to appear to him, and vouchſafe him revelations. Balaam indeed was a man of no great probity, and might by profeſſion be a diviner; but, by the free acceſs he had to God, it ſeems apparent, that he was no common ſorcerer or magician (44).

The Jews ſay Balaam was not his true name; but that he was ſo called, becauſe by his counſel בלע עם Balaam, i. e. he deſtroyed the people of God (45): and ſome have taken him to be

(41) See Joſeph. 13. 22. (42) See Patrick's Comment. on Numb. xxii. (43) 2 Pet. ii. 15. (44) Stackhouſe's Body of Divinity, p. 465, &c. (45) Vide Hottinger. Smegma Orient. P 444.

much uneaſineſs (H). Accordingly ambaſſadors of both nations were ſent, not empty handed, but with preſents, as is uſual in ſuch caſes, to Balaam, who dwelt at Pethor, a city of Meſopotamia, ſituate on the Euphrates [c], and told him the occaſion of their coming. The prophet deſired them to ſtay with him that night, that he might enquire of GOD, whether he ſhould go with them and curſe the Iſraelites or not: but being commanded not to go, nor to curſe a people whom GOD had determined to bleſs; the next morning he told them, he could not diſobey the divine command, and ſo diſmiſſed them. On their return with this anſwer, Balak, whoſe ſole hopes lay in the prophet, ſent a ſecond embaſſy to him, conſiſting of perſons of more diſtinguiſhed quality, and in greater number, with promiſes of great riches and preferment, if he would comply with his requeſt. Balaam told them, that if he might gain ever ſo much wealth, he durſt not act contrary to the divine directions: however, being willing to gratify Balak, and tempted by the large offers which had been made him, notwithſtanding he knew it was a thing diſagreeable to GOD, yet he conſulted the oracle once more, and had then leave given him to go, provided he ſaid nothing, but what GOD ſhould put in his mouth. Balaam therefore went with the ambaſſadors, reſolving, as it ſeems, with himſelf, to do his utmoſt for the ſervice of thoſe who had employed him. But his intentions being diſpleaſing to GOD, he ſent an angel to withſtand him by the way, who placed himſelf in the road with a drawn ſword in his hand, as Balaam came riding on his aſs,

[c] Geneſ. xv. 10, 18. Joſh. 24. 2—15.

be the ſame perſon who in the book of Job is named Eliſha (46). The prophetical traditions of Balaam the Perſian Magi are ſaid to have had (47), and it is thought, that from his prophecy (48) the wiſe men knew the ſignification of the ſtar which appeared at our Saviour's birth (49).

(H) It was a received opinion among the heathen nations, that imprecations might be made which would have effect, not only on private perſons, but even whole armies and nations; and there were particular forms and ceremonies for that purpoſe (50).

(46) See Patrick's Comment. ubi ſupr. (47) D' Herbel. Bibl. Orient. p. 528. (48) Numb. xxiv. 17. (49) Theodor. Tarſenſis, apud Hyde de rel vet. Perſ. p. 384. (50) Vid. Macrob. Saturn. l. 3. c. 9. Plutarch, in vita Craſſi, p. 553.

aſs, attended by two ſervants only, and at a diſtance from the reſt of the company; the aſs ſeeing the angel (though her maſter did not) turned out of the way into the field; on which Balaam ſtruck her: then the angel went forward, and ſtood in a path between two walls; againſt one of which the aſs thruſting her ſelf to avoid the angel, cruſhed Balaam's foot, and provoked him to ſtrike her again. At length the angel went farther, and ſtood in a place ſo narrow, that there was no room for the aſs to turn out of the way; but ſhe fell down under the prophet, and enraged him ſo, that he ſtruck her a third time. Whereupon GOD miraculouſly opened the aſs's mouth (I), and ſhe ſpoke to her maſter with an articulate voice, and aſked him, why he had given her thoſe three blows? Balaam, in the heat of his paſſion not conſidering the prodigy (K), angrily anſwered, that ſhe had purpoſely provoked him; and wiſhed he had a ſword to kill her. But on the aſs's demanding if ever ſhe had ſerved him in that manner before, he confeſſed that ſhe had not. Immediately on this Balaam's eyes were opened, and he ſaw the angel ſtanding before him armed with a naked

(I) This was ſo extraordinary an event, that ſome Jews, as great lovers of miracles as they are, have not been able to perſwade themſelves that it really came to paſs. Philo *(50)*, in relating the ſtory of Balaam, wholly omits this circumſtance; and Maimonides (51) pretends it happened to Balaam in a prophetical viſion. But as there is no doubt of God's power to effect ſuch a miracle, and the words of ſcripture are very expreſs, there can be no reaſon for diſbelieving it. The heathens cannot reproach Moſes with any abſurdity in this ſtory, ſince they themſelves relate ſo many of the like nature, but not near ſo well ſupported. Witneſs what they ſay of the aſs upon which Bacchus rode; of the ram of Phryxus; the bull of Europa; the horſes of Achilles and Adraſtus; the elephant of Porus in India, and the lamb in Egypt when Bocchoris reigned there *(52)*.

(K) This ſeems to be the true reaſon why Balaam expreſſed no more ſurprize on this occaſion. But ſome ſuppoſe Balaam might have imbibed the doctrine of tranſmigration of ſouls, which was, and ſtill is, too common in the eaſt, and from thence might be the leſs aſtoniſhed to hear a brute ſpeak *(53)*. Joſephus indeed tells us, but without authority, that he was affrighted at the accident *(54)*.

(50) De vita Moſis, l. 1. *(51)* More Nevoch. part. 2 cap. 42. *(52)* See Patrick's Comment. ubi ſupr. *(53)* Vide Clerici Comment. in locum. (54) Joſeph. Ant. l. 1. c. 10.

naked sword; whereupon he fell prostrate on his face, and the angel told him, that he had struck his ass without cause, since it was he that opposed him because of his perverseness; and that if the ass had not turned out of the way he should have killed him, and saved her alive (L). The prophet on this reprimand offered to return home again; but the angel bid him go on, taking care only to say no more than what GOD should direct him [d].

BALAAM being come to the borders of Moab, Balak went out to meet him; and, after some expostulations for not coming on the first message, brought him to Kirjath-huzzoth, where the king offered sacrifices, and feasted Balaam and the princes who were with him. The next day Balak brought the prophet up into the high places of Baal on mount Abarim, where he might have a full prospect of the camp of the Israelites, whom he had hired him to curse [e]. There Balak, by the prophet's direction, built seven altars, in which number there might possibly be some superstition; but the altars, as it appears, were erected to the true GOD, to whom they offered a bullock and a ram to each altar; and the same they did afterwards in two other places on the mountain. The two first times Balaam sought for enchantments [f], or used such means as he was able, to obtain leave of GOD to curse the children of Israel; but without success; for on the contrary he was commanded to bless them, sore against his inclination, and to the great mortification of Balak [g]. Wherefore the third time, finding that no enchantments could prevail against Jacob, nor any divination against Israel, he omitted his former arts, and not only blessed them a third time, but pronounced those cursed who should utter any imprecations against that people. Balak was exceedingly enraged at this disappointment, and ordered him to depart immediately; but Balaam, before he went, pronounced in Balak's presence a noble and magnificent prophecy of the future successes of the Israelites, and what should befall several nations and kingdoms [h]. As to Moab in particular, he foretold, *that*

[d] Numb. xxii. 2. 35. [e] Numb. xxii 36—41. [f] See before ch. 4. sect. 5. par. 54. [g] Numb. xxiii. [h] Ibid. c. 24.

(L) An instance of a prophet's being slain for disobedience, and his ass being saved alive, we have in the first book of Kings (55).

(55) Chap. xiii. 23, &c.

that a ſtar (M) *ſhould come out of Jacob, and a ſceptre ſhould ariſe out of Iſrael, which ſhould ſmite the corners* (or, as it may be better tranſlated, *the princes) of Moab, and deſtroy all the children of Seth* [i] (N). Which prophecy the moſt judicious interpreters take to be primarily ſpoken of David, and fulfilled by his victories over that nation; though it be allowed alſo ſecondarily, and in a more exalted ſenſe, to refer to the Meſſiah. After this Balaam returned home [k], but not without giving a moſt wicked counſel (O) to Balak and the Midianites, which proved very pernicious

[i] Ibid. ver. 17. [k] Ibid. ver. 25.

(M) The eaſtern nations denoted a king by a ſtar or comet, the appearance of which they thought portended the riſe of great princes, and the revolutions of empires (56).

(N) According to the genius of the Hebrew tongue, wherein it is elegant to repeat the ſame ſentence in different expreſſions, by the children of Seth, the Moabites ſhould be intended; but why they are ſo called we cannot find. There is a paſſage in Jeremiah, which ſeems to prove, that in his time this place was differently read. A fire, ſays that prophet, ſhall come out of Heſhbon, a flame from the midſt of Sihon, which ſhall devour the corner of Moab, and the crown of the head of the tumultuous ones, or, as is better rendered in the margin, of the children of noiſe (57). The former part of this paſſage is taken from another text (58), and the latter from that which we are now ſpeaking of. The difference between them is very little in the original: Jeremiah inſtead of קרקר karkar, ſhall deſtroy, having קדקד kadkod, the crown of the head (which is the reading of the Samaritan pentateuch in this very place) and inſtead of שת Seth, שאון Shaon, noiſe. But we dare not hence make any correction.

(O) Though Moſes mentions not this where he deſcribes the interview between Balaam and Balak, yet in another place (59) he lays the whole blame on Balaam, ſaying, that the Iſraelites treſpaſſed through his counſel. Joſephus is very particular in relating this circumſtance, and tells us, that Balaam bethought himſelf of it when he came to the Euphrates, and thence ſent to ſpeak with Balak and the princes of Midian (60). The Targum of Jonathan and that of Jeruſalem ſuppoſe he gave this counſel juſt before he pronounced the laſt prophecy; and that the ſame is intimated by theſe words, I will adviſe, or counſel thee (61).

(56) Vide Cleric. in loc. (57) Jerem. xlviii. 45. (58) Numb. xxi. 28. (59) Numb. xxxi. 16. See alſo Revel. ii. 14. (60) Joſeph. Antiq. l. 4. c. 6. (61) Numb. xxiv. 14. Vid. etiam Cleric. in loc.

pernicious to the children of Iſrael: for he told them, that it was in vain to expect that GOD would ever deſert that nation, ſo long as they continued in their duty; and therefore the only way to hurt and diſtreſs them would be to tempt them to idolatry and diſobedience, which he thought no means ſo proper to effect, as by enticing them to debaucheries with the Moabitiſh and Midianitiſh women. And therefore he adviſed them to ſend the moſt beautiful virgins they could find to the Iſraelitiſh camp, with proper inſtructions [l].

THIS was put in execution; the chief men among them making no ſcruple to proſtitute their daughters on this occaſion [m]: and the ſtratagem ſucceeded but too well. For the Iſraelites were immediately ſmitten with the charms of theſe fair idolatreſſes; and, having began to commit whoredom with them, were eaſily ſeduced in another point, and prevailed on to comply with the worſhip of their falſe gods. This occaſioned a dreadful plague, which deſtroyed 24,000 of them, beſides thoſe who were put to death by the order of Moſes [n].

THEIR hiring of Balaam to curſe Iſrael was the reaſon, why the Moabites were not to be admitted to mix, or intermarry, with that people, as has been obſerved [o]; but the Midianites, who ſeem to have been more particularly the inſtruments of ſeducing them to idolatry, were more ſeverely puniſhed ſoon after, as will be related in a more proper place: and Balaam himſelf had his reward, being ſlain by the Iſraelites, when they took their revenge on Midian [p].

THE next action which is recorded of the Moabites is, that they were the inſtruments of the ſecond oppreſſion of the Iſraelites after their ſettlement in the land of Canaan. For that people, on the death of Othniel the ſon of Kenaz, being without a head, returned again to idolatry; whereupon GOD raiſed up Eglon king of Moab to puniſh them. This prince therefore having entered into an alliance with the Ammonites and Amalekites his neighbours, with their aſſiſtance ſucceſsfully invaded Iſrael, and ſeized on the eaſtern part of their country, and particularly on a city called by Moſes the city of palm trees, by which is gene-

rally

[l] Joſeph. Antiq. l. 4. c. 6. [m] Numb. xxv. 15. [n] Ibid. ver. 1—5. [o] See before, ch. 3. ſect. 3. par. 50. [p] Numb. xxxi. 8. Joſeph. Antiq. l. 5. c. 5.

rally understood Jericho (P), which was in the lot of the tribe of Benjamin; and having left garisons to keep the inhabitants in subjection, obliged them to pay tribute, and exercised great tyranny over them for no less than eighteen years. At the expiration of which time, the children of Israel, returning to a better mind, had recourse to God in their distress, who raised up to them a deliverer, a Benjamite, named Ehud. This person, being deputed by his countrymen to carry a present, or rather the tribute which was exacted of them, to Eglon, formed the design of freeing them from the intolerable oppression they had so long undergone, by taking off their tyrant; he therefore provided himself with a dagger fit for the execution of his purpose, though short enough to be hidden under his garments; and, being left-handed, he girt it on his right thigh, which also gave the less suspicion of his being armed. Having delivered the tribute to the king, he sent away those who had brought it, and followed them so far homewards as the quarries near Gilgal (Q); but when he came thither he turned back again, and being admitted into the king's presence, who was then in a summer apartment, he pretended to have something to impart to him in private. Whereupon Eglon ordered his attendants to withdraw: and Ehud told him, that he had a message to deliver him from God; which the king rising from his seat to receive, Ehud stabbed him with his dagger in the belly, and that with so violent a thrust, that the haft went

(P) Jericho was famous among other things for the great numbers of palm trees of different kinds which grew in its neighbourhood (62). Josephus says, that Eglon removed his court to this city (63): but he seems to have been mistaken: for after it had been burnt by Joshua (64). who cursed the person that should rebuild it (65), it lay in ruins till the days of Ahab (66). However, the place might serve for a garison to keep the country in awe, for which use it was very well situated.

(Q) The word Pesilim which in our version is rendered the quarries, is by the Septuagint translated τὰ γλυπτὰ, and in the vulgate, the idols, the sculptures, which some suppose to have been set up there by Eglon (67).

(62) Deut. xxxiv. 3. Joseph. de bello Jud. l. 5. c. 4. (63) Idem Antiq. l. 5. c. 5. (64) Josh. vi. 24. (65) Ibid. ver. 26. (66) 1 Kings xvi. 34. (67) Chytræus, &c. See before, ch. 3. sect. 3. par. 52. in the notes in loc.

went in after the blade; and, Eglon being a very fat man, the fat cloſed upon it, ſo that he was obliged to leave it in his body. Having thus executed his purpoſe, he locked the door of the apartment upon the king, and went out unſuſpected (R). The ſervants, after Ehud was gone, coming, and finding the door locked, concluded the king was eaſing himſelf, and therefore waited at the door till they were aſhamed; but at length they opened it, and found their maſter breathleſs on the floor. Ehud in the mean time eſcaped beyond Jordan, and gathering together what forces he could, attacked the Moabites, that were gariſoned on the weſt of the river within the land of Canaan, and ſlew ten thouſand of their beſt men; which utterly broke the power of Moab, and freed the Iſraelites from the yoke of that nation [q].

We hear no more of the Moabites after this diſaſter till the time of Saul, who warred againſt them with ſucceſs [r]. The enmity which ſubſiſted between him and this nation probably induced David, when perſecuted by that prince, to aſk the king of Moab's protection for his parents, till his affairs ſhould be in a better poſture [s]; which the Moabites readily granted, and treated them with great hoſpitality, while David lay in the cave of Adullam. However, when he came to the crown, the Moabites entered into a confederacy againſt him with ſeveral of the neighbouring nations [t]: whereupon he declared war againſt them; and, having obtained a ſignal victory, put two thirds of them to the ſword (S), and made the reſt his vaſſals and tributaries [u].

From.

[q] Judges. iii. 12—30. [r] 1 Sam. xiv. 47. [s] 1 Sam. xxii. 3, 4. Joſeph. Antiq. l. 6. c. 14. [t] Pſal. lxxxiii. 5, 6, &c. [u] 2 Sam. viii. 2.

R) This action of Ehud ſome juſtify, by ſuppoſing he had God's expreſs command for it (68). But, as the ſcripture intimates no ſuch thing, others think he might lawfully rid his country of a tyrant, who had unjuſtly enſlaved it, by any means (69). A poſition which may encourage aſſaſſinations in every caſe, where the actor judges the cauſe he engages in to be righteous.

(S) This is the meaning of the ſacred hiſtorian, when he ſays, "That David meaſured them with a line, calling them down to "the ground; even with two lines meaſured he, to put to death; "and

(68) Vid. Patrick in loc. (69) Cleric in loc.

FROM this time they continued ſubject to Solomon and Rehoboam, till the revolt of the ten tribes; upon which it ſeems they became tributaries to the kings of Iſrael, though they had all along kings of their own, which were little better than viceroys. Meſha one of them paid Ahab a yearly tribute of 100,000 lambs, and as many weathers, with the wool; his riches conſiſting chiefly in ſheep [w]. But when Ahab was dead he rebelled againſt his ſon Ahaziah [x], whoſe ſhort reign not permitting any attempt to reduce him, his brother and ſucceſſor Jehoram, aſſiſted by Jehoſhaphat king of Judah his ally, and the king of Edom, his tributary, made an expedition for that purpoſe, and took a compaſs of ſeven days march through the deſart of Edom, in order to ſurprize the enemy. Having reached the land of Moab, the army was diſtreſſed for want of water, and muſt have periſhed, had not the prophet Eliſha obtained a ſudden and large ſupply for them by a land-flood. The Moabites, being by this time alarmed, got together all that were able to bear arms, and early in the morning, ſeeing the water to the weſtward look red, like blood, by reaſon of the reflection of the ſun, and never ſuſpecting it to be water in that dry deſart, and in ſo great a quantity, they immediately took it to be blood, and ſuppoſing the confederated princes had fallen out, and turned their arms againſt one another, concluded, they had no more to do than to take the ſpoil. On this imagination they ran in confuſion to the camp of Iſrael, but ſoon found their miſtake; for not being able to ſuſtain the firſt attack of the Iſraelites, they preſently turned their backs, and great numbers of them were ſlain by the enemy, who purſued them into the very heart of their country,

[w] 2 Kings iii. 4. [x] 2 Kings i. 1, & iii. 5.

" and with one full line to keep alive." It ſeems to have been a cuſtom in the eaſt, to order the priſoners of war to lie down, and to meaſure by a line ſuch a part of them as they deſigned to put to death. Le Clerc thinks this probably was a juſt retaliation for ſome cruelties of the ſame kind which the Moabites had been guilty of. As the ſcripture does not ſay whether David put to death two thirds of the whole nation, or only of thoſe who appeared in arms againſt him; it is more for the honour of that prince to ſuppoſe the latter (70).

(70) Idem, in 2 Sam. viii. 2.

try, waſted their lands, and demoliſhed their cities, except Kir-Haraſeth, where the king of Moab ſhut himſelf up. Meſha, being beſieged and cloſely preſſed, made a ſally with 700 choice men, and endeavoured to eſcape, by breaking through the quarters of the Edomites, which were the weakeſt; but failing in the attempt, in the height of deſpair he took his eldeſt ſon, who ſhould have ſucceeded him in the throne, and offered him for a burnt-ſacrifice on the wall (T). Which barbarous act raiſed ſuch horror and indignation in his enemies, that they immediately raiſed the ſiege, and returned home [y].

It was not long before the Moabites attempted to revenge the loſſes, they had ſuſtained in this invaſion, on Jehoſhaphat king of Judah (U), by whoſe aſſiſtance chiefly Jehoram was enabled to undertake it; and, to ſtrengthen themſelves, entered into alliance with the Ammonites, the Edomites of mount Seir (who were almoſt ripe for rebellion, and actually did rebel againſt Jehoſhaphat's ſon), and ſome other neighbouring nations (W), and formed a very large

[y] Ibid. ver. 6, 27. Joſeph. Antiq. l. 9. c. 1.

(T) Several writers (71) ſuppoſe Meſha did not ſacrifice his own ſon, but the ſon of the king of Edom, whom, they ſay, he took in the ſally; and that this is the ſame action with that mentioned by the prophet Amos, who threateneth Moab, becauſe he burnt the bones of the king of Edom into lime (72). But they ſeem to be different actions; for, not to inſiſt on the ſtrict acceptation of the two paſſages, one ſpeaking of a king of Edom, and the other of a king's ſon, it was a known cuſtom in ancient times, for princes, in extreme calamities of the public, to offer their moſt beloved child as an expiatory ſacrifice, to avert the impending vengeance of the gods (73).

(U) Some make this action prior to the invaſion of Moab by this prince and Jehoram; but we ſhall elſewhere ſhew that it ought to be placed after it.

(W) Who theſe nations were is uncertain. The original word Mehaammonium ſhould be tranſlated (as it is in the Vulgate) with the Ammonites, were it not that the children of Ammon are men-

(71) See the Argument to the iii chap. of 2 Kings, in the Engliſh Bible; and Uſher's Annals, ad Annum Mundi, &c. (72) Amos ii. 1. (73) See before, ch. 2. ſect. 3. par. 20. Vide etiam Porphyr. de Abſtin. l. 2. Ælian. var. Hiſt. l. 12. c. 28. Juſtin. l. 18. c. 6. Plut. in Pelopida, &c.

large army, carrying on their design with such secrecy and dispatch, that they were entered the kingdom by the way of Edom, and were got to Hahazon-tamar, or Engedi, on the west of the dead Sea, before Jehoshaphat had any advice of their motion. That good prince was greatly dismayed at the news, and, being unprepared for the reception of his enemies, had recourse to GOD, who promised him by the prophet Jahaziel to deliver him from his enemies, without his striking a blow. And it happened accordingly: for while Jehoshaphat and his army, in confidence of the prophecy, were marching towards the enemy, with the priests and singers at their head, praising GOD, the several nations that had leagued against them destroyed one another, by falling into the ambushes which themselves had set against the men of Judah; so that the Ammonites and Moabites first fell upon their confederates of Edom; and, having put them to the sword, began to cut one another's throats till none were left alive. And when Jehoshaphat and his people came up with them, they had no more to do than to seize the plunder, which was very rich, and in such abundance that they were three days in gathering it [z].

AFTER

[z] 2 Chron. xx. 1—25. Joseph. ubi supr.

mentioned before. To avoid the absurdity of which repetition, the Septuagint, if their copies were not different from the present Hebrew in this place, render it some of the Minæans; of which name Bochart supposes there were two people, one of the race of Shem, dwelling in Arabia felix, and the other of the race of Ham, who settled in Arabia petrea, and are meant in this place, being, as he thinks, by the Jews called Meonim, which word occurs in two places of the book of Chronicles (74) (though the English translation in the first place takes it for an appellative, and renders it the habitations), and is in both by the Septuagint translated Minæans. Wherefore Bochart prefers the Greek reading in the passage before us to the Hebrew; being of opinion, that there is a transposition of the letters Mim and Ain (75). The Chaldee paraphrast has it, with the Edomites. But there seems to be no occasion for any change, since the particle prefixed may, agreeably to its force elsewhere, be rendered beyond or besides (76); for which reason the English Version is judged to have rightly interpreted the words, and others besiege the Ammonites.

(74) 1 Chron. iv. 41. 2 Chron. xxvi. 7. (75) Bochart. Phaleg. l. 2. c. 23. (76) Vide Cleric. in loc.

AFTER this we do not find, that the Moabites diſturbed Iſrael for many years; however, between this and the reign of Uzziah king of Judah, they had invaded their neighbours of Edom; and having the better of them, inhumanly burnt their king (whether alive or dead is not ſaid), and reduced his bones to aſhes: for which piece of cruelty GOD denounced ſevere judgments againſt them by the prophet Amos [a]. And on the declenſion of the kingdom of Iſrael, they alſo ſeem to have retaken, from the tribes of Reuben and Gad, great part of the land which had formerly belonged to them before the invaſion of Sihon; for in the prophecies of Iſaiah and Jeremiah againſt Moab ſeveral cities in thoſe territories are mentioned, as then in the poſſeſſion of that nation, or of the Ammonites [b], who were probably their confederates in oppreſſing the Iſraelites. Theſe ſucceſſes elated the Moabites ſo much, that for their pride and inſolence GOD threatened them with utter deſtruction, by ſeveral of his prophets [c]: And Iſaiah in particular foretold, that within three years Ar and Kir-Haraſheth, two of their principal cities, ſhould be deſtroyed, and the reſt of their country brought to contempt and deſolation [d]. This prophecy being dated in the firſt year of king Hezekiah [e], muſt have been executed the very year that Samaria was firſt beſieged by Salmaneſer king of Aſſyria, who probably ſubjected Moab, and placed gariſons in thoſe towns, to ſtop the incurſions which the Arabs might that way make on him, before he began the ſiege [f].

AFTER the fearful deſtruction of the army of Sennacherib the ſon of Salmaneſer, the Moabites often revolted from his ſucceſſors, and were as often reduced, till they were entirely ſubdued by Nebuchadnezzar, into whoſe hands their king was given, according to a prediction of Jeremiah [g], the fifth year after his taking Jeruſalem [h]. For the Babyloniſh yoke ſat ſo uneaſy on them, that though they took advantage of the low condition of Judah, and miſſed few or no opportunities of haraſſing that nation [i], yet, on Nebuchadnezzar's departure from Judea and Syria, after his ſecond expedition into thoſe parts, they with

[a] Amos ii. 1, 2, 3. [b] Iſaiah xv, & xvi. Jerem. lxiii. [c] Ibid. & Ezek. xxv. 8, & 9. Zeph. ii. 8, 9, 10, 11. [d] Iſai. xv. 14. [e] Ibid. c. xiv. 28. [f] Vide Prid. Connect. part 1. B. 1. p. 18. [g] Jerem. xxvii. 3—6. xxv. 21. [h] Joſeph. Antiq. l x. c. 11. [i] 2 Kings xxiv. 2.

the other neighbouring nations propoſed to Zedekiah to enter into a league with him againſt the Chaldeans; which that prince [k], notwithſtanding the remonſtrances of Jeremiah to the contrary, conſenting to, on the acceſſion of the Egyptians to their confederacy, it became the occaſion of his utter ruin; his new allies deſerting him in his diſtreſs.

FROM this time hiſtory makes very little mention of the Moabites, who were hence-forward ſubject to the great empires, and at length coaleſced with, and were ſwallowed up in, the neighbouring nations which inhabit the deſarts of Syria; ſo that though Joſephus mentions the Moabites as a diſtinct nation long after, ſaying they were ſubdued by Alexander Jannæus king of the Jews [l], and tells us they were a populous nation, even in his time [m]; yet by the third century after CHRIST they loſt their ancient name, and became comprehended under the more general denomination of Arabians [n].

SECT. II.

The Hiſtory of Ammon.

THIS people were the poſterity of Ammon, otherwiſe called Ben Ammi (though that is not poſitively known), ſignifying *the ſon of my people* our kindred, the offspring of Lot and his younger daughter [o]. We have given the hiſtory of this inceſtuous birth in ſpeaking of Moab, the ſon of the elder ſiſter by her father [p].

Of the country poſſeſſed by the Ammonites.

THE children of Ammon poſſeſſed themſelves of the country called, after their own name, Ammonitis, adjoining to the north of Moabitis, after having driven out the Zamzummins, as they called them, who were giants, and the ancient inhabitants of the land [q]. This country [r], as well as Moabitis, is by ſome reckoned a part of Cœle-Syria [s], and by others of Arabia, and was, in its firſt ſtate under the Ammonites, bounded by the river Jabbok on the north [t]; though elſewhere it ſeems as if it extended beyond

[k] Jerem. xxvii. [l] Joſeph. de bello Jud. l. 1. c. 4. [m] Idem Antiq. l. 1. c. 11. [n] Origen. in Job. l. 1. [o] Gen. xix. 38. [p] See before, Vol. II. p. 98, 99. [q] Deuter. xi. 20. [r] Joſeph. Antiq. l. 1. c. 16—5. [s] Steph. de urb. in Ἀμμων. [t] Judg. xi. 13.

beyond that northward, into the mountains of Gilead [u]: on the weſt, it had the river Jordan; on the ſouth, the river Arnon [w], or the confines of Moabitis; on the eaſt, the deſarts of Arabia. But in the days of Moſes the Amorites had diſlodged them from their firſt boundaries, at the ſame time they diſturbed the Moabites, driving the Ammonites from the weſtern part of their poſſeſſion into, and acroſs, the mountains, which ſerved them for an immediate defence, perhaps, againſt the farther purſuit of the Amorites, and as a ſtrong barrier to protect them, in part, from invaſions thereafter [x]. Their exact boundaries, eſpecially after this expulſion, we cannot ſettle. We have only to add, that their kingdom, probably, was not of very wide extent, no more than that of Moab; and that it was chiefly a corn country, as may be gathered from the tribute, which will be ſeen on its inhabitants in the courſe of their hiſtory.

THE cities of this kingdom we know little enough of. The metropolis was called Rabbah; which, to diſtinguiſh it from the chief city of Moab, which bore the ſame name or epithet, was called Rabbah of the children of Ammon [y]. It was alſo known by the name of Ammana [z]. This capital ſeems to have been diſtinguiſhed into two parts, Rabbah properly ſo called, and the city of waters. Whence the waters were derived to it, whether from the river Jabbok, or whether from exuberant ſprings in or about it, cannot be determined. This only we have ſome authority to ſay, that it was the moſt delightful part of the city, and that the king's houſe ſtood there; from whence this part may have been ſtiled the royal city [a]. Rabbah moreover was famous for being the place where the great iron bedſtead of Og king of Baſan was to be ſeen [b]. In proceſs of time this city was called Philadelphia [c] from Ptolomy Philadelphus, who rebuilt it in a ſumptuous manner; and for ages after it was a city of firſt note: nay, of ſuch eminence as to impoſe its name upon the countries of Ammonitis and Moabitis; from whence you have the Philadelphian Arabia [d]. The other conſiderable cities of this kingdom were Minnith (concerning which there is ſome doubt) and Abel of

[u] Joſh. xiii. 24, 25. [w] Judg. ubi ſupr. [x] See Numb. xxi. 24. [y] Deut. iii. 11. [z] Steph. in Αμμαν. [a] See 2 Sam. xii. 26, 27. [b] Deut. ubi. ſupr. [c] Vide Euſeb. Onomaſt. urbium & locorum. [d] Vide Cellarii notitias Orbis Antiqui. c. 14.

the vineyard [e]. Jaſer, or Jazar, is alſo reckoned among the cities of Ammon [f], but inaccurately [g].

We know very little of the manners and cuſtoms of this people. They had kings, and were circumciſed [h], and ſeem to have been principally addicted to huſbandry. They, as well as the Moabites, were among the nations, whoſe peace or proſperity the Iſraelites were not to ſtrive after. Neither the one nor the other of them were to be admitted into the congregation to the tenth generation; ſo wide was the diſtance between the Iſraelites and them! The reaſon, becauſe they did not come out to relieve them in the wilderneſs; and becauſe they joined to hire Balaam to curſe them [i]. However, we find there was afterwards a very good underſtanding between their king Nahaſh and David [k].

Their religion.

The religion of the Ammonites, as we have already obſerved concerning that of the Moabites, was originally as pure as it could flow from ſo clear a ſtream as the inſtruction of Lot; but they alſo ſwerved therefrom by degrees, and at length degenerated into the moſt ſtupid, and, as is generally ſuppoſed, the moſt cruel, idolatry.

Their chief and peculiar deity is in the ſcripture called Molech, or Moloch. He is thought alſo to be underſtood under the names of Baal, Milcom, Melech, Adramelech, Anamelech, and the like. Theſe names, or titles, ſignify no more than lord, or king, and ſometimes have a prejunctive epithet, as in the two laſt, where he is ſtiled the mighty and rich Melech, Moloch, or king: theſe two were the gods of the Sepharvites. We ſhall only ſpeak of the Ammonitiſh Moloch in this place. The learned are not poſitively agreed in what relates to him. It is on all hands allowed, that they addreſſed him under the title of king, or Moloch [l]. His image is ſaid to have been hollow, and to have been divided into ſeven receptacles. The firſt was opened for an offering of fine flour; the ſecond for an offering of turtles; the third for a ſheep; the fourth for a ram; the fifth for a calf; the ſixth for an ox; the ſeventh for a child. It had the head of an ox, and the arms of a man

[e] Judg. xi 33. [f] Joſeph. Antiq. lib. 12. c. 11. 1. Maccab. v. 8. [g] Vide Cellar. ubi. ſupr. [h] Jerem. ix. 25, 26. [i] Deut. xxxiii. [k] 2 Kings xi. [l] Vide Voss. de Idolalat. & Selden de Diis Syr. Syntag. 1. c. vi.

man ſtretched out in act to receive [m] (A). Now theſe ſeven receptacles are alſo called ſeven chapels; and inſtead of being within the image itſelf, are placed orderly before it [n]. Whatever was the diſpoſition of theſe ſeven places, their number correſponding with that of the ſun, moon, and five planets, has given room to ſuppoſe, that they worſhipped the ſun intentionally [o]; and the rather, as the oblations ſeem to riſe in ſuch proportion as might, according to this people, beſt befit the degree of each of theſe heavenly bodies. But it were endleſs to expatiate in a conjectural way upon ſo obſcure a matter, as the learned have done. Some accounts there are farther concerning this idol, but they are very doubtful (B). Chemoſh alſo was a god of the Ammonites, concerning whom we have ſaid all we can already *.

As to the ſuperſtitions paid to Moloch, there is a wide diſcrepancy among authors. By the ſcripture it is often ſaid, that the Ammonites *paſſed their ſeed through fire to* Moloch. This expreſſion is taken in a literal ſenſe by ſome, in a figurative ſenſe by others. The firſt ſentiment

[m] Paul Fagius apud eund ubi. ſupr. [n] See Bedford's Script. Chronol. p. 259. [o] Vide Voss. ubi ſupr. * See before, Vol. II. p. 100.

(A) An ancient Jewiſh traveller ſays, "that when he was in "theſe parts, there were yet ſtanding remains of the ancient "temple of the Ammonites, and therein their idol ſeated upon "a throne. This idol was of ſtone, gilt over with gold, and "had on each hand the image of a woman in a ſitting poſture "(77): before the idol was the altar on which the Ammonites "offered their ſacrifices and incenſe". Selden thinks this idol and this temple cannot be thought to have been erected to Moloch, that moſt ancient deity of the Ammonites (78). And indeed we think this traveller muſt have been ſome how or other impoſed on, or miſtaken. However, we muſt not apprehend, that the images of Moloch were always large and fixed: they were likewiſe ſmall and portable, and carried up and down in ſhrines, according to appearance, and as the cuſtom was with other idolaters, as will be obſerved at due times (79).

(B) To give you the various opinions of ſome learned men, Moloch has been taken for Priapus, for Mercury, for Saturn, and for Venus or the morning ſtar (80). But as fancy, chiefly, rules over theſe conjectures, it is enough that we give the bare mention of them.

(77) Benjamin Itinerar. (78) In Syntag. prim. de diis Syr. (79) Vide eund. ibid. (80) Vide Voſs. de Idolatria, lib. 2. c. 5.

is embraced by the Jewish writers (C), who for the most part hold, that the children were barely carried or led between two fires, by way of purification: the latter is adopted by the christian writers chiefly, who think, that they actually burnt their children, by way of sacrifice to this grim idol. There was a place near Jerusalem where this horrid custom was observed. It was called the valley of the sons of Hinnom [p] (D), so named from the shrieks of the children sacrificed: as also Topheth [q], from a Hebrew word, Toph, signifying a drum or tabret, which they used among

[p] 2 Chron. xxviii. 3. [q] 2 Kings xxiii. 10.

(C) Some of the Jewish writers hold, That the children were solemnly delivered to the priests; who returning them again, they were carried by their parents, upon their shoulders, between two fires. According to others, the priests carried them. A very eminent writer of this sort says, "That the priests, or servants, of fire, perswaded men that their children would die if "they did not pass them through fire: wherefore parents being "anxious for the lives of their children, and perceiving there "was neither danger nor difficulty in performing the ceremony, "no one neglected it, considering that the children were not to "be consumed by fire, but only to pass through it" (81). This also is the opinion of Solomon Yarhi, Joseph Karo, and others; but Aben Ezra dissents therefrom, and affirms, that passing through fire must be here understood of burning. Vossius insists on it, that where-ever the expression of passing through fire is met with, it must be taken in the strictness of the letter; but allows, that in cases of great calamity and upon other particular occasions, they gave up their offspring as an expiatory sacrifice to their god (82). Selden is of a quite different sentiment, and will have it, that they not only led their children through fire, but burnt them also at the same time. This he proves as far as a matter of this nature can be ascertained (83). Upon the whole, remembering how common a practice it was to offer up these unnatural oblations among some of the neighbouring nations, the same may probably have prevailed among the Ammonites.

(D) This valley was a very delightful place, watered by the springs of Siloah. It was shady and beautified with gardens. And indeed it is remarkable, that the heathens commonly chose fountain heads and solemn groves for the scenes of the homage they paid their deities. This custom our author supposes they borrowed from the Ammonites. (84).

(81) Moses. Maim. More Nevoch lib. 3. c. 38. (82) Vide Voss. ubi supr. (83) Vide Seld. ubi supr. (84) Hieron. in Jerem. c. vii. xxxii.

among other inſtruments, to drown the dreadful outcries of the unhappy victims. Whence this cruelty took birth, is what we may have occaſion to diſcuſs at large hereafter.

As the Moabites drove out the Emims, and poſſeſſed themſelves of their country, ſo the Ammonites forced the Zuzims, or Zamzummins, as they called them, from their habitations, and ſettled themſelves there. Theſe Zamzummins, as well as the Emims, are ſtiled giants [r], and were doubtleſs both derived from the ſame ſtock [s]. This gigantic race had been invaded by Chedorlaomer king of Elam [t]: who, deſtroying great numbers of them, as ſhould ſeem, made it the eaſier for the children of Ammon to diſlodge them. When this expulſion was effected, or in what manner, we know not. However, the Ammonites themſelves underwent the ſame fate in the days of Moſes, being diſpoſſeſſed by Sihon the Amorite, who drove them into, and to the eaſtward of, the mountains. They drive out the Zamzummins.

THE names of their firſt kings do not occur. They joined Eglon king of Moab againſt Iſrael [u], and ſhared in the ſucceſſes of that war; but who was their leader at this time is not ſaid. Their hiſtory.

ABOUT two hundred years after this, we find the Ammonites as principals in a war, under an anonymous king, againſt the Iſraelites. This prince took it into his head to attempt the recovery of the ancient country of Ammonitis; and making an irruption into it, he bore down all before him, and reduced the land, and kept it in ſubjection to him eighteen years. Encouraged by his ſucceſs, he croſſed over the river Jordan, and inſulted the tribes of Judah, and Benjamin, and Ephraim [w]; but returned to the other ſide again, and prepared (E) to make a compleat They war with the Iſraelites under an anonymous king.

[r] Deut. ii. 20, 21. [s] See before, Vol. II. p. 103.
[t] Gen. xiv. 5. [u] See before, Vol. II. p. 109. [w] Judg. x. 8.

(E) There is pretty conſiderable difference here between the ſcripture and Joſephus. He ſays the Ammonites and the Philiſtines had only prepared to croſs the river Jordan. The ſcripture ſays, the Ammonites did actually croſs over to fight with Judah, and Benjamin, and Ephraim; ſo that the Iſraelites were in great diſtreſs. We have therefore harmonized the one with the other; in which we know not but we may be miſtaken. For, after all, this warfare is not very clearly related in ſcripture. If they croſſed to this ſide of Jordan, what did they here? we are

pleat conqueſt of the country on both ſides of the river[x]; or at leaſt to get a handſom portion of it. For it is ſaid, that the Philiſtines alſo at this time invaded Iſrael; but whether with ſeparate views, or in combination with the Ammonites, does not appear; though it is moſt likely they intended to ſhare the ſpoil between them. But to ſpeak of the king of Ammon ſingly, he perſevered in his purpoſe, and encamped in Gilead; and the Iſraelites having turned to GOD, who had ſuffered them to be ſo long oppreſſed for their wickedneſs, they were inſpired with a courage to oppoſe this arrogant invader, and not only ſtop the progreſs of his arms, but drive him out of Gilead, where he had lorded it for eighteen years. Accordingly, meſſengers came to him from their new general Jephthah, to demand his reaſons for perſiſting in his enmity againſt them, and threatening them with farther calamities. His anſwer to them was, that the remembrance of the injuries his forefathers had ſuſtained, when the Iſraelites diſpoſſeſſed them of their country, had excited him thereto; and therefore required them forthwith to reſtore that realm to him, as in juſtice they ought. In reply to this pretenſion, there came ambaſſadors to him again from Jephthah: and theſe made an hiſtorical remonſtrance to him of his miſtake, in ſaying the Iſraelites had driven out the Ammonites, and, ſtifly expatiating upon the truth of the ſtory throughout the ſeveral circumſtances, expected his anſwer: but he gave no ear to them, and was bent at all hazards upon a war. And therefore, as he lay near Aroer, he was attacked by Jephthah, who gave him a total overthrow; and being put to flight, he was purſued with great loſs of blood, even into his own dominions, to Minnith, and from thence as far as Abel of the vineyards: ſo that not only his army was ſlaughtered, but good part of his country alſo was pillaged and waſted[y]. This was the event of the war, which put an end to the tyranny of Ammon over the

[x] Joſeph. Antiq. lib. v. c. 9. [y] Judg. xi.

are not told. How came it to paſs that the inhabitants of thoſe tribes did not croſs over to Gilead, where the war was decided? we know not. In a word, this war ſeems by the ſcripture to have affected only the north-eaſtern Iſraelites, who had been oppreſſed by the Ammonites, and ſhook off the yoke at laſt by their own ſtruggles, without any other aſſiſtance.

the Iſraelites on the other ſide of Jordan, and which had laſted eighteen years.

THE next of their kings we find mentioned, is called NAHASH. He flouriſhed in the days of Saul, from whom he received the juſt reward of his great inſolence and barbarity. For reviving the old claim upon the territory inhabited by the Iſraelites on the other ſide of Jordan, he waged war with them, and in the beginning was attended with all the ſucceſs imaginable. At length coming to the city of Jabeſh, he beſieged it. The terror of his arms was ſo great, that the inhabitants were at once for throwing themſelves at his feet, and acknowledging him for their lord and king. This ſubmiſſion, which might have mollified the leaſt generous heart, ſerved only to harden his. He would hearken to them upon no other condition, than their conſenting every one to the loſs of his right eye, that in them he might ſtigmatize the whole body of Iſrael. The inhabitants returned, That if he would allow them but ſeven days to endeavour a deliverance from him, they would ſubmit to his terms after the expiration of that time, if none was found to deliver them. This he granted them, and, ſecure within himſelf, waited for the cruel ſatisfaction he propoſed ſhortly to enjoy. But he was aſſaulted in three ſeveral parts of his camp by Saul, very early on the eighth morning, when he expected the inhabitants to march out to him, as they deceitfully told him they ſhould the night before; and his army was put into ſuch confuſion, that the Iſraelites had little elſe to do but to put them to the ſword. Inſtead of a battle it is termed a ſlaughter, which laſted till the heat of the day; at which time the ſurviving remnant of Nahaſh's army was ſo perfectly diſperſed, that there was no two of them to be ſeen together [z]. Thus ended this war. We are informed, that Nahaſh did ſome kindneſſes to king David. Joſephus differs from ſcripture in his account of this war (F).

Nahaſh king.

HANUN

[z] 1 Sam. xi.

(F) There ſeems to be ſomething very unaccountable in Joſephus's hiſtory of this war: he ſays, that Nahaſh began it, and carried it on for ſome time with the violences uſual in the like caſes, and with this political addition, of plucking out the right eyes of all thoſe he took, that they might loſe the uſe of their bucklers, which covered the left eye, or the uſe of that eye at all; and ſo reduce them to a ſlavery for life, ſeeing they would be unable

Hanun king. HANUN succeeded his father Nahash (G) in the kingdom; but whether this Nahash be the very same who was defeated by Saul at Jabesh, we are not told. However this was, we are informed, that Nahash, the father of Hanun, had lived in a very fair intelligence with David. Wherefore when this latter heard, that Nahash was dead, and that his son succeeded, he, for the father's sake, sent ambassadors to the young king, to condole with him for his loss, to congratulate him upon his accession, and to offer a continuance of the friendship which had been cherished between the late king and him. Hanun seems to have been a weak prince, and had very ignorant counsellors about him. Whence it came to pass, that when he received these compliments from king David by the mouth of his ambassadors, he, instead of improving them to advantage, took a false step which he never could recover. For instead of entertaining these ambassadors with the hospitality and decency which became him, he suffered himself to be perswaded, that they were no better than spies; and accordingly, forgetting the sacredness of their character, he shaved off the half of their beards, cut away their garments by the buttocks, and in that shameful disguise sent them back to their king. This amazing defect in policy and contempt of David, in open defiance of the laws of nature, hospitality, and gratitude, brought on a war [z], which ended very destructively upon him and his kingdom.

IT was soon told him how grievously David resented the affront, and what preparations he was making to chastise him

[z] 2 Sam. x. 1. Chron. xix. Joseph. Antiq. lib. 7. c. 6.

unable to defend themselves. But may it not be asked how it could come to pass, that those, who pressed on so hastily to relieve Jabesh, could have suffered Nahash to have gone on in a course of this cruelty for even the shortest space of time? this historian seems here to be quite wide of the sense of the sacred text.

(G) Notwithstanding Josephus informs us, that Nahash was killed upon the breaking up of the siege of Jabesh (85), we cannot forbear thinking that he lived many years afterwards, and was the father of this Hanun. His behaviour at Jabesh speaks him to have been a rash, hot-headed, young man at that time, and he might naturally enough have lived fifty or threescore years afterwards. We are seemingly supported in our opinion by the scripture itself.

(85) Joseph. Antiq. lib. 6. 6.

him for it. Hanun, therefore, perceiving himself on the brink of a war, to which he singly was unequal, dispatched ambassadors to the neighbouring princes, to hire and solicit the assistance of troops from them, to enable him to withstand the invasion which threatened his kingdom. What the troops he procured were, either in quality or number, is not clearly evident, inasmuch as the scripture varies (H) concerning them. First, we are told, that Hanun sent to the Syrians of Beth-rehob, and to the Syrians of Zobah, from whom he had twenty thousand footmen; to the king of Maachah, who furnished one thousand men; and to the king of Ishtob, who sent twelve thousand men [a]. With this Josephus agrees pretty well in respect of number, retrenching only the one thousand men supplied by the king of Maachah, and allowing him and the king of Ishtob to have contributed twelve thousand men between them [b]. Whence, instead of making the number of these mercenaries to have amounted to thirty three thousand, as the scripture does, he gives them at thirty two thousand. Again, we are told, that Hanun sent a thousand talents of silver, therewith to hire chariots and horsemen out of Mesopotamia, and out of Syria Maachah, and out of Zobah; and that he actually hired thirty two thousand chariots besides the king of Maacha's men [c]. Between Josephus and this passage of scripture there is a more material difference than before: He says, those which came out of Mesopotamia were footmen [d]. Here also we see the scripture keeps to the number of thirty three thousand. However, though the number be the same as before, the difference is very great. But let us proceed to the actions and event of this war.

HANUN, having thus drawn a considerable force from the neighbouring countries, and raised an army of his own subjects, marched out of Rabbah to fight Joab, whom David had sent at the head of his army. The Ammonites and their

[a] 2 Sam. ubi supra. [b] Joseph. Antiq. ubi supra. [c] 1 Chron. ubi supra. [d] ubi supra.

(H) This we cannot pretend to account for, nor do we know that it was ever cleared by any one, in a satisfactory manner. Haderezer is in scripture mentioned as the chief prince of the Syrian nations; Josephus speaks of one Syrus as chief, and calls him king of Mesopotamia (86).

(86) Ib. lib. 7. c. 7.

their auxiliaries drew up in two diſtinct bodies; (viz.) the Ammonites under the walls of their city, and the auxiliaries at ſome diſtance on the plain. By this diſpoſition they thought to have charged Joab's front, and at the ſame time to have fallen upon his rear; but this took not effect. For the Ammonites were attacked by Abiſhai, Joab's brother, whilſt Joab himſelf charged the Syrians. The Ammonites (E) ſuſtained Abiſhai's charge with great conſtancy, and maintained the conflict with intrepidity, till, perceiving their Syrian friends to give ground, they thought it moſt adviſeable to retreat into their city, and they did ſo.

THE next year their Syrian allies, aſhamed of their laſt defeat, made head again, (F) but being utterly routed by David

(E) In what concerns this battle we reject Joſephus *, and chooſe to interpret the ſcripture according to reaſon and the nature of things. He ſays, the Ammonites, perceiving their allies to be routed, hurried into their city without ſtriking a ſtroke. Partiality for his fore-fathers might perhaps have tempted him to repreſent them ſo very formidable to their enemies. But can it be ſuppoſed, that when Joab divided his army between his brother and himſelf, that they did not advance with an equal pace each againſt his oppoſite? And eſpecially, as Joſephus allows, that the Syrians ſtood their ground till a conſiderable ſlaughter was made among them, which could not be the work of a minute; Abiſhai muſt have moved on very ſlowly, if before the Syrians were broke he did not charge the Ammonites. On the other ſide, the Ammonites, who were principals in this war, if they had perceived Abiſhai afraid to give them battle, or ſeemingly ſo, and at the ſame time beheld their auxiliaries in a furious and doubtful conflict with Joab, they muſt have had ſenſe and courage enough to march up to Abiſhai, and force him to battle, before the Syrians began to flee. If the whole ſtory be well conſidered, it is not to be imagined, that Abiſhai and the Ammonites kept looking at one another, or what is next of kin to it, made very ſlow advances towards each other.

(F) Thus it appears by ſcripture, which, turning the tables, makes the Syrians principals in this war, rather avenging their laſt overthrow, than eſpouſing the cauſe of the Ammonites. Joſephus ſtrays here again very unaccountably. He makes the Ammonites ſend to one Balama, a king of the Syrians beyond the Euphrates, for another army thrice as big as that they hired before (87)

* Antiq. lib. 7. c. 7. (87) Ubi ſupra.

David in perſon, the Ammonites were left to defend themſelves againſt the violent and juſt reſentment of their injured enemy [e].

It came down heavily upon them. For the very next year, the third of this war, the country was entered by Joab, who haraſſed and waſted it far and wide; and at length beſieged Hanun in Rabbah, the capital of his kingdom. The place held out about two years; during which Hanun made one deſperate ſally, and cut off many of the beſiegers, and, among the reſt, Uriah the huſband of Bathſheba. At length the city was reduced to the utmoſt extremities of famine, and was ſtormed by David in perſon, who came to have the honour of completing the work. In the aſſault Hanun was ſlain, and his crown, which weighed a talent of gold (one hundred thirteen pound ten ounces one penny-weight $10\frac{2}{7}$ Gr. of our Troy weight *), and was adorned with precious ſtones, a ſardonyx Joſephus ſays, was taken from off his head by David. What other ſpoil was found in this metropolis is no where ſpecified. The inhabitants were treated with extraordinary ſeverity, being led out, and put to death by the moſt exquiſite torments, harrowed, ſawn, and hack'd with axes, and paſſed through the brick-kiln. This dreadful uſage extended to the reſt of the cities of Ammon (G), which held out againſt the conqueror; all ſuch ſharing in the fate of the city of Rabbah, which was deſtroyed, and laid level with the ground [f]. And thus did the Ammonites ſuffer, ſeemingly too much, for the raſhneſs of a young king, and the fooliſh advice of empty counſellors.

After this vengeful execution, it is no wonder we hear nothing of a king of Ammon, nor indeed of the nation itſelf, till the reign of Jehoſhaphat king of Judah. At this time we find them united with their brethren the Moabites, and the inhabitants of mount Seir, againſt the ſaid king of Judah. The particulars of this war, and how it ended, we have given in the hiſtory of Moab [g].

After

[e] Sam. ubi ſupra. Joſeph. Antiq. ubi ſupra. * See Arbuth. Tab. of an. coins, weights, and meaſures, Tab. XX.
[f] See 2 Sam. xii. 1, 29, 31. Joſeph. ubi ſupra. c. 7. 1 Chron. xx. [g] See before, Vol. II. p. 213.

(G) The ſcripture ſays it extended to all the cities of Ammon; but we cannot forbear thinking, that this expreſſion means only all ſuch as held out obſtinately, and defied the king of Iſrael; and herein we are ſupported by Joſephus.

AFTER this they were overthrown by, and made tributary to, Uzziah king of Judah [h].

THE Ammonites bore this yoke as long as Uzziah lived, but in the reign of his ſon Jotham they had an anonymous king over them, who ſtirred them up to rebellion againſt him. The nation at this time muſt have been pretty well recovered, and, having a martial prince at the head of them, they reſolved to free themſelves from the oppreſſions of their old enemies in Judah. The event was unhappy; they were overthrown in battle, and were reduced to compound for their peace with Jotham, by paying a tribute of one hundred talents of ſilver, ten thouſand meaſures of wheat, and as many of barley [i], in all about one hundred ſixty thouſand of our buſhels; and this ſame tribute did they pay for three ſucceſſive years [k].

AT length when the Babylonians grew mighty, and threatened all the kingdoms of this part of Aſia with ſubjection, it is likely they might have entertained thoughts of withſtanding the common enemy with their joint force. From hence, poſſibly, a good underſtanding between Baalis, the laſt king of Ammon, and Zedekiah, the laſt king of Judah [l], might ſeemingly ariſe. But when deſtruction came upon Zedekiah and Jeruſalem, the Ammonites ſhewed themſelves, and exulted over the ruins of that unhappy city [m], for which they were ſeverely threatened by the Prophet. It ſeems impoſſible that they ſhould have refrained from it, conſidering the ſteadfaſt enmity which had ſo long ſubſiſted between the nations. However, Baalis received all the Jews, that fled into his dominions to avoid the captivity, and among thoſe one Iſhmael, of the royal blood, whoſe intereſt he pretended to have much at heart. And, to give him an inſtance of his readineſs to aſſiſt him, with counſel at leaſt, adviſed him to go back again into his own country and aſſaſſinate Gedaliah, who, by the expreſs appointment of the Babylonians, was left ſet over the poor remnant of the Jews. By thus ſtirring up a pretender, he ſeems to have aimed at the utter extirpation of the nation, either out of a pure deſire of revenge, or with ſome view to his advantage at the ſame time. His bloody counſel was taken, and the aſſaſſin did his work, and was obliged

[h] 2 Chron. xxvi. 8. Joſeph. Antiq. lib. 9. c. 11. [i] Vid. Arbuth. ubi ſupra. [k] Idem ubi ſupra. [l] 2 Chron. xxvii. 5. [m] See Jerem. xxvii. 3.

liged to fly back again to Baalis, who received him into his protection [n]. But Baalis lived not long unpuniſhed, for having been ſo nearly acceſſary to the murder of the innocent Gedaliah: for a ſhort time afterwards, he was attacked by Nebuzaradan the Babylonian general, who put his country to fire and ſword, and deſtroyed his chief city Rabbah, and carried away Baalis and moſt of the nobles of Ammon into captivity, as had been propheſied by Amos: *I will kindle a fire in the wall of Rabbah, and it ſhall devour the palaces thereof, and their king ſhall go into captivity, he and his princes together, ſaith the Lord*; *and* Ezekiel: *And I will deliver thee for a ſpoil* [o] *unto the men of the Eaſt, and will give them the Ammonites in poſſeſſion, that the Ammonites may not be remembered among the nations* [p].

THIS laſt prophecy was in due time compleated, their name being blotted out from the book of nations in the end. But in the mean time they are mentioned as conjoined with the Arabians, Moabites, and Samaritans, in giving all the diſturbance they were able to the rebuilding of the temple of Jeruſalem; which they endeavoured to prevent as much as in them lay. One Tobiah, called the ſervant, is ſaid to have been at the head of them upon theſe occaſions [q].

LIVING in peace and quietneſs under the great monarchies, the Ammonites in proceſs of time grew to be more conſiderable, and in the days of Judas Maccabæus were aſſembled together, in a very great army under their governor Timotheus, to fight againſt that heroic Jew. They came to a battle, wherein Timotheus and the Ammonites were worſted, and the ſame ill-fortune attended them in other ſubſequent conflicts, under the ſame leader, and againſt the ſame enemy. In the end their city Jaſer (it was not anciently reckoned a city of theirs) and the neighbouring towns, fell a prey to the Jews, who ſmote the men, and carried their wives and children into captivity, and plundered and burnt the city of Jaſer; and thus ended this, as it ſeems, their laſt warfare with the deſcendants of Iſrael [r].

NEVERTHELESS, towards the beginning of the ſecond century of the chriſtian æra, they were thought worthy of being

[n] See Ezekiel xxv. [o] See Jerem. ch. xl, xli. c. 1. 14, 15. [p] Idem xxv. 7—10. [q] See Nehem. ii, iv, vi, xiii. [r] See 1 Macc. v. 6—8. Joſeph. Antiq. lib. 12. c. 11. 12. Prideaux Connect. part 2. book 4. p. 212.

being called a numerous nation[s]; but towards the latter end of the fame their name was vaniſhed, and they themſelves blended among the Arabians[t], as happened alſo to the Moabites, Edomites, and others.

[s] Vide Juſt. Mart. in dial. cum Tryph. p. 272. [t] Orig. lib. 1. in Job.

The End of the Hiſtory of Ammon.

SECT. III.

The Hiſtory of MIDIAN, *or* MADIAN.

Their deſcent.

IT is generally agreed, that this people drew their origin from Midian, the fourth ſon of Abraham by Keturah, from whom they were called Midianites. He received large gifts from his father, as did the reſt of his brethren, and was, as well as they, ſent eaſtward, into the eaſt country, to be at a proper diſtance from Iſaac [a]. The ſons of Midian were Epha, and Epher, and Henoch, and Abidah, and Eldaah [b].

THE Midianites were, in their moſt early times, evidently confounded with the Iſhmaelites [c]; and many ages afterwards they are mentioned in conjunction with the Nabatæans and Kedarenes, the poſterity of Nabaioth and Kedar, the ſons of Iſhmael [d]. Doubtleſs, remembering their kindred, they adhered to each other, and were pretty much blended together. On the other hand, we find them to have been ſo incorporated as it were with the Moabites, that Moſes almoſt conſidered them as but one nation [e]. Their religion was the ſame, and they acted in the ſtricteſt concert together againſt him and the Iſraelites. The ties of blood united theſe likewiſe, as on the one ſide they were deſcended from Abraham, and on the other from Lot. So, juſt as they happened to live in the northern or ſouthern parts of their country, they joined themſelves either to the Moabites or the Iſhmaelites. From hence we, in part, gather the extent of their territory, and that there was

a

[a] Gen. xx. 2. 6. 1 Chron. i. 32. [b] Ibid. ver. 33. Gen. xxv. 4. [c] See Gen. xxxvii. 25—28. Judg. viii. 24. [d] Iſa. lx. 6. 7. [e] See Gen. xxxvi. 35. 1 Chron. i. 46.

a pretty wide difference between the Midianites and Madianites.

THE country of Midian was a part of Arabia Petræa. Its exact limits cannot be aſcertained. From what we find in ſcripture, it muſt have lain ſouth-eaſt-ward of the lake Aſphaltites, or the Dead ſea [f]. On the north it was bounded by Moab, or rather mixed with it [g]. Its boundary on the eaſt is uncertain. On the ſouth, it was bounded by the Red ſea. On the weſt, by Edom, or Idumæa, and, partly, alſo on the north, as ſhould ſeem [h]. The country poſſeſſed by the Midianites.

BEING a part of Arabia Petræa, it was moſtly rocky, mountainous, and ſandy. Theſe barren and difficult defects were pretty well amended by the numbers of camels and dromedaries it abounded with; creatures moſt admirably adapted for the uſe of ſuch whoſe lot it was to live upon ſo dry and rugged a ſoil. It was alſo well ſtored with other cattle, which in great herds were driven about to paſture, and to ſprings of water [i]. Though it is certain, that this country was not very well furniſhed with fixed habitations, ſuch as towns and cities, yet we read of their cities and goodly caſtles: but theſe we muſt underſtand to have ſtood in the neighbourhood of Moab only [k]. Two of its cities we have expreſs mention of, and both called Midian, or Madian; the one ſituated in the north towards Rabbah of Moab, or Areopolis; the other in the ſouth, by the red ſea [l]; and was very probably the ſame which Ptolemy calls Modiana, and is perhaps the ſame with a ruined place which the Arabs call Madyan, to this day. Finally, we muſt not forget that mount Sinai is placed within this territory [m].

THE Midianites were a very numerous race, and may be diſtinguiſhed into two ſorts, ſhepherds and merchants. The ſhepherds moved up and down in tents, and drove their cattle before them, even when they went to war [n]. The merchants alſo travelled from place to place in companies [o], or caravans, as the merchants of thoſe parts do at this day, and left the care of their cattle to the women, as ſeems by the ſtory of Jethro's daugh- Their Manners.

[f] See Exod. iii. 1. xviii. 5. Judg. vi. 3. vii. 12, 24, 25. [g] See Numb. xxii. 4. [h] See 1 Kings xi. 18. [i] See Judg. vi. 5. [k] Numb. xxi. 10. [l] Hieron. in Numb. xxxi. 8, 10. [m] Vide Euſebius Onomaſt. in voceni Χωρὴβ. [n] See Judg. vi. 5. [o] See Gen. xxxvii. 28.

ters (A). The ſhepherds, it is likely, had few or no fixed habitations, except ſome ſtrong holds near their borders; the merchants probably had few or none but marts and ſtations, in places convenient for their trade. Theſe grew to be exceeding rich, and by exchanging their gold and jewels with their brethren for their cattle, the ſhepherds were thereby ſtored with precious ornaments [p]. Their manners muſt have been in many reſpects as different as their way of life. However, they are in general repreſented to have been very ſumptuous in their exterior. We read of their *jewels of gold*, *chains*, *bracelets*, *rings*, *ear-rings*, *tablets* [q], *the purple raiment of their kings*, *and the gold chains*, *or collars*, *round the necks of their camels* [r].

Their learning.

IT appears very plain from Job, that they had the uſe of writing very early in theſe parts [f] among the deſcendants of Abraham; and the Midianites being alſo of the number, we cannot ſuppoſe them to have been ignorant therein (B). Sir Iſaac Newton gives them the honour of having

[p] See Numb. xxxi. 50, 51, 52. Judg. viii. 24. [q] Numb. ubi ſupr. [r] Judg. ubi ſupr. ver. 26. [f] See Job xix. 23. 24.

(A) That ſtory ſeems to inform us, that the men in the ſouth part of Midian were not ſhepherds; and therefore we imagine they were merchants. Joſephus expreſly tells us, that it was the cuſtom of the women in this part (which he miſtakenly calls Troglodytica) to look over the cattle; though indeed in this he ſeemingly contradicts what he ſays but a line or two before, viz. that the ſhepherds of the counrty were continually at ſtrife, which ſhould get firſt ſerved with water; and from thence infers the irregularity committed upon Jethro's daughters (1). Thus ſeemingly inconſiſtent is this author with himſelf. But if this laſt cuſtom prevailed, Jethro's ſon Hobab (for that he had ſuch a ſon we ſhall endeavour to make out hereafter) would have been much more equal to ſo troubleſome a taſk, than all the young women, his daughters.

(B) It is almoſt plain, that Jethro himſelf had the art of writing, and, though we dare not poſitively aſſert it, ſent a letter to prepare Moſes for his reception, when he was on his way to the Iſraelites with his daughter Zipporah and her two ſons. This is very naturally inferred from Jethro's form of addreſſing himſelf to

(1) Joſeph. Antiqui. lib. 2. c. xi.

having inſtructed Moſes in writing [t]. The merchants muſt alſo have been verſed in arithmetic of ſome kind or other; and there being ſhips on the mediterranean ſo early as in the days of the patriarch Jacob [u]; and theſe being themſelves traders, and ſituated on the Red ſea, it cannot be ſuppoſed that they could refrain from ſhip-building, and exploring the ſhores of their own ſea, and the coaſts thereunto contiguous. From hence we may naturally enough extend the circle of their ſciences beyond bare writing and arithmetic, and allow them a competent ſkill in geography, geometry, and aſtronomy.

Their religion.

IT is very apparent that the Midianites varied as much from each other in the matter of religion, as in their manner of life. At firſt they were, to be ſure, pure and right in their way; how long they perſevered in it is not ſaid. But in the days of Moſes they partly wallowed in all the abominations of the Moabites [w]; thoſe we mean who were neareſt to that idolatrous nation; nay, exceeded them in their endeavours to pervert the children of Iſrael, when they lay in the plains of Moab, and perſwaded them to bow down to Peor [x]; but we are indeed told, that Peor was worſhipped by the Midianitiſh women chiefly [y]. Thus ſtood religion in the north of Midian. Now in the ſouth, we find them enlightened by a rational and ſublime ſyſtem, long after their brethren

[t] Chron. of ancient kingd. amended, p. 210. [u] See Gen. xlix. 13. [w] See before, ch. 3. ſect. 3. par. 50. [x] See Numb. xxv. 18. Joſeph. Antiq. lib. 4. c. vi. [y] Hieron. in Numb. Hom. xx.

to Moſes, and what is ſaid to have happened thereupon: *I thy Father-in-law, Jethro, am come unto thee, and thy wife, and her two ſons with her.* What was the conſequence of this? *Moſes went out to meet his father-in-law.* Had theſe words been uttered face to face, Moſes could, with no manner of propriety, be ſaid to have gone out to meet his father-in-law. Nor could this notice have been delivered by a meſſenger, who could not, without the moſt ridiculous abſurdity, have ſaid, *I Jethro, am come unto thee,* and ſo on *(2)*. As to the manner of writing in theſe days, and in theſe parts, there is mention made of graving with an iron pen or ſtyle upon lead, in the book of Job (3).

(2) Vide Lightfoot Spicilegia in Exod. § xxiii. (3) Chap. xix. 24.

thren had fallen into the fouleſt corruption. As a proof of this, we need only mention Jethro, who is commonly ſtiled the prieſt of Midian, and is ſaid to have lived [z], and is by ſome thought to have preſided [a] over the Midianites, near the Red ſea. His behaviour [b] in the camp of Iſrael is a ſufficient argument in favour of them; yet, though their religion was otherwiſe very pure, it is remarkable they could not bear circumciſion (C) [c]. They offered up praiſes, and thankſgivings, and ſacrifices to GOD, but their religious rites or ceremonies are not ſpoken of.

WE know not whether they were divided as much from each other in form of government, as in occupation and religion: excepting the caſe of Jethro, their government is repreſented rather as ariſtocratical than monarchical. Their chiefs, however, are ſtiled kings, and therefore we ſhall dignify them with the ſame title.

Their hiſtory.

THE moſt ancient record we find concerning this nation, after what has already been ſaid, is their war with Hadad the Horite, when Midian (D) was ſmitten by him in the field of Moab [d].

THE next is their purchaſing of Joſeph from his brethren, for twenty pieces of ſilver, and carrying him away with them into Egypt, where they ſold him to Potiphar, one of Pharaoh's chief officers [e].

MANY years after this there lived a prieſt, or prince, (E) of the ſouthern Midianites, called Reuel, or Jethro

[z] Joſeph. Antiq. lib. 2. c. xi. [a] Vide Tremelii Bibl. Lat. Exod. iii. [b] Exod. xviii. 10——12. [c] See ibid. iv. 25, 26. [d] Gen. xxxvi. 35. [e] Ibid. xxxvii. 28. 36.

(C) This we think we have authority to ſay; but it is a controverted point. The text, to our apprehenſion, ſuggeſts at leaſt as much for it as againſt it. We ſhall briefly conſider this hereafter.

(D) Doctor Cumberland is inclined to think, that Moſes recorded this, as it was a calamity, to Jethro his father-in-law; and that it was Midian himſelf that was ſmitten, ſomewhat before he was an hundred and nine years old (4).

(E) The Hebrew word is כהן chohen, which ſignifies a prince, or a prieſt, and is promiſcuouſly rendered by both the one and the other. But let this condition of life have been great or mean, we

(4) Origin Gent. Antiquiſſ. p. 14, 136.

thro (F), or the Kenite, the father of Moſes[f]. This perſon reſided in the city of Madian by the Red Sea[g]. It happened that his daughters, who were ſeven in number, met with ſome diſturbance one day from certain rude ſhepherds, in watering their father's flock. Juſt before this, Moſes had ſet himſelf down to reſt in the ſame place, being then upon his flight from Pharaoh; and perceiving the outrage of the ſhepherds, who drove the maidens and their cattle from the water they had been at the pains of drawing (G), he roſe up, and withſtood them, and aſſiſted the young women in completing their work. When they went home to their father, he wondered to ſee them come back ſooner than uſual; and enquiring into the cauſe of their diſpatch, they gave him an account of the inſult they had received at the well; and how an Egyptian (ſo they called Moſes) had protected and aſſiſted them. The good man enquired where this worthy ſtranger was, and reproved his daughters for being ſo unkind as not to bring him home with them; and ſtraightway ſent them to invite their friend and protector to refreſh himſelf. They obeyed, and brought Moſes to their father Jethro; who, taking a fancy to the man, retained him in his family, committed the care of his flocks to him, and in proceſs of time gave him his daughter Zipporah to wife; and Jethro had Moſes with him forty years. At length, underſtanding that his Jethro.

I 4 ſon-

[f] Exod. iii. 1 Judg. i. 16. [g] Joſeph. ubi ſupr.

we may be excuſed for inſerting what we find concerning him and his family, inaſmuch as it is the only fragment we have left in hiſtory concerning the ancient Midianites in the ſouth.

(F) This is by ſome held to have been the firname of the family (5). The ſeventy call him Ῥαγουήλ, Raguel, and ſo does the vulgate, and even our own verſion in another place: however, this name is by ſome thought to have been the name of Jethro's father (6): but with what foundation may be curſorily conſidered hereafter.

(G) This inſult has given birth to a ſuſpicion, that their father was ſo far from being chief, either as prince, or prieſt, that he was only an inferior in the ſacred order, and then no wonder they were abuſed, ſays our commentator. Indeed, if we do not ſuppoſe theſe ſhepherds to have been ſtrangers in this part, it muſt be

(5) Vide Cleric. in Exod. ii. (6) Vide cund. ibid.

ſon-in-law was commiſſioned by GOD to lead out the children of Iſrael from bondage, he conſented to part with him, and his daughter, and his grand-children, who ſet out for Egypt: but a diſpute ariſing between Moſes and his wife about circumciſing a child upon the road [h], ſhe came, or was ſent, back again (H) by her huſband, and he went on without her [i].

WHEN Jethro heard of the mighty things which the LORD had done through Moſes, and how he had delivered his people, and brought them out of Egypt, he took his daughter Zipporah, and her two ſons, and his own ſon Hobab, and ſet out with them towards his ſon-in-law Moſes, to congratulate him, and reconcile him with his daughter Zipporah. They were all received very affectionately by Moſes, and Jethro hearing from him the wondrous works which had been done for Iſrael, he bleſſed GOD for the ſame, acknowledged him to be far ſuperior to all other gods, and took a burnt-offering and ſacrifices for GOD: and Aaron and all the elders of Iſrael came to aſſiſt at the ſolemnity, and to pay him the reſpect due to ſo venerable a perſon.

THE next day, Jethro had an opportunity of diſplaying his great wiſdom and ſkill in the due regulation of government,

[h] Exod. ii. iii. iv. [i] Ibid. xviii. 2.

be acknowledged, that it does not look as if Jethro was a man in any great repute or authority.

(H) In caſes of doubt like this, we can only take what ſeems to us the moſt rational ſide of the queſtion. Divines have explained this matter many ways (7), and ſome ſeem unwilling to allow there was any jar between Moſes and his wife, apprehending, perhaps, that it cannot ſuit with the dignity of that law-giver's character. But for our parts we do not perceive how it can reflect any diſhonour upon him, eſpecially when the ſubject of the diſpute was ſo very important. Farthermore, if the cuſtom had been that Jethro's family was circumciſed, Zipporah his daughter would certainly have made no words about the execution of a practice, which ſhe muſt have thought to have been eſſential. That there was ſome ſort of miſunderſtanding in this matter muſt be allowed; and therefore we have urged it as an inſtance to prove, that theſe Midianites did not uſe circumciſion; and have alſo made it the cauſe of Zipporah's returning back to her father.

(7) Vide Lightfoot, ubi ſupr. § 8, 9. Cleric. in Exod. iv.

ment. He obſerved, that the people crouded about Moſes all day long; and aſking him the meaning of it, Moſes anſwered him that he had been ſitting in judgment. Upon this Jethro told him, he was quite wrong to charge himſelf with ſo grievous a burden, too much for any one man to bear; that it would be enough for him to attend upon the ſublimer concerns only, to conſult with GOD, to declare his holy laws and ordinances, to inſtruct the people in the right way, and the like; and commit the judging and well-ordering of the people to a ſelect number of the moſt righteous men among the multitude, who ſhould, according to their abilities, be appointed over thouſands, and over hundreds, and over fifties, and over tens; abſtaining from every buſineſs himſelf that was not of the higheſt moment. Jethro gave not this counſel in vain, and thereby adminiſtered great eaſe to his ſon-in-law Moſes [k] (I).

ANY thing farther concerning Jethro we know not, except that Moſes diſmiſſed him; that he ſeems to have left

[k] Ibid. ver. 3, 4, 5, 6, 7, & ſeqq.

(I) A very eminent divine contends, that this whole ſtory is miſplaced, and ought to ſtand between the tenth and eleventh verſes of the tenth chapter of Numbers (8): Firſt, becauſe Jethro is ſaid to have taken burnt offerings and ſacrifices for God. Secondly, becauſe Moſes is ſaid to have ſitten to judge the people, and to have made known to them the ſtatutes of God and his laws. As this ſtory now ſtands, it refers to a time when as yet the tabernacle was not erected, nor any altar built; Moſes had not yet received any laws from God; nor had they reached mount Sinai, ſays our author. But it is nevertheleſs poſſible, that Jethro might have offered a ſacrifice in his way, particularly as he was a prieſt; nor is it unlikely that Moſes acted as judge and arbitrator before he received any particular ſyſtem of laws from God. But Thirdly, becauſe Moſes puts off the inſtitution of the judges and elders over the people, which he was adviſed to by Jethro, till after they moved from mount Sinai. This third proof ſeems to be more valid than the two former, but yet, not quite ſo plain and deciſive as might be wiſhed. The putting of Jethro's advice in execution effectually and orderly, muſt have been certainly the work of time. But were we to enlarge upon theſe obſcurities ſo far as we might, there would be no end to our work.

(8) Lightfoot ubi ſupr. § xxiii.

left his ſon Hobab (K) behind him, with a friendly intent, that he ſhould ſerve as a guide through the wilderneſs; but it was with reluctance he went through with them; nor was he prevailed on to do it without very large promiſes [1]. We read farther concerning the deſcendants of Jethro, that they were called Kenites, and that they joined the children of Judah, and marched with them from the

The Kenites.

[1] Numb. x. 29—32.

(K) It is very ſtrange, that thoſe who know not how to think that Raguel and Jethro were both names belonging to one man, will yet have it that Hobab and Jethro mean one and the ſame perſon. And, contrary to the apparent reaſon of things, that it was Jethro himſelf under the name of Hobab, who is here intreated to ſerve as a guide to the Iſraelites (9). Joſephus frequently calls him by the name of Raguel, and ſays he was Moſes's father; ſo ſays the ſcripture, under the name of Raguel, in the place where Hobab is mentioned. In ſcripture he is conſtantly called Reuel or Jethro, till he departed from the camp. Shall we ſuppoſe that he came back again, and was from thenceforward called Hobab? That Jethro, returned to his own country, is expreſly ſaid (10). That Hobab did ſerve the Iſraelites as a guide, is plainly enough inſinuated (11). What ſettlement could Jethro want? how, as father of a family, could he deſert them? how, as he was a prieſt or a magiſtrate, could he be abſent from his charge? On the other ſide, how can it be ſuppoſed, that a man who expreſſed ſo much good will towards the children of Iſrael, who was ſo thankful to God for their deliverance, who owned his conviction that they were under the protection and care of the Lord God; how can it be ſuppoſed, that ſuch a perſon would have made the leaſt ſcruple of doing any thing that could have been requeſted by Moſes, whom he looked on as the immediate miniſter of the Almighty? It is more rational to ſuppoſe, that it was a ſon of his called Hobab, who is here ſpoken of, who was left behind by his father, as one well acquainted with the deſart, and ſo might be of good uſe to Moſes; but who, not having the ſame faith and aſſurance in God which his father had, ſaw no great proſpect of good things to come, and therefore wanted to return home again; but that he was tempted to ſtay, and go through with them, is clearly enough ſaid. If Moſes's father-in-law is afterwards called Hobab, as he is (12), that is not the only little diſſonance of the hiſtorical kind we find in ſcripture.

(9) Vide Cleric. in Exod. xi. & Numb. x. (10) Exod. xviii. Judg. i. 16. (11) Joſeph. Antiq. lib. v. c. 2. (12) Judg. iv. 11.

the city of palm trees [Jericho [m]] into the wilderneſs of Judah [n]. That upon the taking of Hebron they were rewarded with a large portion of ground, in conſideration of their having forſaken their native place, and ſuffered with the Iſraelites all the toils of their wars, and all the diſtreſſes in the wilderneſs [o]. That Heber the huſband of Jael, who killed Siſera, was particularly of this family [p]. That on the aforeſaid conſideration alſo, the Kenites were many years afterwards warned by Saul to move off from the Amalekites, when he had it in charge to extirpate that nation, that they might be no way prejudiced thereby. Thus were they preſerved, and fixing their ſeat upon a rock, and there poſſeſſing a ſtrong hold, they grew wanton and preſumptuous, and were carried away into captivity by the Aſſyrians, together with the ten tribes of Iſrael, as Balaam had propheſied long before: "And he [Balaam] looked on "the Kenites . . . and ſaid, ſtrong is thy dwelling-place, "and thou putteſt thy neſt on a rock. Nevertheleſs the "Kenite ſhall be waſted, until Aſhur ſhall carry thee "away captive [q]." And thus have we traced down the poſterity of Jethro to their exit.

THE Midianites we ſhall have now occaſion to mention as at enmity with Iſrael, we apprehend to have been chiefly thoſe who bordered upon, or lived, as it were, in common with, the Moabites. EVI, REKEM, (L) HUR, ZUR, and REBAH, were all five of them kings, or dukes of Midian (M), when Moſes overcame Sihon the Amorite, and greatly fearing for themſelves, they entered into counſels with Baalak king of Moab, to conſider upon what methods they could take to avoid the dangers which they thought threatened them. We ſhall not repeat here what we

Evi, Rekem, Hur, Zur, and Rebah.

[m] See before in the Notes Vol. II. p. 110. [n] Judg. i. 16. [o] Joſeph. Antiq. lib. 5. c. 2. [p] Judg. iv. 11. [q] Numb. xxiv. 21, 22.

(L) Joſephus calls theſe five kings Oeus, Sures, Robeas, Urcs, and Recem, and ſays, that this laſt built, and gave name to, the city of Rekem, the capital of Arabia, by the Greeks called Petra (13).

(M) They are alſo ſtiled princes of Midian, and dukes under Sihon king of the Amorites (14). Perhaps they might have paid ſome homage or tribute to Sihon, or ſome other way might have been deemed as feudatory under him.

(13) Joſeph. Antiq. lib. 4. c. 7. (14) Joſh. xiii. 21.

we have already ſaid concerning this abſurd and iniquitous matter in the hiſtory of Moab [r]. Only it will be neceſſary for us to remark here once more, that the Midianites ſeem to have ſignalized themſelves in a moſt extraordinary manner, in their endeavours to turn the children of Iſrael from GOD. For it muſt be remembered, that Balaam had ſent them word either upon, or after, his return home, that it was in vain they hoped to hurt the darlings of heaven by any other means than enticing them to ſin, the ſole means whereby GOD could be brought to forſake them: that upon this occaſion it would be proper for them to take the moſt beautiful of their young women, and deck them out in the moſt gorgeous manner, and ſend them to the Iſraelites, with ſuch inſtructions for their behaviour, as that, after having enſnared their hearts, might beſt corrupt their minds alſo [s]. This counſel they ſwallowed down very greedily, and were ſo ſanguine upon the matter, that we find Zur, one of their kings, made no ſcruple to ſend his daughter Cozbi among the reſt; but it was a tragical buſineſs for her; ſhe was killed by a wound in the belly, given with the ſame weapon, and with the ſame ſtroke, as made an end of her huſband or friend Zimri. For the reſt, theſe fair idolatreſſes played their part ſo well, as to captivate many of the Iſraelites, and ſo abſolutely to prevail over them, as to bring them to bow down before Baalpeor, from whence great trouble and deſtruction came upon the whole body of them (N) [t].

THE Midianites herein enjoyed but a ſhort-lived ſatisfaction; their forwardneſs upon this occaſion, and ſubdolous practices, kindled the wrath of GOD againſt them, and Moſes had poſitive orders to ſmite them particularly. When they heard that the divine command was on the point of being executed upon them by twelve thouſand of the Iſraelites, under the conduct of Phinehas, they made the beſt preparations they could to withſtand the invaſion, by arming their caſtles, and muſtering their ſtrength. But their caſtles

[r] See before, Vol. I. p. 189. [s] Vol. I. p. 189. [t] Numb. xxv. 15.——18. Joſeph. Antiq. lib. 4. c. 6. See before, Vol. II. p. 104, 105, 106, 107, 108, 109.

(N) Joſephus ſpeaks of a plague upon this occaſion which carried off fourteen thouſand Souls (15).

(15) Joſeph. ubi ſupra.

caſtles availed them but little, nor the ſtrength they muſtered. They were defeated, and every man of them put to the ſword, and among the reſt Balaam [u] (O), and all their cities and goodly caſtles were laid in aſhes. Not one male of any age or degree was ſpared, they were all put to the ſword, as were all the females likewiſe that were not pure virgins. The country was laid waſte, and all the cattle driven off before the conqueror, to the number of ſix hundred ſeventy five thouſand ſheep, ſeventy two thouſand beeves, and ſixty one thouſand aſſes. The virgins which were carried away captive were thirty two thouſand in number; and there is mention made of great riches in gold, and ſilver, and iron, and other metals, which were carried off in this general devaſtation [w]. Thus were they puniſhed for their folly and wickedneſs, and their country made quite deſolate.

THUS was a branch of the Midianites utterly cut off; but in proceſs of time this loſs was ſupplied, and it pleaſed GOD, for the puniſhment of Iſrael, that they roſe up in war againſt that ſinful nation, and in their turn were very near deſtroying the whole generation of them by fire, and ſword, and famine, for ſeven ſucceſſive years. For, about one hundred and fifty years after this ſlaughter of the Midianites, there appeared two kings at the head of them, and the Amalekites, and Arabians.

THESE two kings are called ZEBAH and ZALMUNNA, and waged ſo cruel a war againſt the Iſraelites, that not daring to ſtay in the low country, they betook them to the mountains, and there, where nature had been defective, they made themſelves caves and fortreſſes to ſhelter them. The Midianites having therefore no enemy that withſtood them, they waſted the fruits of the earth, and drove off all the cattle. This deſtruction they continued for ſeven years together marching every ſummer ſeaſon in vaſt multitudes, with numberleſs camels, and herds of cattle, about the

Zebah and Zalmunna.

[u] Numb. xxxi. 1—8. [w] Ibid. ver. 9, 10, 11. & ſeqq. Joſeph. ubi ſupr. c. 7.

(O) Balaam is poſitively ſaid to have gone to his place (16), to have returned home; but whether he came back again in compliance with a ſecond meſſage, or whether of his own accord, to ſee the iſſue of his wicked counſel, or to forward it, is not ſaid.

(16) Numb. xxiv. 25.

the time the fruits were far advanced, all which they reaped for themselves; so that, between them and their infinite flocks, there was scarce any sustenance left for the Israelites, who continually fled up to the mountains upon their approach [x].

But God at length put a stop to these mercileſs incursions of Zebah and Zalmunna, who meant nothing less than to starve the inhabitants, and possess themselves of the land [y]. Gideon was chosen by heaven for the delivery of his country upon this calamitous occasion, and he did it so effectually, that the Midianites never dared afterwards to contend with Israel, as will immediately be seen. Zebah and Zalmunna and their confederates marching into the country, according to their annual custom, pitched their tents in the valley of Jezreel, on this side of Jordan. Here, as they lay covering a vast tract of ground, their camp was explored by Gideon one night, who overhearing one of the camp telling his dream to another, who interpreted it in favour of Gideon, he was more than ever encouraged to put in agitation a stratagem, which had been formed for their destruction, with only three hundred men, armed with no other weapons than a ram's horn in one hand, and a light concealed in a pitcher in the other. Accordingly about midnight the Midianites were alarmed in three several quarters of their camp, by the sound of one hundred horns or trumpets in each; and starting from their sleep, perceived also as many lights breaking in upon them on three several sides. The sound of the horns, the glare of the lights, the gloom of the night, and the loud shouts they heard, struck them with horror and amazement, and having no time to recover from their first consternation, they fell into unspeakable confusion; and, being of different languages, struck at one another, not knowing friend from foe; so that a dreadful slaughter ensued, which was chiefly owing to their own weapons. The kings Zebah and Zalmunna, however, found means to extricate themselves, and fled off with a body of about fifteen thousand men: Oreb and Zeeb, two princes of Midian (P), also found means to

[x] Judg. vi. 1—6. Joseph. Antiq. lib. 5. c. 7. [y] Psalm lxxxiii. 11, 12.

(P) According to Josephus, Oreb and Zeb were kings of Midian (17).

(17) Joseph. Antiq. lib. 5. c. 8.

to escape for the present; but they immediately fell into the hands of the Ephraimites, who put them to death; and by the slaughter which happened upon this occasion, and what before happened in the camp, there fell one hundred and twenty thousand men. The kings Zebah and Zalmunna (Q), with their party, got over the river, and held on their flight to Karkor, and there thought themselves safe; but being hotly pursued by Gideon, they were unexpectedly surprized, and put to farther flight, and being overtaken again, their fifteen thousand men were beaten and dispersed [z], and they themselves taken prisoners, and carried back again by Gideon [a]. When he had brought Zebah and Zalmunna home with him, he asked them what kind of men they were whom they had formerly slain at Tabor; they answered they were just such as himself, of majestic deportment; to this he replied, they were his own brethren, and therefore he could not spare their lives: wherefore he ordered his son to stand up and kill them; but they, perceiving the youth to be but weak and fearful, requested of Gideon, as a favour, that he would dispatch them himself, and he did so, and they were no sooner dispatched than the ornaments were taken from the necks of their camels. Thus were the Midianites slaughtered a second time, and plundered of immense wealth in cattle, gold, jewels, rich attire, and the like. The very ear-rings only, taken from them, weighed 1700 shekels [b]. This downfal is, by the prophet, termed, the day of Midian [c], and the slaughter of Midian at the rock of Oreb [d]. From henceforward they gave over the trade of war [e].

THEY were, however, a famous nation many ages afterward, and are mentioned for their industry, and riches [f], and the magnificence of their tents [g]: but in the first century

[z] Judges ubi supra. 10, 12, 13. & seqq. vii, viii. 1—18. [a] Vide Joseph. ubi supra. c. viii. [b] Judg. viii. 18, 26. [c] Isa. ix. 4. [d] Isa. x. 26. [e] Judg. ubi supr. ver. 28. [f] Isa. lx. 6. [g] Habak. iii. 7.

(Q) Josephus says, they were brethren, and calls them Zebin and Hezarben (18). He says also, that these fifteen thousand men were all slain (19) to a man; the scripture only says they were discomfited or terrified, which is by much the more likely to have happened.

(18) Idem ubi supra. (19) Idem ubi supra.

tury their name was difuſed, being by that time ſwallowed up by the more famous of Arabia. Between three and four hundred years ago, there was a ruined city which bore the ancient name (R); in the neighbourhood of which they pretend to ſhew the place where Moſes watered his father-in-law's cattle.

SECT. IV.

The Hiſtory of Edom.

ESAU, called alſo Edom, was the progenitor of this people. He was the ſon of Iſaac, the ſon of Abraham, by Rebekah, and born at a birth with Jacob, being his twin-brother, and the elder of the two (A). Theſe twins contended while yet in their mother's womb; an early preſage of the ſtrife which was to take birth between them, and revive between their deſcendants, as GOD himſelf explained it to their mother. Eſau was born with red hair all over him (B); and as he grew up he proved to be a very ſtrong

(R) Abu'lfeda, from whom we have authority to ſay this, calls it مدين Madyan, and Moſes's father-in-law, شعيبا Shoaib (20); and the place is ſtill one of the ſtations in the pilgrimage from Egypt to Mecca, under the name of Shoaib's Cave (21).

(A) It is remarkable, that as he came into the world his brother Jacob had him faſt hold by the heel, as if he would ſupplant him, as he afterwards did, ſays a learned commentator (1).

(B) Much is ſaid concerning this extraordinary hairyneſs of the new born Eſau: but not to enter into the little uncertain niceties of a ſubject of this kind, it is in general thought, that he had not only hair on his head, but all over his body; and that this hair was as ſtrong as briſtles; in ſhort, that he was as rough and ſhaggy as a Satyr (2): and this indeed ſeems to be the meaning of the text, which ſays he was red all over, like a hairy garment. This expreſſion has given birth to a conjecture, that the hair-garments they wore in thoſe days, were of a reddiſh colour, like the hair of Eſau (3). Inſtead of garment the LXX render it δοραδασύς, a briſtly, ſhaggy ſkin, and the vulgate has the ſame interpretation. It is thought, that each interpretation has an eye to the faſhion among

(20) Deſcrip. Arab. p. 42. inter Geo. Vet. Script. Grec. Min. (21) See Ray's Collect. of curious Travels and Voyages, Tome 2. p. 158. (1) Patrick's Comment. upon Gen. xxv. 26. (2) Idem ubi. ſupr. ver. 25. (3) Cleric. in Gen. Loc. ſupra cit.

ſtrong and active perſon, and delighting in the chaſe, became a man of the field; by which means providing plentifully and deliciouſly for his father's table, he won his particular affection. On the other hand, being of a very maſculine turn of mind, and much abſent from home, he retained not the kind inclinations of his mother Rebekah, who prided herſelf wholly in Jacob, who was a gentle-ſpirited man, and more frequently in her eye. On a day it happened, that Eſau came home quite ſpent with faſting and exerciſe, and perceiving that his brother Jacob had cooked ſome pottage, begged he might have ſome of it, being quite empty and ready to die. Jacob, taking advantage of his brother's diſtreſs, tells him, if he would make over his birth-right to him, he ſhould have ſome: whereupon Eſau, thinking himſelf at the point of death, and that his birth-right was of no value to himſelf, conſented to Jacob's ungenerous motion, and ſware away his birth-right to him, and accepted of a meſs of pottage in conſideration thereof; and thus is he ſaid to have deſpiſed his birth-right. Upon this occaſion he was called Edom, which ſignifies red, the colour of the pottage which Jacob ſo dearly ſold him (C). [a] At the age of forty years, he gave

[a] Gen. xxv. 24—34.

among the Arabs of wearing ſkins (4), as ſome of them do at this day, but they are ſheep-ſkins, warm and ſoft, ſown together, the wool being worn innermoſt (5).

(C) We are well apprized of all that has been ſaid by commentators and others upon this great tranſaction between theſe brethren; but it will hardly be expected we ſhould run the ſame lengths they have, nor enter into their infinite repreſentations of this matter; and therefore we ſhall briefly touch upon ſome general points only. The pottage it ſeems was red, or yellowiſh, and made of lentils (6) from Egypt (7); of which there was two ſorts, one darker than the other (8), and both highly prized by the antients, both of the eaſt and weſt. Pliny relates from others, that equanimity is the uſual effect of feeding upon lentils: and another writer ſays they inſpire with joy (9.) It is unlucky they ſhould

(4) Idem ibid. (5) Thevenot, Part. 1. lib. 2. chap. 32. (6) Gen. ubi ſupra, ver. 30, 34. (7) St. Auguſt. in Pſal. xlvi. (8) Plin. Hiſtor. Nat. l. 18. c. 31. (9) Auctor Geopon. lib. 2. c. 35. p. 71.

gave great trouble and ſorrow to his parents by marrying among the daughters of Heth; he took two of them, Judith the daughter of Beeri, and Baſhemath the daughter of Elon

have kindled ſuch a ſtrife between Eſau and Jacob. To this ſome anſwer, that Eſau had never ſeen any afore (10); and this is pretended from Eſau's ſaying only, give me ſome of that red, red, as it is in the original: but this is at firſt ſight very unlikely to be true; for doubtleſs theſe lentiles muſt have been a food he and the reſt of the family were well acquainted with; ſo that what the ancients held concerning the harmonious effects lentils have upon the mind, muſt fall to the ground. But to leave this ſubject, let us take a view of the birth-right which was exchanged for theſe lentils. The chief privilege of the birth-right, ſay ſome, was the inheriting a double portion of the father's eſtate (11): others annex the prieſthood thereto, and ſuppoſe, that Eſau's cloaths, with which Rebekah clad Jacob, were his ſacerdotal veſtments (12); but this notion is ſtrongly repugned by what ſtands on record concerning Cain and Abel (13). Thirdly, a ſuperiority over the reſt of the children is thought to have been the principal prerogative of the birth-right. Again, the chief privilege of the birth-right might have been to challenge the particular bleſſing of the dying parent. To conclude upon this head, the prerogatives of the primogeniture were not confined to the perſon of the ſon, on whom the bleſſing was conferred, ſo as to die with him, but deſcended to his poſterity. So the promiſes made to Jacob in his bleſſing were not fulfilled in him, but in his children after him. Such was the pottage, and ſuch the birth-right, which were ſet in oppoſition to each other. The Hebrew word הלעיטני halhiteni, which Eſau uſes in addreſſing Jacob, occurs no where but in this place, and therefore there is ſome doubt about the true interpretation of it. The LXX render it γεῦσόν με, fac me guſtare, which is not thought earneſt enough for a hungry man. Some, feed me with it, as if he was ſo thoroughly tired, that he could not lift his own hand to his head. Others, give me a good deal of it, which a very hungry man might ſay very naturally; and this is defended by the Samaritan reading, and from the affinity of an Arabic word, which has ſome relation to it in ſound and ſignification. From the ſame alſo it may be ſuppoſed, that he aſked for the thickeſt of the pottage. Conſidering the whole tranſaction between Jacob and Eſau upon this occaſion as meerly human, the former was guilty of a great breach of hoſpitality and brotherly affection at leaſt, and cannot be excuſed, as moſt, even divines, apprehend (14).

(10) See Patrick's Comment. ubi ſupr. ver. 30. (11) ver. 31. (12) Lightfoot Obſervations in Geneſin. c. xxvii. (13) Gen. iv. (14) Vide Cleric. in Geneſ. ubi ſupr.

Elon [b] ; but this wore off in time, and he was received into favour with his father again. Iſaac now grown old and very dim-ſighted called Eſau to him, and told him, that he knew not how few the remainder of his days were to be, and therefore ſhould be glad if he would take his weapons, his quiver and his bow, and go out and get him veniſon, and dreſs it for him in a ſavoury manner as he knew how, that *his ſoul might bleſs him before he died* (D). Eſau obeyed, but while he was abſent, his mother, who heard the words which paſſed between his father and him, dreſſed her ſon Jacob in Eſau's cloaths (E), and, preparing a diſh of ſa-

[b] xxvi. 34, 35.

(D) It is thought that Iſaac only ſent out Eſau by way of probation ; that is, to try whether he had good ſucceſs, or not, thereby to ſatisfy himſelf in a ſcruple he had, whether he ſhould bleſs him or no. For, as by his former ill ſucceſs he was reduced to the neceſſity of making away his birth-right ; ſo now, if the ſame ill luck attended him, he ſhould take it for a ſign that the bleſſing was to depart from him : And though he had pronounced the great bleſſing over Jacob, yet when he perceived that Eſau had brought home the veniſon he ſent him for, he deemed it a tacit expreſſion of the will of God, that Eſau ſhould have his bleſſing alſo, and he bleſſed him accordingly (15).

(E) Concerning theſe cloaths, it is ſaid they had been worn by Adam in his miniſtry, and that they retained the ineffable fragrancy of paradiſe (16). Others only ſuppoſe, that they were laid up in aromatic flowers, or other perfumes, to preſerve them from moths, and to refreſh the brain, when put on ; and that it is groundleſs in the Jews to imagine they deſcended from Adam to Noah, and ſo downwards to Abraham's family (17). Beſides, it may be aſked how it came to paſs, that Iſaac could part with ſo precious a relique to his ſon, during his own life-time ? Perhaps this is too early to ſuppoſe there was any ſuch delicacy in apparel ; but this is obviated by the near neighbourhood of Arabia (18). By the ſmell of the field ſome may underſtand a ſcent more manly than the ſteams of a perfume, eſpecially as Eſau was ſo great a hunter, and perpetually in the field ; but that expreſſion is ſuppoſed to have a different import, and to mean, that his cloaths were exquiſitively ſcented ; and this ſeems to be confirmed from the Samaritan reading, which after the word שרה Shadeh

(15) Vide Lightfoot Obſervat. in Geneſ. cap. xxvii. (16) Vide Braun. de Veſtib. Hebr. ſacerd. c. 4. (17) See Patrick's Comment. upon Gen. c. xxvii. 15 (18) Vide Cleric. in Gen. c. xxvii. 27.

voury meat, sent him in with it to his father, who pronounced the irrevocable blessing over Jacob. Thus was Isaac deceived, and Esau supplanted, who coming in with his venison just after Jacob was gone, Isaac in a great agony told him he had been circumvented by his brother, and that he neither could nor would recal the blessing. When Esau heard this he wept bitterly, and upbraided his brother with his unnatural and subdolous dealing, first, in extorting his birth-right from him, and now, in robbing him of his blessing. However, Esau did so far prevail with his tears and his sorrowful pressing intreaties, that his father blessed him also to this effect; that "his dwelling should be the "fatness of the earth, and of the dew of heaven from "above (F), that he should live by the sword and serve "his

a field, has מלא full; and so the LXX have rendered it ὡς ὀσμὴ ἀγροῦ πλήρους, and so the Vulgate has it, Sicut odor agri pleni; as the smell of a full field, or as it is supplied, as the smell of a field full of sweet herbs and flowers.

(F) Some give this part of Esau's blessing a quite contrary turn, and will have it, that his lot was to be in a barren land; and that his living should be by rapine and violence; and accordingly, that Edom was an ungrateful soil, nor refreshed with timely rains (19). The interpretation of the LXX, with a trifling variation of ἀπὸ, by making it either a prepositon or an adverb, may be taken both ways. But, on the other hand, it is observed, that if we follow our own translation, which is directly in the sense of the Vulgate, and in the sense St. Hierom took it, there will be still a wide difference between Jacob's blessing and Esau's; that in the latter there is no mention made of corn and wine; no such dominion promised as in Jacob's; and that lastly, whatsoever fatness was in the soil of his country, it did not last long (20). Nevertheless, Moses seems to tell us, that the land of Edom was not so destitute as some may imagine; when he promises the king of Edom, that if he would permit the children of Israel to pass through his country, they should hurt neither the fields nor the vineyards (21): the fields may perhaps have been rather corn fields than pasture; and if this be true, the Edomites had their corn and wine too. As to what Malachi says of the infertility and desolation of the kingdom of Edom (22), that must, we think, be rather attributed to the cruel effects of their unfortunate wars, than to any failure in the usual product of the soil.

(19) Idem ubi supr. ver. 39. (20) Patrick's Comment. ubi supr. ver. 39. (21) Numb. xx. 17—20. (22) Malach. i. 3.

" his brother, but that he ſhould ſhake off the yoke at " laſt." It was with a heavy diſcontented mind that he heard his lot, and his reſentment wrought ſo ſtrongly upon him, that at firſt he determined to kill Jacob as ſoon as their father ſhould die; which coming to the knowledge of Rebekah, ſhe ſent Jacob away to Padan-Aram, under pretence of getting him a wife there from among her own kindred [c]. But Eſau cooled again, and generouſly forgot all that had paſt, and finding that Iſaac and Rebekah had a great averſion to the daughters of Canaan, he went over to Iſhmael, and took his daughter, Mehalath the ſiſter of Nebaioth (G), adding her to the wives he had already taken [d]; and removed with his family to mount Seir, not ſo much with a deſign to ſettle there perhaps, as to ſerve a preſent conveniency. The ſpot he occupied in this country took his name, and was called the field of Edom [e], and in a few years he became a very conſiderable perſon.

For, when news came to him hither, that his brother Jacob was on his return from Padan-Aram, he went out to meet him on the road with a train of four hundred followers, with which he meant to honour and aſſiſt his brother, and not inject fear into him as he did. The interview was very tender on both ſides, but eſpecially Eſau, unmindful of what moſt men would ever have retained, accoſted Jacob with tears of joy and the moſt melting affection: he nobly refuſed the preſents wherewith his brother would needleſly have bribed him to a reconciliation, and preſſed him to hold on his way to mount Seir, that they might be neighbours and live together; and when Jacob artfully waved this invitation, under pretence of the tedioufneſs of his marches for the ſake of the children and cattle, and ſeemed to ſay he would follow him; Eſau deſired he would let him at leaſt leave ſome of his followers behind to aſſiſt him and conduct him on his way; but this

[c] Gen. xxii. [d] Gen. xxvii. 6—9. [e] Gen. xxxiii. 3. in the Margin.

(G) It is obſerved from hence, that Eſau paid no regard to the divine revelation, or he would not have taken the deſcendant of a bond-woman [Hagar], who could not inherit the promiſes made to Abraham and Iſaac (23).

(23) See Patrick upon Gen. xxviii. 9.

being rejected, he with reluctance left Jacob behind him, and took the presents away which had been utterly forced upon him by his timorous brother (H); who, instead of following him, deceived him once more, and went another way [f]. Esau remained in Seir till he heard that his father Isaac was either dead, or upon the point to die, and went to

[f] Ibid. & xxxiii.

(H) It appears very plain from what now passed between Esau and Jacob at this meeting, that the former was not so great a reprobate, or naturally so bad a man, as some have unreasonably represented him. We had resolved to touch upon this matter in the behalf of Esau; but finding it generously done to our hands by a very worthy divine, we shall content ourselves with the substance of what he says: Esau was a plain, generous, and honest man; nor does he seem to have been more wicked than the other men of his age and times. His generous and good temper appears by his affectionate deportment towards his brother, and his speedy and utter oblivion of the injuries and slights he received from him: and though St. Paul calls him the prophane Esau, and says he was hated by God, it cannot thence be gathered that he was a wicked man, or that God punished him for an immoral life. 1. This sentence could not extend to his posterity, and is not said to be founded upon his actions. 2. God's hatred of Esau was not a hatred which induced him to punish him with an evil; for he was as happy in the blessings of this life as Abraham, Isaac, or Jacob, if not more. His children became masters of the land of their possession much sooner than the Israelites; and God was pleased to command the Israelites not to disturb them in their rights. And if his earthly felicity was such, why should we despair of his being a partaker of the heavenly? 3. If he was excluded from being the heir of the blessing, so was Lot, and Job, and other good and virtuous men. 4. St. Paul means no more than to shew the Jews, that God had all along bestowed the favours which led to the Messiah on whom he pleased; to Abraham, not to Lot; to Jacob, not to Esau: to the Gentiles, not to the Jews. 5. Though Esau be called βέβηλος, or prophane, he is never called ἀσεβὴς, or ἁμαρτωλὸς, wicked, or immoral. So that the only defect in his character is, that he does not seem to have been so mindful of the promises made to his family as Jacob was; from whence, and from his temper, it appears, that he was not quite so fit to be the heir of the mercies peculiar to his family (24).

(24) Shuckford's Connect. of the Sacr. and Prof. History of the World, vol. 2. p. 198 & seq.

to Mamre, where he aſſiſted Jacob at the funeral of their deceaſed parent, and took poſſeſſion of his inheritance; for his birth-right was a ſpiritual prerogative, and no-ways related to his father's temporal eſtate. By this addition to his former ſtore, and Jacob being alſo very rich and maſter of much cattle, they perceived it would be next to impoſſible to enjoy ſuch large poſſeſſions together in a country where they were both ſtrangers; and therefore, as Abraham and Lot had done before, they parted. Eſau returning to the country of Seir, being an hundred and twenty years old, married Aholibamah a daughter of the country, but originally of Canaan[g]; and from henceforward took ſuch meaſures as might be moſt conducive to the good and peaceable ſettlement of his deſcendants in this country.

Now though Eſau might have no poſitive knowledge of it, yet God deſigned this land for an inheritance to his line[h], as he did that of Canaan for the line of Jacob: and this naturally leads us to give the beſt deſcription we can of the realm ſo ordained for them; which we ſhall here do once for all. This country was originally, ſo far as we know, inhabited by a people called Horites, or Horim, whether ſo named from one Hor, or Hori[i], which was a name amongſt them, is what we know no more, than whether mount Hor was ſo denominated from him, as ſome think[k]. It was called the mount or land of Seir from one Seir an Horite, and not from the hairyneſs of Eſau, who came there long after, as Joſephus dreamed[l]. In the Samaritan Verſion it is called Gablah; by Jonathan's Targum Gobal; and by Joſephus Gobolitis; which ſeveral appellations are derived from Geboul, ſignifying a border; for it did border upon the land of Canaan on the ſouth; but the extent of the ancient country of Seir we take not upon us to ſay; and therefore can mention no other boundary. When the children of Edom ſeized on this country, it grew to be univerſally known under the name of Edom; but we cannot gather, that they extended their limits till the time they erected their monarchy, when they built Elath and Eſiongeber, as is likely, on the eaſtern ſhore of the Arabian gulf; but in the days of Moſes

Their country.

[g] Ubi ſupr. xxxv, xxxvi. [h] Deut. ii. 5. Joſh. xxiv. 4. [i] Gen. xxxvi. 22, 30. [k] See Wells's Hiſtoric. Geogr. of the Old Teſt. vol. 1. p. 533. [l] Joſeph. Antiq. lib. 1. c. 20.

ſes no part of their dominion abutted upon that gulf[m]. When the ancient kingdom of Edom was in its meridian, it was, as we think, bounded on the north by the land of Canaan and the ſalt ſea, or lake Aſphaltites, on the eaſt by Midian, on the ſouth by the Arabian gulf, or the red ſea, ſo called from the juriſdiction this people exerciſed over it, as is moſt likely (I); on the weſt it was bounded by Amalek.

THIS

[m] See Numb. xx. 17—21. Deut. ii. 1. & ſeq.

(I) The Red Sea, as we commonly call it, is more properly termed the Arabian gulf. By the Hebrews it was called Yam Suf, the weedy, or flaggy, ſea; by the Arabians Bahr Alkolzum, or the ſea of Kolzum, a ſmall town at the northermoſt end of it. But by the ancient iuhabitants of the adjacent countries it was called the ſea of Edom, becauſe it waſhed the ſouthern ſkirts of the land of Edom. The Greeks, finding that the Phœnicians called it Yam Edom, miſtook the word Edom to ſignify an appellative inſtead of a proper name; and therefore rendered it ἐρυθρὰ θαλάσσα, Mare Rubrum, and thence we have the Erythrean, or Red Sea (25). Others (26), however, derive the name from a certain king of the eaſt, in, or towards, Perſia, called Erythras; but by the Red Sea they manifeſtly underſtand what we call the Indian ocean; and therefore we cannot think with Sir Iſaac Newton (27), that this ſame Erythras is the Edom or Eſau of ſcripture (28), and that he was actually the firſt that invented the veſſels, rates, in which they navigated that ſea. Agatharcides expatiates on this, and will have it, that the Indian ocean was called the Red Sea; not becauſe the Arabian gulf belonging to it had hills on the weſt of it, which when the ſun ſhone intenſely upon them, looked ſomewhat like burning coals. On the eaſt he ſays indeed there were ſome red hills, and the ſame there are at this day; but this, he ſays, was not the reaſon why the ocean was called Red: nor was it becauſe the ſun in thoſe parts, inſtead of darting forth bright and clear rays, ſhone out only with a ſanguine light, which gave a bloody hue to the ſurface of the ſea; but he will have it derived from one Erythras, an obſcure and fabulous prince, concerning whom he tells a very abſurd and puerile ſtory, with a very grave air. From this it appears, that the Erythrean, or Red Sea of the ancients is the Indian ocean of our days, and that what we call the Red Sea was conſidered as a branch of it.

(25) See Prideaux's Connect. of the Old and New Teſt. Part. 1. Book 1. p. 10 (26) Plin. l. 6. c. 28. Strab. lib. 16. p. 766. Pompon, Mel. lib. 3. cap. 8. (27) Chronol. of ancient Kingdoms amend. p. 211. (28) Apud Phot. in Biblioth. p. 1, 322.

THIS tract is very hilly and mountainous, and great part of it desart. It has few or no open streams, but latent springs of water sufficient for the use of the inhabitants, who know where to find them [n]. Corn and wine, nevertheless, it seems to have anciently abounded with in some degree [o]; so that Esau may have enjoyed the fat of the land (K); and besides, his posterity, by their situation, were able to supply and enrich themselves with the produce of some of the finest and most fruitful soils on earth, by means of their commerce with foreigners by the red-sea, in those days the greatest and most considerable trading water in the world. Amalekitis is by some reckoned to have been a part or province of Edom [p] (L), but, however it was considered in later days, it certainly was not so when the kingdom of Amalek flourished; and therefore we shall treat thereof separately, in the next section. We are positively told, that Job's country, the land of Uz, lies within

[n] Thevenot's Travels, Part 1. c. 32. Sandys, Book 2. p. 107.
[o] See Numb. ubi supra. [p] Vide Histor. Jul. in Edom. Joseph. Antiq. l. 11. c. 1.

(K) By modern travellers we are told, that this country at present is nothing less than a fertile spot (29). But it must bear a widely different face now that it is only frequented by the Bedouins, or wandering Arabs, from what it did, when occupied by a settled nation, who doubtless must with great pains and industry have prepared the soil for propagation: but we have spoken of this already (30).

(L) Josephus divides Edom into Gobolitis and Amalekitis (31); but this is a division which cannot be accurately spoken of, while the Edomites and Amalekites were independant states. The habitation of the Edomites is also frequently called Gebalene (32); and especially by Eusebius, who uses the appellations Gebalene and Idumea indifferently to denote the same place (33). Some later writers have torn the country asunder by a very violent and needless rent, placing one Edom in the land of Seir on the other side of Jordan to the north, and leaving the other in the place where the only land of Seir certainly stood; but this is a notion very solidly confuted by the best approved of the latest geographers.

(29) Sandys, Book 2. p. 107. (30) See before p. 148. note (F). (31) Joseph. Antiq. l. 11. c. 1. (32) Stephan. ad voces, Γάβαλα. & Γεβάλα. (33) In Onomast urbium & locorum ad voces Γεθεά, Σηεὶς Ἰάθερ.

in the limits of the ancient Edom [q]; but ſome very noted geographers [r] are unwilling to grant it, for reaſons which are not altogether ſo valid as might be wiſhed; but they are too obſcure and uncertain to be diſcuſſed here.

Now the cities and remarkable places of Edom were Teman, which, being mentioned for the wiſdom and counſel of its inhabitants [s], was, perhaps, the royal ſeat: The country around it was called Temani; of this part was Eliphaz, one of Job's friends [t]. Dedan, a city of great dealings with Tyre; ſome of the commodities are mentioned, ebony, ivory, and fine cloaths [u]; it ſeems to have been ſituated in an extremity of the country oppoſite to Teman [w]. Bozrah [x], Boſor, Bazrah, and the like, are names of another city of Edom; its name implies a fortreſs, which has made ſome imagine, that it was the capital of the kingdom [y]. By the manner of the prophet's introducing it, it may be gueſſed to have been a conſiderable place in his days. Selah or Petra being words of the ſame ſignification, the one in greek the other in hebrew, it is thought, the one is a tranſlation of the other, and that they both intend one and the ſame city [z]. If this be right, it ſtood on a level ſpot of ground, encompaſſed all round by ſteep rocks and craggy precipices, and within this incloſure were many gardens and rich ſprings; but beyond it the country was a deſart [a]. That it was thus naturally fortified, appears by ſeveral authors [b]. By one it is called the chief place of the Nabatæans [c], whom in another place he calls Idumeans [d], that is, Edomites; and ſays, that it was three or four days journey diſtant from Jericho. A ſecond author alſo calls it a city of the Nabatæans [e]. A third places it near mount Hor [f], and calls it the capital of Arabia [g]. A fourth ſeats it ten miles weſtward of Elath [h], a ſea-port on the red ſea belonging to the Edomites. Moreover,

over, this kingdom had two very eminent ſea-ports, Elath and Eſiongeber, on the ſhores of the Arabian gulf, or red ſea [i]. Eſiongeber proved an unfortunate harbour, being rocky and very difficult, deriving its name from a ridge of rocks it had, which was thought to reſemble the back-bone of a man [k], and growing at length infamous for the many wrecks which befel the ſhipping that frequented it, it was deſerted very early; and therefore its ſituation is not exactly known, any further than that it ſtood very near to Elath. This [meaning Elath] was a fairer and more commodious haven, and for a long time was a ſtation for the ſhipping, which was ſent from theſe parts into the Indies. It is alſo called Eloth, Aela, Ailat, Elat, Elana, from whence you have the Elanitic gulf wherein it ſtood; and by the Arabians Ailah to this day (M). Upon the decay

[i] 1 Kings ix. 26. [k] See Prideaux's Connect. of the old and New Teſt. part 1. book 1. p. 7. and Patrick's Comment, upon the above-cited paſſage of Kings.

(M) Ailah, or Elath, is near the road the Egyptian pilgrims take, when they go to Mecca. In the fourteenth century there were conſiderable remains of it ſtanding. At that time an Egyptian governor reſided in a tower there: there were no fields about it. There was formerly a caſtle which ſtood out in the ſea, but that is deſtroyed. Our author calls it a ſmall city, and adds, that it had belonged to thoſe Jews who were turned into apes and ſwine (34). Elath and Eſiongeber grew at laſt to be ambigui juris, according to Sir John Marſham (35). But not to anticipate what we may have to ſay upon this matter, let it for the preſent ſuffice, that we obſerve the Edomites to have been ſo well able to defend the right they claimed of the empire of the Red-Sea, that the Egyptians were anciently unable to diſpute it with them, and were obliged to ſubmit to ſuch conditions as the Edomites were pleaſed to allow them, which are ſaid to have been hard enough; for they were allowed but one veſſel of burthen wherewith to ſail to the Indies, and not ſo much as one galley (36). Elath was particularly ſo conſiderable a place, as to give name to the eaſtermoſt of the gulfs which terminate the Red-Sea, and had the famous metropolis of Petra, ten miles to the weſtward of it (37), as is ſaid from very good authority, which has been followed by ſome geographers of firſt note.

(34) Abu'lfeda in Deſcrip. Arab. (35) Canon. Chron. ſecul. xiv. p. 367. (36) See before, Vol. I. Ch. 3. latter end of the ſecond ſect. Hiſt. de Huet, du Comm. & de la Navig. des Anc. c. 5. (37) Euſeb. Onom Urbium & Locorum ad vocem, Αἰλα.

decay of Esiongeber, it grew into great credit and resort, and was thought worthy of being contended for; and anciently changed its masters several times: it was wrested from the Edomites by David [l], it was afterwards forced from the house of David by the Edomites when they rebelled against Jehoram [m]; Azariah got it from them again [n]; but his grandson lost it to the king of Syria [o]; the Syrians held it a long time, and, after some revolutions and changes under the Seleucidæ and the Ptolemies, it fell to the share of the Romans. Remarkable places in this country were farther, mount Hor, where Aaron died, and the valley of Salt, a spot on which the Edomites were twice defeated with a great slaughter; and had its name, probably, from its salt springs, or the salt found there [p].

Now though the name of this kingdom is frequently rendered Idumæa, and Idumea, as in our version of the bible; yet when that name occurs in the prophane and the more modern writers, it must not be understood of the ancient Edom, which, losing its old name, was comprehended under the general appellation of Arabia Petræa, and the third Palestine. The southern part of Canaan came to be called Idumæa, and the whole nation of the Jews Idumæans sometimes. Whence this arose will in part be seen in the close of this section, and more amply in the history of the Jews.

Forms of government.

To return to the ancient Edom. How it was in its more early times governed is a matter of doubt, and being so, we can only embrace the most likely opinion. The Horites were at first ruled by patriarchs, or heads of families, and after that by kings, which were elected into the regal office. This elective kingdom was some how or other interrupted and dissolved, and the ancient form took place again, the governors being stiled dukes, who seem to have succeeded in right of birth. Perceiving the imperfections of this kind of administration, they coalesced under one king, thereby to be the better enabled to withstand an invasion from the Israelites when they came out of Egypt. It was governed afterwards by Edomitish kings quite down to the days of David, who subdued the kingdom; and this second monarchy seems to have been hereditary. These are the various forms of government, which seemed

[o] Ibid. xvi. 6. [p] Vide Salmas. Exercit. Plinian. Cap. 35. p. 613, 614.

ſeemed to have been exerciſed in the land of Seir and Edom, by the Horites and the Edomites, as will be ſeen in the courſe of this ſection.

THE character we have of the Edomites is, that they were a bold and daring people, fond of broils and tumults, which they as much delighted in, as others in the ſoftning pleaſures of luxury [q]. But this, we muſt tell you, is peculiarly the character of the later Edomites, who migrated into Judæa; nor ſhould we have inſerted it here, but that it ſeems to be of a piece with the genius of the people, as their great anceſtor Iſaac foretold it. However, though courage was to be one of their characteriſtics, and, perhaps, the chief, yet we are under no neceſſity to believe it to have been of ſo brutal a ſort as Joſephus repreſents above: for as they were, doubtleſs, a trading nation, it is incompatible to ſuppoſe they were a neſt of robbers and incendiaries, fewer ſuch being for ever found among thoſe that are addicted to commerce, and conſequently enjoy all the world can afford them, than among lazy and ſlothful nations, and ſuch as condemn induſtry out of a vain and ridiculous notion of honour. For theſe laſt are ſure to be mean, and beggarly, rude, ignorant, and baſe; the former quite the reverſe, flouriſh in plenty and eaſe, are learned, ingenious, and brave. What therefore their anceſtor foretold of them, that they ſhould live by the ſword, perhaps, imports no more, than that they ſhould maintain their rights, whether natural or uſurped, with a high hand and a jealous eye; as all thoſe who have claimed the empire of the ſea, as they did, have for ever done. Thus for want of due authority, have we attempted the character of the Edomites, by drawing a parallel between them and others of later, and our own times. And, abating the difference of climates which works a difference of tempers, we cannot be much out of the way in comparing them with other trading ſtates, that flouriſh within our knowledge, who are far from living upon plunder and rapine; and in this we ſhall be more confirmed, when we come to view their behaviour towards Moſes; when though they refuſed him admittance into their territories, yet they were ready to traffic with him, and ſupply him with neceſſaries, as we ſhall ſee anon. The Edomites, whoſe character Joſephus draws above, were a degenerate race, quite aliens to the liberties and noble ſpirit of their forefathers, as we may not unjuſtly ſuppoſe.

Their character.

THEIR

[q] Joſeph. Antiq. l. 13.

Arts and sciences.

THEIR arts and sciences were doubtless great, considering the time, many, and well perfected; and though perhaps there may be no necessity to suppose, as the excellent Sir Isaac Newton has done, that they were the parents of those amiable sisters; yet may we safely pronounce, that they were not much, if any thing at all, behind hand with the most ancient learned nations. The invention and use of constellations appear, by the Book of Job [r], to have been known among the Edomites, among whom he dwelt [s], a rare instance of the early progress of astronomy, if we suppose Job to have ever existed, or the book it self to be of such ancient date as many think. Writing is there mentioned [t] also, and ships [u], and many hints given sufficient to confirm us in a belief, that the secrets and beauties of nature, morality, and much sublime and truly-useful knowledge was cultivated among them. Nor is there wanting very ample evidence from prophane authors to make this out, as we shall take proper opportunities of shewing; and indeed it has been a common opinion of the learned, that great veneration is due to their memory on that account.

Religion.

CONCERNING their religion we are much in the dark. They at first were right in their belief and practice, as they were descended from Isaac, and used circumcision; but they by degrees forgot all, erred into idolatry (for idols it seems they had *), and disused circumcision; but in the end coalesced with the Jews, and were ever after considered as but one nation with them in divine matters, as will be seen at the decay of their state.

History.

WE now resume the history of Esau the father of this people. The number of his family and domestics when he fixed his dwelling here is uncertain, though probably very numerous. According to the hypothesis [w], which in this very obscure case we think ourselves obliged to adopt, he settled here under one of the Horite kings; and therefore he lived in a private manner, and was never considered any more than as the chief of his own house; and thence is dignified with no particular title by Moses. Concerning this matter, we cannot but think with bishop Cumberland,

[r] Chap. ix. 38. [s] St. August. de civitat. Dei ubi supr. Lamenta. ubi supr. [t] See before, in the Notes, p. 132. [u] Job c. ix. * See 2 Chron. xxv. in the Argument. [w] See Bishop Cumberland's Orig Gent. Antiq.

berland, that the Horites were at firſt ruled by ſeveral independant chiefs or patriarchs, till they were overpowered by Chedorlaomer king of Elam, who ſwept them before him, with the neighbouring nations. To ſecure themſelves therefore from ſo great an evil for the time to come, they united under a more ſtable and perfect kind of government, and formed themſelves into an elective kingdom, and their kings were,

BELA, the ſon of Beor: the name of his city was Dinhabah.

JOBAB, the ſon of Zerah of Bozrah. From a ſimilitude of names he has been taken for the holy and patient Job, whoſe hiſtory we might enlarge on, were it not too well known, or too uncertain for us to inſert here, which, for ought we are ſure of, is as proper a place as any other. But though we are well furniſhed with help towards this obſcure taſk, and might, to ſhew that we have read almoſt every thing neceſſary to qualify us for the undertakeing, introduce a cloud of commentators and interpreters; yet we ſhall forbear, becauſe it will naturally lead us into a very dry diſcourſe, and be perhaps very diſſatisfactory to ſome, and very diſguſtful to others. Wherefore we will only ſay, that, according to ſome, Job was a real, according to others, an imaginary, perſon. Some ſay the book was written by himſelf in Arabic, and tranſlated by Moſes into Hebrew; others, that Moſes compoſed it originally while he was in Midian; others again, that it was originally written by Ezekiel: Some hold it to be a genuine and ſincere hiſtory: others, that it is a dramatic entertainment, or a pious fable for the inſtruction of men in the great duty of reſignation to GOD. Some place his abode in, or upon the ſkirts of, the ancient kingdom of Edom; others, upon the banks of the Euphrates (N). Some reckon

(N) Some have not ſcrupled to ſay, that Job's diſtemper was the foul diſeaſe; for indeed he might have been ſmitten with that as well as with any other; ſo that in this caſe there is no reaſon to believe that he drew it on himſelf. He is the patron of all thoſe that labour under that filthy affliction within the pale of the Roman church; but ſhe revered him before the ſaid diſeaſe was known in Europe. As to that miſtake about the ſepulchre without the walls of Conſtantinople, and that other, that the Turks take him to have been the chief judge of Solomon's court; they have been fully detected (38).

(38) Bayle Art. Job.

reckon him among the moſt early of Eſau's deſcendants, others bring him down to the days of Joſiah. Having thus given a tranſitory view of the great miſt which hangs over the ſtory of Job, we proceed.

HUSHAM of the land of Temani.

HADAD, the ſon of Bedad, he ſmote Midian in the field of Moab, and the name of his city was Avith.

SAMLAH of Mareſkah; in his reign, or in that of his ſucceſſor, came Eſau, as we think, into this country.

SAUL of Rehoboth.

BAAL-HANAN, the ſon of Achbor.

HADAR; the name of his city was Pau, and his wife's name was Mehetabel.

UNDER the three laſt, or four laſt, of theſe kings, did Eſau and his family live as ſojourners in a ſtrange land, as Abraham and Iſaac their forefathers had done before them in other parts. This monarchy, which was plainly elective, came ſome how or other to be interrupted, and broken into ſeveral petty and independant principalities or dukedoms; and, ſeeing that the poſterity of Eſau exceed in the number of their dukes, it cannot be very incongruous to ſuppoſe, that they had the largeſt ſhare in bringing about this revolution. It is very accurately obſerved by a late and learned writer, that the firſt dukes of the Edomites are not ſtiled dukes of Edom, but dukes in the land of Edom [x]. From whence we gather, that the grandchildren of Eſau, grown ſtrong and potent, could no longer brook ſubjection to a ſtrange line, and would govern themſelves; ſo that now the whole country became divided into ſeveral diſtinct juriſdictions, and under ſeveral petty princes, called dukes, both of the poſterity of Eſau, and of that of Seir, who are all collateral. The dukes in the land of Edom were, 1. Duke Teman; 2. Duke Omar; 3. Duke Zepho; 4. Duke Kenaz; 5. Duke Korah; 6. Duke Gatam; 7. Duke Amelek. Theſe ſeven were the ſons of Eliphaz the firſt-born of Eſau. 8. Duke Nahath; 9. Duke Zerah; 10. Duke Hanimah; 11. Duke Mizzah: theſe four were the ſons of Reuel, the ſecond ſon of Eſau; 12. Duke Ieuſh; 13. Duke Jaalam; 14. Duke Korah: theſe three were the ſons of Eſau himſelf, begot by him, after he was an hundred and twenty years old, on Aholibamah his laſt wife. All theſe were the dukes in the land of

[x] Shuckford's Connect. of the ſacred and prophane Hiſt. Book 8. p. 192.

of Edom; that is, in that part poſſeſſed by the Edomites, and thence called after them. At the ſame time were ſeven Dukes over the poſſeſſion of the deſcendants of Seir. 1. Duke Lotam; 2. Duke Shobal; 3. Duke Zibeon; 4. Duke Anah; he found mules (O) in the wilderneſs, as he fed the aſſes of Zibeon his father; 5. duke Diſhon: 6. Duke Ezer; 7. Duke Diſhan [x]. Now ſeeing that the dukes of Eſau's line in the land of Edom, being more in number, may have been greater in might than thoſe of the Horites in the land of Seir, it ſeems not unnatural to ſuppoſe, that theſe laſt were now expelled by the former, who ſeized on the land by the preordained diſtribution of GOD [y]. At the ſame time, Amalek or his ſpurious offſpring may have been driven out alſo.

ACCORDINGLY

[x] Gen. xxxvi. [y] Deut. ii. 12.

(O) Concerning this remarkable event there is ſome variety of judgment and interpretation. The Hebrew word is הימים hayyemim, which the LXX, not knowing how to render, have retained, and accordingly have ἰαμεὶν, and ſo have Theodotion, Aquila, and Symmachus. From St. Jerom we have ſeveral traditions of the Jews concerning this matter. Some thought, that by the above word muſt be underſtood ſeas, or large waters; for the ſame letters are uſed for the word which bears that import; and will have it, that, while he fed his father's aſſes in the wilderneſs, he found a collection of waters, or ſeas, according to the Hebrew idiom, an uncommon diſcovery in a deſart, and therefore worthy of notice. Some would have it to mean hot waters in the Phœnician tongue. Some again, that he ſuffered wild aſſes to cover his tame ones, and that the ſwifteſt breed of thoſe creatures called Yamim, ſprang from thence: And moſt of the Rabbins teach, that he, firſt of all men, ſuffered aſſes to cover the mares in the wilderneſs; whence the unnatural breed of mules were ſhewn to the world. Now theſe interpretations, or ſuppoſitions, are thus combated. 1. To make the Hebrew word mean ſeas, it muſt be altered in the reading contrary to all authority and likelihood: and beſides, as the Hebrews call great ponds or lakes ſeas, it is no wonder, that he found out ſuch congregations of water; but there is nothing of that kind that can be conſidered in thoſe parts, except the lake Aſphaltites, which was made afterwards. 2. Thoſe who render the word hot-baths, as the Vulgate, according to the Phœnician ſignification, ſeem to have read חמים hhemim, and to have believed,

ACCORDINGLY the next generation of theſe princes are ſtiled dukes of Edom, and had no rivals of any other family in any other part of the country, which now we ſuppoſe to have been all called Edom. The Dukes of this ſecond race were; 1. Duke Timnah; 2. Duke Alvah; 3. Duke Jetheth; 4. Duke Aholibamah; 5. Duke Elah; 6. Duke Pinon; 7. Duke Kenaz; 8. Duke Teman; 9. Duke Mibzar; 10. Duke Magdiel; 11. Duke Iram [z] (P). Theſe eleven were dukes of Edom when the

[z] Gen. ubi ſupr.

that it is ſynonymous with חמים hhammim, which ſignifies hot baths; but this is countenanced by no reading or interpretation. 3. Thoſe who will have him to have firſt found out the breed of mules, are confuted by Bochart, with the following arguments; 1. Becauſe mules were never called by that name; 2. Becauſe the word מצא matza, which Moſes uſes, imports the finding what exiſts already, and not the invention of what never had been before; 3. Becauſe they were aſſes which Anah fed, and not horſes; 4. Becauſe in ſcripture there is no mention made of mules to the time of David. In the concluſion, it is the proper name of a people, the אימים Emim for example; which is perfectly made out from the Samaritan reading; whom he found ſuddenly, that is, fell on them by ſurprize, and diſcomfited them; and this is the moſt likely meaning of the Hebrew text in this place, it having the very ſame ſignification in ſeveral other places (40). However, the word is alſo thought to have been the name of ſome uſeful plant, or herb (41), which Anah firſt diſcovered.

(P) In ſcripture the names of theſe kings and dukes run in a ſeemingly-confuſed order: and ſome are unwilling to think that they ſucceeded in the manner we have, from biſhop Cumberland, placed them in (42). This difference in opinion proceeds from theſe words of the text prefixed to the liſt of the kings; *and theſe are the kings that reigned in the land of* Edom, *before there reigned any king over the land of* Iſrael (43). This is ſuppoſed to be an interpolation; and if we do not allow all the kings of the liſt to have been elder than Moſes, we muſt ſuppoſe the whole to

(40) Vide Cleric. Comm. in Gen. cap. xxxvi. ver. 24. (41) Vide Wagen Annot in Tit. Talm. Sot. (42) See Shuckford's Connect. of the ſacr. and prof. Hiſt. Book 7. p. 192, & ſeqq. (43) See Prideaux's Connect. of the Old and New Teſt. Part 1. Book 5. p. 492, 493.

the children of Israel were come out into the wilderness; and, being dismayed at the approach of so formidable a body, as yet unprovided with a seat, dreaded for their own country, not knowing, that the Israelites were under a strict injunction by no means to molest them. Wherefore, perceiving the imperfection and weakness of the regulation they were under, they united under one head or king, and prepared to maintain their ground against any invasion.

To this nameless king, or perhaps his successor, came messengers from Moses, then drawing near the end of his days, to entreat a passage through his country for him and his people. And though it was remonstrated to him, that the Israelites were his brethren; and as he could not but know, how they and their fathers had wandered from place to place, without any fixed habitation; how they had been oppressed in Egypt; how God had now led them out from under their bondage, and that they had reached his borders, being in, and near, the town of Kadesh; it was to be hoped he would let them pass freely through his country, in their way to the land of Canaan; that if he was willing to befriend them in this matter, they would keep the highway, and not offer to turn to the right or the left, to hurt the fields, or the vineyards, or drain the wells of water, until they had quite crossed his territories. To this the jealous king of Edom answered, that he would by no means grant it, and advised them not to make the least attempt towards it; that if they did, they might expect to be interrupted by the whole strength of his kingdom. And when these embassadors, or perhaps those of a second embassy, urged him still farther upon this

to be interpolated too; and accordingly some take Moses to have been the first king of Israel, and to be meant here. It cannot be proved that any of the said kings were of the line of Esau: and this first monarchy set up by the Horites was plainly elective; whereas that monarchy erected by the children of Esau was, by the very little or nothing we know of it, at least seemingly, hereditary; for Hadad was a minor when David conquered Edom. But we are afraid of trespassing too much on our readers patience, by running into the many particulars of this debate, and shall only say, that we have embraced that opinion, which upon mature deliberation seems to us to be the best founded.

important buſineſs, and made a renewal of promiſes and aſſurances of the moſt peaceable behaviour, if they might have the paſſage they ſolicited, proteſting, that they would pay for every thing they might have occaſion for on the way, and that they would be as expeditious in their marches as their feet would permit; he grew downright exaſperated at their reiterated inſtances, and fearing, that the Iſraelites might make ſome deſperate attempt to force the paſſage he denied them, he took the field, and marched towards them, to intimidate them, and ſhew them that he was not to be prevailed on [z]. However, his enmity did not run to the pitch of diſtreſſing them in matters wherein he could relieve them without danger to himſelf, and, perhaps that they might not grow deſperate, he furniſhed them with what his country afforded for their ſuſtenance, or convenience, for their money [a].

AFTER this, there is ſcarce any hiſtory ſo obſcure and interrupted as this of Edom; and particularly, we find no words concerning them, from theſe days to thoſe of king David: however, we will ſupply this chaſm in part, by obſerving, that in the mean time the Edomites extended their dominion, and applied themſelves to trade and navigation, and ſeized on the empire of the ſea; we mean of the Arabian gulf at leaſt, and the trade thereof: they dealt in very rich commodities as it ſeems; pure gold, gold of Ophir, the topaz of Ethiopia, coral, pearls, and the like [b], and became a very conſiderable kingdom, as the moſt common opinion is.

BUT in the very meridian, as we think, of their glory, they were humbled by conqueſt, and the chiefs of them driven from their homes by the cruelties of a foreign invaſion; which how they drew it upon them we have ſcarce any room to gueſs (Q). But ſo it was, that they became involved in a war with king David, in which they

[z] Numb. xx. 14, 21. [a] Deut. ii. 28, 29. [b] Job. xxviii.

(Q) Indeed there is but very little room to gueſs at what might poſitively be the cauſe of this ruin executed upon the Edomites; but probably, David treating with them for ſome of the advantages of Elath and Eſiongeber, they refuſed to hearken to him, and thereby provoked him to wreſt thoſe important places, the only marts of the very rich commodities he wanted, out of their hands.

they were defeated in the valley of ſalt [c], with the loſs of eighteen thouſand men; and though this battle ſeems to have decided the fate of the kingdom, yet the Edomites were not ſuffered to live, but were maſſacred, where-ever they could be found, for ſix months together by Joab, who ſlew all the males that came into his hands; ſo that happy were they who could eſcape into ſtrange countries (R). So Edom was awed by the conqueror's gariſons, waſted, and depopulated, while its ancient inhabitants were diſperſed into ſeveral parts. Hadad their king, as yet a minor, and a party with him, took the way of Midian (S), thinking, perhaps, to croſs the Red-ſea, and there underſtanding, that they and their young king would be favourably received by Pharaoh, they carried him thither, and Hadad was accordingly received, and ſupported by Pharaoh with all the dignity becoming his royal rank; and, to compleat all the favours and kindneſſes which were unſparingly heaped on him, he had the queen's [Taphenes's] ſiſter given to him in marriage [d]. But at the ſame time that Hadad made his way towards Egypt, others took different routs; ſome, flying to the Philiſtines, fortified Azoth, or Azotus, for them (T), and

[c] 2 Sam. viii. 13. 1 Chron. xviii. 12. [d] 1 Kings xi. 15, 20.

(R) Sir Iſaac Newton makes this diſperſion to have been of very beneficial conſequence to the ſeveral nations they went to, ſuppoſing they carried their arts, ſciences, and induſtry with them where-ever they went (44); and herein he is in part ſupported by very ample authority, as we ſhall immediately obſerve.

(S) From hence we have, after Reland, ſuppoſed, that Midian was partly bounded on the north by Eden (45); as if they were obliged to fly through Midian to go to Egypt: but it is more likely that they ſtruck into Midian, as the ſhorteſt cut to get away from the enemy, with deſign to embark for Egypt, at Madian, or ſome other ſea-port of that country, as the ſafeſt way to go into Egypt.

(T) According to Sir Iſaac Newton's hypotheſis, Hadad and his followers were the more kindly received by the king of Egypt, as he foreſaw the advantage they would be of to him, by bringing with them their ſkill in letters, aſtronomy, navigation, and the like, in which the Egyptians were till then ignorant.

(44) Chron. of anc. kingd. amended, p. 209. (45) See before, p. 131.

proved a considerable accession of power, and of very singular benefit to that people (U): and others, that dealt in shipping, took the longest way they could to escape the rage of the conqueror, and went towards, or into, the Persian gulf [d]: in a word, they were dispersed into all parts, there being no safety for them in their native place.

HADAD,

[d] Sir Isaac Newton's Chronol. of anc. Kingd. amended, p. 104, 105.

(U) The aforesaid chronologer holds, among other things, that some of them flying to the Philistines and the sea-ports, improved the inhabitants there in the arts of navigation and commerce; and indeed it is more than once said, that the Phœnicians came from the Red-Sea. Herodotus (47) tells us so; and Stephanus (48) relates, that Azotus was built by the fugitives which fled from the Red-Sea. "The Phœnicians therefore "came from the Red-Sea, in the days of Io and her brother "Pheroneus, king of Argos; and by consequence at that time, "when David conquered the Edomites, and made them fly every "way from the Red-Sea ... And this flight gave occasion "to the Philistines to call many places Erythra, in memory of "their being Erythreans, or Edomites, and of their coming "from the Erythrean sea; for Erythra was the name of a city in "Ionia; of another in Libya; of another in Locris; of another "in Bæotia; of another in Cyprus; of another in Ætolia; of "another in Asia, near Chius; and Erythya Acra was a promontory in Lybia, and Erythræum a promontory in Crete, and "Erythros a place near Tybur, and Erithini a city or country in "Paphlagonia; and the name Erythea, or Erythræ, was given "to the island of Gades, peopled by Phœnicians..... Edom, Erythra, and Phœnicia, are names of the same signification, the "words denoting a red colour; which makes it probable, that "the Erythreans who fled from David settled in great numbers in "Phœnicia; that is, in all the sea-coasts of Syria, from Egypt "to Zidon; and by calling themselves Phœnicians in the language of Syria, instead of Erythreans, gave the name of "Phœnicia to all that sea-coast, and to that only" (49).

The same chronologer holds, that the Oes of Helladius, the Oannes of Berosus (50), and the Euhanes of Hyginus (51), are several names given to an Edomite commander, who now fled to the Persian gulf, and first introduced the useful arts into Chaldea; but this, we apprehend, is allowing a little too much.

(47). l. 1. c. 1. l. 7. c. 89. (48) In vocem Ἄζωτ, (49) See his Chronol. of anc. kingd. amended, p. 108, 109. (50) See before, Vol. I. p. 266. (51) Fab. 274.

HADAD, though he lived in great eaſe and ſplendor in the Egyptian court, yet being conſcious of his birth, unwilling to live in dependance, thirſting after his kingdom, and bitterly remembering the ſeverity of the conqueror, meditated revenge, but more eſpecially when it was told him, that David and the terrible Joab were both dead. At length the time came, when Solomon wallowed in all kinds of impurity, and thinking this a proper opportunity to take his revenge, he diſcloſed his mind to his brother-in-law Pharaoh, entreating that he would diſmiſs him. The wiſe king of Egypt, perceiving the great troubles and dangers which he muſt be expoſed to in executing his deſign, would have prevailed on him to lay aſide all thoughts of ſo tumultuous an undertaking; but Hadad, upon urging the matter, obtained a diſmiſſion, and proved a very troubleſome enemy to Solomon, and ſhewed the way to others, as is thought, to be the ſame; but he did not recover his kingdom again. He had a ſon by his Egyptian wife, and his name was Genubath: he had a princely education in the palace of Pharaoh; but Hadad failing in his view upon his own kingdom, he, it is likely, eſtabliſhed himſelf in Syria, where we find the royal family bore the name of Hadad.

IN the mean time, the kingdom or Edom continued under the houſe of David till the days of Jehoſhaphat, being governed by deputies or viceroys, appointed by the kings of Judah. And, though we have, in the hiſtory of Moab, made mention of a king of Edom, who aſſiſted Jehoram king of Iſrael and Jehoſhaphat king of Judah, in the reduction of Meſha king of Moab, we there ſpeak only in the freedom of ſcripture-phraſe; for that king, as he is called, attended upon Jehoſhaphat as a vaſſal, and not as a an auxiliary [e]. However, though the hiſtory of that war does peculiarly belong to the reigns of Jehoſhaphat and Jehoram, kings of Judah and Iſrael, who were the principals in it, yet we have here occaſion to repeat, that this chief of Edom's ſon is thought to have been ſacrificed by Meſha the king of Moab, upon the walls of the city where he was blocked up, though, on the other hand, it is alſo thought to have been the Moabite's own ſon [f].

WE have now ſeen the time wherein Eſau was to be a ſervant to his brother; and now we come to that wherein he was to ſhake off his yoke, and be ſubject to him no more. For finding a fair opportunity to recover their anci-

[e] See 1 Kings xxii. 47. [f] See before, p. 113.

ent liberty, the Edomites embraced it, and ſucceeded. They had already ſhewn how ill they were diſpoſed, even towards Jehoſhaphat, when a part of them joined the Moabites and Ammonites, in an attempt to ſurprize him, when he was unprepared for the aſſault; but fell into unaccountable confuſion, wherein the Edomites were all cut off by the Ammonites and Moabites, who afterwards butchered each other [g]. But in the days of Jehoram the ſon of Jehoſhaphat, the whole nation of Edom aroſe, and, aſſaſſinating or expelling their vice-roy, made themſelves a king after their own liking; and upon advice that Jehoram was comeing with a formidable power to reduce them, they marched towards him, and managed ſo as to hem him all round in the night-time; but this project was diſconcerted with a great ſlaughter, and they were forced to their retrenchments. This was but an indifferent beginning; but ſo it happened, that the Edomites could not be annexed again to the houſe of David *.

THUS was the long wiſh'd for revolution brought about, after one hundred and fifty years of oppreſſion; but who was their chief upon this occaſion, or what he did farther, or who ſucceeded him, we are wholly at a loſs for.

AFTER this they had no attempts made upon them by the kings of Judah for upwards of ſixty years; in which time they muſt have had time to recover themſelves very well, and retrieve their ancient ſplendor in a great meaſure. Notwithſtanding which, they ſuffered a ſignal overthrow from Amaziah king of Judah in the valley of ſalt, where ten thouſand of them fell in battle, and as many of them were alſo taken priſoners. After which their capital Selah, which we have ſuppoſed to have been the famous Petra, was taken from them by ſtorm, and ten thouſand captives were by Amaziah's orders thrown down from the ragged precipices which ſtood about that city, and were torn, and daſhed to pieces. Selah was now by the conqueror called Joktheel [h].

WHETHER after, or before this, we cannot diſcover, the Edomites had a war with their neighbours the Moabites, wherein, being unfortunate, their king fell into the hands of the enemy, who burnt him, whether dead or alive we cannot

[g] See before, p. 114. * 2 Chron. xxi. 8. [h] 2 Kings xiv. 7.

cannot ſay, till his bones were reduced to aſhes (X). Thus have we hitherto tacked together the incoherent parts of this hiſtory in the beſt manner we have been able. In the mean time, they became ſubject to the king of Babylon, in completion of what the prophets had threatened them [i]. And when utter deſtruction came upon the Jews, and that they were carried away captive, then did their fury blaze out, ſo far as to cut off ſuch of the Jews as attempted to eſcape the captivity, not forgetting the ſlaughter made of their fore-fathers by Joab in the days of king David; but for this were they threatened, that they ſhould be repayed in kind, that for the deſolation they had forwarded in Judah, their own land ſhould be deſolate when the reſt of the countries flouriſhed [k]. They were for laying Jeruſalem level with the ground, and accordingly, when the Chaldees or Babylonians were withdrawn, they made an end of the temple with fire [l]. Thus did they proſecute their revenge to the utmoſt, hoping, that the Jews were never more to be a nation, inſulting GOD, and ſlaughtering the few of his miſerable people, who had by his leave eſcaped the hands of the Babylonians.

WHEREFORE confuſion was brought upon them, and violent inteſtine commotions and perſecutions; inſomuch, that a great part of them left their own country, and ſettled in the empty land of Judæa, and particularly in the ſouth-weſtern parts [m]; and it may be, that at this time they made an end of the temple of Jeruſalem. Thoſe of them that ſtaid behind in Edom joined the children of Nabaioth, and were called Nabatæans ever afterwards; ſo that the antient kingdom of Edom now loſt its name, which was transferred to that part of the land of Judæa, which the refugees had pitched in, and which had never been any part of their old kingdom, but the lot of the tribes

(X) It is doubted, whether this be not the ſame war wherein Meſha king of Moab ſacrificed his own ſon, or the ſon of the king or chief of Edom (50.) Our tranſlators of the bible take them to be one and the ſame event.

(50) See before, p. 113.

tribes of Simeon and Judah. And this is the Idumæa, and theſe the Idumæans mentioned by Pliny, Ptolemy, Strabo, and other antient writers. For becauſe of their wicked dealing with their oppreſſed brethren, their kingdom was to loſe all its glory, and become a deſart; *ſtrangers from the ſouth* [o] *were to poſſeſs it*; it was never to riſe, and from thenceforward to be called the border of wickedneſs [p], though it pleaſed God to ſpare a remnant of this people, by permitting them to ſeize on a part of their brethrens portion; by which means they came to be united into one family with them, as they were deſcended from the loins of one man.

We have now pointed out the exit of the ancient kingdom of Edom, and ſhall proceed to the broken interrupted affairs of thoſe Edomites who ſettled in Judæa; concerning which we only know, that a decree was iſſued out againſt them from Darius Hyſtaſpes, commanding, that they ſhould deliver up all they had belonging to the Jews [q]; but what effect this took we cannot well ſay. That upon the decline of the Perſian monarchy, and after the days of Alexander, they were under the power of the Seleucidæ, when the ancient averſion they had to the Jews being ſtirred up in them, they warred againſt them, under the conduct of Gorgias their governor for Antiochus Epiphanes: but they got nothing thereby but blows and great ruin; being conſtantly worſted by Judas Maccabæus, who at laſt took, and ſacked their chief city Hebron [r]; their ſtrong holds, wherewith they awed the Jews, were forced by that valorous commander, who cut off twenty thouſand of them in the aſſault, but a reſidue of nine thouſand of them fled to two ſtrong towers [s], where they were well prepared to ſuſtain a ſiege; whence, by a bribe of 70,000 drachmas, a good part of them were ſuffered to eſcape. But, when the treachery was diſcovered by the Jewiſh general, a ſtop was put to this outlet; theſe two ſtrong caſtles were alſo forced, and no leſs than twenty thouſand Idumæans again [t] put to the ſword. Thus was their zeal againſt their brethren rewarded as it deſerved, as ſhall be more exactly particularized in the Jewiſh hiſtory.

After theſe very troubleſome times, we know not how it fared with the Edomites in Idumæa, except that they

[o] Obad. ubi ſupr. [p] Malach i. [q] Eſdr. ubi ſup. ver. 50. [r] 1 Maccab. v. 65, 68. [s] ver. 4, 5. 2 Maccab. x. 18, 23. [t] Ibid. ver, 21, 23.

they ſeem to have been continually agitated by broils and wars, till they were conquered by John Hyrcanus; who reduced them to the ſore neceſſity of embracing the Jewiſh religion, or of quitting their country. They choſe the former, and, ſubmitting to be circumciſed, became incorporated with the Jews [u], and, conſidering their deſcent as well as their converſion, they were upon a double account reckoned as natural Jews; and accordingly, in the firſt century after Chriſt, the name of Idumæan was loſt and quite diſuſed (Y) [w]. And being ſo, we here break off, referring what further relates to this people to the Jewiſh hiſtory. We have ſeen then, that the Edomites, or Idumæans, were partly ſwallowed up before by the Nabatæans, or Arabians, and partly now by the Jews.

SECT. V.

The Hiſtory of Amalek.

AMALEK was the father of this people, and from him they were called Amalekites, and their country Amalekitis. He was the ſon of Eſau's firſt-born Eliphaz (A), by his concubine Timna. Notwithſtanding the ſpuriouſneſs of his birth, Their anceſtor.

[u] Joſeph. Antiq. l. 13. c. 17. [w] Prideaux's Connect. of the Old and New Teſt. Book 5. p. 307, 308.

(Y) The name of Edomite is not ſo wholly loſt, but the Jews make uſe of it ſtill. "The Rabbins ſpeak of Edom and E-"domites long after this; but thereby they do not mean Idumæa, "or the ſons of Edom, but Rome, and the chriſtians of the "Roman empire. For fearing the diſpleaſure of the chriſtians, "among whom they live, for avoiding it whenever they ſpeak "any reproachful thing of Chriſtians, or of their religion, they "uſually blend it under feigned names; ſometimes calling us "Cuthæans, i. e. Samaritans, and ſometimes Epicureans, and "ſometimes Edomites; and this laſt is the civilleſt appellation "they give us (51).

(A) the Arabians deduce his genealogy in a different manner, and make him ſome generations older than Abraham, as follows:

(51) Prideaux's Connect. of the Old and New Teſt. Part 2. Book 5. p. 708.

Noah

birth, he is reckoned among the dukes in the land of Edom [a], which is all we know for certain concerning him. How this family came to separate from the others of Esau's line, wants some light. Perhaps it were not absurd to suppose Amalek or his posterity to have been expelled by the Edomites, when they cleared the land of the Horites; and that on account of their illegitimate descent, as was practised towards Ishmael in the house of their great ancestor Abraham. Or on the other hand, Amalek or his descendants may have been slighted and distinguished with contempt by the other Edomites; which they stomaching, may have joined themselves to the Horites, resolving to share fortunes with them. Very unlikely it is, that this single family should have been able to erect it self into a formidable state, so early as to have attempted the Israelites almost as soon as they had set foot on this side of the Red Sea: they must certainly have been joined by others; and by whom so likely as by the remnant of the Horites, and by the inhabitants of the land they seized on, for some there were [b]. The Kenites descended from Jethro, we know, inhabited with them, but that was in after times [c]. That there was an inbred misunderstanding between

عاد *Ad.*
كلاف *Amalek* (1)

They say also, that the Amalekites in ancient times possessed the country about Mecca, whence they were expelled by the Jorhamite kings (2). Some hold, that Ad was the son of Aws, or Uz, the son of Aram, the son of Shem, the son of Noah. Others, that Ad was the son of Amalek, the son of Ham (3); but the contrary is the received opinion. Some commentators on the Koran (4) tell us, that the old Adites were of prodigious stature, the

(4) Jalla Lo' Ddin & Zamakshari.

tween the Edomites and Amalekites, and that they held each other in averſion is confirmed, in that we cannot diſcover any manner of harmony between the nations, no confederacy, no correſpondence, or the leaſt token of mutual accord.

As we can but gueſs at the cauſe of this rent in the houſe of Eſau; ſo are we left to do little more concerning the ſpot they pitched on, or the tract wherein they afterwards erected their kingdom. Their firſt removal cannot be ſuppoſed to have been at any great diſtance from the land of Edom; and indeed, from the firſt of their expulſion or removal to their exciſion, they ſeem to have bordered upon that country: whence Joſephus divides the whole land of Edom into Amalekitis and Gobolitis [c]; but, as we have already obſerved, it is very unaccurately ſaid, if we refer to thoſe early days, when it is ſo evident there was no participation of counſels between the two kings, as will appear by their different conduct towards the children of Iſrael [d], when in the wilderneſs. In reference to this matter, and elſewhere, does the ſcripture divide them into quite diſtinct kingdoms [d]. The ſituation of the kingdom of Amalek, is, however, pretty clearly, if not ſelf-evidently, ſettled, by remarking, that it had intercourſe and commerce with Egypt [e] (B); that it had a way leading into

[c] Joſeph. Antiq. l. 2. c. 1.
[e] See Joſeph. Antiq. l. 6. c. 8.
[d] See 1 Chron. xviii. 11.

the largeſt being an hundred cubits, and the leaſt ſixty; which they pretend to prove by the authority of the Koran (5). In fine, it is alſo ſaid by the Arabian writers, that Amalek was the ſon of Azd, the ſon of Shem (6). Le Clerc (7) is willing to adopt this notion ſo far as to think, that the Amalekites were a great nation before the days of Abraham or Lot; becauſe he finds that Chedorlaomer made war on them under that name, which he ſuppoſes muſt be proleptically taken at firſt. But conſidering, that our Amalek was of the houſe of Eſau, with whom the Iſraelites were commanded to be at peace, he changes his mind, and imagines they had no relation to our Amalek, but ſprang from ſomewhere elſe.

(B) This ſeems to be clear from Joſephus (8), who makes Amalekitis to extend between Peluſium and the Red-Sea, and from the Arabian

(5) Kor. c. 7. & Numb. xxiv. 20.
(6) Ebn. Sholnah.
(7) In Geneſ. xiv. 7.
(8) Antiq. l. 6. c. 8.

to the country of the Philiſtines, and into the land of Canaan (C). Whence we conclude it to have been bounded by Canaan on the north; by Egypt, or its dependant territory, on the ſouth; by Edom on the eaſt; and by the deſarts towards the ſea on the weſt; or perhaps by the margin of the ſea itſelf. And this we deliver ſimply as our own opinion, wherein, however, we are not alone[f], and forbear to perplex the reader with a variety of opinions, which are not ſo happily ſupported as this. Here then, and hereabouts, was their abode, till they ceaſed to be a nation; their limits extending with their encreaſe of power, and ſhrinking in again as they dwindled away.

THE

[f] Vide Reland. Palæſt. illuſt.

Arabian hiſtorians, who make the Amalekites to have been even maſters of Egypt (9); for it were hard to ſuppoſe they have no manner of foundation for their ſtory, and that the whole is entirely falſe in all its articles. That they had communication with Egypt, may farther appear from the Egyptian they left behind them on their return from ſacking of Ziklag, who fell into the hands of David (10). Finally, it is expreſly ſaid in ſcripture, that they had of old inhabited the land——— even unto the land of Egypt.

(C) This is naturally ſuppoſed by their expedition againſt Ziklag (11) in the country of the Philiſtines, which they took and burnt, and from other inſtances of the ſame kind, which we ſhall not here enumerate; but this we the rather inſiſt on; becauſe ſo miſerable and broken a people as they were at that time, cannot well be ſuppoſed to have been able to break through any other country to get at Ziklag: and had they not the ſituation we have given them, they muſt have croſſed ſome part or other of the kingdom of Edom, at that time in its meridian, which it is not likely would have been allowed them; for there ſeems to have been no manner of underſtanding between the nations, as we have elſewhere ſaid: and it is plain, that they lay to the ſouth of the Philiſtines by the words of David, who being aſked by Achiſh where he had been, he anſwered, that he had been againſt the ſouth of Judah, and againſt the ſouth of the Jerahmeelites, and againſt the ſouth of the Kenites (12); but did not think fit to ſay he had been againſt the Amalekites, who lay in the ſouth. Add to this, that the Simeonites lay next to them (13).

(9) See before, p. 90, 91. (10) 1 Sam. xxx. (11) Idem ibid. (12) 1 Sam. xxvii. 10. (13) See 1 Chron. iv. 42.

THE cities of this country we are wholly at a loss for, except we follow Josephus, who places the famous city of Petra under the jurisdiction of the Amalekites [g] (D).

THEIR religious and civil customs we know nothing of positively. That they originally used circumcision cannot be disputed; and, for ought we know, they may have continued the same practice to the end; but whether they were doomed to utter destruction for any crying sins that prevailed among them, besides the horrid outrage they committed on the distressed Israelites [h], we do not read. Their customs.

THEIR religion was at first, doubtless, the same that was taught in the house of Abraham; but by what degrees they erred therefrom, and how far they went astray, we have no knowledge of. Josephus [i] mentions their idols, but the scripture terms them the idols of mount Seir [k]; so that they seem to have more properly belonged to the Edomites than to the Amalekites. Their religion.

THEIR arts, their sciences, and trade we can only guess at from their situation; for it is probable they had the knowledge and commerce of those times, pretty much in common with their neighbours the Edomites, and Egyptians, and those of the sea-coasts of Judea. And this is the less disputable, as their king is placed in so high a sphere of majesty, and themselves stiled the first of the nations, as we shall see anon. Much the same may be said of their manners, genius, and policy. Their arts, &c.

CONCERNING their government thus much appears, that it was monarchical; and that the first, or at least one of the first, of their kings, was called Agag [l]; as was also their last [m]; from whence it has been imagined, that all their intermediate kings bore the same appellation. Their government.

THE

[g] Vide Joseph. Antiq. l. 3. c. 2. [h] Exod. xvii. [i] Antiq. l. 9. c. 10. [k] See before, p. 158. [l] Numb. xxiv. 7. [m] 1 Sam. xv. 8.

(D) We must here note, what Josephus says, that those who inhabited Gobolitis and Petra were called Amalekites (14); but seeing the same author divides the whole kingdom of Edom into Gobolitis and Amalekitis (15), how comes it, that they dwelt not in this last division? it is an ænigma we know not how to unriddle.

(14) Joseph. Ant. l. 3. c. 2. (15) See before p. 153. in the Note, (L)

Their hiſtory.

The Amalekites ſtepped early, if not at the very firſt, into the government of this country; and very remarkable it is, that they grew up to ſuch a ſudden height of power and ſplendor, that their king is ſpoken of as far above all others; for Balaam, foretelling the future majeſty of the Jewiſh ſtate, expreſſes himſelf, that their king *ſhall be higher than Agag*, and ſtiles them, *the firſt of the nations* [n] (E); which ſeems to countenance the extraordinary things the Arabian hiſtorians have concerning the Amalekites; as that they conquered Egypt, and poſſeſſed the throne of that kingdom for ſeveral generations [o] (F).

But not to deviate from the authority we muſt rely on, it appears, that this kingdom was haughty and inſolent in its

[n] Numb. ubi ſupr. & ver. 20. [o] See before, p. 90, 91.

(E) It was ſudden, according to the hypotheſis we have adopted (16): for thereby the kingdom of Amalek is not likely to have been much, if any thing at all, older than that of Edom, which we have ſhewn to have commenced at the Exodus; and therefore, when Balaam expreſſed himſelf in ſo high a ſtrain concerning Agag and his monarchy, it could not have been of much above forty years ſtanding. The expreſſion of Amalek's being the firſt of the nations, our verſion turns otherwiſe in the margin, the firſt of the nations that warred againſt Iſrael. Much the ſame turn does Onkelos give it; but if we compare what is ſaid of Agag himſelf but thirteen verſes before, we ſhall not be at any great loſs for the right, or, at leaſt, natural explication of the paſſage before us; which doubtleſs means, that they were the greateſt and moſt noble nation of that time; and this is the moſt generally approved opinion. In Le Clerc's verſion they are ſtiled the firſt fruits of the nations; by which in his commentary he underſtands them to have been the moſt antient and potent nation; and to have been before any of thoſe which proceeded from the loins of Abraham and Lot.

(F) What the Arabic hiſtory ſays of theſe Amalekites, bears an affinity with what the Egyptian records report of the Phœnician ſhepherds; for they were at length expelled by the natives (17), and are ſuppoſed, as is ſaid by us of the Canaanites, to have fled into Afric (18); and that the Amalekites were ſometimes comprehended under the general denomination of Phœnicians, may be obſerved hereafter.

(16) See before, p. 158. (17) Ex libro Mirat. Cainat dicto. (18) Vide Reland. Palæſt. Illuſtr. p. 82.

its very cradle; and no ſooner heard, that the Iſraelites had croſſed the Red-Sea, than they reſolved to cut them off. The ſcripture mentions none but Amalek [q] upon this occaſion; which, whether it is ſpoken of the king alone, or collectively of the whole nation, is not agreed. Joſephus relates, that they had no leſs than five kings, who laid their heads together, and joined forces to carry on this turbulent deſign [r] (G). To paſs this over, ſo it was, that the Amalekites fell on the rear of the Iſraelites, as they were on full march from Rephidim to mount Horeb. Some havock they made; but it returned ſeverely upon themſelves, as ſoon as Joſhua could get the fighting men into order; by whom being in their turn aſſaulted, a long and bloody battle enſued: but in the end the Amalekites were put to a precipitate flight, with the heavy doom on their head, that for this outrage *their* name *ſhould be put out from under heaven* [s]

In the mean time, however, it pleaſed God to make uſe of them in conjunction with ſome of the Canaanites, as his inſtruments for the puniſhment of the diffidence and diſobedience of the Iſraelites, when they thought to have waſhed away their ſinful perverſeneſs by a fool-hardy attempt, in contradiction to the expreſs decree of God, that not one of them from twenty years and upwards ſhould have ſight of the land of Promiſe [t]. The ſlaughter the Amalekites help to make of the Iſraelites upon this occaſion, will be told in the hiſtory of Canaan.

After this they ſeem to have miſſed no opportunity of vexing the choſen nation, till they were ripe for the exciſion denounced againſt them. They confederated with Eglon, king of Moab, and the Ammonites [u]; and afterwards with the Midianites under Zeba and Zalmunna, to root out the Iſraelites, and poſſeſs themſelves of the land, as they had vainly projected; but what ſucceſs they had in the attempt,

[q] Exod. xvii. [r] Joſeph. Antiq. lib. 3. c. 2. [s] Exod. ubi ſupr. [t] Numb. xiv. [u] See before, p. 109.

(G) What Joſephus here ſays need not be ſuppoſed to imply, that the Amalekites were divided into many kingdoms. It is poſſible and very probable, that ſome of the petty kings of Canaan joined the king of Amalekitis now, as he did ſome of the Canaanites afterwards, to prevent the Iſraelites from entering into their borders. This junction may have been paſſed over by Moſes, who thought it enough, that he mentioned the principal and ring-leader of the aſſault.

and how they in the end fell by their own ſwords and thoſe of their friends and allies, we have already related at large [w].

AFTER this there is a very wide gap in the hiſtory of this people, which reaches even to the days of Saul. At this time their king was a very graceful perſon, and of noble preſence and addreſs, which ſtood him in good ſtead; for on account of theſe his perſonal accompliſhments, was his life ſpared (ſay they) in the general maſſacre of his ſubjects [x]. But with all this ſpecious outſide, he is upbraided as an inſolent and mercileſs tyrant. Under this prince the nation was grown ripe for the exciſion they had been threatened with about four hundred years afore. And, as a forerunner of it, the Kenites, their inmates, were warned to leave their country, and ſeek ſome other ſeat, for fear they ſhould be involved in the impending calamity [y]. As ſoon as the Kenites had obeyed the ſummons, the Amalekites were invaded by Saul, at the head of two hundred and ten thouſand men (H). And by theſe numbers, being ſorely oppreſſed, and quite diſabled from making any head, they were all cut off, except Agag, and ſome who were ſo happy, for the preſent, as to fly their country, or hide themſelves in ſuch retreats where they were not diſcovered: not even the mother, or the infant at her breaſt, was ſpared; and the whole country was made deſolate. Agag and the beſt of the cattle only were ſuffered to live. However, Agag did not long enjoy this favour; for it was no ſooner related to Samuel that he was alive, than he was ſent for by the prophet, with whom all his inſinuating addreſs, and hopes that the *bitterneſs of death was paſſed*, availed him nothing: he was hewn to pieces by Samuel, or at leaſt by his order, in Gilgal, before the Lord [z].

THE poor remnant of the Amalekites, who eſcaped the ſword of Saul, poſſeſſed themſelves of their deſolate country again,

[w] See before, p. 141.
[y] See before, p. 139.
[x] Joſeph. Antiq. lib. 6. c. 8.
[z] 1 Sam. xv. Joſeph. l. 6. c. 9.

(H) Joſephus makes this army to have conſiſted of no more than 70,000 men, and tells us, that the country was ſo poſſeſſed by them, that the Amalekites could hardly eſcape, if they attempted to fly any where (19); but this is ſaid at random, as we think.

(19) Joſeph. Antiq. l. 6. c. 8.

again, and lived, for ought we know, in peace, till such time as David was driven to ask protection of Achish king of the Philistines, dreading the murderous jealousy of Saul, and had Ziklag allotted to him. At this time the Amalekites are mentioned as associated with the Geshurites and Gezerites (I). The Amalekites, thus picking up again and gathering strength, were slaughtered once more by their new and near neighbour David, who thought it perhaps a duty incumbent on him to compleat the work, which Saul had left unfinished. So once more were the Amalekites, man and woman, butchered and dispersed, their country in good part ruined, and all the cattle that came in the enemy's way driven off [a].

The Amalekites meditated revenge for this cruel injury, as they doubtless called it, and, mustering their strength, went up to Ziklag the abode of David, who happened then to be absent with his small party, so that the town was left defenceless; wherefore they easily made themselves masters of the place, and burnt it with fire; but touched not the lives of any of the inhabitants, which, considering what they had suffered so lately from David, may seem to have been a great piece of humanity in them; but this is not allowed them (K). Among their captives were David's two wives, Ahinoam the Jezreelite, and Abigail who had been wife to Nabal the Carmelite; and having thus succeeded to their wish, they thought to secure what they had got by an expeditious return homewards, and determined not to stop by

[a] 1 Sam. xxvii.

(I) Who these Geshurites and Gezerites were is uncertain. They are taken for reliques of the Canaanites (20); but by the text it might be imagined they were originally of this country; for those nations were of old the inhabitants of the land, as thou goest to Shur, even unto the land of Egypt (21).

(K) It is said they were a poor covetous people, who intended to sell them for slaves, and make money of them (22); or wanted servants for their own use, and therefore shewed this mercy: but if we may be allowed a conjecture of our own, they kept their prisoners alive to supply the loss of those who had lately perished by the hand of David; and this does not seem to be a very unnatural supposition.

(20) Vide Cleric. & Patrick, upon 1 Sam. xxvii. (21) 1 Sam. xxvii. 18. (22) See Patrick on 1 Sam. xxx. 2. & Cleric.

the way, till they ſhould reach ſuch a place, which was perhaps a pleaſant ſpot, affording water and a refreſhing ſhade, and pretty well out of the reach of the enemy. Hurrying on with this precipitation, they left behind them one of their number, an Egyptian by birth, who, by ſome means or other, was ſo weak that he could not keep pace with them. David, in the mean time, had notice of the revenge the Amalekites had taken on him, and purſued them very eagerly, and in his way took this Egyptian, who informed him of the place where they intended to halt, to rejoice and reſt themſelves. The Amalekites arrived at the appointed place, and gave a looſe to their triumph, with great mirth and jollity; and it ſeems they recreated themſelves ſeveral days together. As they were in this careleſs poſture they were deſcried by David, from the neighbouring hills towards the cloſe of day: and after they had ſpent the whole night in debauchery, and were repaired to reſt, which was towards the break of day, they were ſet upon by David and his men, and a ſlanghter was begun among them, which continued till the ſetting ſun; ſo that not a ſoul of them eſcaped the edge of the ſword, except four hundred young men, who rode upon dromedaries, and who, leaving all their companions and booty behind them, were burthened with nothing but the doleful news of ſo woeful a miſchance, after ſuch uncommon ſucceſs in their attempt upon Ziklag [b].

THUS by degrees were the Amalekites reduced; and at laſt the fatal blow was given to them, in the days of Hezekiah, by the Simeonites *, who utterly deſtroyed and diſperſed them, and kept their country in poſſeſſion: and this is the imperfect account we have of the exit of the Amalekites, as Balaam had propheſied long before, *Amalek was the firſt of the nations; but his latter end* ſhall be *that he periſh for ever* [c].

BUT it happened afterwards, that a man of Amalekitiſh blood had taken ample revenge on the Jews, had not GOD interpoſed, as it were, by a miracle; for Haman is called an Agagite, or Amalekite; and it is well known, how near he was to the fruition of his bloody will againſt the Jews; but this fact, being tranſacted in another country and period, muſt be related elſewhere. That, however, may be called the laſt act of the Amalekites; and here therefore this ſection concludes.

[b] Sam. xxx. * See 1 Chron. iv. 40——43. [c] Numb. xxiv. 20.

SECT.

SECT. VI.

The Hiſtory of Canaan.

WE have already [a] given the hiſtory of the anceſtors of this nation, and of their origin, and therefore ſhall not repeat it here.

CANAAN the ſon of Ham, the ſon of Noah, had eleven ſons, Sidon or Zidon, Heth, Jebuſi, Emori or Amori, Gergaſi or Gergaſhi, Hivi or Hevi, Archi or Arki, Sini, Arvadi, Zemari, and Hamathi. Theſe were the fathers of the following tribes or nations; the Sidonians or Zidonians, the Hettites or Hittites, the Jebuſites, the Emorites or Amorites, the Gergaſites or Gergaſhites, the Hivites or Hevites, the Arkites or Archites, the Sinites, the Arvadites, the Zemarites, and the Hamathites [b]. Five of theſe are known to have dwelt in the land of Canaan, the Hettites or Hittites, the Jebuſites, the Emorites or Amorites, the Gergaſites or Gergaſhites, and the Hivites or Hevites. To theſe are added two others, the Perizzites and Canaanites; and theſe make up the ſeven primary nations of the Canaanites: but how the Perizzites came to be a diſtinct body; or whence the Canaanites are peculiarly ſo called, is a difficulty, can, at beſt, be only gueſſed at. Theſe ſeven nations laboured in particular under the evil influences of the curſe denounced by Noah againſt their ungodly anceſtor Ham, being doomed in the end to expulſion, and exciſion, and ſubjection. Whether the ſix other nations we have mentioned are to be reckoned among the inhabitants of the land of Canaan, by us commonly ſo called, is ſeemingly affirmed by ſome, and denied by others, who think they were exempt from the ruin which was to light on the other ſeven; being countenanced by the ſilence which may be obſerved concerning them in the wars, the other Canaanites had with Joſhua and his ſucceſſors. For therein is no mention made of the Sidonians, the Arkites, the Sinites, the Arvadites, the Zemarites, or the Hamathites; which is much, ſeeing they were primary nations or families. We therefore are of opinion, that they were not included, elſe ſo many petty ſtates or kingdoms could never have been particularized, and theſe paſſed over. Being thus, we muſt

[a] See before, Vol. I. ch. 2. ſect. 2. par. 25. [b] Gen. x. 15.

ſeek for theſe ſix original tribes elſewhere. It cannot well be otherwiſe, than that the ſeven nations, as they are called, were ſubdivided into many little kingdoms; for little, very little, they muſt have been, ſince we muſt look for them all within the ſcanty limits conquered by Joſhua. Within that ſmall compaſs we have no fewer than the following number of Canaanitiſh kings, ſaid to be ſubdued by him; the king of Jericho, the king of Ai, the king of Jeruſalem, the king of Hebron, the king of Jarmuth, the king of Lachiſh, the king of Eglon, the king of Gezer, the king of Debir, the king of Geder, the king of Hormah, the king of Arad, the king of Libnah, the king of Adullam, the king of Mackkedah, the king of Beth-el, the king of Jappuah, the king of Hepher, the king of Aphek, the king of Laſharon or Sharon, the king of Madon, the king of Hazor, the king of Shimron-meron, the king of Ackſhaph, the king of Taanach, the king of Megiddo, the king of Kedeſh, the king of Jokneam of Carmel, the king of Dor, the king of the nations of Gilgal, and the king of Tirzah, thirty-one in all (A); who were either all, or moſt of them, comprehended under the primary denominations of the ſeven nations, the Hittites, the Jebuſites, the Amorites, the Gergaſites, Hivites, Perizzites, or Canaanites (B), properly or peculiarly ſo called. Nor were theſe all the branches of the Canaanites, who were poſſeſſed of the land of promiſe. But how to aſſign a place to each particular we know not; wherefore we ſhall only divide the country in general between the ſeven tribes or nations, as well as we can, which is all the geography we ſhall give of this country here.

THE

[c] Joſhua xii. 9, 24.

(A) But we muſt not for this ſuppoſe there were no more than thirty-one in the whole country that bore the royal title. Theſe are only all that were conquered by Joſhua. The ſcripture hiſtory acknowledges, that the Canaanites were never wholly ſubdued by him; and we may infer, that many had the title of king, who never had much hurt from Joſhua.
